

RPO Section

The following conventions are being followed on most of the feature card RPO's attached to SERIES/1.

The most outstanding exception to this rule is the 4978 attachment which, because of it's impact on the DCP, is handled as a normal feature.

Familiarity with these conventions will help in the identification as well as support structures of RPO features encountered.

1. RPO documentation such as maps, listings, and ALD's are printed on green paper.
2. RPO MAP Programs fall within the range of 8000 to 9FFF.
3. Configurator program will alert the CE to the presence of RPO's which have a configuration record entry.
4. RPO Feature cards and cables may have green cloth identification tags affixed.
5. A brief description of the RPO Feature as well as the configuration record information will be contained in the prologue of it's maps.
6. Custom feature manuals, maintenance information manuals when applicable, will be multi-hole punched for inclusion in the Maintenance Library and will be part of the ship group.
7. All unique map programs supporting RPO's will be loaded from separate diskettes without using IPL.
