ELECTRONIC TECHNOLOGY FOR ENGINEERS AND ENGINEERING MANAGERS

# PRODUCT SHOWCASE

# supports your choice.

It's no secret that the faster you can design your ASICs, the faster you can get your products to market. Which is why Fujitsu lets you decide which design tools to use. Then we provide you with all the on-site support you need to breeze through not only product development but also product verification.

As your ASIC partner, we've got what it takes to help you turn a good idea into a great new product.

If you choose a popular engineering workstation, for example, we'll support you all the way. With libraries, convertors, test vector editor and a powerful, menu-driven file-management program called FAME (Fujitsu ASIC Management Environment) that boosts productivity by 300%.

If, on the other hand, you're using computers running third-party software, we'll support you there too. Our support goes even further with ViewCAD™. A complete set of easy-to-use tools that gives you a choice. Use ViewCAD for on-site verification or as a complete, stand-alone ASIC engineering workstation.

ViewCAD supports your entire design cycle. From schematic capture and logic design rule checking to test data entry, simulation, analysis and data conversion. All running on your favorite industry-standard UNIX®-based platforms. And all from Fujitsu.

ViewCAD puts years of ASIC experience under your belt. Experience that has led to more than 10,000 successful designs. And made Fujitsu the world's leading ASIC supplier.

ViewCAD's design methodology helps you shorten your product development cycle. Because it catches more design errors earlier in the process. Its powerful design capabilities and X Windows™ software lets you easily handle the overwhelming complexities of high-density ICs. Even our 100,000 gates and beyond.

With ViewCAD, you get the benefit of a powerful simulator that provides you with virtual mainframe compatibility. Including a simulation-to-silicon correlation of over 99.9%.

What's more, you can integrate ViewCAD with third-party tools for interactive design verification.

Which ensures the integrity of your design and reduces design verification and modification time. So your circuit is closer to silicon than ever before. And you're closer to market.

But supporting your design tool decision is only part of the story. As your ASIC partner, we expand your design team, providing you with fully staffed and equipped technical resource centers, coast to coast.

Each able to train your engineers and provide twenty-four hour design suites, so you can work whenever inspiration strikes. You also get ASIC sales and marketing support to help you smooth out all the administrative wrinkles.

So no matter what your decision, you can count on Fujitsu to support it. Which, after all, is everything an ASIC partner should be.

# A WORLD OF IEEE 488 CHOICES

## For OEM applications

Hardware interfaces and software drivers for OEMs who depend on superior products, pricing and technical support to make their products succeed.

**Hardware interfaces for the IBM  
PS/2, PC/XT/ATs, STD Bus and  
MULTIBUS systems.**

## Software Choices

Several software driver choices for each interface. Also, the menu-driven ASYSTANT GPIB package for scientific instrument control and data analysis.

Optional protection from unauthorized software copying for users of the PS/2 and PC interfaces.

Ziatech's world also includes STD Bus computers, software development systems, and local industrial networks for test and control applications.

# WHY VTC? ASK THE VME CONSORTIUM.

**"For a bunch of companies that don't always agree on everything, we sure were unanimous on VTC."**

The VME Consortium needed an economical, yet highly functional VME bus interface chip, to minimize design time . . . and to help raise the VME standard to higher levels.

"We looked at the leading suppliers," said Joe Ramunni, consortium chairman (and president of Mizar), "and VTC came out on top. Their CMOS standard-cell ASIC approach gave us the high drive capability we needed, optimized for bus interfacing. And, it proved much more cost-effective, with higher performance, than gate array technology."

The VME Consortium is made up of such firms as Plessey Microsystems, Omnibyte Corporation, Mizar Inc., Ironics Inc., Heurikon Corporation, Matrix Corporation, and Clearpoint Inc., among others. What did they look for in a supplier?

"We needed a credible business partner," said Ramunni, "with a proven track record, who could provide a turnkey package . . . both design and fab. A supplier that could produce in quantity, and provide technical support to the market at large."

"We also needed a firm with an international marketing structure, because we expect this chip to be the de facto standard worldwide."

"But, we needed *people* we could work with, too. VTC had the right 'comfort factor'."

Jack Regula, consortium technical director (and VP-R&D, Ironics) added: "Our requirements for high speed, high gate-count, low power consumption, and VME bus drive capability were all met well with VTC's 1-micron CMOS standard cell library. And we were extremely impressed with VTC's facilities, its people, and its customer list."

In the future, the VME bus chip (VIC) will become a standard cell within VTC's CMOS library, to allow customers to further customize the chip.

Shouldn't you be getting to know VTC, too? You'll be in good company when you do. Call or write us today, and we'll send you our short-form product catalog, which describes our product offerings in linear signal processing, high-speed CMOS logic, mass storage ICs, bipolar ASIC, and CMOS ASIC.

VTC Incorporated, 2401 East 86th Street, Bloomington, MN 55420. (In Minnesota, 612/851-5200.) Telex 857113.

# We've been making waves for 25 years. Now it's your turn.

A quarter-century ago, Wavetek brought you the first waveforms produced by a solid-state function generator. Now our Model 75 Arbitrary Waveform/Function Generator puts you in control.

Model 75 lets you generate waveforms without entering x/y coordinates. Thumbtack and rubberband modes allow easy development and editing of any waveform. There are also nine standard functions which you can use at the push of a button.

Waveforms are stored in nonvolatile memory, with more than 4,000 vertical points and 8,000 horizontal points of resolution. They can be played back at any rate, up to 500ns per point.

By linking two or more Model 75's together, you can superimpose waveforms to introduce phase displacement or other special effects. And at the low price of \$2295, you might want to buy several.

For literature or to arrange an amazing demonstration, call or write Wavetek San Diego, Inc., P.O. Box 85265, San Diego, CA 92138. Phone (619) 279-2200; TWX (910) 335-2007.

# The smallest big move in motor control.

Siliconix' new surface mount MOSPOWER Half Bridge Driver delivers a powerful 2 A while occupying less space than DIPs & DPAKs.

Siliconix has just made a very big move—in a very small way. Now it's your turn!

Save space! Improve reliability! Use your new half bridge driver in a tiny SO-16 surface mount package to replace two bulky MOSFETs in your motor control circuits.

And now that the through-hole devices are eliminated your assembly can be totally automated, reducing manufacturing cost and complexity.

The Si9950 contains 50 V complementary n- and p-channel MOSFETs that deliver the 2 amps you need for high performance. And the  $r_{DS(ON)}$  of each transistor is only  $0.3 \Omega$ . Resulting in low, low power consumption with direct drive from CMOS control circuitry.

*The Si9950 MOSPOWER driver is the perfect way to get more power into less space in motor control applications for disk drives, printers, copiers, plotters & battery-powered systems. It also makes an ideal MOSFET driver in high frequency power supplies.*

Make your big move to Siliconix' small Si9950 MOSPOWER half bridge driver. Dial our toll-free hot line now! Call 1 (800) 554-5565, Ext. 942 for your free MOSPOWER Half Bridge Driver Design Kit. It includes your sample, data sheet and application note.

**On the cover:** Part 2 of EDN's Product Showcase No 28 can help in your search for the best product for your application. Staff-written reports lead off each one of four product categories: hardware and interconnect devices (pg 52), instruments (pg 94), computers and peripherals (pg 128), and components (pg 168). (Photography by Kevin Bryan; photo colorization by Kim Fisher; art direction by Ken Racicot)

## DESIGN FEATURES

### Hardware and Interconnect Devices

#### Products and services can facilitate ESD control

52

As a design engineer, you might often view the damage caused by electrostatic discharge as someone else's problem. But only by using your engineering knowledge to understand the phenomenon can you wisely choose among the products that claim to offer protection.—*Dan Strassberg, Associate Editor*

### Instruments

#### High-performance DSOs present users with plenty of choices

94

An impressive collection of 100-MHz-and-above DSOs (digital storage oscilloscopes) have made their debut in the last year.—*Doug Connor, Regional Editor*

### Computers and Peripherals

#### Helical-scan drives store gigabytes on tiny tape cartridges

128

Tape drives that use helical-scan recording technology can store more than a gigabyte of data on 4-mm digital audio tape or 8-mm video tape cartridges. However, issues such as data-format standards, alternate sources, and cost may prove more important than the typical drive specs.—*Maury Wright, Regional Editor*

### Components

#### Crystal oscillators hit higher frequencies in smaller packages

168

Like other components, TTL- and CMOS-compatible pc-board crystal oscillators are moving into true SMD packages. And although ECL-compatible devices still come in standard metal cans, they now provide clock frequencies as high as 400 MHz to handle high-speed logic families.—*Peter Harold, European Editor*

## More ways to get in touch.

**We've added a new color screen to our full line of touch control operator interfaces.**

Fluke gives you more ways to improve the operator interface of your computer-based machine. Prompting operators through the sequence of your machine, touch control from Fluke reduces both input error and training time. Your customers will appreciate the value these state-of-the-art interfaces add to computer-based products. Our broad line spans a variety of models, from the economical to the most sophisticated, from panel mount to bench top—and now we've added color. The new 1050 gives you a palette of 32 brilliant colors—more ways to

create effective displays, with the same confidence in quality.

Every Fluke Touch Control Screen offers the advantages of an integrated subsystem, eliminating costly and time consuming integration of touch panel, display and logic components. Our rigorous quality-control procedures ensure that every unit operates reliably. And our touch control screens operate under the toughest of environmental conditions.

Fluke has been designing and manufacturing quality touch control subsystems for the past ten years. As an experienced OEM vendor, we understand your needs. You'll find us a reliable business partner, ready with the support you need: competitive discounts,

complete documentation, powerful software tools and worldwide service.

When you want to get customers in touch with your machine, get in touch with Fluke. Contact your local Fluke Sales Engineer or call **1-800-44-FLUKE**.

# The low-pass filter for real signals

**The SR640 dual channel,  
programmable, low-pass filter.  
115 dB/octave rolloff. \$2990.**

The SR640 offers a unique combination of filter specifications, preamplifier performance, and programmability at a price far less than other instruments. Featuring two fully independent 8-pole, 6-zero elliptic filters with less than 0.1 dB p-p passband ripple and 115 dB/octave rolloff, the SR640 is the ideal filter for general purpose signal processing as well as anti-aliasing for digital signal processing systems.

The GPIB and RS232 interfaces allow complete control of all instrument settings via computer control. The microprocessor components are optically isolated from the filter sections to provide optimum noise performance.

Whether your needs are for laboratory benchtop filters or signal conditioning filters in data acquisition systems, the SR640 is the natural choice.

## SR640

**\$2990**

1 Hz to 100 kHz cutoff frequency

## A product-oriented design aid

To save you time in your efforts to keep current, EDN's editors have surveyed the new-product offerings from thousands of companies, screening and selecting only the most significant of those offerings introduced in the last six months. We present our findings—the best of the best—in a format devised to make your product selection as easy as possible. You can keep this Product Showcase as a reference until the next one that covers these four key product areas appears in July.

You've just assembled  
the "perfect" EDA system.  
Now it's boxing you in.

# Mentor Graphics delivers the only Electronic Design Automation system that grows in size and power at the same time.

## Engineer or referee?

The time has come. You're about to take on a major design project, so you assemble a little of this and a little of that to construct the "perfect" EDA system. And quickly discover it's too little too late.

Why? Because unless all your tools are on speaking terms, you spend more time patching up arguments than you do designing. And the further you expand your system, the more boxed in you become.

Fortunately, there's a single, simple solution. Mentor Graphics' EDA tools.

## The sum of the parts.

No other EDA vendors provide the rich inter-tool communications paths found within our IDEA Series™ EDA system. From

schematic capture to output for manufacturing, your design data flows freely from one tool to the next.

Nor do they offer the broad array of tools you need to actually get your design out the door. Whether you're designing ICs, ASICs, PCBs, systems or embedded software, Mentor Graphics' tools cover the entire design cycle.

Nor can other vendors claim the experience we've accumulated. Currently, there are over 12,000 Mentor Graphics workstations producing everything from 32-bit VLSI microprocessors to 108 MIPS parallel computers. And our continuous dialogue with these customers gives us invaluable feedback in designing subsequent generations of EDA tools.

Mentor Graphics also provides a single source of service and support for your entire EDA tool set. No more finger pointing. No more delays. Our support organization takes care of all your hardware and software needs.

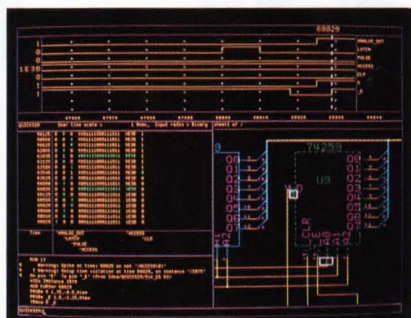

## To be continued.

It's all part of a vision unique to Mentor Graphics, the leader in electronic design

automation. Let us show you where this vision can take you.

Before you open all those strange boxes, call us toll-free for an overview brochure and the number of your nearest sales office.

**Phone 1-800-547-7390 (in Oregon call 284-7357).**

QuickSim™ logic simulation tools offer the broadest modeling support available and allow ASICs to be included in system-level simulations.

ChipGraph™ provides an IC layout environment rich with advanced features such as symbolic cell representation, yet programmable to emulate your current layout tools.

Board Station® promotes rapid, error-free PCB layout by permitting any combination of automation and interaction the professional board designer feels is necessary for a particular design.

Package Station™ offers a mechanical design and thermal analysis environment targeted directly at the needs of electronic packaging engineers.

# Mentor Graphics®

*Your ideas. Our experience.*

# How the fa

Our new 75ns PAL<sup>®</sup> device is fast enough to prove that standard logic shouldn't set the standard anymore.

It's also fast enough to finally let today's new microprocessors run at the speeds for which they were designed—breathtaking.

## **Raising your standard.**

How fast would you like your standard logic?

How about faster than any TTL logic around? Even FAST<sup>™</sup> or AS? You've got it with the 75ns PAL device.

And the fact that you can config-

ure it yourself means you can get exactly what you want.

If you want to redesign something, you change the PAL device. Not the board.

Not only is this the fastest way to get high speed logic, it's also the most practical. One 75ns PAL device replaces two to six standard TTL devices.

Which cuts down on board size.

And cuts down chances for a device failure.

75ns PAL Device vs. FAST & AS				
SSI/MSI		FAST	AS	75ns PAL Device
Combinatorial				
74138	tPD	8.0	10.0	7.5
Decoder				
74151	tPD	11.0	15.0	7.5
Mux				
Register/Latch

Eight bit Ctr	tCO	10.0	11.0	6.5

# st get faster.

## **What to give the microprocessor that has everything.**

We suggest the first PAL device that can keep up with it.

The 7.5ns PAL device runs at 74 Mhz. It can deliver the speed the new high performance microprocessors need.

Processors like the 29K, the 386 and the 68030.

This PAL device delivers 25% more speed than any other PAL device.

## **We even have the fastest 22V10.**

Our 15ns 22V10 runs at 50Mhz. That's 10ns faster than anyone else on the market. And it lets you run at twice the rate of the new 25Mhz microprocessors.

We've been shipping 20 pin 10ns

PAL devices for eighteen months. And now you can get the new 24 pin 10ns PAL device as well.

There's plenty of service and support to get and keep your project moving. And all our fast PAL devices are available in volume when you need them. Now, for example.

For all the facts about our fast PAL devices, drop us a line. Or call us at (800) 222-9323.

Because you can never be too fast.

# THE NIT PIC

# KER'S PICK.

Many of the world's most demanding engineers are already sold on the ES-1800 microprocessor development system from Applied Microsystems.

Because it's the only closely coupled system that includes emulators, debuggers, SCSI, two megabytes of overlay memory and transparency at operational speeds.

And because we've kept it state-of-the-art by constantly expanding and upgrading the system.

Now the ES-1800 supports most every popular processor, including 68020 at 25 MHz, 80C186 at 16.0 MHz and 68000 at 16.7 MHz. As a result, you don't need to replace your development system every time you select a new microprocessor.

There just isn't a more comprehensive, effective, efficient or experienced development system around. Not Intel ICE. Not Hewlett Packard.

Nearly 10,000 units out there continue to debug embedded systems more reliably than any of the others. By doing more. Faster, easier and more accurately. After all, thousands of nit pickers can't be wrong.

For a demonstration, write Applied Microsystems Corporation, P.O. Box 97002, Redmond, Washington, USA 98073-9702. Or call (800) 426-3925, in WA call (206) 882-2000.

IH6116/6216	CMOS 16-/8-Channel Differential Mux
IH5108/IH5208	CMOS 8-/4-Channel Diff. Fault Protected Mux
IH5116/5216	CMOS 16-/8-Channel Diff. Fault Protected Mux

## Coming soon:

DG508A/509A	8-/4-Channel Differential Mux
DG528/529	8-/4-Channel Differential Mux with Latches
IH9108	8-Channel High-Voltage Mux with Latches
DG201A/202	CMOS 4V Quad

## Choose your technology.

With a selection like ours, you can choose from nearly every major technology, including metal gate CMOS, JFET, DI CMOS and DMOS.

And you can choose the cost/performance that's best for your application. From our DG211 CMOS family at 35 cents per channel, to our standard-setting IH5341/5352 video switch family.

## A multitude of multiplexers.

If it's multiplexers you're looking for, we won't

disappoint you. We offer a full family of CMOS monolithic multiplexers, including our new IH9108 8-channel High-Voltage Mux with Latches. It's designed for especially low drain-on, drain-off and source off-leakage.

## Tops in military.

Look at this roll call: more than 150 switches and multiplexers that meet MIL-STD-883B Rev. C. And over 90 devices that are on DESC Standard Military Drawings and QPL.

That's more than anyone else in the business. We can deliver these parts in volume from our four certified Fab flows that are DESC-certified for JAN 38510 CMOS and bipolar production.

## Switch to solutions.

Perhaps most important, when you switch to Intersil, you switch to solutions. We offer extensive applications engineering support. And we're developing solutions to the problems you face every day.

So, to get the widest variety of switches and multiplexers, in the widest variety of packages and technologies, there's just one thing you have to do:

## Switch to Intersil.

For information on getting the right switch or mux for your military, computer, disk drive, instrumentation or communications equipment, contact your local GE Solid State sales office or distributor. Or call toll-free, 800-443-7364, extension 27.

In Europe, call: Brussels, (02) 246-21-11; Paris, (1) 39-46-57-99; London, (276) 68-59-11; Milano, (2) 82-291; Munich, (089) 63813-0; Stockholm (08) 793-9500.

# ACL from Signetics. It's logical.

Utilizing advances in fabrication technology, moving from six to three to one micron gate lengths, Signetics CMOS Logic now operates in the realm of the most advanced bipolar families. Yet it offers all the acknowledged CMOS benefits.

That's Advanced CMOS Logic (ACL) from Signetics. With an average gate propagation delay of 3 ns (150 MHz operation) and 24 mA output sink/source capability, Signetics ACL allows designers to implement the CMOS benefits across the whole speed spectrum of logic circuitry.

## **A new layout for a new technology.**

Traditional IC pin-outs, with supply pins at diagonally opposite corners, are a remnant from the days of single-sided print boards. They are inherently unsuitable for advanced CMOS logic, producing supply and ground noise resulting in a reduction in system noise margins, loss of stored data and lower system speed. Signetics ACL has multiple supply pins at the center of each side of the package, the input pins on one side of the package, the output pins on the other side and control pins at the corners.

The result is improved system reliability, simplified design and reduced board area.

All Signetics ACL ICs (74 AC/ACT11XXX family) are available not only in 300 mil wide DIP but also in SO packages, so you can use surface mounting techniques to increase PCB packing density even further.

Parts are now available through your local Signetics distributor. If you'd like full information on this important logic development, call 800/227-1817 ext. 983 or call your local Signetics sales office.

## **For Advanced CMOS Logic, the name is Signetics.**

Signetics Company, 811 East Arques Avenue, P.O. Box 3409, Sunnyvale, CA 94088-3409. Attn.: Publication Services MS27. Telephone: 408/991-2000

# NOW SERVING 68030 EMULATION

## MicroCASE supports the 68030 with 25 MHz emulation.

Step right up to the MicroCASE 68030 PROBE™ In-Circuit Emulator. The first, the fastest, the best 68030 support of its kind.

The 68030 PROBE incorporates the same unique features as our highly successful 68020 PROBE™ — the debugging tool chosen by hardware and software engineers in a wide variety of leading high technology equipment manufacturers world-wide.

### Pre-fetch pipeline dequeuing

The 68030 PROBE provides in-circuit emulation — at speeds up to 25 MHz. PROBE also features pre-fetch pipeline dequeuing, so it's easy to figure out which

instructions actually execute, and which bus cycles relate to those instructions.

And by merely changing the probe tip, the 68030 PROBE also supports the 68020.

### True source-level debugging

The 68030 PROBE provides on-line debugging of high-level language software. Real source statements are displayed, eliminating lengthy translations from assembly language to your high-level language.

PROBE utilizes an IBM® PC AT as

its instrumentation chassis, so you can get compiled code to its target via Ethernet, VAXNet, SUNNet, SCSI or RS-232. Whether you compile on a PC, a workstation or VAX,® MicroCASE supports more object code formats than any other vendor.

No need to wait any longer. Real-time emulation and dequeuing for the 68030 and 68020 are available now. From the number one supplier of hardware-assisted software debuggers for the 68000 series. The Atron Division of MicroCASE.

If you'd like more information, or a short product demonstration, call us today at **408-253-5933**. Or circle the number on the reader service card.

68020 PROBE and 68030 PROBE are trademarks of the Atron Division of MicroCASE. VAX is a registered trademark of Digital Equipment Corporation. IBM is a registered trademark of International Business Machines.

EDITED BY JOANNE CLAY

## **RISC PROCESSOR CAN RUN AT ONE INSTRUCTION PER CYCLE**

The ultimate goal of all reduced-instruction-set computers (RISCs) is to operate at a rate of one clock cycle per instruction—one CPI. Most RISC  $\mu$ P chips approach the one-CPI limit; ranges of 1.25 to 2.6 CPI are typical. (Generally, basic arithmetic and logic operations require only one clock cycle, but often the load-and-store operation and some types of branch operations require extra processing time.) Fujitsu Microelectronics Inc (San Jose, CA, (408) 922-9000), however, expects to meet the one-CPI goal with its SPARC H chips; the company expects to have the chips available in the second quarter of 1989. The H family extends the manufacturer's SPARC family and will include a floating-point arithmetic unit as well as cache-memory and memory-management ICs. The manufacturer won't release technical details until it's closer to having ICs available.—Jon Titus

## **DIAGNOSTIC BOARD FOR PC BUS DISPLAYS SELF-TEST PROGRESS**

The Postcard from Award Software Inc (Los Gatos, CA, (408) 370-7979) makes it easier to troubleshoot a malfunctioning IBM PC's (or compatible computer's) mother board. The \$399 card uses onboard LED displays to display a 2-digit code generated by the mother board's BIOS-ROM-based power-on self-test (POST). In addition, the Postcard contains its own diagnostic PROM that can test the computer's memory, video functions, hard- and floppy-disk drives, parallel and serial I/O ports, keyboard, and math coprocessor. The diagnostic PROM can also perform looped diagnostics for burn-in applications.—Steven H Leibson

## **CURSOR-POSITIONING DEVICE FITS INTO TIGHT SPOTS**

Mice and trackballs share two key disadvantages when used as cursor-positioning tools—they force the touch-typist to move away from the keyboard's home row, and they require a substantial amount of room in the keyboard or on a desk. The Isopoint, a positioning-control device demonstrated last month (November) at Comdex/Fall '88 by ALPS Electric (USA) Inc (San Jose, CA, (408) 432-6000), overcomes both of these problems. Developed over several years by San Francisco inventor Craig F Culver, the oblong Isopoint measures only about 1  $\times$  4 in. and derives positioning information from a rotating, sliding roller that you operate with your thumb. The roller drives two minuscule optical rotary encoders. A working prototype, installed below the space bar of a Toshiba laptop PC, was demonstrated at Comdex. The prototype device adds only 1/2 in. to the front edge of the computer. ALPS estimates that the Isopoint would add less than \$30 to a computer keyboard in OEM volumes.—Steven H Leibson

## **FIVE SIMULATION VENDORS WILL OFFER HARDWARE MODELER**

Five vendors of logic and fault simulators have signed agreements with Logic Modeling (San Jose, CA, (408) 922-0870) that will allow the simulator vendors to integrate Logic Modeling's hardware modeler in their logic and fault simulators. Logic Modeling's hardware modeler allows you to design your system or ASIC with actual VLSI circuits and pc boards as simulation models for design verification. The five simulation vendors are Gateway Design Automation (Lowell, MA), GenRad (Milpitas, CA), LSI Logic (Milpitas, CA), Valid Logic Systems (San Jose, CA), and Viewlogic Systems (Marlboro, MA). Besides selling its hardware modeler through OEM relationships with simulation vendors, Logic Modeling also markets the modeler directly to large companies that have proprietary simulators.—Michael C Markowitz

## **ETHERNET TERMINALS IMPLEMENT X-WINDOWS SERVER PROTOCOL**

Proving that the X-Windows graphic-display protocol for Unix isn't just for workstations, the 640 XDS (X display station) from Visual Technology Inc (Lowell, MA, (617) 459-4903) and the Xebra Model 100 from Acer Counterpoint Inc (San Jose, CA, (408) 434-0190) perform the server functions of the X Windows protocol for Unix systems, and couple to networks through Ethernet (IEEE 802.4) interfaces and the TCP/IP network protocol. The 640 XDS, which costs \$1995, features a 1024×800-pixel, monochrome display; its 82-Hz screen-refresh rate eliminates screen flicker. The Xebra Model 100 has a 640×480-pixel, monochrome screen and costs \$995 in small OEM quantities. Both terminals have 14-in. CRTs and include mice for cursor positioning.—Steven H Leibson

## **12-BIT D/A AND 10-BIT A/D CONVERTER OPERATE AT 25 MHz**

The CLC912 D/A converter and the CLC920 A/D converter from Comlinear Corp (Fort Collins, CO, (303) 226-0500) feature maximum operating rates of 25 MHz. The 12-bit CLC912 employs on-chip latches to minimize data skew. For video and frequency-synthesis applications that are sensitive to spectral purity, the company has added SINAD (signal-to-noise-and-distortion ratio) and harmonic-suppression ratings and spectrum plots to the D/A converter's data sheet. For example, noise and distortion are 59 dB below a 1-MHz signal generated by a CLC912 operating at a 20-MHz update rate. The device achieves reduced glitch energy by implementing the six most significant bits with 63 matched current sources instead of a conventional R-2R resistor-ladder network. The 24-pin converter costs \$35.70 to \$118.75 (1000), depending on linearity and temperature ratings and packaging.

The 10-bit CLC920 flash A/D converter takes 25M samples/sec and features a full-scale, bipolar signal-input range of  $\pm 0.5$  to  $\pm 2V$ . Like the data sheets for the D/A converter, the CLC920's data sheets include SINAD, SNR, and harmonic-distortion ratings for applications that are sensitive to spectral purity. The A/D converter dissipates 3.75W (typ) and is packaged in a 64-pin DIP with an integral heat sink. Commercial versions of the device cost \$175 (100).—Steven H Leibson

## **CASE-TOOL PRODUCT LINE IS AVAILABLE UNDER GSA CONTRACT**

Pursuant to a new procurement agreement with the Government Services Administration (GSA), Interactive Development Environments (San Francisco, CA, (415) 543-0900) will now offer its Software Through Pictures computer-aided software engineering (CASE) product line under GSA Contract Number GS00K89AGS5508. The contract comes under GSA Group 70, Part I, Section A, which encompasses automated data processing. Software Through Pictures tools assist software engineers in analyzing, designing, and documenting software. You can tailor the tools to meet your project's individual requirements. The programs run in the native windowing environments of Apollo, DEC, Hewlett-Packard, and Sun Microsystems workstations.—Joanne Clay

# Stay Generations Ahead in Video/RF 12-Bit ADCs

When it comes to the industry's highest performance 12-bit, 10 MSPS converters, TRW LSI can keep you out front. Whatever your data acquisition problem, TRW LSI's THC1200 Series provides the solution.

Take the THC1201: It's completely self-contained, including track/hold and all timing circuitry. Signal in, data out, all in a 46-pin hermetic DIP. Standard  $\pm 1.0V$  input range,  $\pm 15V$  and  $\pm 5V$  supplies, TTL interface and synchronous data output make this the easiest part of your system design.

Really cramped for space? Try the THC1202. You get the same leading-edge performance as the THC1201, but in a 40-pin package that's 40% smaller. And, as an extra bonus, you can dump that  $-15V$  power supply. And accommodate bipolar or unipolar input signals. That's not all . . .

If you have signals down in the mud, our THC1200 is the solution. It offers a full scale input range of  $\pm 167$  millivolts. That means you won't need that extra low-

noise gain stage. But, the whole world doesn't speak softly, so the THC1200 has a gain switch that gives you a  $\pm 2.5V$  input range. That's a gain shift of 15X, extending the dynamic range by over 23dB.

Need more? Give us a call. We have many other leading-edge conversion products on the drawing board. Or we'll do one just for you.

Even if you have already solved your 12-bit acquisition problem, talk to us. Remember, we guarantee full-spec performance. Plus, we can show you how to save time, space, power and money — and obtain multiple-source security without a redesign.

Part Number	Analog Input Range (V)	Package Style	Area (Sq. In.)	Power (W)
THC1202	$\pm 1.0$	40-Pin DIP	2.3	5
THC1201	$\pm 1.0$	46-Pin DIP	3.8	5
THC1200	$\pm 2.5$ and $\pm 0.167$	46-Pin DIP	3.8	9

## **ENHANCED 8-BIT MICROCONTROLLER HANDLES 16-BIT MATH**

Targeting applications that require both control and computational capabilities, the 80C517 enhanced microcontroller from Siemens AG (Munich, West Germany, TLX 5210025; in the US: Santa Clara, CA, (408) 980-4500) includes a math unit capable of performing  $16 \times 16$ -bit multiplication,  $32 \times 16$ -bit division, and 32-bit shifts. A  $16 \times 16$ -bit multiplication takes around 4  $\mu$ sec to execute. Although it remains fully compatible with the 80C51 instruction set and architecture, the 80C517 includes additional special-function registers and eight separate data-pointer registers. In addition, the microcontroller has an impressive range of on-chip peripherals, including an event timer that can compare events on as many as 21 I/O-port lines and capture events on five I/O lines; a 12-channel, 15- $\mu$ sec, 8-bit A/D converter; seven 8-bit bidirectional I/O ports; and two serial I/O ports. By using a 2-pass conversion technique, you can increase the A/D converter's resolution to 10 bits, and you can optionally use its 12 input channels as additional digital input lines. A conventional watchdog timer allows you to monitor program flow, and an additional watchdog circuit detects any failure of the microcontroller's clock oscillator. If the clock oscillator fails, the oscillator watchdog automatically holds the microcontroller in its reset condition. The microcontroller also has three separate power-down modes. Engineering samples of the 80C517 will be available during the first quarter of 1989, and production quantities will be available during the third quarter of 1989 at a price of around DM 25 (10,000).—Peter Harold

## **RUGGED MODULE PUTS ATARI ST INTO INDUSTRIAL APPLICATIONS**

If you're looking for an industrial version of a commercial personal computer but the myriad IBM-PC-on-a-card-set clones don't meet your requirements, consider the 190ST from IBP Gerätebau GmbH (Hannover, West Germany, 0511-630963). The metal-clad 190ST module operates from a 5V power supply and incorporates the circuitry from Atari's ST series of computers, including both monochrome and color video interfaces, parallel and serial ports, floppy- and hard-disk interfaces, mouse and joystick ports, and even the three MIDI (musical instrument digital interface) ports. These various interface ports are available through seven D-type connectors mounted on the module's front panel. In addition, the 190ST implements a  $\mu$ P-bus interface for communication with other IBP modules on a Eurobus-E backplane. With 512k bytes of RAM, the 190ST costs DM 2240. The company is currently seeking a US representative.—Steven H Leibson

## **HARDWARE WINDOWING ARCHITECTURE SPEEDS GRAPHICS**

The GS1 hardware windowing architecture from Caplin Cybernetics Corp (London, UK, 01-538-1716, FAX 01-538-4151) supports multiple windows in a graphics display. You can incorporate windowing circuitry based on the architecture in your VLSI graphics-controller IC, or you can develop a stand-alone windowing IC to use with a general-purpose graphics processor. For example, a windowing IC based on the GS1 architecture would interface to a graphics processor, video RAM, and a color-palette IC. (The GS1 architecture directly supports Brooktree palette ICs, but is not limited to them.) The windowing IC would calculate the appropriate sequence of video-RAM addresses in real time to move the windows smoothly or scroll the windows' contents. Such an IC could also arbitrate between overlapping windows and generate the pixel-display stream. Licensing fees for the architecture are about \$350 per IC.—Margery S Conner

# Flexible Triggering An Issue?

## Get the Ultimate in Flexibility and Speed!

- *Preview Of Trigger Settings*
- *Operate With Independent Trigger and Timebase Settings for Each Plug-in.*
- *200 MegaSamples per second*
- *Real Time Functions*
- *Zoom to x256*

Nicolet Test Instruments Division

5225-2 Verona Road, Madison, WI 53711 608/273-5008 or 800/356-3090

**Flexibility** — With Nicolet's 4180 plug-in and 4094C Digital Storage Oscilloscope, you can take the guesswork out of triggering. The Trigger View feature gives you a graphic representation of trigger slope, level and sensitivity superimposed on the actual trigger input signal. What this means for you is easy and accurate trigger setting. Using the 4094C with two 4180's allows four input channels with each two-channel plug-in having its own independent time base and trigger settings. That's flexibility!

**Speed** — Wideband input amplifiers allow you to capture signals up to a 100MHz bandwidth at digitizing speeds up to 200 MegaSamples per second.

**Support** — All this with unequalled factory support. As a user, your questions are answered quickly without the need for customer account numbers or other qualification.

Write or give us a call!

## An overview of algorithm sources

Shortly after reading Alan Clark's letter seeking a source of basic numerical algorithms (EDN, August 4, 1988, pg 31), I found a good overview of some books he may find useful. The overview appeared in the article "A designer's reference shelf: Part two" by P J Plauger, and it appeared in *Computer Language*, August 1988, pg 17.

Several of the books Plauger mentions are:

Sterbenz, Pat H, *Floating-Point Computation*, Prentice-Hall, Englewood Cliffs, NJ, 1974.

Hart, John F, et al, *Computer Approximations*, Robert E Krieger Publishing Co, Malabar, FL, 1968, 1978.

Abramowitz, Milton, and Stegun, Irene A, eds, *Handbook of Mathematical Functions*, Dover Publications, New York, NY, 1965.

My source for basic numerical calculations has been my vast collection of magazines (mostly *Byte*, but I've been leaning towards *Computer Language*), a few math texts, some digital-signal-processing texts, and various books on assembly-language programming. I usually need to use several of these sources—and the index is in my head, so the search for the answer to a simple problem can sometimes turn into a major mess. (However, I often find things of interest that are unrelated to the original problem.)

I'll be interested to see what other sources are available.

Eric Edin

Grants Pass, OR

Reading, MA, 1969, ISBN 0-201-03822-6). Knowledge costs about thirty-five bucks a volume.

Knuth covers most common programming problems, giving both practical algorithms and a theoretical basis for choosing the appropriate one. The examples are written for a mythical but simple computer and can be implemented on most microcontrollers and in any language. These books (there are now three volumes, I believe) are not cookbooks, and they're probably overkill for someone looking for a quick-and-dirty routine.

For specific microcontroller help, I recommend the assembly-language texts by Osborne/McGraw-Hill and Sybex (Rodnay Zaks, Ed). Both series are easy to read and contain sufficient information for most simple (conversion, integer arithmetic) programming problems. These run about \$20.

Graphics algorithms are harder to come by, as they are often very hardware-dependent. This fact is due to the calculation efficiency needed to achieve good performance. Graphics is also a rapidly evolving field for the same reason. There are some specific (academic) texts, but most of the "graphics on the PC (Amiga, Apple, etc)" texts are written for Basic and use built-in Basic functions—the ones you need to write.

Good luck!

Jan Lambert

Lambert Systems  
Oakland, CA

## The all-purpose algorithm

Herein is a response to Alan Clark's request for an all-purpose algorithm for computing floating-point and trigonometric functions (EDN, August 4, 1988, pg 31).

There does exist a unified algorithm for elementary functions

## Knowledge at \$35 per volume

With respect to Alan Clark's request for a source of algorithms:

The source of all knowledge is *The Art of Computer Programming* by Donald Knuth (Addison-Wesley,

*"I should have  
used Hitachi Drives."*

You've always known about Hitachi's well-deserved reputation for high quality, high reliability disk drives. Now, there's more good news. It's the *super-high density DK515-78 780MB 5.25-inch drive*, the latest addition to Hitachi's comprehensive selection of Winchester, magnetic tape subsystems and ultra-high density optical disk drive subsystems.

*The performance you want.*

Our new DK515-78 5.25-inch drive has it all. It features a full 780MB of storage capacity, lightning fast 16ms average access time, and a blazing 2.4MB/sec. data transfer rate. Plus, it offers a choice of SCSI or ESDI interfaces.

*The reliability you demand.*

When you specify Hitachi, you get more than high performance. You get unbeatable Hitachi reliability. Our DK515-78 is designed and manufactured to use our own motors, heads, microprocessors and LSIs. In-house design and production of all these major components and the most stringent quality assurance program in the industry, gives the DK515-78 a remarkable 40,000 hour MTBF.

*The partnership you can trust.* Do business with Hitachi, and you won't get stuck with yesterday's news. You'll get a reliable business partner who can deliver the drives you need, when you need them. Next time, specify Hitachi.

called CORDIC (Coordinate Rotation Digital Computer), which was used in a floating-point math package for the RCA COSMAC 1800 microprocessors, as well as in Hewlett-Packard's 9100 Series calculators. The algorithm calculates elementary functions, including multiplication; division; sine, cosine, tangent, and arctangent; hyperbolic sine, cosine, tangent, and arctangent; natural logarithm; exponentiation; and square root. There are also techniques for performing decimal-to-binary conversion (and vice versa) with CORDIC. The algorithm is based on coordinate rotation in a linear, circular, or hyperbolic coordinate system.

## Consultants share their library

Our company is a consulting firm in South Florida. Our designers and product developers have often required algorithms similar to those Alan Clark requested. In our search for solutions, we have found the following publications to be *very* useful:

Knuth, Donald E, *The Art of Computer Programming, Volume 2: Seminumerical Algorithms*, Addison-Wesley Publishing Co, Reading, MA, 1969. This volume contains many of the mathematical algorithms Alan is seeking.

Giloi, Wolfgang K, *Interactive Computer Graphics*, Prentice-Hall Inc, Englewood Cliffs, NJ, 1978. This book describes the techniques necessary to create graphic images.

Bennet, William Ralph, Jr, *Scientific and Engineering Problem Solving with the Computer*, Prentice-Hall Inc, Englewood Cliffs, NJ,

1976. This publication describes some of the more fundamental numerical and conversion algorithms Alan is seeking.

I honestly do not know if any of these books are still in print. They have all been useful to me personally, as well as to the rest of the staff.

Thomas Peterick

Consultant

## SPRAGUE HIGH-PERFORMANCE FILM CAPACITORS.

Sprague presents a versatile cast of rugged, metallized-film and film-foil, film-wrapped capacitors for applications where high-performance, high packaging density and moderate cost are essential. Features include a-c ratings, high-temperature operation and exceptional stability, low-loss, close tolerances, long-life and high reliability. Dielectrics include Polyester, Polycarbonate, Polypropylene, and

Polyphenylene Sulfide (PPS) films. Standard operating temperature ranges from  $-55^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$  depending upon dielectric used; capacitance values from  $0.0001\ \mu\text{F}$  to  $30\ \mu\text{F}$ , and voltage ratings from 30 to 15,000 VDC. Sprague lightweight, film-wrapped film capacitors are ideal components for your computers, communications, lasers, instruments and controls, medical equipment, aerospace and military applications. # BUILD KILLER CELLS.

This is the stuff reputations are built on.

A cell design with 200,000 gates. More than 1000 library elements. 2MB of memory. And sub-micron HCMOS technology.

You can search high and low, but there's only one place in the world you can find a chip of such staggering complexity.

LSI Logic.

Designs like this are precisely why we're the #1 domestic ASIC supplier with more than 5,000 working cell and array-based designs in the field.

And why our Modular Design Environment (MDE)<sup>™</sup> software is the best foundation for building killer cells.

MDE is the industry's most advanced design software for ASICs. It arms you with the capability to build today's most sophisticated cell-based designs. Easily. And with the smallest possible die size.

Besides MDE, LSI Logic delivers more than 400 LSI and VLSI building

blocks, including RISC micro-processor cells and industry-standard processor and peripheral functions; the longest list of SSI and MSI functions; and memory compilers to

develop exactly the RAM or ROM your chip requires.

And if your application calls for lower densities, that's covered, too. Because LSI Logic has more cost-effective cell-based solutions than you can imagine.

No matter what kind of cell-based ASIC you build, LSI Logic will deliver a fully-tested prototype in as little as 4 weeks.

All in the production quantities you want, thanks to our advanced worldwide wafer fabrication, assembly, and test facilities.

So find out more about LSI Logic's Cell-Based ASICs by calling the sales office nearest you.

After all, we can help you make a killing.

*High complexity Cell-Based ASICs require advanced tools like the MDE chip floorplanner to optimize delays and verify performance prior to layout.*

# Let Oki Handle the Protocol

## Oki's new PSCC provides automatic support for protocols—together with great networking flexibility

The new Protocol Serial Communications Controller (PSCC) from Oki Semiconductor is a highly innovative VLSI device which automatically supports LAPB and LAPD HDLC protocols and saves you from having to program and manage them. With a speed of 10 Mb/s, the PSCC also gives you great networking flexibility.

### Integrated functions

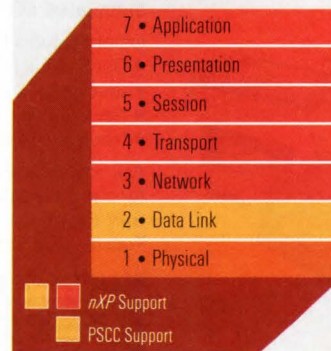

The PSCC combines a full-duplex HDLC channel, on-board DMA controller, and 520 bytes of internal RAM. It allows you to send and receive messages directly from memory and frees system intelligence for higher level functions. It automatically supports the update and comparison of state variables for multiframe transmission. In addition, the PSCC supports collision and priority detection.

For even greater integration, the PSCC will be imbedded in Oki's high-performance 16-bit *nXP* microcontroller which will support all seven OSI levels of the ISDN.

### Great flexibility

Easy interface is provided to standard 16-bit CPUs and to multiplexed buses. The PSCC can be easily customized to support different serial communications protocols. The high speed of the PSCC allows you to create a small inexpensive network, then to expand to a LAN, and later move into ISDN—all supported by Oki.

#### OSI Reference Model

### You can count on Oki

The PSCC is only one of the ways Oki can save you time and help you realize competitive advantages. You can also count on Oki for extensive experience, creative solutions, and proven

reliability in every aspect of semiconductor device design and manufacturing. We invite you to put the full resources of Oki Semiconductor to work for you.

### Automatic protocol support from Oki.

- ☐ Please send the complete technical data package on the MSM6872, the first member of Oki's Protocol Serial Communications Controller (PSCC) family.

## NEW DC/DC Converters

### 2:1 Input Voltage Range 15 Watt Output Ultra-High Reliability.

Just right for those telecommunications and battery-powered systems applications, the PWR53XX DC/DC Converter series has something for everyone. Three wide input ranges of 9-18VDC, 18-36 VDC and 36-72 VDC, three output voltages of 5 VDC, 12 VDC, and 15 VDC, and 15 Watts of power over temperature without derating. Its 2.4" x 2.8" x 0.7" size saves board space yet is still pin-for-pin compatible with the industry standard. It'll cost you less, too! Each device meets or exceeds all standards including overvoltage and short circuit protection, six-sided shielding, and very quick response to load changes. All this and an ultra-high calculated MTTF of over 85 years.

#### Other Features Include:

- Continuous In/Out Isolation . 500 VDC
- Efficiency . . . . . 75-85%
- Remote Logic Controlled On/Off
- Insulated Case

Zilog's Z80180™ is the CMOS general purpose controller with the high performance and the on-board peripherals that make it clearly the cost-effective, space-saving choice. Whether you're upgrading a Z80 application or designing a totally new system.

### *Zilog is Superintegration.*

*ASICs are the obvious answer to many of today's demands for customized products for specific uses. But it's also clear that, as the demand for higher levels of integration grows, the need for a new approach to ASIC arises. That new approach is Superintegration from Zilog.*

*Through Superintegration, Zilog has developed a rapidly growing family of Application Specific Standard Products (ASSPs). Simply put, ASSPs are working cores and cells combined and enhanced for specific applications. They are not custom parts. In fact, the ASSPs we develop use the same architecture and the same codes you're already working with. Compared to ASICs, ASSPs mean a lot less risk. And non-recurring engineering (NRE) charges are eliminated. Plus, tight on-silicon coupling enhances performance. And board real estate is significantly reduced. Think what all this can mean to your time-to-market.*

*And think about this. Nobody has a more complete library of proven, working generic cores, system cells, or I/O bolt-ons than Zilog. Nobody is better qualified to develop—and deliver—Superintegration parts.*

### Full software compatibility.

You'll be up and running with the Z180 immediately. Because it's 100% object code compatible with Z80/8080.™ You probably already know the code, so you can port right onto the Z180. Not only that, since Zilog originally developed the part jointly with Hitachi, the Z180 is directly compatible with Hitachi's version, the HD64180Z.™

### Enhanced performance.

Of course, the Z180's CPU core gives you more power and speed than discrete CPUs. Besides that, there are several new instructions. You also get operating frequencies to 10 MHz. And you have the overall performance advantages of CMOS and Superintegration.™

### The important peripherals are on board.

The Z180's high integration results in impressive savings in costs and real estate. The MMU gives you one Mbyte of addressing space. You have 2 DMA channels, 2 UART channels, and 2 16-bit programmable counter-timers. Plus wait-state generators, an interrupt controller, a clock oscillator/generator, and a clocked serial I/O port. All integrated on the Z180 chip.

If this isn't enough to convince you to take a look at what the Z180 can do for your design project, here's a little more to consider. The full complement of development support tools are readily available from industry leaders. And the Z180 comes to you off-the-shelf, backed by Zilog's proven quality and reliability. Find out more about the Z180 or any of Zilog's growing family of Superintegration products. Contact your local Zilog sales office or your authorized distributor today. Zilog, Inc., 210 Hacienda Ave., Campbell, CA 95008, (408) 370-8000.

# Macro choice—a first in micro control

**Signetics CMOS microcontrollers—now you can choose an 80C51 derivative that fits your price/performance requirements.**

Macro choice! You no longer have to accept less performance than your design requires, or be forced to use devices with more features and functionality than you need.

Signetics has more 80C51 derivatives than any other supplier. We make it easy for you to choose the device that most closely conforms to your specific needs.

**Macro choice! ROM, UV, EPROM and OTP.**

Only Signetics offers just the right type of program storage for your stage of production. Most of our 80C51 derivatives are available in UV EPROM versions for design-in and prototyping, OTP EPROM for low-volume production and masked-ROM for lowest cost at high volumes.

**Macro choice...and mega support!**

Now your CMOS microcontroller designs can migrate over a wide range of memory sizes and feature sets that all have the same 80C51 architecture and instruction set. And all are supported by Signetics development systems and third party programmers.

**For macro choice—we've got the guts!**

That's right, we have those essential microcontrollers you need to improve total system performance. Take advantage of the largest choice of 80C51 derivatives available from a single supplier in commercial, industrial and military temperature ranges.

**Get your design under control now!**

Call Signetics at (800) 227-1817, ext. 990D, for a free Microcontroller Information Packet. For surface mount and military product availability, contact your local Signetics sales office.

One standard.  defects.

# class of

NEC expands your design horizons with a new class of high density memories – 4M EPROMs and 1M SRAMs. These chips not only give you greater capacity, they also offer high speed and low power consumption.

## 4-Megabit UV EPROMs

NEC leads the industry again with the introduction of 4M EPROMs. Providing unprecedented flexibility for storage of large-scale programs and fixed data, these devices help you achieve higher design goals.

The  $\mu$ PD27C4001DZ is fabricated with a  $1.0\mu\text{m}$  CMOS process. It comes in a  $512\text{K} \times 8$  organization, and offers many advanced features, including –

- ☐ Fast access: 150/170/200ns.
- ☐ Fast programming: less than 60 seconds for all 4 megabits.
- ☐ Low power consumption: 30mA (max) active;  $100\mu\text{A}$  (max) standby.
- ☐ 32-pin DIP with JEDEC standard pinout.

## 1-Megabit SRAMs

Our new SRAMs give you 1-megabit density combined with 85ns access speed and low power consumption: 70mA (max) active,  $100\mu\text{A}$  (max) standby. For battery back-up needs, we offer the L-version which requires only  $50\mu\text{A}$  (max) for data retention. The  $\mu$ PD431000 family features:

- ☐  $128\text{K} \times 8$  organization.
- ☐ 3 speeds: 85/100/120ns.
- ☐ 32-pin 600 mil plastic DIP; or 525 mil SOP.

To find out how megabit memories can multiply your design possibilities, call NEC today.

***The RISC that  
lets you build faster  
computers faster.***

# ***Introducing the RISC 7C600 Family: 20 VAX MIPS, SPARC architecture, and development systems today.***

Before you design the next generation of highest performance computers, meet the RISC 7C601 microprocessor from Cypress Semiconductor.

You'll build faster systems because this 20 MIPS RISC chip is available today, running at 33 MHz. It outperforms all others using SPARC™ (Scalable Processor ARChitecture), the fastest RISC architecture, implemented in our fastest 0.8 micron CMOS technology for outstanding performance and cool low power.

## ***A complete chip set.***

The fastest microprocessor doesn't stand alone. Besides the RISC 7C601 Integer Unit (IU), you can incorporate our CY7C608 Floating Point Controller (FPC) to interface with a standard floating point unit to perform high-speed floating point arithmetic concurrent with the IU.

Although the IU can function on its own with high speed local memory in a dedicated controller application, for most computer applications our high performance CY7C603 Memory Management Unit (MMU) coupled with the IU and FPC gives you the fastest access to both cache and main memory through the 32-bit address bus and 32-bit data/instruction bus. It also supports the SPARC Reference MMU architecture giving you compatibility with standard UNIX® operating systems.

Our CY7C153 32Kx8 Cache RAMs and the CY7C181 Cache TAG RAM maximize your throughput by providing a cache selection capable of running at full speed with a 33 MHz IU.

We also deliver the highest performance SRAM, PROM, Logic, and PLD parts. So you can make the most of those MIPS.

## ***Develop your systems quickly.***

You'll build systems faster because the 7C601 is based on SPARC. You have a choice of powerful development systems already running on the target

architecture. Plus there's a wide range of UNIX-based languages, tools, and utilities that already run on SPARC. You have more proven development tools, making this RISC easy to integrate into your design.

## ***Design around a proven architecture.***

The 7C601's SPARC architecture has already been embraced by companies like AT&T, Sun Microsystems, Unisys, and Xerox. And SPARC systems are already on the market, like the Sun-4. In fact, AT&T has selected SPARC for the first UNIX Application Binary Interface (ABI), which will allow all SPARC-based computers to run the same off-the-shelf UNIX applications. With our RISC 7C600 family you're designing around an accepted architecture with unlimited potential.

## ***Make the fastest decision.***

Our free brochure, RISC Factors, will give you more information about the factors affecting RISC microprocessors. Because deciding which microprocessor to use is not a snap decision, but it can be a fast one.

## Programmers hate open memory

If asked about our computer needs today, many of us would shout "More memory!" Our desire for more and more computer memory has persisted because programmers, in their eagerness to enhance their products, usually fill so-called open or free memory as fast as they possibly can.

In the early '70s, I programmed a PDP-8/L minicomputer that supplied 8k words of memory. The computer did a fine job of automating many data-acquisition and number-crunching tasks. We couldn't believe our luck when a 32k-word disk was added to the system. Unfortunately, the operating system and all the enhanced application programs quickly filled the disk. The computer did the same jobs, we said, but it did them better.

When we moved to microcomputers that provided 64k bytes of storage space, we thought we'd have lots of extra memory for data storage and manipulation, but it just was not to be. Instead, the size of our CP/M application programs expanded, too. Certainly the expanded programs offered more capabilities and we could select from a larger range of options, but basically they did the same things as their predecessors. What's more, there was little free memory.

In the early '80s, the IBM Personal Computer enlarged the available memory space tenfold to 640k bytes, but the program-expansion trend continued. For example, a communications program that required about 2k bytes of memory in our CP/M computer now needs about 20k of memory in the PC. Again, our expanded program provides enhancements, but it doesn't offer a decade's leap in performance.

The OS/2 operating system makes matters worse. Before you can run OS/2 on existing IBM PCs and PC-compatible computers, you must expand the memory to 2M bytes at a minimum. You can still run MS-DOS-type application programs, but the OS/2 software's needs shrink the available space to about 540k. That's 100k, just for part of the operating system.

It seems inevitable that program expansion will continue. Users may view small computers that offer 16M bytes of memory as the answer to their expanding memory needs. Of course, there will be new applications that really need large quantities of memory—a circuit-simulation program is a good example. But while we're expanding memory space and shrinking computer systems, we ought to be looking for better software-production techniques as well. Based on my own experience, we have a long way to go.

# Products and services can facilitate ESD control

*An ESD simulator that can inject transients by contact or through the air (Keytek Instrument Corp)*

As a design engineer, you might often view the data loss and damage caused by electrostatic discharge as someone else's problem. But only by using your engineering knowledge to understand the phenomenon can you wisely choose among the thousands of products that claim to offer protection.

Dan Strassberg, *Associate Editor*

**E**lectrostatic discharge (ESD) isn't like most of the other phenomena that trouble electrical engineers. Though it *can* do so, ESD doesn't usually cause immediate, outright catastrophic failures. More often, ESD-related problems range from the corruption of data, to system lock-up, to the creation of "walking-wounded" devices destined to fail prematurely—after you ship your product.

As a result of the widespread use of ESD-susceptible ICs, such as high-speed logic chips and VLSI devices, the electronics industry has begun to realize ESD's potential costs. In response to this realization, hundreds of vendors now offer thousands of products to help manufacturers control ESD effects. By one estimate, the value of the ESD-control products and services sold in the US in 1986 exceeded \$200 million. Unfortunately, though, too many ESD-control measures are selected on the basis of mythology and folklore rather than as a result of a solid understanding of the problems. Moreover, design engineers too often think that ESD control is the province of people in manufacturing and field service, when, in fact, steps taken during the design phase could make many products substantially more resistant to the ravages of ESD.

Despite the mythology and folklore, there are logical explanations for the mechanisms that cause ESD-induced damage in devices and systems. But, improving the accuracy with which discharge-susceptibility tests simulate real-world conditions still poses a significant challenge. Consequently, many standard-setting organizations continue to work on refining the circuit models that describe discharges and on characterizing discharge waveforms. This work is likely to continue for years.

Warning labels and conductive straps, mats, and bags (Static Inc)

ESD-related problems range from the corruption of data, to system lock-up, to the creation of "walking-wounded" devices destined to fail prematurely.

ESD-control measures at plants that manufacture electronic systems and subsystems take two basic forms. The most common form consists of process-oriented programs that are supposed to reduce the likelihood of damage to components and assemblies. Such programs usually affect factory areas and occasionally affect design-engineering labs. Personnel who load, test, and troubleshoot pc boards wear grounding wrist straps and, sometimes, conductive footwear. Floors may be covered with conductive tiles. Boards and components travel in conductive containers. Conductive mats cover benchtops, and air ionizers and humidity controllers may be used to condition the ambient air.

Process-oriented programs make no attempt to alter the design of the products being manufactured, and all too often the effectiveness of such programs is questionable. Nonetheless, fewer companies use a second form of ESD control: limiting product vulnerability by design. Through an understanding of discharge phenomena, you can design products with inherent immu-

nity to ESD. Then you can perform controlled tests to verify the ability of such products to survive.

A knowledge of how electrostatic potentials arise is invaluable in selecting the appropriate control products as well as in designing your product for ESD immunity. Though the derivation of these values is beyond the scope of this article, your capacitance to ground while wearing ordinary insulating shoes is somewhere between 100 and 500 pf. Because the soles of women's shoes are usually thinner than those of men's, women typically have higher capacitance to ground than do men. And, if you are standing on an insulating floor and then sit down on an insulating chair, raise or lower an arm, or lift your feet off the floor while seated, you change your capacitance to ground.

#### Small energy . . . big trouble

When you walk across an insulating surface or shift your position on the insulating seat of your chair, triboelectric effects, commonly known as friction, cause your body to become charged. That is, the potential of your body with respect to ground changes. You are actually converting mechanical energy into electrical energy, and the electrical energy is stored in your body capacitance. Small currents, in the order of nanoamperes, flow through your body to charge its capacitance in seconds. Both the charge and the energy stored are relatively small:  $W = \frac{1}{2}CV^2$ ;  $Q = CV$ . Potentials on the order of 5 kV, which is more than enough to rupture an insulating oxide layer in an IC, are commonplace. If your body potential is 5 kV and your capacitance to ground is 150 pf, the energy stored in

*Conductive gaskets that keep discharges from injecting noise through openings (Tecknit)*

*Directory provides extensive data on thousands of ESD-control products (SAR Associates)*

*System characterizes components according to the latest MIL-STD-883 requirements (Trisys Inc)*

your body capacitance is approximately 19 mJ or 19 mWsec, and the charge is 0.75  $\mu$ C.

Because there is little resistance or inductance to limit the current, grounding yourself or touching an object at a different potential with respect to ground—actions that change the charge stored in your body capacitance—can cause destructive results. The change in stored charge takes place rapidly; therefore, the peak current can be quite large. At present, researchers in the field believe that the discharge currents can reach a peak in less than 100 psec and possibly as quickly as 30 psec. In the above example, the capacitor discharge can give rise to peak currents ranging from 0.5A to more than 30A. If such currents were to flow through practically any logic IC, they would cause irre-

versible damage by vaporizing some of the deposited metal stripes.

Thus, ESD-induced damage occurs after small currents charge small capacitances to high voltages. Destructively large currents then flow when the small capacitances discharge rapidly. A mitigating factor is corona, which causes the air to become conductive when electric field gradients become large enough. Corona limits the potential difference between your body and its surroundings to a maximum of 40 kV and also slows down the leading edge of discharges.

Process-oriented ESD control is based on the idea that by connecting people and equipment to a common ground, you can limit ESD-induced potential differences to the order of a few hundred volts and hence limit stored energy and the currents that can flow. Furthermore, by surrounding sensitive components and assemblies with high conductivity material, such as antistatic bags, you can divert any current that does flow away from circuit nodes susceptible to damage.

#### **Attitude is key to process-control success**

Many vendors maintain that failures of process-oriented control programs don't occur because of the industry's imperfect understanding of ESD waveforms. Nor are such failures caused by inherent defects in ESD-control products, the majority of which are effective when properly applied. Rather, process-oriented programs most often fail because the personnel involved don't understand the basics of ESD. Failure to observe ESD-control procedures can cause problems that don't become apparent for months.

*Stackable conductive containers that help protect pc boards from ESD (Buckhorn Corp)*

A knowledge of how electrostatic potentials arise is invaluable in selecting the appropriate control products and designing your product for ESD immunity.

And, although the failures can be expensive—especially when customers are the ones who discover them—improper handling of components and assemblies usually causes failures only a small percentage of the time. As a result, personnel who must follow control procedures often get the impression that the extra process steps are unnecessary. This cavalier attitude toward static control leads to breakdowns in the use, monitoring, and maintenance of static-control equipment: A process-oriented approach to static control requires continuous vigilance.

Dozens of products are available to help you implement the necessary vigilance. For example, many companies offer wrist-strap testers; prices start at approximately \$100. Not only do these devices indicate that the mandatory 1-M $\Omega$  resistor in a wrist strap is neither open nor shorted, they also indicate whether a strap is making satisfactory contact with the wearer. It is easy to wear a strap so loosely that it does no good. Air ionizers are another type of product that you mustn't forget about after you install them. Ionizers can become clogged with dust. You can buy ionization detectors that indicate whether your ionizers are performing their intended function.

Proponents of vulnerability limitation by design maintain that if you design your product to survive ESD, you don't need to be quite as careful while you're building it or after you install it. One of the problems

*An economical tester that guards against ineffective wrist straps (Wescorp)*

*A battery-powered meter that indicates surface resistivity (Monroe Electronics Inc)*

with vulnerability limitation by design, however, is conducting meaningful tests to prove that the product is immune to ESD. Standards for ESD-susceptibility tests abound; so do stories of products that passed such standardized tests and still exhibited unacceptable levels of failures traceable to ESD. A standard that has come in for more criticism than most is MIL-STD-883C. Criticism of the standard may be the reason why the Department of Defense has recently changed the specification's ESD-test provisions.

#### **Always keep EE fundamentals in mind**

If you elect to limit the vulnerability of your products by design you must pay careful attention to electrical engineering fundamentals, particularly electromagnetic field theory. Because of the extreme speed of discharge waveforms, high-frequency design techniques apply. Inductance in connections intended to carry discharge currents around susceptible components can make what you think is a short circuit behave like an open circuit during a discharge. Discontinuities in ground planes can permit energy to radiate into what you think is an impervious enclosure. The most successful and economical ESD-resistant designs begin life with a design objective of ESD immunity and are carefully tested by their designers to verify that the objective is met. Though you can and, indeed, some-

## Process-oriented ESD control consists of connecting people and equipment to a common ground to limit ESD-induced potential differences.

times must "engineer" ESD immunity into existing products, the experience can be painful and the costs significant.

Until recently, engineers have considered the problem of making products ESD immune to be soluble only by hardware approaches. "Not so," says Warren Boxleitner, director of engineering at KeyTek Instrument Corp, a manufacturer of ESD simulators such as the \$3620 MiniZap. Boxleitner claims that software can play a major role in providing ESD immunity and can often be the least expensive way to combat ESD.

He cites an example in a  $\mu$ P-based computer keyboard.

Most such keyboards have a few keys—CAPSLOCK, for example—that, when in a particular state, illuminate an indicator. ESD can cause the actual state of the key to differ with the displayed state. However, if you store the desired state of the display in three widely separated memory locations, the keyboard's  $\mu$ P can periodically determine whether the three locations contain the same information. If they do, the  $\mu$ P can set the displayed state to agree with the stored state. If one of the three memory locations contains a state

### For more information . . .

For more information on the ESD-control products and services discussed in this article, contact the following manufacturers directly, circle the appropriate numbers on the Information Retrieval Service card, or use EDN's Express Request service.

# It pays to get with the system!

Holmberg's cable applied products system offers a complete line of high quality D-subminiature components including:

- 9 through 50 position male and female connectors
- snap-together plastic and metalized backshells
- gold plated 20 to 30 AWG contacts
- an automated stripper/crimper machine for volume applications

This cabling system approach allows you to put total quality responsibility upon Holmberg Electronics. We'll stand behind the components, the tooling and the termination.

Our unique stripper/crimper machine and snap-together backshells will substantially reduce your assembly time and component inventory.

- Our electrically-driven stripper/crimper machine is easily adjustable to handle 20 to 30 AWG applications.

- Our backshell design eliminates the need for gates and grommets, while allowing for a straight or right angle cable exit path.

These are just some of the many features Holmberg has to offer to help make you more competitive by reducing your applied cost. Our cabling system provides you with competitively priced, domestically-manufactured components that have earned a quality reputation throughout the industry.

It pays to specify the HOLMBERG system!

## The most successful and economical ESD-resistant designs begin life with a design objective of ESD immunity.

indication different from that in the other two, the  $\mu$ P can set the displayed state to agree with the "consensus." Such an approach enlarges the keyboard's firmware; but, in an actual keyboard that uses the approach, the ESD-immune firmware fits easily in the same size PROM as did the susceptible firmware.

### Line-transient and ESD protection are related

Many of the design techniques that make for ESD immunity also reduce a product's susceptibility to transients on the ac power line—for example, those caused by lightning. You can often save design time and help to control product costs by simultaneously considering your product's ESD and line-transient susceptibility. For example, you can improve a product's resistance to both line transients and ESD by placing networks that contain metal-oxide varistors (MOVs) and silicon-avalanche transient absorbers at the product's power inlet. Examples of transient absorbers are General Semiconductor Industries' Zorbs and Tranzorbs—available at prices ranging from \$0.35 to \$84.70 depending on rating and quantity.

Products for ESD control are enormously varied—it is impossible to provide a comprehensive listing of them in a few pages. **Table 1** lists just a few. But, if you are interested in an all-inclusive directory, you can get one—SAR Associates publishes the ESD control-products file. The publication is massive. It consists of three 8½×11-in. looseleaf binders containing copies of data sheets on thousands of ESD-control products organized by product type. The control-products file sells for \$335.

### Consultants' knowledge can save you money

If working in an unfamiliar technical area intimidates you, there are many places to turn for help. Several consulting firms specialize in ESD control. One of them is Julie Associates, whose president, Jerry Giuliano, calls attention to the savings that consultants can achieve. He cites a story about a company that was about to remove ordinary, insulating floor tiles from a large area and replace them with conductive tiles. The cost was to approach \$100,000. A consultant pointed out that the concrete beneath the tiles exhibited acceptable conductivity. By removing the tiles and not replacing them, the company achieved its objective at little cost. Early in 1989, Liberty Labs is scheduled to publish a directory of consulting firms and test laboratories active in electromagnetic compatibility (EMC). Many of the firms to be listed also possess ESD exper-

*A battery-powered tester that determines if the humidity is high enough for ESD control (Beckman Industrial)*

tise. After the introductory pricing expires on March 31, 1989, the directory will cost \$65.

The ESD-control industry also has its own technical organization, the EOS/ESD Association. (EOS stands for electrical overstress.) The association holds a trade show and conference each September and publishes the proceedings. Membership for US residents costs \$20.

# Fluorinert™ Liquids—products that power Fluoronics Resources.\*

## \*Fluoronics Resources:

An exclusive 3M combination of innovative products backed by research and development, manufacturing expertise, technical data and service assistance built on more than 35 years' experience of pioneering in fluorochemistry.

3M has had a whole generation of experience in the development, manufacture and refinement of perfluorinated liquids. We first introduced these versatile liquids to electronics design, testing and production professionals in the fifties. Since then, Fluorinert Liquids have become the mainstays in electronic cooling, high reliability testing and vapor phase soldering.

Fluorinert Liquids, used as a direct contact heat transfer medium, offer a range of physical properties that make them particularly suitable for electronic uses. They are non-polar and exhibit no solvent action. They are colorless, low in toxicity, non-flammable and offer exceptionally high dielectric strength plus thermal and chemical stability. Most important, they have almost no chemical reactivity and they evaporate without leaving a residue on parts.

### Buy the numbers

Our FC™ numbers — FC-40, FC-70, FC-77, etc. — are used to identify Fluorinert Liquids that offer certain physical characteristics to meet specific application needs. These FC numbers are solely 3M designations for various fluorochemical products.

Fluorinert Liquids are being used cost-effectively in cooling, high reliability testing and vapor phase soldering operations. When you are interested in applying these versatile liquids in your own production, 3M can provide an abundance of technical information and support.

### Technical assistance: the main benefit of Fluoronics Resources

3M offers prompt assistance to help you solve many production and testing problems. We provide comprehensive technical recommendations for specific fluids. We consult with you on the proper application equipment and help you evaluate production methods and results. Our service bulletins bring you up to date on the most recent advances in vapor phase soldering and high reliability testing. Ask us about 3M's audiovisual materials and on-site application training seminars.

### Discover Fluorinert™ Liquids' heat transfer capability

What are your needs? A precise degree of temperature control? Fast, uniform heat transfer? High dielectric strength? Fluorinert Liquids offer the broad range of physical characteristics required in most applications.

Fluorinert Liquids are an effective direct contact heat transfer medium whether used in a liquid or vapor state. Their unique properties enable you to use them in contact with sensitive components and substrates.

Major differences between the various products in the Fluorinert Liquids family can be seen in their boiling points. These can range from 56°C to 253°C. Should you need products with intermediate boiling temperatures, the 3M staff will work with you to fashion a product especially for your needs. It's an example of how 3M's Fluoronics Resources provide you with "customized" service to solve special problems.

### Fluorinert™ Liquids achieve accurate high reliability testing

It's a small world you work in. Where time ticks in nanoseconds and dimension is measured in Angstrom units. And as circuitry becomes more complex, a greater demand is placed on testing capability — not only in speed, but in higher reliability and accuracy.

Fluorinert Liquids meet those requirements by providing a controlled temperature environment and a high degree of electrical protection. They offer maximum compatibility between

the heat transfer medium and the device under test. Fluorinert Liquids reduce testing costs by reducing testing time substantially. They do this by rapidly reaching test temperature and providing precise and uniform temperature control. You'll minimize the number of faulty units by detecting defects before they become rejects.

These liquids provide cost-effective tests such as gross leak, thermal shock, liquid burn-in, ceramic crack detection, electrical environmental, temperature calibration and failure analysis/short detection.

Fluorinert Liquids are specified in the MIL-STD's for thermal shock and gross leak testing.

#### THERMAL SHOCK TEST CONDITIONS

Military Standard 883-1011			Military Approved Fluorinert Liquids	
Test Condition	Hot Test Step 1	Cold Test Step 2	Hot Test Step 1	Cold Test Step 2
A	100°C	-0°C	Water, FC-40	Water, FC-40, FC-77
B	125°C	-55°C	FC-40, FC-70, FC-5311	FC-77
C	150°C	-65°C	FC-40, FC-70, FC-5311	FC-77
D	200°C	-65°C	FC-70, FC-5311	FC-77
E	150°C	-195°C	FC-40, FC-70, FC-5311	Liq. N <sub>2</sub>
F	200°C	-195°C	FC-70, FC-5311	Liq. N <sub>2</sub>

#### GROSS LEAK TEST CONDITIONS

Military Standards	Military Approved Fluorinert Liquids		
	Indicator Fluids	Detector Fluids	Absorption Fluids
MIL-STD 883-1014	FC-40, FC-43	FC-72, FC-84	Do not apply
MIL-STD 750-1071	FC-40, FC-43	FC-72, FC-84	FC-43, FC-75, FC-77
MIL-STD 202-112	FC-40, FC-43	FC-72, FC-84	Do not apply

#### Discover higher yields in vapor phase soldering

Fluorinert Liquids have been the industry's fluid of choice since the vapor phase reflow soldering (VPS) process was introduced in 1975. There are a number of good reasons for this universal acceptance. VPS with Fluorinert Liquids produces highly reliable solder joints. The system reduces reject rates, increases production, and lowers production costs. With Fluorinert Liquids, you can be assured that your products will never be exposed to a temperature higher than the selected liquid's boiling point. (See above)

You'll avoid those problems usually associated with other systems — shadowing, uneven heating, and overheating. The liquids are non-flammable. Their low surface tension helps them evaporate quickly from the work pieces without leaving a residue.

VPS with Fluorinert Liquids is especially suited for boards with high mass or complex geometries. The liquid vapors completely surround the assembly and penetrate remote recesses to heat all surfaces evenly. The vapors are 15 to 20 times heavier than air so they can be contained easily within the work area. The system offers an oxygen-free, non-corrosive environment to minimize rejects from oxidation contamination.

Some typical applications using Fluorinert Liquids in VPS include surface mounted leaded or leadless components, through-hole leads and wire-wrap pins, lead frame attachment, reflow of electroplated solder or tin and miscellaneous metal joining.

#### VPS SELECTION GUIDE

Fluorinert Liquid	Boiling Point	Typical Solders
FC-43	174°C/345°F	70 Sn/18 Pb/12 In 100 In 58 Sn/42 In 58 Bi/42 Sn
FC-70, FC-5311 FC-5312	215°C/419°F	63 Sn/37 Pb 60 Sn/40 Pb 62 Sn/36 Pb/2 Ag
FC-71	253°C/487°F	100 Sn 95 Sn/5 Ag 60 Pb/40 Sn

#### Discover the unique cooling benefits of Fluorinert™ Liquids

As the package size decreases, your need for more efficient heat dissipation increases in proportion. 3M Fluorinert Liquids are very efficient as a direct contact heat transfer medium, with the added advantage of having the high dielectric characteristics needed to meet stringent demands of the diversified electronics industry. We offer 11 liquids with boiling points that range from 56°C to 253°C.

These stable liquids allow you to maximize power density and miniaturize your package. Yet they reduce failure rates and increase reliability.

Fluorinert Liquids are used in such demanding applications as:

- Radar transmitters • Power supplies
- High voltage transformers • Lasers
- Radar klystrons • Computer modules
- Computer memories • Fuel cells

Typical properties of Fluorinert Liquids used in cooling are:

Fluorinert Liquid FC-77 (English Units)	Liquid		Vapor
	Room Temp. (77°F)	Boiling Point (207°F)	Boiling Point 207°F @/ATM
Density lb./ft. <sup>3</sup>	111	100	0.85
Thermal Conductivity Btu/(hr) (ft <sup>2</sup> ) (°F/ft)	0.037	0.033	0.008
Specific Heat Btu/(lb.) (°F)	0.25	0.28	0.23
Viscosity c.p.	1.42	0.46	0.02
Coefficient of Thermal Expansion ft <sup>3</sup> /(ft <sup>3</sup> ) (°F)	0.0008	0.0009	0.0015

#### Discover heating/curing with Fluorinert™ Liquids

Because they maintain their vapor temperature with absolute precision, Fluorinert Liquids can be used in many heating and/or curing operations. They serve as heat transfer media in solder mask and polymer thick film applications and for polymer processing. The non-corrosive vapors will not support oxidation. Ideal where solvent flash-off is a problem.

# "A SINGLE AD IN **EDN NEWS EDITION** GENERATED AN INQUIRY LEADING TO A \$2 MILLION OPPORTUNITY!"

John Poturny, President  
Poturny & Associates  
Northridge, CA

Fred Silver, Director of Marketing  
Rantec  
Chatsworth, CA

## Advertising results. Agencies want them. Clients need them.

"When I was on the client side, I demanded sales results from my advertising dollars," says John Poturny, President of Poturny & Associates. "Today I'm on the agency side, and I expect the same for my clients — advertising that generates sales."

Advertising results. A publication must provide them.

"After running ads in EDN News Edition, our phones ring and proposal activity soars immediately for our military power supplies," says Fred Silver, Director of Marketing at Rantec, a division of Emerson Electric.

Advertising results. For Poturny & Associates and Rantec, EDN News Edition gets them.

"We traced prototype orders worth \$2 million in sales to a lead generated by our ad in EDN News Edition," said Silver.

Both Silver and Poturny agree about the power of EDN News Edition, "it gets results."

John Poturny

Fred Silver

EDN News Edition works for marketing communication partners, Poturny & Associates and Rantec. It can work for you.

Where Advertising Works

**“I need a supplier who  
can design, prototype,  
build and  
ship cable  
assemblies  
to *my* specs.”**

**Tough customers  
turn to 3M.**

Turn to 3M for cable assemblies created for your specific application.

We'll help you right up front with design assistance to quickly turn your interconnect idea into a prototype. Manufacture as many finished assemblies as you need, to your most demanding specs. Then deliver everything you need—from pressed and molded to high-speed transmission line and fiber optic cable assemblies—to

meet your most ambitious production schedule.

You get all the well-known 3M quality in assemblies that meet your demanding criteria. Without having to cope with rejects or in-house modifications. You get the reliability you need to help eliminate wasted time or field failures. And the just-in-time delivery programs that reduce inventory and materials handling costs.

There's only one place tough customers turn to no matter what their specs. 3M. For information, dial 1-800-CALL-EPD. Or call from your modem 1-800-444-8080 (300-2400 baud, 8 bit, no parity 1 stop bit) and enter the access code **3MEPD4** when prompted. Or write 3M Electronic Products Division, Department F, P.O. Box 2963, Austin, TX 78769-2963.

**From concept  
to completion:  
3M delivers  
quality  
application-specific  
cable assemblies.**

## A Battery Powered Lap Top Computer Power Supply

Brian Huffman

Most battery powered lap top computers require regulated multiple output potentials. Problems associated with such a supply include magnetic and snubber design, loop compensation, short circuit protection, size and efficiency. Typical output power requirements include 5V @ 1A for memory and logic circuitry and  $\pm 12V$  @ 300mA to drive the analog components. Primary power may be either a 6V or 12V battery. The circuit in Figure 1 meets all these requirements. The LT1071 simplifies the power supply design by integrating most of the switching regulator building blocks. Also, the off-the-self transformer eliminates all the headaches associated with the magnetic design.

The circuit is a basic flyback regulator. The transformer transfers the energy from the 12V input to the 5V and  $\pm 12V$  outputs. Figure 2 shows the voltage (trace A) and the current (trace B) waveforms at the  $V_{SW}$  pin. The  $V_{SW}$  output is a collector of a common emitter NPN, so current flows through it when it is low. The circuit's 40kHz repetition rate is set by the LT1071's internal oscillator. During the  $V_{SW}$  (trace A) "on" time, the input voltage is applied across the primary winding. Notice that the current in the primary (trace C) rises slowly as

the magnetic field builds up. The magnetic field in the core induces a voltage on the secondary windings. This voltage is proportional to the input voltage times the turns ratio. However, no power is transferred to the outputs because the catch diodes are all reversed biased. The energy is stored in the magnetic field. The amount of energy stored in the magnetic field is a function of the current level, how long the current flows, the primary inductance and the core material. When the switch is turned "off" energy is no longer transferred to the core, causing the magnetic field to collapse. The voltage on the transformer windings is proportional to time-rate-of-change of the magnetic field. Hence, the collapsing magnetic field causes the voltages on the windings to change. Now the catch diodes are forward biased and the energy is transferred to the outputs. Trace D is the voltage seen on the 5V secondary and trace E is the current flowing through it. The energy transfer is controlled by the LT1071's internal error amplifier, which acts to force the feedback (FB) pin to a 1.24V reference. The error amplifiers high impedance output ( $V_C$  pin) uses an RC damper for stable loop compensation. If a 6V input is desired, use just one primary winding and an LT1070.

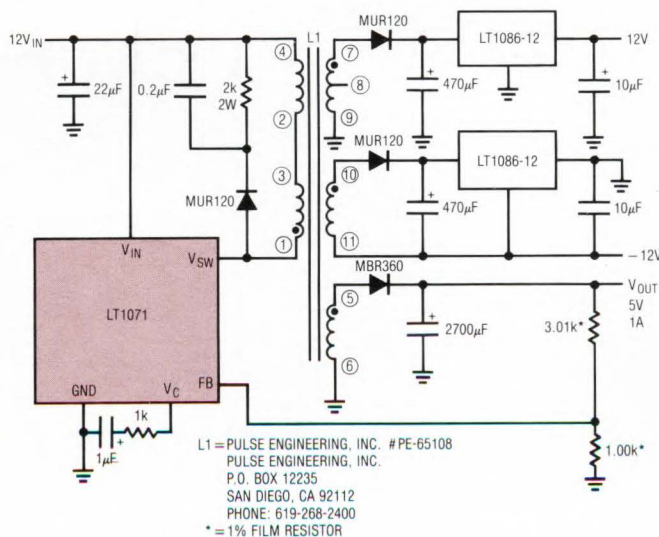

Figure 1. Multi-Output Flyback Converter

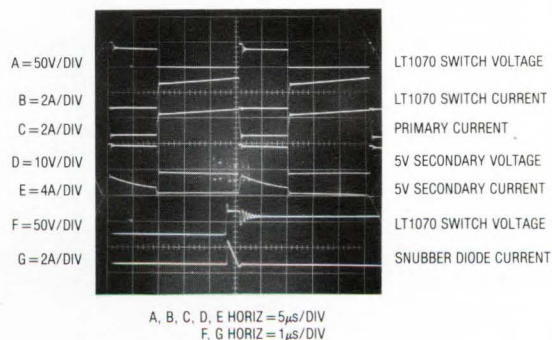

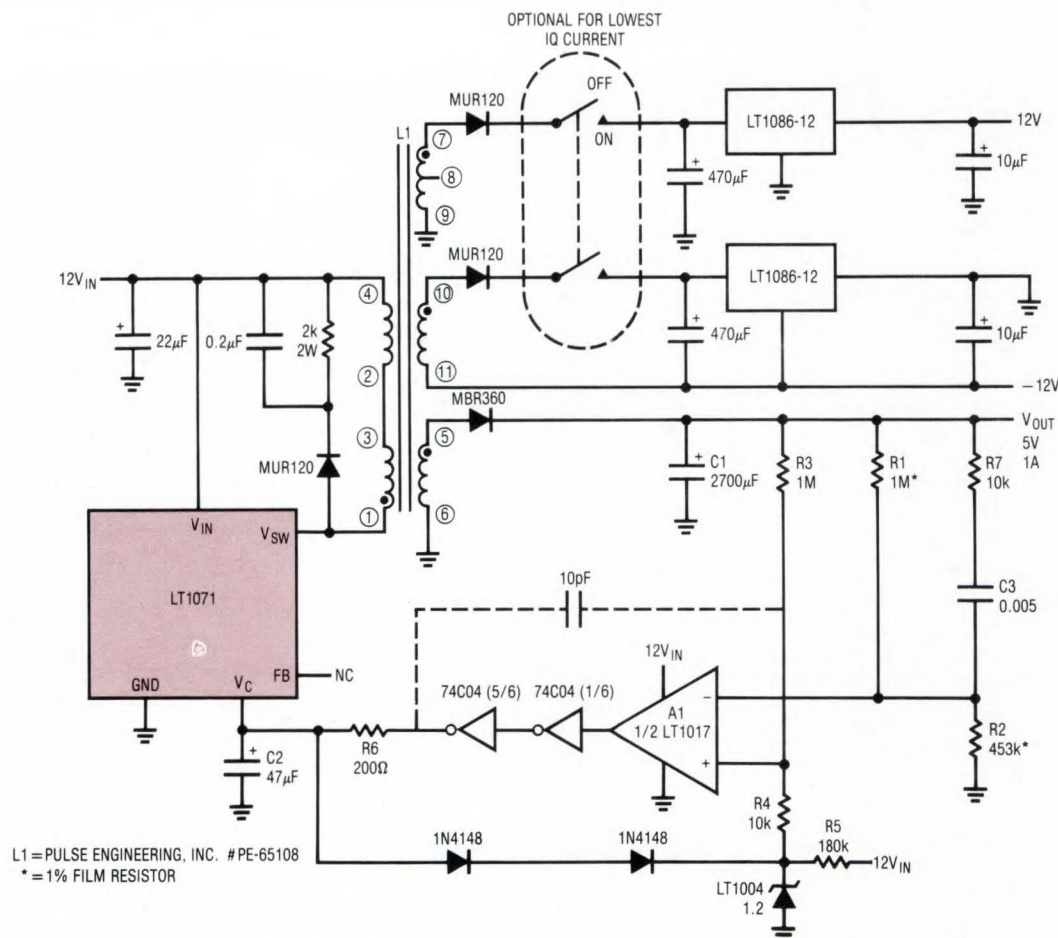

Figure 2. Waveforms for Continuous Mode Operation

**Figure 3. Multi-Output, Transformer Coupled Low Quiescent Current Converter**

This is not an ideal transformer so not all the energy is coupled into the secondary. The energy left in the primary winding causes the overvoltage spike seen on the  $V_{SW}$  pin (trace F). This phenomenon is modeled by a leakage inductance term placed in series with the primary winding. When the switch is turned "off" current continues to flow in the inductor, causing the snubber diode to conduct (trace G). The snubber network clamps the voltage spike, preventing excessive voltage at the LT1071's  $V_{SW}$  pin. When the snubber diode current reaches zero, the  $V_{SW}$  pin voltage settles to a potential related to the turns ratio, output voltage and input voltage.

Post regulators are needed on the unregulated outputs if the cross regulation error is too great. Such error can be as much as 20% depending upon output loading conditions. Note that the floating secondaries allow a -12V output to be obtained with a positive voltage regulator. The isolation allows the input of the regulator to float above ground. The LT1086 positive voltage regulators maintain both positive and negative outputs within 1%.

If battery capacity is limited by size or weight this circuit's 9mA quiescent current may be too high. Figure 3's modification offers output current in the ampere range with only microamps of quiescent drain. Further information about this circuit can be found in LTC Application Note AN29 "Some Thoughts on DC-DC Converters," page 8.

By using standard magnetics and a simplified switching regulator the design time needed to implement this power supply is greatly reduced. Although these circuits demonstrated a flyback topology, the LT1070/LT1071/LT1072 can easily handle other configurations including buck, boost, forward and inverting. Examples are given in LTC Application Notes; AN19 "LT1070 Design Manual," AN25 "Switching Regulators for Poets," and AN29 "Some Thoughts on DC-DC Converters."

For literature on Switching Regulators, call 800-637-5545. For applications help, call (408) 432-1900, Ext. 361.

# Hardware and Interconnect Devices

## PC-board-mounted fan provides on-the-spot cooling

The TFDD50BMAW Series of brushless dc fans can be mounted directly on a pc board and move air radially off the board. With these board-mounted fans, you can concentrate cooling at the hottest spots in your system.

The fans measure 1.97-in. square by 0.47-in. thick; weigh 1.43 oz; and are available in 5, 12, and 24V models. All versions come with a standard tachometer output, which you can use as a fan-failure indicator. The manufacturer claims the units' solid-state drives emit minimal levels of EMI.

The fans consume approximately 0.5W and spin at 3300 rpm. The two basic versions of the fan move air at low pressure and high volume and high pressure and low volume, respectively. The TFDD50BMAW versions move 4.2 ft<sup>3</sup>/min of air at 0.5-in. H<sub>2</sub>O of pressure; the TFDD50BMALW versions move

2.6 ft<sup>3</sup>/min at 2.5-in. H<sub>2</sub>O of pressure. The fans' materials are UL recognized. \$12.30 (100-499).

## Board-to-board jumper exhibits controlled, 50 $\Omega$ impedance

The Invisicon board-to-board jumper has a characteristic impedance of 50 $\Omega$ . The manufacturer claims that the jumper's terminations are virtually invisible—even to digital signals having rise times as short as 50 psec.

The jumper mates its controlled-impedance, flexible circuit to traces on your pc board. The jumper uses an elastomeric retainer to maintain contact force over time and make up for board-to-jumper gap tolerances.

The standard part is 4 in. long and has 51 signal contacts on 0.025-in. centers. The jumper's contacts provide 35 mils of wiping action

during assembly. The device's crenellated contact pads have scraping edges that remove dust particles and nonconductive surface contaminants during wiping.

The flexible-circuit portion of the

jumper is based on RO2500 circuit-board material rather than a polyimide film. The RO2500 material offers better electrical properties and lower water absorption than polyimide materials and has a dielectric constant of 2.5, a dissipation factor of 0.0025, and water absorption of 0.4%.

The standard jumper, part number 1ROBCK30B, costs \$105 to \$400 in evaluation quantities.

# Hardware and Interconnect Devices

## Interwoven, 4-conductor cable beats performance of twisted-pair cables

Inter-8 Weave cable, the manufacturer claims, provides substantial improvement over the performance of a conventional twisted-pair cable. The Inter-8 Weave cable has four separate conductors braided into interlocking loops. In practice, you connect the adjacent conductors that are oriented 90° apart, thus yielding a 2-conductor cable.

The cable uses 24 AWG stranded wire; and, unlike twisted-pair cables, does not kink or untwist when left loose. The cable is available unshielded; with a braided shield of Co-Netic AA high-permeability wire; and, for optimal electrostatic and RF shielding, with a braided shield of tinned copper wire.

Inter-8 Weave cable is also available with either PVC or EFTE (DuPont Tefzel) insulation. The cable measures 0.23 in. in diameter for PVC-insulated versions and 0.21 in. in diameter for ETFE versions. In 1000-ft quantities, the cable costs

between \$0.34 and \$2.70/ft.

## Backplane interconnection system suits high-density applications

The VHSICon UHD is a high-density backplane interconnection system for VHSIC-based military/avionic applications. The system includes a controlled-impedance, multilayer pc-type backplane (KS1050 Series) and the 2-piece (backplane/daughter board) UHD connectors. The backplane-half of the connector mounts via solderless, compliant, press-fit contacts. A bare, custom pc backplane can have as many as 30 layers.

VHSICon UHD connectors adhere to the dimensions of SEM (Standard Electrical Module) format E, with connectors measuring 5.44-in. long by 0.58-in. wide. The connectors provide 396 contacts on a staggered 8-row, 0.1×0.05-in. grid. The daughter board and backplane connectors feature ten modular sections, which each con-

tain 40 tuning fork or blade contacts. The daughter board connectors employ either flexible-circuit terminations (M1050) or rigid terminations (MF1050). Both the daugh-

ter board and the backplane connectors accept size-16 coaxial or size-16 or -20 fiber-optic contacts.

Key connector specifications include a 2A continuous current rating, a voltage rating of 600V, and a contact resistance of 30 mΩ. The operating range measures -55 to +105°C, and the contact life is 500 cycles. Materials for the backplane and daughter board contacts are beryllium copper and brass, respectively. The daughter board's body is extruded aluminum 6061-T6. Contact plating is 50 to 70 μin. of gold over 100 to 250 μin. of nickel. Excluding the backplane, the connectors cost \$1 to \$2 per mated line.

# Balancing mechanical and electrical requirements keeps us on the leading edge of interconnect technology.

What a challenge: making cable systems smaller, lighter, and more flexible without compromising signal fidelity, flex-life, or reliability. At Precision Interconnect we do it every day, for leading electronic equipment manufacturers all over the world.

Working with a variety of mechanical requirements, plus strict electrical parameters, we custom-design and produce complete interconnect systems. Micro-miniature cables, usually using 38 AWG and smaller conductors, can be terminated to standard or micro connectors and protected with flex-strain

reliefs. Custom overmolds and sealing designs have been developed to protect interconnect systems in harsh environments. These cable assemblies provide the critical link in hand-held applications on diagnostic instruments, sensors, and medical and surgical devices.

Our expertise, increasing with each unique problem we solve, ensures that reliability is designed in, built in, and tested.

So we can keep our balance. And assure a great performance every time.

## Surface-mount-device probes give you access to tightly packed circuitry

The ETK520 Series of probes suits electronic assemblies using SMDs and other densely packed circuitry. The series features a test prod with a tip that is extendable to 2 in. The phosphor-bronze tip is insulated with Kynar and has a diameter of 0.039 in.

The prods connect to 4-ft silicone-rubber test leads. Their banana connectors can be standard non-shielded types, retractable safety-shield types, or fixed safety-shield types. Models having gold-plated banana connectors are available. All models are rated for 1000V dc and 5A max. Prices range from \$16.95 to \$18.95; delivery is from stock.

## Snap-in sockets hold single-in-line packages and memory modules

Sockets for JEDEC-standard, single-in-line package (SIP) modules and memory modules (SIMM) adapt these modules to conventional thru-hole pc boards. Because the modules snap in and out, you can easily update or repair pc boards.

The sockets come in vertical versions and so-called right-angle (actually inclined at 25° from the pc board) low-profile versions. The single- and dual-row models both have 0.1-in. contact spacing.

The sockets feature zero insertion and extraction force and a mechanical lock to hold the modules in place. The units have visual and mechanical polarization for both the socket-to-board and module-to-socket connections. Internal contact bussing is also available.

The contact material is beryllium copper or phosphor bronze; the contact platings can be tin-lead or gold.

The socket body is black glass-filled polyethersulfone, which has a UL 94 V-O flammability rating. The sockets cost \$0.03 to \$0.04/contact in production quantities; delivery is from stock.

# The VME Volksclosure. \$995. Ready to Run.

Finally. The economies of mass production catch up with VME and Multibus II enclosures.

Introducing the Volksclosure, Electronic Solutions' economy model enclosure with turbo performance. All you do is add cards and peripherals for a complete, attractive desktop computer.

With the Volksclosure (also known as our Model One) everything comes standard: six VME or Multibus II slots, space for three half-height 5 1/4" disk drives, and a high-performance six-layer backplane all in a highly tooled enclosure with our handsome front panel that hides those ugly connectors and cables.

You do get a choice between two multiple-output power supplies: 190 Watts with 19A at +5V or 270 Watts with 30A at +5V. You can also choose a J2 backplane for VME extended addressing or iLBX II for a Multibus II system.

Most important, while the Volksclosure costs less, you don't get less. It fully reflects Electronic Solutions' commitment to quality and performance. For example, it meets UL and CSA safety standards and FCC Class A EMI/RFI specs to the letter.

The New Volksclosure. How to get a lot more mileage from your packaging budget. Call right now for complete details.

## Multipole connectors allow easy contact rearrangement

The 8016 Series of multipole rack and panel connectors features removable contacts that allow straightforward assembly and rapid alteration of the connectors to suit individual applications. The contacts mate with an orthogonal contact in the opposing connector to provide a gas-tight contact on four separate faces.

The contacts are available with crimp terminations, solder-cup terminations, or posts that are suitable for wire-wrapped connections. They conform to MIL-E-54000, MIL-E-8189, and MIL-T-21200 requirements.

The connectors are available in 20-, 38-, 56-, 90-, and 120-way ver-

sions, all of which incorporate screw-lock actuating mechanisms. They are also available with either male or female contacts to provide

input or output connectors. The connectors meet MIL-C-21097 and MIL-C-28731 requirements. The following are representative prices: 38-way male contact housing, £2.07; female contact housing, £1.20; Varilok contacts, £4.40; connector covers, £2.31 (100).

## MAGNET WIRE

**For specialty coil and motor windings.**

While product miniaturization allows less space for components, MWS MICRO SQUARE film coated magnet wire lets you design compact coils and small motors that deliver more power in less space.

MICROSQUARE means miniature square and rectangular copper and aluminum magnet wire. Custom produced in sizes *smaller* than 14 AWG or 3500 sq. mil. cross-sectional area, MICRO SQUARE is available in a wide range of solderable and high-temperature insulations in a variety of colors, with or without bondable overcoats.

MICROSQUARE magnet wire was developed to provide improved winding uniformity and maximum use of space. When you're looking for options to meet the most demanding coil, small motor, or other special application requirements, without size limitations or quantity minimums, take a good look at MICRO SQUARE magnet wire.

*Illustration of cross-section of typical coil winding using round magnet wire.*

## PROTOTYPING BOARDS

Providing an alternative to prototyping boards that require wire-wrapped connections, Eurocard-Plus prototyping boards use insulation-displacement connectors that are reusable as many as 50 times. In addition to the insulation-displacement sockets, the board also has a matrix of through-hole plated holes in which you can mount discrete components. The boards are available in single- or double-Euro-

card versions, either unpopulated or populated with sockets. The company will also manufacture custom versions. A wiring pen and suitable wire are available as accessories. Single-Eurocard version, £20.80 (10).

## BATTERY HOLDERS

BX-series panel-mounting battery holders are available to hold four AA (R6) size batteries, one PP3 battery, or two PP3 batteries. The batteries are contained in a removable magazine that slides into a panel-mounted housing. The magazine is marked internally with the correct battery polarities, and a latching mechanism holds the magazine in place. Terminals provide suitable push-fit or soldered connections. On the version that accepts AA-size batteries, these terminals are arranged so that you can connect all four batteries in series, or wire them as two separate series-connected pairs. \$5.

## INTERCONNECT SYSTEM

The Chiprack interconnect system allows you to add a third dimension to the 2-dimensional interconnect patterns provided by pc boards. Comprising leadless chip carriers that have contact pads on both their upper and lower surfaces, and square frame connectors that connect the contact pads on the upper

surface of one chip carrier to the contact pads on the lower surface of the chip carrier above it, the system allows you to create vertical stacks of circuitry above a conventional pc board or other substrate material. Bolt holes are provided that allow you to clamp these vertical assemblies to the pc board, thereby ensuring reliable contact between the contact pads and the connectors.

You have the alternative of soldering the contact pads and connectors together after assembly by using vapor-phase soldering techniques. Because all the vertical interconnections are available at the top and bottom of the stack, the Chiprack system eases the testing of completed assemblies. Chiprack connectors have nickel beryllium/copper contacts on a 1-mm pitch. The connectors and chip carriers range from 48- to 104-contact versions. 48-contact version, £2.75;

104-contact connector, £5. The devices are scheduled for US release in the middle of 1989.

# WE ALWAYS KEEP AHEAD OF OUR REPUTATION.

Keeping up with the needs of today's electronics is no simple task, but over the years we've got ourselves quite a name for being the front runner in soldering technology.

The investment in research and development continues to produce stations and irons that make your

work more accurate, more efficient and easier too.

Although building a reputation is not easy, if you take a close look at the quality of Weller® soldering equipment, you'll see just how far ahead we are.

**Weller®. How reputations are made.**

From: Engineering

Re: Why we specified Cabtron electronic enclosures.

### ☐ Durable Construction

Cabtron frames are built to stand up to tough environments and heavy loads. They utilize 12, 14, or 16 gauge steel, with 11 gauge corner gussets added for strength on vertical rack and console models. Significant components are even seam welded together for extra strength and rigidity. You just don't find that kind of quality anymore.

### ☐ Unique Features/Accessories

Cabtron is the only place you can get a blower system that's built into the base to save space. And with their wide selection of accessories such as receptacle strips, writing top drawers, chassis brackets, and 11 gauge mounting angles tapped on EIA patterns, we were able to get exactly what we needed with standard catalog items!

### ☐ Selection

Everything we needed was right there in one catalog. Cabtron has vertical racks, 19" "flat top" and 30" consoles, bench cabinets, turret cabinets, desk turrets—even wedges. We put together the whole system with one call.

### ☐ Customizing ability

When we told the people at Cabtron what we needed, they helped us design an enclosure that covers every contingency. Their flexibility gave us practically a custom enclosure at "off the floor" prices.

### ☐ Good looks

The enclosures, not the salesperson's. Cabtron has 10 standard textured finishes to choose from, and will even make combinations of those colors at no additional cost. We also got a choice of styles—computer style (with trim) or industrial (without trim).

### ☐ On-time delivery

Cabtron is famous for their delivery and service. Not just sometimes, or on certain models, but every time. We can't afford to wait around, and Cabtron makes sure we don't have to.

### ☐ All of the above

Cabtron Systems, Inc.

# A New Supply Line For **MILITARY MULTIPLIERS**

## Introducing fully-certified “/883” replacements for all AD532, AD534, and AD632 analog multipliers.

Now you can get popular AD532, 534, and 632 analog multipliers from Burr-Brown's Military Products Division. These drop-in replacements are manufactured in our DESC-certified facilities and meet all requirements of MIL-STD-883C. Key features include:

- $\pm 0.5\%$  max four-quadrant error;
- 1MHz min bandwidth (3MHz typ);
- choice of two performance grades in metal TO-99 or 14-pin ceramic DIP packages;
- easy to use as multipliers, dividers, square-rooters, many other computational circuits.

To open your new supply lines for these precision military parts, call your sales rep or Applications Engineering, 602/746-1111. Burr-Brown Corp., P.O. Box 11400, Tucson, AZ 85734.

# This chip enabled us to process signals of the past.

The Rosetta Stone, discovered in 1799, was the key to deciphering the hieroglyphics that had been incomprehensible for centuries.

Signal processing, when you come right down to it, is multiplication, addition, subtraction and storage. Doesn't sound very exciting.

But put together a set of building blocks that do those simple operations with almost unimaginable digital speed and precision. Then add A/D converters that bring in information from the world around you. Plus D/A converters that restore the digitally processed signals to a form your senses can understand.

And you've built a signal processing system that will enable you to do things that couldn't be done before, see things that couldn't be seen before and understand things that could never be understood before.

*That's exciting. And we can help make it happen.*

## **Complete systems solutions.**

Our approach to signal processing is simple.

We've taken our unparalleled experience in data conversion and added to it a set of signal processing chips that perform operations that used to require entire circuit boards.

Here's a sample of what they can do for you:

*ISP 9110 12-Bit Microprogram Sequencer:* expanded 33 word stack, 50 ns minimum cycle time.

*ISP 9119 FIFO RAM Controller:* uses standard RAMs to build FIFOs up to 64K deep, 15 MHz operation.

*ISP 9128 FIR Filter Controller:* implements 16-bit filters to 128 Taps, 128 Tap sampling rate of 100kHz.

*ISP 9210 16x16 Multiplier Accumulator:* innovative high-speed architecture (65 ns commercial, 75 ns military), low-power operation.

*ISP 9216 16x16 Multiplier:* low-power, industry-standard compatible to AM29516 and MPY016.

*ISP 9520/21 Pipeline Register:* high-speed access,

# These are the chips you need to process signals of the future.

Our DSP building blocks, combined with our data conversion know-how, will help you design systems that depict reality more clearly than ever before possible.

output selectable from any register.

With devices like these, we can give you a total integrated signal processing solution. Plus the added benefits of single-vendor support and package pricing.

## **Position yourself for the future.**

Signal processing is changing every day.

That's why you need more than a signal processing supplier who has a few good parts.

You need a long-term partner who has a commitment to signal processing, and the resources in every area that signal processing calls upon.

For example, the chips of tomorrow will very likely combine signal processing, data conversion and high-speed logic. When you work with us, you'll get our Intersil expertise in processing and conversion. Plus our RCA Advanced CMOS Logic capabilities. Plus the more than 20 years of GE

experience in radar, sonar, medical imaging and other demanding DSP applications.

If worries about complexity and cost have deterred you from taking the exciting step into digital signal processing, call us. Together, we'll step into the future.

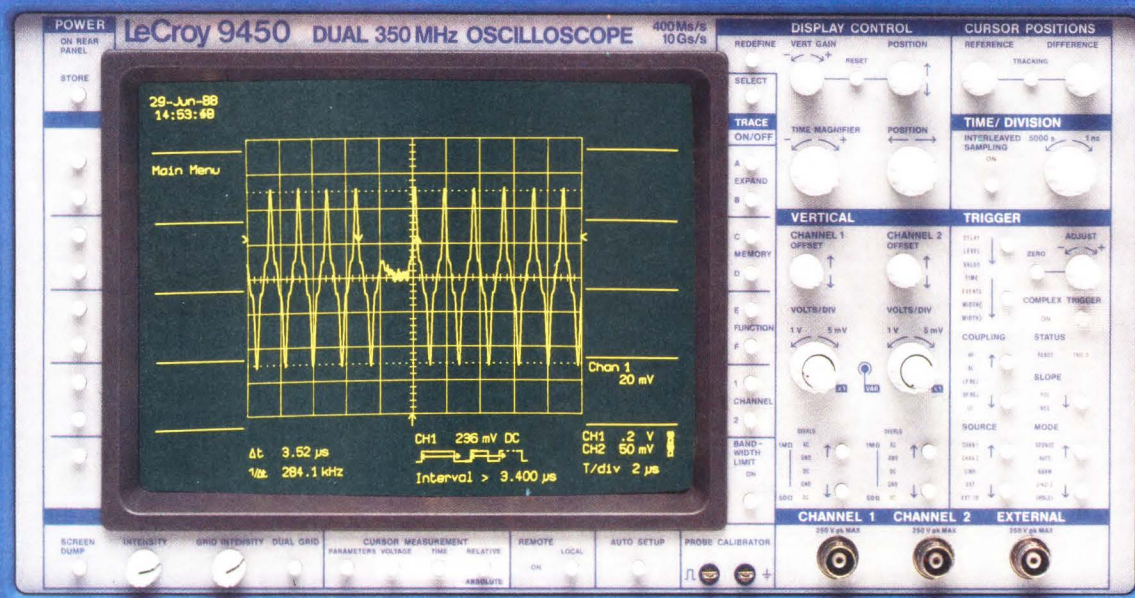

For more information, contact your local GE Solid State sales office or distributor. Or call toll-free, 800-443-7364, extension 30.

# SPEED, FIDELITY and... ...UNPRECEDENTED TRIGGERING

- \* 350 MHz Bandwidth, 400 Ms/s ADCs
- \* 50K Non-volatile Memory per Channel
- \* Glitch, Interval and Logic Trigger Modes
- \* Automatic Waveform Parameters

# NEW! LeCROY'S 9450

## THE MOST ADVANCED DIGITAL OSCILLOSCOPE IS DESIGNED FOR YOUR NEEDS.

**FASTGLITCH** trigger mode is used to trigger on a glitch 1.51 nsec wide which occurs before the leading edge of a 500 kHz clock signal (top trace, see trigger arrow at the bottom of the graticule). Fast sampling rates, automatic pulse parameters and horizontal expansion by 250 times (lower trace) all combine to reveal the signal details.

**G**litches, drop-outs, logic patterns and states are all triggered on easily with LeCroy's new and innovative trigger modes.

For example, the 9450's **FASTGLITCH** trigger mode can be used to trigger on glitches shorter than 2.5 nsec even when they are buried in complex signals. **INTERVAL** trigger mode can be used to trigger on rare phenomena like missing bits. The 9450's massive memories show more pre- and post-trigger information so you can examine the cause and effect of any signal perturbation. Waveform expansion (up to 1000 times) reveals **ALL** the signal details you are looking for, and fast parameter calculations deliver the answers you need in a fraction of a second.

And... you already know how to use it. A familiar front panel, together with a push-button **AUTO SETUP** facility, lets you rapidly learn to operate this new member of the LeCroy oscilloscope family.

To receive further information, technical documentation or a demonstration, circle the reader service card or call us today.

**U**ntil now, recording very high-frequency signals with digital oscilloscopes often meant giving up measurement fidelity, due to short acquisition memories, inadequate vertical resolution, or sometimes even both. **NOT ANY MORE!!**

With LeCroy's new 9450 you get it all, 350 MHz bandwidth, 400 megasample/sec digitizing rates, 8-bit vertical resolution (12-bit with averaging), 50,000 words of acquisition memory per channel and... a uniquely powerful trigger system.

Logic conditions can be individually set for each of the 9450's inputs. **PATTERN** trigger mode is used to trigger only when the logic condition CH1 Low (top trace) and CH2 High (middle) is exited. The pattern must also be present for less than 15 nsec (lower trace). The trigger position is shown by the arrow at the bottom of the graticule.

# LeCroy

# High-performance DSOs present users with plenty of choices

20-GHz sequential-sampling DSO provides differential TDR (Tektronix Inc)

An impressive collection of 100-MHz-and-above DSOs (digital storage oscilloscopes) have made their debut in the last year. Because the scopes' specifications and features are many and varied, you should familiarize yourself with the features available before you decide upon a particular DSO.

**Doug Conner**, *Regional Editor*

Unlike analog scopes, whose features tend to be standard regardless of the manufacturer, DSO capabilities differ from vendor to vendor. The primary performance specification for both analog and digital scopes is the analog bandwidth—the frequency at which an input suffers 3-db attenuation. Apart from the bandwidth specification, however, the capabilities of the two types of instruments diverge. You have to evaluate a DSO's capabilities in light of the waveforms you need to examine: single shot or repetitive.

#### The sampling rate may be unimportant

A DSO's sampling rate is only important if you intend to use the instrument in single-shot, or real-time, sampling applications. If you want to examine repetitive waveforms, a DSO's sample rate is unimportant. For this application you have a choice of either a sequential-sampling or a random repetitive-sampling DSO.

Sequential-sampling DSOs acquire a single sample after each trigger event; the DSO incrementally delays the taking of samples until it acquires a full image of the waveform. This method is compatible with bandwidths as high as 20 GHz, but it does present a drawback or two. For instance, you can't really observe pretrigger events. Some sequential-sampling DSOs provide an analog delay line in the signal path that lets you see pretrigger events, but you can't obtain more than a few nanoseconds of pretrigger display.

**500-MHz DSO that optionally can sample 2G samples/sec**  
(Hewlett-Packard)

The sampling rate of a DSO is only important if you're going to be using the scope in single-shot sampling applications.

DSOs having a bandwidth of 1 GHz and above use random repetitive sampling. Typically, in a random repetitive-sampling scope an A/D converter is coupled to a shift register. The converter operates continuously, pushing new data into the shift register. If you've set the scope to acquire pretrigger data, acquisition can stop when the trigger system detects the trigger event. If you've set the scope for post- or delayed-trigger acquisition, the ADC will continue pumping values into the shift register until the specified delay time.

After each trigger event, the DSO interleaves newly acquired data with the data previously stored in memory. Because the sampling process runs asynchronously with the trigger event, after the scope has acquired and converted the data points, it must align them in time with the trigger event. This asynchronous operation means that consecutive trigger events lay down a set of acquired data points that have a random relationship to the previously acquired set; this set might fall right on top of the previous set or somewhere between the data points of the previous set. Given enough trigger events, a DSO running in a random repetitive mode will acquire enough data points to fill in a complete view of the waveform—limited only by the scope's bandwidth and resolution.

#### Getting the resolution you need

Ideally, you would think that a DSO and an analog oscilloscope having the same bandwidth and examining the same repetitive waveform would produce the same display. In reality, the resulting displays are somewhat

2-GHz sequential-sampling DSO (Philips Test and Measurement)

different. In contrast to an analog scope, a DSO's digitizing resolution quantizes the data into discrete voltage levels. For example, if the scope has an 8-bit digitizer—a common value of many 100-MHz-and-over DSOs—it will quantize the data into 256 discrete levels.

Actually, the digitizer resolution is seldom the limiting factor in a DSO's signal resolution. The DSO's sampling and conversion system will often introduce several bits of noise. The effective resolution of a DSO may be much less than the number of bits coming out of the digitizer. Unfortunately, DSO manufacturers don't always specify the effective resolution.

#### Averaging data points improves resolution

Many DSOs let you use averaging to remove noise and increase the effective resolution on repetitive waveforms. Repetitively sampling DSOs assume that the waveform is essentially constant from one trigger event to the next. You should be aware that, though averaging is useful for reducing noise produced within the DSO, it also reduces noise that is asynchronous with the trigger event in the circuit you are examining. For example, if you want to see how much 60-Hz power-line noise is coupling into a circuit and you are triggering on an event that is not synchronized with the power-line frequency, averaging will eliminate the noise you are looking for. Although averaging is a very useful feature, use it judiciously.

#### DSOs can have long re-arm dead times

When it comes to triggering, you'll find that a DSO has many of the features of an analog scope but some differences do exist. A significant one is the re-arm dead time, or the time it takes for the scope to display

350-MHz DSO with a 400M-sample/sec rate (Lecroy Research Systems)

**300-MHz DSO with 500M-sample/sec rate (Tektronix)**

the data and re-arm the trigger. An analog oscilloscope performs the re-arm operation quickly: After a sweep, it takes about a microsecond for it to re-arm the trigger. On a digital scope, the trigger isn't ready for the next event until the scope has finished every computation and put up the display for the last set of samples.

Typical DSO re-arm dead times range from about 10 to a few hundred msec. This figure varies so much because the re-arm dead time depends on what kind of signal processing or measurements are required for a particular scope setting. Inexplicably, most scope vendors don't specify the re-arm dead time, but it does have an effect on the user.

To familiarize yourself with a scope's re-arm dead time, you can run test cases. For example, suppose that you want to acquire and display 256 averaged waveforms. When you run a test case, you may find that you have to wait tens of seconds for the DSO to finish all the computations. If you try to change the trigger delay, you'll also see how the re-arm dead time can influence your display: Unless you change the delay slowly, a long re-arm dead time will cause the image to jump. A short re-arm dead time will make the image move smoothly, just as it would on an analog scope.

A long re-arm dead time has another undesirable effect. The DSO will trigger on only a very small fraction of the possible trigger events. If you're looking for glitches or other intermittently occurring problems, you probably won't see them unless the scope triggers on the event itself. Fortunately, some DSOs support glitch triggering (**Table 1**). Basically, this feature lets the scope trigger on a pulse that exists for less than a user-selected time span.

Sometimes your application may require more than

the observation of repetitive waveforms. You may need to view single-shot waveforms—for example, if you're performing destructive testing or if you're looking for glitches that may take minutes or hours just to trigger once. When you need single-shot storage, you have to consider specifications different from those applicable to repetitive-waveform sampling.

### **Sampling at a sufficient rate**

The most important DSO specification for single-shot storage is the sampling rate. Theoretically the Nyquist limit requires a sampling rate that is twice the rate of the highest frequency in the signal. Practical considerations dictate higher sample rates, depending on how the DSO processes and displays the data.

A DSO has essentially three ways to display single-shot data. The first is to display just the points actually acquired. This method gives you the real data but may result in visual aliasing—a situation where the points represent a waveform but are difficult to follow visually.

The second way of displaying single-shot data avoids the visual-aliasing problem by including a display capability that connects the data points in the display, interpolating linearly between points.

In any case, a sampling rate that is 10 times the maximum signal frequency is a good rule of thumb when using single-shot sampling DSOs that display only points or that perform linear interpolation. You may actually need more or less points, depending on the information you need to extract from the captured waveform.

The third way is to use waveform-reconstruction techniques to recover the sampled waveform. A DSO in the single-shot mode using these methods allows you to capture the highest possible bandwidth signal. The scope performs interpolation between data points and the computed curves give a closer representation to the real waveform. For this technique, DSO vendors claim that sample rates anywhere from 2.5 to 4 times the highest frequency components in the signal are adequate. If you use sample rates of anything less than 4 times the signal frequency, you'll be making decisions based on sparse data.

### **Don't forget the record length**

In addition to the sampling rate, you have to take into account the record length. Users often assume that a scope is always sampling at its maximum rate. In reality, the sample rate also depends on the time-

## Sequential sampling does not let you see pretrigger events.

base setting and the record length, which is the number of data points the scope can store for a single waveform. For example, a DSO with a 50,000-word record length can maintain a 400M-sample/sec rates for timebase settings of 10  $\mu$ sec/div. For a DSO with the same

timebase setting but only a 1000-word record length—a common spec for many DSOs—the maximum sample rate is 10M samples/sec, or 100 nsec between samples. In this case, waveforms with frequency components above 5 MHz will suffer aliasing. In order for a scope

## A DSO operating in a random repetitive-sampling mode interleaves newly acquired data with the data previously stored in memory.

performing automatic rise- or fall-time measurements, long record lengths allow it to use a large number of samples to help determine 0% and 100% signal levels.

Some DSOs offset their lack of long record lengths by offering glitch capture in the form of peak detectors. The peak detectors capture positive and negative peaks between samples and display these at the sample points. These types of instruments indicate when activity is occurring between samples, but they suffer from poor time resolution. In effect, the peak detectors let you know that you are undersampling, but they don't let you obtain information on what is actually happening. You can't access the data unless you get better time resolution—which you can only do if you specify a faster timebase.

Regardless of the type of waveform you want to examine, almost every DSO lets you delay the acquisition of data for a certain interval after the trigger event (**Table 1**). Some let you delay by events in addition to time-specified delays. These delaying features compensate for a DSO's lack of dual timebases, which is what you would normally find on an analog scope. There are DSOs available that also have dual timebases; you can use these instruments just as you would an analog scope.

On other DSOs you'll find a similar feature called windowing, which gives you the ability to view a portion of a trace and look at a waveform on an expanded time scale. The Tektronix 11000 Series, for example, lets you use as many as seven windows so that you

### Should you use an analog or digital scope?

The many differences between analog and digital scopes often make it difficult to decide which type is appropriate for your applications. When it comes to bandwidth per dollar, analog scopes have a definite advantage and probably will for years to come. Oftentimes, however, the reason you use a scope is to make measurements; because DSOs automate measurements such as rise and fall times, pulse widths, and amplitude, they can save you lots of time at the bench. Moreover, DSOs use an accurate crystal timebase for timing measurements, thereby giving you much better timing accuracy than is commonly available on an analog scope. So, even though the basic price of a DSO may be higher than an analog scope, the increased productivity you will enjoy may help offset the higher price.

Another feature inherent to a DSO is the ability to transmit waveforms to computers and

printers or plotters. According to **Table 1** in the accompanying article, most DSOs include either IEEE-488 or RS-232C interfaces. These computer interfaces let you automate test sequences—uploading scope setups and downloading waveforms and measurement results. Another bonus of DSOs with computer interfaces is the ability to quickly get high-quality waveform hard copies with pertinent scope settings and measurement information.

Because DSOs let you store waveforms in memory, you can compare two waveforms easily by superimposing one on top of the other. Many scopes provide setup memories as well, so that you can quickly recall special setups you might want to use to perform measurements. If you need to power down a DSO because you need to move between projects or because you're using it in the field, you may want an instrument that has nonvolatile waveform and setup memories.

A feature common on most, but not all, DSOs is autoseup. All you have to do is connect the probes to the nodes of interest and press the autoseup button to get a triggered waveform with reasonable timebase and attenuator settings. On most scopes, autoseup works quickly and avoids timebase settings that undersample the waveform. Few analog scopes offer autoseup.

One caution: When shopping for a DSO, you should look the specs over carefully. Don't take anything for granted as you might when evaluating an analog scope. Differences in DSO features abound. For example, some DSOs have only ac coupling on the trigger, no dc coupling. Other DSOs have only dc coupling on the trigger and no ac coupling. Still other DSOs have all the triggering modes that you are accustomed to on analog scopes and some additional features as well. You have to take the time to find out.

When performing repetitive sampling, you assume that the waveform is essentially constant from one trigger event to the next.

100-MHz DSO (Hewlett-Packard)

can have an expanded view of the rising and falling edges of multiple pulses. Using these expanded windows, you can make high-resolution measurements.

During the last year, DSO vendors have been busy introducing significant new 100-MHz to 20-GHz DSOs. At the high end of the spectrum, Tektronix introduced the 11800 Series of 20-GHz sequential-sampling DSOs, which rivals Hewlett Packard's 54120. Although both types of scopes have 20-GHz bandwidths, their capabilities are actually quite different.

The 11800 Series offers true differential time-domain reflectometry (TDR) capability, a first for any oscilloscope—analogue or digital. Differential transmission lines have excellent noise immunity and generate very little EMI, but to maintain signal fidelity you have to terminate them into their characteristic impedance. Any connections must also maintain the same impedance. Differential TDR allows you to measure the characteristic impedance and look for line discontinuities.

Standard single-ended TDR works fine on single-ended transmission lines, but not on differential lines. On differential transmission lines, you usually have two signal lines and a reference line—shielded twisted-pair cable, for example. Single-ended TDR leaves one of the three lines floating or connected to one of the other lines. Moreover, single-ended TDR systems cannot launch differential signals. Even unshielded twisted-pair cable exhibits a different characteristic impedance between single-ended and differential signals. If you want to perform differential TDR testing but you have a single-ended TDR system, you'll require additional equipment and a special setup (Ref 1).

Tektronix's 11800 Series of scopes also permits you

**Fig 1—TDR testing capability along with a normalization feature** on the HP 54120 sequential-sampling DSO lets you look at how a transmission path will respond to different rise-time signals. This screen photo shows the TDR results of a 50Ω coaxial-cable/microstrip-launcher junction. The yellow trace shows the live 40-psec TDR response. The blue trace shows the results of a computed 25-psec rise-time pulse; the violet trace shows the computed 100-psec rise-time pulse. Automatic cursor readouts are visible in the upper left corner.

to expand to 136 channels without compromising performance: All multiplexing is done after the high bandwidth sampling. The scopes perform autoseup quickly and acquire and display data rapidly. They also continuously update measurements and statistics.

The HP 54120 does not have differential TDR capability and offers only four channels, but it does offer a powerful normalization capability. The normalization feature complements the scope's single-ended TDR capability and lets you see how a transmission line will respond to the edge rate you will be using in your circuit (Fig 1).

Both the 54120 and 11800 scopes can display the "eye patterns" associated with communications work, but only the 54120 has the color display to provide histograms that show the data distribution in the eye pattern. The 11800 requires you to transfer the data to a computer to get the equivalent information.

Philips' newest sequential-sampling DSO is the PM3340. With a 2-GHz bandwidth, the PM3340 obviously can't compare with the 20-GHz bandwidth of the two scopes above. Nevertheless, at \$16,000 it is considerably less expensive than the \$28,000 to \$31,000 you'd expect to pay, and it has at least twice the bandwidth of any other DSO available. In addition, the PM3340

# Set, Forget...No Regret

## with unique "Preview" feature in new Kepco 100-Watt Bench-type Linear Power Supplies

Preset voltage and current for your circuit and systems prototyping and testing, using Kepco's unique "Preview Switch" feature. Model MSK *d-c off selection* allows you to pre-set voltage and current with the digital meters displaying the set values. No voltage is applied to the output terminals and no load current needs to be drawn to set the current control. The *d-c on selection* applies the set voltage to the output terminals. The appropriate mode indicator illuminates and the meters indicate actual voltage and current.

MSK MODEL TABLE	d-c OUTPUT RANGE		POWER
	Volts	Amps	Watts
MSK 10-10M	0-10	0-10	0-100
MSK 20-5M	0-20	0-5	0-100
MSK 40-2.5M	0-40	0-2.5	0-100
MSK 125-1M	0-125	0-1	0-125

Price: \$595., each model.

The compact unit (only 5-3/4" x 8-1/8" x 13-5/32") includes two front-panel, 10-turn precision controls for setting voltage and current, two 3 1/2 digit LCD

displays, an LED mode indicator and a quiet, efficient fan. Its fully-dissipative series-pass stabilizer circuit assures low noise, high stability and accurate resettability.

Although the Nyquist limit gives an upper theoretical sampling limit, practical considerations dictate a higher sampling rate.

offers eye patterns with amplitude-probability histograms and many other measurement features you'd want in a lab DSO.

### DSOs for high-speed digitizing

If you're interested in achieving the fastest single-shot real-time performance possible, you should consider the HP 54111D. This scope boosts its 1G-sample/sec digitizing rate to 2G samples/sec by working in tandem with the 54114A test set. The \$1625 test set demultiplexes the single input channel into two digitizing channels. With this accessory, you only have one acquisition channel, but in return you get data samples separated by 500 psec on signal bandwidths to 500 MHz.

Tektronix's 2440 is another recent offering with a high sample rate. This 24-lb portable scope has a 300-MHz bandwidth and a 500M-sample/sec sample rate. Although portable, the unit (like other members of the 2400 family) can make 21 automated waveform measurements, giving it much of the capability usually found in lab instruments.

Lecroy's 9450 DSO offers high-performance features for both repetitive and single-shot applications. Its 350-MHz bandwidth provides good capability on repetitive signals, and its 400M-sample/sec digitizing rate coupled with a generous 50,000-word record length means that you can capture long waveforms with excellent timing resolution. The 9450 also lets you divide up the 50,000-

400-MHz DSO (Tektronix Inc)

word record length to use it for acquiring multiple events; the DSO time-stamps each record. To help you capture a single glitch in single-shot mode, the instrument offers glitch triggering.

In October, Tektronix added the 11201 to its 11000 Series of laboratory oscilloscopes. At \$11,900, the 11201 is the lowest priced lab DSO available today. The 4-channel scope provides a 400-MHz bandwidth, nine bits of vertical resolution, and a 10,000-word record length. Although you can't change plug-ins for operations like differential probing, you do get all the same display and measurement features available on the 11400 Series.

In mid-year, HP introduced the \$3465 54501, a 100-

# FIND THE SOLUTION TO YOUR CHALLENGING SIGNAL ANALYSIS PROBLEM HERE.

*(Or challenge us to come up with a solution for you).*

## THE INSTRUMENTS:

The DATA 6100 permits complex signal analysis with or without computers. You get simple one-key access to 50+ processing functions, settling time to within 0.01% of final value in less than 10 ns, rise times as fast as 350 ps and resolution to 16 bits at 100 GHz effective sampling rate. The MODEL 2020 generates waveforms in real time, lets you add noise, glitches, simulate phase shifts or degraded rise times with front panel entry, and features a 512K output memory.

## THE SUB SOLUTION:

With the 650-1 Plug-In Digitizer's true 16-bit/1 MHz resolution, the DATA 6100 can determine "Who goes there?" in the undersea environment, easily differentiating seemingly identical screw and engine noises. With more than 50 resident functions and 32,000 data point storage, analysis and retrieval of key sensor data are greatly simplified.

## THE BIOMEDICAL SOLUTION:

Studies of the effect of psychotropic drugs on brain electrical activity may lead to greater understanding of the etiology of mental disorders. The DATA 6100 ac-

quires signals from 0.5 to 100 mV with durations of fractions of a millisecond in this advanced research program. In other applications, the Model 2020's direct entry, real-time waveform generation and modification enhances analysis.

## THE VIBRATION SOLUTION:

The DATA 6100's extensive frequency and time-domain capabilities excel in industrial vibration analysis, such as the automatic testing of transmissions, alternators, and fuel pumps. For example, 6 FFT input types and 18 result options speed electric fuel pump fault detection through signature analysis.

## THE DISK DRIVE SOLUTION:

Disk drive performance parameters such as position error signal (PES) symmetry and seek-time errors can be rapidly and cost-effectively

tested with the DATA 6100 and the 620-1 plug-in. Testing PES resonance and PES spike is equally fast and efficient. The 6100's programmability and powerful algorithms provide single-key results.

## Low Cost 8051 Tools

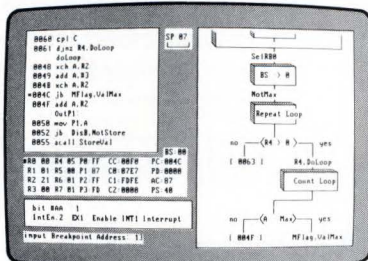

**d²ICE-51** \$995

This Real-Time ICE is the lowest cost and smallest sized full speed 8051 in-circuit emulator. Full access to hardware I/O. Includes all debugging features of Sim and dICE below. Fits in shirt pocket.

**dICE-51** \$495

This reduced-speed in-circuit 8051 debugger provides full access to I/O but will not run real-time. With the same user interface features as Sim8051 below, dICE-51 generates execution profiles during reduced speed execution. (CMOS and MIL also available.)

**Sim8051** \$395

This software Simulator/debugger allows 'no-circuit' debugging of 8051 code on IBM-PCs. All Cybernetics 8051 debug tools offer multi-window source code displays, symbolic access to data, single key commands, breakpoints, trace, full speed and single step execution, execution profiler, and more.

### Other 8051 tools include:

Cross Assembler	\$195
8751 Programmer	\$195-\$345
Debugger Demo Disk	\$ 39

MHz DSO, which includes many high-performance features that HP calls Advanced Logic Triggering. The DSO has positive- or negative-edge triggering on any of its four input channels. In addition, you can use pattern triggering by designating the required high, low, or don't-care state for each of the four channels. Time-qualified pattern triggering lets you trigger on the first edge to exit from a pattern if the pattern is present for greater or lesser than a specified time, or if it is within a window (which you designate). You can adjust the qualification time from 20 nsec to 160 msec. The 54501's time-qualified pattern triggering lets you trigger glitches that are present for at least 7 nsec. A state-triggering mode uses three channels to qualify a pattern and the fourth channel as a clock input, which triggers when the desired pattern appears.

In addition, you can combine all of these trigger modes with delay-by-time or delay-by-event capability to achieve outstanding trigger flexibility. The 54501 also performs 16 automatic pulse-parameter measurements.

Judging by the above descriptions of some of the DSOs introduced in the past 12 months, you shouldn't have any trouble finding a DSO with a performance level to satisfy just about any application you may have in mind. Moreover, the stream of new high-performance DSOs shows no signs of letting up, so you can expect to see competitive prices and continuing increases in performance.

# System 3000

## WORK WITH THE BEST

To be the best **UNIVERSAL PROGRAMMER**, you've got to set some pretty high standards.

Stag's Systems 3000 gives you standard features found in no other Universal Programmer.

### Single Programming Station

The System 3000 is designed to program PROMS, PLD's and Microcomputers in every known technology. The technology includes NMOS, CMOS, ECL, Fuse Link, AIM, DEAP and Isoplanar-Z. Surface mount devices can be programmed on an optional SMD chip-station.

### Built-In CRT

The System 3000 incorporates its own CRT display and keyboard allowing it to be used as a powerful stand-alone programmer. On-screen menus and prompts allow device selection and all system operation functions to be easily executed.

The System 3000 also gives you full-screen editing of both memory and logic data including test vectors. Light pen operation and custom Z-packs for life cycle testing and other specialized functions set the System 3000 apart from any other Universal Programmer.

### Interface Flexibility

Four separate user interface ports, including two RS232C's, an IEEE 488 and a Handler Port, give the System 3000 unrivaled flexibility for communicating with peripheral equipment.

### Stand-Alone or Computer Operation

All stand-alone functions are operational under remote control using either a mainframe or a personal computer.

### Instant Update Using a Memory Card

A unique feature of the System 3000 is that all device libraries and programming algorithms are contained on a Memory Card that can be changed instantly by the user as new devices become available. Data access is considerably faster than floppy disk-based systems.

### Approved by Chip Manufacturers

Semiconductor manufacturers' approval of our programming algorithms assures the user of the highest yield and device reliability.

Call us today for more information or a demonstration and find out how easy Universal Programming can be.

# OFF-LINE Modular Power From 50 to 600 Watts!

From AC line in, to highly regulated DC out, **VICOR** now offers the **total design solution through a complete family of Off-Line Front End and DC/DC modular power components.**

The system configuration changes...The power budget changes...What do you do about the power supply? If you are designing with modular power components, configuring the most effective power system is as straight forward as changing the mix of components used. **Configurable Power**...the most efficient and cost effective means to maintain flexibility and minimize time to market.

## Off-Line Front Ends

The Front Ends are available in output power ratings of 250, 500, and 750 Watts and are designed to deliver an unregulated 300 Volt DC bus to Vicor's VI-26X Series of DC/DC converter modules.

### FRONT END SELECTION CHART

MODEL	PACKAGE		OUTPUT POWER		
	PC MOUNT	CHASSIS MOUNT	250W	500W	750W
VI-FPE6-CUX	✓		✓		
VI-FKE6-CUX		✓	✓		
VI-FPE6-CQX	✓			✓	
VI-FKE6-CQX		✓		✓	
VI-FPE6-CMX	✓				✓
VI-FKE6-CMX		✓			✓

### OPERATING PARAMETERS (ALL MODELS)

INPUT VOLTAGE (VAC)			
NOM	LOW	HIGH	TRANSIENT (1 SEC)
110	90	135	150
220	180	270	300

Strappable to provide operation from 90 VAC to 270 VAC single phase lines, the Front Ends feature conducted EMI/RFI filtering to VDE/FCC A & B, 50 msec holdup, active in-rush limiting and a BUS-OK status output. An opto-isolated AC-OK output is provided for advance warning of DC BUS dropout due to AC line failure.

## DC/DC Converters

The VI-26X Series is Vicor's family of 300 Volt input, "zero-current-switching," component-level, agency approved, DC/DC converters. These converters represent the state-of-the-art in terms of power density, efficiency, noise performance, reliability and ease-of-use. Available in 38 standard combinations of power rating and output voltage, the VI-26X Series modules in combination with the Front Ends, offer unprecedented flexibility in providing off-the-shelf solutions to virtually any off-line power requirements.

### CONVERTER/BOOSTER SELECTION CHART

Shaded modules available as boosters. Change VI-2XX-XX to VI-BXX-XX.

5V	OUTPUT VOLTAGE*					OUTPUT POWER (W)
	12V	15V	24V	48V		
—	VI-261-CU	VI-262-CU	VI-263-CU	VI-264-CU		200

# DON'T GET CAUGHT IN THE ASIC SPEED TRAP

## Winning in Design Verification Demands Highest Speed And Lowest Elapsed Time. Topaz-V Gives You Both.

There's a significant difference between test rate and testing time. That difference could add hours, days or even weeks to your VLSI design verification effort. Don't be trapped by only comparing the obvious.

The Topaz-V family of VLSI Design Verification Systems redefines the meaning of speed—concentrating on how fast it can work for you and your ASIC verification requirement. Not simply how fast it can run.

These fifth generation systems incorporate the revolutionary, new virtual vector memory ( $V^2M$ ) architecture. It allows large vector sets to be downloaded, edited, and actively maintained on line. 'What if' analysis takes only seconds; simply change the set-up or vector and press 'start.' Time-consuming recompiles, vector re-downloading, and use of multiple vector pages are completely eliminated, slashing characterization time. Coupled with the system's 110 MHz test rate, 1.5 V/ns slew rate, 544 I/O pins, and 0.5 Gigabit per second communication interface, it will characterize your most complex device.

### The Superior Solution to Prototype Testing, Failure Analysis, Quality Assurance, and Low Volume ASIC, VHSIC and VLSI Production

Specify Topaz-V. Thoughtfully engineered to satisfy your requirements for shorter test time, higher speed and greater accuracy.

Don't be caught in the ASIC speed trap. Look beyond the obvious. Redefine what speed and time really mean to you, and to your next new product's time to market.

Demand a demonstration of the Topaz-V systems; designed to meet your needs for high performance, accuracy and throughput into the decade of the Nineties. Then decide for yourself.

## Digital scope simultaneously captures data from two sources at 500M samples/sec

The Tektronix Model 2440 digital-storage oscilloscope looks and acts much like a familiar analog instrument, yet it has many more features and operating conveniences. It offers a high sampling rate—500M samples/sec. The 2440 is similar in style to its predecessor, the 2430A, but it has a 300-MHz vertical bandwidth—twice that of the 2430A—and its greatest sweep speed (2 nsec/div in equivalent-time-sampling mode) is 2.5 times faster than the 2430A (equivalent-time sampling allows the storage of repetitive events that occur faster than the maximum digital oscilloscope sampling frequency).

The 2440 retains many of the features of the 2430A: simultaneous sampling of two inputs, 8-bit reso-

lution, 2-mV/div max sensitivity (200  $\mu$ V/div in average mode), and 1024-point record length. Its 6.3  $\times$  13  $\times$  18.9-in. size and the 24-lb weight are also identical to the 2430A.

Added conveniences include an automatic setup and an automatic measurement, which, among other

things, can display 20 numerical parameters of a captured waveform. Using its automatic pass/fail test, you can define a waveform envelope, and then automatically monitor the scope's operation.

The scope's dual timebases give you access to a variety of display modes. You can also provide your own sampling clock with any frequency from 1 to 100 MHz. Further, it has a glitch-capture feature. Among the unit's interfacing features is an IEEE-488 port for printers and plotters. \$11,500.

**Tektronix Inc, Box 1700, Beaverton, OR 97075. Phone (800) 426-2200.**

Circle No 437

## LabView upgrade reduces execution time and adds graphics controls

LabView version 2.0, an upgrade of version 1.2, has a compiler that significantly reduces the execution time, provides editing capabilities like rubberbanding, and offers graphics controls such as panning and zooming.

This color, icon-based programming system simplifies engineering and scientific programming on Apple Macintosh computers by permitting you to design software-generated virtual instruments. You produce these instruments by drawing block diagrams that represent test and measurement functions, and then control the instruments via pictorial renditions of the types of switches, dials, and levers you

might actually find on 3-D versions of such equipment.

To reduce memory requirements and to further increase execution speed, LabView 2.0 adds multiple integer and floating-point data formats to the previous version's ex-

tended-precision floating-point data type. LabView 2.0 can run all the applications you've developed under version 1.2, and is available to owners of version 1.2 at no cost. Otherwise, you can buy version 2.0 for \$1995. The company also plans to distribute libraries of LabView via the MacNet electronic bulletin board and on fourteen 3½-in. disks. The disks cost \$50 each; access charges for MacNet vary from \$4 to \$8 per hour.

**National Instruments, 12109 Technology Blvd, Austin, TX 78727. Phone (800) 531-4742; in TX, (512) 250-9119. TLX 756737.**

# Instruments

## 400M-samples/sec digital scope stores 50k-word records

Using flash ADCs, the LeCroy 9450 digital oscilloscope can sample 2 channels simultaneously to 8-bit precision at 400M samples/sec, and it can do so with its sweep speed set anywhere from 1 nsec to more than 10  $\mu$ sec/div. It owes this unusual ability to 2 acquisition memories that, with 50k words of battery-backed RAM for each of the scope's two channels, are approximately 50 times deeper than those of most competitive scopes. Each RAM can store a single waveform record, or you can partition it to store as many as 200 records.

A key feature of this scope is its flexible triggering: It can delay starting a sweep for a user-specified interval following a trigger condition, and it can also delay the sweep until it has registered a specified number of trigger events—the number of events can be as large

as one billion. It features glitch-capture and pattern-triggering modes as well. The scope's controls mimic those of an analog scope, and its display helps you to avoid perceptual confusion because it draws lines between sampled data points and highlights them. The 9450 includes RS-232C and IEEE-488

ports, and you can power it from 110 to 220V ac from 48 to 440 Hz. \$18,900.

**LeCroy Corp, 700 Chestnut Ridge Rd, Chestnut Ridge, NY 10977. Phone (914) 425-2000. TWX 710-577-2832.**

Circle No 439

## ASIC-verification system produces 200-MHz patterns

The HP 82000 ASIC verification system is designed both for the custom-IC design environment and for the test-development environment. The system uses a 68030-based HP 9000 Series 360 computer with 8M to 32M bytes of main RAM, a hard disk with at least a 120M-byte capacity, and a cartridge-tape backup unit. It runs under HP-UX (the vendor's real-time extension of the Unix operating system) and the XWindows graphics manager.

The desktop configuration of the verifier can accommodate 80 channels, and you can expand the test hardware to drive and sense 384 channels. Each channel can both drive and sense signals at 200 MHz,

without sacrificing channel capacity. The total edge-placement error is 250 psec. The true tester-per-pin architecture eliminates fixture wiring for devices in many dual-in-line and pin-grid packages and allows

you to reconfigure channels individually. The system can generate patterns in four formats: return to 1, return to zero, return to complement, and delayed nonreturn to zero.

To cut test-development time, the system software provides an automatic test generator and linkage to CAE programs. HP 82000 pricing begins at \$65,000, and a 64-channel system costs \$193,000. Delivery is scheduled for the first quarter of next year.

## Sequential-sampling digital scope has 2-GHz bandwidth

The PM 3340 2-channel digital oscilloscope uses sequential sampling to essentially achieve a 2-GHz repetitive-signal bandwidth. According to the manufacturer, sequential sampling does not result in a longer waveform reconstruction time than that of other data-capture techniques, and its use allows for products with a superior price/performance ratio. The PM 3340 delivers a 2-GHz signal bandwidth, 2-GHz trigger bandwidth, 20-psec/div sweep speed, and 1-mV/div sensitivity. Furthermore, it digitizes with 10-bit resolution.

Insofar as possible, the scope's controls work as their counterparts on analog scopes do, but there are also many of the conveniences common to digital scopes, such as on-

screen menus, and function selection via a row of soft keys to the right of the screen. Nonvolatile memory can store 250 control settings. For automated-test applications, the unit includes both RS-232C and IEEE-488 interfaces.

The scope also offers many signal-processing capabilities: signal averaging, FFT and amplitude histo-

gram determination, four memory registers for waveform comparisons, and an eye-pattern display mode. Moreover, it can calculate some arithmetic problems. Prices start at \$16,000. Delivery is six weeks ARO.

## Unit simultaneously programs bipolar and MOS PLDs

The Gangpro SP can gang-program both MOS and bipolar PLDs in 20- and 24-pin DIPs. What's more, you can upgrade it to handle EPROMs (32 at a time) and some single-chip  $\mu$ Ps. Special configurations of the programmer are available that handle plastic leaded chip carriers and pin-grid packages with as many as 68 pins. The SP can do PLD set programming—that is, it can write different data into each of the individual ICs plugged into it, and it can actually program device sets composed of several types of ICs.

The unit is a stand-alone programmer with 512k bits of program RAM, expandable to 4M bits. You can operate the programmer with

a small handheld keypad included in the base price (or you can connect an ASCII terminal to the RS-232C port). Battery backup for the RAM is optional. You use an IBM PC to update the library of programming algorithms stored in EEPROMs inside the unit; the vendor distributes

library updates on PC-formatted disks.

The programmer can store the times at which you modify the RAM contents; a label-printing program running on a PC can then print out labels indicating the program version residing in the IC. The Gangpro-SP8 (with eight 20- and 24-pin PLD programming stations) sells for \$7995. The EPROM- $\mu$ P upgrade costs \$600/station.

# Introducing OmniLab 9240.

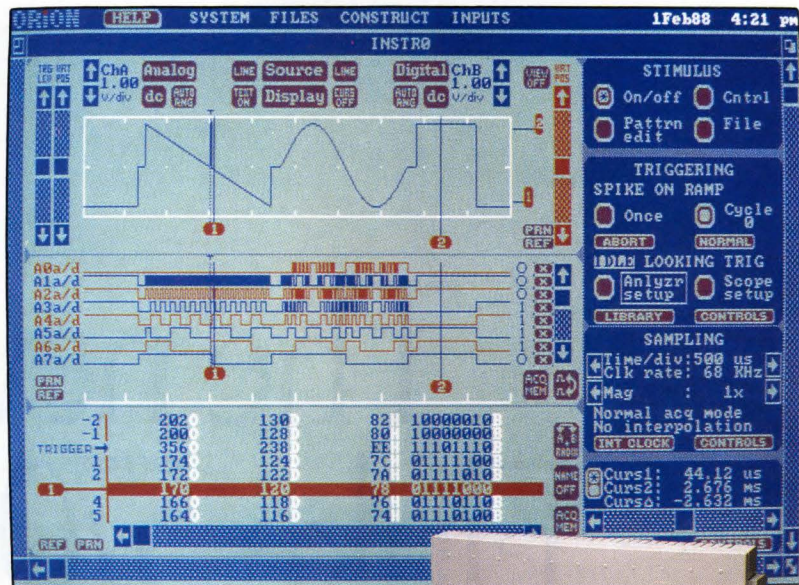

## Totally Integrated Scope-Analyzer-Stimulus.

■ Combine a 100 MHz digital oscilloscope with a time-aligned, 200 MS/s 48-channel logic analyzer. Next add synchronized analog and digital stimulus generators. Then a remarkable new triggering system. What you have is the 9240 — a whole **new class** of instrumentation. Expressly designed to speed challenging analog and digital analysis. And get you from concept to product faster.

■ The 9240 is based on an innovative new instrument architecture that merges high-speed universal hardware and seamlessly-integrated software to create high-performance capabilities not available in separate instruments. Analog and digital traces are always time-correlated in a unique, single screen display. SELECT™ triggering bridges scope and analyzer techniques. And OmniLab's stimulus generators can playback captured or edited signals.

■ At the heart of the 9240 is SELECT triggering, the most straightforward and complete solution **ever** to triggering dilemmas. It's one system, operating with synchronized analog and digital views of your data. By combining conventional oscilloscope and analyzer triggering with powerful RAM truth tables — plus min/max time qualification as needed — SELECT triggering helps you analyze hardware, debug software, and integrate systems more easily.

■ OmniLab™ is a generation ahead of conventional digital scopes that often hide rarely occurring faults because they only show you a few cycles out of millions. With its continuous monitoring, you can use SELECT triggering to quickly catch every occurrence

OmniLab display demonstrates capture of an imbedded analog glitch (in top trace) with time-aligned presentation of the waveform's digitized bit values (center) and numeric states.

of rare events like metastable states, bus contentions, missing pulses, and buried noise glitches.

■ The 9240 is like having a complete benchtop of instruments integrated with your PC/AT or compatible. Which you can easily customize for digital development, analog development, or a combination of both.

■ With OmniLab, your productivity will soar. Because you achieve results with fewer instruments. And in fewer steps than ever before. By no means least, the 9240 delivers the best price/performance you'll find anywhere, costing just \$8900 fully outfitted. And most importantly, without compromising a single high-performance spec. Not a one.

■ For more information, call toll free 800/245-8500. In CA: 415/361-8883. Or write for complete literature.

# The new Fluke 5700A Calibrator.

PHILIPS

# Before it could exceed your expectations, it had to exceed ours.

## The most complete multifunction calibrator ever made.

You've always expected more from Fluke calibrators. More features. More performance. More innovation. You expect a lot. And here it is: the all-new 5700A Calibrator.

## Precision performance that is easy to use.

You will find the 5700A surprisingly easy to use. Enter the desired values on the calculator-style keyboard. View menu selections and interpret status and error messages quickly through plain language displays. Use one of the many convenience features to perform tedious functions automatically.

## Simplified support with Artifact Calibration.

You might expect an instrument with the accuracy of the 5700A to be difficult to support. But it's not. You need only three Artifact Standards — a 10V direct

voltage standard, and 1Ω and 10kΩ resistance standards — to calibrate all ranges and functions of the calibrator. Front panel messages prompt you through the process. And it all takes just over an hour, compared to the eight hours or more you'd expect for such a calibrator. Internal Check Standards and the Cal Check feature enhance your confidence in the 5700A's performance between calibrations. External verification may be extended to two years.

## Covers your complete DMM workload.

The 5700A will calibrate virtually every DMM in your workload. It outputs direct voltage to 1100V. Alternating voltage from 220μV to 1100V (10 Hz to 1.2 MHz). Cardinal resistances from 1Ω to 100 MΩ in x1 and x1.9 decades, plus a short. And direct and alternating (10 Hz to 10 kHz) current to 2.2A. To calibrate higher current ranges or high ac voltages at high frequencies, select the companion 5725A Amplifier. To extend the 5700A's calibration workload

coverage to RF voltmeters, order the Wideband Voltage option.

## Compatibility that protects your investment.

The 5700A protects your investment in existing Fluke instruments, systems and procedures. 5220A and 5205A/5215A amplifier ports are standard. So are IEEE-488 and RS-232 capabilities. And 5100B emulation mode allows you to update a system with minimal changes to your existing procedures.

## Send for a free demonstration video.

Call 1-800-44-FLUKE today for more information, and ask for a copy of our free 5700A demonstration video. It will give you a closer look at its features and functions in action. The Fluke 5700A Calibrator. It will exceed your expectations.

## Macro performance in a micro size

**Signetics 83/87C751  
microcontroller—the performance  
of an 80C51 packed into a 24-pin  
skinny DIP or SMD 28-pin PLCC.**

Designed around the 80C51 architecture, our new 83/87C751s let you use your existing instruction set and code to gain the enormous benefits of a smaller package at a smaller price.

**A lot of guts in a little package.** Its 16 MHz operation means you don't have to sacrifice performance. You'll appreciate the convenience of EPROMs in UV or OTP. Coupled with the flexibility of an I<sup>2</sup>C serial bus port. And the efficiency of an 8-bit architecture backed by a complete Signetics development system.

**Think of it.** Increase the power of your 4-bit applications. Or replace your logic blocks. Or lighten your handheld designs. All while decreasing system costs.

Call us for a free '751 Microcontroller Information Packet at (800) 227-1817, ext 991D. For surface mount requirements and military product availability, contact your local Signetics sales office.

One standard. *0* defects.

## 20 GHz SCOPES

The 11800 Series 20-GHz digital sampling oscilloscopes offer as many as 136 channels, 16 automatic measurements, and differential and single-ended time-domain reflectometry (TDR) measurements. Two mainframes are currently available. You can expand the 8-channel 11801 with the SM11 Multi-Channel unit to acquire 136 channels. The 11802 has built-in delay lines that allow you to view the leading edge of the trigger event.

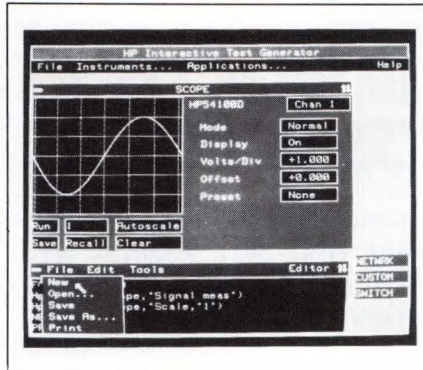

Both models combine  $\leq 17.5$ -psec rise times with a 200k-sample/sec sample rate and an 8-bit vertical resolution at all vertical sensitivities. They can acquire multiple records of 512 to 5120 points. You can configure the mainframes with the SD-24 dual-channel TDR/sampling head plug-in to execute single-ended and differential multichannel TDR measurements. You can then use the scope to evaluate balanced lines such as twisted pair cables and circuit-board transmission lines. 11801, \$23,500; 11802, \$22,000; SM11 \$10,000 (4 head), \$15,000 (16 head); sampling heads, from \$3,500.

## TEST GENERATOR

The E2000A interactive test generator (ITG) is a mouse-driven software package that runs on specially equipped IBM PC/ATs and compatibles as well as on the vendor's HP 9000 workstations. It lets you create Basic test programs that are independent of the measurement in-

struments. ITG software drivers, which are tailored to specific instruments, then link the device-independent test program to a particular test system. You can use the same test program for different instruments, and you can change a program to take measurements from different instruments.

The ITG gives you interactive control over the state of an instrument, and its automatic incremental state-programming feature reduces program execution time; the software sends only the minimum number of calculated commands to an instrument. ITG software, \$995; 20 drivers for IEEE-488-based instruments, \$495; through February 28, 1989, both the ITG software and drivers, \$995.

**Hewlett-Packard Co, 19310 Pruneridge Ave, Cupertino, CA 95014. Phone local office.**

Circle No 556

## GENERATORS

The 2040 and 2045 arbitrary waveform generators convert data from 8-bit bytes to analog voltages at the rate of 800M points/sec. You can describe the desired waveforms as mathematical equations, graphics sketches, or line segments, or you

can download them from a host computer. The units feature 512k points of memory that you can divide into multiple segments and 78k bytes of battery-backed RAM that stores files containing polynomial waveform definitions. You can trigger the output waveforms or you can synchronize them to an external source.

Both generators provide a pair of analog outputs. The 2040's outputs, which are in phase opposition, have internal impedances of 50 $\Omega$  and supply a 1V p-p signal into a 50 $\Omega$  load. One output of the 2045 is obtained directly from the main DAC and the other passes through a programmable 63 dB attenuator and Bessel filter. 2040, \$13,500; 2045, \$14,500. Delivery, within 12 weeks ARO.

Circle No 557

## WAVEFORM DIGITIZER

The Model 6880B/6010 waveform-digitizing system has a 1.35 billion-sample/sec digitizing rate and a 500-MHz typ analog bandwidth. Using a charge-coupled-device buffer, the 6880B/6010 captures "snapshots" of the input signal's amplitude every 750 psec and applies them to a flash A/D converter at a slightly lower rate. The unit can store 10,000 digitized samples in its waveform memory. It has 11-bit single-shot resolution—approximately one part in 2000—and provides 9.6 bits of "effective accuracy" in a "sine-fit" test that accounts for differential non-linearity, noise, aperture uncer-

# Instruments

tainty, and harmonic distortion. You can manually control the digitizer from the front panel or through the IEEE-488 and RS-232C interfaces.

You can create your own digitizing system by combining as many as six 6880B digitizers with one 6010 controller. Prepackaged configurations that include one or two digitizers, a controller, a benchtop chassis, an IEEE-488 cable, and PC-based oscilloscope software are also available. Single-channel version, \$20,450; two-channel version, \$33,350; 6880B, \$14,500.

**LeCroy Corp, 700 Chestnut Ridge Rd, Chestnut Ridge, NY 10977. Phone (914) 578-6038. TWX 710-577-2832.**

Circle No 558

## WAVEFORM RECORDER

The 5300 Series programmable waveform recording system allows you to monitor eight analog and eight event data channels at 1M sample/sec/channel with 12-bit resolution. You specify the waveform capture parameters via a software tool called the Event Manager, which has a 21-input, dual-trigger tree system that uses logical AND and OR functions to discriminate among more than one-half million transient events.

The 68000-based 5300 has two independent clock functions: a real-time clock and an interval timer. You can program the 5300 via its RS-232C, IEEE-488 port, or an optional Intelligent Front Panel. Another software tool called the Mem-

ory Manager lets you optimize the 5300's memory utilization. Other options include a D/A converter for hardcopy output to standard oscillographic recorders. 5300, from \$15,000.

## DATA LOGGER

Although the Step-120 Mobile Incident Logger (MIL) is designed for the automotive industry, it is suitable for use as a 6800 or 68000 family system analyzer. It requires an IBM PC or compatible to act as a host for data transfer and initialization. The unit records processor-bus data, RAM variables, and external events. The data logger has four analog channels and eight event channels. The analog inputs have selectable ranges of 0 to 5V or 0 to 20V, and offer 8-bit A/D resolution. The unit operates from dc power with a 9 to 16V input range and tolerates vibration and mechanical shock. \$14,900.

Circle No 560

## EMULATOR

The ICE-386 25-MHz emulator allows you to control program execution, modify the contents of memory, control the initial state of registers and flag bits, and directly manipulate memory-resident tables. It is designed for products based on the vendor's 80386 processor. Standard features include 128k bytes of

emulator memory, bus trace capture as high as 4k cycles, single-step execution, register and memory access, coprocessor support, and symbolic support for programs written in Intel-supported 86/286/386 languages. You can define a breakpoint as an execution address, a task switch, an external input, a trace-buffer-full signal, a bus event, a series of events, or a counter signal. To connect your host system to the emulator, you can use an RS-232C or a GPIB interface. The emulator provides external I/O lines so you can coordinate events between the emulator and external tools such as logic analyzers. \$19,995.

**Intel Corp, Garrett 1, 3535 Garrett Dr, Box 58119, Santa Clara, CA 95052. Phone (408) 765-8080.**

## MULTIMETERS

The 80 Series comprises three models of hand-held A/D multimeters that offer frequency, duty-cycle, and capacitance functions. You can conduct frequency measurements from 0.5 Hz to 200 kHz, duty-cycle measurements from 0.1 to 99.9% of cycle, and capacitance measurements from 10 pF to 5  $\mu$ F. A min-max-average feature lets you simultaneously store the highest, lowest,

# Best catcher in any league.

## Check Out Our Performance

All players may cover the basics, but not many can play in our league. When making your first cut you should expect:

- No wait state emulation
- Source level and symbolic debugging
- File compatibility with HP, Intel, Tektronix, Motorola and more, including symbols
- IBM PC/AT and XT compatibility
- Variable trace depth to 4K steps with or without a target CPU break or reset
- Trace-and-go with data stored to disk
- A wide range of supported microprocessors
- Easy re-configuration and compatibility with earlier model hardware
- Dual processor capability
- Memory read and write protection with trace and break
- Menus or direct system commands with an on-line manual
- Complete assembler, linker, and library utilities
- Free software support services
- Parallel interface high-speed data transfer

## LOGIC ANALYZER

The TA208 is an add-in board that converts an IBM PC/AT, PC/XT, or compatible into a 200-MHz logic-timing analyzer. Each board has eight input channels, and you can install as many as four boards into a single PC to produce a 32-channel analyzer. A coaxial connection between the boards synchronizes their operation and enables a 32-channel setup to meet the single-board specification. The variable-threshold input pods present a circuit load of 1 m $\Omega$  in parallel with 3 pF. Trace memory depth is 8k bit/channel, and the internal clock period is selectable in a 1-2-5 sequence from 5 nsec to 5 msec. Alternatively, you can externally clock the analyzer at frequencies as high as 50 MHz.

A single trigger word, in which you can specify logic 0, 1, or don't-care states, triggers the analyzer. There is also a trigger filter, which

## DMM OPTION

The 70615A option adds MATE (modular automatic test equipment) compatibility to the vendor's 7061 systems DMM. In addition to providing the DVM with the CIIL (control interface intermediate language) remote programming instruction set, the option also implements other systems-oriented features. For example, after a power failure, the instrument reinstates the instrument setup that existed before the power failure. It also allows you to capture external events in its 8000-reading nonvolatile memory.

If you have the MATE option, you can also install the 70616A hardware self-test and 70616B status-monitoring relay options; both meet USAF MATE requirements. The self-test option checks the analog functions of the DMM with a simple pass/fail confidence test, a full diagnostic check, and a board-level check. The status-moni-

## RECORDER

The Model 520 data-acquisition and -recording system accepts a range of plug-in, front-end instruments and produces digital or pen-recorder trace outputs. The front-end instruments, which digitize input signals at 30 reading/sec, include a 15-bit dc measurement module, a 15-bit DVM module, a 13-bit DMM module, a thermocouple-linearization module, and a 100 $\Omega$  platinum-resistance-thermometer module.

The recorder can preprocess measured data and produce output in digital form over optional IEEE-488 or RS-232C interfaces. In addition, you can plot the data on the unit's integral 10-in., 2- to 8-pen chart recorder. The chart recorder has 0.1% nonlinearity, a frequency response of  $\pm 0.2$  dB 1.5 Hz, and a step response of 200 msec for a 10 to 90% full-scale deflection. It features trace-annotation, trace-overlap, retrace, and external-synchro-

## SIMPSON UNIVERSAL FREQUENCY COUNTERS. COUNT ON US FOR ACCURACY.

Simpson's new high precision, eight digit frequency counters give you an eye into the world of critical clock signals, RF oscillators and data communications.

Readings of frequency (to 1.3 GHz), frequency ratio (A/B), period, time interval (A to B) and totalized count combined with multi-channel triggering let you find circuit problems that might otherwise go unnoticed.

Simpson's *Professional Series* frequency counters allow for accurate measurements to be

taken on complex and noisy wave-forms by using the variable trigger controls and built-in, low pass filter. One model even offers you selectable attenuation and

AC/DC coupling, allowing the inputs to accommodate a range of signal characteristics. For more complex measurement situations involving two interdependent frequencies, an external clock can be substituted for the internal oscillator. This feature enables you to investigate a wide spectrum of frequencies—from computer circuitry to satellite communications.

Try the new lineup of *Professional Series* frequency counters from Simpson. It all adds up to accuracy and reliability.

Simpson Professional Series  
products are made in USA.

## PROGRAMMABLE FILTER

The 9002 programmable filter is a 3½-in.-high, half-rack-width unit with a frequency range from 0.1 Hz to 102.4 kHz. You can program it via an IEEE-488 port or the front panel. Because the filter has battery-backed RAM, you can store eight complete, 6-parameter setups on each of the two channels for five years. You specify the unit to contain two filters with any combination of the following characteristics: 8-pole Butterworth lowpass or highpass, 8-pole/6-zero elliptic lowpass or highpass, 8-pole Bessel lowpass, or 8-pole/6-zero constant-delay lowpass. \$2495. Delivery, six to nine weeks ARO.

## ANALYZER

The Enhanced Graphics Acquisition and Analysis (EGAA) System records and digitizes analog signals while performing preselected signal analyses with high-resolution color graphics. Designed for use with an IBM PC/XT, PC/AT, or Compaq 386 personal computers, the EGAA system consists of a 16-channel A/D plug-in board, a BNC termination box, and EGAA software. The aggregate 16-channel sampling rate is 1 MHz; resolution is 12 bits.

In the scope mode, EGAA functions as a high-resolution, digital-storage oscilloscope and includes individual channel time bases, digital readouts, automatic transducer calibration, and X-Y function display. A mass-storage mode is optional and allows real-time monitoring while continuously storing data to the hard disk. Data-conditioning, averaging, histogram, spreadsheet, and FFT programs are also optional. \$2495; with analysis options, from \$795 to \$1495.

## EMULATOR

The ES 1800 in-circuit emulator for Intel's 80C186/80C188 microprocessor runs with zero wait states at 16 MHz. The unit supports the 80C186/80C188's enhanced-mode feature set, which includes DRAM refresh, direct coprocessor support, power down, and system-testing

modes. The emulator also includes target-system interrupt servicing in pause mode and I/O overlay capability, which allows the emulator to exercise I/O service routines without target hardware in place. Like other ES 1800 emulators, the 80C186/80C188 includes the Event Monitor System, which provides triggering, breakpoint, and emulation-control capabilities. From \$11,000; upgrade for existing ES 1800, \$8,645.

# MICRO-LOGIC II.™

## The CAE tool with a 10,000-gate digital simulator for your PC.

Spectrum Software's MICRO-LOGIC II® puts you on top of the most complex logic design problems. With a powerful total capacity of 10,000 gates, MICRO-LOGIC II helps engineers tackle tough design and simulation problems right at their PCs.

MICRO-LOGIC II, which is based on our original MICRO-LOGIC software, is a field-proven, second-generation program. It has a high-speed event-driven simulator which is significantly faster than the earlier version.

Shape Editor

A 200-type library of standard parts is at your fingertips. And for a new high in flexibility, a built-in shape editor lets you create unique or custom shapes.

MICRO-LOGIC II is available for the IBM® PC. It is CGA, EGA, and Hercules® compatible and costs only \$895 complete. An evaluation version is available for \$100. Call or write today for our free brochure and demo disk. We'd like to put you in touch with a top digital solution.

- Total capacity of 10,000 gates
- Integrated schematic editor
- Fast assembly language routines
- Standard parts library of 200 types
- Event-driven timing simulator

- Built-in shape editor
- Multiple delay models
- Printer and plotter hard copy

Schematic Editor

Timing Simulator

The program provides you with a top-notch interactive drawing and analysis environment. You can create logic diagrams of up to 64 pages with ease. The software features a sophisticated schematic editor with pan and zoom capabilities.

# Helical-scan drives store gigabytes on tiny tape cartridges

*DAT drive compatible with  
the DDS Manufacturers Group's format  
(Wangtek Inc)*

Tape drives that use helical-scan recording technology can store more than a gigabyte of data on 4-mm digital audio tape (DAT) or 8-mm videotape cartridges. At present, however, issues such as data-format standards, alternate sources, and cost may prove more important than the typical drive specs.

**Maury Wright**, *Regional Editor*

**H**elical-scan tape drives offer system designers state-of-the-art data-capacity and performance specs for secondary-storage applications. The drives store more than 1G byte on 4-mm DAT (digital audio tape) cartridges and more than 2G bytes on 8-mm videotape cartridges. Currently available drives can fit into the standard 5¼-in. form factor, and manufacturers plan to offer the 4-mm drives in the 3½-in. form factor. Furthermore, the tape cartridges are small enough to fit into a typical shirt pocket. The drives currently cost from \$3000 to \$7000 in single quantities, but you can expect their prices to drop by more than half in the next year.

Although you can easily compare the technical specs of helical-scan drives, issues such as data formats and alternate sources may be more important considerations at present. Currently, only Exabyte offers 8-mm drives in the US, although the company has licensed other vendors to produce the drives. Meanwhile, a dozen or more companies have either introduced 4-mm drive products or announced the intention to introduce such products in the first half of 1989. But the companies in the 4-mm market have split into two industry groups, the DDS Manufacturers Group and the Data/DAT committee, and they're promoting incompatible physical data formats (see **box**, "Who's who in data-storage DAT").

#### Helical scan boosts capacity and data rate

Helical-scan recording technology offers advantages in recording density and data-transfer rate over traditional linear recording techniques. Traditional tape drives employ a stationary head to read or write data on parallel linear tracks, which typically run the entire

**Full-height 5¼-in.,  
1.2G-byte, 4-mm cartridge drive**  
(Gigatrend Inc)

## Helical-scan-recording tape drives achieve higher effective head-to-tape speeds than do traditional linear-recording drives.

length of the tape. The head moves up or down to access any track on the tape, but it reads or writes data linearly as the tape moves by.

For a given set of read/write electronics and type of tape medium, the speed at which the tape moves by the head (head-to-tape speed) determines the number of flux transitions per inch the drive can record on the tape (the drive's flux density). The drive's flux density and its data-encoding scheme (MFM, GCR, etc) determine its recording density (bpi) and ultimately its data-transfer rate. The combination of tape length, number of tracks (and therefore track density), and recording density determine the tape drive's storage capacity. Some traditional drives employ multiple heads that operate in parallel, effectively boosting the transfer rate. However, multiple heads have no effect on a drive's storage capacity.

Helical-scan drives typically employ two or more heads embedded in the surface of a rotating drum. The drive pulls the tape out of the cartridge and wraps

it partially around the drum's circumference. In a 2-head drive, the heads are mounted directly opposite (180° apart) each other on the drum's circumference. Each head can read or write data during the time that it's in contact with the tape.

### Rotating drum increases tape speed

The drum is slightly tilted in relation to the tape so that the heads read and write stripes or tracks diagonally across the tape. Together, the horizontal tape movement and the rotating drum cause a higher effective head-to-tape speed, but a lower actual tape speed than drives using linear recording can produce. For example, the Exabyte EXB-8200 drive achieves an effective head-to-tape speed of 150 ips, although the tape actually moves at only 0.429 ips. The drive's drum assembly rotates at 1800 rpm. By contrast, drives based on the linear-recording HI-TC standard for 1/2-in. IBM 3480 tape cartridges have both an actual and an effective tape speed of 79 ips.

## Drive stores 5.2G bytes on VHS videotape

Helical-scan recording technology isn't limited to 4- and 8-mm tape cartridges. Honeywell's VLDS drive, for example, uses helical-scan recording to store 5.2G bytes on commercial VHS super high-grade videotape. The drive fits into a 19-in. rack-mount package and offers performance specs that make it suitable for use with mainframe computers.

The VLDS drive employs a 2-head scanner assembly that rotates at 60 rps and achieves a head-to-tape speed of 454 ips. Operating at a 50,000-bpi recording density, the drive stores 16k bytes of user data on each 4-in. stripe, which is recorded diagonally on the tape.

The drive features a corrected error rate of  $10^{11}$  bits between errors. Each of its two data channels can transfer data at 2M bytes/sec, so the drive can sustain

*VHS-based, 5.2G-byte helical-scan drive (Honeywell Inc.)*

a 4M-byte/sec transfer rate. Recording 5.2G bytes at 4M bytes/sec on a T-120 tape takes 22 min. You can also operate the drive as slowly as 1M byte/sec. To slow the transfer rate, the drive simply decreases the rotational speed of the scanner assembly.

You can purchase the VLDS drive with an embedded SCSI

controller or with a Honeywell proprietary interface. The SCSI controller operates in asynchronous or synchronous mode, and it can perform synchronous burst transfers as fast as 5M bytes/sec. A 2-channel drive with an embedded SCSI controller costs \$39,900.

Both the Exabyte drive and an HI-TC drive transfer data at around 250k bytes/sec, but the Exabyte drive achieves that transfer rate with only one read-write head and a single data channel, while the HI-TC drive employs parallel heads with two data channels. Further, the Exabyte drive stores far more data in the same tape space. The Exabyte drive features a recording density of 43,200 bpi; HI-TC drives record data at only 12,700 bpi. The slow tape speed of helical-scan drives also allows for higher track densities, because it simplifies tape handling and makes the tape alignment more exact. The Exabyte drive operates with a track density of 819 tpi; an HI-TC drive writes only 24 tracks on a 1/2-in. tape.

Helical-scan recording has been used extensively in the video-recording industry, but only in the past couple of years has it been available for computer-data storage. Helical-scan technology is certainly not limited to 4- and 8-mm cartridge drives (see **box**, "Drive stores 5.2G bytes on VHS videotape"), but those two sizes are the form factors of choice because they fit the mechanical requirements of the computer industry. As with most new-technology products, helical-scan tape drives currently have relatively high unit prices in comparison with those of linear-recording tape drives. Helical-scan drives based on the 4-mm DAT and 8-mm videotape cartridges, however, will benefit from the economies of scale provided by the 4- and 8-mm consumer audio and video products.

### Economies of scale benefit DAT drives

Manufacturers of DAT drives, for example, estimate that the electromechanical subsystem common to both the audio products and the data-storage products makes up 25% of the cost of a data-storage DAT drive. As DAT gains widespread acceptance among consumers of audio products, manufacturing volumes will go up, and the price of one key component of data-storage DAT drives—the electromechanical subsystem—will go down.

The other key to lower prices for 4- and 8-mm data-storage drives depends directly on the computer industry's acceptance of the drives. Manufacturers of the drives must employ custom and semicustom VLSI ICs in order to fit the drives into the small form factors required by the industry. When those custom and semicustom ICs go into volume production, the cost of the end product will drop substantially.

DAT drives can cost more than \$5000 in small quantities. When you consider the price of a helical-scan prod-

SCSI-based, 2.3G-byte, 8-mm cartridge drive (Exabyte Corp)

uct, however, be sure you're making a fair comparison. The Exabyte EXB-8200, for example, stores 2.3G bytes and costs \$3850 (1) or \$2225 (1000). State-of-the-art 1/4-in.-cartridge drives cost much less than \$1000 in quantity, but store only 150M bytes. The 1/4-in.-cartridge products also offer a substantially slower data-transfer rate than does the Exabyte drive. Manufacturers plan to ship 1/4-in.-cartridge products that have a 300M-byte capacity in the first half of next year, but the prices will be higher.

### Drives use low-cost 4- and 8-mm media

Don't forget to compare the prices of the media as well. DAT cartridges sell for about \$10 (retail) in Japan, where the audio product is already popular. You can buy 8-mm video cartridges in the US for \$15. The 4-mm and 8-mm data-storage drives use exactly the same cartridges that the consumer audio and video products use, and cartridge prices are sure to drop. Data-storage-drive manufacturers plan to offer private-label certified cartridges for a small premium.

Exabyte currently sells 8-mm cartridges to its OEM drive customers for \$11 (1000) as a way of ensuring the customers that they're using the highest quality media available. This service is an important one, because as 8-mm data-storage tape drives become popular, and more companies start manufacturing the cartridges, the possibility arises that some lower-quality media will appear on the market. Drive manufacturers will probably test the tape media they sell you.

DC-2000 cartridges for 40M-byte, 1/4-in.-cartridge drives sell for \$30 and more. The DC600 cartridges used in 60M-byte drives cost about the same amount.

DAT-drive prices for data-storage applications will drop as audio DAT products gain widespread acceptance among consumers.

But premium DC600-style cartridges for higher-capacity drives can cost \$60 or more. So even though 4- and 8-mm drives are relatively pricey now, they're actually still a good choice on a cost-per-megabyte basis, because they can store a large amount of data on lower-cost media.

#### Applications range to minicomputers

Both the 4- and the 8-mm drives target system applications ranging from file servers on personal-computer networks, to workstations, to minicomputers. The Exabyte EXB-8200 8-mm drive offers a 240k-byte/sec transfer rate; according to Marty McCoy, the company's director of marketing and sales, few submain-frame applications currently require higher transfer rates. The EXB-8200 has a read head, a write head, and a servo head. The drive performs a read-after-write verify operation as a first level of error correction. On each drum rotation, the drive stores eight 1k-byte data blocks in a stripe or track. The data format that Exabyte employs also stores 400 bytes of ECC data with each 1k-byte block. The drive specs an error rate of 1 bad bit in  $10^{13}$ .

The EXB-8200 does not support update-in-place operations (rewriting a section in the middle of the tape), but it will append information either to the logical end of the tape or to any location you choose. Note, however, that when you append information to any part of the tape before the logical end, you invalidate any data past that point. The 5¼-in., full-height drive includes an embedded SCSI controller and a 256k-byte buffer. The drive can burst data asynchronously across the SCSI bus at 1.5M bytes/sec.

As mentioned, only Exabyte currently offers an 8-mm tape-cartridge product (the EXB-8200) in the US. The drive is based on a mechanism from Sony. According to Exabyte's McCoy, two unnamed US companies have licensed the format, and Exabyte continues to offer licenses. Kubota Ltd (Japan) has licensed manufacturing rights to the drive and is marketing the product in Japan. Exabyte intends to establish the format as a standard so that the 8-mm drives can serve applications requiring multiple sources and data interchange between drives from various vendors.

Meanwhile, manufacturers of 4-mm-cartridge drives face the exact opposite problem. A dozen or more companies want to produce data-storage DAT drives, but there's still no standard; the formats adopted by the DDS Manufacturers Group and the Data/DAT committee are vastly different. The manufacturers all agree

*Stand-alone, 1.2G-byte desktop DAT drive (Gigatrend Inc)*

that only one format can succeed in the long run. Furthermore, the ¼-in. cartridge marketplace has shown that to gain widespread market acceptance, tape-cartridge drives must be capable of data interchange, and, preferably, must have compatible logical file formats.

The DDS Manufacturers Group and Data/DAT formats differ in such key areas as error-correction scheme and operating mode. The Data/DAT group's format will allow the drive to update files in place. The format defined by the DDS Manufacturers Group requires that a file be appended to the end of the tape; if you place it in the middle of the tape, you lose the rest of the file unless you rewrite it. Both formats allow random searches for data. The drives employ a high-speed search mode that examines location data written at the beginning and end of each track and can typically access any file on the tape in less than 20 sec.

#### Formats affect performance and capacity

The different formats also have ramifications for performance and capacity. Drives compatible with the DDS Manufacturers Group format store 1.3G bytes of data and transfer data at 182k bytes/sec. Because of data overhead associated with the update-in-place feature, Data/DAT drives store 1G byte of data and have a 133k-byte/sec transfer rate. The Data/DAT committee may add a sequential write mode to its format; if it does, the format would provide performance specs similar to those quoted by the DDS Manufacturers Group. Note, however, that a dual-format drive would

require intelligence to handle both formats, so it would cost more. Furthermore, a manufacturer that chose to support only one operating mode could create incompatibility within the standard.

Drives designed for either format are based on the same mechanism—that used for audio products. The standard DAT mechanism handles the C1 and C2 track and frame format and error-correction schemes. A frame consists of two consecutive tracks or stripes, and a frame can store 5824 bytes of protected data. Both formats also specify a read-after-write operation to detect bad frames. However, the two camps have different methods of adding the C3 level of format and error correction.

The DDS Manufacturers Group format handles er-

rors on a group basis. A group consists of 22 consecutive frames that store 126,632 bytes of data. The DDS Manufacturers Group's C3 ECC scheme will correct any two tracks within a group. The Data/DAT format employs a C3 ECC scheme that operates on 32 frames (128k bytes of useful data, not counting the overhead for the update-and-replace operation) and can correct burst errors of as many as five consecutive tracks in length.

There's currently no information on what types of errors will occur during real-world operation of the drives. The Data/DAT group claims that tape defects will cause errors that are undetected by read-after-write checks to propagate through more than two consecutive tracks. The DDS Manufacturers Group be-

## Who's who in data-storage DAT

Tape drives based on 4-mm digital-audio-tape (DAT) cartridges promise to become a major contender in the secondary-storage market for computer systems. At present, however, two industry groups are promoting incompatible physical formats for DAT drives. The DDS (Digital Data Storage) Manufacturers Group champions a format that was initially developed by Hewlett-Packard and Sony, then fine-tuned by other members of the group. The Data/DAT committee has adopted a format that Hitachi originally developed.

Companies that wish to join the DDS Manufacturers Group and build compatible tape drives must purchase a license from Hewlett-Packard and Sony. For the license, you pay a one-time fee of \$10,000 and a royalty payment of \$2 per drive. Hewlett-Packard and Sony initially maintained strict control over the technical aspects of the format; recently, however, members of the DDS Manufacturers Group have all

had a voice in decisions regarding the format. So far, Aiwa (Japan), Archive, Exabyte, Laser Magnetic Storage International, Mitsumi, Wangdat, and Wangtek have licensed the format.

The Data/DAT committee is an industry trade group working on open DAT standards for the computer industry. Anyone can attend Data/DAT meetings and build compatible tape drives. Michael Peterson, president of the market-research firm Peripheral Strategies, acts as facilitator of the Data/DAT committee. Archival Storage Devices, Distributed Storage Technology, Gigatape, Gigatrend, Hitachi, JVC (Elmwood Park, NJ), Mitsumi, and Sharp (Mahwah, NJ) have all announced that they plan to build Data/DAT drives or are interested in doing so.

## The DDS Manufacturers Group and the Data/DAT committee support incompatible formats for 4-mm DAT drives.

believes it has a superior ECC scheme for correcting random 1-track errors.

The DDS Manufacturers Group has also added some further safeguards that the Data/DAT committee could choose to implement as well. For example, the DDS Manufacturers Group format employs a data randomizer to increase data integrity. Certain ASCII code sequences are more prone to causing errors than others, and the randomizer minimizes the probability that those sequences will occur. The format also includes a provision for error monitoring and reporting on the tape. Every error that occurs is logged on the tape, and an intelligent drive can prompt a system to warn users when the condition of a particular cartridge becomes degraded. Finally, the format supports multiple-group writing, or writing data to the same cartridge more than once to ensure that a good copy of the data exists.

Both industry groups plan to submit their formats to ANSI in February, and neither group expects ANSI to publish two such similar formats. Most industry ob-

servers do expect to see products from both groups emerge, however. Market acceptance by computer-system OEMs will set the standard.

You can't yet buy a tape drive that's compatible with either the Data/DAT format or the DDS Manufacturers Group format. Several companies do offer data-storage DAT drives, but those products employ proprietary formats. The manufacturers chose to bring out those proprietary drives before the two industry groups completed the format standards. The drives serve some niche markets and provide system designers with products they can use now for evaluation and for proving system concepts.

Gigatape, a West German company, and its US marketing arm, Gigatrend, have led the way by offering 4-mm tape drives for several months. The GIGA-1200 stores 1.2G bytes of data and transfers data at 192k bytes/sec. Like all the DAT drives that are currently available, the GIGA-1200 has only two read/write heads, so it can't perform read-after-write error checking because it has no heads dedicated to that function.

### For more information . . .

For more information on the helical-scan tape drives described in this article, contact the following manufacturers directly, circle the appropriate numbers on the Information Retrieval Service card, or use EDN's Express Request service.

# A lot of companies claim complete VME capability.

## Only Radstone can deliver it now.

Radstone Technology is the *only* company in the world that delivers proven VMEbus board and system level products for every application from commercial to full Military Specification...and everything in between. Plus more than 30 years of solid computer experience — more than *anyone* in the OEM board level computer market.

### **Commercial VME...highest performance, low cost, ready to plug and play.**

Radstone's commercial VMEbus product line includes:

- 16 and 32 bit processor boards, including a complete family of 68030-based boards
- Memory boards covering all available capacities and technologies, CMOS versions and VME/VSB models
- The world's fastest and most popular SCSI boards; parallel, serial and analog I/O boards; and much more
- Development chassis with peripheral hardware and a wide range of advanced operating systems

### **Military VME...true Mil-Spec VME, not "militarized."**

All Radstone Mil-Spec VMEbus boards fully comply with both VME and Military Specifications. These boards are built with MIL-STD-883C class B components and meet MIL-E-5400, MIL-E-4158 and MIL-E-16400. They feature low power CMOS components and conduction cooling via an on-board thermal management layer.

- 68020-based processor boards
- SCSI and 1553B interface boards

- MPCC, Ethernet and serial and intelligent communications boards
- Static and dynamic memory boards
- ATR boxes accommodating 15, 8 or 5 boards
- Complete software support, including Ada
- BITE Built-In Test Equipment

### **Ruggedized VME for severe environment, non-Mil-Spec, applications.**

All Radstone Mil-Spec VME modules are also offered in electrically and mechanically compatible reduced environmental spec versions to give you low cost hardware for severe — but not full military — applications. Even lower cost versions are available for off-the-shelf development work.

### **Radstone Technology...Ultimate VME capability for you.**

Radstone is the only company that produces all its boards in military qualified production facilities. And we back up our market-matched commercial, ruggedized and Mil-Spec VME products with technical support services second to none in the world.

A lot of companies claim complete VME capability. Only Radstone can deliver it now.

### **Radstone Technology Corporation**

One Blue Hill Plaza, Pearl River, NY 10965-8541

Western Region: (408) 727-4795

The storage capacities and data rates of 4- and 8-mm cartridge drives will very likely double over the next year or two.

Despite that fact, the product specs an error rate of 1 bit in  $10^{15}$ , and the drive records data at 61,000 bpi and features a track density of 1869 tpi. (Incidentally, both the DDS Manufacturers Group and the Data/DAT formats specify a 4-head drive that does perform read-after-write error checking.)

#### **Choose from stand-alone or 5¼-in. drives**

You can purchase the GIGA-1200 with SCSI, QIC-02, or Pertec 9-track interfaces. The drive comes mounted in a stand-alone desktop box and costs \$6700 with a host interface. The companies also began shipping the \$2585 (1000) GIGA-1230 in November. The GIGA-1230 comes in the standard 5¼-in. form factor; it includes an embedded controller and maintains format compatibility with the GIGA-1200. Gigatape and Gigatrend plan to introduce a Data/DAT product next year.

Archival Storage Devices (in the US) and Distributed Storage Technology Ltd (in Europe) sell the Sphinx DDT-1000 stand-alone DAT drive. The 2-head drive stores 1G byte of data and transfers data at 192k bytes/sec. The drive employs an update-and-replace format and costs \$5000 with a SCSI controller. The companies plan to ship a 5¼-in. product with four heads in the first quarter and a Data/DAT product later in the year.

Hitachi, originator of the Data/DAT format, has shown sample drives at several trade shows but has not announced plans to sell the products. Likewise, Sharp (Mahwah, NJ) has demonstrated a drive but hasn't yet followed up with a publicly available product. Both companies plan to build Data/DAT drives. JVC (Elmwood Park, NJ) will supply mechanisms to a number of drive makers, but it may also enter the drive market with a Data/DAT product.

#### **Company will support both formats**

Mitsumi also offers samples of a 5¼-in. prototype drive for less than \$3000. The drive employs two heads and an update-and-replace format; it specs a 133k-byte/sec transfer rate, and an error rate of 1 bit in  $10^{12}$ . Marketing manager John Antonchick believes customers want a 4-head device; the company plans to ship one before next summer. Antonchick also claims Mitsumi can adapt its present mechanism to a half-height 5¼-in. package.

Mitsumi is the only manufacturer thus far that has licensed the DDS Manufacturers Group format, yet also tentatively plans to produce Data/DAT products.

According to Antonchick, Mitsumi targets only large OEM customers, and will build both types of DAT drives if customers ask for them.

Sony will be the first company to ship a product that's compatible with one of the two proposed 4-mm standards. The company plans to begin sample shipments of its SDT-1000 drive in January. Thus far, Sony has announced the product only in Japan; it sells for ¥600,000 (about \$4500). Compatible with the DDS Manufacturers Group format, the SDT-1000 fits the full-height 5¼-in. form factor. The DDS Manufacturers Group produced a workable standard long before Data/DAT did, so the members of the DDS Manufacturers Group had a head start. In fact, Sony helped to develop the original DDS Manufacturers Group format spec.

#### **OEM DAT prices reach \$1500**

You can also expect Wangtek to ship a DDS Manufacturers Group format drive in the first half of 1989. Wangtek demonstrated the Model 6130F drive at Comdex Fall and promises to ship the product in May 1989. Based on a JVC mechanism, the full-height 5¼-in. drive will cost \$1800. Wangdat and Archive will probably also introduce products compatible with the DDS Manufacturers Group format in about mid-1989.

Activity in the helical-scan tape-drive market will very likely continue at a hectic pace for the next couple of years. Exabyte's McCoy predicts that his company will double the capacity and transfer rate of its 8-mm products in the next year. And once the 4-mm standards issues are settled, you can expect to see rapid growth in all segments of the market. Lee Elizer, executive vice president of marketing and sales at Gigatrend, believes that DAT drives will offer twice the present capacity and four times the present transfer rate in a couple of years. As for the low end, market researchers predict the advent of scaled-down, 2-head DAT drives that use schemes such as multiple-group writing. Within three years, they estimate, these drives will be inexpensive enough to suit personal-computer systems.

# THE MASTER SERIES™ VME by MATRIX

*The power of  
the Future is Here ...*

*The MS-CPU Series with  
1 Megabyte dual ported RAM  
and 68881 Math Co-processor  
meets today's and tomorrow's  
performance requirements.*

The new MS-CPU100 Series reduces board count by integrating key features such as no-wait-state dynamic RAM, ROM/EPROM sockets, two communication ports and a clock/calendar. A system controller supporting multi-processing with a mail box interface rounds out the features of this highly integrated VMEbus processor board. And interface is EASY... the MS-CPU100 and MS-CPU110 are almost entirely configurable under software control!

*Let Matrix provide your future  
VMEbus solutions with our high  
quality Master Series VMEbus  
products.*

## **MS-CPU100/110 Features**

- 1Meg/512K Dual Ported, No-Wait-State DRAM
- 12.5 MHz 68000/68010 with Optional 68881 Math Accelerator
- (2) RS-232 Serial Ports; Optional RS422/485 Multidrop Support
- (2) 28-Pin ROM/EPROM Sockets, 8K Battery-Backed Static Ram
- Full VMEbus System Controller, Supports Multi-Processing
- Time of Day Clock/Calendar, Watchdog Timer and General Purpose 16-bit Timer

**6U Format  
for use in  
double-height  
systems**

# WE'VE GIVEN THE WORLD THREE GREAT LEADERS

## **SWIFT**<sup>TM</sup> *The first 200 MB 3½" disk drive*

The Swift disk drive sets the standard for small drive performance with a blazing 15 ms average seek. Its 1-to-1 interleave allows read/writes of a full track in one revolution.

With models from 100 to 200 MBs and interface options including AT, SCSI, ESDI, and ST506/412, there is a model for every PC application. Shock resistant design, low power consumption, voice coil actuator and a special motor mean Swift is designed for reliability.

## **WREN**<sup>TM</sup> *5¼" disk drives are performance leaders*

The Wren family of drives includes both full- and half-height models with capacities from 50 to 760 plus MBs. Wren's wide range of capacities make it a product your system can grow with.

Wren's claim to fame is its blazing speed. A unique, patented straight-arm actuator provides average seek times as low as 14.5 ms, making Wren the performance leader in its class.

## **SABRE**<sup>TM</sup> *The first 8" drive with a gigabyte plus*

The Sabre Series of disk drives offers capacity from 386 MBs to 1.23 gigabytes. Designed for heavy-duty use, the Sabre sets the standard for rugged duty. Designed for performance with a 16 ms average seek time and transfer rates from 14.5 to 24 MHz, Sabre is the ideal choice for larger multi-user, multi-tasking systems.

A new two-head parallel model with a 6 MB per second transfer rate is ideal for high-speed graphics applications.

### **Made by Imprimis Technology Incorporated**

Imprimis is a Control Data subsidiary. And while we have a new name there is one thing we don't intend to change: our commitment to quality. It's how we intend to remain the world's leading supplier of high-performance, high-capacity data storage.

### **Sales and Service available worldwide**

Distributed in the U.S. by Arrow Electronics; call 1-800-777-ARROW. For large volume (OEM) quantities call us direct at 1-800-828-8001, ask for operator 82 or write Imprimis, Sales Support Services, 12501 Whitewater Drive, Minnetonka, Minnesota 55343, U.S.A.

“Digital helps  
Scientific  
Calculations  
provide  
leading edge  
design software  
to the world’s  
top electronic  
firms.”

Stephen W. Testa  
Scientific Calculations  
Vice President of Sales

“We do business in an on-line manner—we license the SCICARDS® system design software and provide automatic, easily-implemented upgrades every year. Only Digital provides the kind of computer systems architecture and support we need to operate that way.

“Digital’s VAX™ architecture lets us bring software to the customer in the most cost-effective manner. The marketplace is calling for VAX-based solutions, because engineers need the mainframe power that MicroVAX™ and VAXstation™ workstations and VAXcluster™ systems provide. And because of DECnet™ networking software, our product works in a multivendor environment.

“Digital also allows us to be backward and forward compatible. So our customers can keep current with technology without rewriting their applications.

“Everything from concept to design to the manufacture of printed circuit boards is available from Scientific Calculations. And Digital is the common thread.”

#### **The rewards of working together.**

Digital’s flexible architecture provides the leading edge to tomorrow’s technology.

Today, with a consistent systems foundation that supports a wide range of applications yet lowers development and expansion costs, Digital gives you an elegantly simple way for your people to work together more productively, more creatively, more efficiently, more competitively.

To learn more, write to Digital Equipment Corporation, 200 Baker Avenue, Concord, MA 01742-2190. Or call your local Digital sales office.

A way to work together like never before.

CIRCLE NO 31

# ZAX Presents The Best Way To Develop, Program, Edit, Erase, Compile, Assemble, Debug And Compute

Along with everything else shown here, we offer emulators for the following processors: 8086/88, 186/188, 80286, 80386, 8085, 8048, V20/30, V40/50, 6301, 64180, 6809, 68000, 68020, 68030. And yes, more are on the way.

**I**f you're dissatisfied with the formidable task of trying to assemble a suitable microprocessor development system from different vendors, take heart. Now with a simple phone call, you can receive *complete support* for all your development equipment needs from one supplier—ZAX Corporation!

## **WHY DOES SINGLE-VENDOR SUPPORT MAKE SENSE?**

When you turn your development needs over to ZAX, you're assured that all hardware and software tools were conceived, designed and tested to work together reliably and efficiently. Both with your existing system or as a completely independent development system.

That coordination results in a complete turnkey development system instead of a collection of unmatched components. (Surprising as it seems, this modular approach to design tools still costs less than dedicated systems, yet offers more flexibility!) Also, by providing a package instead of a puzzle, you end up conserv-

ing another important resource: Time. One phone call. One purchase order. One solid commitment. No headaches.

## **WHAT TYPE OF HARDWARE AND SOFTWARE TOOLS ARE WE TALKING ABOUT?**

ZAX offers you a choice of two different powerful emulation systems with the ICD- and ERX-series emulators. Both can be interfaced to a variety of hosts (from PC to mainframe) and both offer support for a wide variety of processors. There's also our universal interface chassis, the 300i, that's capable of linking our emulators to virtually all host computers and operating systems. And speaking of computers, ZAX can provide you with a model of its own—the BOX-ER.

ZAX can also furnish an array of useful support hardware, such as a line of PLD/EPROM programmers and erasers. Our ZP-series high-speed programmers interface to your PC for a powerful combination. And the ZE-series line of EPROM erasers include everything from an indus-

trial-class, 200-chip model to the world's fastest eraser, the 5-second Quick-E II.

Chances are a broad choice of development software is paramount to your ability to work in a familiar environment. If so, ZAX is still your best source. We offer "C," Pascal, Ada, PL/M and Fortran compilers, assemblers/loaders, symbolic debuggers, source-level debuggers, and helpful menu-driven communications programs to get you up and running, fast.

Call ZAX today and get single-vendor support working for YOU! Our toll-free number is 1-800-421-0982 (800-233-9817 in CA). ZAX Corporation. 2572 White Road, Irvine, California, 92714.

# Computers and Peripherals

## DSP board and software tools perform signal analysis on a Macintosh II

Using the MacDSP add-in card and accompanying software tools, Macintosh II owners can develop an interactive menu-driven signal-analysis system. When operating in conjunction with a data-acquisition daughter card, the DSP card acquires data at a 125-kHz rate and processes and displays it in real time. The DSP board is available in a 8M-, 12.5M-, or 25M-flops version. The daughter card has a 16-bit ADC and a 16-bit DAC. The DSP card uses AT&T's DSP32 DSP chip, which performs multiply-accumulate operations in a single instruction cycle. The card acts as a rasterizing coprocessor, thereby allowing it to produce real-time video displays.

The board comes with menu-driven, icon-based software for manipulating a Macintosh mouse. A signal-analysis application package

performs FFTs, spectral averaging, Hilbert transforms, and FIR and IIR filters in real time.

An 8M-flops version with 64k bytes of memory and software costs \$2249; a 12M-flops version with the same amount of memory and soft-

ware sells for \$2745. The acquisition daughter card costs \$486.

Circle No 538

## Removable-disk storage system offers 25M bytes of unformatted data

The Model I325 Floptical disk drive, a removable-disk storage system in a 3½-in. format, provides 25M bytes of unformatted disk capacity and 20.8M bytes of formatted memory. The disk drive combines magnetic recording with the high track densities of an optical servo-mechanism. By combining the two technologies, the system reaps the benefits of a removable, flexible medium and achieves the low cost of a 20M-byte drive. In OEM quantities, Model I325 costs less than \$250.

The disk drive accepts double-sided, high-density disks. The

manufacturer optically inscribes 1250 concentric grooves spaced 20 µm apart, which provides 1250 tpi. Track densities of conventional magnetic floppy-disk drives range

from 48 to 135 tpi; pure optical-disk drives specify over 15,000 tpi.

The servo uses LEDs similar to those in compact disks and provides an average seek time of 65 msec. The disk drive comes with an embedded disk controller and a common-command-set SCSI interface. If you have an IBM PC, PC/XT, PC/AT (or compatible) without a SCSI host adapter, the company will provide a host adapter.

**Insite Peripherals, 2363 Calle del Mundo, Santa Clara, CA 95054. Phone (408) 727-8484. FAX 408-727-7917.**

# Computers and Peripherals

## STD Bus boards provide IBM PC/AT compatibility for industrial applications

According to its manufacturer, the STD-AT is the first STD Bus controller to offer full IBM PC/AT compatibility and 18 times the performance speed of a standard PC/XT. The STD-AT includes three plug-in boards that meet the standard 4.5×6.5-in. STD Bus card-cage form factor: the LPM-286AT, the LPM-Video, and the LPM-Disk.

The LPM-286AT card contains an 80286 CPU. It comes with 512k bytes of zero-wait-state RAM, Chips and Technologies' NEAT chip set, two RS-232C ports, a battery-backed real-time clock, a keyboard controller, an 80287 coprocessor socket, three 16-bit timer/controllers, BIOS ROM, and a speaker.

If you add the LPM-Video card to your system, you get 256-color VGA compatibility and 800×600-pixel resolution. The card supports

various monitors and meets the EGA, CGA, and Hercules standards.

The LPM-Disk card lets your system control mass-storage devices having as much as 100M bytes of capacity (including 3½- and 5¼-in.

floppy-disk drives). LPM-286AT, \$1495; LPM-Video, \$525; LPM-Disk, \$295.

## Industrial IBM PC/AT-compatible system employs an 80386 $\mu$ P and 23 STD Bus slots

The STD Busmaster-386 system couples a 16-, 20-, or 25-MHz 80386  $\mu$ P to the STD Bus and targets industrial-control applications. The system is partitioned into two functional and physical sections.

One PC/AT-compatible card hosts as much as 16M bytes of 32-bit dynamic RAM and includes a socket for an optional 80387 math coprocessor. The 80386  $\mu$ P resides on this card. This card plugs into a passive 3-slot PC/AT-compatible mother board positioned in the upper portion of the card cage.

A second PC/AT-compatible board includes a video controller that is EGA, CGA, and Hercules

compatible. This multifunction card also includes two serial ports, a parallel port, a dual floppy-disk-drive

controller, and a SCSI host adapter. The lower portion of the card cage houses 23 STD Bus slots and a 24th slot that interfaces the PC/AT bus to the STD Bus. A plug-in board acts as the interface between the 2 buses.

The 80386 can address 128k bytes of 8-bit STD Bus memory and 504 contiguous 8-bit I/O locations. A 16-MHz STD Busmaster (without any dynamic RAM installed) and MS-DOS costs \$3995. Delivery, stock to 90 days ARO.

# ONLY ONE PLACE WE KNOW HAS A GREATER SELECTION OF MINIATURES.

Sony introduces the most complete selection of miniatures available this side of Oz.

High resolution, CCD, color and B & W video cameras.

All built to perform a rainbow of tasks that include machine vision, robotics, image processing, packaging, surveillance, and more. Plus, with the lenses these cameras offer, you can focus in on an entire production facility.

Or a lion's whisker.

To get this incredible selection of cameras, remember, there's no place like Marshall. We're Sony's largest distributor. With more miniatures than anyone. Ready to ship immediately from over 40 locations nationwide. Even Kansas.

# Computers and Peripherals

## PC/AT-compatible frame-grabber board interfaces with nonstandard video sensors

The VS-100-AT is a single-board frame grabber for the IBM PC/AT and acquires images as large as  $1024 \times 1024$  pixels. In addition to being able to acquire images from standard RS-170 and CCIR video cameras, the board interfaces with many of the newer CCD sensors that do not conform to industry standards. Examples include fast-frame-rate area-scan sensors, x-ray sensors, line-scan cameras, and high-resolution cameras.

The frame grabber also includes an external part-in-place trigger that allows the board to be synchronized with external events. This feature permits the board to capture images such as parts on a conveyor belt when they pass under a camera for inspection. When the board works with CCIR cameras, a  $768 \times 512$ -pixel image-capture mode provides square-pixel acquisition

and display. Capturing square, rather than rectangular, pixels eliminates the need for geometric corrections in gauging applications. The board also has a  $640 \times 480$ -pixel square-pixel capture mode for RS-170 cameras.

Programmable-gain and level-adjust capabilities let you match the video signal to its maximum digiti-

zation range and accuracy. A digital input port bypasses the digitization step if the video sensor is outputting digital data. \$4495.

**Imaging Technology Inc., 600 W Cummings Park, Woburn, MA 01801. Phone (617) 938-8444. TLX 948263.**

## 32-bit CPU card for Multibus I systems hosts a 68030 $\mu$ P and a math coprocessor

With the introduction of the SM31 board, users of Multibus I systems can upgrade their systems to use the 68030  $\mu$ P. The card includes either a 20- or 33-MHz CPU and a 68882 math coprocessor. It features a 32-bit extension to the Multibus I standard, called Multiplus, which it implements on unassigned P2 connector contacts. Another salient feature is a SCSI port capable of synchronous operation at 4M bytes/sec.

The card has 4M bytes of dynamic RAM; you can expand it to 40M bytes via a local bus. The SM31 also includes 2M bytes of EPROM and

five 16-bit timers. Although the 68030 has an on-chip MMU based on a descriptor cache, the board includes a custom MMU compatible with the Stanford University Network (SUN) MMU. The SUN MMU

features a 256M-byte address range and 64,000 descriptors and is suitable for applications that require frequent switching between a large number of tasks.

You can add a variety of functions by adding daughter-card modules. Available modules include a 20M-flops coprocessor, a  $1660 \times 1280$ -pixel video controller, and an Ethernet interface. Configured with a 20-MHz processor and 4M bytes of RAM, the SM31 costs \$4575 (100).

# INTERPHASE

## WE'RE KNOWN BY THE COMPANIES WE KEEP.

Leadership in this industry is earned. Interphase has earned the top position in controller technology for disk, tape and networking in the VMEbus and Multibus open systems markets. But don't take our word for it. Ask the people who use our products as part of their products—Silicon Graphics, Apollo, Siemens, FileNet Corporation, Convex, MIPS, Stellar—and that's to name just a few of our more than 200 active customers.

And if you really want to know what they think of us, consider this. While they all started buying only one product from us, most of our top customers now integrate several Interphase controllers into their systems. Some buy almost our entire product line—surely the ultimate statement of customer satisfaction.

Interphase leadership is rooted in our nearly 15 year heritage of consistently setting technology trends and performance benchmarks that others have followed. With Interphase as your technology partner, you gain a valuable member of the team that always keeps you...

# Now there's an 80C86 built specially for harsh military and space environments!

## First power-saving 16-bit rad-hard CMOS $\mu$ P family.

You should see what happens to our 80C86RH  $\mu$ P when exposed to 100K rads total dose. That's right. Absolutely nothing!

With its built-in hardness, the 80C86RH is designed to thrive in harsh environments. Guaranteed, in fact, to meet data sheet specs after exposure.

Our new CPU makes bulky shielding obsolete. New specialized peripherals replace many discretes and pare chip count and costs even further.

All are 100% pin- and software-compatible with 8086 NMOS systems, and with Harris' standard 80C86. And you avoid the expense of developing software: it's already available.

You can prototype with standard 80C86 parts then retrofit with our new rad-hard compatibles — after systems are tested and working.

Want to outshine the competition? Then give your systems a flare for the dramatic...design-in our rad-hard 80C86 family.

Contact Harris Semiconductor for details and a data book. Call 1-800-4-HARRIS, Ext. 1902 (in Canada, 1-800-344-2444, Ext. 1902).

## Subsystems based on optical WORM drive store 488M bytes, rival hard-disk drives

Two storage subsystems for the IBM PC bus, the APX-4100 and the APX-4200, are available based on the APX-4000 5¼-in., optical WORM (write once, read many) disk drive. The \$4250 APX-4100 mounts inside a PC, and the \$4450 APX-4200 includes a case and a power supply so that the WORM drive can operate outside the PC.

The full-height APX-4000 stores 244M bytes on each side of a 2-sided disk, providing a total storage capacity of 488M bytes. The disk drive can also read from and write to optical-disk cartridges in a half-density format compatible with the company's older APX-3000 disk drive.

The subsystems accept single-sided APX-3300 and double-sided APX-3600 disk cartridges, which cost \$125 and \$175, respectively. Both subsystems include the drive itself, cables, a controller board that

adapts the drive's modified ESDI port to the IBM PC bus, Maxsys file-system software, and utility programs for file-version control and deleted-file recovery.

Circle No 540

## IPI controller for VME systems provides 36M-byte/sec transfers

If you need faster data I/O between your VME Bus system and your IPI (Intelligent Peripheral Interface) disk drives, the V/IPI 4260 Cougar controller lets you meet the ANSI performance specs required to meet IPI level 2.

Today's IPI disk drives provide 3M-byte/sec transfer rates; the next generation of IPI level 2 drives is expected to offer transfer rates as high as 6M bytes/sec. Because the Cougar board has a 36M-byte data-transfer rate and uses a 1:1 interleaving scheme, it can control as many as eight drives.

The board is based on a 16-MHz 68020 and comes with a 256k-byte data buffer, which you can expand to 512k bytes. Using internal logic, the board segregates the processor-to-memory data path from its IPI-

to-VME bus data path. The board's bus path is 32 bits wide for 8-, 16-, or 32-bit addressing and transfers.

The Cougar accommodates VME Bus sequential-mode transfers. Hardware switches let you select from four bus-priority levels. A proprietary software interface creates individual work queues for each of the IPI devices that the board controls. The V/IPI 4260 Cougar costs \$4995.

# Computers and Peripherals

## Synchronous-communication controller for the VME Bus provides 16 serial ports

The PT-VME330, a controller board for the VME Bus, provides as many as 16 full-duplex synchronous-communication ports. The controller has a split-data-bus architecture built around a 1M-byte, dual-ported, dynamic-RAM buffer. One port of the buffer feeds as many as eight dual-channel Z8530 (H) SCCs (synchronous communication controllers) that support various line interfaces. The other port interfaces with the VME Bus, a multifunction 68901 peripheral chip, a 12.5-MHz 68020 MPU, and EEPROM and boot EPROM.

The board also uses a proprietary 32-channel DMA controller that is tightly coupled to the SCCs. This arrangement allows the controller to support data rates to 137k bps for 16 full-duplex serial-I/O channels and to 1.35M bps for one full-

duplex I/O channel. The MPU coordinates the operation of the DMA controller, executes communication protocols, and moves data between the dual-ported memory and the VME Bus at rates approaching 12.5M bytes/sec. The controller includes the company's PT-VSI ASIC

chip, which permits the user to configure the board using software. \$2475 (100).

## STE Bus card economically adds I/O channels to VME Bus system

The VSC020 CPU card features both VME Bus and STE Bus interfaces, allowing you to use STE Bus boards to implement low-cost industrial I/O ports in VME Bus systems. An I/O subsystem based on STE Bus cards reduces I/O costs by as much as 50% compared to a system using VME Bus I/O cards. Alternatively, you can use the CPU card simply to add 32-bit processing power to an STE Bus system. Because both VME and STE Bus cards are based on Eurocard foot-print boards with DIN-41612 connectors, it's easy to integrate buses into the same packaging.

The CPU card includes a 12.5-, 16-, or a 20-MHz 68020  $\mu$ P; 1M or 4M bytes of dynamic RAM; two serial-I/O channels; and a 16-bit counter/timer. The 32-bit VME Bus interface, which occupies the

card's P1 connector, allows the CPU to operate in a multiprocessor VME Bus environment. The STE Bus interface occupies the two outer rows of pins on the card's P2 connector. An onboard bus arbiter allows you to add extra bus masters to the STE Bus. The company supports the CPU card with the OS-9/68k operating system. The VSC020 sells for £1380.

# Computers and Peripherals

## Parallel-computing add-on consists of sixteen 32-bit transputers

The SuperSet.16 is a parallel-computing add-on that operates in conjunction with a workstation host. It consists of a host-interface card and a desktop or rack-mountable cabinet that houses sixteen 32-bit Inmos transputers.

Each transputer node includes local RAM and is arranged as a 4-dimensional hypercube. A seventeenth node connects to the hypercube via a communication-link switch and acts as a system node that passes messages to and from the host interface. The host system can be an IBM PC, PC/XT, or PC/AT (or compatible), or it can be a VME Bus host.

You can program the subsystem in C, Fortran-77, Occam, or a combination of the three. The C and Fortran compilers come with concurrency libraries and network loaders to facilitate parallel implementation.

An IBM PC model using T414 integer processors and having 256k bytes of memory per node costs \$18,000. The same configuration for the VME Bus costs \$20,000. An IBM PC model using T800 floating-point processors and having 1M

bytes of memory per node costs \$36,000; a VME Bus version costs \$38,000.

## Coprocessor board for Sun 3 workstation executes neural networks quickly

The Anza Plus/VME is a single-board coprocessor that you can install in any VME Bus slot in the Sun 3 workstation. It enables developers to run neural networks at speeds over 500 times greater than software-only implementations, and it comes with software that facilitates the integration of neurocomputing into C programs.

The board is equipped with 10M bytes of RAM and performs all neurocomputing functions without imposing any overhead on the host workstation. It is capable of imple-

menting neural networks with any combination of 2,500,000 processing elements and interconnections. The

coprocessor board can update a network at a peak rate of 10,000,000 interconnects/sec or at a sustained rate of 6,000,000 interconnects/sec (feed-forward mode) or 1,500,000 (back propagation). The Anza Plus/VME includes Release 2.1 of the vendor's neural-network software system (operating under the Sun Unix operating system) and costs \$25,000.

# "Thwap!"

**When you're tired of hitting the wall—Signetics Programmable Logic Arrays offer those additional product terms you're aching for.**

Thwap! The 12ns Signetics PLUS173D (24-pin) and PLUS153D (20-pin) have a proven architecture with programmable AND and OR arrays that eliminate "product term depletion." In fact, when you require more than eight product terms per output these devices will outperform the fastest PAL® parts available in a fraction of the board space.

*Design flexibility and efficiency with shared product terms.*

**Thwap! More design flexibility and efficiency.** All product terms (up to 48) can be shared among all individually controlled outputs. The result—no speed penalty, improved design flexibility (active high or active low), no redundancy and enough product terms to keep you from hitting the wall. And that's not all! These PLAs, like all Signetics PLDs, are supported by ABEL, CUPL or our powerful AMAZE design software that makes designing easy.

**Thwap! We've got the guts!** That's right, we have those essential PLDs you need to improve total system performance. Programmable Macro Logic, Logic Sequencers, PAL-type devices and our new PLAs that reduce part count and improve system reliability.

**Get the product terms you need!** Call Signetics at (800) 227-1817, ext. 986D, for a PLD Data Manual. For surface mount and military product availability, contact your local Signetics sales office.

## Cartridge drive has nonvolatile RAM, replaces conventional disk drives

The FD4500A is a removable-cartridge drive that is a direct replacement for a standard 5¼-in. half-height disk drive. The nonvolatile CMOS RAM cartridge comes in varying capacities: 360k, 720k, 1.2M, and 1.44M bytes.

Lithium batteries having an average lifetime of 10 years maintain the cartridge memory. According to the vendor, the low-insertion-force cartridge connectors underwent more than 100,000 insertion and removal cycles without any deterioration. The cartridge holder includes a floppy-disk interface that connects directly to a floppy-disk controller.

For a 500k-bps data-transfer rate, the FD4500A has an average random-seek time of 83.3 msec; for a 250k-bps rate, it has a spec of 10 msec. It withstands shocks of 10g and vibrations of 5g.

The FD4500B, a fixed nonremov-

able version, offers the same capacities and battery lifetime as the FD4500A. With a 720k-byte cartridge, the FD4500A costs \$895; the FD4500B costs \$845. Delivery, four to six weeks ARO.

## Color thermal-transfer printers achieve 300-dot/in. resolution

The CH-5504 and the CH-5514 are color thermal-transfer printers offering 300-dot/in. resolution for A-size (8½×11-in.) and A- or B-size (11×17-in.) pages, respectively. They feature a 1-piece, injection-molded chassis and an integrated proprietary Direct-Drive-Media-Transport system for accurate media control. The integrated design permits 3- or 4-color pass printing without sacrificing print quality. The CH-5504 prints a page in 55 sec; the CH-5514 prints a page in 65 sec. Both units print on both paper and transparent film.

Three video interfaces are available. The VM1 accepts 4096 colors, the VM3 handles 270,000 colors, and VM5 accommodates 16 million. The interfaces all have a 130-MHz

bandwidth and a 0.5-sec capture time.

Two Centronics interfaces are also available that accept print data in the following formats: yellow, magenta, and cyan (YMC); YMCK (a separate pass for black); 8- or 24-bit RGB; or a hybrid that combines all three. The printers sell for \$5995 to \$12,995, depending on the interface option. Delivery, four months ARO.

## 80386-based Multibus II card handles eight serial-I/O channels

The M-CC386/008 is an intelligent communications controller for Multibus II systems and has an onboard 16-MHz 80386  $\mu$ P. The board controls eight serial-I/O channels. The onboard  $\mu$ P, 1M- or 4M-byte RAM, 82380 DMA controller, and optional 80387 math coprocessor suit the M-CC386/008 for use in high-performance systems running standard operating systems such as Unix.

The onboard RAM is dual ported to the  $\mu$ P and the Multibus II iPSB. Each serial-I/O channel operates at 50- to 19.2k-baud rates (asynchronous mode) or at 1.5M-bps bit rates (synchronous mode). All baud rates are software programmable, and all the serial channels provide full mo-

dem control. The board supports bit- and byte-synchronous modes for protocols such as HDLC, SDLC, X.25, and IBM Bisync.

Other features include four 32-pin

JEDEC EPROM sockets and an iSBX expansion interface. The iPSB interface supports Multibus II message passing, built-in self test, and interconnect space functions. \$5495 to \$6450.

## Tough, Sensitive Electret Mike

The electret microphone RLC 104 can withstand the toughest environment while still performing better than any other.

Between arctic  $-40^{\circ}\text{C}$  and tropical  $+70^{\circ}\text{C}$  you'll always get super-sensitive performance, about 10 dB better than from the best competitor. The low-mass diaphragm renders the mike insensitive to mechanical vibrations. The signal-noise ratio can't be beaten. A built-in IC handles impedance conversion and a capacitor handles RF-interference.

The microphone can be used both for handsets and loud-speaking telephones. With only two terminal contacts it is designed for fast, automatic or manual assembly without soldering. Terminals can be supplied bent at  $90^{\circ}$  to adapt to your specific design.

With our mike, you get the best.

# Computers and Peripherals

## MAC FRAME GRABBER

The Colorcapture is a plug-in color frame-grabber board for the Macintosh II computer. The board captures color images from video cameras, VCRs, or still-video equipment, and reproduces them within 1/30 sec (real-time) on a video monitor. It captures 640×480-square-pixel images and can display them with 32,768 different colors. In addition, the board can edit images, add text or graphics to the color video, sharpen or soften edges, adjust brightness and contrast, add and subtract multiple images, and perform animations. Two versions of the board are available: One is compatible with the 60-Hz NTSC (National Television System Committee) video format in North America and Japan; the other is compatible with the 50-Hz PAL format in Western Europe and Japan. An external trigger feature lets you synchronize the capture of a color image from phenomena like a photographer's strobe lights. \$2995.

## TRANSFER SWITCHES

The Variswitch T-1 Master Frame holds a set of A/B transfer switches for T-1 data networks. In the event that an on-line T-1 communication link or T-1 multiplexer becomes inoperative, the transfer switch can switch the data traffic to a backup route. The unit consists of a 19-in.

master frame, which houses 16 A/B switch modules; a master-control module; and a power-supply module. The power supply can provide power for as many as 3 additional frames, each containing 20 A/B modules. This arrangement expands the capacity to 76 A/B transfer switches. You can control each switch via a pushbutton located on the front panel of each switch module. Or, using menu-driven software, you can control each module remotely from a CRT terminal. From \$4640 to \$5490. Delivery, six weeks ARO.

## PC/AT I/O BOARD

The I/O Terminal Emulation Board is a single plug-in board for the IBM PC, PC/XT, PC/AT, and compatible computers. It provides 2 RS-232C serial ports that handle data rates as high as 38.4k baud with data structures of 5, 6, 7, and 8 data bits and 1 or 2 stop bits. It also provides a Centronics parallel port and as much as 64k×8 bits of EPROM for customized booting software. An onboard socket can hold either an 8k×8-bit or 32k×8-bit static RAM. The board can emulate a variety of terminals, includ-

ing a DEC VT 220/100/52; an Intelcolor 8001G/8810, 8001R/8820; and the Tektronix 4010. The I/O terminal card comes with a 122-key IBM PC-style keyboard and sells for \$700.

## LASER PRINTER

The LP-76 is a laser printer that is fully compatible with the Hewlett-Packard Laserjet Series II. The printer can print at 6 pg/minute, download fonts larger than 30 points, and print fonts with as many as 655 points. The standard version contains 512k bytes of memory, expandable to 4.5M bytes. The printer can print with a resolution of 300 dots/in. It comes with nine resident fonts for printing in other European languages as well as in English. Twenty-one optional cartridges contain font packages written for the Laserjet family (the printer has two font-cartridge slots). The control panel has a liquid-crystal alphanumeric and graphics display for monitoring the printer's operation. A 150-pg output bin is standard, and the printer accepts input cartridges with legal, half-letter, A4, B5, and A5 paper sizes. The unit weighs 37.5 lbs and has a footprint of 16×16-in. It operates below a noise level of 55 db. \$1995.

## FEEDTHROUGH MODEM

The XE2400FT is a 2400-, 1200-, or 300-bps modem that operates with the industry-standard AT command set. The unit has two RJ-11 connectors—one for the phone and one for the phone line. In addition, it has two RS-232C connectors; one plugs directly into an RS-232C port on a computer, and the other is a feed-through connector for any serial peripheral device. The modem conforms to the CCITT V.22 bis, V.22, and V.21, and Bell 212A and 103 specifications. The unit contains an FCC-approved Data Access Arrangement (DAA).

The modem automatically sets the baud rate, and features auto-answer, and autodial and redial capabilities. It can also perform remote and local loopback tests as recommended in CCITT V.54. You can switch the modem to transmit or receive data over the phone lines or to provide a feed-through connection to a peripheral. You don't need an A/B switch to use it. A packaged unit consists of the modem, an RJ-11 cable, an RS-232C cable, an adapter connector (DB-25 pin to DB-9 pin), data-communication software, a manual, and a warranty card. From \$399.

**Xecom Inc, 374 Turquoise St, Milpitas, CA 95035. Phone (408) 945-6640. FAX (408) 942-1346. TLX 325672.**

Circle No 656

## LAN CARD

The VLAN is a single-height, single-slot VME Bus board that provides an IEEE 802.3 (Ethernet) LAN interface. The board is based on an AMD 7990 LAN controller, and includes a 68000  $\mu$ P. The 68000, which runs the Vioxxom real-time multitasking operating system kernel, handles TCP/IP protocols locally. Two 64k-byte dual-port RAMs, one between the  $\mu$ P and the LAN controller and the other between the  $\mu$ P and the board's VME Bus interface, maximize the board's throughput.

Data transfers to or from host CPUs on the VME Bus go through a mailbox facility in the  $\mu$ P's and

VME Bus's dual-port RAM. Mailbox interface software drivers are currently available for the OS-9/68000 and PDOS 3.3 operating systems. Link-level access, Telnet, and file-transfer protocol (FTP) are available as an option. The board has a 15-pin attachment unit interface (AUI) for connection to the LAN. You can add a media attach-

ment unit (MAU) for Ethernet or Cheapernet networks. DM 4500 (OEM qty).

## INTERFACE BOARD

The CC-121 double-Eurocard computer board interfaces VME Bus systems to Arcnet token-passing networks. The board is based on the COM9026 Arcnet controller and can operate with either coaxial or fiber-optic network cabling. It has 2k bytes of onboard dual-port RAM that buffers data between the VME Bus and the network. This buffer can hold as many as four network data packets with a maximum length of 508 bytes per message. Including host-system software overhead, the board can achieve a throughput of 1.5M bps on the network. Data is transferred between the dual-port RAM and the VME Bus in 10M-byte bursts.

The board operates as a VME Bus slave with 8-bit access to the controller chip and onboard registers and 8- or 16-bit access to the dual-port RAM. The VME Bus also has a 7-level interrupt requester with a software-programmable interrupt vector. Software drivers are available for the OS-9/Net operating system. The company will develop other drivers on request. The CC-121 typically consumes 1A of 5V supply current. \$825 (100).

## LAN BOARD

The VME68570-LAN is a double-Eurocard VME Bus board that provides an intelligent interface to IEEE 802.3 networks. The board's LAN interface has a transceiver for direct connection to a Cheapernet LAN, and a 15-pin D-connector attachment unit interface (AUI) for connection to an Ethernet transceiver. These LAN interfaces are controlled by a 7990 LAN controller that transfers data using DMA to or from 512k bytes of onboard RAM.

An onboard 12.5-MHz 68HC000  $\mu$ P allows you to process the data locally before passing it to the VME Bus host system. The board operates as a VME Bus slave, communicating with the VME Bus host via 2k bytes of onboard dual-port RAM and interrupts or semaphores. Alternatively, you can install as much as 128k bytes of EPROM and use the board as a stand-alone system. Software drivers to implement TCP/IP protocol are available for the OS-9 operating system. DM 2650, including 128k bytes of local RAM.

## MODEM

The Syncro-1496 is a multistandard modem that can transmit and receive data over a variety of data links ranging from simple dial-up lines to sophisticated point-to-point data links. The modem is a V.32 9600-bps modem that uses trellis coding and local and remote echo-cancellation techniques, but it also includes V.33, V.29, and V.22 bis operating modes. As a result, it can transmit at speeds ranging from 14,400 to 1200 bps.

If the modem is operating on a leased line and the leased line fails, the modem can reconfigure itself, make a PSTN dial-up call, and automatically restore data transmission. You can also use the dial-up interface to configure remote modems. The Syncro-1496 stores 12 preset user-selectable modem configurations, one of which you can define yourself. A rack-mount version is available for use with the company's Network-16 data-communications management system. Stand-alone version, £1995; rack-mount version, £1945.

## GRAPHICS CARD

The TT786 add-in graphics card for IBM PCs and compatible computers provides both digital and analog outputs, allowing you to drive standard monitors at resolutions as high as 800x560 pixels. In its analog mode, the card allows you to simul-

# PHILIPS IR LED'S SPEED AND ENDURANCE

## INTRODUCING THE FASTEST, LONGEST LASTING INFRARED LED EVER MADE.

Still going strong after 10,000 hours. Philips brings you the world's first infrared LEDs based on a single heterojunction gallium aluminum arsenide technology. A new technology that allows them to operate at 80% of their initial intensity after 10,000 hours of continuous operation. When you get that kind of longevity in your remote controls, why settle for anything less?

**New technological advantages;** Faster response (50ns). Complementary technology for use with existing circuits. Ability to operate at low and high currents makes them well suited to carrier frequencies up to 1MHz. 830nm emission wavelength for standard photodiodes and transistors, 740nm for integrated photoreceivers. Available in 3mm, 5mm and flat pack packages. In stock now.

taneously display as many as 256 colors from a palette of 262,144 colors. It's compatible with IBM CGA and EGA digital graphics adapters, and with the IBM VGA and PGA analog graphics systems.

The card is available with 512k, 1M, 2M, or 4M bytes of video memory. The 4M-byte version allows you to store and manipulate images containing as many as 8000 × 4000 1-bit pixels, or 2000 × 2000 8-bit pixels. An Intel 20-MHz 82786 graphics processor provides features that include a drawing speed of 35 nsec per pixel, and hardware windowing capabilities. The company can provide a library of graphics routines for the card. £395 to £1400.

## TRANSPUTER KIT

This fully integrated Transputer training package operates with an IBM PC or compatible computer to provide an educational introduction to the operation of the Inmos T414 Transputer. The package comprises a Transputer module, an interface card for the IBM PC, development software that includes an Occam compiler, and full documentation. The Transputer module includes 256k bytes of RAM, 4 Transputer links, I/O ports, and system-status LEDs. The status LEDs indicate communication to and from the PC, Transputer activity, external-memory access, errors, and event outputs.

The I/O ports are available on a 40-way connector so that you can link the Transputer module to application boards. Training documentation includes a tutorial, and the software supplied includes numerous programs as examples. The PC that you use with the package must have 640k bytes of RAM, a hard disk, and one available expansion slot. £995.

## SHARED MEMORY

The SNAP-SMS shared-memory system allows conventional mini- or microcomputers to share a common block of physical memory, and to access the memory at data rates as high as 88M bytes/sec. You can use it with a variety of computers, including MicroVax, IBM PC/AT, VME Bus-based computers, and the company's SN-series computing engines. The memory system is suited for use in high-performance real-time applications—for example, flight simulators—where tasks are distributed among several processors that need to share a common database or to exchange data at high speed. The shared memory appears to each attached processor as local memory and thus minimizes operating-system overhead for shared memory access. From around £11,000.

## FIBER-OPTIC MUX

The FMX800 is a family of fiber-optic multiplexers that provides a high-data-rate link between separate buildings and computer clusters. A single chassis can multiplex

and demultiplex 16 RS-232C ports to a pair of fiber-optic cables. The addition of three expansion chassis expands the number of ports to 64. All of these full-duplex channels can operate at the maximum RS-232C rate of 19.2k baud as specified by the V.24 standard. The control signals are continuously scanned and transmitted through the trunk line to make remote handshaking possible. Each trunk line may be as long as 3.5 km.

The unit consists of an enclosure that contains a power supply, and a mother board that accepts modular plug-in cards. The plug-in cards include a fiber-optic module, from 1 to 16 RS-232C channel cards, and an expansion card. The FMX800 transmits data at 3M baud over the fiber-optic link. The unit measures 16.8 × 5.3 × 8-in. It costs \$800 for two channels, and just under \$5700 for each end of a full 64-channel system.

## PARALLEL COMPUTER

The XTM is a modular parallel-processing supercomputer. The basic desktop system contains two 20-MHz Inmos T800 Transputers that can provide 5 MIPS and 1.5M flops of performance each. You can order the system with as many as 400 processors. A 30-processor system, for example, delivers 45M flops and 150 MIPS (as measured in DEC's

# Computers and Peripherals

VAX 780's MIPS). The architecture contains a parallel bus and an intelligent switch, which can dynamically reconfigure the Transputers' communication links. The computer runs the Linda software environment developed at Yale. You can invoke Linda by adding four statements to familiar programming languages, such as Lisp, Ada, C, or Fortran. The system can have a 90M- or 190M-byte, internal SCSI hard-disk drive; an 800k-byte, double-sided 3½-in. floppy-disk drive is standard. Prices depend on the configuration. A 2-processor system costs \$19,800; a 30-processor system costs \$225,300.

## TICKET PRINTER

The Series 4550 is a ticket, boarding-pass, and baggage-tag printer that can print alphanumeric characters and bit-mapped graphics on 3¼-in. wide, 100-lb fan-fold stock. The direct-thermal printer has dual stock feeds, which means you can set the unit up so it can print two types of documents on demand. You can format the data on a host computer and download it to the printer via an RS-232C or RS-422 port (or a 20-mA link) at data rates ranging from 300 to 19.2k baud. Both horizontal and vertical printing resolutions are 4 dots/mm (approximately 100 dots/in.). The standard character

size is 0.07×0.107-in. (other character sizes are also available). The unit can print logos, bar codes, and machine-readable OCR characters. It has a self-contained power supply that can operate from 115V ac at 60 Hz or 220/240V ac at 50 Hz. \$4500.

## NETWORK SERVER

Designed for use on VME Bus systems, the MS-CPU220 has all the basic computing power, memory, and control necessary for acting as a universal server on a network. The system contains a VIC (VME

Interface Controller) chip, a 16-MHz 68020 MPU, 1M byte of dual-ported dynamic RAM, two 32-pin ROM or EPROM sockets, and board-control and -status registers. A 68881 coprocessor is optional.

The board has a 60-pin personality-module connector for customizing applications. That connector provides a 16-bit data path and a 22-bit address for installing personality modules. The modules can configure the board as a network server, a file server, or the network's processing unit. An optional time-of-day module has a lithium battery that offers backup for more than 10 years. Software support includes OS-9, VxWorks, and a Unix-compatible operating system with TCP/IP protocols. From \$1695.

## VME CURRENT DRIVER

The VMIVME-2130 is a 64-channel high-current source-driver board for the VME Bus. The board can source 500 mA of continuous current and as much as 3.5A for a 10% duty cycle on all channels simultaneously. Each of the 64 output drivers incorporates thermal shutdown protection and output-transient suppression diodes. Each output has a high-voltage breakdown rating of 35V min. The outputs are provided on dual 64-pin DIN 41612 connectors. A built-in test feature detects and isolates faults off line or in real time. A front-panel LED lights up at power-up or at reset, and goes off after successful completion of board-level diagnostics. \$995. Delivery, 45 days ARO.

# OGALLALA, USA.

## THE NEW FILM CAPITAL OF THE WORLD.

### ASC presents a complete line of film capacitors for commercial, industrial and military applications.

In case you didn't know, Ogallala is in western Nebraska. And now, thanks to ASC, it's about to become the new film capital of the world.

That's because in 1987, ASC acquired the entire capacitor division of TRW. By combining the best of both companies—strong engineering and technological know-how with a total commitment to customer service—ASC has emerged as the fastest growing film capacitor manufacturer in the U.S. With 280,000 square

feet of combined manufacturing capability in Ogallala, Nebraska and Guadalajara, Mexico, we can deliver application specific capacitors in volumes, large and small. All at very competitive price points.

Our full line of high quality, cost efficient film capacitors includes polyester, polycarbonate, polypropylene and polystyrene dielectrics, both metalized and non-metalized. Plus, oil filled capacitors for industrial and motor-run applications and more.

In fact, virtually any configuration of film capacitors from A-Z, are available from ASC, ASAP. All of which proves that business is better when it's done right, at home. Call us today at 818-710-8555 and let ASC show you why.

# Crystal oscillators

hit higher frequencies  
in smaller packages

*TCXOs with  $\pm 3$  ppm stability  
over a  $-55$  to  $+125^{\circ}\text{C}$  temperature  
range (STC Components)*

Like other components, TTL- and CMOS-compatible pc-board crystal oscillators are moving into true SMD packages. And although ECL-compatible devices still come in standard metal cans, they now provide clock frequencies as high as 400 MHz to handle high-speed logic families.

**Peter Harold**, *European Editor*

**M**anufacturers of low-cost pc-board crystal oscillators, devices that sell in high volumes to the computer industry, have had to keep pace with advances in automated pc-board assembly methods. As a result, you can now obtain a range of crystal oscillators in SMD packages for use with pick-and-place equipment, or in packages for automatic-insertion equipment. The ability of surface-mount technology to reduce the weight and increase the packing density of pc boards has also spurred manufacturers to offer military-grade devices in SMD form. Various pc-board oscillators introduced during the last year illustrate these developments.

The movement toward SMD packaging is most apparent at the low end of the pc-board oscillator market, where SMDs satisfy the needs of low-cost automated manufacturing methods. Most of these devices are general-purpose clock oscillators designed to drive CMOS or TTL circuitry at clock frequencies as high as 50 or 60 MHz. Consequently, they operate from a single 5V supply and offer moderate levels of stability—typically between  $\pm 1000$  and  $\pm 100$  ppm over the commercial temperature range (0 to 70°C). They can drive 10 standard TTL loads (ie, they can sink 16 mA and source at least 0.4 mA at TTL levels); they can drive CMOS inputs as well. Their typical output mark-to-space ratio is between 2:3 and 3:2 so you'll need to operate at twice the required frequency and divide the oscillator's output frequency by two with a flip-flop if you require a mark:space ratio of exactly 1:1.

Fox Electronics recently introduced its FSO Series crystal clock oscillators; they're pin compatible with Motorola's MSO Series devices and come in 4-pin J-lead surface-mounting plastic DIPs that measure

*CMOS/TTL-compatible crystal oscillators in hermetically sealed SMD packages (Micro Crystal)*

General-purpose crystal oscillators no longer need special handling—standard SMD and plastic DIP packaging make things easier.

*TTL-compatible military-grade SMD crystal oscillators (Xsis Electronics Inc)*

0.550 × 0.385 × 0.185 in. These oscillators cover the frequency range from 1.5 to 55 MHz, and have a frequency stability of  $\pm 100$  ppm over a  $-10$  to  $+70^{\circ}\text{C}$  range. Over the oscillator's full operating range of  $-40$  to  $+85^{\circ}\text{C}$ , that stability figure worsens to  $\pm 200$  ppm.

The FSO Series oscillators that operate at frequencies as high as 36 MHz can drive 10 TTL loads, and can also drive CMOS loads. They are optionally available with a TTL-level enable input. The highest group of oscillators in this line, operating between 30 and 55 MHz, can sink or source 4 mA at TTL- and CMOS-compatible levels. You can obtain any of the FSO oscillators on tape and reel for use on automatic-placement equipment. They can withstand vapor-phase and other high-temperature soldering methods. A typical 20-MHz part sells for around \$4 (1000).

Micro Crystal's MCSO Series crystal clock oscillators, which are also pin-compatible with the Motorola MSO Series, are packaged in 0.55 × 0.35 × 0.11-in. ceramic leadless chip carriers. This design adds the advantage of hermetic sealing to a small-outline surface-mount package that's suitable for vapor-phase and wave soldering. Ranging in frequency from 0.1 to 35 MHz, these oscillators are available with stability ratings of  $\pm 5000$ ,  $\pm 500$ , or  $\pm 100$  ppm over a 0 to  $70^{\circ}\text{C}$  operating range. You can also order these devices for the  $-40$  to  $+85^{\circ}\text{C}$  operating range. Their outputs can each drive 10 TTL loads at logic levels that are also suitable for CMOS loads. Typical current consumption

is 8 mA for a 1-MHz oscillator and 20 mA for a 30-MHz version. Priced at around \$6 (1000), the MCSO clock oscillators are supplied in tray carriers, on 24-mm tape, or in sticks for use on automatic-placement equipment.

If you're looking for a very inexpensive crystal clock oscillator for conventional through-hole or socket mounting, and you want to be able to handle those devices easily with automatic-insertion equipment, consider using one of Savoy Electronics Inc's S2150 or S2650 Series oscillators. Unlike metal-can oscillator packages, which overhang the pins on all sides by approximately 0.1 in., S2150 and S2650 Series oscillators come in standard 14-pin plastic DIPs, thus adding real-estate savings into the bargain. They sell for around \$2 (1000). The S2150 Series, which covers the frequency range 62.5 kHz to 20 MHz, has a TTL- and CMOS-compatible output that can drive 1 LSTTL load or 15 pF. The S2150s' maximum 5V supply current is 6 mA.

The higher-speed S2650 Series oscillators cover the frequency range from 15.625 kHz to 20 MHz. They have rise and fall times of 15 nsec max for CMOS loads with total capacitance values as high as 50 pF, and 5 nsec for a load that has 10 LSTTL gates. Maximum supply current for S2650 Series oscillators is 12 mA with a 50-pF load.

Both series have a stability rating of  $\pm 100$  ppm over their 0 to  $70^{\circ}\text{C}$  operating range—a rating that includes a calibration accuracy at  $25^{\circ}\text{C}$  as well as the effects of supply-voltage variation, load changes, aging, shock, and vibration.

Xsis Electronics is typical of the companies that have

*A low-cost crystal oscillator in IC-style plastic DIP (Savoy Electronics Inc)*

turned to SMD packaging to meet the requirements of high-reliability and military applications. The company has introduced a high-performance crystal oscillator in a  $0.48 \times 0.48 \times 0.085$ -in., 40-pin ceramic leadless chip carrier. Designated the XE10 Series and covering the frequency range 500 kHz to 25 MHz, these oscillators offer an initial accuracy at 25°C of  $\pm 15$  ppm and an aging rate of 5 ppm/year. The stability rating is as low as  $\pm 20$  ppm for a device that operates in the range from  $-30$  to  $+85^\circ\text{C}$ , and  $\pm 50$  ppm for a device with an operating range of  $-55$  to  $+125^\circ\text{C}$ . The hermetic sealing provided by the XE10's welded package is essential to maintain these levels of stability. Xsis plans to extend the frequency range of these oscillators to 60 MHz in the near future. The company manufactures most XE10 oscillators to specific customer requirements and price them from approximately \$50 to \$70 (100).

In the UK, Salford Electrical Instruments Ltd has also chosen a 40-pin ceramic chip carrier to house its recently introduced QC-6111 and -6112 Series crystal oscillators. These two series are TTL- and CMOS-compatible and TTL-compatible respectively, and are available with output frequencies in the range of 875 kHz to 28 MHz. Targeted for use in military and avionics equipment, they offer the full military temperature range, over which their specified stability is  $\pm 100$  ppm. Standard versions sell for around £40 (100), although the company admits that devices screened to mil-

**ECL-compatible crystal oscillators in through-hole or surface-mounting metal cans** (NEL Frequency Controls Inc)

**An ECL-compatible crystal oscillator with  $\pm 5$  ppm stability over 0 to  $50^\circ\text{C}$**  (Vectron Laboratories Inc)

standard requirements, or customized parts, will cost considerably more. For use under space or battlefield conditions, the oscillators will be available in a rad-hard form, constructed from high-purity quartz crystals and silicon-on-sapphire ICs.

Piezo Technology Inc's latest introduction also targets the military market with a surface-mount oscillator packaged in a  $0.625 \times 0.625 \times 0.110$ -in. 12-lead flat pack. Piezo also manufactures their devices for specific customer requirements. These oscillators cover the frequency range from 488 Hz to 60 MHz, and have an aging specification of 5 ppm/year max and a stability of  $\pm 30$  ppm over a temperature range of 0 to  $70^\circ\text{C}$  ( $\pm 50$  ppm over their full operating range of  $-55$  to  $+125^\circ\text{C}$ ). The output rise and fall times for these oscillators are 5 nsec max; and the output swings to within 0.2V of the supply rails. Unlike most oscillator modules, which require a supply of  $5\text{V} \pm 0.5\text{V}$  or  $\pm 0.25\text{V}$ , these oscillators operate from a supply in the range 3 to 6V. The unit price is around \$300 for an oscillator at the low end of the frequency range—a price that buys you a part fully screened to the relevant MIL-STD requirements.

#### **Metal-can packages remain popular**

Most of the other pc-board oscillator modules introduced over the last year still use conventional metal-can packaging. Not only does this package style have the advantage of excellent RFI shielding; it also guarantees a highly reliable hermetic seal provided it's resistance welded rather than soldered. Although most of these devices are suited only for conventional through-hole mounting, some have modified leads that allow you to surface-mount them.

NEL Frequency Controls Inc's SA100 and SA350

Temperature-compensated crystal oscillators, targeted at industrial and military applications, are now available in SMD packages.

*A military-grade CMOS-compatible clock oscillator in a 12-lead flat pack (Piezo Technology Inc)*

Series crystal clock oscillators, for example, cover the frequency range 0.5 to 63 MHz and are packaged in  $0.515 \times 0.515 \times 0.2$ -in. hermetically sealed metal cans with leads that are bent and cropped to provide a gull-wing SMD. These oscillators, which sell for between \$4 and \$6.50 (1000), are aimed at the general-purpose clock oscillator market. The SA100 Series includes clock oscillators with frequencies between 0.5 and 25 MHz, which are specified for driving TTL loads, and 25- to 63-MHz oscillators, which are specified for driving Schottky TTL loads. The SA350 Series oscillators' outputs can drive a range of NMOS or CMOS loads.

#### Choose TCXOs or OCXOs for improved stability

If you need an oscillator with a frequency stability over its temperature range that you can't achieve with standard crystal oscillators, you'll have to use a temperature-compensated crystal oscillator (TCXO) or oven-controlled crystal oscillator (OCXO) **Ref 1**. Within the last year, both Savoy Electronics and STC Components have introduced new TXCOs. The S5100 Series TCXOs from Savoy Electronics, which sell for between \$8 and \$50 (1000), cover the frequency range from 4 to 30 MHz and provide a stability of  $\pm 3$  ppm max over their operating range of  $-20$  to  $+70^\circ\text{C}$ . Their aging rate is  $\pm 1$  ppm/year max; and their frequency variation over their operating supply voltage range of  $5\text{V} \pm 0.25\text{V}$  is  $\pm 0.5$  ppm max. The oscillators produce a 2V p-p min output, and consume 15 mA max.

STC Components' SQO3500 oscillators are targeted at both the industrial and the military markets. Cover-

ing the frequency range from 2.5 to 20 MHz, they have a stability of  $\pm 0.3$  ppm over a temperature range of  $-20$  to  $+70^\circ\text{C}$ ; the stability rating increases to  $\pm 3$  ppm over the full military range. These oscillators operate from any supply in the range from 5 to 15V. They're available with output options that drive 1 CMOS logic input, 1 HCMOS logic input in parallel with 10 pF, or 5 LSTTL inputs. In addition, you can obtain them with ac-coupled output options that produce a clipped sine-wave output capable of driving a 1-k $\Omega$  load in parallel with 10 pF, or a 50 $\Omega$  load at a 0-dBm drive level.

You can also obtain the SQO3500 oscillators with one of two frequency adjustments: The first option allows you to trim the frequency using an external potentiometer, thereby maintaining the hermetic seal of the 2 $\times$ 2-in. metal-can package; the second option has an onboard potentiometer with a screwdriver head that's accessible from the side of the package. Typical prices for SQO3500 oscillators range from \$150 to \$400.

Piezo Technology Inc has introduced a pc-board oven-controlled, crystal oscillator, designated the XO1119, that's packaged in a  $1.5 \times 1.5 \times 0.5$ -in. hermetically sealed metal can. The unit offers  $\pm 3$  ppm stability at a frequency of 10 MHz, and operates over a temperature range from  $-55$  to  $+85^\circ\text{C}$ . Although the standard part is a 10-MHz oscillator, the manufacturer can modify the design to operate at a particular frequency in the range 8 to 20 MHz. Because of the small thermal

*A precision sine-wave reference (Thaler Corp)*

mass involved in the package, the oven has a relatively short warm-up period—a maximum of four minutes. Prices for the XO1119 start at \$550.

EDN's October 17, 1985, Special Report on pc-board crystal clock oscillators only listed one device that could hit 100 MHz (Ref 1). During just this past year, however, several manufacturers have pushed that limit to 200 MHz, and at least one manufacturer has introduced 400-MHz parts.

NEL Frequency Controls Inc's HS600 and HS2600 Series of ECL-compatible crystal clock oscillators cover the frequency range from 30 to 200 MHz. The HS600 series offers ECL-10K, -10KH, or -100K compatibility. The HS2600 Series generates complementary outputs suitable for driving the ECL-10K or -10KH logic families that have complementary inputs. Their output rise and fall times are around 3 nsec max. All of these oscillators have an initial accuracy at 25°C of  $\pm 50$  ppm, and a stability over their 0 to 75°C operating range of

$\pm 100$  ppm. They are housed in  $0.815 \times 0.515$ -in., hermetically sealed, 4-pin metal-can packages, which are the industry-standard metal enclosures for crystal oscillators. The devices cost between \$15.50 and \$22 (1000). Standard Crystal Corp has introduced a similar line in the same size package that covers the frequency range 20 to 200 MHz; the price is approximately \$12 (1000).

Standard units in Oscillatek's EM1100 Series of ECL-compatible oscillators, introduced in April of this year, cover the frequency range from 150 to 350 MHz. The company will consider designing custom parts at frequencies as high as 500 MHz. The outputs are suitable for driving 10KH ECL; the output rise and fall times are 2 nsec max. These oscillators are available with stability ratings between  $\pm 1000$  ppm and  $\pm 50$  ppm over their operating range of 0 to 70°C. In addition to the standard single-output units, versions are available with complementary outputs or with an enable

## An oven-controlled crystal oscillator in a pc-board metal can has a fast warm-up period.

input. You can order the version with the enable input so that the output remains either in a logic 1 or in logic 0 state when disabled. Prices for EM1100 series oscillators range from \$50 to \$100 (100).

The highest-frequency standard ECL oscillators recently introduced come from Vectron Laboratories. This company's CO450 Series covers the frequency range 5 to 400 MHz. The standard stability rating for a part with a 0 to 70°C operating range is  $\pm 25$  ppm. The oscillators provide complementary 100K ECL-compatible outputs, and operate from a supply voltage of  $-4.5\text{V}$  or  $-5.2\text{V}$ . The company also offers devices with a 0 to 50°C stability rating as low as  $\pm 5$  ppm; extended temperature ranges are also available. Prices start at \$114 (10). You can also obtain VCXO versions of these oscillators that operate at frequencies as high as 200 MHz.

Savoy Electronics and Q-Tech Corp have each recently introduced a new line of voltage-controlled crystal oscillators (VCXOs) that are useful when you need to pull the frequency over a narrow range—for example, in phase-lock loops. Savoy's S4100 Series VCXOs are available with center frequencies between 4 and 30 MHz. They have a  $\pm 25$  ppm stability rating, a figure that takes into account the effects of temperature changes between 0 and 70°C, of 1 year of aging, and of variations in load and supply voltage. By applying a  $\pm 1.5\text{V}$  dc control signal, you can shift the oscillator frequency by as much as  $\pm 75$  ppm with a maximum nonlinearity of 5%. These devices can drive 10 TTL loads and consume a 5V supply current of 30 mA max.

Q-Tech's VCXOs cover the frequency range from 1 kHz to 55 MHz, providing  $\pm 25$  ppm stability over a  $-20$  to  $+70^\circ\text{C}$  operating range. The company can also supply those oscillators for the military range. Standard parts allow you to pull the oscillator frequency by  $\pm 100$  ppm with the use of a 0 to 5V control input; the oscillators have a modulation bandwidth of 10 kHz. They are available with square-wave outputs that can drive TTL or HCMOS logic inputs, or with a sine-wave output. The typical price for a military-grade part in the frequency range from 8 to 27 MHz is around \$42 (100).

### Analog's not forgotten

Finally, if your interest is analog rather than digital, and you want a pc-board sine-wave source that has excellent amplitude stability, consider using Thaler Corp's SWR200 oscillator. The unit contains a phase-shift oscillator, the frequency of which is set with two

external capacitors. You can set the frequency anywhere in the range from 400 Hz to 10 kHz. The oscillator produces a 7.071V rms output with an initial amplitude accuracy of  $\pm 0.05\%$  and a temperature coefficient of 2 ppm/°C max for a version with a temperature range of  $-25$  to  $+85^\circ\text{C}$  ( $\pm 3$  ppm/°C for a military-grade version). To achieve this level of amplitude stability, the oscillator has an AGC circuit that monitors the output amplitude and compares it to a reference voltage that is generated by an internal zener diode. The resulting error signal provides feedback to alter the gain of the phase-shift oscillator.

To improve stability at the extremes of the device's operating temperature range, the temperature coefficient of the amplitude monitoring circuitry is arranged to compensate for that of the zener-diode reference. You can operate the oscillator at lower frequencies by adding external components to alter the time constant of the error amplifier. Using this technique, you can use the oscillator as, for example, a precision 60-Hz source. The SWR200 is available in either a 14-pin ceramic DIP or in a 14-lead flat pack. The devices sell for between \$86 and \$126 (100), depending on package type and temperature range. **EDN**

## New 16-bit A/D Converters from Analogic

*World Class  
Performance  
at Down-to-  
Earth Prices*

By any measure, our new family of ultra stable, high precision sampling A/D converters outclasses the competition. Optimized for both amplitude and frequency domains with a wide dynamic range of 96 dB and sampling frequencies from 125 kHz to 500 kHz, they provide the only true 16-bit performance in sampling applications greater than 100 kHz.

Our sampling A/D converters have been designed for both 16-bit resolution and 16-bit performance, achieving an integral linearity of  $\pm 0.003\%$  of full scale range and a differential linearity of less than  $\pm 0.75$  LSB, thus guaranteeing no missing codes over the entire temperature range. With years of experience, who else but Analogic could make this guarantee. In the frequency domain we guarantee signal-to-noise ratios of better than 90 dB and peak distortion of more than 95 dB down. All at a cost per channel that the competition can't match either.

With such performance, our A/D converters will meet your most demanding OEM applications. Professional audio encoding, digital telecommunications, seismic instrumentation, high resolution imaging. You name it, Analogic has an A/D that will help you outpace your competition too.

Unlike our competition, we put our promises in writing. Every Analogic converter undergoes exhaustive tests on our proprietary automatic test systems. The test data shipped with each product is our guarantee that it meets or exceeds our published specifications. Surprised? Then again, what else would you expect from the world resource for A/D converter technology?

## Board-mounted fiber-optic sensor brings a PC's power to the factory floor

FiberPak is a fiber-optic-based sensor system for equipment manufacturers using  $\mu$ P-based control systems. The modular sensors are packaged in a case that is plug compatible with single-channel I/O modules that interface with standard computer-bus mounting racks. Sensing options include four modes: through-beam, proximity, true reflex, and polarized reflex.

The system's plastic fibers extend as far as 75 feet and allow FiberPak to interface with a number of the manufacturer's accessories. Lenses are available in a variety of shapes and sizes to increase the sensing range in the through-beam mode. Flexible fiber-optic tips allow the sensors to accommodate proximity-sensing applications in confined spaces. A reflex lens and a polarized reflex lens simplify alignment and reduce interference from reflec-

tions. These accessories allow the FiberPak modules to operate anywhere a standard photoelectric control can be used.

FiberPak also features improved

sensing speed and noise immunity compared with traditional photoelectric controls. Three FiberPak models are available: a high-sensitivity model with a 15-msec response time; a standard version with a 1-msec response time; and a high-speed version with a 100- $\mu$ sec response time. Over a 6-ft length of fiber, appropriate lenses extend sensing capabilities in the through-beam units to 160, 46, and 16 ft, respectively. Because all three models operate from 4.75 to 30V dc supplies, you can use a single module in 5, 15, and 24V systems. FiberPak modules have a 3-year warranty against mechanical and electrical defects and are priced at \$90 each.

## Moderate-resolution incremental encoders handle high-density applications

The Model 84C incremental encoder is a 4 oz, housed incremental encoder that functions in mild environments where small size and moderate resolutions are the critical design requirements. The encoder comes in a 2.2-in. diameter by 1.18-in. length housing and costs \$73 in quantities of 100.

The 84C provides resolutions up to 1800 cycles with quadrature outputs and an index marker pulse with an operating frequency to 100 kHz. The encoder can withstand a

slowing speed of 5000 rpm. The outputs of the 84C are TTL-CMOS compatible. Options include a differential line driver at 5V, voltages to 24V, and a square mounting plate. The cover of the encoder meets UL94-VO requirements, and the unit's cable is UL/CSA approved.

# We won't just sell you a display—we'll make sure you buy the one that's right for you.

**Choosing The Right Display... (continued)**

**WHAT ARE THE DIFFERENCES?**

**OPERATING TEMPERATURE RANGE**

At IEE displays operate within a temperature range of at least 0 to 55°C. If your application requires operation beyond these limits, then consider a FLIP wide-temp display or a DAYSTAR LCD.

**AMBIENT LIGHT RANGE**

You must then consider the ambient light conditions under which you will be viewing a display. FLIP, ARGUS, and backlit DAYSTAR LCDs can also be used in applications with little or no ambient light. (Many models even feature dimming.) Although FLIP and ARGUS modules can be viewed under some dimming conditions, if your application requires viewing in direct sunlight, then choose a DAYSTAR LCD display module.

**OPTICAL CHARACTERISTICS**

Character height, character capacity, display color, and viewing angles are all important considerations when selecting the appropriate display module. As a general rule of thumb, you should allow 1 mm of character height for every foot of viewing distance. The same rule choice for character capacity. FLIP and ARGUS modules offer superior appearance when used with contrast-enhancement filters (which are available in a variety of colors).

**DAYSTAR LCD**

Back on gray reflective background

1.9 to 1.1 mm (0.075 to 0.043 inches)

8 to 160

8.0" Module, 80° Horizontal

30,000 hours

**ARGUS DC Plasma**

Neon-orange or green plasma light only

21 to 34 inches (0.5 to 0.8 mm)

50 to 400

100° Cone

30,000 hrs. (to half-brightness)

**FLIP Module Fluorescent**

Blue-green spectrum suitable to blue, green, or yellow

10 to 24 inches (0.1 to 1.0 mm)

10 to 240

140° Cone

80,000,000 hrs. (to half-brightness)

30,000 hours

**POWER AND INTERFACE CHARACTERISTICS**

Power and interface requirements will also have a bearing on which display technology is most appropriate for a given application. DAYSTAR LCD requires, by far, the least amount of power. All three types of displays accept parallel data, and most FLIPs have a built-in serial port, as well. For remote serial operation, all three display formats can also be used in conjunction with one of IEE's optional serial interface cards and power supplies.

**Parameter**

**Power Consumption**

**Power Supply**

**Maximum Loading Rate**

**Standard Parallel Interface**

**Serial Input**

**Serial Data**

For applications requiring data transfer rates in excess of 100,000 characters per second, IEE offers a choice of serial interface cards and power supplies.

**COST**

In general, FLIP displays are the most economical choice for most applications. DAYSTAR LCDs are the most expensive, but they offer the longest life and the best performance in harsh environments.

## Conductive rings act to switch devices into and out of a circuit

The HDMP-25 switch contains 25 double-throw switches in a miniature low-profile package and can be used to perform a system reconfiguration by swapping devices into and out of a circuit. The HDMP-25 features a patented stressed elliptical-contact system that has a contact resistance of 20 m $\Omega$  typ and 50 m $\Omega$  max. The contact rating is 250 mA at 5V dc, and the manufacturer specifies the dielectric strength at 500V ac min.

The stressed elliptical-contact system features movable conductive rings, which are made from cylindrical cross sections of thin-walled tubing. After proprietary processing, the rings become conductive circular springs that return to their original shapes after compression. A nonconductive actuator

finger shifts the position of the ring between the two poles of the switch.

The switch itself is made from four posts arranged in an elliptical shape. The conductive ring is slightly larger than the circles defined by the one major axis post and the two minor axis posts. The vendor assembles the switch by compressing the ring and placing it in one of the two positions with the

actuator finger inside the ring. You operate the switch by shifting the actuator, which snaps the ring to either side of the 4-post array.

The HDMP-25 switch has a 39.4  $\times$  33-mm footprint and is 10.2-mm high. For insertion ease, you should use 1-mm plated-through holes. The switch is available as an individual component for \$9.95 (100) and as part of an evaluation kit. The kit contains an HDMP-25, one pre-drilled and etched pc board, three right-angle DB25 connectors, and three 24-pin IC sockets. The cost for the kit is \$34.95.

## TO-220-housed surface-sensing thermostat manages power supply temperatures

The Series 6700 surface-sensing bimetallic thermostat features a completely redesigned bimetallic disk. The thermostat is rated for a 100,000-cycle lifetime at 5V dc at 20 mA; its mechanical life exceeds 10<sup>6</sup> operations. Gold-plated silver crossbar contacts are standard in both the normally open and normally closed versions. The contacts are rated for 1A at 48V dc. The contacts of the normally open version close with rising temperatures; the contacts of the normally closed version open with rising temperatures. The closed contact resistance equals 50 m $\Omega$  max. The operating sense range extends from 40 to 120°C in 5°C increments.

The thermostat's nickel-plated

copper mounting bracket, which is isolated from the operating contacts, lets you connect the Series 6700 thermostat directly to a heat sink. The thermostat's surface-sensing ability allows it to detect any over-temperature condition generated by other components that are mounted directly on or close to the heat sink. You can configure the thermostat to turn on a

visual or audible signal, switch on or change the speed of a fan, or completely shut down the system when it detects an over-temperature condition.

The Series 6700 thermostat dimensionally conforms to the international Y220/TO-220 product package standard, making it compatible with automatic-placement equipment. Using high-speed equipment, you can also solder the thermostats onto pc boards. The thermostat sells for \$5 and is shipped in a plastic tube that's compatible with automatic-placement equipment.

## Store and display messages can be answered with a touch

The PEP Model 4285-XX canned-message memory module combines an 8-line  $\times$  32-character dc gas-plasma display with an infrared touchscreen. The module sports 16k bytes of RAM, which can store as many as 127 canned messages and is backed by an onboard lithium battery for use in interactive environments. The touch-input infrared switch matrix provides 128 switch locations using optical technology, which allows a high quality display. Proprietary techniques minimize the effects of ambient light.

The alphanumeric display provides a 64-character U.S. ASCII character set as well as several European character sets in a  $5 \times 7$  dot-matrix format. The  $0.18 \times 0.26$ -in. characters come in neon-orange or green and are software dimmable to three brightness levels.

The  $12.2 \times 7.14 \times 3.915$ -in. module

accepts RS-232 or RS-422 serial data at 1200 or 9600 baud. The unit supports CTS and DTR and can detect parity and rate errors in transmission. The PEP 4285 requires 5V dc at 0.5A and 150V dc at 9 to 55mA. Typical power consumption is 4 to 11W. Options include mounting subpanels, drip-proofing, and

EMI/RFI shielding. The base unit price is \$1089 (100) for the neon-orange display and \$1242 (100) for the green display.

## Variable active resistors can function in constant current sources

The Smart Resistor family of power supply loads incorporates variable active resistors. You can also use the SR Models as resistance simulators, 500W potentiometers, precision 4-wire resistors, and for other applications where you need a constant resistance or current.

The units can supply an adjustable load of  $0.03$  to  $1000\Omega$  and can dissipate as much as 500W over a range of 0 to 90V. The maximum current is 160A. In addition, they have fail-safe protection against excessive current and temperature, and they provide electronic gating of the load. You can operate the

Smart Resistors in parallel and control them via a computer using a IEEE-488 bus.

The Smart Resistors come in four versions: a basic OEM unit and

three units that share the same cabinet but have different numbers of loads. The SR-01 is the basic model. It dissipates 10W alone and 50W with a heat sink, has a maximum current of 20A, and sells for \$121. The other three units all dissipate a total of 500W. The SR-11P single-load unit sells for \$890; the SR-21P dual-load, 80A/load unit sells for \$990; and the SR-41P 4-load, 30A/load unit sells for \$1190.

# KEMET: More than a surface solution surface mount.

Look beyond the surface in surface-mount capacitors and you'll find nobody matches KEMET's availability and selection. They're all produced in dedicated plants using the tightest controls — with special attention to solderability.

Our T491 tantalums' symmetrical terminals eliminate "wheelies" and "tombstones"; they're compatible with all soldering techniques — up to 260°C for 10 seconds.

Nickel-barrier terminations on all our MLC chips withstand reflow temperatures and assure high-integrity connections.

Need a military/space chip? KEMET MIL-spec chips offer a failure-rate qualification level that is unsurpassed.

See for yourself. Ask your KEMET distributor for our engineering kits — a surface-mount kit for tantalums and ceramics in a range of values. With drawings and ordering information, too.

TEXAS INSTRUMENTS REPORTS ON  
**THE VALUE OF COM**  
IN THE ERA OF MEGACHIP™ TECHNOLOGIES

If you think all PALs and their suppliers are pretty much alike, we'll send you up to 100 PALs free to change your mind.

Using is believing. We're betting that hands-on experience with TI's PAL<sup>®</sup> ICs will prove to you that, by comparison, they can easily deliver the performance, reliability, and value you need. We're backing our bet with an Evaluation Kit that offers up to 100\* free TI PALs programmed to your specs.

Return the card to get your kit.  
It will, we're confident, make a few  
points:

## The value of a wide choice

You'll find in our broad PAL family — more than 40 functions — the standard 20- and 24-pin PALs, as well as high-speed leadership circuits, required to implement your system designs. All the standards are pin-for-pin and functionally compatible with AMD/MMI counterparts.

# PARISON IN PAL ICs

TI's 16XX 20-pin series offers four standard architectures in five speed/power ratios to provide flexibility, speed, and power conservation. In this series are PALs with a 10-ns propagation delay, plus the recently announced TIBPAL16XX-7 PALs that decode logic in a scant 7.5 ns.

TI's 20XX 24-pin series offers four standard architectures in two speed/power ratios. High-performance TIBPAL20XX-15 members deliver a 15-ns propagation delay, while TIBPAL20XX-25 devices satisfy lower power requirements with a low 105-mA ICC at a 25-ns propagation delay.

Our 24-pin selection also includes exclusive-OR, registered-input, and latched-input devices.

TI's TIBPAL22V10/V10A and TIBPAL22VP10-20 provide flexibility beyond that of standard PAL architectures. They feature programmable output logic macrocells and variable product-term distribution. The '22VP10-20 allows two extra, exclusive output configurations, for a total of six. Its 20-ns delay is a 20% improvement over the competition's "A" version.

TI PALs are fabricated using exclusive IMPACT™ or IMPACT-X™ technologies that produce very dense circuitries and superior speed/power characteristics.

Most TI PALs are characterized for operation over the -55°C to 125°C military temperature range. Packaging options include plastic and ceramic chip carriers as well as plastic and ceramic DIPs.

**The value of programming support that moves you along**  
Programming of TI PALs has been structured with one objective in mind, to help you get to market — fast.

Substantial third-party support allows you to program TI PALs yourself. The necessary equipment and software are readily available from a growing number of third-party sources, including Data I/O, Logical Devices, Stag, INLAB, and Advin.

Or, if you prefer, regional IMPACT Centers have been established, equipped, and staffed to provide design, programming, and testing services for TI PALs at selected authorized TI distributors. Such local, individualized support helps you save programming time and costs.

## The value of inherent reliability

A strict philosophy at TI is that quality and reliability must be designed in and built in from the start. Then before a new design is released, we program it to worst-case codes to test that it will perform as specified.

To make sure our PALs will last over time, they are

subjected to a battery of operating-life tests. At present, TI PALs are demonstrating a 10 FIT rate.

Bias humidity and autoclave testing probe packaging integrity, while temperature cycling determines how well TI PALs stand up to operating temperatures.

As a result, you can be confident of long, reliable operation.

## Now, about those free PALs...

Send us your completed return card, and we'll ship your TI PAL Evaluation Kit. In it, you'll find copies of TI's product-support literature: (1) a 472-page design and specification data book with applications notes; (2) a 192-page qualification data book containing the information you need to qualify your TI PALs, as well as reliability data by quarter; and (3) the latest issue of our quarterly programming guide, which also lists third-party support.

In the kit, you'll find a container for shipping your programmed master device(s) so that up to 100 free PALs can be programmed for you.

Within 30 days, you'll receive your free TI PALs. Then it's up to you — just plug 'em in and make your own comparisons.

Mail your return card today; if it's missing, call 1-800-232-3200 (ask for

INQ3204), or write  
Texas Instruments Incorporated,  
P.O. Box 809064,  
Dallas, Texas 75380-9064.

\* Offer limited to 100 units total per customer, not to exceed ten (10) military PALs or ten (10) commercial 7.5-ns TIBPAL16XX-7 PALs and up to 90 devices from TI's other commercial PAL series. Offer subject to availability. Void where prohibited. Offer expires March 31, 1989.

## VIBRATION SENSOR

The SDT1-028K fully shielded, low-mass, surface-mount vibration sensor consists of a piezo film and a shielded cable and housing. The sensor measures  $1.75 \times 0.775 \times 0.125$  in., and the sensing element measures  $1.125 \times 0.440 \times 0.005$  in. The unit has an 18-in. wire and weighs 2.1g. The SDT1-028K responds to operating forces greater than 2g with an output voltage of 20 mV/g. Using a 1 M $\Omega$  load, the frequency response is basically flat above 125 Hz; however, roll-off exists and extends the low frequency range by about a decade. \$40 (sample qty).

**Pennwalt Corporation, Kynar Piezo Film Dept, Box 799, Valley Forge, PA 19482. Phone (215) 666-3500.**

Circle No 677

## POWER RELAYS

The HC-5, KC-15, KC-16, and K60C relays are available for power-switching applications that cause severe contact erosion, such as capacitive discharge of a heart defibrillator and electrostatic discharge simulation. The vendor fills these relays with an electronegative gas and offers arc-quenching characteristics to extend compo-

nent life. These four relays operate at voltages ranging from 3.5 to 30 kV dc and continuous currents as high as 12A dc. From \$108.

**Kilovac, Box 4422, Santa Barbara, CA 93140. Phone (805) 684-4560. TWX 910-336-1141.**

Circle No 678

## TANTALUM CAPACITORS

The 49SC Star Chip tantalum capacitor yields a low ESR (equivalent series resistance) at high frequencies. For example, a 4.7- $\mu$ F 10V capacitor has an ESR of <100 m $\Omega$  at 100 kHz. The 49SC capacitors are available in capacitances ranging from 0.1 to 100  $\mu$ F and from 4 to 50V. You can purchase the devices in 5 case sizes conforming to EIA specification IS-28, and in tolerances of  $\pm 5\%$ ,  $\pm 10\%$ , and  $\pm 20\%$ . Terminations are hot-solder dipped and are compatible with all forms of surface bonding. Typical 49SC with 47  $\mu$ F, 10V, 10% tolerance, \$0.95 (1000).

**Mepco/Centralab, Box 10330, Riviera Beach, FL 33404. Phone (407) 881-3257.**

Circle No 679

## LED CLUSTERS

The Series SL467 and S467 consist of seven LED clusters in an indus-

try-standard candelabra S6 screw-base lamp that mounts directly in the S6 screw-base sockets or lamp holders. Because the series contains all the necessary limiting resistors and rectifiers within its packages, you don't need to modify your circuit to convert from S6 type filament incandescents to the cluster LEDs. The advantages of the LEDs are lifetimes exceeding 10 years, low power, low turn-on surge currents, equal intensity light output, and high shock and vibration tolerance.

The clusters are available from stock in 5V/6V, 12V/14V, 24V/28V, 36V, 48V, 60V, 110V dc, 120V ac, and 130V dc, and can be made to order for other voltages. They are available in either polarized dc types or nonpolarized dual-polarity ac/dc types. The brightness of the clear illuminator LEDs approaches that of a 1 to 3W incandescent bulb; seven other colors are in production. Standard high-efficiency SL467 in 120V ac, \$7.22 (1000). Delivery, stock to six weeks ARO.

## PRESSURE SENSOR

The SHP5000A pressure sensor is suitable for measuring media in a hostile environment. The sensors feature internal temperature compensation for accurate operation over 0 to 50°C. Factory laser trimming sets the initial offset calibration to within 0 to 10 mV, and

# SEE HOW YOUR CONNECTOR MEASURES UP TO OURS.

If your present I/O connector can completely cover the new Fujitsu Series 230 pictured on this page, you've got a large problem.

You're wasting valuable board space.

Space you could use to cram in a few extra components. Or space you could eliminate entirely to reduce manufacturing costs.

Fact is, the Series 230's remarkably compact 1.27mm (.50") pitch and remarkably efficient 4-row, zig-zag terminal layout pack provides all the pinout you're used to in 40% less real estate.

More than that, the cable mount plug and board mount socket, in 50 and 68 positions, conforms to the SCSI II and III standards adopted by ANSI.

And, every Series 230 connector also includes features like a standard "D" shape polarization header, EMI shield, plug/socket lock and minimum-pressure insertion/withdrawal fitting. All with no extra size.

So, before you run out of space on your next compact or portable system design, call us at **(408) 562-1000** or see the EEM Catalog. For a complete list of local distributors and representatives write to Fujitsu Component of America, Inc., 3330 Scott Boulevard, Santa Clara, California 95054-3197.

We'll keep you from coming up short.

Circle No 681

## CERAMIC CAPACITORS

The C056 and C066 Series radial-molded ceramic capacitors feature a permanent 2-legged standoff between the leads. The standoff improves solderability and eases flux removal. The standoff also makes visual inspection of solder joints easier and eliminates the need for external spacers, as well as mini-

mizing tilting and flush mounting. The series meets all performance requirements and physical characteristics of MIL-C-39014 and MIL-C-20. The devices are available in a wide range of values and tolerances. CKR05-style 0.1  $\mu\text{F}$ , 10%, 50V capacitor, \$0.28. Delivery, stock to 10 weeks.

**Kemet Electronics Corp, Box 5928, Greenville, SC 29606. Phone (803) 963-6300.**

Circle No 682

## DIP SWITCH

The K40 surface-mount DIP switch features two separate slides for each contact point to improve the switch's reliability. The switch is also flush with the cover to eliminate accidental on-off movement. The slides are made of beryllium copper plated in a 100- $\mu\text{in}$ . nickel bath and then spot gold-plated 30  $\mu\text{in}$ . deep at all the contact points. The size of the K40 switch corresponds to the size of a DIP with the same pin count. The K40 switch is available in 4- to 16-pin, surface-mount packages—either gull-wing or J-bend; each package can have 2 to 8 switches. From \$0.65 to \$1.30.

## FILM CAPACITORS

The Surfilm ST multilayer surface-mount-chip film capacitors have the same footprint as ceramic chip capacitors. Available in capacitance values from 0.01 through 2.2  $\mu\text{F}$  in  $\pm 5\%$ ,  $\pm 10\%$ , and  $\pm 20\%$  tolerances at 50V dc, the capacitors come in chip sizes 1210, 1812, 2225, 2824, and 3827. The parts can withstand IR or vapor-phase soldering at 225°C for one minute and are available on 12- and 16-mm plastic tape and reel. The capacitors' dielectric absorption of 0.25% is suitable for S/H circuit applications. A 0.1- $\mu\text{F}$  ST 1812, \$0.29; a 1.0- $\mu\text{F}$  ST 2225, \$0.90 (1000). Delivery, six weeks ARO.

## CHIP INDUCTORS

The CS 2014 series shielded-chip inductors are available in values from 1 to 1000  $\mu\text{H}$ . The Q minimum is 50 for parts below 68  $\mu\text{H}$ , 40 for parts between 68 and 470  $\mu\text{H}$  inclusive, and 30 for both the 680- and 1000- $\mu\text{H}$  parts. These devices come

with tolerances of  $\pm 10\%$  from 10 to 1000  $\mu\text{H}$  and  $\pm 20\%$  below 10  $\mu\text{H}$ ,

although you can special order  $\pm 10\%$  parts below 10  $\mu\text{H}$ . The chip inductors measure  $0.199 \times 0.144 \times 0.125$  in., and you can use them with either flow or reflow soldering. The shield on the CS 2014 is 100% ferrite, thereby providing better protection against induction interference than more traditional shields made with a combination of ferrite

## WE CAN GET YOU AROUND YOUR LIGHTING PROBLEMS.

Our electroluminescent (EL) lamps give you light that's easy to work with.

Instead of juggling grains of wheat, we give you a single field of light, perfectly uniform and balanced the moment you plug it in.

Instead of bulk, we give you a lamp so thin, it's barely three-dimensional—lighted almost edge to edge. We can make our lamps in all kinds of sizes and shapes—with cutouts and holes to fit protruding knobs and switches.

Instead of resistance-based technology that's hot, we give you capacitance-based technology that's very cool. Instead of a limited color range, we can make a lamp in almost any color—even multicolor. Instead of sudden death, we give you lamps with useful lives exceeding 10,000 hours in extreme environments. We can give you a variety of connectors, including IC leads. And we can supply front or back adhesives, for easy mounting.

## OUR DESIGN GUIDE CAN LIGHT YOUR WAY.

And with our lamps, we give you solid-state-of-the-art construction backed with our Loctite applications know-how. So for solutions to any problem, we're here. To learn more, send for our DESIGN GUIDE, the definitive reference on electroluminescence. Because the solution to your lighting problem may be as simple as seeing it in a new light.

## OUR EL LAMPS WON'T LEAVE YOUR PRODUCT IN THE DARK.

When your product needs lighting that absolutely has to work—everytime, everywhere—you need our electro-luminescent (EL) lamps.

Because in lighting, there's nothing tougher or more reliable than our solid-state-of-the-art construction. Tough Aclar packaging makes our lamps durable. Special phosphors with our unique desiccant layer make them dependable. Our lamps will survive where lesser lights—both incandescent and EL—face sure and sudden death.

So, in vibration and shock, in temperature extremes, in humidity and moisture, our EL lamps really shine...on and on. In fact, their useful lives exceed 10,000 hours.

And we can provide this reliability in almost any color. In all kinds of sizes and shapes.

### SEND FOR OUR DESIGN GUIDE. IT'LL SHED MORE LIGHT.

When it comes to electroluminescence, we've quite literally written the book. And we'd like to send it to you—the DESIGN GUIDE. Because when you spend a lot of time making your product and your reputation solid, lighting shouldn't be its weakest link.

## SOLID-STATE RELAYS

Two high-reliability solid-state relays, the 10A and 20A, can switch loads up to 240V ac at a power factor of 0.3. The 10A and 20A have a reliability of 0.05 failures per million hours so you can use the relays in high-reliability, low power factor applications. The relays mount directly on your pc board with four screws. Both the 10A and 20A are UL recognized, CSA certified, and conform with VDE specifications. Both units carry a 10-year warranty. 10A relay, \$20; 20A relay, \$21.50 (100).

## FLAT-PANEL DISPLAY

The manufacturer claims that this electronically addressed smectic liquid-crystal (EASL) screen provides a high-resolution flicker-free display that's readable in bright ambient light and has a viewing angle equivalent to that of ink-on-paper

printed material. It has a contrast ratio greater than 20:1, and a line resolution of 200 dpi max. Once updated, the display doesn't require any refreshing, thereby eliminating the requirement for high-speed drive circuitry and providing a high degree of data security. You can update the entire screen of a 640 x 480-pixel display in <300

msec.

Power dissipation during erasure of the image is 0.1W/cm<sup>2</sup>, and the display requires zero power for image retention. The operating temperature range is 15 to 55 °C. The display is initially being manufactured in 4-, 8-, and 14-in. diagonal versions. The 14-in. version can display a full-size A4 page. The initial

## ONE OF THESE CAN CHANGE THE WAY YOU SEE LIGHTING.

### WE'D LIKE TO SEND YOU ONE OF OUR EL LAMPS -

Bend and twist it. Bang it. Throw it. Dunk it. Freeze it. And then watch it light up when you plug it in.

Only our electroluminescent (EL) lamps can take it. Because only our EL lamps combine solid-state technology with Loctite quality and reliability.

Besides standing-up to conditions that would virtually destroy incandescents and other ELs, our lamps also stand-out with useful life exceeding 10,000 hours. With uniform surface illumination, so you can forget your balancing act. With no heat. With all kinds of sizes and shapes - in almost any color.

### HERE'S HOW TO GET ONE, SO YOU CAN SEE FOR YOURSELF.

Just send this ad, along with your business card, to Les Hyatt, our Sales Manager. Along with our DESIGN GUIDE (the definitive reference on electroluminescence), he'll send you a sample EL lamp - both free. After you kick it around for a while, you'll understand why we say - no other light can hold a candle to ours.

## SMD SWITCHES

These fully sealed miniature keyboard switches are suitable for surface mounting using pick-and-place equipment. They have a 10.1×10.1-

mm footprint and a height of 6.4 mm. You can fit them with a range of standard or customized colored keycaps. The keycaps can incorporate a medium-intensity LED indicator, or high-intensity illumination. The keyswitches have an operating force of 150g and provide 1 mm of switch travel with tactile feedback. \$0.65.

## Higher frequencies. Smaller size.

ACTUAL SIZE

## NDK 1300 Series Compact Crystal Clock Oscillators

NDK's 1300 Series offers the widest range of CMOS- and TTL-compatible compact oscillators available. Frequencies from 28 kHz to 70 MHz with enable/disable std and dual-frequency output as an option. All in rugged, space-saving, half-size packages that are perfect for high density pc-board applications.

### NDK 1300 Series Features

- Broadest range of available frequencies — 28 kHz to 70 MHz
- Low-power/low-heat CMOS technology
- Choice of TTL, CMOS or dual-compatibility
- Compact size (0.52-inch square) — perfect for portables
- Quick rise and fall times (5, 7, 10 ns)
- Excellent fan out (2 or 5 TTL gates)
- Sealed, grounded metal case resists EMI, high temperatures, humidity
- Shock and vibration resistant

## POTENTIOMETERS

Series-3203 surface-mount potentiometers have package dimensions of 3×3×1.7 mm and can withstand dual-wave soldering, and vapor-phase soldering at 250°C for 10 sec or 280°C for 5 sec. The potentiometers are available with resistance values between 200Ω and 1 MΩ, and have a temperature coefficient of resistance of 250 ppm/°C.

You can adjust the potentiometer after soldering by removing its silicone seal, and lock it again by using a rubberized locking paint. The terminal layout of the package is offset

# Specify P&B relays for the 2 amp and under switching game.

## New Models Available

Potter & Brumfield's expanded line of low-signal printed circuit board relays provides the features you need for your 2A and under switching requirements. New products, traditional P&B quality, stock availability and service through our broad sales network combine to help solve your toughest relay design-in problems in telecommunications, alarm, industrial control and other applications.

## SPST to 4PDT, Dry Circuit to 2A

Whether your design demands single or multiple-contacts, dependable dry circuit or 2A switching, one or more of our new models will probably meet your needs. Many are UL recognized and CSA certified.

## Range of Relay Types

Both polarized and non-polarized models are available in varying degrees of coil sensitivity. Immersion-cleanable DIP and SIP types are offered, as are surface-mountable reed relays.

## PANEL METER

The DPM-35 3½-digit panel meter has front-panel dimensions of 48×24 mm and a depth of 34 mm behind the front panel, allowing you to mount as many as three meters in a standard Eurocard cassette with room to spare for a signal-conditioning board behind the meters.

The meter has a high-intensity, 8-mm high, 7-segment LED display with the decimal point position determined by soldered links. It has single-ended or differential input voltage ranges of 200 mV and 2V, and current input ranges of 20 mA and 200 mA. The measurement accuracy is ±1 digit. The DPM-35 draws a maximum of 750 mW from a 5V supply. DM 65 (100).

## CAPACITOR

The PME-271E range of RFI suppression capacitors meets the X1 category requirements of IEC-384-14, and nine other stringent national standards. The capacitors are suitable for use in high pulse appli-

cations such as the suppression of fluorescent lamps and other line operated household equipment. They are available with capacitance values between 0.01 and 0.22 µF.

Their voltage rating is 300V ac, and they have a dV/dt capability between 400 and 1200 V/µsec. Their operating temperature range is -40 to +100°C, and they meet the 56-day requirement of the IEC humidity tolerance specification. PME-271E capacitors are constructed of metallized paper and are encapsulated in a self-extinguishing epoxy resin. Swedish krona 1.70 (1000) for a 0.047-µF capacitor.

## HALL-EFFECT IC

The TLE4910K Hall-effect IC produces an output voltage that is proportional to the flux density of its surrounding magnetic field, allowing you to convert mechanical motion directly into an analog electrical signal. External resistors allow you to adjust the zero point of the device's linear output characteristic and sensitivity. By adjusting the zero point you can use the device to detect flux reversal of the magnetic field.

The device can withstand ambient temperatures of -40 to +135°C and includes a temperature sensor that you can use to temperature-compensate measurement circuitry. The TLE4910K has an operating

supply voltage range of 4.75 to 18V. \$2.29 (1000).

## BUS ISOLATORS

Suitable for surface mounting, 1600-series bus isolators for CheaperNet, token-ring, and other networks are packaged in 28-pin J-lead plastic leaded chip carriers. They are available with isolation voltage ratings of 500V or 2000V rms. In conjunction with suitable interface chip sets, you can use the isolators to implement CSMA/CD (carrier sense multiple access/collision detection) and IEEE-802.5 network nodes. The isolators for CSMA/CD networks provide isolation for the

# Components

TX and RX data channels and for the CD (collision detect) channel. The isolator for IEEE-802.5 networks is a dual-channel device. In addition, a 4-channel isolator is available for isolating data buses, offering a low-cost alternative to optocouplers. £5 (100).

## LCD DPMs

The DP-1650 and DP-1654 digital panel meters feature user-selectable decimal-point placement, automatic polarity changeover, and overrange indication of  $\pm 1$ . Both DPMs are completely autozeroing, employ a dual-slope integrating A/D converter, and use fully differential inputs for reliable readings. The DP-1650 has a fixed input of  $\pm 2V$  dc; the DP-1654 covers a full-scale input range of  $\pm 20V$  dc.

Both DPMs have 12.7-mm,  $3\frac{1}{2}$ -digit LCD displays, a HOLD function for freezing the display, a common-mode rejection ratio to 86 dB, accuracy to  $\pm 0.1\%$  full scale (+1 digit), and they draw 17.5 mW typ, 5V dc at 3.5 mA. An external reference that measures between 0.5 to 1.5V dc for ratiometric measurements can replace the internal reference of 1V dc. The input impedance for the DP-1650 is 1000 M $\Omega$  with overvoltage protection to  $\pm 10V$  dc; the DP-1654 has an input impedance of 1 M $\Omega$  and overvoltage protection to  $\pm 100V$  dc. \$79 each; C-14 connector, \$4.

## TRIMMER

You can perform adjustments to CRTs using this high-voltage focus-control trimmer with an input voltage rating as high as 1 kV dc. The Model 3386-HV1 trimmer has a cermet element with a temperature coefficient of  $\pm 150$  ppm/ $^{\circ}C$ . The trimmer is a  $\frac{3}{8}$ -in.-square single-turn device, which meets MIL-STD-202, Method 103, for humidity.

Standard resistance values for the 3386-HV1 are 2.5 and 5 M $\Omega$ . Contact resistance variation is 1% maximum. Adjustability in the voltage divider mode is  $\pm 0.05\%$  and in the rheostat mode is  $\pm 0.15\%$ . The rotational life is specified at a minimum of 200 cycles, and the knobs are available in white or blue, with optional red knobs. The vendor requires a 50-piece minimum order. \$1.01 (1000). Delivery, stock to eight weeks ARO.

## PROGRAMMED SOCKET

The Correct-A-Chip is a socket that the vendor programs to your specification to reroute circuit paths, either due to unavailability or obsolescence of the ICs you are using in your design. Using a tiny pc board, the Correct-A-Chip can be adapted to any pin count and to any DIP configuration. The contacts are gold plated with tin-plated solder tails and the Correct-A-Chip is available in standard and low-profile versions for 0.300-mil centers in

14-, 16-, 18-, 20-, and 24-pin sizes and 0.600-mil centers in 24-, 28-, and 40-pin sizes. Worksheets are available from the vendor to help you plot your circuitry. The \$250/order for each configuration programming fee is reduced to \$100 for repeat orders. 14-pin socket, \$4.68 (1000).

## WIREWOUND RESISTORS

Type WSC surface-mount wirewound resistors are available in 1 and 2W models with tape-and-reel packaging suitable for automatic-insertion equipment. The SMD has broad wraparound terminals to provide mounting stability and solderability. You can mount the 1W WSC-1 resistor in the same foot pad as a 1W chip resistor. The 1W WSC-1 resistors come in values ranging from  $0.1\Omega$  to 2.38 k $\Omega$ , and the 2W WSC-2 resistors are available in 0.005 $\Omega$  to 10.4 k $\Omega$  resistances. You can get tolerances from  $\pm 0.05\%$  to  $\pm 5\%$ . Standard temperature coefficients are  $\pm 20$ ,  $\pm 50$ , and  $\pm 90$  ppm/ $^{\circ}\text{C}$  in values down to  $0.1\Omega$ . \$0.98 (1000). Delivery, 8 to 10 weeks ARO.

# If this is how you see LEDs, the ad is over.

The popular myth goes something like this: "An LED, is an LED, is an LED." Or: "If you've seen one, you've seen them all." And of course: "LEDs? They're commodity products." Notions we at Dialight, steadfastly reject. And once you're familiar with our products, you'll know why.

Take our Circuit Board Indicators. Single or multiple discretes aligned in a sturdy plastic housing, complete with their own current limiting resistor. The entire assembly polarity-keyed to guarantee correct insertion.

Each unit is 100% tested—ready to insert for wave soldering. No leads to bend, trim, or break. No time wasted fumbling with discretes.

Dialight pioneered the concept more than fifteen years ago to satisfy the OEM need for fast and reliable circuit board installation of LEDs. And we've been perfecting it ever since. Developing hundreds of standard and custom designs. A heritage of technological advance you can see in our new super-bright gallium aluminum arsenide units.

All meticulously engineered with the understanding that the failure of a "jelly bean product" can cost thousands in end-user downtime, and who-knows-what in customer loyalty.

The same understanding might bring you to call 201-223-9400, or write Dialight Corporation, 1913 Atlantic Ave., Manasquan, NJ 08736, and ask for our catalog or a product sample. At the very least, it's brought you to the real end of our ad.

Engineering is the only commodity we sell.

# Hitachi's 3-Chip Graphics System

Off the northeast coast of Australia lies the Great Barrier Reef... a world of striking visual images... its appearance changing effortlessly with the tide. Now, Hitachi's made it easier than ever for you to create dazzling graphic images.

Our renowned HD63484 Advanced CRT Controller (ACRTC) has been joined by the HD63485 Graphics Memory Interface Controller (GMIC), and the HD63486 Graphics Video Attributes Controller (GVAC). The ACRTC made graphics software design simple, and now the GMIC and GVAC complete the picture by making your hardware design just as easy.

Glue logic is virtually eliminated. Development time and cost are slashed to the minimum. You end up with a graphics system so cost-effective that you can use it in high-volume, mainstream PC and OA workstation applica-

tions. High-performance graphics no longer has to be an option on your products.

A trio of devices gives unbeatable performance in every key area. The ACRTC embodies Hitachi's 2-micron CMOS technology to integrate all CRT and graphics control functions on one chip. This all-CMOS device has three on-board processors to relieve the system's CPU of many time-consuming processing tasks. The ACRTC executes 38 high-level commands—including 23 graphic drawing commands. You don't have to compute command parameters, and address translation is done in hardware.

The GMIC acts as an interface between the ACRTC and your frame buffer. This 64MHz Hi-BiCMOS™ device generates every control and refresh signal required by the DRAM frame buffer, including all timing signals, row-and-column addresses, and write strobes.

## Every Image

The GVAC controls the data flow going to the display itself. This 64MHz Hi-BiCMOS device controls the video attributes, and includes programmable dot shift registers. These provide zooming, horizontal smooth scrolling, plus many user-definable video attributes.

With one ACRTC, one GMIC, two GVACs, plus frame buffer memory, you quickly build a system with 640 x 480 resolution, and 16 colors. Or, configure a system any way you want. As you add GVACs, system flexibility goes up exponentially—just *imagine* the kinds of images you can create. And, you'll do it all in less time, and with less cost, than any other graphics system ever made.

Hitachi gives you the price/performance competitive edge. This system is rapidly becoming the industry-standard CRT and graphics controller. After all, it allows PGA\* capabilities—and

more—at EGA\* prices! To learn more, call your local Hitachi Sales Representative or Distributor Sales Office today.

***Fast Action:*** To obtain product literature immediately, CALL TOLL FREE, 1-800-842-9000, Ext. 6809. Ask for literature number SB-103.

\*PGA and EGA are registered trademarks of International Business Machines Corporation. PGA offers 640 x 480 resolution, a 4K color palette, and 256 displayable colors. EGA offers 640 x 350 resolution, with 16 displayable colors.

## Product Database Index

(May through October 1988)

Including products from EDN and EDN News

## About this database . . .

This database lists products that received editorial coverage in EDN and EDN News from May through October 1988. EDN's products include those featured in Product Updates, showcases, and individual short-product sections. The products from EDN News include those from the New Products and Product Features sections.

You'll find products in eight main groups:

**Components**

**Computers and Peripherals**

**Computer-Aided Engineering**

**Hardware and Interconnect**

**ICs and Semiconductors**

**Power Sources**

**Software**

**Test and Measurement Instruments**

For more information about the products in this index, use the addresses in EDN and EDN News to contact the manufacturers directly.

We would like to know how you use our Product Database Index and what you think of it. Please let us know by reading the choices below and then circling the corresponding numbers on the Information Retrieval Service card in this issue. You can also write any comments and suggestions on the card.

1. The Products Database Index is:

Useful to me	Circle No 461
Somewhat useful	Circle No 462
Not useful	Circle No 463

2. I'll use the Product Database Index:

At least weekly	Circle No 464
At least monthly	Circle No 465
Infrequently	Circle No 466
Never	Circle No 467

Thanks for your help.

**If you want to increase  
the value of your PWB real estate,  
Du Pont can help  
you do it.**

With VACREL® photopolymer film solder mask. The material that enables you to reliably encapsulate dense circuitry and tent via holes, permitting more electrical functions in less PWB real estate; to let you create higher density PWBs than ever before.

Instead of placing vias and components on separate areas of the board, you simply design vias under the components. And because VACREL tents the vias, solder stays only in the places where you want it; you avoid bridging, shorts, and contamination. It's also easier to clean under components.

In addition, you use less solder, minimizing assembly weight, because you're only covering connections. Hole-filling defects are also avoided. The bottom line is VACREL can increase assembly yields and cut manufacturing costs per function allowing you to get the most from your PWB real estate.

If you want more value out of your PWB real estate, ask for VACREL photopolymer film solder mask. It's the right material for PWB designs. Just call Du Pont at **1-800-237-4357**. Or write: Du Pont Company, Room G-51176, Wilmington, DE 19898.

### PLD interface chip

Advanced Micro Devices, *PAL22IP6*, EDN, 10/27/88, pg 342

### PLL IC

GE Solid State, *CD54/74HC/HCT4046A*, EDN, 8/18/88, pg 264

GE Solid State, *CD54/74HC/HCT7046A*, EDN, 6/09/88, pg 271

### PNP darlington

Micro Networks, *PH27001H*, EDN, 10/27/88, pg 374

### PROM

WaferScale Integration Inc, *WS57C51B*, EDN NEWS, 9/01/88, pg 37

### PS/2 chip

G-2 Inc, —, EDN NEWS, 8/01/88, pg 42

### Phase splitter

Anadigics Inc, *APS30010*, EDN, 8/04/88, pg 229

### Phone IC

Signetics Corp, *TEA1064*, EDN, 7/07/88, pg 114

# PRODUCT DATABASE INDEX

## ICs and Semiconductors (Continued)

### Power MOSFET

Motorola Inc, *MTP40N06M*, EDN, 5/26/88, pg 245

### Power driver

SGS-Thomson Microelectronics, *VM200*, EDN, 9/15/88, pg 269

### Power module

IXYS Corp, *MOS-Block*, EDN, 7/07/88, pg 128

### Power switch IC

GE Solid State, *CA3262*, EDN NEWS, 9/01/88, pg 37

### Power transistor

SGS-Thomson Microelectronics, *STH110N50*, EDN, 10/27/88, pg 377

### Power-supply IC

SGS-Thomson Microelectronics, *TEA 2170*, *2164*, EDN, 7/07/88, pg 138

### Preamplifier

REL-Labs, Inc, *RL-790*, EDN, 10/13/88, pg 294  
Signetics Corp, *TEA 6300*, EDN, 7/07/88, pg 140

### Printer $\mu$ P

National Semiconductor, *NS32CG16*, EDN NEWS, 10/01/88, pg 48

### Printer/display processor

National Semiconductor, *NS32CG16*, EDN, 7/07/88, pg 118

### Pulse detector

National Semiconductor, *DP8468B*, EDN, 9/01/88, pg 218

### RAM

Electronic Designs Inc, *EDI8M1664C*, EDN, 7/07/88, pg 124  
Fujitsu Microelectronics, *STRAMs*, EDN, 7/07/88, pg 112  
Hitachi America Ltd, *HM628128*, EDN NEWS, 9/01/88, pg 48  
Inova Microelectronics Corp, *S128K8*, EDN NEWS, 8/01/88, pg 35  
Integrated Device Technology, *IDT7MC4032*, EDN NEWS, 7/01/88, pg 31  
Mitsubishi Electronics Inc, *M5M5256VP*, EDN, 6/23/88, pg 234  
Motorola Inc, *MCM6264J*, *-6290J*, *-6268*, EDN, 6/23/88, pg 227  
Motorola Inc, *MCM6264J*, *MCM6290J*, EDN NEWS, 6/01/88, pg 43  
National Semiconductor, *NM5100*, EDN, 5/26/88, pg 100  
Sharp Electronics Corp, *LH52252*, EDN, 6/23/88, pg 232  
Toshiba America Inc, *TC511000AP/AJ/AZ*, etc., EDN NEWS, 6/01/88, pg 41  
Toshiba America Inc, *TC5588*, *TC5589*, EDN NEWS, 7/01/88, pg 31  
Triad Semiconductors Inc, *TR9C1640*, *1643*, EDN, 10/13/88, pg 104  
VLSI Technology Inc, *VT20C50*, EDN NEWS, 9/01/88, pg 37  
Vitelco Corp, *V53C256*, *V53C258*, EDN, 7/07/88, pg 102

### RAM controller

Signetics Corp, *74F1764*, *74F1765*, EDN NEWS, 7/01/88, pg 31  
Signetics Corp, *74F1764*, *74F1765*, EDN, 8/04/88, pg 222

### RF amplifier

National Semiconductor, *LH4200*, EDN, 7/07/88, pg 128

### RISC $\mu$ P

Advanced Micro Devices, *Am29000*, EDN, 8/18/88, pg 261  
Fujitsu Microelectronics, *S-25*, EDN, 7/07/88, pg 138  
Fujitsu Microelectronics, *S-25*, EDN, 5/26/88, pg 234  
Motorola Inc, *88000 Family*, EDN, 7/07/88, pg 152

### RISC chip set

Motorola Inc, *88000 chip set*, EDN, 5/26/88, pg 103

### RS-232C IC

Maxim Integrated Products, *MAX235M*, EDN, 9/15/88, pg 260

### Random logic IC

Signetics Corp, *PLHS501*, EDN NEWS, 9/01/88, pg 38  
Signetics Corp, *PLHS501*, EDN, 9/15/88, pg 269

### Read/write amp

Exar Corp, *XR-501*, *XR-511*, EDN NEWS, 10/01/88, pg 48

### Rectifier

Omnirel Corp, *OM5227SC Series*, EDN, 6/23/88, pg 198  
Powerex Inc, *CD6 family*, EDN, 5/12/88, pg 234  
Semtech Corp, *USC110X*, EDN NEWS, 9/01/88, pg 37  
Semtech Corp, *USC110X*, *USC130X*, EDN, 10/13/88, pg 282

### Reference

Precision Monolithics Inc, *REF-43*, EDN, 5/26/88, pg 234  
Precision Monolithics Inc, *Ref-43*, EDN, 7/07/88, pg 135

### Register

Texas Instruments Inc, *SN74ALS29821/26*, etc., EDN NEWS, 8/01/88, pg 35

### Regulator

Linear Technology Corp, *LT1085*, EDN, 9/29/88, pg 218

### Resonant-control IC

Unitrode Integrated Circuits, *UC3860*, EDN, 8/04/88, pg 222

### Resonant-mode IC

Gennum Corp, *GP605*, EDN, 10/13/88, pg 294

### S/H amplifier

Analogic Corp, *AH20016*, EDN NEWS, 6/01/88, pg 44  
Burr-Brown, *SHC601*, EDN, 5/12/88, pg 215

### SCSI IC

Adaptec Inc, *AIC-6110*, EDN NEWS, 7/01/88, pg 31  
Logic Devices Inc, *L53C80*, EDN, 5/12/88, pg 226  
National Semiconductor, *DP8490* and *DP5380*, EDN, 9/29/88, pg 219  
National Semiconductor, *DP8490*, *DP5380*, EDN, 8/18/88, pg 262

### SCSI host-adaptor

NCR Microelectronics Div, *NCR 53C400*, EDN NEWS, 7/01/88, pg 31

### Servo control

Micro Linear Corp, *ML4404*, EDN, 10/13/88, pg 290

### Shift register

Brooktree Corp, *Bt424*, EDN NEWS, 8/01/88, pg 35  
Brooktree Corp, *Bt424*, EDN, 9/01/88, pg 218  
GE Solid State, *CD54/74AC/ACT299*, EDN, 9/15/88, pg 264

### Smart-power IC

SGS-Thomson Microelectronics, *VB100*, EDN, 10/27/88, pg 348

### Standard-cell library

Exar Corp, *N2000*, EDN NEWS, 7/01/88, pg 34

### Switch

Theta-J Corp, *LBA and LCC Series*, EDN, 6/23/88, pg 192

### Switch debouncer

Precision MicroDevices Inc, *PSI-01*, EDN, 7/07/88, pg 135

### Switched-capacitor filter

Micro Linear Corp, *ML2110* and *ML2111*, EDN, 5/26/88, pg 237  
Micro Linear Corp, *ML2111*, EDN, 7/07/88, pg 106

### Synthesizer

Qualcomm Inc, *Q2334*, EDN, 8/18/88, pg 261

### T1 and CEPT chip set

Dallas Semiconductor, *DS2187*, *-2180A*, *-2175*, *-2186*, EDN NEWS, 5/01/88, pg 29

### Telecomm chip

Silicon Systems, *SSI-78P233*, EDN, 9/01/88, pg 218

### Time-delay device

Dallas Semiconductor, *DS1005*, *DS1010*, *DS1013*, *DS1007*, EDN NEWS, 7/01/88, pg 34

### V/F converter

Burr-Brown, *VFC101*, EDN, 6/23/88, pg 225

### Video amplifier

GE Solid State, *LM1822*, EDN, 6/23/88, pg 227

### Video and system controller

Signetics Corp, *68070*, *66470*, EDN, 8/04/88, pg 83

### Video controller

Texas Instruments Inc, *SMJ34061*, EDN, 6/09/88, pg 279

### Video switch

Gennum Corp, *GX414*, EDN, 9/01/88, pg 222

### Voltage reference

Silicon General Semiconductor, *SG103-XX/883B*, EDN NEWS, 6/01/88, pg 41

### Watchdog IC

EM Microelectronic-Marin SA, *H6060*, EDN, 9/01/88, pg 220

### $\mu$ P

Cypress Semiconductor, *CY7C601*, *CY7C608*, EDN NEWS, 8/01/88, pg 35  
Cypress Semiconductor, *CY7C9115*, *-16*, *-17*, EDN NEWS, 9/01/88, pg 42  
Harris Corp, *80C286-20*, EDN NEWS, 8/01/88, pg 35  
Intel Literature Dept, *386SX*, EDN NEWS, 9/01/88, pg 46  
NEC Electronics Inc,  *$\mu$ PD70136*, EDN NEWS, 8/01/88, pg 38  
Texas Instruments Inc, *TMS370 Family*, EDN, 6/09/88, pg 96  
Zilog Inc, *Z80180*, EDN, 7/07/88, pg 100  
Zilog Inc, *Z84C01*, EDN NEWS, 9/01/88, pg 46

# PRODUCT DATABASE INDEX

Zilog Inc, *Z84C01*, EDN, 9/29/88, pg 217  
Zilog Inc, *Z84C90*, *Z84C80/81*, *Z80180*, EDN NEWS, 5/01/88, pg 32

## µP control chip

Edsun Laboratories Inc, *EL386-88*, EDN, 8/04/88, pg 222

## POWER SOURCES

### AC inverter

Tamura Corp of America, *Series CX-100*, EDN NEWS, 9/01/88, pg 79

### Battery

Electrochem Industries, *CSC Line*, EDN, 7/07/88, pg 187  
Power-Sonic Corp, *Model PS-1242*, EDN, 5/12/88, pg 241  
Redwood City, *PS-1242*, EDN, 9/29/88, pg 98

### DC/DC converter

Bicc-Citec Ltd, —, EDN, 7/21/88, pg 134  
Bicc-Citec Ltd, —, EDN, 7/07/88, pg 201  
Bicc-Citec Ltd, *3T*, EDN, 6/23/88, pg 200  
Burr-Brown, *PWR1546A*, EDN, 9/29/88, pg 217  
Burr-Brown, *PWR1726*, EDN, 10/27/88, pg 381  
Burr-Brown, *PWS726*, EDN, 7/07/88, pg 197  
Calex Mfg Co, *12S5.3000XC*, EDN, 9/29/88, pg 207  
Calex Mfg Co, *XC Series*, EDN, 7/07/88, pg 198  
Computer Products Inc, *WS Series*, EDN, 7/07/88, pg 187  
Conversion Devices Inc, *Series 2100*, EDN NEWS, 10/01/88, pg 75  
Integrated Circuits Inc, *MTW Series*, EDN, 5/12/88, pg 241

# High Performance Triacs That Need No Snubber.

## The Brighter Solution.

When it comes to advanced smart power integrated circuit technology, SGS-THOMSON Microelectronics is an acknowledged leader. But what about discrete devices? Our latest range of Snubberless Triacs offers design, reliability and cost-saving advantages second to none. Just what you'd expect from The Brighter Power.™

## High $(di/dt)_c$ guaranteed without a snubber.

Created specifically to deliver very high switching performance, SGS-THOMSON's Snubberless Triacs have a guaranteed  $(di/dt)_c$  and do not require the use of a snubber circuit. With devices covering the 6 to 16 A<sub>RMS</sub> and 200 to 800 volt ranges Snubberless Triacs can, in fact, replace less efficient triacs in most applications.

## Snubberless Triacs save design time and space.

With SGS-THOMSON Snubberless Triacs, you simply specify it, fit it and forget it—even when driving high inductive loads. There's no more over-dimensioning to achieve system reliability. No more wasted time and money designing and fitting costly, space-consuming snubbers.

## Winning IC driven triacs, too.

Even for low  $I_{GT}$ , IC driven triacs, SGS-THOMSON technology is

ahead of the rest. Our Logic Level Triacs offer guaranteed switching characteristics and super high performance. In the 20 to 50V/ $\mu$ s range, SGS-THOMSON's  $(dv/dt)_c$  is up to 50 times better than conventional sensitive triacs.

Snubberless and Logic Level Triacs are just two members of a family that also include standard triacs, thyristors and alternistors. Why settle for second best and why design what you don't need when a whole range of brighter triac ideas is just a phone call away?

### SNUBBERLESS TRIACS

TYPE/CURRENT/ VOLTAGE	SUFFIX	$I_{GT}$ MAX*	$(di/dt)_c$ Min @ $(dv/dt)_c \leq 100V/\mu s$
BTA/BTB 6A/200-800V	AW	75mA	8.0A/ms
	BW	50mA	5.0A/ms
	CW	35mA	3.5A/ms
BTA/BTB 8A/200-800V	AW	75mA	10.0A/ms
	BW	50mA	7.0A/ms
	CW	35mA	4.5A/ms
BTA/BTB 10A/200-800V	AW	75mA	12.0A/ms
	BW	50mA	9.0A/ms
	CW	35mA	5.5A/ms
BTA/BTB 12A/200-800V	AW	75mA	16.0A/ms
	BW	50mA	12.0A/ms
	CW	35mA	6.5A/ms
BTA/BTB 16A/200-800V	AW	75mA	21.0A/ms
	BW	50mA	14.0A/ms
	CW	35mA	8.5A/ms

### LOGIC LEVEL TRIACS

TYPE/CURRENT/ VOLTAGE	SUFFIX	$I_{GT}$ MAX*	$(di/dt)_c$ Min @ $(dv/dt)_c$
BTA/BTB 6A/200-800V	SW	10mA	2.7A/ms 50V/ $\mu$ s
	TW	5mA	1.3A/ms 20V/ $\mu$ s
BTA/BTB 8A/200-800V	SW	10mA	3.5A/ms 50V/ $\mu$ s
	TW	5mA	1.8A/ms 50V/ $\mu$ s

MICROELECTRONICS

# Early warning device from Motorola and Hall-Mark.

Call Hall-Mark for the Motorola undervoltage sensing circuit and save your boards from power struggles.

The Motorola undervoltage sensing circuit acts as a single device reset controller in microprocessor-based systems to save your boards and save your customers' headaches.

Called the MC34064, it's an electronic match for the MC68HC11 microcomputer. The MC34064 is a silicon monolithic IC that requires only one external resistor to operate. It features a guaranteed reset operation with 1.0 volt input and low standby current, and it's offered in TO-92 and surface mount packages for design flexibility.

To find out more about this economical solution, call your nearby Hall-Mark sales center. They're ready with answers for questions from designers, manufacturing engineers and purchasing experts. Hall-Mark is also the one to call for samples and accurate shipping schedules.

If you have an application in appliances, automotive, consumer and industrial products you'll want to know more about Motorola's circuit insurance—the undervoltage sensing circuit.

## Summary and comparison of ADC performances

The 2-pg application note, *AD7578 and AD7582 Performance with Reduced  $V_{DD}$  Supply ( $12V \pm 10\%$ )*, summarizes typical performance at 12V  $V_{DD}$  for 100- $\mu$ sec, 12-bit ADCs and compares it with the data-sheet

**ANALOG DEVICES**  
ONE TECHNOLOGY WAY • P.O. BOX 9100 • NORWOOD, MASSACHUSETTS 02061-0100 • 617/229-4700

**AD7578 and AD7582 Performance with Reduced  $V_{DD}$  Supply ( $12V \pm 10\%$ )**  
by Don Stinebaugh

The AD7578 is a single channel, medium speed, monolithic 12 bit ENR (Effective Number of Resistor) converter. It is designed to provide a conversion rate of 100 kSPS (Samples Per Second) for the AD7578 and 10 kSPS for the AD7582, with similar applications. Both devices feature very low offset voltage (typical 100  $\mu$ V), low gain error (typical 0.1%), and low total harmonic distortion (typical 0.001%).

The device requires three power supply voltages and a reference voltage which can be the same as the positive supply.  $V_{DD} = 12V \pm 10\%$ ,  $V_{SS} = 0V$ ,  $V_{REF} = 12V \pm 10\%$ . The device is designed to operate with a  $V_{DD}$  supply of 12V  $\pm 10\%$  and a  $V_{REF}$  supply of 12V  $\pm 10\%$ . The device is designed to operate with a  $V_{DD}$  supply of 12V  $\pm 10\%$  and a  $V_{REF}$  supply of 12V  $\pm 10\%$ .

The device is designed to operate with a  $V_{DD}$  supply of 12V  $\pm 10\%$  and a  $V_{REF}$  supply of 12V  $\pm 10\%$ . The device is designed to operate with a  $V_{DD}$  supply of 12V  $\pm 10\%$  and a  $V_{REF}$  supply of 12V  $\pm 10\%$ .

**APPLICATION NOTE**

The offset error of the AD7578 (AD7582) is typically 100  $\mu$ V (typical 100  $\mu$ V) with a  $V_{DD}$  of 12V  $\pm 10\%$  and a  $V_{REF}$  of 12V  $\pm 10\%$ . The offset error of the AD7578 (AD7582) is typically 100  $\mu$ V (typical 100  $\mu$ V) with a  $V_{DD}$  of 12V  $\pm 10\%$  and a  $V_{REF}$  of 12V  $\pm 10\%$ .

The gain error of the AD7578 (AD7582) is typically 0.1% (typical 0.1%) with a  $V_{DD}$  of 12V  $\pm 10\%$  and a  $V_{REF}$  of 12V  $\pm 10\%$ . The gain error of the AD7578 (AD7582) is typically 0.1% (typical 0.1%) with a  $V_{DD}$  of 12V  $\pm 10\%$  and a  $V_{REF}$  of 12V  $\pm 10\%$ .

The total harmonic distortion of the AD7578 (AD7582) is typically 0.001% (typical 0.001%) with a  $V_{DD}$  of 12V  $\pm 10\%$  and a  $V_{REF}$  of 12V  $\pm 10\%$ . The total harmonic distortion of the AD7578 (AD7582) is typically 0.001% (typical 0.001%) with a  $V_{DD}$  of 12V  $\pm 10\%$  and a  $V_{REF}$  of 12V  $\pm 10\%$ .

specifications for 15V operation. Among the topics included are accuracy, timing, power-supply current, and logic inputs and outputs. Also included are a table showing accuracy results and a diagram illustrating the interfacing of the ADCs to an IBM PC.

## Toko DC-DC Converters: A Bright Idea for Powering Vacuum Fluorescent Displays.

Whether you're using Futaba, ISE or NEC vacuum fluorescent displays, Toko CPS series DC to DC Converters are the power solution to provide grid, anode and filament voltages—with high reliability and cost savings. They also provide stable power for modems, RS-232 interfaces and other subsystems requiring mixed operating voltages, at prices much lower than other power alternatives. Contact us to be sure you're not over specifying your DC to DC Converter needs.

High performance characteristics:

- ☐ Stable output levels for flicker-free displays
- ☐ High switching frequency and ceramic substrate design combined with SMT for high power and very compact size
- ☐ Full metallic shielding and matched external filtering prevents EMI problems
- ☐ Delivers rated performance from -20 to +65°C at 10 to 85% RH

The CPS series is available in power outputs to 2.4 watts, with input voltages of 1.7 to 30 VDC and output voltages  $\pm 5$  to  $\pm 50$  VDC or 1 to 10 VRMS AC. For more details and application assistance, contact Toko America today.

# LOW COST SAMPLE HOLD AMP GUARANTEES 12-BIT ACCURACY, 6 $\mu$ s ACQUISITION TIME

Burr-Brown's popular SHC298 sample/hold amplifier is specified for 12-bit accuracy and is available in 8-pin TO-99, plastic DIP, and SOIC packages. SHC298 provides fast, precision performance over a wide  $\pm 5V$  to  $\pm 18V$  supply range and is an excellent choice for data acquisition and distribution system applications. Features include:

- 12-bit throughput accuracy;
- 6 $\mu$ s acquisition time (to  $\pm 0.01\%$ , 10V step);
- 30 $\mu$ V/ms droop rate;
- 10 $\mu$ Vrms noise;
- 10nA bias current;
- Reliable monolithic construction;
- 160 hour "burn-in" option;

# \$2.85

## Disk describes C support tools

This demonstration disk presents the Micro/C programming-language support tools for single-chip micro-computers. It also details MS-DOS-based cross-compilers for the 8051 and the Z8 and Super8 processors. The disk spotlights standard and enhanced features of C. Further, it provides examples of Micro/C support for memory maps, interrupts, and on-chip peripherals; sample C and assembly-code listings are included.

**Micro Computer Control**, Box 275, Hopewell, NJ 08525.

## Guide for designers of embedded systems

The *Guide to Embedded Languages* addresses the tradeoffs involved in embedding a language. This reference for engineers examines the characteristics of ROMable languages, interpreter/compiler tradeoffs, interactive development, and multitasking from within the language. It also contains a discussion of a case study.

**Softaid Inc.**, 8930 Route 108, Columbia, MD 21045.

Circle No 735

## Publication features scientific software

This 6-pg brochure, *Asystant, The Scientific Number Cruncher*, discusses the capabilities of the menu-driven scientific software for data analysis and graphics. It describes data file I/O and processing, array

and matrix operations, statistics, waveform and signal processing, polynomials and differential equations, curve fitting, built-in utilities, and graphical presentation. The illustrated pamphlet also lists system specifications. Descriptions of the vendor's products and support services complete the brochure.

**Asyst Software Technologies Inc.**, 100 Corporate Woods, Rochester, NY 14623.

Circle No 734

## Catalog unveils software for VAB and HP-UX

The vendor's 200-pg Publication 5951-6794 deals with value-added-business (VAB) software and proprietary-software solutions for its HP-UX operating system. The catalog lists more than 400 technical and commercial software packages for the vendor's HP-9000 workstations and servers. Using the market keyword index, you can look for products in specific application areas. A range of application areas are available, from aerospace simulators to water-utilities operation. Business application areas include financial management, sales analysis, and accounting packages. The 200 VAB software packages listed in the publication are part of the HP Plus Program that assists third-party software suppliers with marketing the products.

## Video-based courses for database system, software

The two training courses, *Using Informix-SQL* and *Using Oracle SQL\*Plus*, are available on 2-hour-long videotapes. The Informix-SQL course, which explains the functions and features of this relational database system, is suitable for three

levels of users: managers, who need an overview of the system's capabilities; experienced users, who can reinforce their knowledge of the SQL system; and beginning users, who can learn to read and interpret a variety of RDSQL programs. The Oracle SQL\*Plus course outlines the basics of this software package and gives detailed instructions on how to create a data table and insert rows of data in the table. Finally, you learn how to display the data rows in a formatted report on a screen or a printer. Packages for each course include a 2-hour-long videotape, a student guide, and hands-on exercises. Informix-SQL course in VHS format, \$595; on 3/4-in. tape, \$695. Oracle SQL\*Plus course in VHS format, \$495; on 3/4-in. tape, \$595.

## Data book delineates applications development

*The Guide to 64180 Applications Development* gives instructions for programming the 64180 microprocessor. Its inclusion of benchmarks comparing the 64180 with other processors helps you select an appropriate CPU. It tells you how to use the  $\mu$ P's peripherals such as UARTs, timers, and the memory-management unit, and it provides schematics and code segments that are useful in most applications. A description of hardware- and software-development environments and a listing of support products complete the guide. A supplementary guide disk is also available.

## EDN's CHARTER

**EDN** is written for professionals in the electronics industry who design, or manage the design of, products ranging from circuits to systems.

**EDN** provides accurate, detailed, and useful information about new technologies, products, and design techniques.

**EDN** covers new and developing technologies to inform our readers of practical design matters that will be of concern to them at once or in the near future.

**EDN** covers new products

- that are immediately or imminently available for purchase
- that have technical data specified in enough detail to permit practical application
- for which accurate price information is available.

**EDN** provides specific "how to" design information that our readers can use immediately. From time to time, EDN's technical editors undertake special "hands on" projects that demonstrate our commitment to readers' needs for useful information.

**EDN** is written by engineers for engineering professionals.

## LOW COST INTERFACE CARDS FOR PC/XT/AT

### RS-485/422 Card [PC485D] \$95

- Meets RS-485 (Multipoint Bus Transmission) and RS-422A standards.
- Can be configured as COM1 or COM2.
- Jumper selectable line terminators. Two wire (half duplex) operation.
- Maximum Band Rate 56KB/115KB. Differential drivers to 4000 ft.
- DB9 or phonejack. Sample communication software available (\$50).

### IEEE-488 Card [PC488A] \$145

- Includes INSTALLABLE DOS DEVICE DRIVERS and support for BASIC.
- Additional Support for ASSEMBLY, C, Pascal and FORTRAN (\$50).
- IRQ (1-4). DMA channel 1 or 2. Up to 4 boards per computer.
- Compatible with most IEEE-488 software packages for IBM-PC (e.g. ASYS-TANT-GPIB, Lotus Measure, etc.). H/W compatible with NT's GPIB-PCIIA.

### IEEE-488 Card [PC488B] With Built-In Bus Analyzer \$345

- GPBASIC complements IBM/Microsoft BASIC interpreter and compiler to create a programming environment similar to HP desktop computers.
- Additional libraries of over 20 high level 488 dedicated functions for C, Pascal and FORTRAN available. (\$50 ea. including separate library manual).
- Powerful menu-driven BUS ANALYZER runs in the background while 488 programs or commands are executed. Features Program Stepping, Break points, real time bus data capture (4K buffer), instant screen toggling.
- Dipswitch selectable Base address, interrupts (IRQs) and DMA.
- Complete Controller / Talker / Listener capability. Based on TI's TMS-9914.
- NEC-7210 based card (compatible with Nat. Instruments GPIB-PCIIA) - \$445.

### REMOTELY LOCATE YOUR COMPUTER MONITOR

Your computer's monitor can now be located up to 1000 feet from your computer with SCREEN SENDER™. Works with any TTL monitor, color or monochrome. The Transmitter connects to your computer's monitor port and the Repeater can be located up to 1000 feet away using multi-paired cable. Repeaters can be daisy chained for connecting multiple monitors to one computer. Great for factory automation, public displays, training environments, and remote monitoring. Transmitter and Repeater pair is only \$495.00. Call today for more information.

## FREE DEMO DISK

Filter designs, plots, and selects component values for active, passive L-C, and digital filters up to order 30. Full support for Allpass, Elliptic, Bessel, Butterworth, Chebyshev, and Inverse Chebyshev filters. Can design lowpass, highpass, bandpass, and bandstop filters. Filter will transform any filter function into the Z-domain for digital IIR filters. Screen editor allows modification of the transfer function for custom filters. Filter does Monte Carlo analysis, Bode and Transient Analysis plots. Fully menu driven, Filter is \$900 for the IBM PC.

## EPROM PROGRAMMER

- Programs 2764 in 8 sec
- Reads, programs, copies over 475 devices from 35 mfg's: 2716-27513, 27011, 68764, 68766, 2804-28256, etc
- Optional microcontroller heads support 874x and 87C51 series
- Improved design now programs over twice as fast
- Connects via RS-232 to any computer: PC, XT, AT, PS/2, Mac, etc
- Supports XMODEM/XMODEM CRC protocols & ASCII file xfers
- Supports Intel, Motorola, hex-space, straight hex and binary files
- 30-day money-back guarantee
- Collates 16 & 32-bit data
- Engr support team for fast updates
- Gold Textool ZIF IC socket
- One-year warranty (parts and labor)
- 8 baud rates to 38,400
- Toll-free technical support
- Same day shipment
- Thousands of satisfied customers attest to the EP-1's great value
- Low price of \$349 includes IBM compatible communications program, user's manual and two free firmware update coupons

## NEW! AutoPCB Release 5

AutoPCB is a professional quality, PCB design system for the PC/AT or SUN and is integrated with AutoCAD. It features schematic capture, interactive part placement and route editing, and a powerful AI driven autorouter. Release 5 adds full support for SMT (component placement on both sides of a board and autorouting to surface-only pads with blind and buried vias); automatic packaging (gate and pin assignment); automatic back-annotation; fast design rule checking; many new interactive graphics features; and the display of photo-plotting data. Complete PCB design systems are priced from \$1295 to \$7500.

## CT2600 Interface Board With MIL-STD-1553 Fiber Optics

This IBM PC/AT compatible interface board incorporates MIL-STD-1553 standard products and adapted NATO STANAG 4185 fiber optic components to implement a complete I/O channel.

Benefits include:

- Eliminates potential for sparks
- Eliminates electromagnetic interface
- Inherently protected from EMP
- Provides longer transmission distances

# Does your company think of you as just another number?

If your engineering, computer, DP/MIS or software career isn't what you dreamed it would be, it could be the company you keep. And that's where BPI TECH FAIR® can help.

We bring recruiters and line management from top local and national technical companies to your area. They're looking for people who value their careers. And won't settle for being just another face in the company crowd.

BPI TECH FAIR is completely confidential. There's no registration. *And we're not an employment agency.* So there's no fee.

When BPI TECH FAIR comes to your area, plan to attend. You'll learn about new career opportunities at other companies. And they'll get to meet with you in person. So they'll know you by your name.

*If you feel too confined in your present company, come to BPI TECH FAIR®*

Nation's #1 rated career event.

***you've been looking for.***

Caterpillar Inc. has job openings for *electronic engineers* in the area of control systems and component development. We are searching for individuals to work on the design and development of systems utilizing micro-processor and analog circuit technology to control engine and vehicle functions. The candidate must have a *BSEE* or *BS Computer Engineering* as a minimum. Experience in hardware, software, or electronic sensor technologies would be helpful, but not mandatory.

Job location is in Peoria, Illinois. Salaries and fringe benefits are excellent. Openings are immediately available. Please send your *resume*, *transcript* and salary requirements to:

**Caterpillar Inc.**  
Attn: Wes R. Durand  
100 N.E. Adams  
Peoria, Illinois 61629-1490

**CATERPILLAR INC.**

- An equal opportunity employer -

# EDN Databank

## Professional Profile

### Announcing a new placement service for professional engineers!

To help you advance your career, Placement Services, Ltd. has formed the EDN Databank. What is the Databank? It is a computerized system of matching qualified candidates with positions that meet the applicant's professional needs and desires. What are the advantages of this new service?

- It's absolutely free. There are no fees or charges.

- The computer never forgets. When your type of job comes up, it remembers you're qualified.
- Service is nationwide. You'll be considered for openings across the U.S. by PSL and its affiliated offices.
- Your identity is protected. Your resume is carefully screened to be sure it will not be sent to your company or parent organization.

- Your background and career objectives will periodically be reviewed with you by a PSL professional placement person.

We hope you're happy in your current position. At the same time, chances are there is an ideal job you'd prefer if you knew about it.

That's why it makes sense for you to register with the EDN Databank. To do so, just mail the completed form below, along with a copy of your resume, to: Placement Services, Ltd., Inc.

MAR-8	DC-1000	33	23	—	19	+10	3.5	2.20	(25)

NOTE: Minimum gain at highest frequency point and over full temperature range.

• 1dB Gain Compression

□ +4dBm 1 to 2 GHz

### designers amplifier kit, DAK-2

5 of each model, total 35 amplifiers

only \$59.95

Unbelievable, until now... tiny monolithic wide-band amplifiers for as low as 99 cents. These rugged 0.085 in. diam., plastic-packaged units are 50ohm\* input/output impedance, unconditionally stable regardless of load\*, and easily cascable. Models in the MAR-series offer up to 33 dB gain, 0 to +11dBm output, noise figure as low as 2.8dB, and up to DC-2000MHz bandwidth.

\*MAR-8, Input/Output Impedance is not 50ohms, see data sheet.  
Stable for source/load impedance VSWR less than 3:1

Also, for your design convenience, Mini-Circuits offers chip coupling capacitors at 12 cents each.†

Size (mils)	Tolerance	Temperature Characteristic	Value
80 x 50	5%	NPO	10, 22, 47, 68, 100, 470, 680, 100 pf
80 x 50	10%	X7R	2200, 4700, 6800, 10,000 pf
120 x 60	10%	X7R	.022, .047, .068, .1 μf

† Minimum Order 50 per Value

finding new ways...  
setting higher standards

# Now! HEXSense™

*makes today's current-sensing obsolete.*

## Old Method

This circuit uses a fractional value resistor (A) to measure current, causing a voltage drop which increases power losses. Its parasitic inductance also slows down switching speed. To offset these losses, a lower  $R_{DS(ON)}$  power MOSFET may be used, increasing circuit cost.

## New HEXSense Method

In this simple, cost effective circuit the current-sensing output connects to a virtual ground. Resistor (A) establishes a voltage-to-current ratio. With the Kelvin connected to the non-inverting input of (B), a highly accurate current-sense results.

HEXSense offers 5-pin lead forms for vertical and horizontal pcb mounting.

HEXFET and HEXSense are trademarks of International Rectifier.

HEXSense, a new HEXFET power MOSFET with built-in current-sensing, reduces component count and design time — making conventional current-measuring methods obsolete.

Your circuit designs are simplified in less board space. Power and voltage losses disappear. Accuracy and bandwidth increase. In the end, your system performs better, more reliably.

It's all made possible by our HEXFET power MOSFET's superior quality, faster switching speed, built-in avalanche withstand capability, and now, current-sensing for control and protection.

In short, now you can design easier and more accurate, cost effective current-sensing circuits with the quality choice in power MOSFETs. Call (213) 607-8842 for technical data. Today.

# 17 MILLION PLDS A MONTH BEGIN WITH DATA I/O.

No company supports as many programmable logic devices as Data I/O®—virtually every PLD on the market. From design, to programming and test, Data I/O is the industry choice for PLD development tools.

**UNIVERSAL SUPPORT FOR EVERY PLD MANUFACTURER.** We give you the freedom to choose the right PLD for your design—from any manufacturer. You can use our tools to design and program all PLD architectures, including PALs, FPLAs, PLEs and EPLDs, and all technologies from vertical-cell AIM, ECL, and CMOS to bipolar. And you can pick any package—DIP, PLCC, LCC or SOIC.

**UNIVERSAL DESIGN TOOLS.** ABEL™ 3.0, Data I/O's high-level design language, lets you describe your design with any combination of equations, state diagrams, or truth tables. For multiple PLD design, use the advanced logic synthesis capabilities of GATES™. And for complete device testability,

PLDtest® is our universal tool for automatic fault grading and test vector generation.

**UNIVERSAL PROGRAMMING TOOLS.** The UniSite™ 40, our most sophisticated programmer, handles all devices—memory, logic, and microcontrollers—in a single site. The modular approach to logic programming is the 29B with a

LogicPak™. Or for portable convenience, choose the 60A.

**UNIVERSALLY APPROVED BY PLD MANUFACTURERS.** With Data I/O, you can depend on the accuracy and reliability of your programmed PLD. We work with semiconductor manufacturers—long before devices are released—to develop, and obtain approvals for, our programming algorithms. So reliable support will always be ready when you need it.

**A CLOSER LOOK AT UNIVERSAL SUPPORT.** Call us today for more information about our complete line of PLD development tools and qualify for your FREE copy of the ABEL 3.0 demonstration disk. Your PLDs will be off to a better start and a faster finish.
