;  0026  0     !
;  0027  0     !       Diagnostic Supervisor (part of the Resident-DS image).
;  0028  0     !
;  0029  0     ! Abstract:
;  0030  0     !
;  0031  0     !       This module contains the routines necessary to load the CRD-Loadable image file and integrate
;  0032  0     !       it with the Resident-DS, thus putting the Supervisor under control of CRD. It also now contains
;  0033  0     !       the routines necessary to unload the CRD image.
;  0034  0     !

;  0044  0     !
;  0045  0     !       Version 6.9
;  0046  0     !
;  0047  0     ! Modified By:
;  0048  0     !
;  0049  0     !       01      Jack Stansbury, 29-June-1982, Version 6.8
;  0050  0     !               Took out checking the DS verification bytes, and the check to see if
;  0051  0     !               the DS vector count EQL'ed the CRD vector count (why was this in there
;  0052  0     !               anyway???). Assume that the DS verification bytes are okay. It is CRD
;  0053  0     !               that I am verifying anyway!
;  0054  0     !
;  0055  0     !       02      Jack Stansbury, 1-July-1982, Version 6.8
;  0056  0     !               You dummy! I put the check of the vector count in there for a good reason!
;  0057  0     !               If the vector counts are not the same, one or the other may get some other
```

```
;    0058  0     !                  data overwritten (i.e., data following the dispatch vectors). This must
;    0059  0     !                  NOT happen. So, if the vector counts are not equal, it is an incompat-
;    0060  0     !                  ibility error (not a corrupted error).
;    0061  0     !
;    0062  0     !          03      Jack Stansbury, 15-July-1982, Version 6.9
;    0063  0     !                  Added support for loading in the CRD Menu Test file. Which file to load in
;    0064  0     !                  depends on which DSA bit is set.
;    0065  0     !
;    0066  0     !          04      Jack Stansbury, 25-July-1982, Version 6.9
;    0067  0     !                  Added code to check to see if this was running in User-Mode, and if so, then
;    0068  0     !                  use the CRD$ExpReg routine; else use $ExpReg to expand the VDS's memory.
;    0069  0     !                  Note that although CRD Menu Test will NOT be normally run in User Mode,
;    0070  0     !                  it is run this way when it is being debugged. Whether or not it should run
;    0071  0     !                  is determined by the CLI routines.
;    0072  0     !
;    0073  0     !          05      Jack Stansbury, 7-September-1982, Version 6.9
;    0074  0     !                  Made major modifications to all the routines in this module. I renamed it from
;    0075  0     !                  LoadCRD to CRDImage. Added many routines.
;    0076  0     !
;    0077  0     !          06      Jack Stansbury, 26-Oct-1982, Version 6.9
;    0078  0     !                  Added code to disable printing ^C's during running of CRD.
;    0079  0     !
;    0080  0     !          07      Jack Stansbury, -2-Mar-1983, Version 6.11
;    0081  0     !                  Improved the debugging mode of CRD. Added SET CRD/DEBUG to the CLI.
;    0082  0     !                  Made printout of debug vectors much better and much more informative.
;    0083  0     !                  Put the actual debug vector printout in this module rather than in a
;    0084  0     !                  CRD module. Also took out references to the DS$K_Numb_Dispatch_Vectors.
;    0085  0     !                  Also added the DSR$Print_Typecode_Name routine, for use by all the VDS.
;    0086  0     !                  Also changed the check to see if the debug flag was set (in CRD_Error).
;    0087  0     !
;    0088  0     !          08      Jack Stansbury, 7-Mar-1983, Version 6.11
;    0089  0     !                  Added the DSR$Show_Calls routine - this is a global routine (JSB linkage)
;    0090  0     !                  that will print the contents of the last 'n' call frames on the stack.
;    0091  0     !
;    0092  0     !          09      Jack Stansbury, 8-Mar-1983, Version 6.11
;    0093  0     !                  Took out the DSR$Show_Calls routine. I created a new module for this routine
;    0094  0     !                  called CallFrame.B32. That routine didn't realy belong in here.
;    0095  0     !
;    0096  0     !          10      John Ciukaj     4-April-1983    Version 6.11
;    0097  0     !                  - Changed references to CRD Bits in DSA Flags
;    0098  0     !                    to distinguish between online and offline
;    0099  0     !

;   0728  1     ! Functional Description:
;   0729  1     !
;   0730  1     !       'Unload' the CRD image from memory. This routines does not actually unload the CRD code and data per se,
;   0731  1     !       but it does deallocate the memory that the CRD code and data occupies. This routine also deallocates
```

```
;  0732  1        !       all temporary CRD storage that was allocated in the DSR$Load_CRD routine.
;  0733  1        !
;  0734  1        ! Formal Parameters:
;  0735  1        !
;  0736  1        !       Return_To_Caller: If the image is loaded, then return to the caller of this routine when the
;  0737  1        !                         unloading is done. If it is not loaded, return regardless.
;  0738  1        !
;  0739  1        ! Side Effects:
;  0740  1        !
;  0741  1        !       Too numerous to mention. See the code!
;  0742  1        !
;  0743  1        ! Completion Codes:
;  0744  1        !
;  0745  1        !       None
;  0746  1        !--

;  0998  1      GLOBAL ROUTINE Exchange_Dispatch_Vectors (A_CRD_Dispatch_Vectors) : NOVALUE =                                    !C11
;  0999  1
;  1000  1      !++
;  1001  1      ! Functional Description:
;  1002  1      !
;  1003  1      !       Exchange the CRD and DS dispatch vectors. That is, the DS has a set of dispatch vectors that CRD uses to
;  1004  1      !       access certain DS locations (such as the DSA flags, the Control-C handler address, etc.). These are
;  1005  1      !       stored in the CRDVECS module (part of the Resident-DS image). CRD also has a set of dispatch vectors
;  1006  1      !       that the Resident-DS will use to get to certain CRD locations and routines (such as the CRD routine to
;  1007  1      !       call when something is being printed by the DS). These are stored at the beginning of the CRD-Loadable
;  1008  1      !       image (i.e., in the very first Psect). Exchange_Dispatch_Vectors will exchange these two sets of vectors,
;  1009  1      !       thus enabling the DS to get to the CRD routines, and enabling CRD to get to the DS locations and routines.
;  1010  1      !
;  1011  1      !       Before:
;  1012  1      !               CRD_Dispatch_Vectors:           Contains the addresses of the CRD-Loadable routines and locations
;  1013  1      !               DS$AL_DS_Dispatch_Vectors:      Contains the addresses of certain DS locations and routines
;  1014  1      !       After:
;  1015  1      !               CRD_Dispatch_Vectors:           Contains the addresses of certain DS locations and routines
;  1016  1      !               DS$AL_DS_Dispatch_Vectors:      Contains the addresses of the CRD-Loadable routines and locations
;  1017  1      !
;  1018  1      !       Note also that the first longword in each set of vectors will contain a Count byte (the number of
;  1019  1      !       dispatch vectors), a null byte, and two bytes containing the version number of CRD. One of the version
;  1020  1      !       numbers will be positive, and the other one will be negative. The algorithm for verification is as follows:
;  1021  1      !
;  1022  1      !               1. Read in the CRD-Loadable file
;  1023  1      !               2. Set CRD_Dispatch_Vectors = starting address of the now resident CRD image
;  1024  1      !               3. DS$AL_DS_Dispatch_Vectors [0] <24, 8, 0> = 0                         ! The null byte
;  1025  1      !               4. DS$AL_DS_Dispatch_Vectors [0] <16, 8, 0> =                           ! The version #'s
;  1026  1      !                   - DS$AL_DS_Dispatch_Vectors [0] <8, 8, 0>
```

```
;    1027  1        !               5. CRD_Dispatch_Vectors [0] <24, 8, 0> = 0                                      ! The null byte
;    1028  1        !               6. CRD_Dispatch_Vectors [0] <16, 8, 0> = - CRD_Dispatch_Vectors [0] <8, 8, 0>   ! The version #'s
;    1029  1        !
;    1030  1        !       If any of the above statements are not true, an appropriate error message is printed and CRD-AUTOTEST
;    1031  1        !       is aborted. This ensures that not only do the version numbers agree, but also that the image read in is
;    1032  1        !       indeed the CRD-Loadable image file.
;    1033  1        !
;    1034  1        !       Note: The CRD-Loadable image will be linked with a /System=%X0000 qualifer, thus making all addresses relati
;    1035  1        !       to zero. The only address that this affects are those in the CRD_Dispatch_Vectors, the ones that are moved t
;    1036  1        !       the Resident-DS area. These CRD routine addresses must be modified by the amount of the starting location of
;    1037  1        !       the CRD image (i.e., the parameter to this routine).

Symbol table output	6	00:00:00.06	00:00:00.06
Psect synopsis output	4	00:00:00.02	00:00:00.04
Cross-reference output	33	00:00:00.24	00:00:00.27
Assembler run totals	848	00:00:10.74	00:00:16.73

The working set limit was 1000 pages.
3376 bytes (66 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 446 non-local and 35 local symbols.
738 source lines were read in Pass 1, producing 0 object records in Pass 2.
15 pages of virtual memory were used to define 12 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	0
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	2
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	7
TOTALS (all libraries)	9

500 GETS were required to define 9 macros.

There were no errors, warnings or information messages.

Assembler run totals	644	00:00:07.62	00:00:11.18

The working set limit was 1000 pages.
22812 bytes (45 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 423 non-local and 9 local symbols.
325 source lines were read in Pass 1, producing 0 object records in Pass 2.
9 pages of virtual memory were used to define 7 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	0
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	4
TOTALS (all libraries)	4

464 GETS were required to define 4 macros.

There were no errors, warnings or information messages.

Psect synopsis output	7	00:00:00.03	00:00:00.02
Cross-reference output	18	00:00:00.21	00:00:00.23
Assembler run totals	793	00:00:19.53	00:00:27.62

The working set limit was 1000 pages.
66850 bytes (131 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1174 non-local and 10 local symbols.
171 source lines were read in Pass 1, producing 0 object records in Pass 2.
63 pages of virtual memory were used to define 22 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	1
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	6
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	2
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	9
TOTALS (all libraries)	18

1478 GETS were required to define 18 macros.

There were no errors, warnings or information messages.

Symbol table output	16	00:00:00.12	00:00:00.13
Psect synopsis output	5	00:00:00.02	00:00:00.04
Cross-reference output	31	00:00:00.54	00:00:01.13
Assembler run totals	1097	00:00:22.19	00:00:41.37

The working set limit was 1000 pages.
64820 bytes (127 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1134 non-local and 26 local symbols.
266 source lines were read in Pass 1, producing 0 object records in Pass 2.
55 pages of virtual memory were used to define 21 macros.

0000    36 ;                TOM SOUTTER     18-NOV-77       VERSION 02
0000    37 ;        01      DSPR #10 - LOCATE BREAKPOINTS VIA OPERATOR SPECIFIED BASE
0000    38 ;
0000    39 ;                KEN CHAPMAN     16-FEB-78       VERSION 03 (ESSAA-3.07).
0000    40 ;        02      REMOVED EXCEPTION HANDLER TO SCB.
0000    41 ;                Roger Riggs     18-JUL-78               (4.03)
0000    42 ;        03      Changed SS$_ARITH TO DS$_ARITH
0000    43 ;        04      Various enhancements and cleanup done,
0000    44 ;                'NEXT [n]' command.
0000    45 ;        05      Added code to restore opcode on hidden breakpoint
0000    46 ;        06      Modified FETCH_STORE to correctly report address on
0000    47 ;                COMET machine checks
0000    48 ;                Roger Riggs     29-NOV-1979
0000    49 ;        07      Added BSBW SCRIPT$STOP before call to CLI to halt script
0000    50 ;                mechanism on breakpoints and single step.
0000    51 ;                Dave Butenhof  16-JAN-80
0000    52 ;        08      Add code to examine/deposit internal processor registers.
0000    53 ;                Roger Riggs, 27-May-1980, Version 5.4
0000    54 ;        09      Changed radix on processor register output to hex.
0000    55 ;
0000    56 ;                Dave Butenhof, 30-sep-1980, Version 6.1
0000    57 ;        10      Make PSL typeout unaffected by /WORD or /BYTE.
```

```
                     0000     58 ;                Also change /ASCII to use !AF FAO directive, and also type
                     0000     59 ;                the longword in hex to aid in decoding non-printing strings.
                     0000     60 ;                Dave Butenhof, 23-feb-1981, version 6.3
                     0000     61 ;        11      fix truncation errors
                     0000     62 ;
                     0000     63 ;        12      - Jack Stansbury, 22-Oct-1981, Version 6.-
                     0000     64 ;                Fixed truncation errors. Also added .LIBRARY statements
                     0000     65 ;                for $DS and $DIAG.
                     0000     66 ;
                     0000     67 ;        13      - Jack Stansbury, 10-Nov-1981, Version 6.-
                     0000     68 ;                Added routines for VRSHOWBASE (to show the base address)
                     0000     69 ;                and VRSHOWDFLT (to show the default size and radix). Also
                     0000     70 ;                changed the error messages to mixed case.
                     0000     71 ;
                     0000     72 ;        14      - Richard Brown, 19-May-82, Version 6.8
                     0000     73 ;                Addition of routine to process the DEBUG user command.
                     0000     74 ;
                     0000     75 ;        15      - Domenic Andella, 17-Jul-84, Version 7.0
                     0000     76 ;                The 'DEP' command does a write followed by
                     0000     77 ;                read to display the data written. This causes
                     0000     78 ;                a mchk on 11/7xxx when depositing a one into
                     0000     79 ;                the Unibus Adapter Control Register (UACR),
                     0000     80 ;                and could cause similar problems in other
                     0000     81 ;                new CPU's. Problem solved by removing the
                     0000     82 ;                final examine from the 'DEPOSIT' command.
                     0000     83 ;                This makes VDS consistent with the DEPOSIT
                     0000     84 ;                command in XDELTA and DEBUG.
                     0000     85 ;--

Symbol table output	1	00:00:00.25	00:00:00.26

Psect synopsis output	5	00:00:00.03	00:00:00.03
Cross-reference output	78	00:00:01.77	00:00:02.12
Assembler run totals	1624	00:00:23.80	00:00:30.71

The working set limit was 1000 pages.
115562 bytes (226 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 529 non-local and 110 local symbols.
1869 source lines were read in Pass 1, producing 0 object records in Pass 2.
77 pages of virtual memory were used to define 32 macros.

Psect synopsis output	7	00:00:00.02	00:00:00.03
Cross-reference output	21	00:00:00.31	00:00:00.52
Assembler run totals	857	00:00:21.09	00:00:29.00

The working set limit was 1000 pages.
68759 bytes (135 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1024 non-local and 24 local symbols.
396 source lines were read in Pass 1, producing 0 object records in Pass 2.
71 pages of virtual memory were used to define 27 macros.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	32	00:00:00.10	00:00:00.28
Command processing	139	00:00:00.73	00:00:01.59
Pass 1	355	00:00:04.62	00:00:10.60
Symbol table sort	0	00:00:00.21	00:00:00.28
Pass 2	77	00:00:00.76	00:00:00.99
Symbol table output	3	00:00:00.08	00:00:00.08
Psect synopsis output	6	00:00:00.03	00:00:00.03
Cross-reference output	29	00:00:00.26	00:00:00.26
Assembler run totals	646	00:00:06.81	00:00:14.13

The working set limit was 950 pages.
22860 bytes (45 pages) of virtual memory were used to buffer the intermediate code.
There were 10 pages of symbol table space allocated to hold 165 non-local and 7 local symbols.
182 source lines were read in Pass 1, producing 0 object records in Pass 2.
43 pages of virtual memory were used to define 15 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYS0.SYSMAINT]DS.MLB;218	1
DMA1:[SYS0.SYSMAINT]DIAG.MLB;953	4
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	5
TOTALS (all libraries)	10

241 GETS were required to define 10 macros.

There were no errors, warnings or information messages.

                                ;       More word relative references to longword.  This is getting
                                ;       quite un-fun.
                                ;       Dave Butenhof, 17-feb-1981, version 6.3
                                ;       More of same.  ALL DSA$?_? references this time.
                                ;       - dave butenhof, 06-Oct-1981, version 6.5
                                ;       Add SHOW STATUS command
                                ;       - Dave Butenhof, 02-Nov-1981, version 6.-
                                ;       Fix truncation errors
```

```
0000     82 ;        22      - Jack Stansbury, 03-Nov-1981, Version 6.-
0000     83 ;                Added calls to QA$Main for the QA enhancements. Also fixed
0000     84 ;                some truncation errors. Also changed PSECTs a bit. Added
0000     85 ;                .LIBRARY statements for $DS, $DIAG, and LIB.
0000     86 ;
0000     87 ;        23      - Dave Butenhof, 16-Nov-1981, version 6.5
0000     88 ;                Modified the text (and corrected a bug) in the SHOW STATUS
0000     89 ;                command.
0000     90 ;
0000     91 ;        24      - Dave Butenhof, 19-Nov-1981, version 6.5
0000     92 ;                Modify to use typecodes on all output messages.
0000     93 ;
0000     94 ;        25      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000     95 ;                Commented out several of the calls to QA_MAIN because it
C000     96 ;                appears as though they will not be needed for the 6.5 DS
0000     97 ;                version. Made several other small code changes to the DISPATCH
0000     98 ;                routine for QA.
0000     99 ;
0000    100 ;        26      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000    101 ;                Changed DSX$ENDPASS routine slightly to accomadate QA.
0000    102 ;
0000    103 ;        27      - Jack Stansbury, 16-Dec-1981, Version 6.6
0000    104 ;                Added the DS_QADEFS macro definition.
0000    105 ;
0000    106 ;        28      - Dave Butenhof, 29-Dec-1981, Version 6.6
0000    107 ;                Print out all error counts on Summary command.
0000    108 ;
0000    109 ;        29      - Jack Stansbury, 6-Jan-1982, Version 6.6
0000    110 ;                Changed EndPass routine slightly to accomodate the
0000    111 ;                new way of implementing QA (with the QA Start Loop).
0000    112 ;
0000    113 ;        30      - Dave Butenhof, 12-Jan-1982, Version 6.6
0000    114 ;                Fix EndPass message to avoid losing end of message on
0000    115 ;                narrow screen.
0000    116 ;
0000    117 ;        31      - Jack Stansbury, 15-Jan-1982, Version 6.6
0000    118 ;                Made changes to the Dispatch routine for the Loop on Subtest
0000    119 ;                QA check routine.
0000    120 ;
0000    121 ;        32      - Jack Stansbury, 9-Mar-1982, Version 6.6
0000    122 ;                Inserted some new DS macros that will help these routines
0000    123 ;                be more understandable.
0000    124 ;
0000    125 ;        33      Marion Baggett, 9-Apr-1982, Version 6.7
0000    126 ;                Added NoShow Conditionals after the .IDENT
0000    127 ;
0000    128 ;        [34] Dave Butenhof, 20-Apr-1982, Version 6.7
0000    129 ;                Add kluge code in DS_CLEANUP; if standalone on 730,
0000    130 ;                reset IDC to prevent extra interrupts.
0000    131 ;
0000    132 ;        35      Jack Stansbury, 13-September-1982, Version 6.9
0000    133 ;                Fixed some truncation errors. I didn't mark those that I fixed.
0000    134 ;
0000    135 ;        36      Jack Stansbury, 15-September-1982, Version 6.9
0000    136 ;                Changed the VRSummary and VRShowStatus routines to call the
0000    137 ;                DSR$CheckLoad routine defined in ShowMem.
0000    138 ;
```

```
0000   139 ;       37      Jack Stansbury, 8-Mar-1983, Version 6.11
0000   140 ;               Changed the VRShowStatus routine to look for the user's PC
0000   141 ;               on the stack (in the CLI args).
0000   142 ;--

Pass 2	229	00:00:02.91	00:00:03.65
Symbol table output	50	00:00:00.34	00:00:00.67
Psect synopsis output	7	00:00:00.02	00:00:00.03
Cross-reference output	119	00:00:01.76	00:00:02.70
Assembler run totals	1468	00:00:20.80	00:00:30.69

The working set limit was 1000 pages.
79721 bytes (156 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 523 non-local and 43 local symbols.
769 source lines were read in Pass 1, producing 0 object records in Pass 2.
118 pages of virtual memory were used to define 48 macros.

Macro library statistics

Pass 2	86	00:00:01.81	00:00:02.64
Symbol table output	5	00:00:00.06	00:00:00.06
Psect synopsis output	6	00:00:00.02	00:00:00.03
Cross-reference output	17	00:00:00.16	00:00:00.20
Assembler run totals	674	00:00:15.73	00:00:24.38

The working set limit was 1000 pages.
57693 bytes (113 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1095 non-local and 13 local symbols.
313 source lines were read in Pass 1, producing 0 object records in Pass 2.
40 pages of virtual memory were used to define 15 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	1

The working set limit was 1000 pages.
68417 bytes (134 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1256 non-local and 9 local symbols.
420 source lines were read in Pass 1, producing 0 object records in Pass 2.
45 pages of virtual memory were used to define 16 macros.

Macro library statistics

Macro library name	Macros defined

0000    29 ;
0000    30 ; ABSTRACT:
0000    31 ;       This module contains the bootstrap device driver for
0000    32 ;       the RB02 and RB80 disks on the RB730 controller.
0000    33 ;
0000    34 ; ENVIRONMENT:  IPL 31, kernel mode, code must be PIC
0000    35 ;
0000    36 ; AUTHOR:  Greg Robert, CREATION DATE:  09-Jun-1981
0000    37 ;
0000    38 ; NOTE: The RB730 controller is supported by host microcode which is
0000    39 ;       activated each time a device register is accessed, and for
0000    40 ;       each block transferred.  Because of this, registers must be
0000    41 ;       handled in strict accordance with the RB730 software specification.
0000    42 ;       The following special registers protocols are significant:
0000    43 ;
0000    44 ;               DAR --  When the DAR is loaded some drive functions
0000    45 ;                       are initiated.  Consequently the function code
0000    46 ;                       must be loaded into the CSR (with CRDY set)
0000    47 ;                       prior to loading the DAR for seeks and transfers.
0000    48 ;                       For data transfers, the BAR and BCR must also
0000    49 ;                       be loaded prior to loading the DAR.
0000    50 ;
0000    51 ;               MPR --  The microcode keeps an internal disk address
0000    52 ;                       register for computing cylinder differance words
0000    53 ;                       for RB02 seek commands.  If this internal register
0000    54 ;                       falls out of sync with the actual disk address
0000    55 ;                       it can be reset by executing a "read header" command.
0000    56 ;                       Note that the header must actually be read (thru
0000    57 ;                       the MPR) in order to effect the reset.
```

```
                                0000     58 ;
                                0000     59 ; MODIFIED BY:
                                0000     60 ;
                                0000     61 ;--

Symbol table output	9	00:00:00.10	00:00:00.35
Psect synopsis output	6	00:00:00.02	00:00:00.02
Cross-reference output	30	00:00:00.20	00:00:00.23
Assembler run totals	1299	00:00:19.16	00:00:25.89

The working set limit was 1000 pages.
67105 bytes (132 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1228 non-local and 13 local symbols.
467 source lines were read in Pass 1, producing 0 object records in Pass 2.
45 pages of virtual memory were used to define 16 macros.

Psect synopsis output	4	00:00:00.03	00:00:00.03
Cross-reference output	8	00:00:00.06	00:00:00.06
Assembler run totals	439	00:00:03.08	00:00:05.16

The working set limit was 1000 pages.
5883 bytes (12 pages) of virtual memory were used to buffer the intermediate code.
There were 10 pages of symbol table space allocated to hold 57 non-local and 0 local symbols.
169 source lines were read in Pass 1, producing 0 object records in Pass 2.
14 pages of virtual memory were used to define 9 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	1
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	4
TOTALS (all libraries)	5

87 GETS were required to define 5 macros.

There were no errors, warnings or information messages.

;    0029  0      !
;    0030  0      !       This module contains the routines necessary to handle
;    0031  0      !       the DS$LOAD routines.
;    0032  0      !
;    0033  0      ! AUTHOR:       Roger Riggs, CREATION DATE: 10-November-1979
;    0034  0      ! MODIFIED BY:
;    0035  0      !
;    0036  0      !               Dave Butenhof, 8-apr-1981, version 6.3
;    0037  0      !       01      In user mode, magtapes will only load one magtape block,
;    0038  0      !               irregardless of USZ field size, on $READ.  Therefore, loop
;    0039  0      !               on $READ until RMS$_EOF found, to make sure entire file is
;    0040  0      !               read.  Also, use $SPACE if VBN arg is specified, so it'll
;    0041  0      !               work on magtapes.
;    0042  0      !              -Dave Butenhof, 02-Jun-1981, version 6.3
;    0043  0      !       02      Change directory specs of libraries for flexibility
;    0044  0      !
;    0045  0      !       03      - Jack Stansbury, 28-Oct-1981, Version 6.5
;    0046  0      !               Changed PSECTs from SEP to WORK, CODE, and DATA.
;    0047  0      !
;    0048  0      !       04      Jack Stansbury, 10-Apr-1982, Version 6.7
;    0049  0      !               Changed the location of the following assignment statement:
;    0050  0      !                       addr = .address;
;    0051  0      !               in the routine, since if the return length is requested
;    0052  0      !               (ACTUALCOUNT() GEQ 5), the retlen is calculated to be the
;    0053  0      !               maximum of the actual loaded size (addr - address) or the
;    0054  0      !               XAB size. However, if the Length parameter is 0, the assignment
;    0055  0      !               statement above was not getting done, and the aboce calculation
;    0056  0      !               would have been wrong!
;    0057  0      !
```

```
;    0058  0     !       05      Richard Brown, 15-June-82,  Version 6.8
;    0059  0     !               Addition of code to differentiate between those diagnostics
;    0060  0     !               which have an image header and those which do not.  If the
;    0061  0     !               header is present, it is stored in a separate buffer area.
;    0062  0     !

                     0000     49 ;       01      Jack Stansbury, Version 1.0, June 22, 1982
                     0000     50 ;               Added two more vectors.
                     0000     51 ;
                     0000     52 ;       02      Jack Stansbury, Version 1.1, July 24, 1982
                     0000     53 ;               Added the CRD$GB_Menu_OnLine_Debug byte. If == 1, then
                     0000     54 ;               on-line CRD command is allowed. If == 0, the CRD command
                     0000     55 ;               is disallowed. It is == 0 by default.
                     0000     56 ;
                     0000     57 ;       03      Jack Stansbury, Version 1.1, July 27, 1982
                     0000     58 ;               Added the DS$GA_DS_Ctrl_C_First (formerly DS$GA_DSCntrlC) and
                     0000     59 ;               the DS$GA_DS_Ctrl_C_Second longwords to the dispatch list.
                     0000     60 ;
                     0000     61 ;       04      Jack Stansbury, Version 1.1, August 19, 1982
                     0000     62 ;               Added the Begin and DS$GL_CRD_Debug vectors. Also changed the
                     0000     63 ;               version number bytes from 1 to 2.
                     0000     64 ;
                     0000     65 ;       05      Jack Stansbury, Version 1.1, September 10, 1982
                     0000     66 ;               Added the Boot$L_R5 address. This is used by Menu Test to allow
                     0000     67 ;               it to determine how CRD was invoked.
                     0000     68 ;
                     0000     69 ;       06      Jack Stansbury, Version 1.1, September 12, 1982
                     0000     70 ;               Took out the one added in 05 above, and added the
                     0000     71 ;               DSR$Check_MenuTest_Set and the DSR$Check_AutoTest_Set routine
                     0000     72 ;               addresses.
                     0000     73 ;
                     0000     74 ;       07      Jack Stansbury, Version 1.1, October 26, 1982
                     0000     75 ;               Added the DS$GL_CRD_Flags longword. This is set up now as a
                     0000     76 ;               'flags' longword. It is now used for CRD_Debug (bit 1) and
                     0000     77 ;               for disabling ^C echoing (bit 0).
                     0000     .1 ;
                     0000     .2 ;       08      Jack Stansbury, Version ?.?, March 3, 1983
                     0000     .3 ;               Added a number of new (empty for now) dispatch vectors. These
                     0000     .4 ;               empty ones are to allow the debug vectors (in CRD) to be big
```

```
                        0000     .5 ;
                        0000     .6 ;
                        0000     .7 ;
                        0000     .8 ;        09      John Ciukaj     Version 6.11    4-April 1983
                        0000     .9 ;                - Changed name of CRD Online debug vector
                        0000    .10 ;                - Changed reference names to DSR$Check.. routines

Psect synopsis output	2	00:00:00.02	00:00:00.02
Cross-reference output	3	00:00:00.06	00:00:00.08
Assembler run totals	380	00:00:02.83	00:00:05.85

The working set limit was 950 pages.
1780 bytes (4 pages) of virtual memory were used to buffer the intermediate code.
There were 10 pages of symbol table space allocated to hold 18 non-local and 0 local symbols.
190 source lines were read in Pass 1, producing 0 object records in Pass 2.
0 pages of virtual memory were used to define 0 macros.

                        0000     44 ;       01      CHANGE ENTRY VECTOR DISPATCH FROM 'BRW' TO 'JMP'
                        0000     45 ;
                        0000     46 ;
                        0000     47 ;       02      ADDED SYS$WAKE VECTOR.  REMOVED SYS$CRETVA VECTOR.
                        0000     48 ;
                        0000     49 ;
                        0000     50 ;       03      ADDED SYS$SETPRT ENTRY MASK.
                        0000     51 ;
                        0000     52 ;
                        0000     53 ;       04      CHANGED ENTRY MASKS FOR SYS$ASSIGN, SYS$DASSGN, SYS$CANCEL,
                        0000     54 ;               SYS$GTCHAN, SYS$ALLOC, SYS$DALLOC.
                        0000     55 ;
                        0000     56 ;
                        0000     57 ;       05      CHANGED ENTRY MASKS FOR SYS$EXPREG, SYS$CNTREG, DS$GETBUF,
                        0000     58 ;               AND DS$RELBUF.
                        0000     59 ;       06      ADDED NEW ENTRY NAMES: DS$SUMMARY, DS$CANWAIT, DS$ASKDATA,
                        0000     60 ;               DS$ASKVLD, DS$ASKLGCL, DS$ASKSTR, DS$SHOCHAN.
                        0000     61 ;       07      ADDED '+2' TO SKIP OVER LOCAL ENTRY MASKS IN SOME CASES.
                        0000     62 ;
                        0000     63 ;               Roger Riggs                 12-Jun-1978
                        0000     64 ;       08      Changed GETMEM, RELMEM, MOVVRT, MOVPHY to be reserved.
                        0000     65 ;               previously they were dummy routines in MEMMGT.
                        0000     66 ;               Also changed EXPREG, CNTREG, MMOFF, MMON, and SETPRT to
                        0000     67 ;               use .VECTOR pseudo op.
                        0000     68 ;       09      Changed names and entry vectors of:
                        0000     69 ;               RGETDATA        DSX$GETDATA
                        0000     70 ;               RGETADDRESS     DSX$GETADDRESS
                        0000     71 ;               RGETVIELD       DSX$GETVIELD
                        0000     72 ;               RGETLOGICAL     DSX$GETLOGICAL
                        0000     73 ;               RGETSTRING      DSX$GETSTRING
                        0000     74 ;               RGPHARD         DSX$GPHARD
                        0000     75 ;               RBREAK
                        0000     76 ;       10      Added DS$PRINTSIG entry point
                        0000     77 ;
                        0000     78 ;               Roger Riggs, 14-Jan-1979        Version 5.2
                        0000     79 ;       11      Activated DS$PROBE entry point at 101A0
                        0000     80 ;
                        0000     81 ;       12      David R. Butenhof  06-feb-80
                        0000     82 ;               Add entry point for EXE$SETAST system call
                        0000     83 ;
                        0000     84 ;               Roger Riggs, 24-MAR-1980
                        0000     85 ;       13      Added dummy entry points for SYS$LKWSET, SYS$SETPRI,
                        0000     86 ;               SYS$SETRWM, SYS$SETSWM, SYS$ULWSET
                        0000     87 ;
                        0000     88 ;               Roger Riggs, 27-May-1980, Version 5.4
                        0000     89 ;       14      Changed entry points for QIO routines to use .VECTOR
                        0000     90 ;               and JMP +2
                        0000     91 ;
                        0000     92 ;               Dave Butenhof   9-jun-1980, Version 5.4
                        0000     93 ;       15      Added entry vectors for VMS V2.0 driver support routines:
                        0000     94 ;               IOC$LOADUBAMAPA, IOC$GETBUTE, IOC$PUTBYTE, IOC$INITBUFWIND,
                        0000     95 ;               IOC$MOVFRUSER2, IOC$MOVFRUSER1, IOC$MOVTOUSER2, IOC$MOVTOUSER1.
                        0000     96 ;
                        0000     97 ;               Dave Butenhof   18-jun-1980,    version 5.5
```

```
0000     98 ;        16      Add driver entry vectors for SCH$LOCKW and SCH$UNLOCK, for
0000     99 ;                use by drivers doing buffered I/O.
0000    100 ;
0000    101 ;                Roger Riggs, 22-July-1980, Version 5.5
0000    102 ;        17      Added entry points for ???
0000    103 ;                Moved RMS$GL_ABSTIM, RMS$GQ_SYSTIME here from clock.
0000    104 ;
0000    105 ;                Roger Riggs, 27-Aug-1980
0000    106 ;        18      Added SYS$GET, SYS$READ, SYS$OPEN, SYS$CLOSE, SYS$CONNECT,
0000    107 ;                SYS$DISCONNECT for subset of RMS services.
```

```
0000   109 ;
0000   110 ;                    Dave Butenhof, 30-sep-1980, Version 6.1
0000   111 ;          19        Added entry point for DS$ATTACH--user-callable ATTACH
0000   112 ;                    command processing
0000   113 ;          20        Added entry vectors for COM$DRVDEALMEM, EXE$INSIOQ,
0000   114 ;                    IOC$PTETOPFN, and moved EXE$GQ_SYSTIME here from CLOCK to
0000   115 ;                    make it accessible to drivers.
0000   116 ;          21        Added entry point for DS$HELP--user-callable HELP command
0000   117 ;                    processing.
0000   118 ;          22        Add entry point for IOC$MOVFRUSER
0000   119 ;
0000   120 ;                    Dave Butenhof, 22-apr-1981, version 6.4
0000   121 ;          23        Add entry points for IOC$ALLOSPT, EXE$MAXACMODE, and
0000   122 ;                    EXE$READLOCK.  These were specified in release notes
0000   123 ;                    of version 6.3, but somehow the updates were lost.
0000   124 ;                    [also, define all libraries in source]
0000   125 ;
0000   126 ;          24        - dave butenhof, 11-Sep-1981, version 6.5
0000   127 ;                    Fix entries for event flag services.  They are all done
0000   128 ;                    as jumps directly to label: fix to allow for entry mask
0000   129 ;                    on routine.
0000   130 ;
0000   131 ;          25        - Jack Stansbury, 23-Oct-1981, Version 6.-
0000   132 ;                    Fixed a truncation error in the CODE Psect, and
0000   133 ;                    another possibly future one in the same Psect.
0000   134 ;
0000   135 ;          26        - Jack Stansbury, 23-Oct-1981, Version 6.-
0000   136 ;                    Added DS$BRANCH entry point, by putting it between
0000   137 ;                    DS$SUMMARY and DS$BGNSUB, and by taking out the blank
0000   138 ;                    one after DS$ASKSTR.
0000   139 ;
0000   140 ;          27        - Jack Stansbury, 16-Nov-1981, Version 6.-
0000   141 ;                    Changed the code at the DS$BREAK entry point. Put in a
0000   142 ;                    JMP to the label FAKE_JUMP, which is in the routine
0000   143 ;                    RESRVD_ENTRY. This was necessitated by the code at
0000   144 ;                    DS$BREAK occupying too many bytes for the entry point.
0000   145 ;
0000   146 ;          28        Marion Baggett, 12-Apr-1982,    Version 6.7
0000   147 ;                    Added entry point DSX$ERRPREP
0000   148 ;
0000   149 ;          29        Richard Brown, 27-May-82, Version 6.8
0000   150 ;                    Added entry point DS$SETPRIEXV.
0000   151 ;
0000   152 ;          30        Richard Brown, 24-June-82, Version 6.8
0000   153 ;                    Added entry point DS$MAPDBGBLOCK.
0000   154 ;
0000   155 ;          31        Richard Brown, 4-August-82, Version 6.9
0000   156 ;                    Added entry point DS$FREEDBGSYM.
0000   157 ;
0000   158 ;          32        Bob Bergazzi    23-Nov-82       Version 6.10
0000   159 ;                    Added entry point DS$LOADPCS.
0000   160 ;
0000   161 ;          33        Bob Bergazzi    May 16,1983     Version 6.11
0000   162 ;                    Changed the order of the .LIB statements.
0000   163 ;
0000   164 ;          34        Richard Brown   22-June-83      Version 6.12
0000   165 ;                    Added entry point DS$GETTERM.
```

```
0000   166 ;
0000   167 ;       35      Richard Brown   12-July-84      Version 7.0
0000   168 ;               Added entry point DS$SERVICE_DISPATCHER, to handle
0000   169 ;               all future additional services, since empty spots
0000   170 ;               in the dispatch vector area are in short supply.
0000   171 ;               Added DS$SRVDISP_TABLE, used by DS$SERVICE_DISPATCHER.
0000   172 ;               Added DSX$MOUNT and DSX$DISMOUNT to DS$SRVDISP_TABLE.
0000   173 ;               Changed DATA psect alignment from Byte to Quad.

Cross-reference output	80	00:00:01.23	00:00:02.19
Assembler run totals	1020	00:00:12.06	00:00:18.65

The working set limit was 1000 pages.
25604 bytes (51 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 321 non-local and 1 local symbols.
1908 source lines were read in Pass 1, producing 0 object records in Pass 2.
3 pages of virtual memory were used to define 3 macros.

Macro library statistics

Macro library name	Macros defined
DRB1:[DS.WORK]DIAG.MLB;955	0
DRB1:[DS.WORK]DS.MLB;218	2
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0

0000     44 ;                       NICK HOWGATE    06-DEC-78       VERSION 04 (ESSAA-5.01)
0000     45 ;       03              EMULATE CHARACTER STRING INSTRUCTIONS
0000     46 ;       04              Removed DSA$V_ERR_LOOP, use DS$INLOOP instead
0000     47 ;
0000     48 ;                       Dave Butenhof, 10-sep-1980, Version 6.0
0000     49 ;       05              Add error text to support RMS error codes used within
0000     50 ;                       supervisor.
0000     51 ;
0000     52 ;                       Dave Butenhof, 30-sep-1980, Version 6.1
0000     53 ;       06              Change forced word-relative references to longword-relative,
0000     54 ;                       since supervisor has g own.
0000     55 ;
0000     56 ;       07              - Jack Stansbury, 21-Oct-1981, Version 6.-
0000     57 ;                       Added calls to QA$MAIN for the QA enhancement.
0000     58 ;                       Also added .LIBRARY statements for $DS and $DIAG.
0000     59 ;                       Also changed some of the error messages to lower case.
0000     60 ;
0000     61 ;       08              - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     62 ;                       Fixed truncation errors.
0000     63 ;
0000     64 ;       09              - Jack Stansbury, 12-Nov-1981, Version 6.-
0000     65 ;                       Took out references to HALTD and HALTI. Changed them to HALT.
0000     66 ;
0000     67 ;       10              - Dave Butenhof, 17-Nov-1981, Version 6.5
0000     68 ;                       Add 'end of error' message, and typecodes
0000     69 ;
0000     70 ;       11              - Jack Stansbury, 21-Nov-1981, Version 6.5
0000     71 ;                       Commented out several of the calls to QA_MAIN because it
0000     72 ;                       appears as though they will not be needed for the 6.5 DS version.
0000     73 ;
0000     74 ;       12              - Dave Butenhof, 25-Nov-1981, version 6.5
0000     75 ;                       Added error text for error '54', 'Fatal controller error',
0000     76 ;                       as it is appallingly common.
0000     77 ;
0000     78 ;       13              - Dave Butenhof, 15-Dec-1981, Version 6.6
0000     79 ;                       Fix error trailer message to only type out if IE1 isn't
0000     80 ;                       set.
0000     81 ;
```

```
                                0000     82 ;        14      - Jack Stansbury, 17-Dec-1981, Version ?.?
                                0000     83 ;                Added all the registers to the register masks on each of the
                                0000     84 ;                error routines. These are for the QA routines.
                                0000     85 ;
                                0000     86 ;        15      - Dave Butenhof, 29-Dec-1981, Version 6.6
                                0000     87 ;                Use new error counters for each class of error (hard,
                                0000     88 ;                soft, etc.).
                                0000     89 ;
                                0000     90 ;        16      - Jack Stansbury, 25-Jan-1982, Version 6.6
                                0000     91 ;                Discovered that the error number is truncated to a word in the
                                0000     92 ;                RRprError error reporting routine even though the error number
                                0000     93 ;                that is passed to the routine is a longword in length. This is
                                0000     94 ;                most likely because of APT running on PDP-11's, which operate
                                0000     95 ;                on word lengths. So, I changed one instruction to zero out the
                                0000     96 ;                top word in DSA$GL_ERRNO when the error number is moved to this
                                0000     97 ;                longword.
                                0000     98 ;
                                0000     99 ;        17      Marion Baggett, 2-apr-1982, Version 6.7
                                0000    100 ;                added the PREPERR error routine for reporting errors caused by a
                                0000    101 ;                testing starting and the hardware not being properly set up.
                                0000    102 ;
                                0000    103 ;        18      Marion Baggett, 9-Apr-1982, Version 6.7
                                0000    104 ;                Change DS$PRINTF to DSX$PRINT for type coding
                                0000    105 ;
                                0000    106 ;        19      Jack Stansbury, 10-Apr-1982, Version 6.7
                                0000    107 ;                Changed some of the BBC instructions to the new DS macros such
                                0000    108 ;                as Br_If_ ....
                                0000    109 ;
                                0000    110 ;        20      Jack Stansbury, 11-May-1982, Version 6.8
                                0000    111 ;                Added code to store the MsgAdr parameter from the $DS_ERRxxx
                                0000    112 ;                macros into a location for use by the CRD routines.
                                0000    113 ;
                                0000    114 ;        21      Jack Stansbury, 21-Dec-1982, Version 6.11
                                0000    115 ;                Printed out some more flags, locations, etc. in the ErrSup
                                0000    116 ;                routine.
                                0000    117 ;
                                0000    118 ;        22      Jack Stansbury, 03-Mar-1983, Version 6.11
                                0000    119 ;                Changed the code that sets the DS$GA_User_Error_Text so that
                                0000    120 ;                this location is set ONLY when CRD is running. This MUST be
                                0000    121 ;                true or else the CRD dispatch vectors will get scrwed up.
                                0000    122 ;                The condition was this: if a diagnostic was run that issued
                                0000    123 ;                an error (prep, sys, dev, hard, or soft), then if CRD was run,
                                0000    124 ;                and one of the diags run by CRD encountered a prep error, the
                                0000    125 ;                path from the MEN$Preparation_Error_Text routine to the address
                                0000    126 ;                of the user's error text would be lost, and an exception would
                                0000    127 ;                result.
                                0000    128 ;
                                0000    129 ;        23      John Ciukaj     4-Apr-1983      Version 6.11
                                0000    130 ;                - Changed all references to CRD Bits in DSA Flags
                                0000    131 ;                  distinguishing between Online and Offline.
                                0000    132 ;
                                0000    133 ;        24      Bob Bergazzi    24-Apr-1984     Version 7.0
                                0000    134 ;                Fixed edit # 21, FMTERRSUP1, which pushed contents instead of the
                                0000    135 ;                address of DS$GT_VDS_VERSION on the stack.

Cross-reference output	94	00:00:01.39	00:00:03.66
Assembler run totals	1420	00:00:21.17	00:00:32.60

The working set limit was 1000 pages.
82479 bytes (162 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 602 non-local and 86 local symbols.
1037 source lines were read in Pass 1, producing 0 object records in Pass 2.
96 pages of virtual memory were used to define 37 macros.

                        0000     37 ;       01       Added conversion of T-bit trap in compatability mode
                        0000     38 ;                to compatability mode trap with code=7.
                        0000     39 ;       02       Fixed lower limit of user stack in SEARCH routine
                        0000     40 ;       03       Removed ISTK/KSTK Switching stuff.  Interrupts occur on
                        0000     41 ;                the correct stack as indicated by the SCB
                        0000     42 ;       04       Fixed up position of carriage prior to calling CLI.
                        0000     43 ;                Make sure its on a new line at the left margin
                        0000     44 ;
                        0000     45 ;                Roger Riggs     11-Sept-1979
                        0000     46 ;       05       Added TST$MCHK Machine check entry point for
                        0000     47 ;                testing the existence of a memory location
                        0000     48 ;
                        0000     49 ;                Roger Riggs     29-OCT-1979
                        0000     50 ;       06       More cleanup and added DS$PRINTSIG, which can
                        0000     51 ;                be used by the program to print the signal array of an
                        0000     52 ;                exception
                        0000     53 ;
                        0000     54 ;                Roger Riggs, 14-Feb-1980
                        0000     55 ;       07       Added QIO to cancel Control O before printing exception info
                        0000     56 ;
                        0000     57 ;                Roger Riggs, 21-Feb-1980
                        0000     58 ;       08       Added duplicate defs for entry points to satisify internal debugger
                        0000     59 ;                Also added code to revert to old handler for arithmetic traps
                        0000     60 ;                and faults.
                        0000     61 ;
                        0000     62 ;                Roger Riggs, 16-Apr-1980
                        0000     63 ;       09       Corrected bug that reports the incorrect value in R3 during
                        0000     64 ;                exception call to CLI
                        0000     65 ;
                        0000     66 ;                Roger Riggs, 21-Jun-1980, Version 5.5
                        0000     67 ;       10       Changed DSX$PRINTSIG to use PRINTB for First line
                        0000     68 ;                and PRINTX for info lines.  Added new entry point
                        0000     69 ;                DSX$PRINTSIGI that uses PRINTI for all output.
                        0000     70 ;
                        0000     71 ;                Dave Butenhof, 11-sep-1980, Version 6.0
                        0000     72 ;       11       Fixed link-time truncation errors in module (change
                        0000     73 ;                word-relative to long-relative)
                        0000     74 ;
                        0000     75 ;                Roger Riggs, 17-Sep-1980
                        0000     76 ;       12       Added Type and VA to error typeout for translation not
                        0000     77 ;
                        0000     78 ;                Dave Butenhof, 23-apr-1981, version 6.4
                        0000     79 ;       13       Correct spelling in some messages, change to mixed case.
                        0000     80 ;
                        0000     81 ;       14       - Jack Stansbury, 22-Oct-1981, Version 6.-
                        0000     82 ;                Changed SEP Psect to CODE. Fixed truncation errors.
```

```
                                0000     83 ;                Also added .LIBRARY statements for $DS and $DIAG.
                                0000     84 ;
                                0000     85 ;        15      - Dave Butenhof, 16-Nov-1981, Version 6.5
                                0000     86 ;                Split the FIND_USERPC routine into two--one will actually
                                0000     87 ;                find the last user PC and return the address (FIND_USER_PC),
                                0000     88 ;                while the other (FIND_USERPC) will call the first, then
                                0000     89 ;                format and type the response.
                                0000     90 ;
                                0000     91 ;        16      - Dave Butenhof, 17-Dec-1981, Version 6.6
                                0000     92 ;                Correct a bug in TST$MCHK which seems to have been here all
                                0000     93 ;                along--it clears off machine check logout incorrectly.
                                0000     94 ;

Symbol table output	66	00:00:00.43	00:00:00.67
Psect synopsis output	8	00:00:00.03	00:00:00.06
Cross-reference output	177	00:00:02.12	00:00:02.76
Assembler run totals	2508	00:00:33.69	00:00:47.00

The working set limit was 1000 pages.
158678 bytes (310 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1070 non-local and 63 local symbols.
1407 source lines were read in Pass 1, producing 0 object records in Pass 2.
115 pages of virtual memory were used to define 42 macros.

Macro library statistics

Macro library name	Macros defined
DRB1:[DS.WORK]DIAG.MLB;955	10
DRB1:[DS.WORK]DS.MLB;218	12
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	1
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	0
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	0
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	17
TOTALS (all libraries)	40

1187 GETS were required to define 40 macros.

There were no errors, warnings or information messages.

Psect synopsis output	4	00:00:00.03	00:00:00.03
Cross-reference output	23	00:00:00.30	00:00:00.30
Assembler run totals	985	00:00:15.01	00:00:31.95

The working set limit was 1000 pages.
36659 bytes (72 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 461 non-local and 55 local symbols.
1158 source lines were read in Pass 1, producing 0 object records in Pass 2.
12 pages of virtual memory were used to define 10 macros.

Macro library statistics

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	0
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	1
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	7

487 GETS were required to define 7 macros.

There were no errors, warnings or information messages.

Assembler run totals	1558	00:00:29.81	00:00:50.52

The working set limit was 1000 pages.
99309 bytes (194 pages) of virtual memory were used to buffer the intermediate code.
There were 80 pages of symbol table space allocated to hold 1297 non-local and 111 local symbols.
2005 source lines were read in Pass 1, producing 0 object records in Pass 2.
76 pages of virtual memory were used to define 25 macros.

+---------------------------+
! Macro library statistics !
+---------------------------+

Macro library name	Macros defined
DMA1:[SYSO.SYSMAINT]DS.MLB;218	0
DMA1:[SYSO.SYSMAINT]DIAG.MLB;953	0
SYS$SYSROOT:[SYSLIB]LIB.MLB;1	10
SYS$SYSROOT:[SYSLIB]STARLET.MLB;2	10
TOTALS (all libraries)	20

1360 GETS were required to define 20 macros.

There were no errors, warnings or information messages.

0000     52 ;               FIXED SET AND CLEAR FLAGS ALL BY DEFINING DSA$M_ALLFLAGS.
0000     53 ;
0000     54 ;       06      Dave Butenhof   15-feb-80
0000     55 ;               Include SEARCH flag
0000     56 ;
0000     57 ;       07      Dave Butenhof   30-apr-80
0000     58 ;               Change DSA$GL_FLAGS references from word relative to long
0000     59 ;               relative
0000     60 ;
0000     61 ;       08      - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     62 ;               Fixed truncation errors by changing remaining W^'s to L^.
0000     63 ;               Also added .LIBRARY statements for $DS and $DIAG.
0000     64 ;
0000     65 ;       09      - Jack Stansbury, 4-Nov-1981, Version 6.-
0000     66 ;               Took out all references to the following:
0000     67 ;               LOCK, SPOOL, COMPAT, ENSPEC, HALTD, HALTI, SUBMIT, LOG, and
0000     68 ;               CONSOLE. These flags are no longer used anywhere. I changed
0000     69 ;               the HALTD and HALTI flags to just plain HALT.
0000     70 ;
0000     71 ;       10      - Jack Stansbury, 12-Nov-1981, Version 6.-
0000     72 ;               Added the VERIFY and BINARY flags.
0000     73 ;
0000     74 ;       11      - Jack Stansbury, 25-Mar-1982, Version 6.?
0000     75 ;               Added typecoding to the print statements.
0000     76 ;
0000     77 ;       [12] Dave Butenhof, 07-May-1982, version 6.8
0000     78 ;               Fix truncation error
0000     79 ;
0000     80 ;       [13]    Marion Baggett, 16-June-1982, Version 6.8
0000     81 ;               Show HALT  flag if cleared.

Assembler run totals	890	00:00:08.91	00:00:14.25

The working set limit was 1000 pages.
29743 bytes (59 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 190 non-local and 9 local symbols.
464 source lines were read in Pass 1, producing 0 object records in Pass 2.
39 pages of virtual memory were used to define 21 macros.

The working set limit was 1000 pages.
26247 bytes (52 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 277 non-local and 3 local symbols.
164 source lines were read in Pass 1, producing 0 object records in Pass 2.
27 pages of virtual memory were used to define 14 macros.
