

UNIX[®] System V/386 Release 3.2

Foundation Set and User Interface Utilities

The UNIX System V/386 Release 3.2 Foundation Set provides the highly portable, multitasking and multi-user UNIX System V environment permitting many users to simultaneously run application software and share programs and data. It features a hierarchical file system, system access and file security, job control, interprocess communication, I/O redirection, and a versatile command set providing numerous tools for information retrieval, data manipulation, report generation, and task scheduling.

Release 3.2 enhancements enable the system to run application software developed to XENIX[®] System V/386 (Release 2.2.0 and later) and XENIX System V/286 (Release 2.0 and later) as well as the many programs developed for UNIX System V/386 (Release 3.0 and later) and 6300 PLUS UNIX System V (Release 2.0 and later). The system also supports AT&T's Simul-Task 386 and XWIN Graphical Windowing System featuring AT&T OPEN LOOK[™] Window Manager.

Included with each Foundation Set product are the AT&T User Interface Utilities, FMLI and FACE, providing the user with a logical view of the UNIX System V environment. It presents easy-to-use menus to commonly used commands, task scheduling, program services, and administration.

The UNIX System V/386 Release 3.2 Foundation Set and User Interface Utilities is supported by AT&T for use on the 6386 and 6386E WorkGroup Systems. The product requires a minimum of 2 megabytes of random access memory and a hard disk drive with 30 megabytes of free space for installation and operation. Additional memory and storage is recommended for multi-user configurations or when additional performance is desired.

The product includes 90-day toll-free hotline service for customer assistance during normal business hours.
