Symbol table sort	0	00:00:00.98	00:00:01.14
Pass 2	69	00:00:01.20	00:00:02.86
Symbol table output	18	00:00:00.12	00:00:00.58
Psect synopsis output	7	00:00:00.03	00:00:00.03
Cross-reference output	12	00:00:00.11	00:00:00.16
Assembler run totals	602	00:00:11.83	00:00:17.73

The working set limit was 1000 pages.
41070 bytes (81 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 663 non-local and 10 local symbols.
153 source lines were read in Pass 1, producing 0 object records in Pass 2.
35 pages of virtual memory were used to define 14 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	4
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	10

863 GETS were required to define 10 macros.

There were no errors, warnings or information messages.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	32	00:00:00.11	00:00:00.53
Command processing	120	00:00:00.73	00:00:02.27
Pass 1	2806	00:00:36.54	00:01:00.47
Symbol table sort	3	00:00:00.74	00:00:01.44
Pass 2	1507	00:00:08.19	00:00:15.25
Symbol table output	64	00:00:00.38	00:00:00.40
Psect synopsis output	7	00:00:00.02	00:00:00.02
Cross-reference output	483	00:00:02.41	00:00:03.40
Assembler run totals	5028	00:00:49.15	00:01:23.80

The working set limit was 1000 pages.
450239 bytes (880 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 555 non-local and 0 local symbols.
353 source lines were read in Pass 1, producing 0 object records in Pass 2.
742 pages of virtual memory were used to define 367 macros.

Macro library statistics

Macro library name	Macros defined
DRB1:[DS.WORK]DIAG.MLB;955	232
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	0
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	4
TOTALS (all libraries)	236

2460 GETS were required to define 236 macros.

There were no errors, warnings or information messages.

```
MACRO/NOOBJECT/LIST=[DS.LIS]/CROSS/ENABLE=(DEBUG,TRACE) ICODE/UPDA=(ICODE.UPD,ICODE.ENH)+SYS$LIBRARY:LIB/LIBRARY+DMA1:[SYSO.SYSMAINT

0000     60 ;          12      M. Baggett      18-MAR-80
0000     61 ;                  Add TU78 magtape
0000     62 ;                  Dave Butenhof, 15-dec-1980, V6.2
0000     63 ;          13      Add ML11 PTDESC.
0000     64 ;                  Dave Butenhof, 19-mar-1981, version 6.3
0000     65 ;          14      Add DV11 PTdesc.
0000     66 ;          15      Add KA730 Ptdesc.
0000     67 ;          16      -dave butenhof, 4-sep-1981, version 6.5
0000     68 ;                  add RB730 and R80 Ptable descriptors
0000     69 ;
0000     70 ;          17      - Dave Butenhof, 26-Oct-1981, version 6.-
0000     71 ;                  Add some missing devices
0000     72 ;
0000     73 ;          18      - Dave Butenhof, 10-Nov-1981, version 6.-
0000     74 ;                  Add the UDA50 and RA80 devices
0000     75 ;
0000     76 ;          19      - Dave Butenhof, 15-Dec-1981, Version 6.6
0000     77 ;                  Add PX780
0000     78 ;
0000     79 ;          20      - Dave Butenhof, 23-Feb-1982, version 6.6
0000     80 ;                  Add CI_NODE and CI750 Ptable descriptors
0000     81 ;          [21] Dave Butenhof, 16-Apr-1982, verison 6.7
0000     82 ;                  Add RA81 Ptable descriptor
0000     83 ;          [22] Dave Butenhof, 29-Apr-1982, version 6.7
0000     84 ;                  Add RA60 Ptable descriptor
0000     85 ;          [23] Dave Butenhof, 05-May-1982, version 6.8
0000     86 ;                  Activate the device name check feature which
0000     87 ;                  was added (latent) in 6.7 macros.
0000     88 ;          [24] Dave Butenhof, 11-May-1982, version 6.8
0000     89 ;                  Add LP07 and LP26 Ptables for Dan Milleville
0000     90 ;          [25] Dave Butenhof, 25-May-1982, version 6.8
0000     91 ;                  Add "console" Ptable desc. to IOBASE.  This allows
0000     92 ;                  new console Ptable to be displayed by SHOW
0000     93 ;                  {DEVICE ! SELECT} without the annoying "..." which
0000     94 ;                  means it couldn't find the Ptable.  This device is
0000     95 ;                  attached at DS startup by KERNEL, and as it has
0000     96 ;                  a lower-case device type, CANNOT be attached manually!
0000     97 ;          [26] M. Baggett, 20-Jul-1982 Ver 6.9
0000     98 ;                  Added LP27 line printer.
0000     99 ;
0000    100 ;          27      Bob Bergazzi    1-Oct-82        Version 6.9
0000    101 ;                  Added UNA11 (UNIBUS to NI Adapter)
0000    102 ;
0000    103 ;          28      M. Baggett      1-Dec-1982      Version 6.10
0000    104 ;                  Added TU80 magtape and DZ32.
0000    105 ;
0000    106 ;          29      M. Baggett      8-Dec-1982      Version 6.10
0000    107 ;                  Added TU81 magtape.
0000    108 ;
0000    109 ;          30      M. Baggett      10-Dec-1982     Version 6.10
0000    110 ;                  Added VS100.
0000    111 ;
0000    112 ;          31      Bob Bergazzi    10-Jan-83       Version 6.11
0000    113 ;                  Changed the comment before DS$GA_PTABLE.
0000    114 ;

Psect synopsis output	7	00:00:00.03	00:00:00.03
Cross-reference output	799	00:00:07.83	00:00:10.19
Assembler run totals	7916	00:02:46.91	00:03:47.24

The working set limit was 1000 pages.
631524 bytes (1234 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 578 non-local and 0 local symbols.
376 source lines were read in Pass 1, producing 0 object records in Pass 2.
1501 pages of virtual memory were used to define 352 macros.

Macro library statistics

Macro library name	Macros defined
DRB1:[DS.WORK]DIAG.MLB;955	237
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	0
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	5
TOTALS (all libraries)	242

2534 GETS were required to define 242 macros.

There were no errors, warnings or information messages.

```
Assembler run totals          1192     00:00:28.31    00:00:48.39

The working set limit was 1000 pages.
80436 bytes (158 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 988 non-local and 44 local symbols.
678 source lines were read in Pass 1, producing 0 object records in Pass 2.
124 pages of virtual memory were used to define 39 macros.
```

Assembler run totals	1016	00:00:20.86	00:00:36.61

The working set limit was 1000 pages.
61035 bytes (120 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 712 non-local and 35 local symbols.
739 source lines were read in Pass 1, producing 0 object records in Pass 2.
104 pages of virtual memory were used to define 31 macros.

+----------------------------+
! Macro library statistics !
+----------------------------+

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	1
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	10
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	10
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	27

1114 GETS were required to define 27 macros.

There were no errors, warnings or information messages.

Psect synopsis output	6	00:00:00.03	00:00:00.06
Cross-reference output	23	00:00:00.23	00:00:00.29
Assembler run totals	1131	00:00:20.28	00:00:30.56

The working set limit was 1000 pages.
82323 bytes (161 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 996 non-local and 25 local symbols.
380 source lines were read in Pass 1, producing 0 object records in Pass 2.
79 pages of virtual memory were used to define 25 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	8
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	2
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	11
TOTALS (all libraries)	21

1322 GETS were required to define 21 macros.

There were no errors, warnings or information messages.

Psect synopsis output	6	00:00:00.02	00:00:00.02
Cross-reference output	22	00:00:00.22	00:00:00.41
Assembler run totals	1008	00:00:15.95	00:00:25.36

The working set limit was 1000 pages.
65201 bytes (128 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 583 non-local and 18 local symbols.
362 source lines were read in Pass 1, producing 0 object records in Pass 2.
88 pages of virtual memory were used to define 23 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	1
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	6
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	6
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	19

877 GETS were required to define 19 macros.

There were no errors, warnings or information messages.

                                0000     67 ;                 MADE AX_BUFF, USTKPTR, SSTKPTR, ESTKPTR GLOBAL FOR MEMMGT.
                                0000     68 ;
                                0000     69 ;       06      - Nick Howgate, 19-dec-1977, Version 05.
                                0000     70 ;                 MADE ALL STACKS 2 PAGES.
                                0000     71 ;
                                0000     72 ;       07      - Nick Howgate, 30-Dec-1977, Version 06 (ESSAA-3.06).
                                0000     73 ;                 DELETE SYMBOL DS$GL_PASSES
                                0000     74 ;
                                0000     75 ;       08      - Nick Howgate, 06-Feb-1978, Version 07 (ESSAA-4.00).
                                0000     76 ;                 INCLUDE QIO SUPPORT
                                0000     77 ;
                                0000     78 ;                 - Tom Soutter, 03-Mar-1978
                                0000     79 ;       09        ADDED SOFTWARE PCB FOR AST HANDLING
                                0000     80 ;       10        FIXED SOME BUGS IN PCB SETUP CODE
                                0000     81 ;       11        DEFINED DIAGNOSTIC PID, SET UP SAME IN SOFTWARE PCB
                                0000     82 ;
                                0000     83 ;       12      - Ken Chapman, 23-Mar-1978, Version 08 (ESSAA-4.01).
                                0000     84 ;                 ADDED BUFFER INIT CODE.
                                0000     85 ;                 REMOVED MOVC5 AND LDPCTX INSTRUCTIONS.
                                0000     86 ;
                                0000     87 ;                 - Tom Soutter, 30-Mar-1978
                                0000     88 ;       13        ADDED CODE TO INITIALIZE THE SYSTEM TIMER
                                0000     89 ;       14        REMOVED STACK BUFFER PAGES, REDUCED USER STACK TO ONE
                                0000     90 ;                 PAGE AND OVER-MAPPED THE SUPERVISOR & EXECUTIVE STACKS
                                0000     91 ;                 ONTO THE USER STACK
                                0000     92 ;
                                0000     93 ;       15      - Nick Howgate, 18-May-1978, Version 09 (ESSAA-4.02).
                                0000     94 ;                 PLACE IPL LEVEL AT 1F AT SYSTEM START UP
                                0000     95 ;                 LOWER IPL LEVEL ONLY AFTER SOFTWARE INITIALIZATION
                                0000     96 ;
                                0000     97 ;       16      - Nick Howgate, 09-Jun-1978, Version 10 (ESSAA-4.03).
                                0000     98 ;                 FIX APT ^C PROBLEM
                                0000     99 ;
                                0000    100 ;       17      - Nick Howgate, 14-Jun-1978
                                0000    101 ;                 CLEAR EVENTS FLAGS AT SUPERVISOR START
```

```
0000   103 ;                - Roger Riggs, 10-Aug-1978
0000   104 ;          18    Revised basic program loop
0000   105 ;          19    Fix for changed position of year in DS$GT_NEWYEAR
0000   106 ;                Added separate allocations for USER, EXEC, and SUPER stacks
0000   107 ;          20    Added call to INI$PTABLE to initialize P-table list at
0000   108 ;                supervisor start.
0000   109 ;          21    Added code to Auto configure/ATTACH the default load device
0000   110 ;                when loaded with DIAGBOOT.
0000   111 ;          22    Added process exit handler to execute use cleanup and
0000   112 ;                deallocate device allocated by select.
0000   113 ;
0000   114 ;          23    - Roger Riggs, 31-Aug-1979
0000   115 ;                Added initial VDT breakpoint and saved VMB boot flags
0000   116 ;
0000   117 ;          24    - Roger Riggs, 21-Jan-1980, Version 5.2
0000   118 ;                Added code to always prompt APT on start, also copy
0000   119 ;                processor type code to EXE$GB_CPUTYPE
0000   120 ;
0000   121 ;          25    - David R. Butenhof, 06-feb-1980
0000   122 ;                Routine INIT_CONTEXT should force AST delivery enable.
0000   123 ;
0000   124 ;          26    - John Ciukaj, 25-Jan-1980, Version 5.2
00C0   125 ;                Added location BOOT$L_DEVTYP to be loaded from RPB$B_DEVTYP.
0000   126 ;
0000   127 ;          27    - Roger Riggs, 12-Mar-1980
0000   128 ;                Clear DS$GB_MM_ENB on START 10000, as well as memory managment
0000   129 ;
0000   130 ;                - Roger Riggs, 24-Mar-1980
0000   131 ;          28    Added code to verify that system identification register
0000   132 ;                agrees with current supervisor.
0000   133 ;          29    Added code to type message and exit if SYS$INPUT is not
0000   134 ;                a terminal or a mailbox.  Fix for SPR#11-28511.
0000   135 ;                Later fix will use RMS for SYS$INPUT I/O in usermode.
0000   136 ;
0000   137 ;                - Dave Butenhof, -Mar-1980
0000   138 ;          30    Add RMS setup in usermode, to allow supervisor execution
0000   139 ;                via VMS command file/batch.
0000   140 ;          31    Fix CTL$GL_CCBBASE label define to point to a pointer
0000   141 ;                longword.  And fix order of arguments to PRINT on SID
0000   142 ;                mis-match.
0000   143 ;
0000   144 ;          32    - Roger Riggs, 21-May-1980, Version 5.4
0000   145 ;                Changed order of stacks to allow for memory protection
0000   146 ;                when MM is on
```

```
                        0000   148 ;
                        0000   149 ;       33      Moved IOC$GL_PSFL/BL to Entry
                        0000   150 ;       34      Added JIB
                        0000   151 ;
                        0000   152 ;       35      - Dave Butenhof, 28-aug-1980, Version 6.0
                        0000   153 ;               Add call to RMS$INIT in standalone initialization to
                        0000   154 ;               clear RMS file table.
                        0000   155 ;
                        0000   156 ;               - Roger Riggs, 08-Sept-1980, Version 6.0
                        0000   157 ;       36      Added code to set and restore on exit the default directory
                        0000   158 ;               and disk.
                        0000   159 ;       37      Move translation of load device name to DEF$Q_DEV on
                        0000   160 ;               usemode entry
```

```
                        0000   162 ;
                        0000   163 ;       38      - Roger Riggs, 17-Oct-1980
                        0000   164 ;               Made reference to EXE$GQ_SYSTIME L^ offset.
                        0000   165 ;
                        0000   166 ;               - Dave Butenhof, 17-oct-1980, version 6.1
                        0000   167 ;       39      Add new argument to DSX$CNTRLC; DISABL--if low bit is set,
                        0000   168 ;               disables control C handling, if clear, enables it.  Also
                        0000   169 ;               KB_CHECK ignores control C flag if handling is disabled.
                        0000   170 ;               Also, if user control C routine return failure code, the
                        0000   171 ;               Supervisor will proceed to handle the control C normally
                        0000   172 ;               itself.
                        0000   173 ;       40      Add label BEGIN_BLISS (same as BEGIN) for BLISS routines to
                        0000   174 ;               use after INIT_CONTEXT, since BEGIN is reserved word.
```

                                0000    178 ;               Delete use of SEP psect.
                                0000    179 ;
                                0000    180 ;       42      - Dave Butenhof, 16-mar-1981, version 6.3
                                0000    181 ;               Fix ^C handling; move flag clears to make user status=0
                                0000    182 ;               return work under APT.
                                0000    183 ;
                                0000    184 ;       43      - Dave Butenhof, 23-mar-1981, version 6.3
                                0000    185 ;               Expand Exec/Supervisor stack to 3 pages each.
```

```
0000   187 ;        44      - Jack Stansbury, 21-Oct-1981, Version 6.5
0000   188 ;                Added calls to QA$MAIN for the QA enhancement.
0000   189 ;                Also added .LIBRARY statements for $DS and $DIAG.
0000   190 ;                Also changed one of the error messages to lower case.
0000   191 ;                Also fixed some truncation errors.
0000   192 ;
0000   193 ;        45      - Jack Stansbury, 10-Nov-1981, Version 6.5
0000   194 ;                Changed ALL W^ to L^.
0000   195 ;
0000   196 ;        46      - Dave Butenhof, 12-Nov-1981, version 6.5
0000   197 ;                Add DS$GB_TYPECODE for 'SET BINARY' function.
0000   198 ;
0000   199 ;        47      - Dave Butenhof, 13-Nov-1981, version 6.5
0000   200 ;                Implement EXIT command (DSV$EXIT).  It will do an
C000   201 ;                $EXIT in user mode, or a HALT in standalone; after
0000   202 ;                doing program cleanup, etc.
0000   203 ;
0000   204 ;        48      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000   205 ;                Commented out several calls to QA_MAIN because it appears as
0000   206 ;                though they will not be needed for the 6.5 DS version.
```

```
                        0000   208 ;
                        0000   209 ;       49      - Dave Butenhof, 14-Dec-1981, version 6.6
                        0000   210 ;               Modify startup to use $GETSYI call in usermode, to get
                        0000   211 ;               the actual processor SID into DSA$GL_SID.
                        0000   212 ;
                        0000   213 ;       50      - Dave Butenhof, 29-Dec-1981, version 6.6
                        0000   214 ;               Add locations to store error counts for HARD, SOFT, DEVICE,
                        0000   215 ;               SYSTEM, and SOFTWARE (ERRSUP) errors.
                        0000   216 ;
                        0000   217 ;       51      - Jack Stansbury, 10-Feb-1982, Version 6.6X
                        0000   218 ;               Added another Control-C handler for the DS to use. This is for
                        0000   219 ;               QA to trap control-c's, but can be used by any other
                        0000   220 ;               DS-integrated facility. See the KB_Check routine for the code.
                        0000   221 ;
                        C000   222 ;       52      - Dave Butenhof, 09-Mar-1982, version 6.6
                        0000   223 ;               Add support for rooted systems.  When booted from DIAGBOOT,
                        0000   224 ;               startup code will do 'SET LOAD' command on the filespec in the
                        0000   225 ;               RPB$T_FILE field.
```

```
                     0000   227 ;       53      - Dave Butenhof, 26-Mar-1982, version 6.7
                     0000   228 ;               Fix rooted system directory support...redefine SYS$DISK when
                     0000   229 ;               translating SYS$SYSROOT.  SYS$SYSROOT:[SYSO,SYSMAINT] don't
                     0000   230 ;               Added SYS$LIBRARY:LIB.
                     0000   231 ;
                     0000   232 ;       54      Marion Baggett, 31-Mar-1982, Version 6.7
                     0000   233 ;               Added SYS$LIBRARY:LIB
                     0000   234 ;
                     0000   235 ;       55      Marion Baggett, 2-Apr-1982, Version 6.7
                     0000   236 ;               Added DS$GL_PREPERR_COUNT field to count device preparation errors.
                     0000   237 ;
                     0000   238 ;       56      Marion Baggett, 5-Apr-1982, Version 6.7
                     0000   239 ;               Changed $DS_PRINT to $PRINT macros.
                     000C   240 ;
                     C000   241 ;       57      Marion Baggett, 7-Apr-1982, Version 6.7
                     0000   242 ;               Added $DS_TYPEDEF to define type codes.
                     0000   243 ;
                     0000   244 ;       58      Dave Butenhof, 08-Apr-1982, version 6.7
                     0000   245 ;               Fix truncation error.
                     0000   246 ;
                     0000   247 ;       59      Jack Stansbury, 9-Apr-1982, Version 6.7
                     0000   248 ;               Added $CRD Library statement. Added support for the
                     0000   249 ;               Customer Runnable Diagnostic package.
                     0000   250 ;
                     0000   251 ;       60      Dave Butenhof, 13-Apr-1982, version 6.7
                     0000   252 ;               Add setup of DS$GB_INHIBIT_NAMING, to enable/disable
                     0000   253 ;               generic name enforcement. (Set in APT mode).
```

```
                        0000   255 ;
                        0000   256 ;       61      Dave Butenhof, 17-May-1982, version 6.8
                        0000   257 ;               Fix size of Kernel stack (make it larger to minimize trouble).
                        0000   258 ;
                        0000   259 ;       62      Dave Butenhof, 21-May-1982, version 6.8
                        0000   260 ;               Automatically attach console device at startup, to make
                        0000   261 ;               RMS and DIRECTORY a bit simpler (no special case for device
                        0000   262 ;               without Ptable).
                        0000   263 ;
                        0000   264 ;       63      Jack Stansbury, 7-June-1982, Version 6.8
                        0000   265 ;               Added code in DSV$Exit routine that will not allow the user
                        0000   266 ;               to Continue (console command) once a HALT instruction has been
                        0000   267 ;               executed - only if CRD-AutoTest bits are set in the R5 passed
                        0000   268 ;               to the DS.
                        C000   269 ;
                        0000   270 ;       64      Jack Stansbury, 9-Jun-1982, Version 6.8
                        0000   271 ;               Added code in the DSV$Exit routine that will allow output of
                        0000   272 ;               pertinent CRD variables when a CRD-Internal error occurs. This
                        0000   273 ;               is indicated by CRD changing the byte in its own dispatch vector
                        0000   274 ;               area (DS$GA_CRD_Starting_Address + 1) to be one more than the absolu
                        0000   275 ;               value of its dispatch vectors + 2 byte. That is, CRD will increment
                        0000   276 ;               the "positive version number" in its dispatch vector area by one whe
                        0000   277 ;               it detects a internal error. CRD will then put the values of a
                        0000   278 ;               select number of pertinent variables into its own dispatch vector
                        0000   279 ;               area. DSV$Exit will print these out when the user types a console
                        0000   280 ;               Continue command.
                        0000   281 ;
                        0000   282 ;       65      Marion Baggett, 9-June-1982, Version 6.8
                        0000   283 ;               Increase the size of the interupt stack to 4 pages so the
                        0000   284 ;               Vax Architecture exerciser will run.
                        0000   285 ;

                        0000   287 ;               Addition of IMAGE_HEADER, which is a buffer to hold the
                        0000   288 ;               image header of a diagnostic file, if the file was linked
                        0000   289 ;               with a header.  The header is used by the debugger.
                        0000   290 ;
                        0000   291 ;       67      Jack Stansbury, 28-June-1982, Version 6.8
                        0000   292 ;               Disabled ^C's in stand-alone initialization code so that CRD will
                        0000   293 ;               have a chance to set up a ^C handler. This takes care of the
                        0000   294 ;               problem of ^C's being typed while DIAGBOOT is running, and then
                        0000   295 ;               having the DS see the ^C before CRD is loaded in (thus causing the
                        0000   296 ;               DS> prompt to appear without the DS_Start message being printed).
                        0000   297 ;               ^C's are re-enabled in the Begin_0 code.
```

```
0000   299 ;
0000   300 ;       68      Richard Brown, 16-July-82, Version 6.9
0000   301 ;               Addition of code in INIT_CONTEXT to see if the T-bit is set
0000   302 ;               in the PSL and if so to set it in the new PSL.  This is so
0000   303 ;               that if the debugger has set the T-bit, it will not be cleared
0000   304 ;               out when the context is initialized.
0000   305 ;
0000   306 ;       69      Jack Stansbury, 24-July-1982, Version 6.9
0000   307 ;               Added two new routine that return a 1 in R0 iff the correct bits are
0000   308 ;               set in Boot$L_R5 for CRD_AutoTest and for CRD_MenuTest. Used these
0000   309 ;               routines in the Begin0 part.
0000   310 ;
0000   311 ;       70      Jack Stansbury, 27-July-1982, Version 6.9
0000   312 ;               Added another ^C handler for the VDS. This allows CRD Menu Test to
0000   313 ;               let the User handle a ^C if the user has established a handler
0000   314 ;               routine; but at the same time, if this user routine returns failure
0000   315 ;               meaning they did not want to handle it, let the "third" handler (VDS
0000   316 ;               second handler) have it. Leave DS$Cli as the last chance handler.
0000   317 ;
0000   318 ;       71      Jack Stansbury, 8-September-1982, Version 6.9
0000   319 ;               Made some changes to the DSV$Exit routine for CRD Menu Test. Also
0000   320 ;               made a few changes to the routines mentioned in 69 above - they were
0000   321 ;               looking at the wrong bits.
0000   322 ;
0000   323 ;       72      Jack Stansbury, 15-September-1982, Version 6.9
0000   324 ;               Cleared out the three ^C handler addresses in the VDS stand-alone
0000   325 ;               initialization code.
0000   326 ;
0000   327 ;       73      Jack Stansbury, September 15, 1982, Version 6.9
0000   328 ;               Made the DS$L_UserCntrlC longword global, for use by the CLI routine
0000   329 ;
0000   330 ;       74      Jack Stansbury, September 23, 1982, Version 6.9
0000   331 ;               Added a print statement to be printed if the CRD initialization fail
0000   332 ;
0000   333 ;       75      Jack Stansbury, September 24, 1982, Version 6.9
0000   334 ;               Added code to check to see if both CRD bits were set in the R5 passe
0000   335 ;               to the VDS from Diagboot. If so, print an error message and exit.
0000   336 ;
0000   337 ;       76      Jack Stansbury, September 28, 1982, Version 6.9
0000   338 ;               Added code to take care of the following: Start up the VDS. Type CRD
0000   339 ;               Hit ^P while CRD is running - get back to ">>>" console prompt. Type
0000   340 ;               S 10000 - get a DS> prompt. Type CRD again, but the CRD image is
0000   341 ;               already loaded. This was causing a halt at PC = 00000001. So, the
0000   342 ;               solution is to call the Unload_CRD routine when the bits are set in
0000   343 ;               the DSA flags longword when the Supervisor is being inited (it is
0000   344 ;               normally inited without any of the CRD bits being set).
0000   345 ;
0000   346 ;       77      Bob Bergazzi    7-Oct-82        Version 6.9
0000   347 ;               Changed the way system service vectors are handled; after we copy
0000   348 ;               the VMS system service vectors to 10200 (in order to get the
0000   349 ;               correct word mask), modify each entry point to immediately JMP
0000   350 ;               to the corresponding entry point in the real system service vector
0000   351 ;               table at 80000xxx. This solves the problem of code in the system
0000   352 ;               service vectors which branches around outside of the three pages
0000   353 ;               which we were copying before.
0000   354 ;
0000   355 ;       78      Bob Bergazzi    24-Nov-82       Version 6.10
```

```
                                0000    356 ;               Added a call to load the PCS on startup (DS$_LOADPCS_S)
                                0000    357 ;
                                0000    358 ;       79      Jack Stansbury, 4-Mar-83, Version 6.11
                                0000    359 ;               Changed the code in the DSR$Check routines (for CRD) - they must
                                0000    360 ;               check the DSA bits while online, not the Boot$L_R5 longword.
                                0000    361 ;
                                0000    362 ;       80      John Ciukaj,    2-Apr.-1983     Version 6.11
                                0000    363 ;               - Changed code that referenced CRD bits in DSA Flags.
                                0000    364 ;                 The bits were redefined to distinguish between
                                0000    365 ;                 online and offline.
                                0000    366 ;               - Changed name of DSR$Check_... routines to distinguish
                                0000    367 ;                 between Online and Offline.
                                0000    368 ;
                                0000    369 ;       81      Bob Bergazzi    8-Apr-1983      Version 6.11
                                0000    370 ;               Made on-line mode start up with terminal width set to 80.
                                0000    371 ;
                                0000    372 ;       82      Bob Bergazzi    25-April-1983   Version 6.11
                                0000    373 ;               During boot of ESSAA, we must determine if this is 780 or a
                                0000    374 ;               785, and if it is a 785, then we need to change
                                0000    375 ;               the clock overhead factor (DS$GK_USOVR) in the WAITUS routine.
                                0000    376 ;               This is done by referencing the symbol DSX$WAITUS_USOVR which
                                0000    377 ;               addresses the beginning of the instruction which uses the
                                0000    378 ;               overhead factor, and modifying the instruction. This is done
                                0000    379 ;               in order to avoid adding more instructions to the DSX$WAITUS
                                0000    380 ;               routine which would change the value of the DS$GK_USOVR for
                                0000    381 ;               existing processors.
                                0000    382 ;
                                0000    383 ;       83      Bob Bergazzi    25-April-1983   Version 6.11
                                0000    384 ;               Increased SCB size to 4 pages for XXX. Related changes in
                                0000    385 ;               SCB module.
                                0000    386 ;
                                0000    387 ;       84      John Ciukaj     29-Apr-83       version 6.11
                                0000    388 ;                               13-May-83
                                0000    389 ;               DSR$Check.. routines: check both DSA Flags and RPB
                                0000    390 ;               regardless of Standalone or Online.
                                0000    391 ;
                                0000    392 ;       85      Bob Bergazzi    May 16,1983     Version 6.11
                                0000    393 ;               Changed the order of the .LIB statements.
                                0000    394 ;
                                0000    395 ;       86      M.Baggett       May 16, 1983    Version 6.11
                                0000    396 ;               Get RPB$L_BOOTR2 field from RPB.
                                0000    397 ;
                                0000    398 ;       87      Richard Brown   June 22, 1983   Version 6.12
                                0000    399 ;               Added code to fetch user terminal characteristics
                                0000    400 ;               and store them in $DSGL_TERMCHAR so the new service
                                0000    401 ;               $DS_GETTERM can pass them to a diagnostic.
                                0000    402 ;
                                0000    403 ;               Added new system service $DS_GETTERM, which returns
                                0000    404 ;               the characteristics of the user terminal.
                                0000    405 ;
                                0000    406 ;       88      Bob Bergazzi    Sep 22, 1983    Version 6.13
                                0000    407 ;               Added a $CANTIM if a ^C is typed to cancel a $SETIMR
                                0000    408 ;               which may have been done at program start for the
                                0000    409 ;               /TIME switch.
                                0000    410 ;               Commented out for version 6.13 and 6.14, and 7.0
                                0000    411 ;
                                0000    412 ;       89      Bob Bergazzi    11-11-83        Version 6.14
```

```
0000   413 ;                Clear the DS$M_CTRLC and DS$M_CTRLO flags before we call
0000   414 ;                a control-c handler. This fixes the problem of terminal
0000   415 ;                output in a ^C handler being suppressed in S/A.
0000   416 ;
0000   417 ;        90      Bob Bergazzi    12-28-83        Version 6.14
0000   418 ;                The definition of JIB$L_ARB in the JIB was removed from VMS V4,
0000   419 ;                so define it to its old offset value (the space in the JIB is
0000   420 ;                still there).
0000   421 ;
0000   422 ;        91      Bob Bergazzi    2-14-84         Version 6.14
0000   423 ;                Moved the code which builds ptables for the console load device
0000   424 ;                and the boot device into the CONFIG module, called by
0000   425 ;                JSB INI$LOAD_DEVICE. This was done so that SET MEM could call it.
0000   426 ;
0000   427 ;        92      Richard Brown   May 14, 1984    Version 7.0
0000   428 ;                Added display of legal statement on startup.
0000   429 ;
0000   430 ;        93      M. Baggett      May-17-1984     Version 7.0
0000   431 ;                Allow word length unit to be save in RPB.
0000   432 ;
0000   433 ;        94      Bob Bergazzi    May 18, 1984    Version 7.0
0000   434 ;                Made legal display not print out when running under APT.
0000   435 ;
0000   436 ;        95      Bob Bergazzi    June 19, 1984   Version 7.0
0000   437 ;                Also, do not display legal message when CRD is running.
0000   438 ;
0000   439 ;        96      R.E. Muse       July 13, 1984   Version 7.0
0000   440 ;                Search order bit mask added to $TRNLOG system service.
0000   441 ;                SYS$DISK is now search for in the system logical name
0000   442 ;                table exclusively.
0000   443 ;
0000   444 ;        97      R.E. Muse       19 July 1984    version 7.0
0000   445 ;                logical translation for SYS$SYSROOT added and SYS$DISK
0000   446 ;                removed. Now default directory is "[sys0.sysmaint].
0000   447
0000   448 ;--

The working set limit was 1000 pages.
181816 bytes (356 pages) of virtual memory were used to buffer the intermediate code.
There were 100 pages of symbol table space allocated to hold 1853 non-local and 81 local symbols.
2178 source lines were read in Pass 1, producing 0 object records in Pass 2.
219 pages of virtual memory were used to define 81 macros.

Pass 2	116	00:00:01.37	00:00:01.64
Symbol table output	26	00:00:00.19	00:00:00.44
Psect synopsis output	7	00:00:00.03	00:00:00.03
Cross-reference output	40	00:00:00.71	00:00:00.71
Assembler run totals	766	00:00:10.25	00:00:15.97

The working set limit was 1000 pages.
32196 bytes (63 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 272 non-local and 23 local symbols.
455 source lines were read in Pass 1, producing 0 object records in Pass 2.
47 pages of virtual memory were used to define 21 macros.

Macro library statistics

Macro library name	Macros defined
DRB1:[DS.WORK]DIAG.MLB;955	3
DRB1:[DS.WORK]DS.MLB;218	5
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0

Symbol table output	13	00:00:00.10	00:00:00.10
Psect synopsis output	4	00:00:00.02	00:00:00.02
Cross-reference output	15	00:00:00.17	00:00:00.24
Assembler run totals	807	00:00:11.79	00:00:16.95

The working set limit was 1000 pages.
40432 bytes (79 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 481 non-local and 10 local symbols.
222 source lines were read in Pass 1, producing 0 object records in Pass 2.
41 pages of virtual memory were used to define 16 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	1
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	3
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	3
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	5
TOTALS (all libraries)	12

709 GETS were required to define 12 macros.

There were no errors, warnings or information messages.

                                0000     43 ;            03      Turn off ^O before typing final loop pass message
                                0000     44 ;                    Dave Butenhof, 1-Mar-1980
                                0000     45 ;            04      Changed all references to APT mailbox to use longword
                                0000     46 ;                    offsets.
                                0000     47 ;                    Roger Riggs, 18-Mar-1980
                                0000     48 ;            05      Changed loop on subtest to execute the subtest the
                                0000     49 ;                    specified number of times instead of the previous +1.
                                0000     50 ;                    also made post loop on subtest processing call DS_CLEANUP
                                0000     51 ;                    - Dave Butenhof, 22-Jun-1981, version 6.4
                                0000     52 ;            06      Fix edit 5: delete explicit setting of DS$V_DONFLG, which
                                0000     53 ;                    prevented DS_CLEANUP from actually executing the diagnostic's
                                0000     54 ;                    cleanup code.
                                0000     55 ;            07      Fix /subtest to work right with /test:n:m.  It will only loop
                                0000     56 ;                    on the last test selected.
                                0000     57 ;
                                0000     58 ;            08      - Jack Stansbury, 21-Oct-1981, Version 6.-
                                0000     59 ;                    Added calls to QA$MAIN for the QA enhancement.
                                0000     60 ;                    Also added .LIBRARY statements for $DS and $DIAG.
                                0000     61 ;                    Also changed the case of some of the error messages.
                                0000     62 ;
                                0000     63 ;            09      - Dave Butenhof, 02-Nov-1981, version 6.-
                                0000     64 ;                    Fix truncation errors throughout.
                                0000     65 ;
                                0000     66 ;            10      - Jack Stansbury, 21-Nov-1981, Version 6.5
                                0000     67 ;                    Commented out a call to QA_MAIN because it appears that it
                                0000     68 ;                    will not be needed for the 6.5 DS version.
                                0000     69 ;
                                0000     70 ;            11      - Jack Stansbury, 13-Jan-1982, Version 6.6
                                0000     71 ;                    Added comments galore to make things easier to understand.
                                0000     72 ;
                                0000     73 ;            12      - Jack Stansbury, 14-Jan-1982, Version 6.6
                                0000     74 ;                    Added a call to the Summary Code routine in the EndSub routine.
                                0000     75 ;                    The diagnostic's summary code will now be executed when
                                0000     76 ;                    the requested number of loops on subtest have been done.
                                0000     77 ;                    This is more consistent with the EndPass routine.
                                0000     78 ;
                                0000     79 ;            13      - Jack Stansbury, 15-Jan-1982, Version 6.6
                                0000     80 ;                    Changed the FMTLOOPDON message to make it more like the
                                0000     81 ;                    EndPass message. Also added "Test x.y" to the message.
                                0000     82 ;
                                0000     83 ;            14      - Jack Stansbury, 20-Jan-1982, Version 6.6
                                0000     84 ;                    Changed the code in the EndSub routine to not print the
                                0000     85 ;                    header line when the Loop_On_Subtest QA check routine is
                                0000     86 ;                    executing. This is for QA.
                                0000     87 ;
                                0000     88 ;            15      - Jack Stansbury, 29-Mar-1982, Version 6.?
                                0000     89 ;                    Added some typecoding.
                                0000     90 ;
                                0000     91 ;            16      Marion Baggett, 30-mar-1982,    Version 6.7
                                0000     92 ;                    Changed all $DS_PRINT statements to the new form $PRINT.

Symbol table output	41	00:00:00.24	00:00:00.68
Psect synopsis output	8	00:00:00.04	00:00:00.04
Cross-reference output	68	00:00:01.29	00:00:03.28
Assembler run totals	1161	00:00:16.83	00:00:39.04

The working set limit was 1000 pages.

58268 bytes (114 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 385 non-local and 22 local symbols.
591 source lines were read in Pass 1, producing 0 object records in Pass 2.
99 pages of virtual memory were used to define 31 macros.

Macro library statistics

Macro library name	Macros defined
DRB1:[DS.WORK]DIAG.MLB;955	7
DRB1:[DS.WORK]DS.MLB;218	15
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0

Cross-reference output	13	00:00:00.13	00:00:00.14
Assembler run totals	590	00:00:08.76	00:00:11.60

The working set limit was 1000 pages.
25474 bytes (50 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 328 non-local and 6 local symbols.
173 source lines were read in Pass 1, producing 0 object records in Pass 2.
41 pages of virtual memory were used to define 16 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	1
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	5
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	1
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	5
TOTALS (all libraries)	12

590 GETS were required to define 12 macros.

There were no errors, warnings or information messages.

Psect synopsis output	6	00:00:00.03	00:00:00.03
Cross-reference output	34	00:00:00.29	00:00:00.41
Assembler run totals	1283	00:00:21.21	00:00:30.35

The working set limit was 1000 pages.
84638 bytes (166 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1039 non-local and 28 local symbols.
548 source lines were read in Pass 1, producing 0 object records in Pass 2.
113 pages of virtual memory were used to define 33 macros.

Macro library statistics

Macro library name	Macros defined
DRB1:[DS.WORK]DIAG.MLB;955	5
DRB1:[DS.WORK]DS.MLB;218	3
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	9
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0

0000     35 ;                KEN CHAPMAN     30-NOV-77       VERSION 02
0000     36 ;       01       DSPR #63 - FIXED $DS_GETBUF_L OVERLAYING HARDWARE P-TABLES.
0000     37 ;
0000     38 ;                NICK HOWGATE    09-JAN-78       VERSION 03 (ESSAA-3.06)
0000     39 ;       02       DSPR #41 - TURN ON MEMORY MANAGEMENT FIX.
0000     40 ;       03       ADDED $SETPRT ROUTINE.
0000     41 ;
0000     42 ;                KEN CHAPMAN     26-JAN-78       VERSION 04 (ESSAA-3.07)
0000     43 ;       04       MORE FIXES TO MEMORY MANAGEMENT PAGE TABLES.
0000     44 ;
0000     45 ;                KEN CHAPMAN     06-APR-78       VERSION 05 (ESSAA-4.01)
0000     46 ;       05       ADDED P1 AND SYSTEM BUFFER ALLOCATION CAPABILITY.
0000     47 ;                Roger Riggs     12-Jun-78       Version 06 (ESSAA-4.03)
0000     48 ;       06       Fixed Release of P1 or SYS space conflict of PTE's
0000     49 ;       07       MAPMEM cleanup and set DS$GL_MEMSIZE to bytes of physical
0000     50 ;                memory.
0000     51 ;                N. HOWGATE      14-NOV-78       VERSION 07 (ESSAA-5.01)
0000     52 ;       08       CLEAR MACHINE CHECKS CORRECTLY
0000     53 ;       09       FIX BUG IN $DS_SETPRT
0000     54 ;       10       Removed dependence of MAPFREE on L$L_UNITS
0000     55 ;
0000     56 ;       11       Added processor dependent I/O space mapping
0000     57 ;                Roger Riggs     6-Sept-1979
```

```
                     58 ;        12      Added IO$GQ_PHYSICAL, used to determine where to map
                     59 ;                I/O space in P1 space.
                     60 ;                Roger Riggs, 24-Jan-1980,  Version 5.2
                     61 ;        12      Re-arranged system page table to allow system space addresses
                     62 ;                to map 1 for 1 P0 addresses in the range %X10000 to the
                     63 ;                top of the P0 page tables.  References to this range will
                     64 ;                reference the same addresses with or without memory management
                     65 ;                enabled.
                     66 ;                Roger Riggs, 5-Mar-1980, Version 5.3
                     67 ;        13      Made page at APT$AT_APTTXT valid, affects APT when
                     68 ;                Memory Management is on.
                     69 ;                Roger Riggs, 12-Mar-1980, Version 5.3
                     70 ;        14      Added byte to save state of memory managment, allows
                     71 ;                Memory managment to be enabled or disabled after cleanup
                     72 ;                to restore it to what the operator indicated.
                     73 ;                Also if the operator enabled memory managment then the program
                     74 ;                is not allowed to turn it off.  DS$GB_MM_ENB is set
                     75 ;                by CLI command SET MM ON and SET MM OFF.
                     76 ;                Also added routines and support for XDELTA
                     77 ;                Roger Riggs, 21-May-1980, Version 5.4
                     78 ;        15      Removed upper limit on amount of memory checked
                     79 ;                Fix DS$EXPREG to set the protection of pages allocated to UW.
                     80 ;                In DS$MMON AND DS$MMOFF return the previous state of MM as
                     81 ;                SS$_WASSET OR SS$_WASCLR and return DS$_WARNING from
                     82 ;                DS$MMOFF if operator set MMON and program is disallowed from
                     83 ;                turning it off, Add code to flush the translation buffer
                     84 ;                before turning MM ON, Set protections on stacks so
                     85 ;                underflows will can be caught by MM.
                     86 ;
                     87 ;                Dave Butenhof   17-jul-1980
                     88 ;        16      Call MAPFREE from MAPMEM to free up memory; to allow
                     89 ;                GETBUF from Supervisor before program is loaded.
                     90 ;                Specifically, for HELP utility.
                     91 ;
                     92 ;                Roger Riggs, 17-Sep-1980, Version 6.0
                     93 ;        17      Changed MAPFREF to check program loaded flag to determine
                     94 ;                how much of low memory to map.
                     95 ;
                     96 ;                Dave Butenhof, 23-feb-1981, version 6.3
                     97 ;        18      Change a word-relative to longword-relative.
                     98 ;        19      Fix two bugs: in EXE$SETPRT, correct return address array
                     99 ;                start address--BICL3 first two operands were reversed.
                    100 ;                in EXE$CNTREG, Comparison of P0 and P1/SYS PTE resulted in
                    101 ;                ERRSUP if M bit was altered, and ignored V and PFN; fix the
                    102 ;                compare mask.
                    103 ;
                    104 ;                - Dave Butenhof, 08-Jun-1981, version 6.4
                    105 ;        20      Fix SETPRT some more.  Do a CHMK to force cpu
                    106 ;                to KERNEL mode, so we can use MFPR.
                    107 ;
                    108 ;        21      - dave butenhof, 3-sep-1981, version 6.5
                    109 ;                alter to use DS with new XDELTA
                    110 ;
                    111 ;        22      Jack Stansbury, Version 6.8, May 28, 1982
                    112 ;                Add an entry point to the ExpReg routine for use by CRD.
                    113 ;                In stand-alone, ExpReg was allocating space beginning at 200,
                    114 ;                which is a no-no! Fix it to expand above the Supervisor (as it
```

```
0000   115 ;                   does on-line).
0000   116 ;
0000   117 ;           23      Richard Brown, Version 6.8, 25-June-82
0000   118 ;                   Addition of routines which map a block
0000   119 ;                   of memory for the debugger to use.
0000   120 ;
0000   121 ;           24      Richard Brown, Version 6.9, 4-August-82
0000   122 ;                   Addition of routine to deallocate memory assigned
0000   123 ;                   to the debugger's symbol tables.
0000   124 ;
0000   125 ;           25      Bob Bergazzi    5-Aug-82        Version 6.9
0000   126 ;                   Changed MAPFREE to call DSR$CheckLoad (SHOWMEM)
0000   127 ;                   to see if a program is loaded - fixes "SET MM ON,
0000   128 ;                   ATTACH, Translation not valid fault" bug.
C000   129 ;
0000   130 ;           26      Jack Stansbury  25-Aug-1982     Version 6.9
0000   131 ;                   Added two other vaiables: DS$GL_Actual_MemSize and
0000   132 ;                   DS$GL_Set_MemSize. The former is the actual size of the memory
0000   133 ;                   of the machine. The latter is the size that the operator wishes
0000   134 ;                   to set the memory. Also added .Library statements, and changed
0000   135 ;                   the PSect from SEP to what they should be. Also changed the
0000   136 ;                   insufficient memory message from a PrintF to a Print.
0000   137 ;
0000   138 ;           27      Jack Stansbury  25-Aug-1982     Version 6.9
0000   139 ;                   Fixed several truncation errors.
0000   140 ;
0000   141 ;           28      Bob Bergazzi    2-Nov-1982      Version 6.9
0000   142 ;                   Changed the ACCESSABLE routine so that it only copies the
0000   143 ;                   first quadword of a page rather than every quadword on the
0000   144 ;                   page. This results in considerable savings of startup time,
0000   145 ;                   especially for NEBULA systems with large amounts of memory
0000   146 ;                   (greater than 3 Meg took longer than 10 seconds, causing
0000   147 ;                   APT to consider the supervisor hung).
0000   148 ;
0000   149 ;           29      Bob Bergazzi    29-Aug-1983     Version 6.13
0000   150 ;                   Changed the value of the minimum memory size required from
0000   151 ;                   256K to 512K bytes.
0000   152 ;
0000   153 ;--

Psect synopsis output	7	00:00:00.03	00:00:00.09
Cross-reference output	115	00:00:01.62	00:00:02.33
Assembler run totals	2060	00:00:31.89	00:00:59.30

The working set limit was 1000 pages.
116759 bytes (229 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1240 non-local and 84 local symbols.
1583 source lines were read in Pass 1, producing 0 object records in Pass 2.
140 pages of virtual memory were used to define 35 macros.

Macro library statistics

Macro library name	Macros defined
DRB1:[DS.WORK]DIAG.MLB;955	14
DRB1:[DS.WORK]DS.MLB;218	6

Psect synopsis output	6	00:00:00.03	00:00:00.03
Cross-reference output	27	00:00:00.44	00:00:00.48
Assembler run totals	1001	00:00:26.13	00:00:39.73

The working set limit was 1000 pages.
79780 bytes (156 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1573 non-local and 11 local symbols.
563 source lines were read in Pass 1, producing 0 object records in Pass 2.
56 pages of virtual memory were used to define 18 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	1
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	0
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	7
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	14

1577 GETS were required to define 14 macros.

There were no errors, warnings or information messages.

0000    36  ;
0000    37  ;                Roger Riggs, 24-Jan-1989, Version 5.2
0000    38  ;       02       Added definition of value DS$GK_USOVR, for
0000    39  ;                WAITUS clock overhead.
0000    40  ;                Roger Riggs, 15-Feb-1980, Version 5.2
0000    41  ;       03       Fixed QIOCLEAN_CPU to correctly restore the SCB
0000    42  ;                Dave Butenhof, 07-May-1981, version 6.4
0000    43  ;       04       Fix PURGDATAP routine to set correct address for UBA map.
0000    44  ;       05       ATTACH DW730, not DW750.
0000    45  ;
0000    46  ;       06       - Dave Butenhof, 23-Nov-1981, version 6.5
0000    47  ;                Add .LIBRARY declarations, change SEP Psect to Code and
0000    48  ;                Work.
0000    49  ;
0000    50  ;       07       - Dave Butenhof, 09-Mar-1982, version 6.6
0000    51  ;                Fix rruncation errors.
0000    52  ;
0000    53  ;       08       Bob Bergazzi    April 26, 1983  Version 6.11
0000    54  ;                Added ONLY_SCB routine for 11/xxx. Does nothing for NEBULA.
0000    55  ;
0000    56  ;       09       Bob Bergazzi    May 16, 1983    Version 6.11
0000    57  ;                Changed the order of the .LIB statements.
```

```
                                58 ;
                                59 ;       10      Bob Bergazzi 11-16-83   Version 6.14
                                60 ;               Changed MODNAM from ONLY750 to ONY730.
                                61 ;
                                62 ;       11      Bob Bergazzi    Jan. 25, 1984   Version 6.14
                                63 ;               Added ONLY_CLOCK_INIT routine, which reads the TODR.
                                64 ;               We no longer want to MFPR the TODR in CLK$RE_INIT
                                65 ;               because not all cpus read the TODR with an MFPR.
                                66 ;               Also, TODR is now defined by $PR730DEF as PR730$_TODR.
                                67 ;
                                68 ;       12      Bob Bergazzi    May 9, 1984     Version 7.0
                                69 ;               Added UBINTSZ in order to remove code from QIO.
                                70 ;--
                                71

Psect synopsis output	10	00:00:00.02	00:00:00.09
Cross-reference output	78	00:00:00.80	00:00:04.37
Assembler run totals	1615	00:00:19.31	00:01:00.63

The working set limit was 1000 pages.
76715 bytes (150 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 693 non-local and 14 local symbols.
622 source lines were read in Pass 1, producing 0 object records in Pass 2.
124 pages of virtual memory were used to define 31 macros.

                        0000    31  ; AUTHOR:       KEN CHAPMAN     10-NOV-77       VERSION 01.
                        0000    32  ;
                        0000    33  ; MODIFIED BY:
                        0000    34  ;                KEN CHAPMAN     02-FEB-78       VERSION 02 (ESSAA-3.07).
                        0000    35  ;       01       ADDED QUADWORD DATA CAPABILITY.
                        0000    36  ;       02       ADDED STRING MATCH FUNCTIO.
                        0000    37  ;                Roger Riggs     6-NOV-1978
                        0000    38  ;       03       ADDED KEYWORD MATCH FUNCTION AND MADE SOME SUBROUTINES
                        0000    39  ;                USEFUL FROM OTHER PARTS OF THE SUPERVISOR.
                        0000    40  ;       04       Modified keyword construct.
                        0000    41  ;                Dave Butenhof, 13-feb-1981, version 6.3
                        0000    42  ;       05       Add parse table command code for SYMBOL type, so CLI can
                        0000    43  ;                recognise $ and _ in section names.
                        0000    44  ;
                        0000    45  ;       06       - Jack Stansbury, 28-Oct-1981, Version 6.-
                        0000    46  ;                Fixed a few truncation errors. Also added .LIBRARY statements
                        0000    47  ;                for $DS and $DIAG.
                        0000    48  ;
                        0000    49  ;       07       - Dave Butenhof, 10-Nov-1981, version 6.-
                        0000    50  ;                Add new PARSE codes, CLI$K_COMMA and CLI$K_VALSEP.  The
                        0000    51  ;                former traverses the sequence "<blank>,<blank>", while the
                        0000    52  ;                latter traverses "<blank>{=!:}<blank>".  These will make
                        0000    53  ;                CLI simpler.  Added .LIBRARY for LIB, since I added CASE
                        0000    54  ;                macro useage
                        0000    55  ;
                        0000    56  ;       08       - Dave Butenhof, 11-Nov-1981, version 6.-
                        0000    57  ;                Add another PARSE code, CLI$K_EOL to check for end of
```

```
                        ;                       line (considering comments).
                        ;
                        ;       09              - Dave Butenhof, 11-Nov-1981, version 6.-
                        ;                       Again, make things easier for CLI by adding extra (internal
                        ;                       only) entry point for PARSE.  DSX$SUPERPARSE won't stop at
                        ;                       physical end of line; it'll keep parsing the null string until
                        ;                       told to stop.
                        ;
                        ;       10              - Dave Butenhof, 13-Nov-1981, version 6.5
                        ;                       One more time...add CLI$K_CALL and CLI$K_RETURN functions
                        ;                       for CLI convenience.  The parse table is just too complex.
                        ;                       Also, CLI$K_BIFS to test subparse return code
                        ;
                        ;       11              - Dave Butenhof, 03-Feb-1982, Version 6.6
                        ;                       Add Scan$File to allow wildcards (* and %) in file names.
                        ;                       This is for DIRECTORY...CLI will allow them in RUN, etc;
                        ;                       but it won't work too well.  Also, add a macro version of
                        ;                       BREAKUP_FILE (for merging default file specs) here...it's
                        ;                       much more code efficient than the bliss version.
                        ;
                        ;       12              Jack Stansbury, 15-Dec-1982, Version 6.10
                        ;                       Fixed the code in TryEol to fix a bug where a CLI$K_EOL was
                        ;                       being done twice, and causing an error when a comment
                        ;                       followed a DS command. The comment character was being
                        ;                       skipped, but not the rest of the line after the '!'. Thus,
                        ;                       the second time the TryEol was called, R5 would point to the
                        ;                       character after the '!'. Now I set R4 = 0 (the number of
                        ;                       characters remaining in the line) and set R5 to point to the
                        ;                       real end of the line (the NEWLINE character).
                        ;
                        ;       13              Bob Bergazzi    May 16,1983     Version 6.11
                        ;                       Changed the order of the .LIB statements.
                        ;
                        ;       14              M. Baggett      Nov 16,1983     Version 6.13
                        ;                       Allow device name of the form ' name$aaann' to be used as load
                        ;                       devices.
                        ;
                        ;       15              RE MUSE         MAY 8,1984      Version 7.0

Symbol table output	19	00:00:00.15	00:00:00.17
Psect synopsis output	6	00:00:00.03	00:00:00.03
Cross-reference output	34	00:00:00.75	00:00:00.84
Assembler run totals	969	00:00:11.84	00:00:19.00

The working set limit was 1000 pages.
36818 bytes (72 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 216 non-local and 53 local symbols.
1032 source lines were read in Pass 1, producing 0 object records in Pass 2.
45 pages of virtual memory were used to define 14 macros.

;    0030  0      !
;    0031  0      !       This module is used by those diagnostic supervisors that have
;    0032  0      !       no patch control store, namely, ESSAA, and ENSAA.
;    0033  0      !       The routines in this module do nothing except return status.
;    0034  0      !
;    0035  0      ! Author:
;    0036  0      !
;    0037  0      !       Bob Bergazzi
;    0038  0      !
;    0039  0      ! Creation Date:
;    0040  0      !
;    0041  0      !       22-Nov-1982
;    0042  0      !
;    0043  0      ! Version:
;    0044  0      !
;    0045  0      !       6.10
;    0046  0      !

                        0000     67 ;               Fix truncation error.
                        0000     68 ;
                        0000     69 ;       09      - Dave Butenhof, 16-Nov-1981, version 6.5
                        0000     70 ;               Enhance to provide capability of outputting a binary 'type
                        0000     71 ;               code' byte preceding each and every message output by the
                        0000     72 ;               Supervisor.  This is controlled by the SET [CLEAR] BINARY
                        0000     73 ;               command.
                        0000     74 ;
                        0000     75 ;       10      - Jack Stansbury, 23-Mar-1982, Version 6.?
                        0000     76 ;               Took out the RTypeMsg routine because it is now obselete
                        0000     77 ;               with typecoding and with the Print routine. Also added a
                        0000     78 ;               "!/" to the message output by the print routine when
                        0000     79 ;               Debug_The_Sucker has been set to one.
                        0000     80 ;
                        0000     81 ;       11      Jack Stansbury, 8-Apr-1982, Version 6.7
```

```
                                ;               Added code to the DSX$TypeOut routine to call the CRD
                                ;               routine. Also added a .Library statement for /$CRD/,
                                ;               the new CRD library. Also changed some statements to
                                ;               the new DS macros (Br_If_ ...).
                                ;
                                ;       12      Marion Baggett, 9-Apr-1982, Version 6.7
                                ;               Ordered .library statements.
                                ;
                                ;       13      Jack Stansbury, 12-Apr-1982, Version 6.7
                                ;               Changed the code in DSX$TypeOut a bit so that the CRD routine
                                ;               is not called if the TypeCode is CRD_AutoTest. This allows CRD
                                ;               Print's to go through without the CRD routine being called.
                                ;
                                ;       14      Jack Stansbury, 6-May-1982, Version 6.8
                                ;               Added code in DSX$TypeOut to supress outputting the binary
                                ;               typecode when CRD-AutoTest is running (which, in itself, implies
                                ;               that the BINARY flag has been set on).
                                ;
                                ;       15      Jack Stansbury, 24-July-1982, Version 6.9
                                ;               Added support for the Menu Test of CRD.
                                ;
                                ;       16      Bob Bergazzi    30-March-1983   Version 6.11
                                ;               Added guts of SET PAGE command: DSV$SHOWPAGE, DSV$SETPAGE, and
                                ;               in DSX$TYPE_OUT.
                                ;
                                ;       17      John Ciukaj,    2-Apr.-1983,    Version 6.11
                                ;               - Changed references to CRD bits in DSA Flags since
                                ;                 they were redefined to distinguish between online
                                ;                 and offline.
                                ;
                                ;       18      Peter Green     18-JUL-1983     Version 6.12
                                ;               Changed print macros to test R0 for status such that
                                ;               on error an immediate exit occurs instead of attempting
                                ;               to print the message.
                                ;
                                ;       19      Richard Brown   7-June-1984     Version 7.0
                                ;               Added null arguments to SYS$QIO call in DSX$TYPE_OUT.
                                ;               Changed channel number from TTIN to TTOUT in two $QIO
                                ;               calls in DSX$TYPE_OUT, prompting for user response
                                ;               to display next page of terminal output.
                                ;--

02BB    533 ;++
02BB    534 ; Functional Description:
02BB    535 ;
02BB    536 ;       This routine is the control point for Supervisor type coding.
02BB    537 ;       it sets the typecode byte to the proper value, and calls the
02BB    538 ;       desired PRINT routine.  Any print which does not go through
02BB    539 ;       this routine, and which does not set DS$GB_TYPECODE explicitly
02BB    540 ;       will have the default (current) type code [normally 0].
02BB    541 ;
02BB    542 ; Input Parameters:
02BB    543 ;
02BB    544 ;       4(ap)           Type code value (negative of typecode indicates
02BB    545 ;                       that code is 'sticky', and will not be cleared.
02BB    546 ;       8(ap)           Which PRINTx is desired
02BB    547 ;       12(ap)          Address of ASCIC format string
02BB    548 ;       16(ap)          First FAO argument (as in DSX$PRINTx routines)
02BB    549 ;         .
02BB    550 ;         .
02BB    551 ;         .
02BB    552 ;
02BB    553 ; Output Parameters:
02BB    554 ;
02BB    555 ;       none
02BB    556 ;
02BB    557 ; Implicit Inputs:
02BB    558 ;
02BB    559 ;       none
02BB    560 ;
02BB    561 ; Implicit Outputs:
02BB    562 ;
02BB    563 ;       DS$GL_TYPECODE  set to input value.
02BB    564 ;
02BB    565 ; Side effects:
02BB    566 ;
02BB    567 ;       none
02BB    568 ;
02BB    569 ; Status returns:
02BB    570 ;
02BB    571 ;       none
02BB    572 ;--
