OpenVMS™ VAX™ Consolidated Software Distribution—July 1994
AV–PSQEM–TE

Welcome to this month's OpenVMS VAX consolidated software package. We have several changes in this month's package that deserve mention:

- DECADMIRE™ has simplified their kit to include all six components within a single kit. Customers should install the required software from the consolidation and use as usual.

- CDMENU for OpenVMS VAX has been updated to Version 2.0. Added features include:
  - Installation of selected kits within a product's [.KIT] directory
  - Support for installing products via POLYCENTER™ Software Installation Utility (PCSI)
  - Displaying or printing product documentation by file name or as a group
  - Support for multiple data files in the [CDROM] directory via CD_LIBRARY.DAT
  - Improved scrolling in the product selection screen
  - Improved information and error messages
  - Improved online Help

- The following products were removed from this month's distribution:

  > BASEstar™ CIMfast
  > MAILbus™ 400 Application Program Interface for OpenVMS
  > MAILbus 400 Message Transfer Agent for OpenVMS
  > DEC Availability Manager for Distributed Systems

- The following products were removed because they have been retired:

  > DEC3GL Implementation Toolkit for VMS™

NOTE

BASEstar CIMfast functionality has been included in BASEstar Classic.

The MAILbus 400 products will update to new versions with the next consolidation.

Functionality for DEC Availability Manager for Distributed Systems is included with Version 6.1 of the operating system.
