TRANSFORMER

# THE SIGNAL WAY OF DOING BUSINESS

## PRONTO 48-Hour Shipment

We have long recognized that, in most instances, engineers and buyers need immediate delivery of transformers and chokes. To meet this challenge, Signal maintains an extensive inventory of every item in this catalog—over 1,000 different transformers and chokes. More importantly, we're dedicated to shipping out each and every order (1-4 pieces guaranteed) within 48 hours, and we can usually fill your entire order. We call this service "PRONTO". Last year we shipped over 10,000 such orders and we didn't disappoint anyone.

## How and Why We Are Able to Maintain Our Low Price Policy

At Signal, we sell direct. There are no salesmen or distributors—no middlemen, no extra mark-ups. We pass the savings on to you. We answer your questions directly. There is no chance of misinterpretation and you get fast accurate answers. We maintain larger inventories than any distribu-

tors could. We're able to react to your order requirements more quickly and efficiently. These savings have enabled us to install modern machinery, specify better materials and continuously invest in new R & D. In this manner our prices are kept as low as possible. We both profit from this policy.

## Advanced Technology and Innovation

The basic transformer concept and design has been with us for many years. But, the state-of-the-art in electronics has changed drastically in the last 20 years, especially the last ten. We now live in a digital as well as analog world. Circuit size has shrunk and new termination methods have evolved. Again, Signal has recognized the need to develop new designs to meet these new low weight and height constraints. The result has been the development of such new and exclusive products as the SPLIT/TRAN<sup>®</sup> (see opposite page), the miniature PC board transformer featuring non-concentric windings which result in high isolation and the elimination of the need for electro-static shielding. The FLATHEAD<sup>®</sup>, which has a height of only 0.85", is still another example of creative innovation. Therefore, what many of our competitors call custom designs (matched by custom prices) often turn out to be a Signal standard product. You can depend on Signal to have the products you need when you're ready for them and, of course, always in stock.

## Custom Requirements Are Welcome

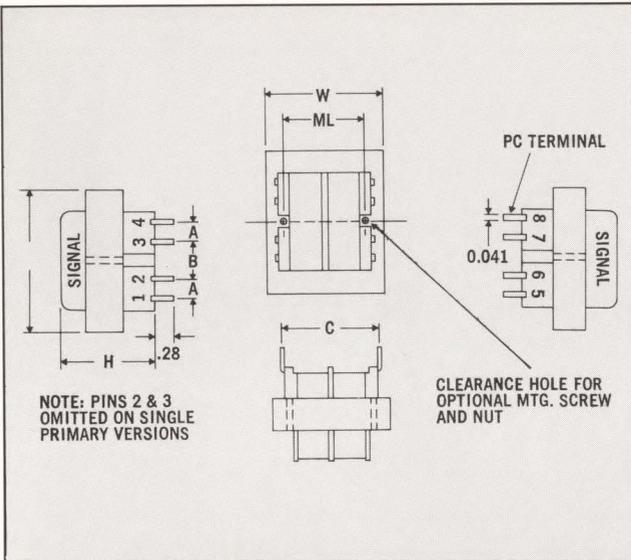

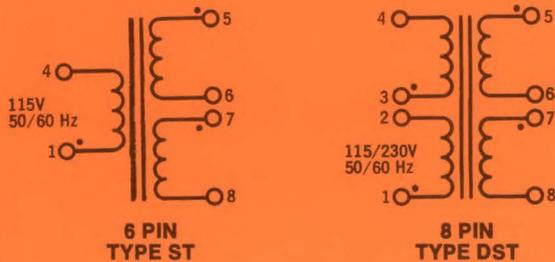

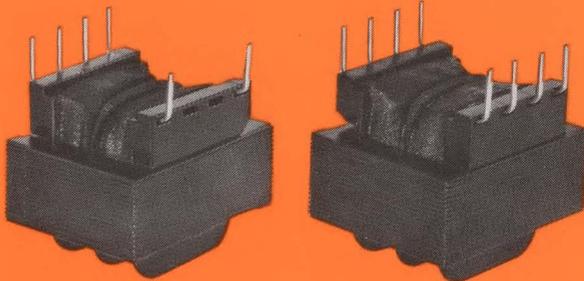

We also recognize that no matter how hard we try, it is impossible to anticipate everyone's need. Therefore, we are eager to discuss and evaluate your transformer and choke requirements. If we can't recommend a standard product that will do the job and save you money and time, we'll gladly quote on your requirement. Many times all that is needed is a modification of one of our standards. Again, you will get consistently high quality and very competitive prices, whether your order is for 10 or 10,000 pieces. We don't have anyone out in the field telling you how good we are. We have to prove it to you by deed. Thank you for considering Signal.

\* Available from Signal: Part No. ST-MS (Screw) & Part No. ST-MN (Nut).

"Split-Tran" transformers combine the best features of our "2-4-1" Series and Signal's pioneering line of pc board miniature transformers.

The use of a "split bobbin" allows the primaries and secondaries to be wound non-concentrically, i.e., side by side rather than one over the other. This results in cost savings and superior performance, namely:

- High isolation — 2500V hipot is standard.
- Low capacitive coupling — no electro-static shield necessary.
- Less manufacturing time — no cross-overs of primary and secondary leads.
- PC pins — allow direct insertion in PC boards.

Each transformer is available with single 115V or dual 115/230V primaries. In addition, secondaries are split so that they can be series or parallel connected.

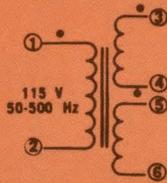

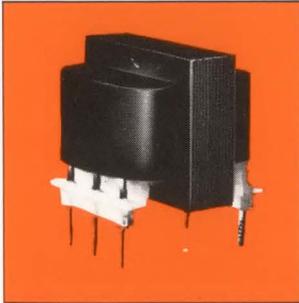

Special variations will be quoted and shipped promptly.

## DUAL 115/230V PRIMARY TYPE DPC 8 PINS

BASIC SCHEMATIC

SERIES CONNECTED

PARALLEL CONNECTED

# for printed circuits applications

Signal has the most complete and diversified selection of miniature plug-in power transformers. All items are stocked in depth for immediate off-the-shelf delivery.

Primary ratings of 115V (Style PC - 6 Pin) or Dual 115/230V (Style DPC - 8 Pin) are standard for the entire line. 1000V. Hipot is standard.

Size 1.0 is used extensively where height is a limiting factor since its height of 0.83 inches allows 1 inch spacing of PC boards. Size 24 is unusual since 24 watt PC transformers are not readily available, especially with a height of 1 3/8 inches.

The RMS current ratings are based on a load regulation of 15-20% and not on temperature rise (except for the largest item, size 24). Therefore, these ratings may be exceeded without overheating, if the additional drop in full load voltage is acceptable. There is, of course, a limit and it would be best to check with our engineering department on specific units.

BLACK DOT ON LABEL INDICATES POSITION OF TERMINAL #1.

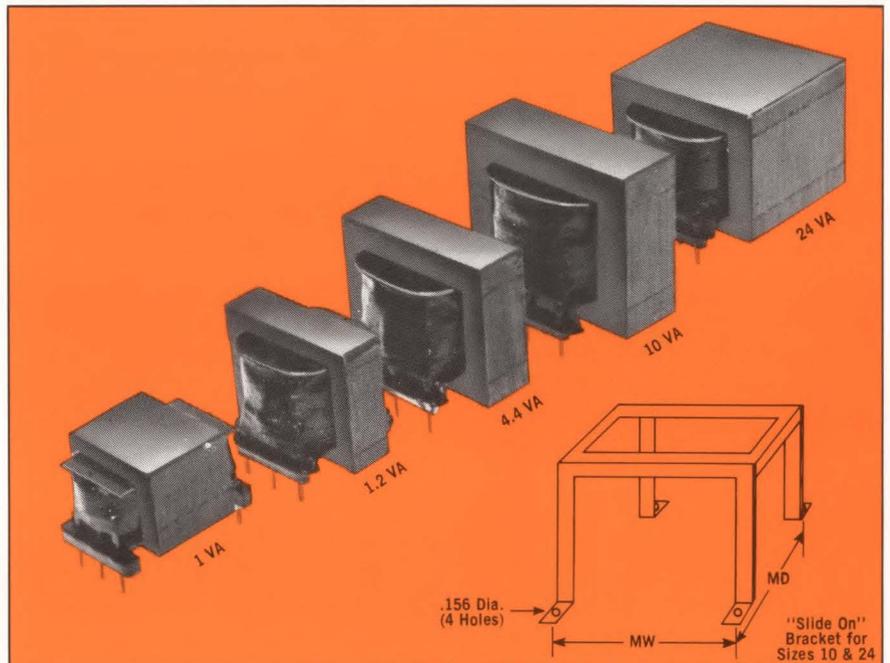

SIZE 24 (24VA) UNIT WITH 24-BR SLIDE-ON MOUNTING BRACKET

### METHOD OF DETERMINING SECONDARY CURRENT RATINGS

The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

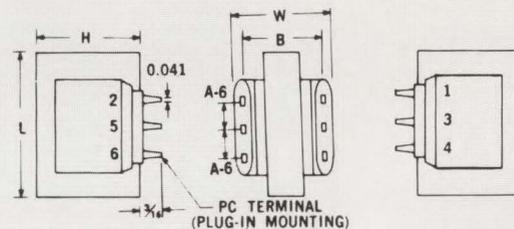

For example, in a F.W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

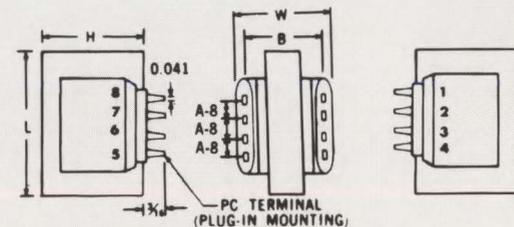

### DIMENSIONS

Size (VA)	L	W	H	A-6 (6 Pin)	A-8 (8 Pin)	B	WT. (oz.)	OPTIONAL BRACKET*		
								No.	MW	MD
1.0	1	1 3/8	0.83	0.250	0.200	1.200	2.5	—	—	—
1.2	1 3/8	1 1/8	1 3/16	0.312	0.200	1.000	3	—	—	—
4.4	1 5/8	1 1/4	1 3/8	0.400	0.250	1.100	5	—	—	—
10	1 7/8	1 7/8	1 5/8	0.400	0.250	1.300	9	10-BR	1 1/4	1 1/8
24	1 5/8	2 1/4	1 3/8	0.400	0.250	2.100	12	24-BR	1 3/8	2

\* An optional "Slide On" Mounting Bracket is available for sizes 10 and 24. The brackets do not use up any extra "Floor Space" but add 1/32" to the height of the transformer.

TYPE PC 6 PINS

TYPE DPC 8 PINS

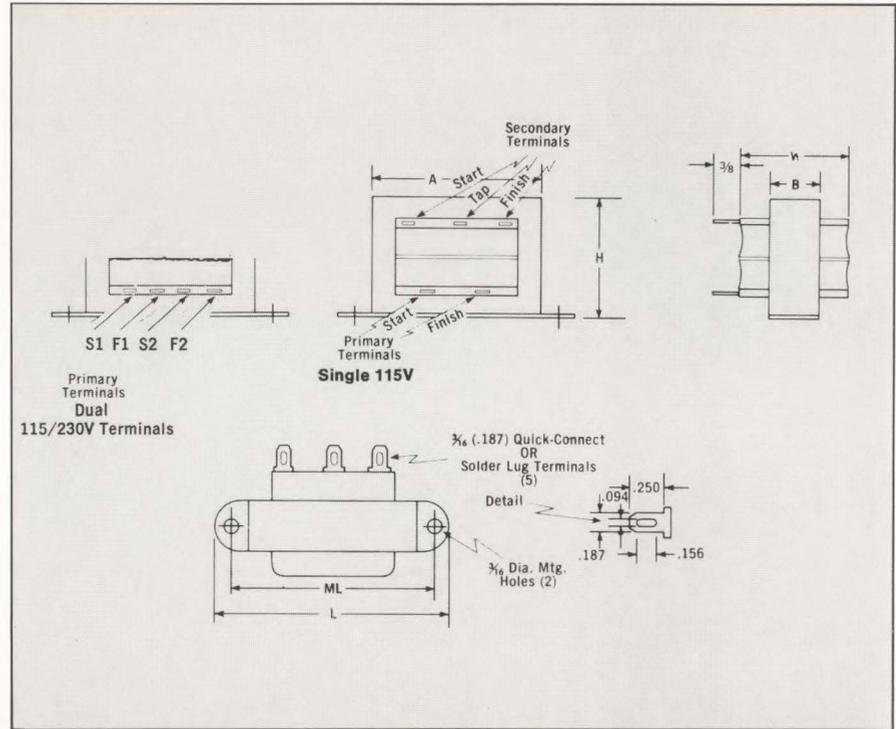

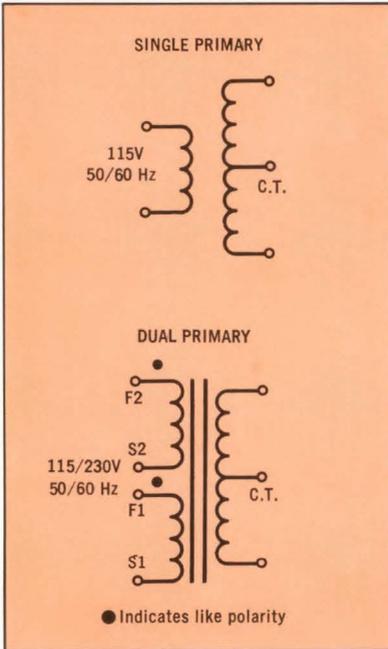

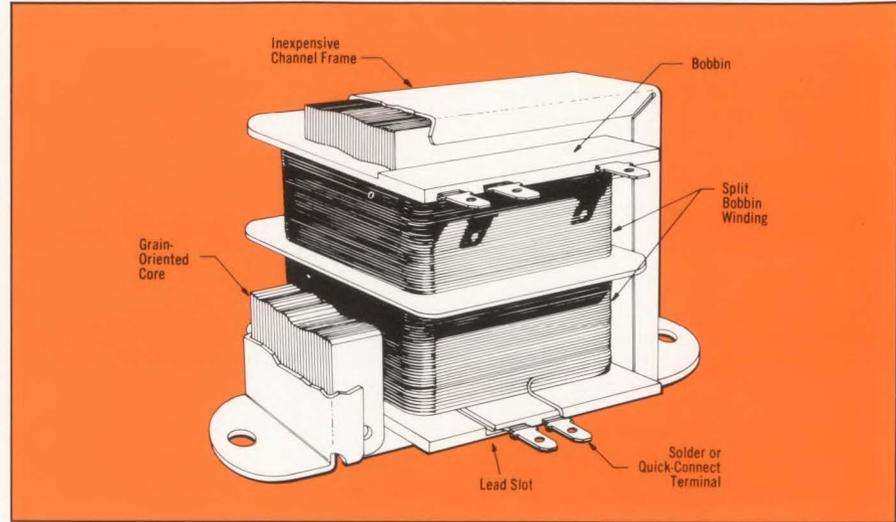

# cut size and weight with "2-4-1"

The 2-4-1 series is an illustration of the use of creative design applied to small power transformers. The result is a line where, for a given va rating, size and weight are reduced almost 50%. Hence the name "241" series.

- **GRAIN ORIENTED CORE** — High Saturation Density — Lower Core Loss — Less Steel and Copper.
- **BOBBIN WOUND** — Maximum Utilization of Winding Area — Space and Size Reduced.
- **SPLIT BOBBIN** — **NON-CONCENTRIC WINDING** — Lower Capacitance — Better Insulation — 2500V RMS Hipot — No need for Electro-Static Shield — High Isolation and Insulation Resistance. No Cross-Overs of Primary and Secondary Leads.
- **SPECIAL TERMINAL** — Solder or Quick-Connect.

The series is available with single 115V or dual 115/230V primary, rated 50/60 Hz. Class S insulation is used for a maximum total temperature rating of 125°C continuous.

## AVAILABLE WITH SINGLE (115V) OR DUAL (115/230V) PRIMARIES

# series of small power transformers

AVAILABLE WITH SINGLE (115V) OR DUAL (115/230V) PRIMARIES

**METHOD OF DETERMINING SECONDARY CURRENT RATINGS**  
The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

For example, in a F. W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

**CUSTOM VARIATIONS**

Signal is equipped to quite on Custom Variations of "241" types. The secondary combinations are restricted by the number of secondary terminals available, as follows:

Size	Maximum Number of Secondary Terminals	VA Rating
3	3	2.4
4	4	6
5	4	12
6	5	30
7	3	56
8	5	100

We answer requests promptly and can deliver prototypes in one to three weeks. Production lead times can be scheduled with very reasonable lead times.

† Available with dual primary only. Therefore, prefix "DL" is not required.

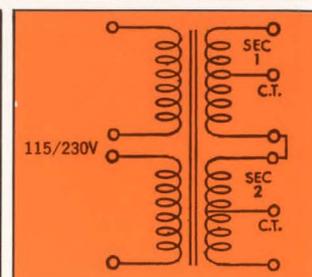

‡ Nominal 115V primary has added taps, i.e., 105/115/125V, Dual (DL) version is 115/230V only.

\* The DL (Dual Primary versions) are not stock items but are standard designs generally available on 2-3 week delivery, plus there will be a \$20 set-up charge per order.

All transformers are designed conservatively for a max of 45°C rise above ambient and are rated for 50/60 Hz. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers and chokes are rugged in construction, well insulated, and have a consistently uniform appearance. All ratings are at full load current continuous operation. Hipot rating of 1500V RMS is standard.

Electrical ratings have been chosen to cover a wide range of applications. All transformers have two center-tapped secondary windings, which may be series or parallel connected as indicated in rating chart.

# rectifier power transformers

IDEAL FOR USE IN SINGLE OR DUAL DC POWER SUPPLIES

△ Available with dual primary only. Therefore, prefix "DL" is not required.

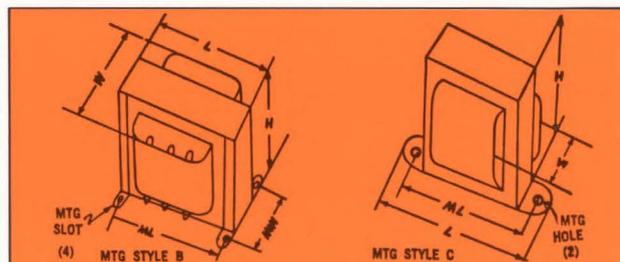

‡ Nominal 115V primary has added taps, i.e., 105/115/125V, Dual (DL) version is 115/230V only.

\* The DL (Dual Primary versions) are not stock items but are standard designs generally available on 2-3 week delivery, plus there will be a \$20 set-up charge per order.

\*The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

For example, in a F.W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

# filter chokes

## 0.5 TO 1000 AMPS

Signal's line of filter chokes is the most extensive available. It is designed to complement the selection of Rectifier Power Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full DC current. All resistance ratings are maximum values. Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

Signal's Dual Chokes are supplied with 2 windings which may be series or parallel connected with rating shown on chart. This line is basically designed for applications requiring lower inductance values at high currents, such as low voltage, DC supplies or SCR filters.

## CHOKES

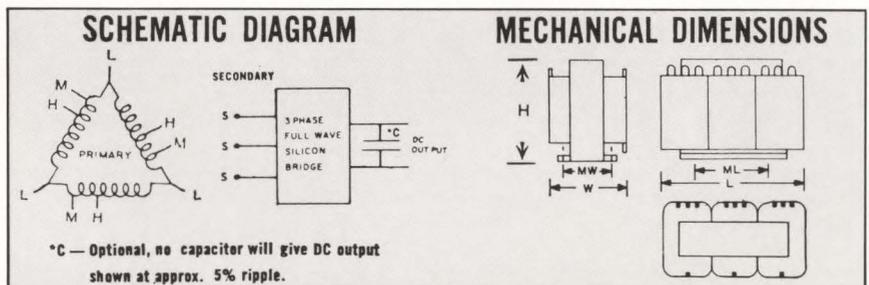

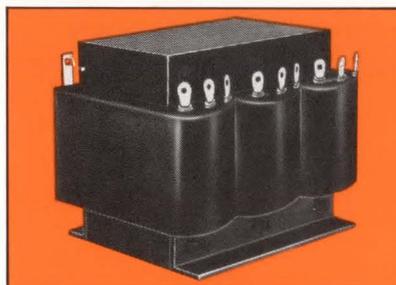

Part No.	Inductance (Milli-hy)	Current (Amperes)	Resis. (Ohms)	Dimensions				MW	Mtg. Screw	Approx. Lbs.
				L	W	H	ML			
CH-250	.3	250	.00115	7½	8	6¼	6¾	5⅞	¼	56
CH-500	.055	500	.00027	7½	6½	6¼	6¾	4⅞	¼	50
CH-1000	.015	1000	.000065	7½	7½	6¼	6¾	5⅞	¼	70

As shown on the schematic diagram dual primaries are provided. This permits parallel connection for 104, 110, or 120 volts or series connection for 208, 214, 220, 230, and 240 volts. Frequency range is 50 to 500 cps.

It is important to note that primary taps may be used to adjust the secondary voltages. Line voltages up to 125V (parallel) or 250V (series) may be used on the lowest primary tap. Nickel plated screw terminals are provided on a heavy phenolic board for easy primary connections.

# 3 phase high current rectifier transformers

## DC OUTPUT VOLTAGE

Part No.	Pri Tap "L" Supply Voltage		Pri Tap "M" Supply Voltage		Pri Tap "H" Supply Voltage		DC Rated Amps	Approximate Dimensions				Approx. Lbs.	
	208	220	208	220	208	220		L	W	H	ML		MW
3PH 24-50	24	25	26	27.5	28	30	50	7¾	6	5½	4.8	4⅞	35
3PH 24-100	24	25	26	27.5	28	30	100	11½	5	8¼	7.2	4	62
3PH 24-200	24	25	26	27.5	28	30	200	11½	8⅞	8¼	7.2	6¼	90
3PH 48-30	42	44	47	50	52	55	30	7¾	6	5½	4.8	4⅞	35
3PH 48-60	42	44	47	50	52	55	60	11½	5	8¼	7.2	4	62
3PH 48-120	42	44	47	50	52	55	120	11½	8⅞	8¼	7.2	6¼	90

At higher power loads (above 2-3 KVA) it becomes inefficient to use single phase 115 or 230 volt standard lines. With this in mind, our engineering staff has developed a line of 3 phase transformers for use off 208 or 220V 3 phase power lines. These offer the significantly higher

conversion efficiency and lighter power line drain of 3 phase systems. Since the principal application of these items is in high power dc power supplies, output ratings are given in dc voltage and current assuming the use of a 3 phase full wave rectifier.

# voltage regulators

MANUALLY CONTROLLED  
LINE VOLTAGE ADJUSTMENT  
65 TO 145V OR 145 TO 245V.  
OUTPUTS 115V OR 230V.

Easy Line Voltage Adjustment: Switch provided for 65 to 145V or 145 to 245V inputs, 50/60 cycle.

Built-in Meter: Output continuously monitored with Red Line at 115V or 230V output, as required.

Simple Installation: Up to 2KVA (Style EB): Receptacle and Line Cord with Plug.

Over 2KVA (Style JB): Enclosed Junction Box, Panel Mounted with Leads. Knockouts provided on all sides.

# power isolation transformers

INDUSTRIAL GRADE/STEP-UP OR STEP-DOWN. MANY POSSIBLE VOLTAGE RATINGS.

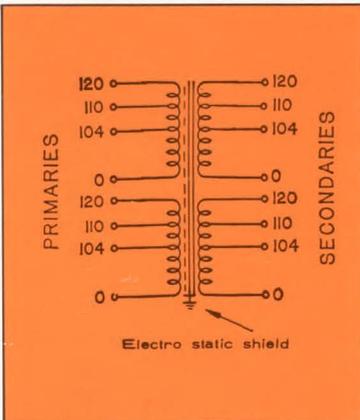

AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "SU" lines are designed for a maximum of 55°C rise above ambient for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated and have a consistently uniform appearance. All ratings are at full load current, continuous operation. 2500V. RMS Hipot is standard.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers (10-32 on ¼ and ½ KVA, ¼-20 on larger sizes). Connections can be easily made with a nut driver. It is also simple to alter the interconnections to change transformer ratings. **Electro static shields are provided grounded to the core.** The connection is made with a lug to ground and may be opened if an ungrounded shield is desired.

## DU SERIES 110/220 Dual Primary to 110/220V. Dual Sec. (Primary & Secondary may be reversed)

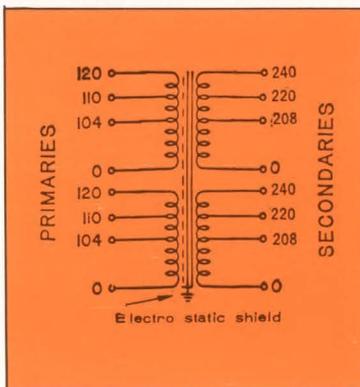

As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts. It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is doubled.

## SU SERIES 110/220 Dual Primary to 220/440V. Dual Sec. (Primary & Secondary may be reversed)

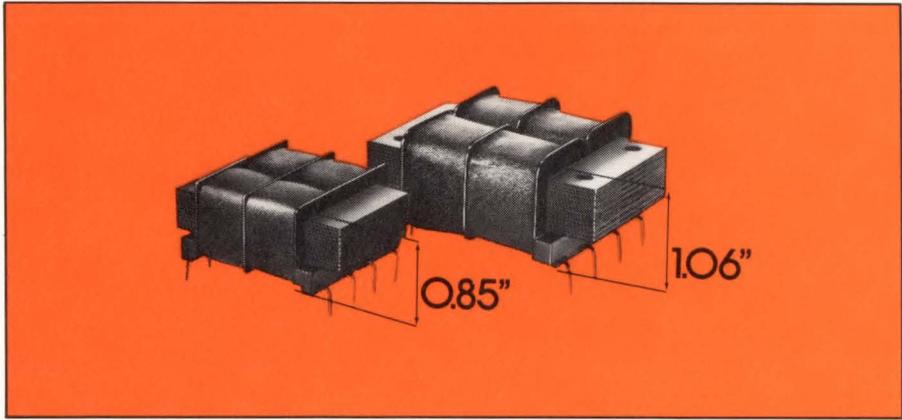

"SU" transformers are similar to "DU" types except that a 220/240V secondary is provided.

# flathead® plug in power transformers

FOR PRINTED CIRCUIT APPLICATIONS  
 2 SIZES — 6VA — 0.850 inches high  
 12VA — 1.065 inches high

**LOW PROFILE:** Allows 1 inch card spacing for 6va units or 1¼ inch card spacing for 12va units.

**DUAL PRIMARIES:** 115/230v, 50/60 Hz.

**NON-CONCENTRIC WINDING:** Where secondary is wound alongside primary rather than directly over it. This added isolation reduces inter-winding capacitance and **eliminates the need for an electro-static shield.**

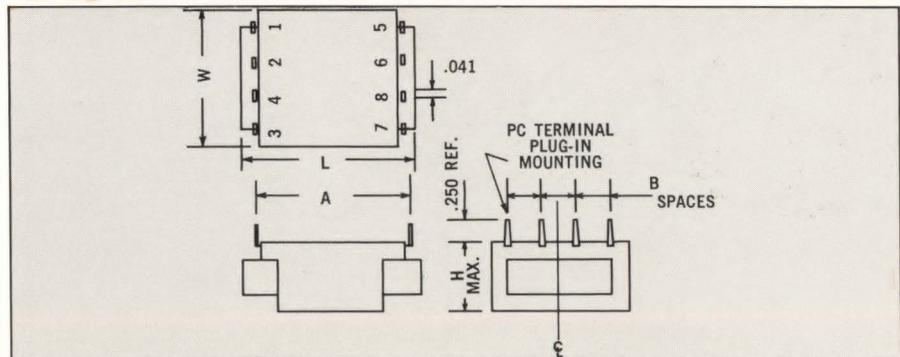

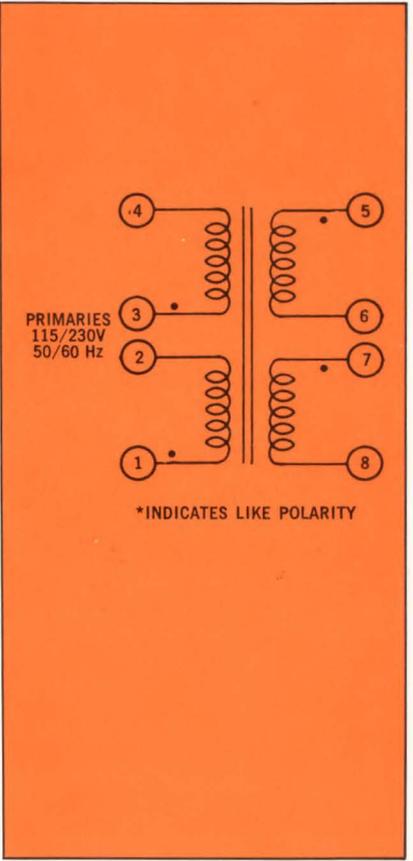

**1500V. RMS HIPOT:** Is standard because of the advantage of non-concentric windings.

**HUM-BUCKING CONSTRUCTION:** (Semi-toroidal) results in reduced radiated magnetic field and balanced windings.

The LP line of transformers is ideal for low height, critical pc board power applications in semi-conductor control and instrumentation. They are used extensively in single or dual output dc supplies and isolated control circuit and reference supplies.
