SUBJECT: ⟶ Distribution:
  MCPII 10.0.112   Andria Anania,   Philadelphia, PA
  Preliminary Release of   Bill Bauer,   Minneapolis, MN
  Object Code Updates   Larry Bell,   Atlanta, GA
                                Al Harbeck,   Detroit, MI
                                Sam Reagle,   Denver, CO
                                Ted Yama,   McClean, VA
                                TIO Software Support Personnel

The reason for this memo is to advise you that MCPII Patch 106,
which was included in the 10.0.112 preliminary release of object
code updates, contains a serious error. The problem arises when
the SYSTEM/ELOG file becomes full and is automatically trans-
ferred by the MCP. A system halt follows. The information on
the system disk is destroyed. A cold/start operation must be
performed before the system disk is usable again.

MCPII Patch 138 is scheduled to eliminate this problem. We plan
to qualify all the new patches through number 138 as soon as
possible. When the qualification process is complete, we will
make another preliminary release of object code updates to you.

Until you receive the new release, please have your customers
stay on the 10.0.95 release, which is the one you received prior
to the 10.0.112 release.
