PRODUCT CLASSIFICATION LIST: All products are normally classified based on standard Sales Manual description of purpose. I/O or terminal products exclusive to one division which attach to selected products of the other division through RPQs are considered Common (for those uses only) with the approval of both divisions.

MACHINES CURRENTLY IN THE PRODUCT LINE

(*) Certain models of these machine types have been withdrawn from marketing. Refer to applicable machine page or announcement letters for models that have been withdrawn from marketing.

* Single dense storage technology models (U4, U6, U8; M4, M6, M8; A4, A6, A8).

Note: This list does not include standard machine types below 3000, RPQ machine types, special feature or model conversion RPQs, or former GSD "Exclusive" machines. For machine types below 3000, affected model conversions (special features are not affected) are so indicated on the applicable page of the RPQ Reference List or, for other RPQs, on the RPQ Description and Price Transmittal form received from ISG Special Product Marketing Support.

29 CARD PUNCH

PURPOSE

Punches coded data into cards serially by manual operation of the keyboard. For independent operation only.

MODELS

Model A Card Punch

A11	Numeric Keyboard	12 characters	Nonprinting
A12	Expanded Keyboard	64 characters	Nonprinting
A21	Numeric Keyboard	12 characters	Printing
A22	Expanded Keyboard	64 characters	Printing

Model B Card Punch (with left zero insertion)

B11	Numeric Keyboard	12 characters	Nonprinting
B12	Expanded Keyboard	64 characters	Nonprinting
B21	Numeric Keyboard	12 characters	Printing
B22	Expanded Keyboard	64 character	Printing

Model C Interpreting Card Punch

C22	Expanded Keyboard	64 characters	Printing

Limitations: Cards with lower corner-cuts (except lower left corner-cut C-3, 30 degrees, 0.0130 inch base measurement) cannot be fed. Round corner-cut cards are acceptable.

HIGHLIGHTS

Keyboard switches control the following automatic functions: Clear, card feeding, duplication and skipping, program 1-2 selection. A punched program-card in the program unit also controls duplication and skipping in addition to field definition, alphabetic shift, and on B mdls, automatic left-zero insertion.

Mdls equipped with the print feature are provided with keyboard switches to suppress all printing or to inhibit left-zero printing only. When printing is activated, the characters print along the top edge of the card as each column is punched. The hopper and stacker each hold approximately 500 cards. Skipping and card release are at the rate of 80 columns per second. Automatic duplication is at the rate of 20 columns per second on nonprinting models and at 18 columns per second on printing models.

Other Standard Features: Column indicator, multiple punch control, backspacing, and two program levels. **Note:** A keyboard switch can be preset to establish program 1 or 2 as the normal program. Functional keys permit shifting between program levels at will.

Printing: Punching and printing is at the rate of 18 columns per seconds. See "Type Catalog" for punching/printing options. Alphabetic "O" is squared slightly to distinguish it from numeric zero. The 64 characters of arrangement EL can be punched while duplicating, regardless of the special character arrangement installed. However, only the graphics of the specified arrangement can be printed while punching or duplicating. On printing models, other multipunched characters may cause damage to the print unit if duplication is attempted.

Keyboard: Depending upon the mdl, either an alphameric or numeric keyboard is furnished. See "Type Catalog" for available special character arrangements.

Arrangement EL: Extended BCD Interchange Code (64 characters), permits punching of any of the 64 EBCDIC characters with a single keystroke. On printing mdls, all of the 64 characters can be printed. This arrangement includes graphics associated with the following S/360 character sets of the 1403 Printer equipped with the Universal Character Set feature:

Programming	1403 Print Arrangement
PL/I	PN
PL/I	QN
FORTRAN/COBOL	RN

Graphics of all character sets associated with the 1443 mdl N1 and 2203 mdl A1 (S/360) are also included. **Exception:** 12-8-4 always prints as < on mdls A22, B22, C22. Arrangement EL is recommended for 1800 systems programming.

Arrangements A-K: Standard BCD Interchange Code (48 characters). When any of these arrangements is ordered, 16 special characters (graphics) associated with the 64-character set (EL) do not appear on the keytops. In place of these graphics, the punched hole codes are shown. These codes indicate the digits which can be punched by a single key depression in numeric shift, a savings in time for the operator, obviating the necessity for depressing the "Mult Pch" key and two or three separate keys to obtain a multipunched card column. Depression of these keys will not result in printing a recognizable character.

Left-Zero Insertion: [B mdls] Under program control, the operator keys only the significant digits within the field (maximum field size of 8 numerical positions), and then, by depressing the left-zero key, the field (including preceding left-zeros) is automatically punched. In the event the operator detects an error prior to depression of the left-zero key, the error reset key may be depressed and the data reentered.

Interpreting Card Punch: Mdl C22 is equipped with an early read station to permit printing over each column when prepunched cards are processed. This feature is under switch control. Machine will not punch when functioning as an interpreter. Cannot be equipped with automatic left-zero function.

Publications: See *IBM Marketing Publications KWIC Index* (G320-1621), *Reference Manual* (GA24-3332).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz):

  For Locking Plug:
  115V **#9880** 208V **#9884**
  230V **#9886**

  For Non-locking plug:
  115V **#9881** 208V **#9885**
  230V **#9887**

- Special Character Arrangement: [All mdls except A11, B11] See "Type Catalog".
- Acoustic Cover: If desired, **#9014** for card transport. May be field installed.

SPECIAL FEATURES

For detailed description of special features, see *Reference Manual* (GA24-3332).

Auxiliary Duplication (#1350): To duplicate from a master card on the auxiliary drum rather than from the reading station. **Limitations:** Cannot be installed with Self-Checking Number - Modulus 11 (#7062).

Card Insertion (#1535): Simplifies manual insertion of a master duplicating card in front of a group of cards to be punched, or insertion of a blank or prepunched trailer card at the end of a group of punched cards. **Limitations:** Cannot be installed with Feed, Variable-Length (#4360).

Character Inhibit (#1540): To restrict the number of active characters to 48 on alphameric keyboard arrangements A through K and EL (mdls A12, A22, B12, B22, C22). A switch in the program drum area permits selection of 48- or 64-character mode of operation. When set to 48-character mode, keying and punching of the following special characters is inhibited:

Card Code:	12-8-2	12-8-5	12-8-6	12-8-7	1-8-2	11-8-5	11-8-6	11-8-7
	¢	(	+	|	!	)	;	¬
Card Code:	0-8-2	0-8-5	0-8-6	0-8-7	8-2	8-5	8-6	8-7
	blank	—	>	?	:	'	=	"

Column Locate (#1570): [Mdls A, C] Enhances the ability to make over a card by automatically skipping or duplicating to the column or columns to be changed. A 17-key cluster located on the keyboard to the left of the existing keys is used to select the column or columns to be changed. **Limitations:** One program level must be dedicated to the use of this feature. Cannot be installed with Self-Checking Number - Modulus 10 (#7061).

Feed, Variable-Length (#4360): Permits processing of 51-, 60-, 66-, and 80-column cards. **Limitations:** Cannot be installed with Card Insertion (#1535) or Interspersed Gangpunch (#4720). Discontinuance of this feature requires replacement of the machine. **Field Installation:** No.

High-Speed Skip (#4595): For skipping at approximately three times the normal speed. Operates under program control in conjunction with normal skipping. Provides the greatest advantage for applications which require skipping at least 55 consecutive columns. **Limitations:** Cannot be installed with Interspersed Gangpunch (#4720).

Interspersed Gangpunch (#4720): For interspersed gangpunching with standard upper corner-cut master cards. A switch is provided for selecting cards with upper left of upper right corner-cuts as masters. Information is punched from the master card into detail cards until the next master is recognized. **Limitations:** Detail cards must have an upper corner-cut opposite to that designated for the master card. Cannot be installed with High-Speed Skip (#4595) or Feed, Variable-Length (#4360).

Self-Checking Number (#7061, #7062): [A mdls] A self-checking number consists of two parts, the basic identifying number and its check-digit. The check-digit, derived from the basic identifying number by one of two techniques, is always the units digit of the self-checking number. The feature assures that all digits of a number such as an account or item field have been correctly punched. Fields containing self-checking numbers can be any size up to 79 columns plus the check-digit. More than one self-checking field can be checked per card, but there must be at least one intervening column between such fields. The field is controlled by program-card coding. A detected error

29 Card Punch (cont'd)

punches a "12" over the units position of the field and locks the keyboard. For a correctly punched card, an "11" is punched in the blank space (81) following column 80. **Note**: Self-checking numbers of Modulus 10 are not compatible with those for Modulus 11.

Self-Checking Number - Modulus 10 (#7061): Uses weighting factors of 1, 2. When the self-checking field is greater than two digits, the weighting factor is repeated. Auto-duplication within the self-checking field is not possible. Includes self-checking number generator for assignment of new numbers. **Limitations:** Does not accommodate left base numbers. cannot be installed with Column Locate (#1570).

Self-Checking Number - Modulus 11 (#7062): Uses weighting factors of 7, 6, 5, 4, 3, 2. When the self-checking field is greater than six digits, the weighting factor is repeated. Auto-duplication within the self-checking field is possible, but must start with the first digit and can extend to, but not include, the self-checking digit. **Limitations:** Does not accommodate left base numbers. Cannot be installed with Auxiliary Duplication (#1350).

Self-Checking Number Generator - Modulus 11 (#7063): [A mdls] Determines and punches the check-digit. Used when assigning new numbers. **Prerequisites:** #7062.

Ordering: Before ordering special features see the following chart for possible feature combinations. Maximum combinations, indicated by "x", are shown in the vertical columns.

Features	Models														
	[				A				]	[	B	]	[	C	]
Auxiliary Duplication (#1350)	x	x	x		x		x	x		x	x	x	x	x	x
Card Insertion (#1535)		x			x	x	x	x	x		x	x		x	x
Character Inhibit (#1540)	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Column Locate (#1570)	x	x	x	x	x	x		x	x				x	x	x
Feed, Variable-Length (#4360)	x		x	x						x			x		
High Speed Skip (#4595)	x		x	x			x	x	x	x		x	x		x
Interspersed Gangpunch (#4720)		x			x	x					x			x	
Reading Board Extension (#6065)	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Self-Checking Number-Mod 10 (#7061)	x	x					x								
Self-Checking Number-Mod 11 (#7062)				x		x			x						
Self-Checking Number Generator (#7063)				x		x			x						

MODEL CONVERSIONS

Can be made in the field only between A11 and A12, A21 and A22, B11 and B12, B21 and B22.

ACCESSORIES

Reading Board Extension (#6065): The extension can be attached to the front edge of the standard reading board to provide an additional 28 cm (11-1/2 inches) x 28.5 cm (12 inches) working area to the left. The Reading Board Extension is available on a purchase-only basis. For shipment with machine, specify #6065.

SUPPLIES (None)

59 CARD VERIFIER

PURPOSE

Used to verify alphabetic, numeric, and special character punching in cards.

MODELS

Model 1	001	Numeric Verification	12 Characters
Model 2	002	Alphameric Verification	48 or 64 Characters

Limitations: Cards with lower corner-cuts (except lower left corner-cut C-3, 30 degree, 0.130 inches base measurement) cannot be fed. Round corner-cut cards are acceptable.

HIGHLIGHTS

Uses photosensing for quiet operation. Program card and keyboard switches and keys allow complete flexible control of all operations, including multiple changes between program levels within a card. Hopper and stacker each hold approximately 500 cards. Skips and releases at 80 cps. Verifies automatically under program or key control at 80 or 50 cps. Notches completely-verified correct cards on right edge between "0" and "1" punch positions. Verifies blank columns automatically at 50 cps. When an error is detected, the keyboard locks and error light is lit. Depression of "Error Reset" key unlocks keyboard. After the third trial of a column the error column is notched at the top of the card and the card advances to the next column. When high-speed auto-verifying at 80 cps (program controlled), notching of the error column is controlled by operator from keyboard. Verification of "X" does not cause skipping. Keyboard rotates approximately +/-12 degrees. For card codes of Expanded Character Set, see "Type Catalog".

Standard Features: Automatic Feed, Skip and Verify Switches. Column Indicator. Error Light, Error Reset key... Second Program Level, switch and keyboard controlled... Automatic Blank Column Verification, keyboard controlled... Program Unit, Program Drum and Control Lever... Stacker Overflow Stop Device... Release, Register, Feed, Skip, Multipunch, Verify Dup, Notch, Alpha and Numeric Shift keys... Clear Switch.

Automatic Left-Zero Verification: Allows auto-verification or left-zeros under program control at 50 cps. Operator controls verification of left-zero field by programming and optional use of "Left-Zero Control" key to signal end of data entry. If control key is used, depression must occur in correct sequence or error is signaled. See *Left-Zero Control Circuit Operation* (GN22-0221).

Publications: *IBM Marketing Publications KWIC Index* (G320-1621), *59 Operator's Reference Manual* (GA24-3333).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): For Locking plug, **#9880** for 115V, **#9884** for 208V, **#9886** for 230V. For Non-locking plug, **#9881** for 115V, **#9885** for 208V, **#9887** for 230V.
- Special Character Arrangement: [Mdl 2] See "Type Catalog".
- 0-9 and 11-12 Elimination: **#9143**, if desired.
- Acoustic Cover: **#9014** for card transport, if desired. **Limitations:** Will interfere with operator access to card during error-marking procedure. Should be ordered only if requested by customer. **Field Installation:** Yes.
- Left-Zero Control: **#9378**. For machines below serial number 22401, standard on all others. **Field Installation:** Yes. Not for Plant installation.

SPECIAL FEATURES

For detailed descriptions of special features, see *59 Operator's Reference Manual* (GA24-3333).

Auxiliary Verification (#1380): Depression of the Auxiliary Verify key causes verification of the common information field from the master card on the auxiliary drum.

Feed, Variable-Length (#4360): For processing 51-, 60-, 66- and 80-column cards. **Field Installation:** No.

High-Speed Skip (#4595): For skipping at approximately three times the normal speed. Operates under program control in conjunction with normal skipping. Provides the greatest advantage in applications that require skipping at least 55 consecutive columns. **Note:** For information regarding field changes of keytops see "Type Catalog".

MODEL CONVERSIONS

Model conversions can be made in the field.

ACCESSORIES

Reading Board Extension (#6065): The extension can be attached to the front edge of the standard reading board to provide an additional 28 cm (11-1/2 inches) x 28.5 cm (12 inches) working area to the left. The Reading Board Extension is available on a purchase-only basis. For shipment with machine, specify **#6065**.

SUPPLIES (None)

83 SORTER

PURPOSE

To group punched cards in numerical or alphabetic sequence.

MODELS

Model 1 001

Limitations: Because cards stack on end, internally-scored cards (Standard Card Score M-2A or M-3), aperture cards, Punched Hole Score OM-2 or OM-3, cards that have been folded or creased (Card Fold Crease S-2), or circulating card documents such as card checks are likely to cause stacking and jamming problems and should not be recommended without prior customer acceptance of these limitations. Only external scores M-2A, M-3, M-4, M-5 and CF-4 (on column 1 end of card) have been approved. Tumble cards with verify notches or similar conditions on the column 1 end of the feed, and cards with folded, bent, or creased corners are likely to cause stacking and jamming problems and should not be recommended without prior customer acceptance of these limitations.

HIGHLIGHTS

The 83 has 13 pockets, each holds from 400 to 900 cards and has an adjustable stop. The hopper holds 1,200 cards and can be equipped with File Feed (#4015). Has Sort Selection Switch (Numeric Zone, Alphabetic 1, Alphabetic 2, and Alphameric). Digit Suppression Keys direct cards of predetermined categories to the reject pocket. Edit Switch and Edit Stop Switch pre-edit cards for absence of selected multiple punches. Dynamic brake to stop machine quickly. Jam bar to stop machine quickly if card jams.

Publications: *Catalog of Marketing Publications* (G310-0012), *Unit-Record Installation-Manual Physical-Planning* (GC24-1037), *Reference Manual* (GA24-1034).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): Locking plug **#9880** for 115 V, **#9884** for 208 V, **#9886** for 230 V. Non-locking plug **#9881** for 115 V, **#9885** for 208 V, **#9887** for 230 V.

SPECIAL FEATURES

Alphabetic Sorting (#1225): Reduces number of card passes for alphabetic and alphameric sorts. See *Reference Manual* (GA24-1034) for sorting charts. **Field Installation:** No.

Card Counting Unit (#1520): Counts holes punched in a column, with or without sorting. Also registers number of cards not punched in that column. Has 14 5-digit adding counters, one for each punching position, one for rejects, and one for subtotals. Auxiliary Card Counter (#2370) is required for a grand total. The unit is connected to the sorter by a 5-foot cable. May be attached (mounted on) to it or placed nearby. Does not affect normal operation. **Field Installation:** No.

Auxiliary Card Counter (#2370): A 6-position unit counter, each is switch controlled, manually reset.

File Feed (#4015): Increases card loading capacity from 1,200 to 3,900 cards. Allows up to 3-1/2 minutes running time without reloading. Usually eliminates operator fanning and joggling of cards. Has joggle plate, modified card weight and pocket jogglers. Joggle plate swings aside for loading up to 300 cards into hopper for small sorts. See *Reference Manual* (GA24-1034) for details. **Limitations:** Is not practical if most cards are to be processed in batches of 3,000 or less. Limits visibility of column indicator and Auxiliary Card Counter (#2370). Limits access to 12 and reject pockets of sorter rack if rack is behind sorter. **Field Installation:** No.

Sorting Suppression (#7240): To separate cards into either reject or 12 pocket without disturbing card sequence.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

129 CARD DATA RECORDER

PURPOSE

Used to punch or verify alphabetic, numeric and special character data in cards by manual keyboard operation, and print if desired.

MODELS

Model 1	001	Alphameric	Punch	Non-Print	Verify
Model 2	002	Alphameric	Punch	Print	Non-Verify
Model 3	003	Alphameric	Punch	Print	Verify

Limitations: Cards with lower corner-cuts (except lower left corner-cut C3, 30 degrees, 0.130 inch base measurement) cannot be fed. Round corner cards are acceptable.

Generally, scored cards require careful handling and a favorable environment. Use of the following scores has been approved:

Internal Scores (before separation) S-1, and for a maximum of five passes M-4 ... M-5 may be used ... cards folded at the crease (Card Fold Creases S-2) must be properly flattened.

External Scores (after separation), for reading, punching and printing. On column 1 end, M-6, M-7 ... on column 51, 60, 66 and 80 end, M-3, M-7, OM-2, CF-4.

There should never be punching in the area of the score ... nor should scored cards be used for program cards or data read-in. All other scores may result in unsatisfactory performance. Consult IBM for more details.

HIGHLIGHTS

Has a buffer storage area into which data is keyed prior to punching, allowing error correction by character, word, field or record backspacing before punching. Also allows complete overlap of keying and automatic functions, for maximum operator throughput. Six program levels, plus an unformatted level, are standard. Formats are read into the storage area via punched program cards. Unlimited switching among levels is possible. Programs control automatic functions of skipping, duplicating, left-zeros or blanks, alpha or numeric keyboard shifting, and field definition. Hopper and stacker each hold approximately 500 cards. Skips and releases at 80 columns per second. Punches and prints at 18 columns per second for printing mdls, 20 columns per second for non-printing mdl. Printing is under switch control. A column indicator display shows the next column to be keyed. Punch or Verify mode is under keyboard switch control.

When equipped with a Card Input/Output Attachment (#7503), all mdls can be attached to a System/3 mdl 6 as an online card I/O device. When equipped with a 3741/5320 Attachment (#8201), the mdl 2 can be attached to a 3741 as an auxiliary card reader or punch, or as an online card I/O device to any mdl 5320.

Verify Mdls: Punched cards are read into buffer storage at 80 columns per second, and the operator key-verifies against the data in storage. For correct cards (no errors), digits 2 and 3 are punched in the column 81 area of the card and operation continues (similar to OK notch on the 59 Verifier). If keyed data does not match data in memory, an error is signaled ... operator can reset error and re-try verification ... if OK, operation continues ... if not OK after second try, machine automatically prepares to "rewrite" memory and next keystroke "rewrites" storage with correct data. Field or character backspace is then used to reverify corrected data in proper sequence within the field. When the buffer storage data is corrected and reverified, and at the completion of that record, the original card is released without any punching in column 81. A blank card is then inserted and punched from the buffer with the correct data and a "2" is punched in column 81. Thus, cards which had a correction punched can be identified from those without errors, and error cards have no punching in column 81.

Standard Features: Auto Skip/Dup switch ... Record Advance/Card Feed Switch ... Program Mode Dial ... Print On/Off (mdls 2, 3) ... Keyboard Mode 48/64 Character switch ... Read pushbutton ... Clear switch ... Record Backspace pushbutton ... Column Indicator ... Multipunch key ... Release key ... Program Select key ... Manual Dup key ... Feed key ... Skip key ... Register key ... Left-Zero Control key ... - LZ key ... Alpha and Numeric Shift key ... Space bar ... Stacker Full Stop switch and stacker card-volume measuring scale. Mdls 1 and 3 have a Punch/Verify Mode switch on the keyboard console ... also have Verify Reset key ... Verify Correct key ... Verify Error light ... Blank Columns Verify key is combined with Left-Zero Control key to provide dual function of blank columns verification and left-zero verification.

Printing: On mdls 2 and 3, is under Print On/Off switch control ... 64-character set EL, or the 48-character subset, is under 48/64-Character Keyboard Mode switch control. Leading zeros, in a field which is under program control, are automatically print-suppressed. **Note:** On mdl 3, printing is not active during verify except when a correction card is being punched.

Programs: Six levels plus a level "0" are standard. Levels 1-6 are read in via a punched card under Program Mode Dial and Read switch control ... level-zero format is 80 single-position fields, alpha shift. Desired level for start of a record is selected by the dial ... unlimited Program Select key switching within a record is possible. Program Mode Dial also controls program card punch out from storage, and data read in from a pre-punched card. Program card or data card read-in is at 80 columns per second.

Left-Zero or Left-Blanks Insertion: Either is under operator keyboard control. Program coding is not needed for punching ... any field may be left-zero punched by operator action. The operator keys the significant digits and then depresses Left-Zero key causing zeros to be inserted in numeric fields or blanks inserted in alpha field under storage control when the record is punched. Leading zeros are automatically print-suppressed. Maximum size of single field is 79 positions in punching.

Verify Mdls: Require program card coding to indicate the start and end column of a field to be verified using the left-zero control function. Operator keys the significant digits and depresses the Left-Zero Control key ... machine automatically verifies leading zeros and compares keyed data against data in the buffer and checks that depression of the Left-Zero Control key was in proper data sequence to prevent undetected errors.

Publications: *Machine Description* (GA22-6980), *Operator's Reference Manual* (GA22-6968).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): Locking plug: **#9880** for 115V, **#9884** for 208V, **#9886** for 230V. Nonlock plug: **#9881** for 115V, **#9885** for 208V, **#9887** for 230V.
- Acoustic Cover: **#9014** for card transport, if desired. **Field Installation:** Yes.
- Character Arrangement: See "Type Catalog".

SPECIAL FEATURES

For detailed descriptions of special features, see *Operator's Reference Manual* (GA22-6968). **Note:** Before ordering special features, see the following chart for possible feature combinations. Maximum combinations, indicated by X, are shown in the vertical columns. Each vertical column represents compatible feature combinations.

Accumulate (#1020)	x	x	x	x	x
Accumulate Program Level, Add'l (#1025)	x	x	x	x	x

Accumulate (#1020): Allows users to balance to a predetermined total or create a hash total for a group of cards, a batch of work, or to crossfoot and punch totals in the same card ... operates in program levels 1 and 2 only. It consists of three 14-position electronic accumulators that will algebraically add any numeric manually-keyed, duplicated, or Ver/Dup fields into any assigned accumulator, under program control. The maximum size of input is 14 decimal positions. Any accumulation beyond the 14th position will carry and maintain valid total up to 19 positions. The input field may be a left-zero or left-blank field, or an auto-dup or manual-dup field. The feature will recognize only the first punch of the numeric portion (0-9) of any keyed data in addition to the "11" for sign control in the units position. The responsibility for input size limitations and accumulator overflow is left to the user. Maximum punch field is 19 positions. Accumulate arithmetic will only occur after the entire record has been keyed in, therefore, there are no restrictions in the use of any backspace functions. **Limitations:** Accumulate (#1020) and Self-Checking Number (#7061 or #7062) are mutually exclusive within the same field. **Field Installation:** No. **Prerequisites:** #3610.

Accumulate Program Levels, Add'l (#1025): The accumulator operates only in program levels 1 and 2. Program levels 1 through 6 remain normal and active in the basic machine. This feature adds levels 3 through 6 to the program capacity of Accumulate (#1020). **Field Installation:** Yes. **Prerequisites:** #1020.

Auxiliary Storage (#1201): Allows insertion of up to 80 columns of common information into the corresponding field of a record from a stored location in memory. The Blank Columns/Left-Zero Control key is split and the Auxiliary Storage key replaces the lower portion of the Blank Columns/Left-Zero Control key. Readout of auxiliary storage is accomplished by impulsing the Auxiliary Storage key or under program control with 0 and 1 code in the first column followed by field definition punches for the remainder of the field. **Limitations:** Available only on machines with serial numbers above 20000. **Field Installation:** No.

Direct Punch Control (#3215): Provides a switch for control of card motion during keying, allowing punching to occur as each keystroke is made, and card motion to occur in synchronism with keying. Thus, source documents may be punched in similar fashion as on the 29, and

129 Card Data Recorder (cont'd)

the untrained or casual user of the 129 may conveniently operate the machine as a 29. Program control may also be used to cause one or more fields to be "buffered" while in direct-punch mode. **Limitations:** Operates in punch mode only. Available only on machines with serial numbers above 20000. **Field Installation:** Yes.

Expansion Feature (#3610): Provides additional capacity to permit installation of Accumulate (#1020), Self-Checking Number - Modulus 10 or 11 (#7061, #7062), or Card Input/Output Attachment (#7503). **Maximum:** One. **Field Installation:** No.

Feed, Variable-Length (#3950): Permits processing of 51-, 60-, 66- and 80-column cards. **Note:** Direct Punch Control (#3215) and/or Verify Read Control (#8705) may be required to provide additional card visibility for those customers punching or verifying into the source document. **Field Installation:** No.

Interpret (#4601): [Mdls 2, 3] Allows mdls 2 and 3 of the 129 to be used to interpret pre-punched cards. Under program card control with the Punch/Interpret/Verify switch in Interpret and the Auto Skip/Dup switch on, the machine is capable of the following:

1. Skipping columns not requiring interpreting.
2. Ignoring 12- and 11-zone punches on fields programmed, thus interpreting the numeric portion only.
3. Printing of leading zeros is under program control.

Interpreting takes place at normal punching speed, 18 columns per second. Skipping takes place 80 columns per second. If two or more adjacent columns are sensed as blank, the equivalent of skip speed will be achieved until a nonblank column is sensed. **Limitations:** In Interpret mode, punch/verify features (i.e., Accumulate, Self-Check) are inoperative. Available only on machines with serial numbers above 20000. **Field Installation:** No.

Production Statistics (#5570): Provides machine statistics for customer use in measurement of work load or production, analysis of errors, and job accounting. Counts automatically under machine control (no programming). Totals-punching is under operator keyboard control. Three electronic counters are provided in a combination package as follows:

1. Keystroke counter, 6 decimal positions (000,000 - 999,999). Counts every data and functional keystroke except multipunch, verify-correct, program select, feed, alpha, numeric, verify-reset, register, dup ... does not decrement.
2. Card counter, 4 decimal positions (0000 - 9999). Counts every output record in punch, or every verify correct or correction punching card ... does not decrement.
3. Verify Correction Keystroke counter, 4 decimal positions (0000 - 9999). Counts each verify correction data keystroke ... does not decrement. Counters reset to zeros when power is turned on. **Field Installation:** Yes.

Self-Checking Number (#7061, #7062): A self-checking number consists of two parts, the basic identifying number and its check-digit. The check-digit, derived from the basic identifying number by one of two techniques, is always the units-digit of a self-checking number. The feature assures that all digits of a number, such as an account or item field have been correctly keyed. Fields containing self-checking numbers can be any size up to 79 columns including the the check-digit. See "Limitations". More than one self-checking field can be checked per card. The field is controlled by program coding. A detected error locks the keyboard and the operator:

A. Chooses a recovery procedure to allow bypassing the field without punching any data, or
B. Provides a "12" or "11" punch over the units-position of the field which includes incorrect punching.

For a correctly punched card, an "11" is punched in the blank space (81) following column 80. Auto duplication of a self-checking field is possible. Self-check also operates in the verify mode.

Self-Checking Number - Modulus 10 (#7061): Uses weighting factors of 1, 2 ... when the self-checking field is greater than two digits, the weighting factor is repeated. **Field Installation:** No. **Prerequisites:** #3610.

Self-Checking Number - Modulus 11 (#7062): Uses weighting factors of 7, 6, 5, 4, 3, 2 ... when the self-checking field is greater than six digits, the weighting factor is repeated. **Field Installation:** No. **Prerequisites:** #3610.

Limitations: Self-Checking Number - Modulus 10 or 11 and Left-Zero Insertion are mutually exclusive within the same field. Accumulate (#1020) and the self-checking number features are also mutually exclusive within the same field. **Note:** Self-checking numbers of modulus 10 are not compatible with those of modulus 11. Self-checking number generating, self-check punch elimination, and left-based number (without a full-field) are not available for modulus 10 or 11.

Card Input/Output Attachment (#7503): To attach all mdls of the 129 as a card reader and/or output punch to a properly interfaced using system. The 129 attachment circuitry operating within a 64-character set arrangement performs the following internal conversions: (1) Input Read Mode - converts 80-column card code to System/3 card code format (B, A, 8, 4, 2, 1) and ... (2) Output Punch Mode - converts System/3 card code format to 80-column card code. Online the 129 reads, punches or punch/prints cards under system control at the following rated speeds: Card Reading - up to 50 cpm ... Punch/Print - 12 to 50 cpm. In Punch/Print mode throughput can vary dependent on the number of columns punched or printed. When two or more adjacent columns are blank, the equivalent of read speed is achieved until a nonblank column is encountered. In offline mode the 129 operates as a conventional card data recorder. **Limitations:** Accumulate (#1020), Accumulate Program Levels, Add'l (#1025), Direct Punch Control (#3215), Verify Read Control (#8705), and Production Statistics (#5570) are inoperative in the online mode. The 129 Card Data Recorder keyboard arrangement is not compatible with the proof keyboard, typewriter keyboard or System/3 mdl 6 keyboard arrangements. If a proof arrangement is desired on the 129, RPQ AA4942 should be ordered. **Maximum:** One. **Field Installation:** No, see "Card I/O Attachment" in "Specify". **Prerequisites:** #3610. #3210 on the 5406 when attaching to System/3 mdl 6, or #3210 on the 5231 mdl 3 when attaching to the 5230 Data Collection System. Connecting cable for 5406 ... Connecting cable for 5231 ... an 8m (25 foot) cable will be sent with the 5231 Control Unit as part of the Secondary Punch (#3210), no cable order is required.

3741/5320 Attachment (#8201): To attach a 129 mdl 2 as a card reader and/or punch to any mdl 5320 or a 3741 Data Station/Programmable Workstation equipped with the Data Recorder Attachment (#3200). An online switch is located on the 129 keyboard console. The 129 attachment circuitry interfaces to the 3741 or 5320 via 8-bit EBCDIC code, thus affording a 256-character set. Any character not within the standard 129 64-character set will not print during punch mode. Online, the 129 reads, punches, or punch/prints cards under control of the 3741 at the following speeds: card reading - up to 50 cpm ... punch/print - 11 to 39 cpm. Under control of the 5320: Card reading - up to 50 cpm ... punch/print - 12 to 50 cpm. **Note:** To read cards at speeds up to 80 cards per minute, order RPQ Z04771. In punch/print mode throughput can vary dependent on the number of columns punch/printed. When two or more adjacent columns are blank, the equivalent of read speed is achieved until a nonblank column is encountered. In offline mode, the 129 operates as a conventional card data recorder. **Limitations:** Accumulate (#1020) and Accumulate Program Levels, Add'l (#1025), are inoperative in the online mode. Available only on machines with serial numbers above 20,000. **Maximum:** One. **Field Installation:** No. **Note:** An 8m (25 foot) cable to attach a 129 to a 3741 is included in #3200 on the 3741. A 3m (10 foot) cable to attach a 129 to a 5320 is included in #3200 on the 5320.

Verify Read Control (#8705): [Mdls 1, 3] Allows the machine reading of a card to be interrupted by program card control, so that the operator may visually read from the "source document" card for verifying, before a portion of the card passes under read station. Facilitates reading columns 72-80 for source document verifying. **Limitations:** Available only on machines with serial numbers above 20000. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Reading Board Extension (#6065): The extension can be attached to the front edge of the standard reading board to provide an additional 28 cm (11-1/2 inches) x 28.5 cm (12 inches) working area at the left. The Reading Board Extension is available on a purchase-only basis. For shipment with machine, specify **#6065**. For shipment to the field order from IBM.

SUPPLIES (None)

357 INPUT STATION

NO LONGER AVAILABLE

PURPOSE

Badge and/or serial card reader input unit for a 357 Data Collection System.

MODELS

Model 4 004 — A badge reader which operates as an independent input station. Reads identification badges (size of a 22-column stub card) prepunched in IBM code with a maximum of ten numeric digits. Badges, which are punched on a 13 Badge Punch, are inserted and removed manually. Badge read-out is automatic with insertion of badge. See *0357 Badge Specifications Manual* (GA21-9028). Badges can be purchased from outside vendors or produced with commercially available laminating equipment.

Model 5 005 — A serial card reader. Standard unscored 80-column cards are inserted and removed manually, one at a time. Reads numbers, letters, IBM special characters, and instruction codes. Blank columns are not recognized and are automatically skipped. Provision is made for attaching a 372 Manual Entry or 374 Cartridge Reader.

Model 6 006 — A combination serial card reader and badge reader. Information pertaining to models 4 and 5 applies to model 6. This model, in conjunction with a 372 or 374, provides a means of loading the station with variable source data as well as fixed employee and job data prior to transmission to the output unit. An instruction code in the card shifts transmission of data from card to badge. A separate column must be used in the card being read for each column of the badge which is to be read out, unless Badge Read-out (#1450), a special feature, is installed. See *0357 Badge Specifications Manual* (GA21-9028) for badge specifications.

Prerequisites: A 358 Input Control Unit ... each 358 controls up to 20 357s, in any combination of mdls.

Publications: See *IBM Marketing Publications KWIC Index* (G320-1621).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9880** for locking plug, **#9881** for non-locking plug.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray.

SPECIAL FEATURES

Badge Read-Out (#1450): [Mdl 6] Enables the mdl 6 to read a badge only. When both a card and a badge are to be read, a single instruction code in the card shifts transmission to the badge reader for automatic read-out of the badge. Patch-panel wiring in the mdl 6 controls read-out. A "Badge" position on the mode switch provides automatic badge read-out upon insertion of a badge. **Field Installation:** No.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

358 INPUT CONTROL UNIT

NO LONGER AVAILABLE

PURPOSE

Links up to 20 357 Input Stations with one 24/26 Card Punch in a 357 Data Collection System.

MODELS

Model 1 001

HIGHLIGHTS

Analyzes instruction codes in input cards and controls card reading. Instruction codes are wired through a transaction selector in the 358 to format control. Data, in the form of DC pulses, is transmitted over multiconductor cable and punched at the rate of approximately 18 characters/second on the 26, or 20 characters/second on the 24.

Publications: See *IBM Marketing Publications KWIC Index* (G320-1621).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9880** for locking plug, **#9881** for non-locking plug.

SPECIAL FEATURES (None)

ACCESSORIES (None)

SUPPLIES (None)

360 CLOCK READ-OUT CONTROL

NO LONGER AVAILABLE

PURPOSE

Controls read-out of time from a 361 Read-Out Clock to up to 35 card punches in a 357 Data Collection System ... see "Limitations" below.

MODELS

Model 1 001

Limitations: Time can be provided for simultaneous output to up to ten 24/26s ... for applications such as attendance recording a 360 and 361 are required for each group of ten 24/26s which may simultaneously call for time.

Prerequisites: #1945 on the 24/26 Card Punch.

HIGHLIGHTS

Has connections for two 361s ... a toggle switch permits switching from one clock to the other.

Publications: See *IBM Marketing Publications KWIC Index* (G320-1621).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9880** for locking plug, **#9881** for non-locking plug.
- Cable: **#9081** for direct connection to a single output punch, **#9082** for connection to multiple punches via a common line ... see *Physical Planning Manual* (GA24-1032).

361 READ-OUT CLOCK

[NO LONGER AVAILABLE]

PURPOSE

Provides a means of punching time into output cards in a 357 Data Collection System.

MODELS

Model 1 001

Prerequisites: A 360 Clock Read-Out Control and #1945 on the 24/26 Card Punch.

HIGHLIGHTS

Time is read out as four digits ... hours (0-23) and nearest hundredths of hours.

Publications: *IBM Marketing Publications KWIC Index* (G320-1621).

372 MANUAL ENTRY

[NO LONGER AVAILABLE]

PURPOSE

For manual entry of data for transmission in a 357 Data Collection System.

MODELS

Model 1	001	Has six slides
Model 2	002	Has nine slides
Model 3	003	Has twelve slides

Limitations: Either a 372 or a 374 Cartridge Reader can be attached to a 357 mdl 5 or 6, not both.

Prerequisites: Each 372 requires a 357 mdl 5 or 6.

HIGHLIGHTS

Has up to 12 numeric slides, each with 11 character positions (0-9 and blank), which can be individually labeled. Slides may be locked in any desired position, or may restore to blank after each transmission. CE can wire any or all of the slides to read-out zero from the blank position ... to change all positions to read-out zero from the blank position, no additional parts are required ... to change any other number of positions, Jumper Assembly (P/N 765993), must be ordered on a no-charge MES.

Slides are codes for individual read-out under card read control. The high-order code position is on the left. Mdl 1 has six left-hand positions blanked-out and the six right-hand slides are coded 6 through 1 ... mdl 2 is similar with the three left-hand positions blanked-out and the slide positions coded 9 through 1 ... mdl 3 is codes 12 through 1.

Publications: See *IBM Marketing Publications KWIC Index* (G320-1621).

SPECIFY

- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray.

SPECIAL FEATURES

Supervisor Key (#7578): Replaces left-hand slide on mdl 1, 2 or 3 with a key-operated switch which provides a controlled ability to insert a specific authorizing digit in the output card for a transaction. **Field Installation:** No.

MODEL CONVERSIONS

If Supervisor Key (#7578) is *not* installed, conversions can be made from model 1 to 2 or 3, or from model 2 to 3.

ACCESSORIES (None)

SUPPLIES (None)

373 PUNCH SWITCH

[NO LONGER AVAILABLE]

PURPOSE:

For automatic switching to a second output punch in a 357 Data Collection System.

MODELS

Model 1 001 Multiwire connection

Prequisites: Two output punches per system ... 24/26 mdls 7 or 8, each with Punch Switch Control (#5930).

HIGHLIGHTS

Provides automatic switching to a second back-up punch if the first fails to duplicate, jams, or runs out of cards. Either or both punches may be placed in offline mode for use as a regular card punch by placing the "Auto" switch to "Keypunch".

Publications: See *IBM Marketing Publications KWIK Index* (G320-1621).

SPECIFY

- If the connector on the 358 is an old-style Elco (rectangular), order Adapter Cable Assembly (A/N 765183), on no-charge MES. If the connector on the punch cable is an old-style Elco (rectangular), and an adapter cable which provides a round Cannon connector is not available, order Adapter Cable Assembly (A/N 765181), on no-charge MES.

374 CARTRIDGE READER

[NO LONGER AVAILABLE]

PURPOSE

Data cartridge input unit for a 357 Data Collection System.

MODELS

Model 1 001 Multiwire connection

Limitations: Either a 372 or a 374 can be attached to a 357 mdl 5 or 6, but not both ... however, 372s and 374s can be interchanged on a terminal without requiring changes in the output card or the output program.

Prerequisites: Each 374 requires a 357 mdl 5 or 6.

HIGHLIGHTS

The Data Cartridge permits the user to pre-set up to 12 positions of variable numeric data at his regular workstation ... use is applicable primarily where variable numeric data must be entered into the system at a peak period. Throughput and accuracy at the 357 Input Station are increased and employee waiting time is reduced. The cartridge is manually inserted and removed. For use with 357 mdl 5 or 6, the cartridge is read out by the card in the same manner as the 372. One data cartridge is supplied with each 374 ... see "Supplies" for additional cartridges.

The reader is connected to the 357 by a 1 meter (3-1/2 foot) cable, and is wall-mounted to the right of the 357.

Publications: See *IBM Marketing Publications KWIC Index* (G320-1621).

SPECIFY

- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray.

1201 PROOF INSCRIBER

[No longer available ... features, model conversions, RPQs and accessories are not affected.]

PURPOSE

Performs all functions, except subtraction, of an 803 Proof Machine ... plus document inscribing.

MODELS

Models	Endorsing	Number of Pockets Operative	Number of Pockets Inoperative	Selector Key Arrangement
1	Yes	1-32	None	4 rows of 8
A1	Yes	1-24	25-32	4 rows of 6, or 3 rows of 8
B1	Yes	1-16	17-32	2 rows of 8, or 2 rows of 6, plus 1 row of 4
2	No	1-32	None	4 rows of 8
A2	No	1-24	25-32	4 rows of 6, or 3 rows of 8
B2	No	1-16	17-32	2 rows of 8, or 2 rows of 6, plus 1 row of 4
3	Yes	1-24	None	4 row of 6
B3	Yes	1-16	17-24	2 rows of 6, plus 1 row of 4
4	No	1-24	None	4 rows of 6
B4	No	1-16	17-24	2 rows of 6, plus 1 row of 4

HIGHLIGHTS

List, distribute, prove, inscribe, and (mdls 1 and 3) endorse checks, deposit slips, batch-control slips and similiar documents in one operation. Each pocket holds about 150 documents. See M803 pages for proof machine functions.

Documents: Intermixed card and paper documents within the following specifications can be inscribed:

Length	6 - 8.75 inches for paper or 4.852 - 8.75 inches for cards
Width	2.75 - 3.66 inches
Thickness	0.003 - 0.007 inch

Inscribing: Recommendations of the American Bankers Association are used. Two fields can be inscribed in magnetic ink on face of documents in a 1/4 inch band parallel to and 3/16 inch up from bottom edge. Spaced 8 characters/inch, starting approximately 5/16 inch from right edge. Type font is E13B. Fields are, from right to left: Amount - set up on adding keyboard and inscribed as ten digits bracketed by amount symbol ... Process Control - established by setting levers mounted in top cover of machine and inscribed adjacent to amount. Used to identify types of transcations or batches of work. Distribution pocket totals, as well as process control codes, can be inscribed on control slips during compartment total printing operations. **Note:** If desired, up to four process control positions are supplied at no charge ... see "Specify."

Endorsing: Endorsing models can endorse documents with date, identification numbers, and bank's legal endorsement. The Endorser Plate is made to the customer's specifications. See "Accessories" below. A Blank Endorser Plate is also available if only partial endorsements are required. When ordering #3792 attach *Endorser Plate Specification* (Z120-1348) ... not required for #3793.

Control Panel: Has hubs for Inscribe Suppress and Process Control Suppress, plus hubs for all 803 functions.

Publications: See *IBM Marketing Publications KWIC Index* (G320-1621).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): With locking plug, **#9880** for 115 V, **#9884** for 208 V, or **#9886** for 230 V.
- Process Control: If desired **#9190** for 1 position, **#9191** for 2, **#9192** for 3, **#9193** for 4 ... number of positions can be changed or eliminated by MES.
- Endorsing (mdls 1, A1, B1, 3, B3 only): See "Endorsing" under "Highlights" and "Accessories".
- Selector Key Arrangement: Mdls A1, A2 - **#9771** for 4 rows of 6 keys, or **#9772** for 3 rows of eight keys. Mdls B1, B2 - **#9773** for 2 rows of 8 keys, or **#9774** for 2 rows of 6 keys plus 1 row of 4 keys.

SPECIAL FEATURES

Process Control, Add'l (#5701, #5702): Up to four digits are standard ... see "Specify" above. Up to two add'l digits can be installed. #5701 for fifth digit ... #5702 for sixth. **Prerequisites: #9193** for #5701 ... #5701 for #5702.

MODEL CONVERSIONS

Conversions from endorsing to non-endorsing models, and vice versa, can be made between the following models: 1 and 2 ... A1 and A2 ... B1 and B2 ... 3 and 4 ... B3 and B4.

ACCESSORIES

Endorser Plates: The following items are available on a purchase only basis for mdls 1, A1, B1, 3 and B3 only. The normal plate charge will apply whenever replacement of a worn or damaged plate is required. A completed *Endorser Plate Specification Sheet* (Z120-1348) must be forwarded to the plant for each machine. If available a sample endorsment should be attached to each specification sheet.

Endorser Plate	(#3792)
Blank Endorser Plate	(#3793)

Note: When ordering #3792, it is recommended that at least one spare plate be stocked, as they cannot be immediately replaced.

SUPPLIES (None)

1203 UNIT INSCRIBER

[*No Longer Available ... features, RPQs and accessories are not affected*]

PURPOSE

Key-operated machine for printing numerals and special symbols on check and other documents in magnetic ink ... combined with functions of an adding machine.

MODELS

Model 1 001

HIGHLIGHTS

Continuous high-speed proving possible with a 10-key electric adding machine which prints individual amounts and totals on a paper tape. At the same time, document can inscribed with an amount field, a process control field, and be fully or partially endorsed and serial numbered ... see Serial Numbering/Endorsing (#3791) under "Special Features".

Speed depends upon operator and type of work processed. Has one stacker and one 10-position net balance accumulator which accumulates 11-position totals. Storage space provided for documents which cannot be processed.

Documents: Intermixed card and paper documents within the following specifications can be inscribed:

Length	6 - 8.75 inches for paper or 4.852 - 8.75 inches for cards
Width	2.75 - 3.66 inches
Thickness	0.003 - 0.007 inch

Inscribing: Recommendations of American Bankers Association are used. Two fields can be inscribed in magnetic ink on face of documents in a 1/4 inch band parallel to and 3/16 inch up from bottom edge. Spaced 8 characters/inch, starting approximately 5/16 inch from right edge. Type font is E13B. Fields are, from right to left: Amount -- set up on adding keyboard and inscribed as ten digits bracketed by amount symbol ... Process Control -- established by setting knobs in top cover of machine, inscribed adjacent to amount field as one to four digits. Used to identify types of transactions or batches of work. Machine total and process control codes can also be inscribed on control slips during total printing operations. **Note:** If desired, up to four process control positions are supplied at no charge ... see "Specify."

Document Counter: A six position counter ... reset manually.

Publications: See *IBM Marketing Publications KWIC Index* (GC320-1621).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): With locking plug, **#9880** for 115V, **#9884** for 208V, **#9886** for 230V. With non-locking plug, **#9881** for 115V, **#9885** for 208V, **#9887** for 230V.
- Process Control: If desired, **#9190** for 1 digit, **#9191** for 2, **#9193** for 4 ... number of positions can be changed or eliminated by MES.

SPECIAL FEATURES

Account Number Field Inscriber (#1012): Inscribes a fixed-length account number and "On-Us" symbols. Field can be any one length from 5 to 10 digits, as specified by customer. **Specify: #9210** for 5 digits, **#9211** for 6, **#9212** for 7, **#9213** for 8, **#9214** for 9, **#9215** for 10.

Serial Numbering/Endorser (#3791): Imprints full or partial endorsement and serial number. Endorsement prints fixed distance (about 1-1/4 inches) from bottom of document. Operator can select left or right horizontal printing positions separated from 2 manually-set positions by a selectable blank or dash. Serial number advance available in any one of the following options: [1] Advance one digit on credit feed (subtract key depression) ... [2] Advance one digit on zero-balance test (sub-total key depression) ... [3] Advance one digit on each document feed ... [4] Advance one digit on manual key control. Advancing method will be set by CE at installation or as required subsequently by customer. With this feature, documents can be endorsed with date, identification number and bank's legal endorsement. The etched endorser plate is made to the customer's specifications. See "Accessories" below. A blank endorser plate is also available if only partial endorsements are required. **Note:** The old Endorser on 1203s shipped prior to July 1, 1964 may be changed to the new feature by ordering #3791. A new endorser plate must also be ordered. On purchased machines, the new feature may be substituted for the old one at no charge except for the Field Installation Charge and price of the new endorser plate ... see "Accessories" below. When ordering #3792 attach *Endorser Plate Specification Sheet* (Z120-1348) ... not required for #3793.

Non-Zero Balance Test (#5350): Depression of Sub-total Key automatically locks keyboard if accumulated total is not zero.

Process Control, Add'l (#5701, 5702): Up to four digits are standard ... see "Specify" above. Up to two add'l digits can be installed. #5701 for fifth digit ... #5702 for sixth digit. **Prerequisites: #9193** for #5701, #5701 for #5702.

Transit Number Field Inscriber (#8020): Inscribes Transit-Routing numbers, dash and transit symbols.

MODEL CONVERSIONS (None)

ACCESSORIES

Endorser Plates: The normal plate charge will apply whenever replacement of a worn or damaged plate is required. Charges for art and layout work (#3796) are to be added if applicable. A completed *Endorser Plate Specification Sheet* (Z120-1348), must be forwarded to the plant for each machine. If available a sample of the endorsement should be attached to the specification sheet. The following items are available on a purchase only basis.

Endorser Plate (#3792)
Blank Endorser Plate (#3793)

Note: When ordering #3792, it is recommended that at least one spare plate be stocked, as they cannot be immediately replaced.

SUPPLIES

To order the following, contact IBM.

Magnetic Transfer Ribbon: Each Magnetic Transfer Ribbon provides about 13,300 impressions.

Disposable Ink Roll

Adding Machine Unit Ribbon

Adding Machine Paper Roll

1255 MAGNETIC CHARACTER READER

PURPOSE

Sorts documents, used in banking and other applications, meeting specifications under "Highlights" below. Available as a stand-alone sorter, or with an appropriate attachment feature, reads magnetic character data into a System/3 model 6, 8, 10, 12 or 15, a System/32, a System/34, a System/36 into a 2770 system in home or line mode, into a S/360 model 22, 25, 30, 40, 50, a S/370 model 115 through 158, 3031 Processor, or 4300 processor.

MODELS

Model 1	001	Reads and/or sorts up to 500 6-inch documents per minute into six stackers.
Model 2	002	Reads and/or sorts up to 750 6-inch documents per minute into six stackers.
Model 3	003	Reads and/or sorts up to 750 6-inch documents per minute into 12 stackers.

Mdls 1, 2 and 3 read the E13B type font. The characters, print quality, and codeline arrangement must meet the specifications recommended by the American Bankers Association Technical Committee on Check Handling. The specifications and related data are available in booklets 147R3 and the Supplement to 147R3, both of which are available at a nominal charge from the American Bankers Association, 1120 Connecticut Avenue NW, Washington, D.C. 20036.

Prerequisites:

For 1255 -- all documents must be mechanically joggled prior to each pass through the machine ... joggers are available from commercial sources. A sorting tray is recommended.

For System/3 -- one 1255 can be attached . Serial I/O Channel (#7081) is required on the 5406, 5408, 5410, 5412 or 5415 ... System/3/32/34 Adapter (#6303) is required on the 1255 itself. See "Special Features" for additional information, also see "Specify". **Limitations:** The 1255 utility program (5702-UT2 for both the mdl 8 and mdl 10 disk systems, and 5703-UT2 for the mdl 6) requires at least 12K bytes of main storage. The 1255 support for the mdl 12 and mdl 15 requires a minimum system. IBM's ability to service a mdl 10 card system with a 1255 attached may be impaired with an effect on system availability.

For System/32 -- one 1255 can be attached. System/3/32/34 Adapter (#6303) is required on the 1255. 1255 Attachment (#1100) is required on the 5320. See "Special Features" for additional information, also see "Specify".

For System/34 -- one 1255 System/3/32/34 Adapter (#6303) is required on the 1255. 1255 Attachment (#1100) is required on the 5340. See "Special Features" for additional information, also see "Specify".

For System/36 -- one 1255 System/3/32/34 Adapter (#6303) is required on the 1255. 1255 Attachment (#1100) is required on the 5360. See "Special Features" for additional information, also see "Specify".

For 2770 -- one 1255 can be attached to a 2770 system. 1255 Attachment (**#9755**) and Buffer Expansion (#1490) are required on the 2772 ... 2772 Adapter (#7850) is required on the 1255 itself. See "Special Features". For audit, maintenance, error recovery and application procedures, the 2770 system must include a printer.

For S/360 mdl 22, 30, 40, 50, or S/370 mdl 115 through 158, 3031 Processor, or a 4300 processor -- one 1255 can be attached to a system ... requires a channel control unit position ... a byte multiplexer channel is recommended. The 1255 should normally be the highest priority device on the channel. S/360/370 Adapter (#6360) is required on the 1255 ... see "Special Features". Direct Control (#3274) or External Interrupt (#3895) is required on the processing unit. There are no special features required on the 4361 or 4381 Processor to attach the 1255. External Signal (#3898) is required on the 3115, 3125 and the 4331 Processor.

S/360 mdl 25 -- multiplexer channel (special feature), or selector channel (special feature).

S/360 mdl 22, 30, 40, 50 -- multiplexer channel (standard), selector channels (special features, except on 2022 one selector channel is standard).

S/370 mdl 115, 125 -- byte multiplexer channel (special feature), External Signal (#3898) ... see M3115, 3125 pages. On a 3115-0, **#9336** is required.

S/370 mdl 135 -- multiplexer channel (standard), selector channels (special features) ... M3135 pages.

S/370 mdl 135-3 -- byte multiplexer channel (standard), block multiplexer channels (special feature) ... see M3135-3 pages.

S/370 mdl 138 -- byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145 -- multiplexer channel (standard), selector channels ... see M3145 pages.

S/370 mdl 145-3 -- byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148 -- byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158 -- multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 pages.

3031 Processor -- byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031 pages.

4300 processor -- byte multiplexer channel, block multiplexer channel.

Limitations: For S/360, S/370 or 4300 Processors -- the 1255 is not supported by any 1400 or 7000 series compatibility features. The 1255 is not supported by the Mdl 20 Compatibility Feature (#7520) on the 3115, 3125.

HIGHLIGHTS

Actual sorting and processing speeds depend upon length of document, paper quality, atmospheric conditions, and/or 2772 terminal and transmission limitations, or host system limitations. Reads all fields and sorts on any field.

Uses a lower cost, single-gap MICR reading technique, providing MICR capabilities for smaller volume operations. Reading performance may differ from other reader sorters. Pre-installation runs of actual documents are strongly recommended to determine expected performance. The input hopper holds 139.7mm (5-1/2") of documents in a gravity feed, permitting non-stop feeding. Mdls 1 and 2 each have six horizontal stackers in one vertical bay, while mdl 3 has 12 horizontal stackers arranged in two vertical bays of six stackers each. Individual stackers have a document capacity of 63.5mm (2-1/2"). The transport mechanism opens for access to the document path. An operator-resettable document counter is provided.

The unit is designed for ease of operation and operator training. The operator panel, feed hopper and stackers are in a compact area for operator convenience and minimum space requirements.

In addition to performing the basic Modulus 10 or 11 checking function, the Self-Checking Number/Improved Recognition feature, when installed and operative, is integrated with the MICR reading circuitry to reduce account number rejects and substitutions. This field is especially subject to folds, banding, and print specification deviations. Rejects and character substitutions will be reduced in proportion to the severity of document degradations, thus reducing customer reconciliation expense.

Sorting: For mdls 1 and 2, offline sorting uses five sort stackers and one reject stacker for a 2-phase digital sort. Phase 1 sorts even digits, rejecting odd digits which are sorted in phase 2. This conforms to the sort pattern of other 6-stacker sorters and permits the start of phase 2 sorting without removing phase 1 documents from the stacker. If Alternate Sort Pattern (**#9301**) is specified, digits 0-4 sort in phase 1 and digits 5-9 sort in phase 2.

For mdl 3, 1-phase sorting on digits 0-9 with rejects directed to stacker "R" at top of first bay. Stacker "A" at top of second bay is used to select items when the High Order Zero and Blank Column Selection feature is installed.

Online 2770 system operation suspends sorting, automatically alternating between two stackers on a stacker-full condition, with the rejecting of invalid documents.

Stacker selection is under program control when operating online to a computer system.

Field Lengths: The amount field and transit-routing (bank and branch) field are fixed-length ... the process control (transaction code) field and serial number (auxiliary on-us) field are variable-length ... the account number field may be fixed- or variable-length. See "Specify" below.

Checking: Readability of each magnetic character and special symbol, and the field-length check on fixed-length fields, are checked on all fields designated by the operator for reading into the system or terminal in the online mode, or on all fields designated for checking in the offline mode. When attached to the 2770 system, error documents are automatically rejected by the 1255 and data is not transferred to the 2772 buffer.

Documents: Intermixed paper and card documents (including traveler's checks) within the following specifications can be processed:

Width -- 64 to 108mm (2.5" to 4.25")
Length -- 146 to 225mm (5.75" to 8.875")
Thickness -- 0.076 to 0.178mm (0.003" to 0.007")
Paper Stock -- 75 to 165g/sq.m (20 lb. to 44 lb) (card stock)
Carrier documents, enclosing a non-processable item, up to 0.33mm (0.013") in thickness may be processed.

1255 Magnetic Character Reader (cont'd)

Document Evaluation: Documents must be evaluated at least six months prior to installation to determine whether the level of print quality is acceptable to the customer, with time for corrective action if necessary. Sub-standard E13B quality may cause excessive rejects and character substitutions.

Transmission: When used with the 2770 system, the 1255 reads into the two 2772 buffers, automatically stopping and alternating between buffers on a specified number of documents. Buffer Expansion (#1490) is required on the 2772. The number of records (documents) held by the buffer is determined by the maximum record length for the fields selected for reading. The records/buffer is set at 4, 6, 8, 10 or 12. The records/buffer may be changed by the CE, but is not subject to customer control. In online transmission and pre-transmission verification operations, reading characters in excess of the maximum record length specified causes an error condition. The following options are available:

Maximum Record Length (including special symbols)	Records/buffer
53	4
41	6
30	8
24	10
20	12

Balance-List (#1470) facilitates pre-transmission balancing to batch total tickets of stacked batches. In Mode A, operating under 1255 speed limitations, the feature totals the Amount Field on good items and prints the good item total, batch ticket total, and derived difference on the 2770 system printer. In Mode B, under 2770 system printer speed limitations, good items are detail listed with the same total cycles as Mode A. Documents are listed with limited print editing and limited columnar formatting.

Bibliography: System/3 -- GC20-8080 ... System/32 -- GC20-0032 ... System/34 -- GH30-0231 ... System/36 -- GC21-9015 ... 2770 -- GA24-3089 ... S/360 -- GC20-0360 ... S/370, 4300 -- GC20-0001

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): For stand-alone and use with 2770 system: Locking plug -- **#9880** for 115V, **#9884** for 208V, **#9886** for 230V ... non-locking plug -- **#9881** for 115V, **#9885** for 208V, **#9887** for 230V. For use with System/3, S/360, S/370 or 4300 Processors: **#9902** for 208V, **#9904** for 230V, for 4381 Processor, 230V is not available. Specify **#9915** fo 240V. For use with System/32, System/34 andSystem/36: Locking plug -- **#9884** for 208V, **#9886** for 230V ... non-locking plug -- **#9885** for 208V, **#9887** for 230V. Must be consistent with system voltage ... specify code consistent with system/voltage for pre-system 1255 installation.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray.
- Alternate Sort Pattern: **#9301**, if desired. Replaces the standard even/odd pattern with the 0-4/5-9 pattern. See "Sorting" above. May be changed in the field by MES.
- Account Number Field Length: Specify **#9210** for 5 digits ... **#9211** for 6 digits ... **#9212** for 7 digits ... **#9213** for 8 digits ... **#9214** for 9 digits ... **#9215** for 10 digits ... **#9219** for variable-length. A fixed-field length assures maximum processing accuracy. However, a variable-field length may be specified in lieu of a fixed-field length. Length of the account number field may be changed in the field by MES.
- Superior Reading Performance: Self-Checking Number/Improved Recognition (#7060) is recommended ... see "Highlights" above and "Special Features" below.
- Use With System/3, System/32 or System/34: System/3/32/34 Adapter (#6303) is required ... see "Special Features" below.
- Use with 2770: Transmission Code -- **#9761** for EBCDIC, **#9762** for ASCII ... must be consistent with 2772 code. May be changed in the field by MES. **Prerequisites:** #7850 ... see "Special Features".
- Use with S/360 mdls 22, 25, 30, 40, 50, S/370 mdls 115 through 158, a 3031 Processor, or a 4300 processor: S/360/370 Adapter (#6360) is required ... see "Special Features".
- Kickstrips: **#9431**, if desired. **Field Installation:** Yes. **Note:** When installed, the open area under the machine is enclosed. This reduces the amount of "toe-room" for the operator and may be inconvenient to the customer if the power outlet is located under the machine.

MODEL CONVERSIONS

Field installable only between model 1 and model 2.

SPECIAL FEATURES

Balance-List (#1470): [For use on 2770 system only] For pre-transmission balancing of stacked document batches. Accumulates the total of good items, with or without detail listing ... a batch total ticket initiates terminal printing of the good item total, batch ticket total, and net difference. Invalid items are rejected. In totaling mode, documents are checked for the maximum characters per document specified for transmission. In listing mode, a different number of characters per document may be specified on installation. In listing mode, selected fields are printed in document order with limited print editing ... the amount field is right justified with decimal insertion and high order zero suppression ... other fields are left justified in columns tabulated on the terminal printer ... special symbols, except dashes and the right amount field symbol, are indicated with substitute printer symbols. Selected fields, other than the process control field, missing from the document causes fields to print in alternate columns. **Limitations:** The feature is not operative during line transmission or fine sorting operations. **Field Installation:** Yes. **Prerequisites:** #7850 ... the 2770 system must include a printer or display unit.

Dash Symbol Transmission (#3215): Transmits the E13B dash symbol from transit field to storage. With symbol in storage, the program can distinguish between duplicate foreign and U.S. transit numbers. **Field Installation:** Yes.

51-Column Card Sorting (#4380): Mdl 1 -- for reading and sorting 51-column card documents. When installed, machine speed is reduced to approximately 405 dpm for 6-inch documents. For 51-column cards, speed is approximately 500 dpm. Mdls 2 and 3 -- when installed, machine speed is reduced to approximately 605 dpm for 6-inch documents. For 51-column cards, speed is approximately 750 dpm. **Note:** For optimum performance on all mdls, card documents should be separated out from standard size ABA documents on first pass operations. **Field Installation:** Yes.

High-Order Zero and Blank Selection (#4520): Permits selection to pocket "A" of documents during a digit sort having only blanks or zeros in the sort position and in all higher order positions of the field. **Limitations:** Available on mdl 3 only ... operates offline only. **Field Installation:** Yes.

System/3/32/34/36 Adapter (#6303): To attach the 1255 to the Serial I/O Channel (#7081) on the 5406, 5408, 5410, 5412, 5415, or to the 1255 Attachment Feature (#1100) on the 5320, 5340, and 5360. **Field Installation:** Yes. **Specify: #9791** for use with 5406, or **#9792** for use with 5408, 5410, 5412, 5415, 5320, 5340, or 5360. **#9791** can be changed in the field to **#9792**, or vice versa.

S/360/370 Adapter (#6360): To attach the 1255 to the Byte Multiplexer Channel. **Field Installation:** Yes.

Self-Checking Number/Improved Recognition (#7060): For reducing rejects and substitutions caused by defects in the account number field and for checking Modulus 10 or 11 self-check digit account numbers up to 10 positions long, including the self-check digit and dashes. SLT pluggable card wiring determines the modulus calculated and weighting factor for each digit. SLT card is removed and inserted by the CE for customer wiring. An operator panel on/off switch is the only customer control of the feature. The self-check digit may be in any position, always using a weighting factor of 1. Modulus 10 will check any weighting factor 0 through 9, summing the product digits, and checking for an even multiple of 10. Modulus 11 will check any weighting factor, summing the products and checking for either an even multiple of 11, or for a constant remainder of 4.

This feature, when installed and operative, replaces the basic character substitution checking circuitry with the more accurate Modulus 10 or 11 checking circuitry while the account number field is being read. Documents with marginal printing that might normally be rejected as potential substitutions will be processed if all characters pass the self-checking digit test, thus reducing the chances of a reject. All account numbers that fail the self-checking digit test will cause the document to reject, thus reducing the chances of a substitution. Since the account number field is frequently subject to folds, banding, multilation and print specification deviations, rejects and substitutions will be reduced in proportion to the severity of document degradation. **Field Installation:** Yes.

2772 Adapter (#7850): To attach the 1255 to a 2772 Control Unit. A switch (adjacent to the self-checking number switch) is provided which permits listing documents previously rejected to determine which field and which character caused the reject. **Field Installation:** Yes.

ACCESSORIES (None)

SUPPLIES (None)

1287 OPTICAL READER

PURPOSE

Optically reads machine printed numeric digits, alphabetic characters, special symbols and handprinted numeric digits and certain alphabetic characters into a S/360 model 22, 25, 30, 40, 50, 65, 65MP, 67 (in 65 mode), 75, any S/370 processor except 3081, 3083 or 3084 (1287 model 005 only on 115 and 125), or a 4331 or 4341 Processor. Machine printed or handprinted character reading is dependent on model and features. See "Special Features".

MODELS

Model 1	001	Can read multiple lines of numeric printed data from cut form paper or card documents.
Model 2	002	[NO LONGER AVAILABLE] In addition to reading multiple lines of numeric printed data from cut form paper or card documents, can also read data from continuous rolls of paper (journal tapes) ... machine design permits easy operator change-over from document to journal tape handling, and vice versa, in a matter of seconds.
Model 3	003	Identical to model 1, with the added capability of reading the alphameric ANSCS OCR Size A font character set.
Model 4	004	[NO LONGER AVAILABLE] Identical to model 2, with the added capability of reading the alphameric ANSCS OCR Size A font character set.
Model 5	005	Can read multiple lines of numeric handprinted digits and certain alphabetic handprinted characters from cut form paper or card documents.

Note: Although the 1287 models 2 and 4 are no longer available model conversions, features, RPQs and accessories are not affected.)

Prerequisites: Multiple 1287s, all mdls in any combination, can be attached to a system ... each 1287 contains its own control unit and requires a channel control unit position.

S/360 mdl 25: Special feature on 2025: Multiplexer channel or selector channel.

S/360 mdl 22, 30, 40, 50: Multiplexer channel (standard), or selector channels (special features, except on 2022 one selector channel is standard). For attachment to a S/360 mdl 30, a 2030 mdl D or larger is required.

S/360 mdl 65, 65MP, 67 (in 65 mode), 75: Basic multiplexer channel of a 2870, selector subchannels (special features) of a 2870 ... see M2870 pages.

S/370 mdl 115, 125: [1287 mdl 005 only] Multiplexer channel (special feature) ... see M3115, 3125 pages.

S/370 mdl 135: Byte multiplexer channel (standard), selector channels (special features), block multiplexer channel (special feature) ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Byte multiplexer channel (standard), selector channels (first one is standard), block multiplexer channel (special feature) ... see M3145 pages.

S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158: Byte multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 pages.

S/370 mdl 165, 168: Basic multiplexer channel of 2870, selector subchannels (special features) on 2870 ... see M2870 pages.

3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031 or 3032 pages.

3033 Processor: Byte multiplexer channels, block multiplexer channels ... see M3033 pages.

4300 Processor: Byte multiplexer channel or block multiplexer channel.

HIGHLIGHTS

All Mdls: The basic machine includes an input hopper with a capacity for an 11-inch stack of documents, an optical read station, a document transport, and three output stackers, each with a capacity for four inches of documents. Documents are fed, one at a time, under program control to the read station where each document is held stationary while it is scanned and read by an electronic flying spot optical scanner. Documents can range in size from 2.25" x 3" to 5.91" x 9".

Format control flexibility is provided under S/360, S/370, 4331 or 4341 Processor program control to allow reading variable-length fields in any sequence. Depending on mdl and feature mix, fields may contain machine printed, typewritten, imprinted or handprinted characters, oriented in either of two directions on the same document. The stored program directs the beam, a field at a time, to the data to be read. Information is scanned from right to left (units to high order) and fed serially, a character at a time, to the system channel.

Unreadable characters are automatically rescanned . Unrecognizable characters may be displayed selectively under program control for online correction (except ANSCS OCR characters read in alphameric mode) The document remains in the read station until ejected under processor program control. Final disposition of each document into one of the three output stackers (A, B or R) is controlled by the program. Stackers A and B can be used for selecting two classes of documents. Stacker R is normally used for selecting documents with unrecognizable characters. Automatic overflow between stackers A and B can be used to extend the length of document runs without stopping the machine.

All mdls provide the following features:

- Multi-line, normal and "plus 90 degrees" reading of numeric 1428 or ANSCS OCR Size A type fonts produced by high speed printers and IBM Selectric® typewriters, and reading of imprinted (1428 E or ANSCS OCR Size C fonts) or handprinted numeric digits and certain handprinted alphabetic characters from documents.
- Format flexibility under processor program control.
- Automatic rescan of unreadable characters.
- Cathode ray tube character display with selective online correction of unreadable numeric characters from the operator keyboard.
- Document counter.

Mdls 1 or 2: The digits 0-9 and the alphabetic characters C, N, S, T, X, Z, printed in 1428 font, plus a special preprinted vertical field mark symbol, can be recognized ... or the digits 0-9 and the three abstract symbols, "hook", "fork" and "chair" printed in the American National Character Set for Optical Character Recognition (ANSCS OCR) font, plus the special preprinted vertical field mark symbol, can be recognized.

Mdls 3 or 4: The alphameric ANSCS OCR character set described below and the characters described for mdl 001 or 002 can be read.

Mdl 5: The handprinted digits 0-9 and handprinted alphabetic characters C, S, T, X and Z and numbers preprinted in Gothic 3/16" font can be recognized.

Features for mdl 005 are:

- Numeric handprinting basic font.
- Alternate NHP character Read-Verify Mode selectable under program control.
- Keyboard and Display Console for online correction.
- Hopper Preload Tray.
- Stacker Foot Treadle start-stop control.
- Background color contrast.

Speed (Documents): Maximum document throughput depends upon document size, the number of characters and fields to be read (machine printed, handprinted, mark read), printed character registration or alignment, characters rescanned, use of online correction, and the processor program. For full details, including speed formula , see GA21-9064 and GA21-9150.

Maximum document throughput can range from about 665 documents per minute for a 3" long stub with one field of 20 machine-printed characters, to less than 100 documents per minute for a 6" long document containing 50 fields of handprinted characters.

Documents and Printing (all mdls): For optimum operation, print quality must conform to quality specifications established for the 1287 described in GA21-9064 and GA21-9150. Except for imprinting, only original copy may be processed. Document sizes and weights must conform to those specified in GA21-9064 and GA21-9150. Also see Serial Numbering (#6550, #6555) under "Special Features" for special document size restriction.

Additional document considerations relating to the printing device, recommended ribbons and type styles can be found in GA21-9064 and GA21-9150.

Journal Roll Reading: [mdl 002 or 004 only] A journal tape transport permits reading the digits 0-9 and the selected characters C, N, S, T, X, Z and "slash-minus" printed in 1428 Font (**#9735** or #4470); 0-9, the selected characters C, N, S, T, X, Z and symbols "hook", "fork" and "chair" printed in ANSCS OCR Size A (with **#9736** or #4470); or the digits 0-9 and six special symbols printed in NCR Optical Type Font (with #5300) from journal rolls. The same reading station described above for document reading is used for reading rolls. A maximum of 38 characters may be read from a single journal roll line. Maximum

1287 Optical Reader (cont'd)

character spacing is 10 characters/inch. Unreadable characters are automatically rescanned.

The line to be read is positioned automatically and scanned under program control from units to high order (right to left - read forward orientation) ... tapes may be processed in either direction. The operator can control the fields to be scanned, the font selection and tape processing direction (forward or backward) by manual console settings. Unreadable characters may be corrected online by the operator, or the line containing the unreadable characters may be marked under program control for offline correction.

In addition to all the features of the mdl 001 and 003, mdls 002 and 004 provide:

- Forward or backward tape reading.
- Input roll feeding up to 200 feet capacity.
- Online manual correction of unreadable characters via operator keyboard.
- Line marking of lines containing unreadable characters under program control.
- Easy operator changeover from document to journal tape handling, and vice versa, in a matter of seconds.

Speed (Journal Rolls): Depends upon the number of characters per line, tape width, line spacing and vertical registration printing accuracy. For complete details, including speed formulas , see GA21-9064.

Throughput is affected by online correction and the user's program ... rescan and line marking of lines containing unreadable characters may also affect throughput.

Journal Rolls: Size ranges and specific journal tape considerations relating to the printing device, ribbons, type styles, paper color and quality are contained in GA21-9064.

Printing: For efficient operation, printing must conform to the quality specifications established for the 1287. For optimum operation, black, purple or approved red ink colors should be used ... colors other than black or cash register purple should be referred to the Data Entry Product Center for review. Journal rolls may be prepared by adding machines, cash registers and similar devices. Acceptable type styles are IBM 1428, ANSCS OCR Size A and NCR Optical Font (NOF type style developed by NCR) ... for allowable characters, see "Table of Acceptable Characters - 1287" below. For reading NOF type style, NCR Optical Type Font (#5300) is required ... see "Special Features".

Optional Features: Available on mdls 001, 002, 003, 004 are -- Numeric Handprinting (#5370) including preprinted number recognition of 3/16" Gothic characters, Farrington 7B Font (#3945), 1428 and ANSCS OCR Font (#4470) which permits alternate reading of both fonts in separate, pre-identified fields under program control, and Serial Numbering (#6550). The following are also available: On mdls 002 and 004 -- NCR Optical Font (#5300) ... on mdls 003 and 004 -- Expanded Symbol Set (#3850) ... on mdl 005 -Machine Printed OCR Font (#4900) which includes alternate reading of numeric 1428, ANSCS OCR and Farrington 7B fonts in separate, pre-identified fields under program control and Serial Numbering (#6555) ... on all mdls -- Optical Mark Reading (#5479). See "Special Features".

Bibliography: S/360 -- GC20-0360, S/370, 4300 -- GC20-0001

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V ... must be consistent with system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Type Font: [mdls 001, 002, 003, 004] **#9735** for reading 1428 and 1428 E Type Font only, or **#9736** for reading only the American National Standard Character Set for Optical Character Recognition

  ... neither of these are to be specified if 1428 and ANSCS OCR Font (#4470) is ordered. See "Special Features".

- National Graphics: One of the following characters may be ordered in place of the dollars symbol: #2915 for British pound sign, #2916 for Y bar (Yen sign), #2917 for Umlaut U, #2918 for Umlaut A.

  In addition, order #2919 for Umlaut O or #2921 for slash zero.

  Also, order #2920 for Angstrom), #2922 for AE dipthong, #2923 for tilde N.

- Background Color Contrast: **#9030**, if desired (standard on mdl 005). This feature allows use of darker background colors for outlining numeric handwriting boxes and mark read positions on documents where high visual contrast is desired. Background color is limited to blue range of visual spectrum when printed to maximum intensity permissible with this feature. Refer to GA21-9064 and GA21-9150 for description of ink characteristics. The feature is compatible with 1287 approved blue-green to blue range of background colors printed at standard machine maximum intensities. **Limitations**: Not compatible with purple ink journal tape processing (mdls 002 and 004). Certain background colors approved for the 1287 mdls 001 through 004 (particularly in the yellow-green range) are not compatible with this feature. The Data Entry Product Center will review any existing forms for background ink compatibility with this feature. **Field Installation**: Yes.

SPECIAL FEATURES

Expanded Symbol Set (#3850): [mdl 003, 004] To recognize the following eight special symbols when they are created by an IBM Selectric® typewriter or equivalent: plus, equals, left bracket, right bracket, per cent, query, quote, double quote.

Farrington 7B Font (#3945): [mdls 001, 002, 003, 004] For reading characters imprinted on documents by credit plate imprinters in Farrington Selfchek* 7B Font ... see characters listed under"7B - #3945" below.

1428 and ANSCS OCR Font (#4470): [mdls 001, 002, 003, 004] Provides the ability to read numeric 1428 and ANSCS OCR fonts, each in separate, pre-identified fields of a document ... selection of the font to be read for a specific field or document type is under program control. See characters under "IBM 1428 Font" and "ANSCS OCR" shown below. On mdls 002 or 004 only, reading of 1428 or ANSCS OCR Size A font on journal rolls is interchangeable under operator switch control. **Note**: When this feature is ordered for plant installation, neither **#9735** nor **#9736** under "Specify" need be specified.

Machine Printed OCR Font (#4900): [mdl 005] Provides the ability to read numeric 1428, ANSCS OCR and Farrington Selfchek* 7B Font, each in separate, pre-identified fields of a document ... selection of the font to be read for a specific field or document type is under program control. See characters under "IBM 1428 Font", "ANSCS OCR" and "7B" shown in the "Table of Acceptable Characters - 1287" below. Also, see GA21-9150.

NCR Optical Type Font (#5300): [mdl 002, 004] For reading characters from journal tapes printed in "NOF" type style developed by NCR. The characters listed under "NOF - #5300" below can be read. Reading of this type style and IBM 1428 or ANSCS OCR Size A type style is interchangeable, under operator switch control. This feature also provides the capability to selectively skip the 11-digit account number field in the NCR C-53 NOF journal tape format. Reading or skipping is under console switch control and customer-specified characters in columns "1" and "2" on the journal tape. Partial line correction (one-two character keyboard entry) may be performed by the operator when processing NOF tapes. **Specify**: Customer may specify up to three character code combinations in positions "1" and "2" to control selective reading of account number field for NCR C-53 format only. **Note**: If NCR registers' tapes contain Line Finder Character Marks, RPQ 841159 is also required.

Numeric Handwriting (#5370): [Mdls 1, 2, 3, 4] [Plant installation only] For reading handprinted numeric digits 0-9 and handprinted alphabetic characters C, S, T, X, Z from documents (N is not available) ... C, S, T, Z must be used in the units position of a field ... X can be anywhere. For optimum operation, character shapes and spacing must conform to the basic rules of handwriting as outlined in GA21-9064 and GA21-9150. Information should be handprinted with ordinary #2 pencils or grade HB fine line lead for mechanical pencils. Includes the ability to read numbers preprinted on documents by the forms supplier in Gothic 3/16" font.

Optical Mark Reading (#5479): For reading mark-entered data from documents. Marks may be oriented vertically, slanted at an angle of 45 degrees as defined for mark reading with the 1418 Optical Character Reader feature codes #4950, #4951, respectively, or drawn horizontally as defined for mark sensing features on the 519 Document Originating Machine. A timing mark is required for each mark-read column regardless of the orientation of the marks. Data should be recorded with ordinary #2 pencils.

Serial Numbering (#6550): [Mdls 1, 2, 3, 4] Provides the capability of sequentially numbering documents from 00000 to 99999. Printing is done along the trailing edge of the front face of the document after reading. A ten-position numbering head is provided, of which five positions are unit-advanced and five are stationary. Selection of documents to be printed is governed by manual control switch setting in conjunction with stacker select commands. Printing in flight is accomplished without decreasing machine throughput. Printing is non-OCR quality. **Ribbons**: The feature uses a black ribbon (1136843) or purple ribbon (1136844), or equivalent. See SSD sales manual. **Limitations**: Cannot be field installed on units below serial number 10155 shipped from the plant prior to March , 1969 ... machines equipped with this feature cannot process documents smaller than 3.00" wide x 4.75" long.

Serial Numbering (#6555): [Mdl 5] Function and limitations same as Serial Numbering (#6550) except provides two alternate print positions in a band adjacent to the normal print position. Selection of print

* Trademark of Farrington Manufacturing Company.

1287 Optical Reader (cont'd)

position is under manual control ... also provides five stacker-serial numbering control combinations and independent batch numbering document printing control.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (none)

LIST OF ACCEPTABLE CHARACTERS

1287 FONTS

#9735 or #4470 on 1287 mdls 001 through 004, or #4900 on 1287 mdl 005.
IBM 1428 Font (16)
0 through 9, C N S T X Z (4), Vertical Field Mark (1), slash minus (2), blank (3).

#9736 or #4470 on 1287 mdls 001 through 004, or #4900 on 1287 mdl 005.
ANSCS OCR Sizes A & C
0 through 9 (6), C N S T X Z (5), Long Vertical Mark (1), hook, fork, chair, blank (3).

#5300 on 1287 mdls 002 or 004.
NOF (17)
0 through 9, "tee over o", p, d, fork, "skew H", HO dipthong, blank.

#3945 on 1287 mdls 001 through 004, or #4900 on 1287 mdl 005.
7B (18)
0 through 9, blank (3).

1287 MDL 3 OR 4 ONLY
ANSCS OCR SIZE A) (10), (11).

IBM Selectric Typewriter (19)
Basic 1287:
0 through 9, fork, hook, chair, A through Z, colon, semi-colon, period, comma, slash, short dash, asterisk, dollars sign, ampersand, long vertical mark (7), long dash (8), Character erase (9), blank.

With #3850:
All characters as for Basic 1287 (above), and in addition: plus, equals, left curly bracket, right curly bracket, per cent, query, quote, double quote.

3211 (14), 1403 mdls 2, 3, 7, N1, 3203 (all mdls), or 3800 (15).
0 through 9, fork, hook, chair, A through Z, period, comma, slash, short dash, asterisk, dollars sign, ampersand, blank.

1287 MDL 5 OR #5370 ON 1287 MDLS 1 THROUGH 4

Handprinted Character Set (13) 0 through 9, C S T X Z (12), blank.

Notes:
(1) Recognized and transmitted in document mode only.
(2) Recognized and transmitted in tape mode only (1428 font.)
(3) No blanks are transmitted in ANSCS OCR Size C, Farrington 7B, or 1428 fonts.
(4) In 1428 font the characters C, N, S, T, X and Z may only occupy the units position of the field or line.
(5) In ANSCS OCR Size A font, the characters C, N, S, T, X and Z may only occupy the units position of the lines in journal mode (mdls 002 and 004).
(6) Only the characters 0 through 9 are available in ANSCS OCR Size C font.
(7) For machine printed fields a pre-printed long vertical mark is permitted.
(8) Group Erase permits ignoring a line or field. Symbol must be at least .300" long overstriking at least one standard height character. It must overstrike the first character on that end of the line on which scanning is initiated.
(9) Character erase not in the ANSCS OCR Size A character set. Available to ignore a character and its space for typewriters.
(10) Two reading modes are available:

Numeric Defined Mode:
The following characters are available in numeric defined mode: 0 through 9, period, comma, slash, short dash, dollars sign, asterisk, fork, hook, chair, long vertical mark, character erase, and with #3850 plus, equals, per cent.

Alphameric Intermixed Mode:
The following characters are available in alphameric intermixed mode: All numeric defined characters except fork. In addition, A through Z, ampersand, colon, semi-colon, and with #3850 plus, equals, left curly bracket, right curly bracket, per cent, query, quote, double quote.

(11) See note 5 above for journal mode characters on mdl 004.
(12) C, S, T and Z must be in the units position. X may be anywhere.
(13) See #5370 under "Special Features" for further details.
(14) The OCR Print Package (#5450) on the 3211, is a pre-requisite for OCR applications. 20 - 24 lb bond is recommended for optimum performance. When other papers are used, customer testing should be performed to assure reading performance. Group or character erase feature should be inactive when reading 3211 generated documents.
(15) Minimum paper weight for documents produced on 3800 is 20 lb.
(16) Digits 0 through 9 only available 1428 E (Elongated) for imprinting.
(17) National Optical Font by permission of National Cash Register Co.
(18) 7B by permission of Farrington Manufacturing Co.
(19) Or equivalent.

1288 OPTICAL PAGE READER

PURPOSE

Optically reads printed alphabetic and numeric characters and specified symbols on up to page size documents (max. 9" x 14") into a S/360 model 22, 25, 30, 40, 50, 65, 65MP, 67 (in 65 mode), 75, all S/370 processors (except 115, 125, 3081, 3083 Or 3084), or all 4300 processors. With Numeric Handwriting (#5370) it can also read handprinted numeric digits and certain alphabetic characters.

MODELS

Model 1 001

Prerequisites: Multiple 1288s can be attached to a system ... each 1288 contains its own control unit and requires a channel control unit position.

S/360 mdl 25 -- special feature on 2025: Multiplexer channel or selector channel. If the 1288 is equipped with Numeric Handwriting (#5370), the 2025 must be at EC level 132845 and the 1288 at EC level 815210B.

S/360 mdl 22, 30, 40, 50 -- multiplexer channel (standard) or selector channels (special features, except on 2022 one selector channel is standard). For attachment to a S/360 mdl 30, a 2030 mdl D or larger is required.

S/360 mdl 65, 65MP, 67 (in 65 mode), 75 or S/370 mdl 165, 168 -- basic multiplexer channel of 2870, selector subchannels on 2870 ... see M2870 pages.

S/370 mdl 135 -- byte multiplexer channel (standard), selector channels (special features), block multiplexer channel (special feature) ... see M3135 pages.

S/370 mdl 135-3 -- byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138 -- byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145 -- byte multiplexer channel (standard), selector channels (first one is standard), block multiplexer channel (special feature) ... see M3145 pages.

S/370 mdl 145-3 -- byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148 -- byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158 -- byte multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 pages.

3031, 3032 Processor -- byte multiplexer channels (one is standard), block multiplexer channels (five are standard) ... see M3031 or 3032 pages.

3033 Processor -- byte multiplexer channels (two are standard), block multiplexer channels (ten are standard) ... see M3033 pages.

4300 Processor -- byte multiplexer channel or block multiplexer channel.

HIGHLIGHTS

The basic machine includes an input hopper with a capacity for up to a 10" stack of documents, a document separator and aligner station, an optical read station, a document transport, and two output stackers each with a capacity of up to 4.5" of documents. Documents are fed, one at a time, under program control to the read station where each document is held stationary while it is scanned and read by an electronic flying spot optical scanner. Multiple lines of printed data can be read on documents which range in size from 3" x 6.5" to 9" x 14".

The digits 0-9, twenty-six alphabetic characters and certain special symbols printed by the devices noted in the "List of Acceptable Characters and Printing Devices." below in the American National Character Set for Optical Character Recognition (ANSCS OCR) font, , plus the character erase symbol, can be recognized by the base unit.

Format control flexibility, called the formatted mode, is provided under S/360 or S/370 or 4300 processor program control to allow reading variable-length fields in any sequence. Fields may contain machine printed, typewritten or handprinted (with #5370) characters, oriented in either of two directions on the same document. The stored program directs the beam, a field at a time, to the data to be read. Information is scanned from right to left (units to high order) and fed serially, a character at a time, to the system channel.

Unformatted mode permits multiple and continuous variable-length alphameric lines, up to 6 lines/inch, right- or left-justified, to be read in the "normal" direction only. Preprinted reference marks are not required, however, a clear margin of at least 1" at the top and 1/2" on the other three sides must be provided.

Multi-line field mode allows the mixture of both formatted and unformatted reading on a document. See GA21-9081 for details on this capability and document design limitations when using this mode of operation on the 1288.

Unreadable handprinted and Gothic characters are automatically rescanned. Unrecognizable characters are transmitted to the processor as the standard EBCDIC substitute character code (use of "at" symbol available on RPQ for possible programmed correction or reconstruction). The document remains in the read station until ejected into one of two stackers (A or R) under control of the processor program. Stacker R is normally used for selecting documents with unrecognizable characters.

Speed: Maximum document throughput depends upon document size, the number of characters and fields to be read (machine printed, typewritten, handprinted, mark read), and the processor program. For throughput for both formatted and unformatted documents, see formulae in GA21-9081.

Documents and Printing: For optimum operation, print quality must conform to quality specifications established for the 1288 described in GA21-9081. Document sizes and weights must conform to those specified in GA21-9081.

Additional document considerations relating to the printing device, recommended ribbons and type styles can be found in GA21-9081.

Bibliography: S/360 -- GC20-0360, S/370 -- GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V ... must be consistent with system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.

SPECIAL FEATURES

Expanded Symbol Set (#3850): To recognize the following eight special symbols when they are created by an IBM Selectric® typewriter, or equivalent: plus, equals, left curly bracket, right curly bracket, per cent, query, quote, double quote.

Numeric Handwriting (#5370): [Plant installation only] For reading handprinted numeric digits 0-9 and handprinted alphabetic characters C, S, T, X, Z from documents (N is not available) ... C, S, T, Z must be in the units position of a field ... X can be anywhere. For optimum operation, character shapes and spacing must conform to the basic rules of handwriting as outlined in GA21-9064. Information should be handprinted with ordinary #2 pencils or grade HB fine lead for mechanical pencils. Includes the ability to read numbers preprinted on documents by the forms supplier in Gothic 3/16" font.
Prerequisites: For attachment to a S/360 mdl 25, this feature requires that the 1288 be at EC level 815210B and the 2025 be at EC level 132845.

Optical Mark Reading (#5479): For reading marks that have been either handmarked or machine-printed onto documents. The feature is format-compatible (except for horizontal marking) with the similar feature (#5479) on the 1287 Optical Reader, with the basic capability for reading ten- or twelve-position mark-read columns. On the 1288, flexibility is increased by allowing these 1287-type mark-read fields to be located anywhere in the scannable area and in either +90° or normal rotation. A further innovation provides the ability to select, by programming, any number of positions from 1 to 12 to be read from a column or group of columns. A timing mark is required for each mark-read column whether 1, 2, 3, etc., up to 12 positions. Hand-marked data should be recorded with ordinary #2 pencils. Marks may be parallel to the timing mark or in any orientation up to 45 degrees in either direction from parallel to the timing mark.

Serial Numbering (#6550): For serial numbering the front side of documents after reading. A ten-position numbering head is provided ... 5 digits are manually set ... 5 are unit-advanced for each document read. A control switch provides either selective serial numbering based on stacker selection or a 10-digit batch number without unit advancing.
Ribbons: The feature uses a black ribbon (1136843) or purple ribbon (1136844), or equivalent.

1288 Optical Page Reader (cont'd)

LIST OF ACCEPTABLE CHARACTERS

ANSCS OCR Font Size A Application Only

IBM Selectric Typewriter mdls 71, 72, 82. (6)

Basic 1288:
0 through 9, fork, hook, chair, A through Z, period, comma, slash, short dash, asterisk, dollars sign, ampersand, long vertical mark (1), long dash (2), character erase (3).

With #3850:
All characters available with Basic 1288 (as above) and in addition: plus, equals, quote, double quote, query, left curly bracket, right curly bracket, per cent.

1403 mdls 2, 3, 7, N1, 3203 all mdls, 3211 (4) (6), 3800 (5) (6).
0 through 9, fork, hook, chair, A through Z, period, comma, slash, short dash, asterisk, dollars sign, ampersand, blank.

Notes:
(1) Lithograph printing approved.
(2) Group Erase permits ignoring a line or field. Symbol must be at least 0.300" long, overstriking at least one standard height character. It must overstrike the first character on that end of the line on which scanning is initiated.
(3) Character Erase is not available in the ANSCS OCR Size A character set. Available to ignore a character and its space for typewriters.
(4) The OCR Print Package (#5450) on the 3211 is a prerequisite for OCR applications. 20-24 lb. bond is recommended for optimum performance. When other papers are used, customer testing should be performed to assure adequate reading performance. Group or Character Erase feature should be inactive when reading 3211-generated documents.
(5) Minimum paper weight for documents produced on the 3800 is 20 lb.
(6) Or equivalent.

1403 PRINTER

PURPOSE

Printed output unit for S/360, S/370, 30XX, and 4300 systems.

MODELS

Model		Print Pos.	Speed (max. lpm)	For Use With
N1	N01	132	1,100	S/360 models 22, 25, 30, 40, 44, 50, 65, 67, 75, 85, 195; all S/370 processors; all 4300 processors

Limitations:

1. Forms set used on 1403 mdls 1, 2, 4, 5, 6 or 7 (chain printers) may not produce acceptable results when used on the 1403 mdl N1 (train printer). A 6-part set which gave satisfactory results on a chain printer may show a decrease in the print quality of the last copies when used on an 1,100 lpm train printer. For details, see GA24-3041.
2. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results, use single-part forms for OCR printing.

Prerequisites:

A 1416 Interchangeable Train Cartridge is required on each 1403 (see M1416 pages).

For S/360 mdl 25: One 1403 can be attached via an Integrated 1403 Attachment (#4590) and an 1,100 lpm Printer Adapter (#3615) on the 2025. For these attachments, an appropriate adapter is also required on the 1403 itself ... see "Specify". The 1403 can also be attached to a system via a 2821 Control Unit mdls 1, 2, 3 or 5 attached to a S/360 mdl 25 Multiplexer or Selector Channel. See M2821 pages for 1403 attachment details.

For S/360 mdls 22, 30, 40, 44, 50, 65, 67, 75; S/370 or 4300 Processor, and 3031, 3032, 3033, 3081, 3083, 3084 Processors: The 1403 is attached via a 2821 Control Unit mdls 1, 2, 3, or 5. See M2821 pages for attachment details.

For S/370 mdls 135, 135-3, 138: A 1403 can be attached to the 3135, 3135-3, 3138 via an appropriate Integrated Printer Adapter. See "Special Features" in M3125, 3135, 3135-3, 3138 pages. **Note:** An appropriate voltage conversion adapter is required on the 1403 itself ... see "Specify".

For S/360 mdls 85 and 195: The 1403 is attached via a 2821 mdls 1, 2, 3 or 5. See M2821 pages for attachment details.

HIGHLIGHTS

Actual speeds depend upon the operation. The system's processing unit performs all format and analysis control. A line of printing is presented to the printer in the arrangement in which it is to be printed. All data printed is checked against data received from core storage.

Each print position can print any one of 48 characters: Alphabetic, numeric, and 12 special characters. Characters are spaced 10 per inch. Line spacing is 6 or 8 lines/inch, under operator control. Continuous marginally-punched forms from 3.5 in. to 18.75 in. in overall width are fed by an automatic carriage. Minimum form depth is 1.0 in.; maximum is 22.0 in. at 6 lines/inch, or 16.5 in. at 8 lines/inch. Forms spacing and skipping are governed by the stored program. Standard skipping is approximately 33 inches/second. The standard carriage on printers used with all systems is dual-speed. The dual-speed carriage permits skipping at approximately 75 inches/second on skips over 8 lines long. **Note:** Under certain unique conditions, the 75 inches/second skip is turned off and skipping continues at approximately 33 inches/second. See GA24-3073 for details. The printer and carriage open for easy loading and alignment of forms. The 1403 has sound-absorbent covers extending to the floor for reduced noise level. A motorized cover facilitates operator handling. The acoustical cover design incorporates platforms for feeding and stacking of forms. A forms cart may be purchased (see "Accessories").

Program Compatibility: The 1403 mdl N1 is program-compatible with the 1403 mdls 2 or 3 used in S/360 mdls 25, 30, 40, 44, 50, 65, 67, 75, and the 1403 mdl 2 used in S/360 mdls 22, 85, 195, any S/370 processor, or any 4300 processor. Existing programs for mdls 2 and 3 need not be changed for a mdl N1, except in those cases where, because of the reduced time required to print a line, the overall I/O scheduling must be re-optimized.

Printed Output for Optical Character Reading: 1403 and 1416 print trains can be equipped for printing on documents to be read by the following optical character readers:

1230 Optical Mark Scoring Reader
1231/1232 Optical Mark Page Reader
1270 Optical Reader Sorter
1275 Optical Reader Sorter
1282 Optical Reader Card Punch
1287 Optical Reader
1288 Optical Page Reader
1418 Optical Character Reader
1428 Alphameric Optical Reader
3881 Optical Mark Reader
3886 Optical Character Reader

Depending upon the system with which the 1403 will be used and the optical character reader involved, see appropriate section of "Type Catalog" for feature number(s) to be specified for the required 1403 print arrangement. The ribbons used on the 1403 must be capable of producing printed characters suitable for recognition by the optical reader used. Recommended ribbons and document specifications are included in the optical reader "Machines" pages or in the appropriate optical reader publications.

Publications: S/360 -- GC20-0360; S/370 -- GC20-0001; 4300 -- GC20-0001.

SPECIFY

- Power (AC, 3-phase, 50 or 60 Hz): Must be consistent with system voltage.
- Attachment of 2025 via Integrated 1403 Attachment (#4590): The 1,100 lpm Voltage Conversion Adapter (**#9726**), which can be field-installed, is required on the 1403.
- Print Train Arrangement: With S/360, S/370 or 4300 processor, see "S/360, S/370, 4300 processor - 1403 and 1404 Printers" in "Type Catalog". Universal Character Set Feature (#8640) is required or Multiple Character Set Feature (#5111) on a 1403 for any arrangement other than the 48-character set composed of identical arrays of standard sequence (AN, HN, ODA, ONA or OAZ). See "Special Features".
- Attachment of a S/370 mdl 125 via an Integrated Printer Adapter (#4662, #4667, #4668), or a S/370 mdl 135, 135-3, 138 via an Integrated Printer Adapter Basic Control (#4670), with the 1403 Printer Mdl N1 Attachment (#4672). 1,100 lpm Voltage Conversion Adapter (**#9726**), which can be field-installed, is required. See above.
- 1416 Interchangeable Train Cartridge: At least one 1416 is required with each 1403. See M1416 pages. Cross reference Branch/Plant Order number of 1416(s) which will be used with the 1403.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Tape Punch: Order P/N 120910 if the 1403 is for a "New Name Account".
  One punch is furnished at no charge.
- Machine Nomenclature: **#2927** for English .
- Kickstrips: **#9350**, if desired. Also available on MES. When kickstrips are installed, the open area underneath the machine is enclosed. They reduce the amount of "toe-room" and may be inconvenient to the user if the power outlet is located beneath the machine.

SPECIAL FEATURES

Auxiliary Ribbon Feeding Feature (#1376): [Standard] Recommended for satisfactory utilization of polyester film ribbons. Can also be used for conventional fabric ribbons. The polyester film ribbon (P/N 424325), or equivalent, provides improved print quality for both optical character recognition and other quality printing applications. Contact IBM. **Note:** For specific details for optical character recognition covering printing unit, document types, recommended ribbons, and type style, see M1270, 1275 and 3886 pages or the appropriate manuals.

Multiple Character Set Feature (#5111): [1403 natively attached to a S/360 mdl 25] Required for use of any print arrangement other than 48-character set composed of identical arrays of standard character sequence. Arrangements with identical repeatable sets will achieve the same printing speed as with the Universal Character Set Feature. Preferred arrangements in non-repeatable sets will result in speed degradation from those speeds specified for the UCS feature. **Limitations:** Cannot be installed with UCS Feature (#8640). **Prerequisites:** #4590 and #5100 on the 2025, plus Utility Load Program 360-P-UT-048. In addition, the following are required: 1,100 lpm Printer Adapter (#3615) on the 2025, and 1,100 lpm Voltage Conversion Adapter (**#9726**) on the 1403 itself, see "Specify".

Selective Tape Listing Feature (#6420): [S/360 mdls 22, 25, 30, 40 or 50] Permits preparation of eight 1.5 in. or four 3.1 in. fanfold tapes; up to 13 characters per 1.5 in. tape, up to 29 per 3.1 in. tape. Combinations of 3.1 in. and 1.5 in. tapes are possible. However, each 3.1 in. tape requires one of the following pairs of 1.5 in. tape positions: 1 and 2, 3 and 4, 5 and 6, or 7 and 8. Each tape is individually spaced or skipped under program control. Skipping is CE-adjustable between 3 and 22 inches. Five manual skip buttons control the four master tape positions; the fifth button manually skips all tapes. Top front stacker

1403 Printer (cont'd)

and access window provide for front loading and unloading of tapes. Detection is provided for failure to line-space. Easily interchangeable by operator between tape listing and standard forms printing. Improved operation with all covers closed -- low acoustical level. Can be used with an alphameric train or Universal Character Set Feature (#8640). **Limitations:** Cannot be installed on a 1403 attached to a S/360 mdl 25 via the Integrated 1403 Attachment (#4590). **Prerequisites:** #6425 on the 2821.

Universal Character Set Feature (#8640): [S/360 mdls 22 through 85; S/370 mdls 115 through 195; 4300] Required on the 1403 for any print arrangement other than AN, HN, OAZ, ODA or ONA. Any set of 240 codes can be loaded from cards into a special storage unit in the 2821 Control Unit mdls 1, 2, 3 or 5. The 240 codes must correspond in sequence to codes assigned to the graphics on the train selected. This includes any announced print arrangement for S/360 systems, or any arrangement of characters selected/designed by the customer for optimization of his application requirements. See "Type Catalog". Charges for artwork, matrix, etc., for special slugs are to be added if applicable. **Limitations:** [1] Printing speed of the 1403 is limited to 1,400 lpm. [2] The allowable code/graphic selection is restricted to the 256 code positions of the EBCDIC code. See GA24-3312. [3] This feature cannot be installed on a 1403 attached to a 2025 via the Integrated 1403 Attachment (#4590). For this function, see #5111 above. **Prerequisites:** For each 1403 with #8640, the appropriate Universal Character Set Adapter (#8637, #8638, #8639) on the 2821; each different train arrangement requires its own 1416 Interchangeable Train Cartridge; for S/360 mdls 22 through 195, S/370 mdls 115 through 195 and the 4300 processor, Utility Load Program 360-P-UT-048. If a customer desires to retain the former arrangement and to receive an additional one, the fixed cartridge will be modified for interchangeability and an additional interchangeable cartridge with selected print arrangement will be furnished.

MODEL CONVERSIONS (None)

ACCESSORIES

Forms Cart (P/N 838300 or #3910): The acoustical cover design of the 1403 incorporates platforms for the feeding and stacking of forms. The forms cart, specially designed for transporting forms, facilitates transfer of the forms to and from the printer platforms.

SUPPLIES

Contact IBM.

1412 MAGNETIC CHARACTER READER

[NO LONGER AVAILABLE]

SPECIFY

The following specifications can be changed in the field.

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V, or **#9904** for 230V.
- Field Lengths: Two feature numbers, one for Account Number, one for Process Control, from table below. Field lengths can be changed in the field by MES.

Length	1	2	3	4	5	6	7	8	9	10
Acct. No.					#9210	#9211	#9212	#9213	#9214	#9215
Process Control	#9190	#9191	#9192	#9193	#9194	#9195				

- Color: Color Accent -- **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray. Extended Color -- **#9031** for red, **#9032** for yellow, **#9033** for blue.
- Kickstrips **#9431** ... field installable. When kickstrips are installed, the open area underneath the machine is enclosed. This reduces the amount of "toe-room" for operator and may be inconvenient to customer if the power outlet is located under machine.
- Isolation Feature: May be required on units shipped prior to December 29, 1967 for attachment to S/360 mdl 30 ... see "Special Features" below.

SPECIAL FEATURES

The following special features are on an "as available" basis for field installation.

Document Counter (#2385): Six-position counter which counts all documents passing through machine. On and Off Control and Reset provided on operator's panel. **Maximum:** One.

Dash Symbol Transmission (#3215): [Units serial number 10058 or above only] Transmits the E13B dash symbol from transit field to storage ... with symbol in storage, program can distinguish between duplicate Canadian and U.S. transit numbers. **Maximum:** One.

Isolation, Control Unit (#4700): [Field installation only on units shipped prior to December 29, 1967 ... standard on units shipped after that] To turn power on or off the 1412 without generating spurious signals. Thus, a CPU program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Prerequisites:** #7720 ... since in all cases there are compatible EC level requirements, the concurrence of the Branch FE Manager is required for any order for this feature.

Multiple Column Select - Sort Suppress (#5215): Operator's panel controls all operations of the feature. Multiple Column Select -- selects documents with specific numbers in four or less columns of any field. The numbers can be in a field other than that being sorted and the four columns need not be adjacent. Sort Supress -- suppresses sorting on specific digits in any single column and selects those documents into a specific pocket. All other documents are sorted manually. Overflow stacking eliminates stoppage due to filled pockets. **Limitations:** Multiple column select and sort suppress cannot be simultaneous. **Maximum:** One.

Self-Checking Number (#7061, #7062): A self-checking number has two parts, the basic identifying number and its check digit. The check digit, derived from the identifying number by one of two techniques, is always the units digit of a self-checking number. The feature assures that all digits in the self-checking number have been correctly recorded. The field is verified as it is read during any pass. **Limitations:** Self-checking numbers for Modulus 10 are not compatible with those of Modulus 11.

#7061 - Modulus 10 -- has weighting factor of 1, 2, 1, 2, 1, 2. Will not detect following types of errors: 09 to 90 transposition ... interchange of digits between alternate columns, e.g., 32647 for 34627 ... substitution of one self-checking number for another ... in some instances, transpositions having the formula "BAB" for "ABA", e.g., 121 for 212 ... in some instances, random errors, e.g., 23 printed as 56.

#7062 - Modulus 11 -- has weighting factor 7, 6, 5, 4, 3, 2. When the self-checking number is greater than six digits, weighting factor is repeated. In some instances, random type errors will not be detected, nor can a basic number requiring a check digit of 10 be used.

S/360 Adapter (#7720): [Units serial number 10085 or above only] Permits operation with a S/360 mdl 25 or 30. **Limitations:** Once this feature is intalled, the 1412 cannot be used with a 1400 series processor. **Prerequisites:** In order to operate with DOS or BPS, #3274 or #3895 is required on the processing unit ... to operate with DOS, the 1412 must have EC 131182. **Note:** Inter-system attachment via Direct Control is limited when the 1412 uses the external interrupt lines. Signal-in lines used by 1412s cannot be shared with the second processing unit.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

1416 INTERCHANGEABLE TRAIN CARTRIDGE

PURPOSE

A cartridge and print train which provides interchangeability of type font for the 1403 Printer model 3 or N1, and 3203 Printer (all models).

MODELS

Model 1 001

Prerequisites: The 1416 functions only when mounted in a 1403 mdl 3 or N1, or a 3203 (all mdls). At least one 1416 is required with each 1403 mdl 3 or N1 or 3203 (all mdls).

HIGHLIGHTS

Interchangeability: When multiple 1416s are available, they may be interchanged by the operator, providing flexibility for printing different type fonts, type styles, or character arrangements. This flexibility opens new application areas with unique printing requirements such as form-letter writing, engineering and scientific data, chemical abstracts, and text printing.

Publications: S/360 -- GC20-0360, S/370, 4300 -- GC20-0001, 1410/7010 -- GA22-6826, 1440 -- GA24-3005, 1460 -- GA24-1495, 7070/7074 -- GA28-6288

SPECIFY

- Print Train Arrangement: See "Type Catalog" for characters in each available arrangement and feature numbers to be specified.
- A rental 1416 must be capacity replaced (unless customer desires to order an additional 1416) when the following are to be field installed: [1] Preferred Character Set Feature (#5523) on 1403 mdl 3 in 1400 series system ... [2] Universal Character Set Feature (#8640) on 1403 mdl 3 or N1 in S/360, S/370, 4300 processors ... [3] Any UCS train arrangement to replace AN or AH arrangement on a 3203 (all mdls), or a 1403 mdl 3 or N1 already equipped with Universal Character Set Feature (#8640) ... [4] A change in type size or style. If a purchased 1416 is involved, contact IBM, unless customer desires to order an additional 1416.

  unless customer desires to order an additional 1416.
- When a Voltage Adapter (**#9709**) is field installed on a 1403 mdl 3, the standard configuration train previously used will be modified to an AN or HN arrangement; a PCS-A arrangement will be modified to a PCS-AN; or PCS-H will be modified to PCS-HN. Any of these changes is restricted to the same type size (style). See "Type Catalog - S/360, S/370 and 4300 Processors - 1403 and 1404 Printers" for feature number to which train is to be modified. Submit MES on 1416, specifying "Change installed train #_____ to #_____"
- Except as stated above, order type slug substitutions whenever changes between the following train arrangements are to be made in the field: A and H ... AN and HN ... PCS-A and PCS-H ... PCS-AN and PCS-HN. See "Type Catalog".
- A separate 1416 is required for each print train.
- Depending upon the system involved, see appropriate section of "Type Catalog" for feature numbers of desired OCR arrangements and associated sales manual "Reader" description pages to assure compatibility of printer/reader recognition ability. **Note:** The ribbons used on the 1403 and 3203 must be capable of producing printed characters suitable for recognition by the optical reader used. Recommended ribbons and document specifications are referenced in the optical reader "Machines" pages.
- Storage Container: **#9668**, if needed for the 1416. [Recommended for use when multiple 1416s are ordered for a single printer.]

Inspection: Field inspection of damaged 1416s will be at no charge (except for travel time and expense, if applicable).

Repair: Purchased 1416s which become damaged or inoperable may be returned to the IBM plant (Endicott) for repair. Transportation charges to and from the plant are to be paid by the customer. The following repairs will be performed at the prices indicated per 1416:

Disassemble, inspect, test, clean, replace idler gear and drive gear, and reassemble	$360††
Replace cams on original base plate assembly	230
Replace base plate assembly (856186)	745
Replace standard type slugs †	21 per slug

† When a character is replaced, all identical characters should be replaced to ensure consistent print-out of identical characters. Unless otherwise specified, the plant will replace these slugs at the stated price per type slug. See "Type Catalog".

When replacement of special characters (special slugs) is required, the original charges (excluding artwork and matrix charges) for those special characters will apply for this replacement.

†† If the customer chooses not to authorize IBM to repair the 1416 after receiving an estimate, the customer will be billed the charges for disassembly, inspection, testing, cleaning, replacement of idler and drive gears, and/or the reassembly of the 1416

In the event a 1416 is damaged to the point where, in the opinion of IBM, repair is not possible, the 1416 will be returned to the customer. In this case, none of the prices will apply.

Note: An emergency replacement procedure for damaged 1416s is available from IBM .

1416s for temporary installation are available at a daily rental, based on the regular monthly charge, until the repaired 1416 is returned. Shipping charges for the temporary 1416 will be charged to the customer.

IBM will bear the transportation and repair charges when the damage to a purchased 1416 is categorized as "IBM responsibility" by the branch manager, e.g., 1416 received in damaged condition, IBM employee drops a 1416, etc. In cases of IBM responsibility, a temporary replacement 1416 will be supplied at no charge.

IBM guarantees that the repaired 1416 will be returned to the customer in operable condition.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

1419 MAGNETIC CHARACTER READER

PURPOSE

Reads magnetically inscribed data from card and paper documents into a 1401, 1410, 1460, System/3 model 12 or 15, S/360 model 22, 25, 30, 40, 50, 65, 67, any S/370 processor (except 3081, 3083 or 3084), or a 4300 Processor. Can be used for offline sorting.

MODELS

Model 1 001 — E13B type font, codeline arrangement as designated by the American Bankers Association Technical Committee on Mechanization of Check Handling. Intermixed paper and card documents within the following specifications can be processed: Width -- 2-3/4" to 3-2/3" ... Length 6" to 8-3/4" ... Thickness -- 0.003" to 0.007" ... Paper Stock -- 20 lb. short grain to 44 lb. card stock. 51-column card stock can be fed at a rate of approximately 1,960 cards a minute. **Note:** For sorting 51-column cards, see 51-column Card Sorting (#4380) under "Special Features".

Prerequisites

System/3 mdls 12 and 15: One 1419 can be attached. It requires the Mdl 20 Attachment (**#9710**) and RPQs WB1253 and S00382. All mdls of the System/3 must be equipped with a Serial I/O Channel (#7081). **Note:** RPQ WB1253 only must be approved by Special Product Marketing in Rochester. **Note:** RPQ S00382 is required to process checks with 9-digit routing/transit number.

S/360 mdl 22, 25, 30, 40, 50, 65, 67, any S/370 (except 3081, 3083 or 3084), or 4300 processor: Up to six 1419s can be attached to a system. Each 1419 requires a S/360 Single Address Adapter (#7720) or S/360 Dual Address Adapter (#7730) ... see "Special Features" below. Each 1419 requires a channel control unit position.

S/360 mdl 25: Special feature on 2025: Multiplexer channel, or selector channel.

S/360 mdl 22, 30, 40, 50: Multiplexer channel (standard), selector channels (special features, except on 2022 one selector channel is standard).

S/360 mdl 65, 67: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on a 2870 ... see M2860, 2870 pages.

S/370 mdl 115, 125: Byte multiplexer channel (special feature), External Signal (#3898) ... See M3115, 3125 pages. On a 3115-0, **#9336** is required.

S/370 mdl 135: Multiplexer channel (standard), selector channels (special features) ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Multiplexer channel (standard), selector channels ... see M3145 pages.

S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158: Multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 pages.

S/370 mdl 165, 168: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870 ... see M2860, 2870 pages.

3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031 or 3032 pages.

3033 Processor: Byte multiplexer channels, block multiplexer channels ... see M3033 pages.

4300 Processor: Byte multiplexer channel, block multiplexer channel (optional), External Signals (#3898) ... required on 4331.

Note: Before ordering, read descriptions of #7720 and #7730 under "Special Features" below for further prerequisites and limitations.

1401/1460: One 1419 can be attached. A Serial I/O Adapter (#7080) is required on the 1401 or 1441 Processing Unit. **Note:** For optimum operation, Processing Overlap (#5730) is recommended on the 1401 or 1461 I/O Control. Without it, a maximum of 9.5 milliseconds are available for processing of data from the 1419. **Limitations:** A 1419 cannot be installed with 1401 A, G or H mdls ... on a 1401, diagnostic programs require a minimum of 4,000 positions of storage.

1410: One 1419 can be attached to each channel ... simultaneous use of two 1419s increases the number of documents converted up to 90%, exclusive of operator handling time. A Magnetic Character Reader Adapter (#4900, #4902, #4903) is required on the 1411 Processing Unit. **Limitations:** Can be installed only on 1411 mdls A1 through A5.

Limitations

S/360 mdl 25, 30: Operation of 1419s is not included under 1401/1440/1460 Compatibility features.

S/360 mdl 40: Operation of 1419s is not included under 1401/1460 Compatibility (#4457) or 1410/7010 Compatibility (#4478).

S/360 mdl 50: Operation of 1419s is not included under 1410/7010 Compatibility (#4478).

S/360 mdl 67: Only when operating in mdl 65 mode.

S/370 mdl 115: Operation of 1419s is not included under S/360 Mdl 20 Compatibility (#7520).

S/370 mdl 125: Operation of 1419s is not included under 1401/1440/1460 Compatibility (#4457) or S/360 Mdl 20 Compatibility (#7520).

S/370 mdl 135, 135-3, 138: Operation of 1419s is not included under 1401/1440/1460 Compatibility (#4457).

S/370 mdl 145, 145-3, 148: Operation of 1419s is not included under 1401/1440/1460 Compatibility (#4457) or 1401/1440/1460, 1410/7010 Compatibility (#4458).

S/370 mdl 155, 158: Operation of 1419s is not included under 1401/1440/1460, 1410/7010 Compatibility (#3950).

4331 Processor: Operation of 1419s is not included under 1401/1440/1460 Compatibility (#3950).

HIGHLIGHTS

Documents read at a maximum rate of 1,600 documents a minute. Actual speed depends upon length of document and stored program. Pocket selection may be controlled by the 1419 or system's program. Feeding is controlled by the system. Can also be used for offline sorting. Processing Overlap (#5730) is required on the 1401 or 1461 (1460) to take full advantage of the 1419's speed. Individual fields can be processed immediately after they are read. Document reading can be overlapped with processing. Minimum processing time, including pocket selection, is 32.2 milliseconds ... more than ample for sophisticated applications.

Checking: Readability of each magnetic character, including special symbols, in each field processed can be verified each time a document is read and/or sorted. A field length check may be made on all fixed-length fields being processed in offline mode to assure that all numeric digits in the field have been encoded. When the 1419 is under control of the system's program, the 1419 sends control signals to the processor so that the program may determine document distribution. Documents not satisfying checking conditions may be rejected. Fixed-field lengths provide a powerful technique for controlling accuracy of processing.

Programming Compatibility: Reprogramming is required whenever: [1] A 1419 replaces a 1412 in an existing 1400 series installation ... [2] a S/360, S/370, or 4300 processor replaces a 1400 series installation ... [3] a S/360 mdl 22, 25, 30, 40, 50, 65, any S/370 (except 3081, 3083 or 3084), or 4300 processor replaces a S/360 mdl 20 ... [4] a conversion is made from one programming system to another.

Publications: S/360 -- GC20-0360, S/370, 4300 -- GC20-0001, 1401/1460 -- GA24-1495, 1410 -- GA22-6826 ... *IBM 1419 Magnetic Character Reader Reference Manual* -- GA24-1499 ... *IBM System/3 1255 and 1419 Magnetic Character Readers Reference and Program Logic Manual* -- GC21-5132

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): **#9902** for 208V, **#9904** for 230V ... must be consistent with system voltage.
- Color: Color Accent -- **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray. Extended Color -- **#9031** for red, **#9032** for yellow, **#9033** for blue.
- Field Lengths: Specify two feature numbers, one for Account Number, one for Process Control ... see table below. Fixed-field lengths assure maximum processing accuracy. Variable-length fields may be specified in lieu of fixed lengths. Field lengths on installed machines may be changed by MES.

1419 Magnetic Character Reader (cont'd)

Fixed-Field Length (position)	Account Number	Process Control
1	----	#9190
2	----	#9191
3	----	#9192
4	----	#9193
5	#9210	#9194
6	#9211	#9195
7	#9212	----
8	#9213	----
9	#9214	----
10	#9215	----
Variable-Field Length	#9219	#9189

- Shipping Instructions: **#9691** for stackers assembled (sorter section 76.27cm/35-3/4" deep), **#9692** for stackers disassembled (sorter section approximately 81.28cm/32" deep).
- Up-Ending Kit (sorter section only): **#9840**, if required ... loan basis on initial machine order only, remains property of IBM. **Note:** Also see "Crane/Hoist Cable" specify below.
- S/360 Mdl 20 Attachment: **#9710**, if desired. Required to attach the 1419 to a System/3 and must be modified by RPQs WB1253 and S00382. For field installation, the 1419 must have EC 127384 or above ... can be removed in the field.

  With **#9710** installed, the 1419 cannot be used interchangeably with a 1400 series processor or a S/360 mdl 22, 25, 30, 40, 50, 65 or 67, any S/370 processor or any 4300 processor.
- Kickstrips: **#9431**, if desired ... also available on MES. When kickstrips are installed, the open area under the machine is enclosed. This reduces the amount of "toe-room" for the operator and may be inconvenient to the customer if the power outlet is located under the machine.
- Isolation Feature: May be required on units shipped prior to December 29, 1967 for attachment to a S/360 ... see "Special Features".
- Crane/Hoist Cable: **#9070** ... specify only if delivery of machine requires lifting by crane or hoist. Loan basis on initial machine order only, remains property of IBM. **Prerequisites: #9840.**

SPECIAL FEATURES

Batch Numbering (#1445): Provides an automatic means of advancing a batch number document identification under program control. Consists of a 6-position impact printer which prints up to 999,999. The five low-order digits are advanced under processor control ... the high-order digit is set manually. The batch number can be printed in any one of six locations on the back of the document. **Limitations:** [1] Batch number advance instructions given more often than once in a given 3-second period will cause suspension of feeding for the remainder of the period. Minimum batch size that can be processed without restriction is influenced by those factors affecting throughput. Refer to *Reference Manual* ... [2] Legibility of batch numbers is influenced by the quantity of reverse side printing, the color and density of the ink used in reverse side printing, and surface irregularities caused by the printing process used. Typical examples of documents with one or more surface irregularities are Traveler's and Certified Checks. Customers must be advised that on these types of documents reduced ribbon life can be expected ... [3] When 51-column cards are processed, print location 6 cannot be used ... [4] This feature is not available for use in 1410 systems ... [5] Cannot be installed with Endorser (#3791). Uses purple ribbon (413193), or equivalent. See GA24-3342 for details. **Prerequisites:** For field installation, 1419 must have EC 127244 or above.

Dash Symbol Transmission (#3215): Transmits the E13B dash symbol from transit field to storage. With symbol in storage, program can distinguish between duplicate Canadian and U.S. transit numbers. **Maximum:** One.

Electronic Accumulator and Sequence Checking (#3610): [Plant installation only] Accumulating -- amounts read from documents and accumulated total printed on paper tape. Maximum accumulation is ten digits. Rejected documents not accumulated. Sequence Checking -- selected positions in a field compared with same positions in preceding documents to assure that all documents are in proper order. Maximum of ten positions can be sequence checked in single pass. **Limitations:** This feature does not function when the 1419 operates in online mode with any S/360, S/370 or 4300 processor. **Note:** This feature is a separate unit, cable connected to 1419 ... 43cm (17") x 52cm (20-1/2") x 98cm (38-1/2") ... weight 48kg (105 lbs). **Prerequisites:** #5201.

Endorser (#3791): [Plant installation only] Imprints full endorsement at speed of 1419. Operator can select one of six endorsing positions in accordance with ABA specifications. With this feature, documents can be endorsed with date, identification number and bank's legal endorsement. The Endorser Plate is made to the customer's specifications. See "Accessories" below. A Blank Endorser Plate is also available if only partial endorsements are required. **Limitations:** Cannot be installed with Batch Numbering (#1445) or Endorse Only (#3795).

Endorse Only (#3795): [Plant installation only ... if Endorser (#3791) is installed, it can be changed in the field to #3795.] Imprints full endorsement at speed of 1419. Vertical location of endorsement is specified by customer and set at plant. A left or right printing position can be selected by operator. Identification number printing is not provided. The date printing unit is at trailing end of endorsing device. With this feature, documents can be endorsed with date, identification number and bank's legal endorsement. The Endorser Plate is made to the customer's specifications. See "Accessories" below. A Blank Endorser Plate is also available if only partial endorsements are required. **Specify: #9167** for endorsement at top, **#9168** for center or **#9169** for bottom. **Limitations:** Cannot be installed with Endorser (#3791).

Expanded Capability (#3800): Provides a command for operation under OS. When in OS mode, stacker select time available using the Dual Address Adapter (#7730) is reduced by 2 ms. Exposure to data overruns caused by 1419s interfering with other 1419s operating on the same channel is eliminated. Overrun exposure and maximum number of 1419s per channel are configuration- and application-dependent ... refer to GC21-5006. Compatibility with DOS Dual Address Support is provided for conversion to OS. OS or DOS mode of operation is established by a field modification to the feature by FE. **Prerequisites:** Each 1419 requires #7730 ... EC259399 is required on a S/360 mdl 50, and EC 712822 is required on a 2870 for operation on a S/360 mdl 65 or S/370 mdl 165.

51-Column Card Sorting (#4380): For sorting 51-column card documents offline, which may be intermixed with documents and cards within the specifications listed under "Models" above. When installed, machine speed is reduced. Formula for calculating feeding rate is:

15,720 + (L + 0.725L) ... where L is document length in inches.

For 51-column cards, speed is approximately 1,875 documents/minute ... for 6-inch documents, approximately 1,515 documents/minute. Decks containing 51-column cards must be mechanically joggled prior to each pass.

Isolation, Control Unit (#4700): [Field installation on units shipped prior to December 29, 1967 only ... standard on units shipped after that] To turn power on or off the 1419 without generating spurious signals. Thus, a processor program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Prerequisites:** #7720 or #7730 ... since in all cases there are compatible EC level requirements, the concurrence of the Branch FE Manager is required for any order for this feature.

Multiple Column Control (#5201): Permits selection of documents with a specific number in four or less columns in any field.

Program Control for Pocket Lights (#5739): To facilitate control of output batches in the transit application. On 1419s attached to a System/3, S/360, S/370, 4300 processor, 1401 or 1460, the program stops the 1419 when a predetermined number of documents has entered one of six pockets designated by the program and turns on the appropriate pocket light(s) [A-3]. **Limitations:** Not available for use in a 1410 system.

Program Control for Pocket Lights 7-12 (#5741): Facilitates control of output batches in the transit application when more than six pockets are being filled. Provides lights for pockets 4-9, enabling program to turn on a light(s) for any of the first 12 pockets designated. **Limitations:** Not available for use in a 1410 system. **Prerequisites:** #5739, plus EC 125358A, or, for field conversion, FBM 488231.

Self-Checking Number (#7061, #7062): A self-checking number consists of two parts, the basic identifying number and its check digit. The check digit, derived from the basic identifying number by one of two techniques, is always the units digit of a self-checking number. The feature assures that all digits in a self-checking number have been correctly recorded. The field is verified as it is read during any pass. **Limitations:** Self-checking numbers for Modulus 10 (#7061) are not compatible with those for Modulus 11 (#7062).

#7061 - Modulus 10: Has weighting factor of 1, 2, 1, 2, 1, 2. Will not detect the following types of errors: 09 or 90 transpositions ... interchange of digits between alternate columns, e.g., 32647 for 34627 ... substitution of one self-checking number for another ... in some instances, transpositions having the formula "BAB" for "ABA", e.g., 121 for 212 ... in some instances, random errors, e.g., 23 printed as 56.

#7062 - Modulus 11: Has weighting factor of 7, 6, 5, 4, 3, 2 ... when self-checking number is greater than six digits, weighting factor is repeated. In some instances, random type errors will not be detected, nor can a basic number requiring a digit of 10 be used.

1419 Magnetic Character Reader (cont'd)

Split Field (#7440): The first ABA dash symbol following a digit (e.g., a dash in units position of a field is ignored) will separate any field into two elements. Each of the elements may vary in length. With this feature, either element can be treated as a separate field. **Specify:** First Element (**#9180**)... required when Self-checking Number (#7061, #7062) is ordered and is to operate only on the first element of the split field.

S/360 ADAPTER (#7220 for Single Address, #7730 for Dual Address): One of these adapters is required on each 1419 attached to a S/360 mdl 22, 25, 30, 40, 50, 65 or 67, any S/370 processor or any 4300 processor. **Limitations:** Once #7720 or #7730 has been installed, the 1419 cannot be used with a 1400 series processor without submission of an RPQ. **Maximum:** One per 1419, #7720 or one #7730.

S/360 Adapter - Single Address (#7720): Up to six 1419s attached to a system are supported by DOS ... exposure to late stacker selects should be considered in determining the maximum number of 1419s that may effectively operate on a system, in addition to those factors outlined under DOS in "Programming". **Limitations:** Programming support precludes concurrent operation of 1419s equipped with #7720 and those equipped with #7730. **Prerequisites:** In order to operate with DOS or BPS, #3274 or #3895 is required on the processing unit. **Note:** Intersystem attachment via Direct Control is limited when the 1419 uses external interrupt lines. Signal-in lines used by 1419s cannot be shared with the second processing unit. To operate with DOS, the 1419 must have EC 131182. When equipped with #7720, it is recommended that 1419s be attached to a multiplexer channel and they should normally be the highest priority devices on the channel.

S/360 Adapter - Dual Address (#7730): With this feature more stacker select time is available than with #7720. Available stacker select time is based on the last field selected for reading; account number -- 27 ms, transit number -- 21 ms, serial number -- 15 ms. In order for these times to be valid, document field placement must be within the standards and specifications of the ABA Common Machine Language Specifications. The feature includes two distinct control units ... each with a separate address, its own set of executable commands, status and sense indicators. **Prerequisites:** If the 1419 is attached to a 2022 or 2030 multiplexer channel via #7730, **#9185** must be specified on the 2022 or 2030. If #7720 is changed to #7730 by MES, **#9185** must be added to the 2022 or 2030.

----------DOS---------

Up to six 1419s attached to a system are supported by DOS. The limiting factors concerning the number of 1419s that may be attached to a system are stacker select time requirements and channel capacity. Since these factors are application- and configuration-dependent, consult the appropriate channel loading and DOS SRLs to determine the maximum number that may be operated effectively. **Limitations:** DOS support precludes concurrent operation of 1419s equipped with #7730 and those equipped with #7720 ... 1419s equipped with #7730 can be attached only to a multiplexer channel and should normally be the highest priority devices on the channel. **Prerequisites:** #3274 or #3895 or #3898 is required on the processing unit (except the 4361 and 4381 Processor). **Note:** Intersystem attachment via Direct Control is limited when the 1419 uses the external interrupt lines. Signal-in lines used by 1419s cannot be shared with the second processing unit. For field installation of #7730, the 1419 must have EC 131196 or above.

----------OS----------

Limitations: 1419s equipped with #7730 (required for OS) can be attached only to a multiplexer channel, must be physically cabled last on the channel, and should be the highest priority devices on the channel. **Prerequisites:** For operation under OS, each 1419 must be equipped with #3800.

MODEL CONVERSIONS (None)

ACCESSORIES

The following items are available on a purchase-only basis. For shipment with machine, order the desired feature number indicated.

Endorser Plate (#3792): Made to customer's specifications ... for use with #3791 or #3795. Documents can be endorsed with date, identification number, and bank's legal endorsement. For further information, see Endorser Plate Specification Sheets, Z120-0563. It is recommended that the customer stock at least one spare endorser plate for each group of machines with identical plates, since plates cannot be immediately replaced. When ordering **#3792** for shipment with a machine, specify color of ink to be used: **#9145** for black, **#9146** for green, **#9147** for purple, or **#9148** for red. **Note:** 1419 endorser plates are not interchangeable with other machine types. An additional charge will be made for an endorser plate that requires art and layout work which cannot be accomplished by straight-line typesetting. This additional charge applies to single plate orders and the first plate of multiple plate orders. Art and layout work, if required, additional, specify **#3796**. The endorser plate on a displaced machine is to be left with the machine, but defaced and rendered unusable. The normal plate charge will apply whenever replacement of a worn or damaged plate is required. Charges for art and layout work are to be added, if applicable. **Field Installation:** Order **#3792** via the AAS Order Transaction. In all cases, if art and layout work is required for **#3792**, also order **#3796**. A completed Endorser Plate Specification Sheet (Z120-0563) must be forwarded to the plant for each machine. If available, a sample endorsement should be attached to each Spec Sheet.

Blank Endorser Plate (#3793): For use with #3791 or #3795. Documents can be endorsed with date, identification number, and bank's legal endorsement. For further information, see Endorser Plate Specification Sheets, Z120-0563. When ordering **#3793** for shipment with a machine, specify color of ink to be used: **#9145** for black, **#9146** for green, **#9147** for purple, or **#9148** for red. **Note:** 1419 endorser plates are not interchangeable with other machine types. The endorser plate on a displaced machine is to be left with the machine, but defaced and rendered unusable. The normal plate charge will apply whenever replacement of a worn or damaged plate is required. **Field Installation:** Order **#3793** via the AAS Order Transaction. A completed Endorser Plate Specification Sheet (Z120-0563) must be forwarded to the plant for each machine.

Endorser Plate for Mechanical or Replacement Machine (#9140): 1419 replaced by 1419 ... made to customer's specifications ... for use with #3791 or #3795. A replacement endorser plate will be shipped with each replacement machine at no charge when the machine being replaced has an endorser. If any change in plate design is desired, there is a charge only for art and layout work (**#3796**), if applicable. Attach sample endorsement to the Endorser Plate Specification Sheet (Z120-0563) and forward to the plant. For further information, see Endorser Plate Spec Sheet. When ordering **#9140** for shipment with a machine, specify color of ink to be used: **#9145** for black, **#9146** for green, **#9147** for purple, or **#9148** for red. **Note:** 1419 endorser plates are not interchangeable with other machine types. An additional charge will be made for an endorser plate that requires art and layout work which cannot be accomplished by straight-line typesetting. The endorser plate on a displaced machine is to be left with the machine, but defaced and rendered unusable. **Field Installation:** Order **#9140** via the AAS Order Transaction. In all cases, if art and layout work is required for **#3792**, also order **#3796**. A completed Endorser Plate Specification Sheet (Z120-0563) must be forwarded to the plant for each machine. If available, a sample endorsement should be attached to each Spec Sheet.

SUPPLIES (None)

1442 CARD READ PUNCH MDLS 1, 2, N1

PURPOSE

A combination punched card I/O unit for a 1240, 1440, 1450, S/360 model 22 through 85 and 195, any S/370 processor (except 3081, 3083 or 3084), and 4300 Processor.

MODELS

Model 1 001 [NO LONGER AVAILABLE] For 1240, 1440 or 1450 ... reads at rated speed of 300 cards/minute ... punches at rated speed of 80 columns/second ... has one stacker.

Model 2 002 [NO LONGER AVAILABLE] For 1240, 1440 or 1450 ... reads at rated speed of 400 cards/minute ... punches at rated speed of 160 columns/second ... has two stackers.

Model N1 N01 For S/360, S/370 (except 3081, 3083, or 3084), 4300 Processor ... reads at rated speed of 400 cards/minute ... punches at rated speed of 160 columns/second ... has two stackers.

Maximum: S/360, S/370 or 4300 processor -- the 1442 mdl N1 includes its own control unit. The number attachable depends upon the total complement of I/O control units in the system. There is a natural limit of eight control units on each channel ... in a S/360 mdl 44, up to two control units can be attached to each high speed multiplexer channel subchannel.

Prerequisites: For S/360, S/370, or 4300 Processors: A control unit position on a system channel.

S/360 mdl 25: Special feature on 2025: Multiplexer channel or selector channel.

S/360 mdl 22, 30, 40, 50: Multiplexer channel (standard), or selector channels (special features, except on 2022 one selector channel is standard).

S/360 mdl 44: Special features on 2044: Multiplexer channel, high speed multiplexer channel, add'l high speed multiplexer subchannels.

S/360 mdl 65, 67, 75: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870 ... see M2860, 2870 pages.

S/370 mdl 85, 195 or S/370 mdl 165, 168, 195: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870, or shared subchannel of a 2880 ... see M2860, 2870, 2880 pages.

S/370 mdl 115, 125: Multiplexer channel (special feature) ... see M3115, 3125 pages.

S/370 mdl 135: Multiplexer channel (standard), selector or block multiplexer channels (special features) ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Multiplexer channel (standard), selector channels ... see M3145 pages.

S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158: Multiplexer channel (standard), 2nd byte multiplexer channel (special feature), or block multiplexer channel (first two are standard) ... see M3155, 3158 pages.

3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031 or 3032 pages.

3033 Processor: Byte multiplexer channels, block multiplexer channels ... see M3033 pages.

4331 Processor: Byte multiplexer channel, block multiplexer channel ... see M4331 pages.

4341 Processor: Byte multiplexer channel, block multiplexer channels ... see M4341 pages.

4381 Processor: Byte multiplexer channel, block multiplexer channels ... see M4381 pages.

HIGHLIGHTS

Format control and analysis are controlled by the system's processing unit. Mdl N1 reads and punches the 256 codes of the Extended BCD Interchange Code. Hopper capacity is 1,200 cards ... stacker capacity is 1,300 cards. In mdl N1, cards go to stacker 1 unless program directed to stacker 2. Mdl N1 contains its own control unit.

Input Section: Invalid codes and mispositioned cards are detected. The light-sensing mechanism is checked for proper functioning in every read cycle.

Output Section: Cards are punched serially after passing through the light-sensing station. Cards can be either blank or pre-punched. Actual punching speed depends upon the number of columns punched, including interspersed blank columns. Rated speed for punching columns 1-10 is 265 cards/minute for mdl N1 ... for punching columns 1-80 is 91 cards/minute for mdl N1. Punching is checked.

Card Limitations: Generally, scored cards require careful handling and a favorable environment. Use of the following scores has been approved:

Internal Scores (before separation): S-1, ID-1, ID-2, and for a maximum of three passes, M-4 and M-5.

External Scores (after separation): For reading and punching: On column 80 end -- M-3, M-7, M-11 (with round corners) and CF-11 (with round corners); On column 1 end -- M-7, M-11 (with round corners), CF-11 (with round corners) score may be used on a mdl N1 with serial number 40044 or above, or a machine having punch unit serial number 2638 or above stamped on the back of the tie bar. For reading without punching: On column 80 end, M-6; and for a maximum of three passes, M-5, OM-2 and CF-4.

All other scores may result in unsatisfactory performance. For possible use of Port-A-Punch® or Micro-Processing cards, consult IBM. Aqua cards and C-4 corner cut cards cannot be used.

Bibliography: S/360 -- GC20-0360, S/370, 4300 --GC20-0001

SPECIFY

The following specify features can be changed in the field (also applies to mdls 1 and 2).

- Voltage (AC, 60 Hz): Mdls 1 and 2 (3-phase, 4-wire) -- **#9903** for 208V, **#9905** for 230V ... mdl N1 (1-phase, 3-wire) -- **#9902** for 208V, **#9904** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or (mdl N1 only) **#9046** for white.
- 1442 N1 Compatibility Attachment: [Mdl N1] May be required ... see "Special Features".
- Isolation, Control Unit: [Mdl N1] May be required on units shipped prior to December 29, 1967 ... see "Special Features".

SPECIAL FEATURES

On a 1442 mdl 1 or 2, the following features, as appropriate, are on an "as available" basis for field installation.

Card Image (#1531, #1532): In any system -- permits processing of cards with multiple punching in a single card column. In 1240, 1440 or 1450 -- converts binary coded cards into BCD codes, and vice versa ... approved scored cards can be read without suspending validity checking on other than scored columns ... cards with interspersed conventional codes and binary coded data can be read.

#1531 -- for mdl 1 or 2 ... #1532 -- for mdl N1.

When reading in card image mode, the validity check is suspended because all characters are considered valid. When installed on the first 1442 attached to a 1240, 1440 or 1450, this feature also functions on a second 1442. **Prerequisites:** For mdl 1 or 2 -- **#9035** on the 1241 or 1441.

1442-N1 Compatibility Attachment (#4445): [Mdl N1] Required if the 1442 mdl N1 is to be used with 1440 Compatibility (#4442) on a 2025, or with 1442/1443 Attachment (#4464) or 1620 Compatibility (#7190) on a 2030. Required only for operation in compatibility mode, not required for normal S/360 operation of the 1442 mdl N1. **Limitations:** Cannot be installed on a unit with serial number under 40100.

Isolation, Control Unit (#4700): [Mdl N1 ... for field installation on units shipped prior to December 29, 1967 ... standard on units shipped after that] To turn power on or off the 1442 mdl N1 without generating spurious signals. Thus, a processor program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Limitations:** Cannot be installed on a unit with serial number under 40068. **Prerequisites:** Since in all cases there are compatible EC level requirements, the concurrence of the Branch FE Manager is required for any order for this feature.

Punch Column Skip (#5880): [Mdls 1, 2] Increases system throughput by allowing the punch to space over card columns without interlocking the system ... a "Punch Column Skip" instruction specifies the number of card columns to be spaced through by the punch. If two 1442 mdl 1s or 2s, in any combination, are installed, each may be equipped with this feature. **Prerequisites:** #5881 on the 1241 or 1441 ... only one #5881 is required if #5880 is installed on two 1442s.

Selective Stacker (#6406): [Mdl 1] Provides a second stacker ... cards can be selected into this stacker under program control.

1442 Card Read Punch Mdl 1, 2, N1 (cont'd)

MODEL CONVERSIONS

Can be made between model 1 and 2 ... a model 1 or 2 can also be changed to a model 4, but not vice versa ... no changes can be made to or from a model N1.

ACCESSORIES (None)

SUPPLIES (None)

1442 CARD READER MDLS 3, 4

[NO LONGER AVAILABLE]

PURPOSE

Punched card input unit for a 1240, 1410, 1440 or 7010 system.

MODELS

Model 3 003 For 1410 or 7010 ... has one stacker.

Model 4 004 For 1240 or 1440 ... has two stackers.

Maximum: Up to two 1442 mdl 3s can be attached to a 1410 or 7010 system, one on channel 1 and one on channel 2 ... up to two 1442 mdl 4s can be attached to a 1240 or 1440 system.

Limitations: On a 1240 or 1440, if a 1442 mdl 1 or 2 or a 1444 is used, only one 1442 mdl 4 can be installed ... if two 1442 mdl 1s and 2s in any combination or both a 1442 mdl 1 or 2 and a 1444 are used, a 1442 mdl 4 cannot be installed.

Prerequisites

For 1410 or 7010: #4659 or #4660 on the 1411 or 7114 (#4660 requires a 1411 mdl A1-A5).

For 1240 or 1440: The first 1442 (mdl 1, 2 or 4) attached must have #1632 ... see " Special Features".

HIGHLIGHTS

Provides high-speed, low-cost punched card input. Cards are read by a light-sensing unit at speeds up to 400 cards/minute. The 64 codes of the BCD Code can be read. Invalid codes and mispositioned cards are detected. The light-sensing mechanism is checked for proper functioning in every read cycle. Has a 1,200-card capacity hopper. Mdl 3 has one 1,300-card capacity radial stacker ... mdl 4 has two.

Card Limitations: Generally, scored cards require careful handling and a favorable environment. Use of the following scores has been approved:

Internal Scores (before separation) -- S-1, ID-1, ID-2, and for a maximum of three passes, M-4 and M-5.

External Scores (after separation) -- column 1 end: OM-2, M-3, M-4, M-5, M-7, M-11 (with round corners), CF-4 and CF-11 (with round corners) ... column 80 end: M-3, M-6, M-7, M-11 (with round corners), CF-11 (with round corners), and for a maximum of three passes, M-5, OM-2, CF-4.

All other scores may result in unsatisfactory performance. For possible use of Port-A-Punch® or Micro-Processing cards, consult IBM. Aqua cards and C-4 corner cut cards cannot be used.

Bibliography: 1240/1440 -- GA22-3005, 1410/7010 -- GA11-6826

SPECIFY

The following specify features can be changed in the field.

- Voltage (AC, 60 Hz): Mdl 3 (1-phase, 3-wire) -- **#9902** for 208V, **#9904** for 230V ... mdl 4 (3-phase, 4-wire) -- **#9903** for 208V, **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray.

SPECIAL FEATURES

The following features, as appropriate, are on an "as available" basis for field installation.

Card Image (#1531): [Mdl 4] To convert binary coded cards into BCD codes ... also permits processing of cards with multiple punching in a single card column. Approved scored cards can be read without suspending validity checking in other than the scored columns. When reading in card image mode, the validity check is suspended because all characters are considered valid. Cards with interspersed conventional punching codes and binary coded data can be read. When installed on the first 1442 attached to a system, this feature also functions on a second 1442 in the system. **Prerequisites: #9035** on the 1241 or 1441.

Card Read Punch Adapter (#1632): [Mdl 4] Required on the first 1442 attached to a system ... the second 1442 does not require this feature. When a 1442 mdl 1 or 2 and a 1442 mdl 4 are both attached to a system, the 1442 mdl 1 or 2 must be the first unit attached and must be equipped with this feature.

Input/Output Adapter (#4661): [Mdl 3] To attach a 1414 I/O Synchronizer mdl 5 or 8 with the teleprocessing units or printer it controls to the 1442 mdl 3.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

1442 CARD PUNCH MDL N2

PURPOSE

Punched card output unit for a S/360 model 22 through 75, any S/370 processor (except 3081, 3083 or 3084), or 4300 Processor ... punches cards at a rated speed of 160 columns/second.

MODELS

Model N2 N02 Includes its own controls.

Maximum: The number of mdl N2s that can be attached depends upon the number of available system channel control unit positions.

Prerequisites: An available control unit position on a system channel.

S/360 mdl 25: Special feature of 2025: Multiplexer or selector channel.

S/360 mdl 22, 30, 40, 50: Multiplexer channel (standard), or selector channels (special features, except on 2022 one selector channel is standard).

S/360 mdl 44: Special features on 2044: Multiplexer channel, high speed multiplexer channels, or add'l high speed multiplexer subchannels.

S/360 mdl 65, 67, 75: Selector channel of 2860, basic multiplexer channel of 2870, or selector subchannels (special features) on 2870 ... see M2860, 2870 pages.

S/370 mdl 115, 125: Multiplexer channel (special feature) ... see M3115, 3125 pages.

S/370 mdl 135: Multiplexer channel (standard), selector channels or block multiplexer channels (special features) ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Multiplexer channel (standard), selector channels ... see M3145 pages.

S/370 mdl 3145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158: Multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 pages.

S/370 mdl 165, 168: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) of 2870, or the shared subchannel of 2880 ... see M2860, 2870, 2880 pages.

3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031, 3032 pages.

3033 Processor: Byte multiplexer channels, block multiplexer channels ... see M3033 pages.

4300 Processor: Byte multiplexer channel, block multiplexer channel.

HIGHLIGHTS

Format control and analysis are performed by the system's processing unit. Blank or prepunched cards are punched serially. Actual speed depends upon the number of columns punched, including interspersed blank columns. Rated speed for punching columns 1-10 is 265 cards/minute ... for punching columns 1-80 is 91 cards/minute. Punching is checked. The unit has a 1,200-card capacity hopper and a 1,300-card capacity stacker. The Extended BCD Interchange Code (256 codes) is punched. Card Image (#1531) is required to punch binary codes ... see "Special Features".

Card Limitations: Generally, scored cards require careful handling and a favorable environment. Use of the following scores has been approved:

Internal Scores (before separation): M-4, M-5, S-1, ID-1.

External Scores (after separation): M-7, M-11 (with round corners), CF-11 (with round corners) on either end, M-3 on column 80 end only.

All other scores may result in unsatisfactory performance. For possible use of Port-A-Punch® or Micro-Processing cards, consult IBM. Aqua cards and C-4 corner cut cards cannot be used.

Bibliography: S/360 -- GC20-0360, S/370, 4300 -- GC20-0001

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): **#9902** for 208V, **#9904** for 230V ... must be consistent with system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Isolation, Control Unit: May be required on units shipped prior to December 29, 1967 ... see "Special Features".

SPECIAL FEATURES

Card Image (#1531): Permits punching of cards with multiple punching in a single column.

Isolation, Control Unit (#4700): [For field installation on units shipped prior to December 29, 1967 ... standard on unit shipped after that] To turn power on or off the 1442 mdl N2 without generating spurious signals. Thus, a processor program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Prerequisites:** Since in all case there are compatible EC level requirements, the concurrence of the Branch FE Manager is required for any order for this feature.

ACCESSORIES (None)

SUPPLIES (None)

2314 DIRECT ACCESS STORAGE FACILITY - MDL 1

[NO LONGER AVAILABLE]

PURPOSE

Large capacity high-speed direct access storage and control for a S/360 mdl 30, 40, 50, 65, 75, 85, 195, or any S/370 processor except 3115, 3125, 3081, 3083 or 3084.

MODELS

Model 1 001

Limitations:

S/360 mdl 30 -- the 2314 requires a 1.5 microsecond 2030 and can be attached only to the first selector channel. Further, when the 2314 is attached, the second channel is restricted as to devices that may be attached ... see "Channel Control Capabilities" in M2030 pages. When a 2841 Control Unit and a 2314 are both attached to a 2030, both must be attached to the first selector channel. Because of the high data rate of the 2314 and the cycle-stealing concept of the selector channel, available program processing time is reduced during 2314 operations. This is of particular concern when handling time-dependent I/O devices, i.e., 1412, 1418, 1419, 1428. To determine the 2314 loading effect, refer to SRL, *S/360 Model 30 Channel Characteristics and Functional Evaluations* (GA24-3411).

S/360 mdl 40 -- the 2314 may be attached to either the first or second selector channel. However, 2314s may not be attached to both selector channels.

S/360 mdl 50 -- if the 2314 is to be used with a 2050 having 1410/7010 Compatibility (#4478), consult

Prerequisites: A control unit position on a system channel.

S/360 mdl 30, 40, 50 -- a special feature, selector channel ... see M2030, 2040, 2050 pages.

S/360 mdl 65, 75 -- a selector channel of 2860 ... see M2860 pages.

S/360 mdl 85, 195 or S/370 mdl 165, 168, 195 -- a selector channel of 2860, or a shared subchannel of a 2880 ... see M2860, 2880 pages.

S/370 mdl 135 -- selector channel (special feature) ... see M3135 pages.

S/370 mdl 135-3 -- block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138 -- block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145 -- selector channel (standard) ... see M3145 pages.

S/370 mdl 145-3 -- block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148 -- block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158 -- block multiplexer channels ... see M3155, M3158 pages.

3031 or 3032 Processor -- block multiplexer channels (five are standard) ... see M3031 or 3032 pages.

3033 Processor -- block multiplexer channels (ten are standard) ... see M3033 pages.

Each disk storage module requires a 2316 Disk Pack ... these must be ordered separately ... see "Supplies".

HIGHLIGHTS

Has eight independent modules, each storing up to 29.17 million 8-bit bytes or 58.35 million packed decimal digits in a 2316 Disk Pack.

The eight removable and interchangeable 2316s provide a total of 233.4 million bytes of online storage and virtually unlimited offline storage. Minimum access is 25 milliseconds; average is 75 milliseconds; maximum is 135 milliseconds.

Standard features include:

File Scan -- for performing a comparison on selected bytes of file organization.

Record Overflow -- for greater utilization of storage. Enhanced system reliability and performance are achieved by provision of a ninth "spare" module for customer use should one of the eight normally addressed modules become inoperable.

Cylinder Concept: Retained in the 2314. One cylinder has 20 tracks. Up to 7,294 bytes (or 14,588 packed decimal digits) on each track, provide 145,880 bytes (or 291,760 packed decimal digits) per cylinder, available under each of the eight access mechanisms.

Data transmission is at the rate of 312,000 bytes/second ... with packed decimal, the rate is 624,000 digits/second.

An advanced method of utilizing disk storage. Self-formatting tracks allow variable length identifiers and records to be easily handled.

Command Chaining: Multiple records within a cylinder can be read/written by a sequence of channel commands without rotational delays between records ... permits index and directory searches without processor intervention. The command structure is optimized to yield efficient random or sequential processing with either randomly or sequentially organized data files. The ability to protect "logical" files is provided by the combination of commands in the 2314 and checks within the control programs servicing the file system. Cyclic code and bit count checking are used to assure the integrity of stored data. The controls necessary to attach the unit to a system channel are included in the 2314.

Publications: Bibliographies; S/360 (GC20-0360), S/370 (GC20-0001)

SPECIFY

- Each 2314 DASF mdl 1 is to be specified on AAS as follows: [1] One 2314 mdl 001, [2] One 2312 mdl 001, and [3] Two 2313 mdl 001s ... on one of the 2313s also specify **#9140** (to indicate the 2313 at the end of the 2314 DASF).

  Note: The 2312 and 2313 type numbers and their associated feature codes are to be specified at no charge and are to be used only for internal IBM ordering and control purposes. List each type and mdl (2314, 2312, 2313) separately with all its associated feature codes. The 2312 and 2313 type numbers should never appear on any agreement.

- Voltage (AC, 3-phase, 60 Hz): Specify the same code for the 2314, the 2312 and each 2313 ... **#9903** for 208V, **#9905** for 230V.

- Color: [2314 only] **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray.

- Additional Codes: On the 2312 and 2313s, additional codes are required depending upon special features on the 2314 and 2844 Auxiliary Storage Control ... see "Special Features" below.

- 2316 Disk Packs: 2316s are required and must be ordered separately ... see M2316 pages.

- Isolation Feature: May be required on units shipped prior to December 29, 1967 ... see "Special Features".

SPECIAL FEATURES

The following special features are on an "as available" basis for field installation.

Isolation, Control Unit (#4700): [For field installation on units shipped prior to December 29, 1967 ... standard on units shipped after that] To turn power on or off the 2314 without generating spurious signals. Thus, if the 2314 can be logically disconnected from the system, the CPU program can continue operating. **Prerequisites:** Because in all cases there are compatible EC level requirements, the concurrence of the branch FE manager is required for any order for this feature.

Remote Switch Attachment (#6148): To attach the Two Channel Switch (#8170) to a 2167 Configuration Control Unit in a S/360 mdl 67-2, or to a S/360 mdl 65MP which has the Configuration Control Panel (#1505) installed, or to a S/370 mdl 158MP or 168MP. **Prerequisites:** Specify **#9500** on the 2312. **#9500** can be field installed.

2844 Attachment (#7949): To attach a 2844 Auxiliary Storage Control. **Note:** Order this feature only when a 2844 is to be attached. Installation of the feature without concurrent installation of the 2844 renders the 2314 inoperative. **Maximum:** One. **Prerequisites:** Specify **#9750** on the 2312 and each 2313 ... if the 2844 has a Two Channel Switch (#8171), also specify **#9765** on the 2312 ... if the 2844 has a Remote Switch Attachment (#6150) also specify **#9510** on the 2312. **#9750**, **#9765** and **#9510** can be field installed.

Two Channel Switch (#8170): To attach the 2314 to a second channel. Switching is under program control. Includes partitioning. **Prerequisites:** Specify **#9760** on the 2312 ... **#9760** can be field installed. If the two channel switch is routed through the Configuration Control Panel (#1505) of a multiprocessing S/360 mdl 65, #6148 is required. Also, in a S/360 mdl 67-2, a S/370 mdl 158MP or 168MP, #6148 is required. See #6148 above.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Disk Packs: Contact IBM. See M2316 pages.

2501 CARD READER

PURPOSE

Models A1 and A2 are punched card input units for a S/360 model 20, an 1130 Computing System, or a System/3 model 15. Models B1 and B2 are punched card input units for a S/360 model 20 through 85 and 195, any S/370 models 115-195 or 4300 processor.

MODELS

Model A1	A01	[NO LONGER AVAILABLE] 600 cards/minute rated 80-column card speed.*
Model A2	A02	[NO LONGER AVAILABLE] 1000 cards/minute rated 80-column card speed.*
Model B1	B01	600 cards/minute rated 80-column card speed.**
Model B2	B02	1000 cards/minute rated 80-column card speed.**

* Models A1 and A2 are punched card input units for a S/360 model 20, an 1130 Computing System, submodels 1, 2, or 3, or a System/3 model 15.

** Models B1 and B2 are punched card input units for a S/360 models 22 through 85 and 195, any S/370, 4300 processor.

Maximum:

System/3 mdl 15: One 2501 mdl A1 or A2 can be attached.

S/1130: One 2501 mdl A1 or A2 can be attached to any 1131 mdl except 1A or 1B.

S/360 mdl 20: One 2501 mdl A1 or A2 can be attached to a 2020 submodel 1, 2, 5, or 6 (only).

S/360 mdl 22 through 85, 195, any S/370 Processor, or a 4300 processor. The number of 2501 mdls B1 and/or B2 that can be attached depends upon the number of system channel control unit positions available. **Caution:** When attaching to a S/370 mdl 115, 125, 135, 135-3 or 138, see "Performance Limitations".

Prerequisites: An available control unit position on a system channel .

Mdls A1 and A2:

On System 1130. A 2501 Attachment (#8042) on the 1131 ... in addition, a 2501 Coupling (#3630) is required on the 2501. See "Special Features" below.

Note: A 2501 cannot be installed with an 1131 mdl 1A or 1B ... in addition, the 1130 system must have 208V or 230V power.

On System/3 mdl 15. A 2501 Attachment (#8090) on the 5415 ... 2501 Coupling (#3630) on the 2501. In addition, a 5424 MFCU or a 2560 MFCM or a 1442 mdl 6 or 7 is required on the System/3 mdl 15, except when Channel Terminator Feature #1601 is installed. **Note:** When a 2501 is retained from a S/360 mdl 20 to be attached to a 5415 Processing Unit, new cables must be ordered.

On a S/360 mdl 20. A 2020 submodel 1, 2, 5, or 6 with a 2501 Attachment (#8090) ... if the installed 2020 has a serial number under 20000, a Cable Adapter (#9099) is required on the 2501. See "Specify" below.

Mdls B1 and B2:

S/360 mdl 22 through 85, 195, any S/370 Processor, or a 4300 processor.

S/360 mdl 25: Special features on 2025: Multiplexer channel or selector channel.

S/360 mdl 22, 30, 40, 50: Multiplexer channel standard, selector channels (special features, except 2022 one selector channel is standard).

S/360 mdl 44: (special features) on 2044 Multiplexer channel, high speed multiplexer channel, add'l high speed multiplexer subchannels.

S/360 mdl 65, 67, 75: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870 ... see M2860, 2870 pages.

S/360 mdl 85, 195 or S/370 mdl 165, 168, 195: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870, or shared subchannel of 2880 ... see M2860, 2870, 2880 pages.

S/370 mdl 115, 125: Multiplexer channel (special feature) ... see M3115, 3125 pages.

S/370 mdl 135: Multiplexer channel (standard), selector channels (special features), or block multiplexer channel (special feature) ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Multiplexer channel (standard), selector channels ... see M3145 pages.

S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158: Multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 pages.

3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031, 3032 pages.

3033 Processor: Byte multiplexer channels (two are standard), block multiplexer channels (ten are standard) ... M3033 pages.

3081, 3083, 3084 Processor: Byte multiplexer channels ... see M3081, 3083, 3084 pages.

4300 Processor: Byte multiplexer channel, block multiplexer channel.

HIGHLIGHTS

The system's processing unit performs all format control and analysis. The unit provides high-speed, low-cost card input. Cards are read serially by a light-sensing mechanism which is checked for proper functioning in every card cycle. The Extended BCD Interchange Code (256 codes) can be read ... invalid codes, off-punching and mispositioned cards are detected. Mdls B1 and B2 include their own control unit. Mdls A1 and A2, when used with an 1130, all codes are considered valid.

Binary Codes: A mdl B1 or B2 must be equipped with Card Image (#1531) to read binary codes ... see "Special Features". Mdls A1 and A2 - when attached to a 2020 Processing Unit submodel 2, 5, or 6, or an 1130 Central Processing Unit, or a 5415 Processing Unit can read binary codes.

All mdls have a 1,200-card capacity hopper and a 1,300-card capacity stacker.

Performance Limitations:

1. The 2501 is an unbuffered time-dependent machine. If the CPU does not reissue a new card read command within 19.4ms for the 2501 mdl B1, or 3.5ms for the 2501 mdl B2, the card reader performance will be reduced to one half the rated speed; or less if the processing time exceeds 100ms, or 60ms, respectively.
2. For S/370 mdl 115 operating under DOS/VS, special precautions must be taken in order to operate the 2501 mdl B2 near rated speed. Some methods for achieving this are to use either the POWER/VS option or to use programs employing chained card read commands.
3. For S/370 mdl 125, 135, 135-3 or 138 operating under DOS/VS, special precautions must be taken in order to operate the 2501 mdl B2 at or near rated speed. Some methods for achieving this are to use either the POWER/VS option or to use programs employing chained card read commands.

Card Limitations: Generally, scored cards require careful handling and a favorable environment. Use of the following scores has been approved:

Internal Scores: (before separation) M-4, M-5, OM-2, OM-3, S-1 and ID-3 (2" x 3-1/4" or 2-3/16" x 3-3/4" sizes only). **Note:** When using OM-2 or OM-3, reading must be terminated prior to the column that is scored.

External Scores: (after separation) M-3, M-4, M-5, M-6, M-7, M-11, OM-2, CF-4 and CF-11. OM-3 may be used if the score is on the column 1 end. **Note:** Upper left corner cut required when the M-11 or CF-11 is used on column 1 end.

All other scores may result in unsatisfactory performance. For possible use of Port-A-Punch® or Micro-Processing cards, consult Special Product Marketing. Aqua cards and C-4 corner cut cards cannot be used.

Publications: S/360 -- GC20-0360, S/360 mdl 20--GA26-3565, S/370 -- GC20-0001, 1130 -- GA26-5916, S/3 -- GC20-8080.

2501 Card Reader (cont'd)

SPECIFY

- Voltage (must be consistent with system voltage): Mdl A1 or A2 (AC, 60 Hz, power provided by system) - with S/360 mdl 20 or System/3 mdl 15, **#9903** for 208V, or **#9905** for 230V; with 1130 **#9902** for 208V, or **#9904** for 230V ... mdl B1 or B2 (AC, 1-phase, 3-wire, 60 Hz) - **#9902** for 208V, or **#9904** for 230V.
- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V, **#9904** for 230V ... must be consistent with system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- Cable Adapter (mdl A1 or A2 with S/360 mdl 20 only): #9099. Required on a 2501 being attached to an installed 2020 which has a serial number under 20,000. Plant installable only, but can be removed in the field.
- Use with 1130 (mdl A1 or A2 only): A 2501 Coupling (#3630) is required ... see "Special Features" below.
- Isolation, Control Unit (mdl B1 or B2 only): May be required on units shipped prior to December 29, 1967 ... see "Special Features" below.
- If the 2501 mdl A1 or A2 is to be used as an emulation unit in a S/360 mdl 20 with 1401/1440 Compatibility (#3901), the micro-program deck must be tailored for the 2501.

SPECIAL FEATURES

2501 Coupling (#3630): [Mdls A1, A2] Required to attach a 2501 to an 1130 system or a System/3 mdl 15. **Prerequisites:** For 1130 - 2501 Attachment (#8042) on the 1131. Also requires a 208V or 230V power source. For System/3 mdl 15 - 2501 Attachment (#8090) on the 5415.

Card Image (#1531): Permits reading of cards with multiple punches in a single card column. When reading in card image mode (Data Mode 2), the validity check is suspended because all characters are considered valid.

Isolation, Control Unit (#4700): [For field installation on units shipped prior to December 29, 1967 ... standard on units shipped after that] To turn power on or off the 2501 mdl B1 or B2 without generating spurious signals. Thus, a processor program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Prerequisites:** Since in all cases there are compatible EC level requirements, the concurrent of the Branch FE Manager is required for any order for this feature.

MODEL CONVERSIONS

Can be made only between model A1 and A2 or B1 and B2.

ACCESSORIES (None)

SUPPLIES (None)

2502 CARD READER

PURPOSE

Punched card input unit for a System/7 (5024), a 3770 Data Communication System, or an 8100 Information System via 3289 Printer mdl 3.

MODELS

	Rated 80-column Card Speed
Model A1 A01	150/minute (not available on System/7)
Model A2 A02	300/minute (not with 8100)
Model A3 A03	400/minute (3776-3, 3776-4, 3777 only)

Maximum: One 2502 can be attached to a 3289 Printer mdl 3 or 3770 System.

Prerequisites:

Mdl A1: 3782/2502 Card Reader Attachment (#8149) on the 3289 mdl 3, 3774, 3775 or 3776 and a 3782 Card Attachment Unit mdl 2 ... 2502 Card Reader Attachment (#8002) on the 3777.

Mdl A2: 5024 model 2 or 3 with System/7. 3782/2502 Card Reader Attachment (#8149) on the 3774, 3775 or 3776 and a 3782 Card Attachment Unit mdl 2 ... 2502 Card Reader Attachment (#8002) on the 3777.

Mdl A3: 3782/2502 Card Reader Attachment (#8149) on the 3776 mdl 3 or 4 and a 3782 Card Attachment Unit mdl 2 ... 2502 Card Reader Attachment (#8002) on the 3777.

HIGHLIGHTS

Used on the 3289 mdl 3, 3774, 3775, 3776 or 3777 for automatic entry of punched card data to the transmission line or the offline operating units. The 3289 Printer mdl 3 or 3774, 3775, 3776 or 3777 Communication Terminal performs all format control and analysis.

Cards are read serially by a sensing mechanism which is checked for proper functioning in every card cycle. EBCDIC code (256 codes) or ASCII (128 codes) can be read, depending upon the transmission code specified for the 3774, 3775, 3776 or 3777. EBCDIC code (256 codes) can be read and transmitted by the 3289 mdl 3. ASCII is not applicable to the 3777 mdl 2. Invalid codes, off-punching and mispositioned cards are checked.

On the System/7, used for automatic entry of punched card data to the system. The 5024 I/O Attachment Enclosure (mdls 2 or 3) performs all format control and analysis.

Hopper capacity is 700 cards ... stacker capacity is 600 cards.

Card Limitations: Generally, scored cards require careful handling and a favorable environment. Use of the following scores has been approved:

Internal Scores: M-4, M-5, S-1, S-2, ID-1, ID-2 and ID-3.

External Scores: Column 1 end -- M-3, M-4, M-5, M-6, M-7, M-11, OM-2, OM-3, CF-4 and CF-11. Column 80 end -- M-5, M-7, M-11, CF-4 and CF-11.

All other scores may result in unsatisfactory performance. C-4 corner cut cards cannot be used.

Publications: GC20-0001

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9901** for 115V ... must be consistent with system voltage.
- Color: **#9046** for white.
- Documentation: [one must be specified] **#9101** for use with a 3289 mdl 3, 3774, 3775 or 3776 ... **#9102** for use with a 3777 ... **#9103** for use with a System/7.
- Cabling: Fixed-length cables are supplied as standard.

SPECIAL FEATURES

Note: No special features are available when used on the System/7.

Interchangeable Feed, 51/80-Column (#4650): Permits reading of 51- or 80-column cards. Operator can readily set up machine to read 51-column cards and reconvert it to read 80-column cards. **Limitations:** Cannot be installed with Interchangeable Feed, 66/80-Column (#4651).

Interchangeable Feed, 66/80-Column (#4651): Permits reading of 66- or 80-column cards. Operator can readily set up machine to read 66-column cards and reconvert it to read 80-column cards. **Limitations:** Cannot be installed with Interchangeable Feed, 51/80-Column (#4650).

Optical Mark Read (#5450): Permits reading of up to 40 columns of marked data. Either marked and/or punched hole data can be read from the same card. Cards on which a mark was unacceptable are offset-stacked and the reader continues operation when in line mode. **Limitations:** Cannot be installed with a 3289 mdl 3, 3776 mdl 3 or 4, or a 3777. **Prerequisites:** #5455 on a 3782 mdl 2 attached to a 3774, 3775 or 3776 mdl 1 or 2.

MODEL CONVERSIONS

Field installable.

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

TERMINOLOGY:

In these pages, the term "Data Terminal Equipment" and its abbreviation "DTE" will mean any business machine which has a telecommunications capability, be it a terminal, a multiplexer or a processor with an integrated communications adapter.

Also, the term "Data Circuit-terminating Equipment" and its abbreviation "DCE" will mean any equipment whose function it is to convert DTE signals into a form suitable for transmission over a communication facility, and to convert signals received from a communications facility into a form suitable for transfer to a DTE. This DCE may be a modem (a MOdulator/DEModulator), a telegraph line adapter or another type of signal conversion equipment.

Finally, the term "Automatic Calling Equipment" and its abbreviation "ACE" will mean that equipment which will accept dial digits from a DTE and present them to the telephone central office for the purpose of effecting a switched network connection.

ORGANIZATION:

These pages are organized into intercommunication charts, which are:

Chart 1 - IBM Start/stop DTE Intercommunication Capability Table

Chart 2 - IBM Binary Synchronous DTE Intercommunication Capability Table

Chart 3 - IBM Synchronous Data Link Control DTE Intercommunication Capability Table

and communication facility charts, which are:

Chart A - Nonswitched Telegraph Lines

Chart C - The Public Switched Telephone Network

Chart D - Nonswitched Voice Grade Lines

Chart E - Nonswitched Wideband Channels

Chart G - Nonswitched Limited Distance Baseband Channels (including Customer Owned and Maintained, COAM, lines)

Chart L - Public Switched Data Networks Providing an "X" Series Interface

Chart M - Nonswitched Data Networks Providing a "V" Series Interface

Chart N - Nonswitched Data Networks Providing an "X" Series Interface

Chart P - Public Packet Switched Networks Providing a CCITT X.21bis (EIA RS-232-C) Interface

Chart Q - Public Packet Switched Networks Providing a CCITT X.21 Interface

UTILIZATION:

To use these pages:

Refer to the appropriate intercommunication chart to find the desired DTEs and to determine if they are capable of intercommunication. If they are so capable, read the alphabetic designations for the classes of facility over which they may communicate.

Refer to the charts for the facility classes indicated to find the particular facility and the required feature codes for the DTEs that will allow their intercommunication.

Refer to the individual machine sales pages for the DTEs to determine prerequisites, restrictions, etc.

For example, assume that communication between a 3101 and a 3705-II is desired. Since this would be in start/stop mode, the first reference would be to Chart 1. In Chart 1, the 3101 entry shows that communication between a 3101 and a 3705-II is possible over Facility classes C and D. The 3705-II entry confirms that communication with a 3101 over these facility classes is possible.

Reference to the C and D Facility Charts shows that, since feature codes are entered for both the 3101 and the 3705-II, communication between them is possible over Facilities C1M, C2M, D1M, D2M and D3M .

Further, the C and D Facility Charts show, for both the 3101 and the 3705-II, the feature codes required on each to allow this intercommunication.

Finally, reference should be made to the M3101 and M3705 pages to assure that any restrictions, prerequisites, etc., to the installation of the indicated features are satisfied.

STAND-ALONE DCEs:

The only stand-alone DCEs listed in the Facility Charts herein are:

The IBM standard product line modems available, and

Those Common Carrier services in which the use of a Common Carrier provided modem is mandatory.

Standalone DCEs other than these may be attached to IBM DTEs, but such attachment (other than that of the IBM Special Product Modems) is always under the provisions of the IBM Multiple Supplier Systems Policy (see IBM for information on this Policy).

REFERENCE MATERIAL:

Refer to IBM for information on IBM Special Product DCEs and non-IBM DCEs.

CUSTOMER RESPONSIBILITIES:

The customer must be advised in writing that the customer's responsibilities include:

Making arrangements for price quotations, installation and initial and recurring costs of the Common Carrier supplied communication facility/service appropriate to his desired speed of operation.

When operation is planned on the public switched telephone network, obtaining, prior to the processing of the machine orders, assurance from the Common Carrier that facilities of the proper quality to support data transmission will be available between the proposed locations.

Toll charges incurred in the installation and maintenance of the IBM equipment.

Relinquishing the system for service in those cases in which servicing aids and/or available error printouts do not permit localization of the malfunction to the communication facility or terminal location.

The DTE/DCE compatibility and the DTE/ACE compatibility when the DCE and/or ACE is not specifically listed as supported in the Facility Charts.

When using IBM Modems, Line Adapters or Integrated Modems, it is recommended that the customer investigate the economics of providing alternate voice service to facilitate installation and maintenance.

Performing the setup procedures for customer setup products. On these products, the customer is also responsible for following the problem determination procedures and recovery routines furnished by IBM should a problem arise in the setup.

The security of customer data is a customer responsibility. The customer is responsible for the selection, implementation, and adequacy of these products in the protection of his data. For applications in which sensitive data is sent over external communication facilities, the customer may wish to apply cryptography.

Due to the nature of the teleprocessing environment, it is possible that the throughput anticipated on the specified network configuration with recommended channel conditioning will not be achieved. The probability of this is slight, though it is more likely at the higher data rates. Some actions the customer may take if anticipated throughput is not achieved are:

Redialing the connection if operating on the public switched telephone network.

Adjusting, where possible, the block size to optimize throughput, based on the error characteristics of the particular channel.

Requesting the Common Carrier to provide alternate routing or line improvements. This is normally provided at extra cost. The Common Carrier should be contacted for further details.

However, it is possible that, at a particular location, only lower speed speed operation is obtainable.

The costumer should be informed that his local IBM representative is available to assist him in analyzing and planning for these alternatives.

Finally, the Marketing Representative must have the customer obtain a firm installation date for the start of transmission service prior to processing the OC card.

MULTIPOINT OPERATION:

Duplex communication facilities are required for multipoint systems in which:

The DCE at the control station is a 1200 bps integrated modem, or

It is desired that a continuous carrier be maintained from the control station to eliminate the control station "Ready For Sending" delays.

The use of duplex facilities and operation in the continuous carrier mode is strongly recommended, since operation in a non-continuous carrier mode (by the control station) will subject the system to inordinate delays, particularly in the polling and addressing sequences.

IBM DATA TERMINAL AND DATA CIRCUIT-TERMINATING EQUIPMENT:

The following is a list, by machine type number, of the IBM DTEs and DCEs covered in these pages. This list includes, for the DTEs, a reference to the applicable Intercommunication Chart (1, 2 or 3), and, for both the DTEs and DCEs, a reference to the responsible Marketing divisions.

IBM ISG

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

CHART A
NONSWITCHED TELEGRAPH LINES

FACILITY A1: Point-to-point start/stop operation at 45.5, 56.9 or 74.2 bps on a Type 1002 Channel or 75 bps on a Type 1005 Channel via an integrated telegraph line adapter (1, 2)

Machine Types	Special Features Required for Attachment
2701	#7860 (at 45.5 bps), #7861 (at 56.9 bps) or #7862 (at 75 bps)
3704, 3705	#4721 and #9601 (at 45.5 bps), #9602 (at 56.9 bps), #9603 (at 74.2 bps) or #9604 (at 75 bps)

FACILITY A2: Point-to-point start/stop operation at 134.5 bps on a telegraph line via a stand-alone DCE providing an EIA RS-232-C interface (1)

Machine Types	Special Features Required for Attachment
2701	#4640 and #9581
3704, 3705	#9606 and #4711 or #4714
3725-1, 2, 3726	#4911 and #4666 (5)
3845, 3846	(4)

NOTES FOR CHART A:

1. See IBM for more information on these facilities including attachable DCEs.
2. Communication over this facility is with a Telco Type 83B2 or 83B3 teleprinter or a Western Union Plan 115 terminal
3. The "X" in the **#968X** specify code denotes the line position on the 4331 to which this protocol will be assigned. See the M4331 pages for details.
4. No special feature is required to attach the 3845 or 3846 on this facility. The DCEs must be in compliance with EIA RS-232-C. The 3845 and 3846 will operate with DTEs at speeds of 110 or 134.5 bps.

IBM ISG

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

CHART C

THE PUBLIC SWITCHED TELEPHONE NETWORK (PSTN)

FACILITY CA1: Start/stop operation at 300 bps on the PSTN via an integrated modem (1, 2)

Machine Types	Special Features Required for Attachment
3704, 3705-II	#4782 and #9612 or, for Interrupt, #4786 and #9612
3767	#5502, #9540 and #7111 or #7113 or, for Interrupt, #5506, #7113 and #9540
4987	#4746 or #4747

FACILITY C1M: Start/stop operation at 134.5 or 300 bps on the PSTN via a stand-alone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy (2)

Machine Types	Special Features Required for Attachment
2701	#4640 and #9581 (at 134.5 bps only)
3101	(5)
3138	#4640 and #9721 (3)
3232-51	(at 300 bps only) (5)
3704, 3705-II	#4711 or #4714 and #9606 (at 134.5 bps) or #9612 (at 300 bps)
3705-80	No special feature required at 134.5 bps, #1413 (at 300 bps)
3725-1, 2, 3726	#4911 and #4666 (20)
3767	#3719, #9619, #9540 and #7111 or #7113 (at 300 bps only)
3792	#3701 (at 134.5 bps only)
3845, 3846	(5, 15)
4331	#1601, #3701, #4696 and #968X (4)
4952, 4954, 4955, 4959, 4965	#1610 or #2092 or #2096
4987	#4730
5010	#1610 and #2154 (at 134.5 bps only)
5110	#1525 (at 134.5 bps only)
6360	#3704 or #3705 or #3707
6580	#3705
6733	at 300 bps only (5)
7426	(5)

FACILITY CA2: Synchronous operation at 600/1200 bps on the PSTN via an integrated modem (1, 2, 8))

Machine Types	Special Features Required for Attachment
2701	#4782 (7)
3274-51C	#6301, #9112 and #5501 or #5502
3276-11, 14	#5501 and #6301
3651-25	#9512
3684	#5530 and #9481
3704, 3705-II	#4782 or, with Interrupt, #4786 (9) and #9607 (at 600 bps) or #9608 (at 1200 bps)
3741	#5501
3767	#5502 or, with Interrupt, #5506 and #9531 (at 600 bps) or #9532 (at 1200 bps)
3771, 3774, 3775	#1482 and #5501 or #5502
3791	#5501 and #6301 (6)
4331	#1601, #4696, #4781 and #967X or #969X (4)
4987	#4751 or #4752
5010	#5501
5110-1, 2	#5501
5231	#5501
5251-2, 12	#5502
5265	#5501
5285, 5288	#5501
5340	#5501 (10)
5360	#5501
5381	#5501 or #5502
5525	#1750 and #5501 or #1751 and #5503
6670	#5501
8101, 8130 A, 8140 A, B	#5501 and #1601

FACILITY C2M: Start/stop or synchronous operation at 600/1200 bps via a stand-alone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy (2, 8)

S/S Machine Types	Special Features Required for Attachment
3101	(5)
3705-II	#4711 or #4714 and #9607 (at 600 bps), #9608 (at 1200 bps or #9615 (at 600/1200 bps)
3725-1, 2, 3726	#4911 and #4666 (11, 19, 20) or #4911 (12, 19)
4952, 4954 4955, 4959, 4965	#1610 or #2096 or #1310 (1200 bps only)
4987	#4730
6733	(at 1200 bps only--Start/Stop) (5)

Sync Machine Types	Special Features Required for Attachment
2701	#7692 and #7698 (11)
3138	#4640 and #9649 (3, 11) or #4640, #9609 and #9649 (3, 12)
3232-1	(5)
3232-51	(5)
3274-51C	#3701, #6301, and #9112
3276-11, 14	#3701 and #6301 (11) or #3701 and #6302 (12)
3602	#3701 and #4501 or #6301 (11) or #3701 and #4502 or #6302 (12)
3631, 3632	#3701 and #6301 (11) or #3701 and #4502 or #6302 (12)
3651-25	#9150
3651-50	9121 (11)
3651-60	(5, 11)
3651-75	#9121 or #6185 (11)
3684	#3701 and #9695 (11) or #3701 and #9820 (12)
3694	#3701 and #4501 (11) or #3701 and #4502 or (12)
3704, 3705-II	#4711 or #4714 and #9607 (at 600 bps), #9608 (at 1200 bps) or #9615 (at 600/1200 bps) (9, 11) or #4714 (9, 12)
3705-80	#1415 (11) or no special feature required (12)
3725-1, 2, 3726	#4911 and #4666 (11, 19, 20) or #4911 (12, 19)
3741	#9123 (11)

5381	#5760
5525	#1315 or #1316

NOTES FOR CHART C:

1. Attachment of these modems to the public switched telephone network will be via FCC registered circuitry. The IBM 3863 Model 2 Modem and the IBM 3864 Model 2 Modem provide such circuitry and may be directly connected to the PSTN. The 2400 and 4800 bps integrated modems, #5641 and #5741 only, also provide such circuitry and may also be directly connected to the PSTN. All other modems must be connected to the PSTN via a customer-supplied FCC registered coupler equivalent to either the USOC CBS Data Coupler (for manual or automatic answering), or the USOC CDT Data Access Arrangement (for manual only answering). The customer will be responsible for the installation of the proper type of coupler for the mode of operation he desires. See the "Accessories" section of this Manual or the specific machine pages for information on the IBM Protective Coupler.
2. See IBM for information on these services, including the attachable ACEs and DCEs, required options, etc.
3. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.
4. Specify codes **#967X, #968X** and **#969X** on the 4331 stipulate in which protocol the 4331 is to communicate and to which line position on the 4331 that protocol is to be assigned, with the "X" in each case being the line position. See the M4331 pages for details.
5. No special feature is required to attach this DTE to this facility.
6. 3791 switched network operation is supported at the 3704, 3705 or 3725-1, 2, 3726 nonswitched programming. Special procedures are required to establish and disconnect the link. Refer to VTAM and 3790 operation instructions for the appropriate procedures.
7. The 2701 feature code listed is for the attachment of a single synchronous communication line. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second line may be attached.
8. The 3602 will operate on this facility at 1200 bps only. The operational speed of the other DTEs on this facility is determined by:
   - a customer accessible switch on the 2701, 3138, 3274, 3276, 3651, 3684, 3741, 3747, 3767, 3771, 3774, 3775, 4952, 4955, 4959, 4987, 5110, 5251, 5265, and 5340
   - the installation of a CE strap on the 5010
   - the installation of a "Speed specify" on the 3704, 3705, 5381, 8101, 8130 and 8140
   - a customer initiated keyboard request on the 3791, 4331 and 5231
   - an Operator Command Language (OCL) instruction on the 6670.
   - the options chosen at the generation of the control program of the 3725-1, 2.
9. A 3705, equipped with the "Remote Program Loader" feature, may serve as a "Remote" and communicate with a "Local" 3704 or 3705. Their primary communication link must be a nonswitched line, and, therefore, communication over this facility between a "Remote" and a "Local" 3704 or 3705 can only be as a secondary, alternate, path to the primary nonswitched communication link.
10. The listed 5340 feature codes are for the attachment of a single communication line. A second line may be attached to a 5340 equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.
11. These feature codes are for the attachment of a modem which does *not* provide its own clocking. This class of modem should always be used on international connections.
12. These feature codes are for the attachment of a modem which *does* provide its own clocking. This class of modem may only be used on intranational connections.
13. There are two types of 2400 bps Integrated Modems that are *not* compatible with each other. The first type, #4761 and #5610 are line compatible and suitable for communication with each other and with an IBM 3872 Modem equipped with #7941 or #7942. The second type, #5641, is line compatible and suitable for communication with another #5641 or with an IBM 3863 Model 2 Modem.
14. CCITT V.23 modems providing modem clocking and CCITT V.26 modems using Alternative B coding are not truly data transparent, in that the transmission of a long string of zeros can cause the receiving modem to lose synchronization. Therefore, unless the PTT can assure that the modems will not lose synchronization during the transmission of zeros for up to one second, NRZI coding must be used in the SDLC protocol, and transparent mode may *not* be used in the BSC protocol. See Your PTT coordinator for details.
15. The 3845 and 3846 are data encryption/decryption devices inserted between the DTE and the DCE. The DCE must satisfy the requirements of EIA RS-232-C to allow this insertion.
16. The 4800 bps Integrated Modems, #536X and #5741, are line compatible and suitable for communication with each other and with the IBM 3864 Model 2 Modem. The "X" in the #536X feature code is the line position on the 5340 in which this modem will be mounted. See the M5340 pages for details. The 3689 provides a 4800 bps integrated modem as part of the basic machine. This modem is line compatible and suitable for communication with another 3689 or with an IBM 3864 Model 2 Modem.
17. For communication in SNA/SDLC protocol, no special feature is required on the 4701. For communication in BSC protocol, #1422 is required. In either protocol, the 4701 requires that clocking be provided by the attached stand-alone DCE.
18. The 8815 mdl 3 provides a 4800 bps integrated modem as part of the basic machine. This modem is line compatible and suitable for communication with another IBM 8815-3 or IBM 8815-1 equipped with an IBM 3864 mdl 2.

Chart C - PSTN (cont'd)

19. A 3725-1, 2 or 3726 may serve as a "Remote" and communicate with a "Local" 3704, 3705, 3725-1, 2, or 3726. Their primary communication link must be a nonswitched line and, therefore, communication over this facility between a "Remote" and a "Local" 3704, 3705 or 3725-1,2, 3726 can only be as a secondary, alternate path to the primary nonswitched communication link.

20. This feature is only required for the 3725-1 and the 3726, not for the 3725-2.

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

CHART D
NONSWITCHED VOICE GRADE LINES

FACILITY DA1

Point-to-point or multipoint start/stop operation at 134.5, 200, or 300 bps on a half-duplex Type 3002 Channel (or equivalent) via an integrated modem (1, 2)

Machine Types	Special Features Required for Attachment
3704, 3705-II	#4742 (on 2 wires) or #4743 (on 4 wires) and #9606 (at 134.5 bps only) or #4781 or #4785 and #9612 (at 300 bps only)
3767	#5500 or #5505, #9540 and #7111 or #7113 (at 300 bps only)
3792	#5400 (at 134.5 bps only)
4331	#1601, #4696, #4781 and #968X (4) (at 300 bps only)
5010	#4751 (on 2 wires) or #4752 (on 4 wires) (both at 134.5 bps only)

FACILITY D1M

Point-to-point or multipoint start/stop operation at 134.5 or 300 bps on a nonswitched line via a standalone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy (1)

Machine Types	Special Features Required for Attachment
2701	#4640 and #9581 (at 134.5 bps only)
3101	(6)
3138	#4640 and #9721 (3)
3232-51	(Point-to-point only) (6)
3704, 3705-II	#4711 or #4714 and #9606 (at 134.5 bps) or #9612 (at 300 bps)
3705-80	No special feature required at 134.5 bps or #1413 (at 300 bps)
3725-1, 2, 3726	#4911 and #4666 (29)
3767	#3719, #9540 and #7111 or #7113 (at 300 bps only)
3792	#3701 (at 134.5 bps only)
3845, 3846	(6, 16)
4331	#1601, #3701, #4696 and #968X (4)
4952, 4954, 4955, 4959, 4965	#1610 or #2092 or #2096
4987	#4730
5010	#1610 and #2165 (at 134.5 bps only)
5110	#1525 (point-to-point only)
6360	#3704 or #3705 or #3707 (point-to-point only)
6580	#3705 (point-to-point only)
6733	(at 300 bps only) (point-to-point only) (6)
8101, 8130 A, 8140 A, B	#1603 and #3701 (point-to-point only)

FACILITY DA2

Point-to-point or multipoint start/stop operation at 600 bps on a duplex Type 3002 Channel (or equivalent) via an integrated modem (1, 2)

Machine Types	Special Features Required for Attachment
3704, 3705-II	#4742 (on 2 wires) or #4743 (on 4 wires) and #9607
3767	#5500, #7112 and #9541
4331	#1601, #4696, #4781 and #968X (4)
4987	#4748
5010	#4751 (on 2 wires) or #4752 (on 4 wires)

FACILITY D2M

Point-to-point or multipoint start/stop operation at 600 bps on a duplex nonswitched line via a standalone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy (1)

Machine Types	Special Features Required for Attachment
2701	#4640 and #9582 or #4648
3101	(6)
3138	#4640 and #9721 (3)
3232-51	(Point-to-point only) (6)
3704, 3705-II	#4711 or #4714 and #9607
3705-80	#1414
3725-1, 2, 3726	#4911 and #4666 (29)
3767	#3719, #7112 and #9541
3845, 3846	(6, 16)
4331	#1601, #3701, #4696 and #968X (4)
4952, 4954, 4955, 4959, 4965	#1610 or #2092 or #2096
4987	#4730
5010	#1610 and #2165
8101, 8140 A, B	#1603 and #3701 (point-to-point only) (23)

FACILITY DA3

Point-to-point or multipoint start/stop or synchronous operation at 600/1200 bps on a Type 3002 Channel (or equivalent) via an integrated modem (1, 2, 7)

S/S Machine Types	Special Features Required for Attachment
3704, 3705-II	#4781 and #9607 (at 600 bps), #9608 (at 1200 bps) or #9615 (at 600/1200 bps)
3767	#5500, #7112 and #9541 (at 600 bps) or #9542 (at 1200 bps)
3791	#5500 and #6301 (14) or #3210 and #4781 (9)
4331	#1601, #4696, #4781 and #968X (4)
Sync Machine Types	**Special Features Required for Attachment**
2701	#4781, #7698 and #7692 (at 1200 bps) or #7401 at 600/1200 bps) (8)
3274-51C	#5500 and #6301
3276-1, 4	#5500 and #6301
3276-11, 14	#5500 and #6301 (14)
3602	#5500 and #4501 or #6301 (14) or #8001 (5)
3603-1	(5, 6) **3624**#5500 and #1421 or #6301 (7, 14) or #8001 (5, 7)
3684	#5530 and #9482 (14)
3704, 3705-II	#4781 or #4784 and #9607 (at 600 bps), #9608 (at 1200 bps or #9615 (at 600/1200 bps) (14)
3741	#5500
3747	#5500
3767	#5500 and #9531 (at 600 bps) or #9532 (at 1200 bps) (14)
3771, 3774, 3775	#1482 and #5500Y(14)
3791	#5500 and #6301 (14) or #3210 and #4781 (9)
4331	#1601, #4696, #4781 and #967X or #969X (4)

Chart D - Nonswitched Voice Grade Lines (cont'd)

4987	#4748
5010	#4703 and #5500
5110-1, 2	#5500
5231	#5500 and #9334
5251-2, 12	#5500
5285, 5288	#9751 and #9481 or #9482 (14)
5340	#5500 (11, 14)
5360	#5500 (14)
5381	#5500 (14)
5525	#1750 and #5500 or #1751 and #5502
6670	#5510
8101, 8130 A, 8140 A, B	#5500 and #1601 or #1603 (14)
8775	#1488 and #5500

FACILITY DAB3

Point-to-point or multipoint synchronous operation at 600/1200 bps on a Type 3002 Channel (or equivalent) with backup on the public switched telephone network via an integrated modem (1, 2, 7, 21)

Machine Types	Special Features Required for Attachment
3274-51C	#5507 or #5508 and #6301
3276-1, 4	#5507 or #5508
3276-11, 14	#5507 or #5508 (14)
5110-1, 2	#5508
5285, 5288	#5508 (14)
5381	#5508 (14)
6670	#5508

FACILITY D3M

Point-to-point or multipoint start/stop or synchronous operation at 600/1200 bps on a nonswitched line via a standalone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy (1, 7)

S/S Machine Types	Special Features Required for Attachment
3101	(6)
3232-51	(Point-to-point and start/stop only) (6)
3704, 3705-II	#4711 or #4714 and #9607 (at 600 bps), #9608 (at 1200 bps) or #9615 (at 600/1200 bps) (12)
3705-80	#1415 (10) or no special feature required (11)
3725-1, 2, 3726	#4911 and #4666 (12, 29)
3767	#3719, #7112 and #9541 (at 600 bps) or #9542 (at 1200 bps)
3845, 3846	(6, 16)
4331	#1601, #3701, #4696 and #968X (4, 12)
4952, 4954 4955, 4959, 4965	#1610 or #2092 or #2096 (12) or #1310 (1200 bps only)
4975-1R, 2R	(1200 bps only) (7)
4987	#4730 or #4731 (12)
6733	(at 1200 bps only) (point-to-point only) (6)

Sync Machine Types	Special Features Required for Attachment
2701	#7698 and #7692 (at 1200 bps) or #7401 (at 600/1200 bps) (8, 12)
3138	#4640 and #9649 (3), 12) or #4640, #9609 and #9649 (3), 13)
3232-1	(6)
3274-51C	#3701 and #6301
3276-1, 4	#3701, #6301 and #9491 (12) or #3701, #6302 and #9491 (13)
3276-11, 14	#3701, #6301 and #9491 (12, 14) or #3701, #6302 and #9491 (13, 14)
3602	#3701 and #4501 or #6301 (5, 13, 14) or #3701 and #4502 or #6302 (5, 13, 14)
3603-2	(6, 12) or #6352 (5, 13)
3624	#3701 and #1421 or #6301 (7, 13, 14) or #3701 and #1422 or #6302 (7, 13, 14)
3631, 3632	#3701 and #6301 (12, 14) or #3701 and #4502 or #6302 (13, 14)
3684	#3701 and #9695 (12, 14) or #3701 and #9820 (13, 14)
3694	#3701 and #4501 (12, 14) or #3701 and #4502 (13, 14)
3704, 3705-II	#4711 or #4714 and #9607 (at 600 bps), #9608 (at 1200 bps) or #9615 (at 600/1200 bps) (12, 14) or #4714 (13, 14)
3705-80	#1415 (10) or no special feature required (11)
3725-1, 2, 3726	#4911 and #4666 (12, 14, 29) or #4911 (13, 14)
3741	#7705 and #9122 (12)
3747	#1660, #7705 and #9122 (12)
3767	#3719 and #9531 (at 600 bps) or #9532 (at 1200 bps) (12, 14) or #3718 and #9532 (13, 14)
3771, 3774, 3775	#1482 and #3701 (12, 14) or #1481 and #3701 (13, 15)
3791	#3701 and #6301 (12, 14) or #3701 and #6302 or #6303 (13, 14) or #3703 and #3210 (9, 12) or #3703 and #3211 (9, 13)
3845, 3846	(6, 16)
4331	#1601, #3701, #4696 and #967X or #969X (4, 12) or #1601, #3701, #4695 and #967X or #969X (4, 13)
4701-1, 2	(14, 25)
4952, 4954, 4955, 4959, 4965	#2074 or #2090 or #2094 or #2096 (14) or #1310 (1200 bps only)
4975-1R, 2R	(1200 bps only) (7)
4987	#4730 or #4731 (14)
5010	#2074, #4703 and #4800 (12) or #2074 and #4800 (13)
5110	#2074 and #3701
5150	(6, 13)
5231	#2074, #4780, #9334, #9751 and #9481 or #9482 (12) or #2074, #4780, #9751 and #9481 or #9482 (13)
5251-2, 12	#3701 and #4703 (12) or #3701 (13)
5265	#3701
5285, 5288	#3701 (14)
5340	#3701 and #4703 (11, 13, 14) or #3701 (11, 13, 14)
5360	#3701 and #5321 (12, 14) or #3701 (13, 14)
5381	#3701 (14)
5525	#1750 and #3701 or #1751 and #3702 (12) or #3701 or #3702 (13)
6360	#3704 or #3705 or #3707 (12) (point-to-point only)
6580	#3705 (12) (point-to-point only)
6670	#3701 (12, 14)
7426	(6)
8101, 8130 A, 8140 A, B	#3701 and #1601 or #1603 (12, 14) or #3701 and #1602 or #1604 (13, 14) or #3701 and #1605 (12, 13)

Chart D - Nonswitched Voice Grade Lines (cont'd)

8140 C	#1610, #1611, #1620, #1621 or #1630 (13, 14) or #1622 or #1623 (12, 13, 14)
8775	#1488, #3701 and #9494 (12) or #3701 and #9494 (13)

FACILITY D4M

Point-to-point or multipoint synchronous operation at 2000 bps on a nonswitched line via a standalone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy (1)

Machine Types	Special Features Required for Attachment
2701	#7698 (8)
3138	#4640, #9609 and #9649 (3)
3232-1	(6)
3274-1C, 21C, 31C	#3701 and #6302 or #6303 (14)
3276-1, 4	#3701, #6302 and #9491
3276-11, 14	#3701, #6302 and #9491 (14)
3602	#3701 and #4502 or #6302 (14)
3624	#3701 and #1422 or #6302 (14)
3631, 3632	#3701 and #4502 or #6302 (14)
3694	#3701 and #4502 (14)
3704, 3705-II	#4714 or #4718 (14, 17)
3705-80	No special feature required
3741	#9120
3747	#1660 and #9120
3771, 3774 3775	#1481 and #3701 (14)
3776-1, 2	#1481 and #3701 (14)
3845, 3846	(6, 16)
3791	#3701 and #6302 or #6303 (14) or #3211 and #3703 (9)
4331	#1601, #3701, #4695 and #967X or #969X (4)
4701-1, 2	(14, 25)

4987	#4730 or #4731
5010	#2074 and #4800
5110	#2074 and #3701
5150	(6, 13)
5231	#2074, #4780 and #9481 or #9482
5251-2, 12	#3701
5265	#3701
5285, 5288	#3701 (14)
5340	#2500 and #3701 (11, 14)
5360	#3701 (14)
5381	#3701 (14)
5525	#3701 or #3702
6360	#3704 or #3705 or #3707 (point-to-point only)
6580	#3705 (point-to-point only)
6670	#3701 (14)
7426	(6)
8101, 8130 A, 8140 A, B	#3701 and #1602 or #1604 (14) or #3701 and #1605 (13)
8130 B	#3701 and #1602 (13, 14)
8140 C	#1610, #1611, #1620, #1621 or #1630 (14) or #1622 (14) or #1623
8775	#3701 and #9494
8815-1	#3701 (14)

FACILITY DA5

Point-to-point or multipoint synchronous operation at 2400 bps on a Type 3002 Channel (or equivalent) via an integrated modem (1, 2, 18)

Machine Types	Special Features Required for Attachment
3274-31C	#5640, #9112 and #6302 or #6303
3659	(6)
3669	(6)
3704, 3705-II	#4751 or #4752 or #4754 or #4755 (14, 17)
3774, 3775, 3776-1, 2	#5600 or #5602 (14)
3842	(6, 10)
5251-2, 12	#5640
5340	#5600 or #5601 or #5602 (14)
5381	#5640 (14)

FACILITY DAB5

Point-to-point or multipoint synchronous operation at 2400 bps on a Type 3002 Channel (or equivalent) with backup on the public switched telephone network via an integrated modem (1, 2, 19, 20)

Machine Types	Special Features Required for Attachment
3774, 3775, 3776-1, 2	#7951 and #5600 or #5602 (14)
3842	#7951 (10)
5340	#7951 and #5600 or #5601 or #5602 (11, 14)

FACILITY D5

Point-to-point or multipoint synchronous operation at 2400 bps on a Type 3002 Channel (or equivalent) via an IBM 3863 Model 1 Modem or an IBM 3872 Modem (1, 19, 23)

Machine Types	Special Features Required for Attachment
2701	#7698 (8)
3138	#4640, #9609 and #9649 (3)
3232-1	(6)
3274-1C, 21C, 31C	#3701 and #6302 or #6303 (14)
3274-51C	#3701 and #6302 or #6303 (14)
3276-1, 4	#3701, #6302 and #9491
3276-11, 14	#3701, #6302 and #9491 (14)
3602	#3701 and #4502 or #6302 (14)
3624	#3701 and #1422 or #6302 (14)
3631, 3632	#3701 and #4502 or #6302 and/or #3211 and #3703 (14)
3651-25, 50	#9121 or #9122 (14, 22)
3651-75	#9121 or #9122 or #6185 (14, 22)
3684	#3701 and #9822 (14)
3704, 3705-II	#4714 or #4718 (14, 16, 17)
3705-80	No special feature required
3725-1, 2, 3726	#4911 (14, 27, 28)
3741	#9121

8815-1	#3701 (14)

FACILITY DA6

Point-to-point or multipoint synchronous operation at 4800 bps on a duplex Type 3002 Channel (or equivalent) via an integrated modem (1, 2, 21)

Machine Types	Special Features Required for Attachment
3274-31C	#5740 or #9112 and #6302 or #6303 (14)
3776-1, 2	#5700 or #5702 (14)
5251-2, 12	#5740
5340	#5351 (11, 14)
5381	#5740 (14)
8815-4	(14, 26)

FACILITY DAB6

Point-to-point or multipoint synchronous operation at 4800 bps on a duplex Type 3002 Channel with C1 Conditioning (or equivalent) with backup on the public switched telephone network via an integrated modem (1, 2, 20, 21)

Machine Types	Special Features Required for Attachment
3776-1, 2	#9752 and #5700 or #5702 (14)

FACILITY D6

Point-to-point or multipoint synchronous operation at 4800 bps on a duplex Type 3002 Channel (or equivalent) via an IBM 3864 Model 1 Modem or, on a Type 3002 Channel with CI Conditioning (or equivalent), via an IBM 3874 Modem (1, 23)

Machine Types	Special Features Required for Attachment
2701	#7698 (8)
3138	#4640, #9609 and #9649 (3)
3232-1	(6)
3274-1C, 21C, 31C	#3701 and #6302 or #6303 (14)
3274-51C,	#3701 and #6302 or #6303 (14)
3276-1, 4	#3701, #6302 and #9491
3276-11, 14	#3701, #6302 and #9491 (14)
3602	#3701 and #4502 or #6302 (14)
3624	#3701 and #1422 or #6302 (14)
3631, 3632	#3701 and #4502 or #6302 (14)
3651-25, 50	#9124 or #9125 (14)
3651-75	#9124 or #9125 (14)
3684	#3701 and #9823
3694	#3701 and #4502 (14)
3704, 3705-II	#4714 or #4718 (14, 16, 17)
3705-80	No special feature required
3725-1, 2, 3726	#4911 (14, 27, 28)
3771, 3774, 3775	#1481 and #3701 (14)
3776-1, 2 3777-1, 2	#1481 and #3701 (14)
3776-3, 4, 3777-3, 4	#3701 (14, 15)
3791	#3701 and #6302 or #6303 (14) or #3211 and #3703 (9)
3843	(6, 10)
3845, 3846	(6, 16)

8815-1	#3701 (14)

IBM ISG

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

Chart D - Nonswitched Voice Grade Lines (cont'd)

NOTES FOR CHART D:

1. See IBM for information on these facilities, including attachable DCEs, required options, etc.

2. Integrated modems perform the modulation/demodulation function on a communication facility at speeds up to 4800 bps. When they are used, standalone DCEs are not required. GA24-3435 provides descriptions of these modems and definitions of the communication facilities on which they may be used.

3. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.

4. Specify codes **#967X**, **#968X** and **#969X** stipulate in which protocol the 4331 is to communicate, and to which line position this protocol will be assigned, with the "X" in each case denoting the line position. See the M4331 pages for details.

5. The 3603 Model 1 and the 3624, when equipped with #8001, will communicate with a 3602 over a normal "3600 System Loop". When more than one 3603 and/or 3624 are on the loop, point-to-point, half-duplex, 2-wire terminated links are required from the 3602 to the first station on the loop, between successive stations on the loop, and from the last station on the loop back to the 3602. When there is only one 3603 or 3624 on the loop, a point-to-point, duplex, 4-wire terminated link is required between that station and the 3602.

   The 3602 and 3624, when equipped with either #3701 or #5500, will communicate over a nonswitched voice grade line with a 3704, 3705, 3725-1, 2, or 3726 in either point-to-point or multipoint mode.

6. No special feature is required to attach this DTE to to this facility.

7. The 3602 and 3624 will operate on this facility at 1200 bps only. The operational speed of the other DTEs on the facility is determined by:
   - a customer accessible switch on the 2701, 3138, 3274, 3276, 3624, 3631, 3632, 3651, 3741, 3747, 3771, 3774, 3775, 5110, 5251, 5265, 5340, and 5381
   - the installation of a speed specify on the 3704, 3705, 5010, 8101, 8130, 8140 and 8775. (Please note that, in Emulation mode, the reassignment of a line on the 3704 or 3705 to a different speed will require the re-IPL of the 3704/3705. In NCP mode, this reassignment can be accomplished through a customer initiated message to the access method.)
   - a customer accessible switch on the 3767 when #2834 is installed, otherwise, through the installation of a speed specify
   - a customer initiated keyboard request on the 3791 and 4331
   - a customer initiated console request on the 4952, 4955, 4959, 4987 and 5231
   - an Operator Control Language (OCL) instruction on the 6670.
   - the options chosen at the generation of the control program of the 3725-1, 2. (Please note that in Emulation mode, the reassignment of a line on the 3725-1, 2, 3726 to a different speed will require the re-IPL of the 3725-1, 2. In NCP mode, this reassignment can be accomplished through a customer-initiated message to the access method.

8. The listed feature code is for the attachment of a single synchronous communication line to the 2701. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second synchronous line may be attached.

9. The 3276 may be attached as a tributary station on a multipoint nonswitched line where the control station is a 3791 equipped with the Data Link Adapter #3210 or #3211. All stations on such a link must operate at the same line speed and use the same clocking source, i.e., either DTE clock or modem clock, but not a mixture of these two.

10. The 3631, 3632, 8101, 8130 and 8140 support communication with down line 3843 Loop Control Units. The 3843 provides an EIA/CCITT interface to a standalone DCE and can be utilized with any synchronous modem at a speed of 2400, 4800 or 9600 bps.

11. The listed feature codes are for the attachment of a single communication line to the 5340. A second line may be attached to a 5340 equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.

12. These feature codes are for the attachment of a modem which does *not* provide its own clocking. This class of modem should always be used where the network is international.

13. These feature codes are for the attachment of a modem which *does* provide its own clocking. This class of modem should only be used on an intranational network.

14. The 3274 Models 1C and 51C, 3276 Models 11 thru 14, 3602, 3624, 3631, 3632, 3651, 3684, 3694, 3767, 3771, 3774, 3775, 3776, 3777, 3791, 4701, 4952, 4954, 4955, 4959, 4965, 4987, 5285, 5288, 5340, 5360, 5381, 6670, 8101, 8130, 8140 and 8815 may communicate as tributary stations on a multipoint network with a control station 3704 or 3705 using Synchronous Data Link Control (SDLC). In a multipoint network, SDLC allows the control station to receive from one tributary station while it is transmitting to another tributary station. Operation in this mode requires duplex communication facilities and a 3704, 3705, 3725-1, 2, or 3726 equipped with:
   - #4784 for communication with tributary stations with 1200 bps integrated modems
   - #4755 for communication with tributary stations with 2400 bps integrated modems (#5602) or attaching IBM 3872 Modems
   - #4718 for communication with tributary stations via standalone DCEs.

   or a 3725-1, 2, 3726 equipped with:
   - #4911 for communication with tributary stations via standalone DCEs.

15. When equipped with #4718, the 3704 or 3705 can communicate in data-full-duplex mode (i.e., simultaneous data transmission in both directions) with a 3776 Model 3, 3776 Model 4 or 3777 Model 3. This type communication requires full-duplex communication facilities.

16. The 3845 and 3846 are data encryption/decryption devices, installed between the DTE and the DCE. They will operate at speeds of up to 1200 bps with start/stop DTEs, and at speeds of up to 19.2K bps with synchronous DTEs. The DCEs involved must meet the requirements of EIA RS-232-C

17. 3704/3705 "Remotes" may communicate with 3704/3705 "Locals" over this facility as their primary communication link. #4714, #4751 and #4781 will support the normal data-half-duplex mode of operation on half-duplex or duplex communication facilities. #4718, #4754 and #4784 will support a data-full-duplex operation (i.e., simultaneous data transmission in both directions) on duplex communication facilities.

18. There are two types of 2400 bps integrated modems, which are *not* compatible with each other. The first type, #4751, #4752, #4754, #4755, #5600 and #5602 are line compatible and suitable for communication with each other and with a properly equipped IBM 3872 Modem. The second type, #5640, is line compatible and suitable for communication with another #5640 or with an IBM 3863 Model 1 Modem.

19. CCITT V.23 modems that provide modem clocking and CCITT V.26 modems that use Alternative B coding are not truly data transparent, in that transmission of a long string of zeros can cause the receiving modem to lose synchronization. Therefore, unless the PTT can assure that the modems will not lose synchronization during the transmission of zeros for up to one second, NRZI encoding should be used in SDLC (when the 3845 or 3846 are *not* to be installed), and transparent mode should *not* be used in BSC. See your PTT coordinator for details.

20. On switched network backup facilities, the IBM standalone or integrated modem must be equipped as shown for operation on the backup link. However, a control station may elect to operate on this type service via two separate ports, one of which is dedicated to the primary nonswitched link, and the other of which is dedicated to the backup switched link. Each of these ports must be equipped with a modem compatible with the standalone or integrated modem with which it is to communicate.

21. There are two type of 4800 bps integrated modems, which are *not* compatible with each other. The first type, #5700 and #5702, is line compatible and suitable for communication with each other and with a properly equipped IBM 3874 Modem. The second type, #5740, is line compatible and suitable for communication with another #5740 and with an IBM 3864 Model 1 Modem.

22. The 3651 will communicate over this facility with a 3704, 3705, 3725-1, 2 or 3726 at the host system, or with a 3659 at a remote store site. See the M3651 pages for the appropriate feature codes for both type communications. See the M3659 pages for the requirements on that unit for the remote store communications.

23. Refer to the M3863, 3864 and 3865 pages for the DTE attachment codes required for each attaching DTE.

23. The 8101 can only be attached to an 8140.

25. For communication in the SNA/SDLC protocol, no special feature is required on the 4701. For communication in the BSC protocol, *which is limited to a speed of no greater than 4800 bps,* #1422 is required. Communication in either protocol requires that clocking be provided by the attached DCE.

Chart D - Nonswitched Voice Grade Lines (cont'd)

26. The IBM 8815 mdl 4 provides a 4800-bps integrated modem as part of the basic machine. This modem is line compatible and suitable for communication with another IBM 8815-4 or with an IBM 8815-1 equipped with an IBM 3864 mdl 1.

27. 3725-1, 2, 3726 "Remotes" may communicate over this facility with 3704, 3705 or 3725-1, 2, 3726 "Locals" as their primary communication link. #4911 will support the normal data half-duplex operational mode on half-duplex or duplex communication facilities or a data full-duplex (i.e., simultaneous data transmission in both directions) operational mode on duplex communication facilities.

28. The 3725-1, 2, 3726 equipped with #4911 can communicate in a data full-duplex mode (i.e., data transmission in both directions simultaneously) with a 3776 mdl 3 or 4, or a 3777 mdl 3. This type of communication requires full-duplex communication facilities.

29. This feature is only required for the 3725-1 and the 3726, not for the 3725-2.

3776-3, 4, 3777-3, 4	#4501 (3)
3777-1, 2	#1481 and #4501
4952, 4954, 4955, 4959, 4965	#2075
5340	#5401 or #5402 or #5403 or #5404

FACILITY E2: Point-to-point synchronous operation at 40.8K bps on a Type 8801 Service (1)

Machine Types	Special Features Required for Attachment
2701	#7697 (4)
3704	#4717(2)
3705-II	#4717 or #4725 (2)
3705-80	#6713
4952, 4954, 4955, 4959, 4965	#2075
5010	#2074 and #4805
5340	#5401 or #5402 or #5403 or #5404

FACILITY E3: Point-to-point synchronous operation at 50K bps on a Type 8801 Service (1)

Machine Types	Special Features Required for Attachment
2701	#7697 (4)
3704	#4717 (2)
3705-II	#4717 or #4725 (2)
3705-80	#6713
3725-1, 2, 3726	#4921 or #4931 (8)
4952, 4954, 4955, 4959, 4965	#2075
5340	#5401 or #5402 or #5403 or #5404

FACILITY E4: Point-to-point synchronous operation at 230.4K bps on a Type 8751 Service (1)

Machine Types	Special Features Required for Attachment
2701	#7697 (4)
3705-II	#4722 or #4723 (2)
3725-1, 2, 3726	#4921 (8)

NOTES FOR CHART E:

1. See IBM for additional information on these services.
2. 3704/3705 "Remotes" may communicate over this facility with 3704/3705 "Locals" as their primary communication link. #4717 and #4722 will support the normal data-half-duplex operational mode, while #4725 will support a data-full-duplex (i.e., simultaneous data transmission in both directions) operational mode.
3. The 3705, using #4725 can communicate in a data-full-duplex mode (i.e., data transmission in both directions simultaneously) with a 3776 Model 3, 3776 Model 4 or a 3777 Model 3.
4. This feature code is for the attachment of a single communication line. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second line may be attached.
5. A communication line attached to the ICA via this feature presents a 100% load factor to the ICA, and must not be operated simultaneously with any other line on the ICA.
6. The 8101 will operate at this speed only when it is installed in conjunction with an 8140 A or B or 8140 C without #1610-#1614.
7. IBM DTEs normally provide cables terminating with #16 pins. In those countries where #20 pins are required, an adapter cable is available. This is supplied as Cable Group #1393 on the 3704 and 3705, and as specify **#2723** on the 4952, 4955, 4959, 4987, 8101 and 8140.
8. 3725-1, 2, 3726 "Remotes" may communicate over this facility with 3704, 3705 or 3725-1, 2, 3726 "Locals" as their primary communication link. #4921 will support the normal data half-duplex operational mode and a data full-duplex (i.e., simultaneous data transmission in both directions) operational mode.
9. The 3725-1, 2, 3726 using #4921 can communicate in a data full-duplex mode (i.e., data transmission in both directions simultaneously) with a 3776 mdl 3 or 4, or a 3777 mdl 3.

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

CHART G
NONSWITCHED BASEBAND LINES

FACILITY G1: Point-to-point or multipoint start/stop operation at 134.5 bps via an integrated Type 1A (half-duplex) or Type 1B (duplex) limited distance line adapter (1)

Machine Types	Special Features Required for Attachment
3704, 3705-II	#9606 and #4731 (Ty 1A) or #4732 (Ty 1B)

FACILITY G2: Point-to-point or multipoint start/stop operation at 134.5 or 600 bps via an integrated Type 2A (half-duplex) or Type 2B (duplex) limited distance line adapter (1)

Machine Types	Special Features Required for Attachment
2701	#4636 (Ty 2A) or #4637 (Ty 2B)
3704, 3705-II	#4741 and #9606 (at 134.5 bps) or #9607 (at 600 bps)
5010	#4750

FACILITY G3M: Point-to-point or multipoint synchronous operation at 2400, 4800 or 9600 bps via a stand-alone baseband modem attached under the provisions of the IBM Multiple Supplier Systems Policy (2)

Machine Types	Special Features Required for Attachment
2701	#7698 (3)
3138	#4640, #9609 and #9649 (3, 4)
3232-1	(5)
3274-1C, 21C, 31C	#3701 and #6302 or #6303 (6)
3274-51C	#3701 and #6302 or #6303 (6)
3276-1,4	#3701, #6302 and #9491 (3)
3276-11,14	#3701, #6302 and #9491 (6)
3602	#3701 and #4502 or #6302
3603-2	2400 bps, point-to-point only (5)
3624	#3701 and #1422 or #6302 (3, 6)
3631, 3632	#3701 and #4502 or #6302
3651-25, 50	#9121 or #9122 (6, 7) or #9124 or #9125 (6, 8)
3651-75	#9121 or #9122 (6, 7) or #9124 or #9125 (6, 8) or #6185 (7)
3684	#3701 and #9822 (6, 7) or #3701 and #9823 (6, 8)
3694	#3701 or #3701 and #4502 (6)
3704, 3705-II	#4714 or #4718 (6, 9, 10)
3705-80	No special feature required
3705-80	No special feature required
3725-1, 2, 3726	#4911 (6, 16, 17)
3741	#9121 (7)
3747	#1660 and #9121 (7)
3767	#3718 and #9533 (6, 7)
3771, 3774, 3775	#1481 and #3701 (3, 6)
3776-1,2	#1481 and #3701 (3, 6)
3776-3,4; 3777-3,4	#3701 (6)
3777-1,2	#1481 and #3701 (6)
3791	#3701 and #6302 or #6303 (6) or #3211 and #3703 (11)
4331	#1601, #3701, #4695 and #967X or #969X (12)
4701-1,2	(6, 15)
4952, 4954, 4955, 4959, 4965	#2074 or #2090 or #2094 or #2096 (6) or #1310
4987	#4731 or #4731 (6)
5010	#2074 and #4800 (3)
5110	#2074 and #3701 (3)
5150	(5)
5231	#4780, #9753 or #9754 and #9481 or #9482 (3)
5251-2,12	#3701
5265	#3701 (7)
5285, 5288	#3701 (3, 6)
5340	#2500 and #3701 (6, 13)
5360	#3701 (6)
5381	#3701 (6)
5525	#3701 or #3702
6360	#3704 or #3705 or #3707 (point-to-point only)
6580	#3705 (point-to-point only)
6670	#3701 (6, 7)
7426	(5)
8101, 8130 A	#3701 and #1602 or #1604 (6) or #3701 and #1605
8130 B	#3701 and #1602 (6)
8140 A, B	#3701 and #1602 or #1604 (6) or #3701 and #1605
8140 C	#1610, #1611, #1620, #1621, #1622, #1623, or #1630 (6)
8775	#3701 and #9494
8815-1	#3701 (6)

NOTES FOR CHART G:

1. The Limited Distance Line Adapters, Types 1A and 1B, are limited to a link of no more than 7.65km (4.75 miles). The Limited Distance Line Adapters, Types 2A and 2B, are limited to a link of no more than 13.25km (8 miles). See GA24-3435 for detailed descriptions of these adapters and the communication links over which they may operate.
2. See IBM for more information on these services, including attachable DCEs, required options, etc.
3. These feature codes will support communication on this facility at 2400 or 4800 bps only.
4. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.
5. No special feature is required to attach this DTE to this facility.
6. The 3274 Models 1C and 51C, 3276 Models 11 thru 14, 3602, 3624, 3631, 3632, 3651, 3684, 3767, 3771, 3774, 3775, 3776, 3777, 3791, 4701, 4952, 4954, 4955, 4959, 4965, 4987, 5285, 5288, 5340, 5360, 5381, 6670, 8101, 8130, 8140 and 8815 may communicate as tributary stations on a multipoint network with a control station 3704, 3705, 3725-1, 2 or 3726 using Synchronous Data Link Control (SDLC). In a multipoint network, SDLC allows the control station to receive from one tributary station while it is transmitting to another tributary station. Operation in this mode requires duplex communication facilities and a 3704/3705 equipped with #4718 or a 3725-1, 2, 3726 equipped with #4911. SDLC also supports the normal data-half-duplex mode of operation over half-duplex or duplex facilities.
7. These feature codes will support communication on this facility at 2400 bps only.
8. These feature codes will support communication on this facility at 4800 bps only.
9. 3704/3705 "Remotes" may communicate with 3704/3705 "Locals" over this facility as their primary communication link. #4714 will support the normal data-half-duplex mode of operation on half-duplex or duplex facilities. #4718 will support

Chart G - Nonswitched Baseband Lines (cont'd)

a data-full-duplex (i.e., simultaneous data transmission in both directions) on duplex communication lines.

10. When equipped with #4718, the 3704 or 3705 can communicate in data-full-duplex (i.e., simultaneous data transmission in both directions) mode with a 3776 Model 3, 3776 Model 4 or 3777 Model 3. This mode of operation requires duplex communication facilities.

11. The 3276 may be attached as a tributary station on a multipoint line where the control station is a 3791 equipped with the Data Link Adapter, #3211.

12. Specify codes **#967X** and **#969X** on the 4331 stipulate in which protocol the 4331 is to communicate, and to which line position on the 4331 that protocol is to be assigned, with the "X" in each case denoting the line position. See the M4331 pages for details.

13. The listed feature codes are for the attachment of a single communication line to the 5340. A second line may be attached to a 5340 equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.

14. The 8101 will operate at this speed only when it is installed in conjunction with an 8140 A or B or 8140 C without #1610-#1614.

15. Communication in the SNA/SDLC protocol requires no special feature on the 4701. Communication in the BSC protocol, *which is limited to a speed no greater than 4800 bps,* requires #1422.

16. 3725-1, 2, 3726 "Remotes" may communicate over this facility with 3704, 3705 or 3725-1, 2, 3726 "Locals" as their primary communication link. #4911 will support the normal data half-duplex operational mode on half-duplex or duplex facilities or a data full-duplex (i.e., simultaneous data transmission in both directions) operational mode on duplex communication lines.

17. The 3725-1, 2, 3726, equipped with #4911 can communicate in data full-duplex mode (i.e., simultaneous data transmission in both directions) with a 3776 mdl 3 or 4, or a 3777 mdl 3. This type of communication requires full-duplex communication facilities.

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

CHART L

CIRCUIT SWITCHED PUBLIC DATA NETWORKS PROVIDING A CCITT "X" SERIES INTERFACE

FACILITY L3: Synchronous operation at 2400 bps on a public switched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in IBM GA27-3287 (1)

Machine Types	Special Features Required for Attachment
3274-51C	#5656, #6303 and #9112 (2, 5)
3276-11, 14	#1068, #5656 and #6302 (2, 5)
3705-II	#5656 and #9840 (2, 3)
3705-81, 3705-82	#5657 and #9775 (2, 3)
3725-1, 2, 3726	#4941 (2)
5360	#5655 (2)
8101 A2X, 8130, 8140 B	#1602 and #5656 (2)
8140 C	#1612 (2)

FACILITY L4: Synchronous operation at 4800 bps on a public switched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in IBM GA27-3287 (1)

Machine Types	Special Features Required for Attachment
3274-51C	#5656, #6303 and #9112 (2, 5)
3276-11, 14	#1068, #5656 and #6302 (2, 5)
3705-II	#5656 and #9840 (2, 3)
3705-81, 3705-82	#5657 and #9775 (2, 3)
3725-1, 2, 3726	#4941 (2)
5360	#5655 (2)
8101 A2X, 8130, 8140 B	#1602 and #5656 (2)
8140 C	#1612 (2)

FACILITY L5: Synchronous operation at 9600 bps on a public switched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in IBM GA27-3287 (1)

Machine Types	Special Features Required for Attachment
3274-51C	#5656, #6303 and #9112 (2, 5)
3276-11, 14	#1068, #5656 and #6302 (2, 5)
3705-II	#5656 and #9840 (2, 3)
3705-81, 3705-82	#5657 and #9775 (2, 3)
3725-1, 2, 3726	#4941 (2)
5360	#5655 (2)
8101 A2X, 8130, 8140 B	#1602 and #5656 (2)
8140 C	#1612 (2)

FACILITY L6: Synchronous operation at 48K bps on a public switched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in IBM GA27-3287

Machine Types	Special Features Required for Attachment
3274-51C	#5656, #6303 and #9112
3705-II	#5656 and #9841 (3)
3705-81, 3705-82	#5658 and #9776 (3)
3725-1, 2, 3726	#4942
5360	#5655 (2)
8101 A2X, 8130 B, 8140 B	#1602 and #5656 (2, 4)
8140 C	#1612 (2)

NOTES FOR CHART L:

1. See the *Data Communications Handbook,* ZZ20-1939, IBM for more information on attachable DCE, services, etc.
2. When attached to a Network via the CCITT X.21 interface feature (as noted), these DTEs may communicate with other DTEs attached to this network via a CCITT X.21bis interface.
3. 3705-II X.21 switched operation requires the use of a Type 2 Communication Scanner. Switched X.21 operation on the 3705-II and the 3705-80 is supported by ACF/NCP/VS Release 3, ACF/VTAM Release 3 and ACF/TCAM Version 2 Release 3. User Facilities as defined in CCITT Recommendation X.2 are supported as follows:
   - Automatic Answering.
   - Address Calling and Abbreviated Address Calling Only address blocks, consisting of a single address signal are supported, and abbreviated address calling is supported on a per-call basis only.
   - Direct Call is supported on a contractual or a per-call basis.
   - Closed User Groups are supported on a contractual basis only, with both Preferred and Nonpreferred Groups included. The Facility Request Block used to select the Closed User Group (CUG) may only consist of a single Facility Request Signal, to be followed by an Address Block as described under Address Calling above. Please note that the Facility Request Codes for a CUG may vary from country to country. Your local teleprocessing coordinator should be contacted for details.
   - Call Progress Signalling is reported via an operator message containing the Call Progress Signal (CPS) code and a brief message of its significance. Those CPSs defined in Annex 6 of Recommendation X.21 are recognized, with the exception of CPSs 82 and 83, which are related to a currently unsupported user facility. Any unrecognized CPS that is received is reported via an operator message that states that this is an "Unrecognized CPS."
4. The 8101 A2X cannot attach to an 8130 or 8140 C containing #1610-#1614.
5. The 3274 and 3276 X.21 switched interface features will support the following network facilities as defined in CCITT Recommendation X.2:
   - Abbreviated address call
   - Direct call
   - Call progress signalling
   - Closed user groups

8140 C	#1614

NOTES FOR CHART M:

1. See IBM for information on these facilities, including attachable DCEs, required options, etc.
2. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.
3. Specify codes **#967X**, **#968X** and **#969X** stipulate in which protocol the 4331 is to communicate, and to which line position this protocol will be assigned, with the "X" in each case denoting the line position. See the M4331 pages for details.
4. No special feature is required to attach this DTE to this facility.
5. The listed feature code is for the attachment of a single synchronous communication line to the 2701. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second synchronous line may be attached.
6. The 3276 may be attached as a tributary station on a multipoint nonswitched line where the control station is a 3791 equipped with the Data Link Adapter, #3210 or #3211. All stations on such a line must operate at the same line speed and use the same type clocking source, i.e., either DTE clock or modem clock, but not a mixture of these two.
7. The listed feature codes are for the attachment of a single communication line to the 5340. A second line may be attached to a 5340 and equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.

IBM ISG

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

Chart M - Nonswitched Public Data Networks (cont'd)

8. The 3274 Models 1C and 51C, 3276 Models 11 thru 14, 3602, 3624, 3631, 3632, 3651, 3684, 3694, 3767, 3771, 3774, 3775, 3776, 3777, 3791, 4701, 4952, 4954, 4955, 4959, 4965, 4987, 5285, 5288, 5340, 5360, 5381, 6670, 8101, 8130, 8140 and 8815 may communicate as tributary stations on a multipoint network with a control station 3704, 3705, 3725-1, 2, or 3726 using Synchronous Data Link Control (SDLC). In a multipoint network, SDLC allows the control station to receive from one tributary station while it is transmitting to another tributary station. Operation in this mode requires duplex communication facilities, and a 3704/3705 equipped with #4718 or a 3725-1, 2, 3726 equipped with #4911.

9. When equipped with #4718, the 3704 or 3705 can communicate in data-full-duplex mode (i.e., simultaneous data transmission in both directions) with a 3776 Model 3, 3776 Model 4 or 3777 Model 3. This type communication requires duplex communication facilities.

10. The 3845 and 3846 are data encryption/decryption devices, installed between the DTE and the DCE. They will operate at speeds of up to 1200 bps with start/stop DTEs and at speeds of up to 19.2K bps with synchronous DTEs. The DCEs involved must meet the requirements of EIA RS-232-C.

11. 3704/3705 "Remotes" may communicate with 3704/3705 "Locals" over this facility as their primary communication link. #4714 will support the normal data-half-duplex mode of operation on half-duplex or duplex communication facilities. #4718 will support a data-full-duplex operation (i.e., simultaneous data transmission in both directions) on duplex communication facilities.

12. The 3651 will communicate over this facility with a 3704, 3705, 3725-1, 2, or 3726 at the host system, or with a 3659 at a remote store site. See the M3651 pages for the appropriate feature codes for both communications types. See the M3659 pages for the requirements on that unit for the remote store communications.

13. The 8101 will operate at this speed only when it is installed in conjunction with an 8140 A or B or 8140 C without #1610-#1614.

14. Communication in the SNA/SDLC protocol requires no special feature on the 4701. Communication in the BSC protocol, *which is limited to a speed no greater than 4800 bps,* requires #1422.

15. 3525-1, 2, 3726 "Remotes" may communicate over this facility with 3704, 3705 or 3725-1, 2, 3726 "Locals" as their primary communication link. #4911 will support the normal data half-duplex operational mode on half-duplex or duplex communication facilities and a data full-duplex (i.e., simultaneous data transmission in both directions) operational mode on duplex communication facilities.

16. The 3525-1, 2, 3726 equipped with #4911 can communicate in data full-duplex mode (i.e., simultaneous data transmission in both directions) with a 3776 mdl 3 or 4, or a 3777 mdl 3. This type of communication requires full-duplex communication facilities.

17. This feature is only required for the 3725-1 and the 3726, not for the 3725-2.

8140 C	#1613 (2)
8775	#5655 and #9825 (2)
8815	#5655 (2)

FACILITY N6: Point-to-point or multipoint synchronous operation at 48K bps on a public nonswitched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in GA27-3287 . (1)

Machine Types	Special Features Required for Attachment
3274-21C, 31C, 51C	#5655 and #6303
3705-II	#5655 and #9843
3705-81, 3705-82	#5658 and #9778
3725-1, 2, 3726	#4942
4331	#1601, #4695, #5655 and #969X (3)
4952, 4954, 4955, 4959, 4965	#2080
5360	#5655
8101, 8130 B 8140 A, B	#1602 and #5655 (4)
8140 C	#1613

NOTES FOR CHART N:

1. Contact IBM for more information on attachable DCEs, services, etc.
2. The 3274, 3276, 8101, 8130, 8140, 8775 and 8815 will communicate as tributary stations with a control station 3705-II or 3725-1, 2, 3726, or 4331 using Synchronous Data Link Control (SDLC). In a multipoint network, SDLC allows the control station to receive from one tributary station while it is transmitting to another tributary station. Operation in this mode requires a control station equipped for "data-full-duplex" operation. SDLC also supports the normal "data-half-duplex" mode of operation.

   The 8101, 8130 or 8140 will communicate as a control station to 3274-51C, 3276, and 8775 tributary stations in "data-half-duplex" mode.

   Finally, these SDLC DTEs, when attached to a network via the CCITT X.21 interface (as noted), will communicate with other SDLC DTEs attached to the same network via a CCITT X.21bis (EIA RS-232-C) interface feature. See Facilities M3, M4 and M5 in Chart M for information on DTEs attachable via a CCITT X.21bis interface feature.
3. The "X" in the **#969X** specify code denotes the line position on the 4331 to which the SDLC protocol will be assigned. See the M4331 pages for details.

Chart N - Nonswitched Public Data Networks Providing a CCITT "X" Series Interface (cont'd)

4. The 8101 will operate at this speed only when it is installed in conjunction with an 8140 A or B or when the 8140 C does not contain #1610-#1614.

3705-II	#4714 (3)
3705-80	No special feature required (3)
3725-1, 2, 3726	#4911 (3)
3776-1, 2, 3777-1, 2	#1481 and #3701 (2)
3776-3, 4, 3777-3, 4	#3701 (2)
4331	#1601, #3701, #4695 and #969X (2, 4)
4952, 4954, 4955, 4959, 4965	#2074 or #2090 or #2094 or #2096 (2) or #1310
5251-2, 12	#3701 (2)
5340	#2500 and #3701 (2, 5)
5381	#3701 and #925X (2, 6)
8101, 8130, 8140	#3701 and #1602 (2)

FACILITY P6: Synchronous operation at speeds up to 56K bps on a public packet switched network via a CCITT X.21bis stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in IBM GA27-3345 (1)

Machine Types	Special Features Required for Attachment
3705-II	#4726 (3)
3705-80	#6712 and #9713 (3)
3725-1, 2, 3726	#4931 (3)

NOTES FOR CHART P:

1. See IBM for information on these facilities, including attachable DCEs, required options, etc.
2. Attachment of these DTEs to this facility is via a 5973 L02 Network Interface Adapter. For more information on this adapter, see RPQ Y96635.
3. The 3705-II, the 3705-80, and the 3725-1,2, 3726 require either the Program Product 5668-981 or the 5973-L02 Network Interface Adapter for operation on this facility.

Chart P - Public Packet Switched Networks Providing a CCITT X.21bis(an EIA RS-232-C or CCITT V.35) Interface (cont'd)

4. The "X" in the specify code **#969X** specifies in which line position on the 4331 this protocol is to be installed. See the M4331 pages for details.
5. The listed feature codes are for the attachment of a single communication line to the 5340. A second line may be attached to a 5340 equipped with #3500. See the M5340 pages for details.
6. The "X" in the 5381 specify code denotes the line position to which this speed will be assigned. See the M5381 pages for details.

IBM LINE ADAPTER AND MODEM APPLICATION GUIDE

CHART Q

PUBLIC PACKET SWITCHED NETWORKS PROVIDING A CCITT X.21 INTERFACE

FACILITY Q3: Synchronous operation at 2400 bps on a public packet switched network via a CCITT X.21 stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in IBM GA27-3345 (1)

Machine Types	Special Features Required for Attachment
3705-II	#5655 and #9842 (2)
3705-81, 3705-82	#5657 and #9777 (2)
3725-1, 2, 3726	#4941 (2)

FACILITY Q4: Synchronous operation at 4800 bps on a public packet switched network via a CCITT X.21 stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in IBM GA27-3345 (1)

Machine Types	Special Features Required for Attachment
3705-II	#5655 and #9842 (2)
3705-81, 3705-82	#5657 and #9777 (2)
3725-1, 2, 3726	#4941 (2)

FACILITY Q5: Synchronous operation at 9600 bps on a public packet switched network via a CCITT X.21 stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in IBM GA27-3345 (1)

Machine Types	Special Features Required for Attachment
3705-II	#5655 and #9842 (2)
3705-81, 3705-82	#5657 and #9777 (2)
3725-1, 2, 3726	#4941 (2)

NOTES FOR CHART Q:

1. See IBM for information on these facilities, including attachable DCEs, required options, etc.
2. The 3705 and the 3725-1, 2, 3726 require Program Product 5668-981 for operation on this facility. A 3705 or a 3725-1, 2, 3726 attached to a network via a CCITT X.21 interface (as noted) may communicate with other DTEs attached to the same network via a CCITT X.21bis interface. See facilities P3, P4, P5 and P6 in Chart P for information on the attachment of DTEs to a network via the CCITT X.21bis interface.
3. No special feature is required. Specify **#9777** for nonswitched operation at 2400 bps, 4800 bps or 9600 bps. Specify **#9778** for nonswitched operation at 48K bps.

2701 DATA ADAPTER

PURPOSE

Attaches to a S/360 model 25 through 85, 195, or any S/370 or 4300 processor for communications with remote and local I/O devices operating via various customer or common carrier facilities.

MODELS

Model 1 001

Maximum Configuration: As an aid in determining allowable and maximum adapter configurations, the 2701 adapters have been categorized as belonging to Category I or Category II.

If more than two adapters from Category I, more than one adapter from Category II, or at least one adapter from each of the two Categories are to be installed, Expanded Capability (#3815) is required.

Category I

IBM Terminal Adapter Type I, Mod II (#4640)
IBM Terminal Adapter Type II (#4648)
Telegraph Adapter Type I (#7860, #7861, #7862)
Telegraph Adapter Type II (#7885)
Parallel Data Adapter (#5500), with two or less Parallel Data Extensions (#5505)

Category II

Parallel Data Adapter (#5500), with more than two Parallel Data Extensions (#5505)
Synchronous Data Adapter Type I (#7695, #7696)
Synchronous Data Adapter Type II (#7697, #7698)
IBM Terminal Adapter Type III (#4656, #4657)

Maximum Basic 2701 (w/o Expanded Capability, #3815):

Two adapters from Category I ... or one from Category II.

Maximum 2701 (w #3815):

Four adapters from Category I ... or two from Category II ... or two from Category I and one from Category II.

Notes: [1] An Expansion Feature (#3855) is required for each adapter after the first. [2] Channel Interface, 2nd (#1860) requires Expanded Capability (#3815). [3] Unless otherwise stated, an adapter as listed in the above categories includes the adapter and all its features.

Prerequisites: The 2701 requires a control unit position on a system channel.

S/360 mdl 25: Multiplexer channel (special feature).

S/360 mdl 30, 40, 50: Multiplexer channel (standard), or selector channels (special features).

S/360 mdl 44: Multiplexer channel, high-speed multiplexer channels, or additional high-speed multiplexer subchannels (special features).

S/360 mdl 65, 75: Selector channel of 2860, basic multiplexer channel of 2870, or selector subchannels (special features) on 2870 ... see M2860, 2870 pages.

S/360 mdl 67: Selector channel of 2860, or basic multiplexer channel of 2870 ... see M2860, 2870 pages.

S/360 mdl 85, 195: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870, or shared subchannel of 2880 ... see M2860, 2870, 2880 pages.

S/370 mdl 115, 125: Multiplexer channel (special feature) ... see M3115, 3125 pages.

S/370 mdl 135: Multiplexer channel (standard), selector channels (special features) ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) -- see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), Block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Multiplexer channel, selector channels (standard) ... see M3145 pages.

S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channel ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158: Byte multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 pages. **Limitations:** Each SD-II attached to a block multiplexer channel operating in block multiplexing mode must be assigned to a unique shared subchannel and, if the 2701 is to be field installed, it must be at EC level 309060 or above.

S/370 mdl 165, 168, 195: Selector channel of 2860, multiplexer channel of 2870, selector subchannels (special features) of 2870, shared subchannel of 2880 ... see M2860, 2870, 2880 pages.

3031 or 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031 or 3032 pages. See "3031, 3032, 3033 Limitations" below.

3033 Processor: Byte multiplexer channels (2 are standard), block multiplexer channels (10 are standard) ... see M3033 pages. See "3031, 3032, 3033, 3081, 3083 Limitations" below.

3081 or 3083 Processor Unit: Byte multiplexer channels, block multiplexer channels ... see M3081, 3083 pages. See "3031, 3032, 3033, 3081, 3083 Limitations" below.

3031, 3032, 3033, 3081, 3083 Limitations: Each SD-II attached to a block multiplexer channel operating in block multiplexing mode must be assigned to a unique shared subchannel and, if the 2701 is to be field installed, it must be at EC level 309060 or above.

4300 Processor: Byte multiplexer channel, block multiplexer channel.

HIGHLIGHTS

A modular unit which greatly expands the data communications and data acquisition I/O capabilities of S/360 and S/370. Provides for attachment of up to four half-duplex start/stop communications lines with line speeds up to 600 bps ... or up to four (maximum of two operating simultaneously) half-duplex synchronous communications lines with line speeds up to 230,400 bps* ... or up to four parallel data acquisition devices (word width -- 16 to 48 bits). Various combinations of the terminal devices are possible with any 2701.

* The number and speeds of attachable lines is also a function of the attached processor, the channels assigned, and the characteristics of other devices attached to those channels.

Communications Facilities: The 2701 operates in half-duplex mode ... for information concerning applicable communications facilities, see M2700 pages. The alphameric communications facility references indicated below correspond to those shown on the charts on those pages.

Terminal Devices: The 2701 can communicate with the following terminals over the facilities and in the modes and speeds indicated ... for further information about the adapters required on the 2701, see "Special Features" below.

Start/Stop Terminals:

Terminals	Speed (bps)	2701 Adapter Required
1030 Systems	600	#4648
1060 Systems	134.5	#4640 w/**#9581**

Parallel Data Services: For each data path, a Parallel Data Adapter (#5500) is required.

(1) Appropriate transmission code, **#9060** for EBCDIC, **#9061** for ASCII, or **#9062** for 6-bit Transcode, must be specified.

2701 Data Adapter (cont'd)

(2) Appropriate transmission code, **#9060** for EBCDIC, or **#9061** for ASCII, must be specified.

(3) Transparency (#8029) is also required.

(4) EDBDIC (**#9060**) must be specified on 2701.

Modems: Up to two of the following IBM Modems may be attached to the 2701:

2701 Data Adapter (cont'd)

Modem	Speed (bps)	2701 Adapter Required		
3863 mdl 1 or 2	2400	#7698	(2)	
3868 mdl 1	2400	#7698	(2)	
3872 mdl 1	2400	#7698	(2)	#4657
3864 mdl 1 or 2	4800	#7698	(2)	
3868 mdl 2	4800	#7698	(2)	
3865 mdl 1 or 2	9600	#7698	(2)	
3868 mdl 3 or 4	9600	#7698	(2)	

Customer Responsibilities: See M2700 pages. The customer is also responsible for furnishing signal levels and impedance matching in accordance with specifications outlined in *OEMI Manual* (GA22-6844) for the Parallel Data Adapter (#5500) or any of the synchronous or start/stop adapters if he provides the modems, telegraph terminations, or privately-owned communications facilities.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V, **#9904** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- Isolation, Control Unit: May be required on units shipped prior to December 29, 1967 ... see #4700 under "Special Features".
- A Cable Order must be submitted for: (1) Each new machine order, (2) Each MES order where the added feature requires external cable ... see *S/370 Installation Manual, Physical Planning,* GC22-7004, for cabling instructions.

SPECIAL FEATURES

Before ordering special features, consult feature descriptions and "Maximum Configuration" above. A completed, revised *2701 Specification Sheet,* Z120-1379, and copy of the latest preceding specifications sheet must be submitted with each MES for special features.

Autocall (#1302, #1303, #1314): Provides automatic dialing capabilities on Public Switched Networks. One of these features is required for each line equipped to automatically originate calls on switched networks. For the appropriate Automatic Calling Units, see Chart 3B in M2700 pages.

#1302 -- requires either an IBM Terminal Adapter Type I, Mod II (#4640 with Speed Selection **#9581**), or Telegraph Adapter Type II (#7885). **Note:** When ordering #1302 for field installation, a new #4640 with **#9581** must be ordered to replace an installed #4640/**#9851** [or the superseded IBM Terminal Adapter Type I (#4645)].

#1303 -- requires Synchronous Adapter Type I (#7696) and Internal Clock (#4703).

#1314 -- requires Synchronous Adapter Type II (#7698).

Maximum: One per adapter ... two #1302s or one #1303 or #1314 per 2701 without Expanded Capability (#3815) ... four #1302s, two #1303s or #1314s, or two #1302s and one #1303 or #1314 if #3815 is installed.

Channel Interface, 2nd (#1860): Provides the ability to attach the adapter(s) housed in the Expanded Capability (#3815) gate to a channel interface other than the one provided with the basic 2701. **Maximum:** One. **Prerequisites:** #3815 and #3855.

Dual Code (#3455): Permits a second code type, optional under program-controlled selection, for the Synchronous Data Adapter Type II (#7697, #7698). **Maximum:** One per Synchronous Data Adapter Type II. **Prerequisites:** #7697 or #7698 ... also see Station Selection (#7477) and Transparency (#8029) for applicability. **Specify:** **#9070** for EBCDIC, **#9071** for ASCII, or **#9072** for 6-bit Transcode.

Dual Communication Interface (#3461-#3464): Provides the Synchronous Data Adapter Type I (#7695, #7696) or Type II (#7697, #7698) with capability to interface with an additional facility ... determination of which interface is operational is under program control.

For #7695 or #7696:

#3461 -- for operation on Common Carrier Type 5701, 5703, 8801 or 8803 Wideband Services.

#3462 -- for operation on the Public Switched Telephone Network or a nonswitched Voice Grade Line.

Limitations: Autocall (#1303) is not operational on the Dual Communication Interface.

For #7697 or #7698:

#3463 -- for operation with facility E1, E2, or E3.

#3464 -- for operation with facility C4, C5, C6, D3, D4, D5 or D6.

Limitations: Autocall (#1314) is not operable on the Dual Communication Interface. The 2701 does not permit simultaneous operation of two lines attached to the same Synchronous Data Adapter. **Prerequisites:** Either #7695 or #7696 ... or #7697 or #7698 ... also see Internal Clock (#4703) or Synchronous Clock (#7692, #7693) for applicability.

Expanded Capability (#3815): Provides an additional gate that allows additional combinations of adapters ... allows for one additional adapter from Category II, or up to two adapters from Category I ... see "Maximum Configuration" below. Specify #3815 if: [1] Channel Interface, Second (#1860) is ordered ... [2] Adapters from two different categories are required ... [3] More than two adapters from Category I or more than one from Category II are required. **Maximum:** One.

Expansion Feature (#3855): Provides the 2701 with the capability of operating with an additional adapter. The number required per 2701 equals one less than the number of adapters specified ... see "Maximum Configuration" above. **Maximum:** One without Expanded Capability (#3815) ... three with #3815.

† **IBM Line Adapter (#4636, #4637):** A modem for 2-wire limited distance use (up to 8 wire-miles) ... see Limited Distance Line Adapter Type II in GA24-3435†† for specifications and restrictions. For operation of 1030/1060/1070/2740/2741/5010 over facilities which conform to the specifications in the manual referenced above.

#4636 -- for operation at 134.5 bps over facility G2.

#4637 -- for operation at 600 bps over facility G2.

Prerequisites: Each #4636 requires an IBM Terminal Adapter Type I, Mod II (#4640 with Speed Selection **#9581**) [or the replaced IBM Terminal Adapter Type I (#4645)] ... each #4637 requires a #4640 with Speed Selection **#9582** (or the replaced #4646), or an IBM Terminal Adapter Type II (#4648).

† **IBM Terminal Adapter Type I, Mod II (#4640):** Controls data transfers between S/360, S/370, 4331 or 4341 and 1060/1070/2741/5010 over facility C1, C2, D1, D2 or G2. Includes vertical and longitudinal redundancy checking for 1060, 1070 terminals. **Speed Selection:** One of the following must be specified: **#9581**, for operation at 134.5 bps to 1060/1070/2741/5010 ... **#9582**, for operation at 600 bps to 1070/5010s. **#9581** can be changed in the field to **#9582**, or vice versa.

If the facility is G2 conforming to the line requirements for Limited Distance Line Adapter Type 2 in GA24-3435††, #4640 may be used with an appropriate IBM Line Adapter (#4636, #4637) in lieu of a data set. **Limitations:** See "Maximum Configuration" above. **Maximum:** One without Expansion Feature (#3855) ... two with one #3855 ... three with two #3855s and Expanded Capability (#3815) ... four with three #3855s and #3815. **Prerequisites:** See Autocall (#1302) for applicability. **Note:** #4640 with **#9581** or **#9582** replaces the withdrawn IBM Terminal Adapter Type I (#4645, #4646).

† **IBM Terminal Adapter Type II (#4648):** Controls data transfers between S/360 or S/370 and 1030 terminals operating at 600 bps over facility G2, if the facility conforms to the line requirements for Limited Distance Line Adapter Type 2 in GA24-3435††. #4648 may be used with an IBM Line Adapter (#4637) in lieu of a data set. **Limitations:** See "Maximum Configuration" above. **Maximum:** One without Expansion Feature (#3855) ... two with one #3855 ... three with two #3855s and Expanded Capability (#3815) ... four with three #3855s and #3815.

† **IBM Terminal Adapter Type III (#4656, #4657):**

#4656 -- controls data transfers between a S/360 or S/370 and either remote 2845 Display Controls and/or 2848 Display Controls operating at 1200 bps over facility D3.

#4657 -- permits operation with 2845s and/or 2848s at 2400 bps over facility D4, if the data set provides clock pulses.

Limitations: See "Maximum Configuration" above. **Maximum:** One without Expanded Capability (#3815) ... two with #3815 and an Expansion Feature (#3855). **Prerequisites:** This feature requires a CPU with 16K bytes of main storage or larger.

Isolation, Control Unit (#4700): To turn power on or off the 2701 without generating spurious signals. Thus, a CPU program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Field Installation:** Yes, on units shipped prior to December 29, 1967 ... standard on units shipped after that. **Prerequisites:** Since in all cases there are compatible EC level requirements, the concurrence of IBM is required for any order for this feature.

Internal Clock (#4703): Required for Synchronous Data Adapter Type I (#7696) or Dual Communication Interface (#3462) if at least one data set does not provide clock pulses. Provides clocking, under program selection, for 1200, 2000 or 2400 bps operation. **Maximum:** One per #7695 or #7696.

---

† For further information, see M2700 pages.

†† See GA24-3435-2, or subsequent revisions.

2701 Data Adapter (cont'd)

IBM Line Adapter Base (#4708): Provides for mounting of up to two IBM 1200 bps Line Adapters and their associated Automatic Call Origination features. **Limitations**: Cannot be installed when any one of the following features is installed: IBM Line Adapter (#4636 or #4637), Telegraph Adapter, Type I (#7860, #7861 or #7862). **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: #7698 and #7692.

IBM 1200 bps Line Adapter, Leased (#4781): Provides one IBM 1200 bps Line Adapter which is suitable for communications over facility D3 with a similar line adapter. **Maximum**: Two. **Field Installation**: Yes. **Prerequisites**: #4708.

IBM 1200 bps Line Adapter, Switched (#4782): Provides one IBM 1200 bps Line Adapter which is suitable for communications over facility C4 with a similar line adapter. Attachment of this line adapter to the switched telephone network requires the use of FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. This line adapter includes the automatic answering capability. **Maximum**: Two per 2701. **Field Installation**: Yes. **Prerequisites**: #4708.

Automatic Call Origination (#4791): Provides the capability of automatically (under program control) dialing over the switched telephone network to a remote terminal. **Limitations**: This feature can be used on rotary dial systems only. Cannot be installed with Selectable Synchronous Clock (#7401). **Maximum**: One per IBM 1200 Bps Line Adapter, Switched (#4782). **Prerequisites**: #4782 and #1314.

Parallel Data Adapter (#5500): Provides a 16-bit wide path to customer devices ... odd parity and redundancy checking ... can be expanded to 48 bits [see Parallel Data Expansion (#5505) below]. Mode of operation is half-duplex at speeds limited only by channel and system configuration. A maximum of eight customer devices can be connected to the interface. However, there is but one data path shared by all devices. **Limitations**: See "Maximum Configuration" above. **Maximum**: One without Expansion Feature (#3855) ... two with one #3855 [neither #5500 can have more than two Parallel Data Expansions (#5505)] ... two with one #3855 and Expanded Capability (#3815) (either or both #5500s may have more than two #5505s) ... three with two #3855s and #3815 (only one of the three #5500s may have more than two #5505s) ... four with three #3855s and #3815 (none of the #5500s may have more than two #5505s).

Parallel Data Timeout (#5501): Provides a 2-second timeout of the external device responses to data transfer requests from a Parallel Data Adapter (#5500). **Maximum**: One per #5500.

Parallel Data Extension (#5505): Provides an additional 8-data-bit extension to the parallel data customer interface. **Limitations**: See #5500 above and "Maximum Configuration" above. **Maximum**: Four per #5500.

2nd Channel Enable/Disable Switch (#6301): Provides ability to disable 2701 functions to either CPU when the 2nd Channel Interface (#1860) is being used with two-different CPUs. **Field Installation**: Yes, on units with #1860s installed prior to December 29, 1967 ... standard on #1860s shipped after that. **Prerequisites**: #1860 ... 2701 must be at EC level 306675.

Selectable Synchronous Clock (#7401): Provides a synchronous clock which is capable of operation at 600 bps or at 1200 bps and provides a manual switch to allow the operator to select one of these two speeds. **Limitations**: Cannot be installed with any other synchronous clock or with Automatic Call Origination (#4791) ... when the Dual Communication Interface is installed, and this clock is to operate on both the basic and dual interface, both interfaces must operate at the same speed. **Maximum**: One per Synchronous Data Adapter, Type II (#7698). **Prerequisites**: #7698.

Station Selection (#7477): Required when a Synchronous Data Adapter Type II (#7697, #7698) and/or Dual Code (#3455) is functioning on a leased communications line as a tributary (terminal) station. **Maximum**: One per #7697 or #7698. **Prerequisites**: #7697 or #7698.

Synchronous Clock (#7692, #7693):

#7692 -- required for a Synchronous Data Adapter Type II (#7698) or Dual Communication Interface (#3464) if at least one data set attached requires external clocking at 1200 bps.

#7693 -- required for the same combinations above if at least one data set attached requires external clocking at 2400 bps.

Limitations: If #7692 or #7693 is required for both lines when using Dual Communication Interface (#3464), both lines must operate at the same speed. **Maximum**: One per #7697 or #7698.

Synchronous Data Adapter Type I (#7695, #7696): Provides control of data transfers between S/360 or S/370 and 4-out-of-8 code synchronous terminals (1009s, 1013s, 7701s, 7702s, 7710, 7711, 7740s, 7750s, S/360 mdl 20s with #2073s, 1130s with #7690s).

#7695 -- permits operation on common carrier Type 5701, 5703, 8801 or 8803 Wideband Services.

#7696 -- permits operation on the Public Switched Telephone Network or a nonswitched Voice Grade Line.

Limitations: See "Maximum Configuration" above. **Maximum**: One without Expanded Capability (#3815) ... two with #3815 and one Expansion Feature (#3855). **Field Installation**: No. **Prerequisites**: See Autocall (#1303) and Internal Clock (#4703) for applicability. Note: Orders for #7695 or #7696 are on an "as available" basis. Customer-initiated deferrals or orders for 2701s which include either feature will subject the 2701 orders to an "as available" basis.

† **Synchronous Data Adapter Type II (#7697, #7698)**: Provides control of data transfers between S/360 or S/370 and binary synchronous terminals ... see "Terminal Devices" above.

#7697 -- permits operation with high-speed digital facilities.

#7698 -- permits operation with voice grade facilities.

Limitations: **#9062** cannot be used to communicate with a System/32 with #2074, a S/360 mdl 20 with #2074, a S/360 mdl 25 with #4580, a 2703 with #7703 or #7706, an 1800 system with #7550, a 2770 system, a 3735, 3741 mdl 2 or 4, 3747, 3780 or 2715 mdl 2 ... also see "Maximum Configuration" above. Neither **#9061** nor **#9062** can be used to communicate with a 3671 Shared Terminal Control Unit or a 5231 mdl 2. **Maximum**: One per 2701 without Expanded Capability (#3815) ... two with #3815 and one Expansion Feature (#3855) ... for added line capability per adapter, see Dual Communication Interface (#3463, #3464). **Field Installation**: Yes. When ordering #7697 or #7698 for field installation in adapter position No. 1, all features in position No. 1 and No. 2 must be removed ... for field installation in position No. 3, all adapter features in position No. 3 and all features in position No. 4 must be removed. **Prerequisites**: See Autocall (#1314), Dual Code (#3455) Station Selection (#7477), Synchronous Clock (#7692, #7693) and Transparency (#8029) for applicability. **Specify**: For each adapter one of the following is required: **#9060** for EBCDIC code, **#9061** for ASCII code, or **#9062** for 6-bit Transcode.

† **Telegraph Adapter Type I (#7860-#7862)**: Controls data transfers between S/360 or S/370 and various teletypewriter terminals ... line control must be identical to AT&T Selective Calling Terminals Type 83B2/83B3 or WU Plan 115A Terminals ... a 62.6 mA neutral DC Loop is required ... both types of terminals cannot be mixed on the same line.

#7860 -- for operation at 45.5 bps with facility A1.

#7861 -- for operation at 56.9 bps with facility A2.

#7862 -- for operation at 74.2 bps with facility A3.

Limitations: See "Maximum Configuration" above. **Maximum**: One per 2701 without Expansion Feature (#3855) ... two with one #3855 ... three with two #3855s and Expanded Capability (#3815) ... four with three #3855s and #3815.

† **Telegraph Adapter Type II (#7885)**: Controls data transfers between S/360 or S/370 and Mdl 33/35 TTY Terminals (8-level code at 110 bps only) with facility C2. **Limitations**: See "Maximum Configuration" above. **Maximum**: One per 2701 without Expansion Feature (#3855) ... two with one #3855 ... three with two #3855s and Expanded Capability (#3815) ... four with three #3855s and #3815. **Prerequisites**: See Autocall (#1302) for applicability.

Transparency (#8029): Provides a Synchronous Data Adapter Type II (#7697, #7698) and/or Dual Code (#3455) with the ability to transmit and receive 8-bit binary data as well as EBCDIC or ASCII codes ... or 6-bit binary data as well as 6-bit Transcode. ASCII Transparency modifies VRC/LRC checking to VRC/CRC checking. **Limitations**: ASCII code transparency is not available on the 2780 Data Transmission Terminal, 3780 Data Communications Terminal, System/3 or System/32. Therefore a 2780 or System/3 with ASCII code will not operate with a 2701 equipped with #8029 when the #8029 is assigned to the ASCII code. To communicate with a 2701 in transparent mode, the 2780 must be equipped with EBCDIC Transparency (#8030), the 3780 with EBCDIC Transparency (#3601), or the System/3 with Text Transparency (#7850). On System/32, ASCII, EBCDIC and EBCDIC Transparency are standard and one is selected by programming. The 5231 mdl 2 does not support transparent mode. **Maximum**: One per #7697 or #7698. **Prerequisites**: #7697 or #7698 ... when this feature is ordered, there are additional restrictions and limitations to the facility and operation. For details, see GA27-3004. **Specify**: Either or both of the following -- **#9700** for use with **#9060, #9061** or **#9062** on Synchronous Data Adapter Type II (#7697, #7698) ... or **#9701** for use with **#9070, #9071** or **#9072** on Dual Code (#3455).

2702 TRANSMISSION CONTROL

[NO LONGER AVAILABLE]

SPECIFY

- Communication Cable Order: A Cable Order must be submitted for each MES order where the added feature requires external cable. See *S/370 Installation Manual - Physical Planning* (GC22-7004), for cabling information.

SPECIAL FEATURES

Special features are on an "as available" basis for field installation.

Limitations:

- Up to three of the four available terminal controls #4615, #4616, #7911, #7912 can be installed.
- Up to four selective speeds can be specified.
  (a) With each #4615 or #7911, one selective speed must be specified.
  (b) With each Add'l Selective Speed (#1065), another selective speed other than that specified for #4615 or #7911 must be specified.
- The combined total number of terminal controls [maximum, three], Add'l Selective Speed (#1065) [maximum, two], 2741 Break (#8055) [maximum, one], and Type I Terminal Interrupt (#8200) [maximum, one] cannot exceed four.
- #4616 cannot be used when 2741 Break (#8055) or Type I Terminal Interrupt (#8200) is installed.

Ordering Information: Before ordering features, consult "Limitations" above and individual feature descriptions. A completed, revised *2702 Specification Sheet* (Z120-1374), and a copy of the latest preceding specification sheet must be submitted with each MES order for special features.

Add'l Selective Speed (#1065): To add an additional different selective speed with terminal controls (#4615 or #7911). Permits attachment of terminals/facilities of more than one speed to the same terminal control. **Maximum:** Two ... one with #4615, the other with #7911 ... also see "Limitations" above. **Prerequisites:** #4615 or #7911 ... **#9685** requires #7387. **Specify:** With #4615 -- **#9683** for 75 bps, **#9684** for 134.5 bps or **#9685** for 600 bps. With #7911 -- **#9680** for 45.5 bps, **#9681** for 56.9 bps or **#9682** for 74.2 bps.

Autocall Adapter (#1290): For attachment to an automatic calling unit. **Maximum:** Eight ... 16 with Autocall Expansion (#1311). **Prerequisites:** #1310, and, for each line, #3233.

Autocall (#1310): Provides automatic dialing capabilities on facilities C1 and C2 for up to eight lines. **Maximum:** One.

Autocall Expansion (#1311): Expands the automatic dialing capability to sixteen line attachments. **Maximum:** One. **Prerequisites:** #1310.

Auto Poll (#1319): Operates in conjunction with IBM Terminal Control-Type I (#4615) and/or IBM Terminal Control-Type II (#4616) to allow continuation of polling after negative responses on all of the lines served by those terminal controls without having program interruptions. **Maximum:** One. **Prerequisites:** #4615 or #4616.

Data Set Line Adapter (#3233): To attach an external data set for operation -- at 110 bps over facility C2 -- at 134.5 bps over facility C1, C2 or D1 -- at 600 bps over facility D2 ... or to attach a line to a Line Adapter Unit (#2711). For more information, see M2700 pages. **Maximum:** 15 ... 31 with #7955.

Expansion Base (#3853): Required if an IBM Line Adapter (#4634, #4635) is to be installed. **Maximum:** One.

IBM Line Adapter (#4612, #4613): A modem for 2-wire, limited distance use up to 8 wire-miles. See "Limited Distance Line Adapter, Type 2" in *Line Adapter for Data Communication Equipment* (GA24-3435), for specifications and restrictions.

#4612 - for use with 1060 or 1070 systems, or 2741 terminals or 5010 operating at 134.5 bps over facility G2.

#4613 - for use with 1030, 1070 systems or 5010 operating at 600 bps over facility G2.

Limitations: #4612 and #4613 may not be installed if both 1032 Attachment (#7918) and IBM Line Adapters (#4634 or #4635) are to be installed. Only 15 #4612s/#4613s may be installed if #7918 is installed. If maximums are exceeded, investigate possible use of a 2711 Line Adapter Unit. See M2700 pages for more information. **Maximum:** #4612 and #4613 are assigned a weight of three each, where the total weight of IBM Line Adapters (#4612, #4613 #4634 and #4635) may not exceed 50. **Prerequisites:** For either -- #4615, #4616 ... #7387 for #4613 ... #7955 for more than 15 #4612s.

IBM Terminal Control - Type I (#4615): Controls for attachment of 1060s, 1070s, 2741s, 5010. Includes vertical and longitudinal redundancy checking for 1060s, 1070s, 5010. **Maximum:** One ... also see "Limitations" above. **Prerequisites:** **#9696**. **#9685** also requires #7387. **Specify:** Selective Speed -- **#9683** for 75 bps, **#9684** for 134.5 bps, or **#9685** for 600 bps ... for more than one speed, see Add'l Selective Speed (#1065).

IBM Terminal Control - Type II (#4616): Controls for attachment of 1031 Input Station mdl As and the 1032 Digital Time Unit ... includes vertical redundancy checking. **Limitations:** Not available if 2741 Break (#8055) is installed. **Maximum:** One ... also see "Limitations" above. **Prerequisites:** #7387, **#9696**.

IBM Line Adapter (#4634, #4635): [#4634 for 2-wire, #4635 for 4-wire] A modem for local use up to 4.75 wire-miles over facility G2. See "Limited Distance Line Adapter, Type I" in *Line Adapter for Data Communications Equipment* (GA24-3435), for specifications and restrictions ... also M2700 pages. **Limitations:** #4634 and #4635 may not be installed if both 1032 Attachment (#7918) and IBM Line Adapters (#4612, #4613) are to be installed. Only 21 #4634s/#4635s may be installed if #7918 is installed. **Maximum:** #4634 and #4635 are assigned a weight of two each, where the total weight of IBM Line Adapters (#4612, #4613, #4634, #4635) may not exceed 50. **Prerequisites:** #4615 and #3853, and for more than 15, #7955.

Isolation, Control Unit (#4700): [for field installation only on units shipped prior to December 29, 1967 ... standard on units shipped after that] To turn 2702 power on or off without generating spurious signals. Thus, a CPU program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Prerequisites:** Because in all cases there are compatible EC level requirements, the concurrence of the Branch FE Manager is required for any order for this feature.

Remote Switch Attachment (#6148): Provides partitioning and the ability to attach the Two-Processor Switch (#8110) to a S/360 mdl 65MP which has the Configuration Control Panel (#1505) installed or to a 2167 Configuration Unit ... for use in a multiprocessor S/360 mdl 65 or a S/360 mdl 67-2 only. **Prerequisites:** #8110.

Speed Extension (#7387): Increase line speed capability to 600 bps on all (15) lines of the basic 2702. **Limitations:** Cannot be installed with 31-Line Expansion (#7955). **Maximum:** One. **Prerequisites:** #4615 or #4616.

Telegraph Line Adapter (#7895): For attachment to the A1 facility at 45.5 bps, the A2 facility at 56.9 bps or the A3 facility at 74.2 bps. A 62.5 milliamp neutral DC Loop is required. See M2700 pages for more information. **Maximum:** 15 ... 31 with #7955.

Telegraph Terminal Control - Type I (#7911): Controls for attachment of AT&T 83B2/83B3 or WU Plan 115A terminals. **Maximum:** One ... also see "Limitations" above. **Prerequisites:** **#9697**. **Specify:** **#9680** for 45.5 bps operation, **#9681** for 56.9 bps or **#9682** for 74.2 bps ... for more than one speed, see Add'l Selective Speed (#1065). Automatic Downshift on Space Character -- **#9100**. When specified, it governs for all lines using #7911 ... used with this type terminal control only.

Telegraph Terminal Control - Type II (#7912): Controls for attachment of TWX stations using 8 level code at 110 bps. **Maximum:** One ... also see "Limitations" above. **Prerequisites:** **#9697** ... see "Specify".

1032 Attachment (#7918): To attach a 1032 Digital Time Unit via a 6m (20 foot) cable supplied with the 1032. **Limitations:** Must go on Line Address Number 1 ... unavailable if more than 15 IBM Line Adapters (#4612, #4613) or 21 IBM Line Adapters (#4634, #4635) are installed, or if both an IBM Line Adapter (#4612, #4613) and an IBM Line Adapter (#4634, #4635) are installed. **Maximum:** One. **Note:** Other 1030 terminals may operate remotely on the same line. **Prerequisites:** #4616 and #7387 ... if not to be attached to a line previously specified for Line Address Number 1, a Data Set Line Adapter (#3233) or IBM Line Adapter (#4613) specified for Line Address Number 1 is also required ... #3273 is required on the 1032.

Terminal Control Expansion (#7935): Required if both IBM and telegraph terminals are to be attached to the same 2702. **Maximum:** One. **Prerequisites:** **#9696** and **#9697**.

31-Line Expansion (#7955): Increase the line attachment capability to 31 half-duplex communication lines operating at speeds up to 200 bps. **Limitations:** Cannot be installed with Speed Expansion (#7387). **Maximum:** One.

2741 Break (#8055): Allows the IBM Terminal Control-Type I (#4615) to operate with a 2741 equipped with Receive Interrupt (#4708). #4615 may be used independently of this feature even though #8055 is installed. **Limitations:** Not available if IBM Terminal Control-Type II (#4616) or Type I Terminal Interrupt (#8200) is installed. **Maximum:** One. **Prerequisites:** #4615 with **#9684** ... if IBM Line Adapters are used they must be 4-wire version ... if #4615 is to control other non-interrupt 134.5 bps terminals, two **#9684**s are required, one associated solely with the interrupt terminals, the other solely with the non-interrupt terminals.

Two-Processor Switch (#8110): For switching the 2702 between two S/360 or S/370 multiplexer channels via program control. **Maximum:** One. **Prerequisites:** In a S/360 mdl 67-2, #6148. If the Two-Processor Switch is routed through the Configuration Control Panel (#1505) of a S/360 mdl 65MP system, #6148 is required.

2702 Transmission Control (cont'd)

Type I Terminal Interrupt (#8200): Allows the IBM Terminal Control-Type I (#4615) to operate in a bidirectional interrupt mode with 2741s with Transmit Interrupt (#7900) and Receive Interrupt (#4708). #4615 may be used with non-interrupt equipped terminals even though #8200 is installed. **Limitations**: Not available if IBM Terminal Control-Type II (#4616) or 2741 Break (#8055) is installed. **Maximum**: One. **Prerequisites**: #4615 and **#9684** ... if #4615 is to communicate with 2741s with Transmit Interrupt and any other non-interrupt 134.5 bps terminal, two **#9684**s are required, one associated solely with the interrupt terminals, and the other associated solely with the non-interrupt terminals. **Note**: Special Product Marketing Support must be contacted to verify compatibility when #8200 is to be added to a 2702 with an installed or on-order RPQ.

2703 TRANSMISSION CONTROL

[NO LONGER AVAILABLE]

SPECIFY

- Communication Cable Order: A Cable Order must be submitted for each MES order where the added feature requires external cable. See *S/370 Installation Manual - Physical Planning* (GC22-7004), for cabling information.

SPECIAL FEATURES

Special features are on an ''as available'' basis for field installation.

Autocall (#1340 for first, #1341 for second): Each provides up to eight line appearances of a given Data Line Set (#3205) or Data Line Set Expander (#3206), or two Synchronous Line Sets (#7710), with automatic calling capability. For attachment to facilities C4, C5 or C6. See IBM for appropriate Automatic Calling Units. When using #1340 or #1341 with a Synchronous Line Set, a first or second autocall feature may be associated with two Synchronous Line Sets (eight BSC lines) if both #7710s are the same Synchronous Base, have consecutive addresses, and the first begins on a base address boundary which is a multiple of eight. **Maximum:** One of each. **Prerequisites:** One #3205 or #3206 for each #1340 or #1341 ... or one or two #7710s for each #1340 or #1341 ... #1341 requires #1340.

Base Expansion (#1440): Required to attach a Synchronous Attachment (#7702), or more than one Start/Stop Base Type I (#7505) or Type II (#7506). **Maximum:** One.

IBM Terminal Control Base (#4619): To attach an IBM Terminal Control Type I (#4696) and/or Type II (#4697). **Maximum:** One. **Prerequisites:** #7505 or #7506.

IBM Terminal Control Type I (#4696): Controls for attachment of 1060s, 1070s, 2741s and 5010 . Includes vertical and longitudinal redundancy checking for 1060, 1070, 5010. **Maximum:** One. **Prerequisites:** #4619.

IBM Terminal Control Type II (#4697): To communicate with 1030 systems. **Maximum:** One. **Prerequisites:** #4619.

Isolation, Control Unit (#4700): [For field installation on units shipped prior to December 29, 1967 ... standard on units shipped after that] To turn power on or off the 2703 without generating spurious signals. Thus, a CPU program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Prerequisites:** Because there are compatible EC level requirements, in all cases, the concurrence of IBM is required for any order for this feature.

Line Speed Option (#4873-#4875, #4877-#4879): Defines the line speed available for asynchronous features on the 2703. **Maximum:** Six, one of each of the following:

- #4873 - 45.5 bps for common carrier half-duplex telegraph service
- #4874 - 56.9 bps for common carrier half-duplex telegraph service
- #4875 - 74.2 bps for common carrier half-duplex telegraph service
- #4877 - 110 bps for TWX
- #4878 - 134.5 bps for 1060 systems, 2741 terminals, 1070 systems or 5010 not requiring 600 bps
- #4879 - 600 bps for 1030 systems, 1070 systems or 5010 requiring 600 bps.

Station Selection (#7473): Required when one or more lines are assigned to a Synchronous Terminal Control (#7715, #7716, #7717) which is functioning on a leased communications line as a tributary (terminal) station. **Maximum:** One per #7715, #7716, #7717. **Prerequisites:** #7715, #7716, #7717.

Start/Stop Base Type I (#7505): To attach up to 88 half-duplex line appearances (11 Line Set Features) operating up to 165 bps. May be intermixed with Start/Stop Base Type IIs (#7506) and/or Synchronous Base Type 1A (#7703), Type 1B (#7704) or Type 2A (#7706). **Maximum:** Three ... but total half-duplex line appearances per 2703 cannot exceed 176. **Prerequisites:** The second #7505 installed requires #1440.

Start/Stop Base Type II (#7506): To attach up to 24 half-duplex line appearances (3 Line Set Features) operating up to 600 bps. May be intermixed with Start/Stop Base Type I (#7505) and/or Synchronous Base Type 1A (#7703), Type 1B (#7704) or Type 2A (#7706). **Maximum:** Three. **Note:** #7506 may be used to attach features normally attached via #7505, although the limitations for #7506 remain unchanged. **Prerequisites:** The second #7506 installed requires #1440.

Synchronous Attachment (#7702): To attach any synchronous lines. **Maximum:** One. **Prerequisites:** #1440.

Synchronous Base Type 1A (#7703), Type 1B (#7704), Type 2A (#7706):

- #7703 - to attach up to 24 half-duplex lines (6 synchronous line sets) at bit rates up to 2400 bps using Synchronous Terminal Control (#7715 for EBCDIC or #7716 for ASCII).
- #7704 - to attach up to 16 half-duplex lines (4 synchronous line sets) at bit rates up to 2400 bps using Synchronous Terminal Control (#7717 for 6-bit Transcode), either by itself, or in combination with #7715 or #7716.
- #7706 - to attach up to 12 half-duplex lines (3 synchronous line sets) at bit rates up to 4800 bps using Synchronous Terminal Control (#7715 for EBCDIC or #7716 for ASCII).

May be intermixed with Start/Stop Base Type I (#7505) and/or Type II (#7506). **Limitations:** No more than two Synchronous Terminal Controls can be associated with one Synchronous Base. **Maximum:** Two. **Prerequisites:** #7702.

Synchronous Line Speed Option (#7711): Defines the 1200 bps synchronous line speed for Synchronous Clock(s) (#7705). **Note:** This option may not be used with any Synchronous Line Set on which a data set clocked line appears. **Maximum:** One per 2703.

Synchronous Terminal Control (#7715, #7716, #7717): To communicate with synchronous terminals.

- #7715 - for terminals communicating in EBCDIC code.
- #7716 - for terminals communicating in non-transparent ASCII code.
- #7716/**#9100** - for terminals communicating in transparent ASCII code. *

- #7717 - for terminals communicating in 6-bit Transcode.

* **Note:** Transparency (**#9100**) modifies the VRC/LRC check to a CRC check, making the #7716/**#9100** a fourth synchronous terminal control type. Transparency capability is included in the #7715 and #7717 Synchronous Terminal Controls. When transparency is used with any of these codes, there are additional restrictions and limitations ... see *Bisynchronous Communications - General Information* (GA27-3004).

Maximum: One of each ... three if no IBM Terminal Control Type I (#4696) or Type II (#4697), Telegraph Terminal Control Type I (#7911) or Type II (#7912) is installed ... otherwise, only two. **Prerequisites:** For #7715 or #7716 -- #7703, #7704 or #7706. For #7717 -- #7704. #7473 may also be required.

Telegraph Attachment (#7876): To attach Telegraph Line Sets (#7897) ... required when one or more 83B2/83B3 or 115A lines are attached via Telegraph Line Sets (#7897) ... *Not* required when 83B2/83B3 and 115A lines are attached via 2712 Remote Multiplexer mdl 2s. **Maximum:** One.

Telegraph Terminal Control Base (#7905): To attach a Telegraph Terminal Control, Type I (#7911) and/or Type II (#7912). **Maximum:** One.

Telegraph Terminal Control Type I (#7911): To communicate with AT&T 83B2/83B3 or WU 115A terminals. **Maximum:** One. **Specify: #9129** for downshift on space, if desired. **Prerequisites:** #7905.

Telegraph Terminal Control Type II (#7912): To communicate with TWX Mdl 33/35 terminals. **Maximum:** One. **Prerequisites:** #7905.

2741 Break (#8055): Allows the IBM Terminal Control-Type I (#4696) to operate with a 2741 equipped with Receive Interrupt (#4708). #4696 may be used independently of this feature even though #8055 is installed. **Note:** All lines on any Line Set or Line Set Expander to which this feature is applied must operate with this feature. **Limitations:** Not available if Type I Terminal Interrupt (#8200) is installed. **Maximum:** One. **Prerequisites:** #4696 ... If IBM Line Adapters are used, they must be the 4-wire version.

Two-Processor Switch (#8110): For switching the 2703 channel interface between two S/360 or S/370 multiplexer channels under program control. **Maximum:** One. **Prerequisites:** Emergency Power-Off Control on attached processing units.

Type I Terminal Interrupt (#8200): Allows the IBM Terminal Control Type I (#4696) to operate in a bidirectional interrupt mode with 2741s equipped with Transmit Interrupt (#7900) and Receive Interrupt (#4708). #4696 may be used with non-interrupt equipped terminals even though #8200 is installed. **Limitations:** Not available if 2741 Break (#8055) is installed. **Maximum:** One. **Prerequisites:** #4696 ... if IBM Line Adapters are used they must be the 4-wire version. **Note:** Special Product Marketing Support must be contacted to verify compatibility when #8200 is to be added to a 2703 with an installed or on-order RPQ.

Line Set Special Features

All lines in a given line set or line set expander must operate at the same speed (unless clocking is supplied by the data set) over the same type communications facilities (e.g., all lines connecting to a given line set or line set expander must be either switched network or leased. All lines must be 2-wire or 4-wire) with terminals employing the same type of line control, with either business machine or data set clocking, but not a combination (also see #8055 limitations).

2703 Transmission Control (cont'd)

Data Line Set (#3205): For attachment of up to eight line appearances of asynchronous terminals (1030, 1060, 1070, 2741, 5010 and TWX Mdl 33/35 type) over facilities C1, C2, D1 or D2 ... or for attachment of up to eight line appearances to a Line Adapter Unit (#2711). See M2700 pages for further information. **Maximum:** 12. **Prerequisites:** #7505 or #7506 ... #4877, #4878 or #4879 as appropriate ... either #4619, or for TWX, #7905 ... one of the following: #4696 or #4697, or for TWX, #7912.

Data Line Set Expander (#3206): Permits attachment of up to eight additional lines to a Data Line Set (#3205). **Maximum:** One per #3205 ... ten per 2703. **Prerequisites:** One #3205 per #3206.

IBM Line Set 1A (#4686): Eight IBM limited distance line adapters Type I for 2-wire local use (up to 4.75 wire-miles each) over facility G1. See "Limited Distance Line Adapter Type I" in *Line Adapter for Data Communications Equipment* (GA24-3435), for specifications and restrictions. To attach up to eight half-duplex line appearances accommodating 2741 terminals. See M2700 pages for further information. **Limitations:** Cannot be installed if any IBM Line Set 2s (#4688) are installed. **Maximum:** Total number of #4686s and IBM Line Adapter 1Bs (#4687) cannot exceed 12. **Prerequisites:** #7505 or #7506 ... #4878 for 134.5 bps ... #4619 ... #4696 ... for more than nine #4686s, an additional #7505 or #7506 and its prerequisites.

IBM Line Set 1B (#4687): Eight IBM limited distance line adapters Type I for 4-wire local use (up to 4.75 wire-miles each) over facility G1. See "Limited Distance Line Adapter Type I" in *Line Adapter for Data Communication Equipment* (GA24-3435), for specifications and restrictions. To attach up to eight line appearances accommodating 2741 terminals. See M2700 pages for further information. **Limitations:** Cannot be installed if any IBM Line Set 2s (#4688) are installed. **Maximum:** Total number of #4687s and IBM Line Set 1As (#4686) installed cannot exceed 12. **Prerequisites:** #7505 or #7506 ... #4878 for 134.5 bps ... #4619 ... #4696 ... for more than nine #4687s, an additional #7505 or #7506 and its prerequisites.

IBM Line Set 2 (#4688): Eight IBM limited distance line adapters Type II for 2-wire local use (up to 8 wire-miles each) over facility G2. See "Limited Distance Line Adapter Type II" in *Line Adapter for Data Communications Equipment* (GA24-3435), for specifications and restrictions. To attach up to eight half-duplex line appearances accommodating 1030, 1060, 1070, 2741, 5010 systems and terminals. **Limitations:** Cannot be installed if any IBM Line Set 1As (#4686) or 1Bs (#4687) are installed. **Maximum:** Four. **Prerequisites:** #7505 or #7506 ... #4878 or #4879 ... #4619 ... #4696 or #4697.

Telegraph Line Set (#7897): For attachment of up to eight line appearances via facilities A1, A2 or A3 ... interfaces AT&T 83B2/83B3 and WU Plan 115A terminals. See M2700 pages for further information. **Maximum:** 12. **Caution:** When operating *two* 2703s with #7897s in series on the same telegraph current loop, RPQ S30017 (no-charge) must be applied to one 2703 and RPQ S30018 (no-charge) must be applied to the other 2703. These RPQs are *not* required for a single 2703 operating two telegraph line appearances on the same telegraph current loop. **Prerequisites:** #7505 or #7506 ... #4873, #4874, #4875 or #4876 as appropriate ... #7905 ... #7911 ... #7876.

Telegraph Line Set Expander (#7898): For attachment of up to eight additional lines to a Telegraph Line Set (#7897). See M2700 pages for further information. **Maximum:** One #7898 per #7897 ... ten per 2703. **Prerequisites:** One #7897 for each #7898.

Synchronous Clock (#7705): Provides clocking for up to four synchronous line appearances. Required for attachment of facilities C4, D3 ... each #7705 permits attachment of up to four such facilities. See M2700 pages for modems requiring this feature. **Limitations:** The maximum number of Synchronous Line Sets (#7710) is reduced when any #7705s are installed ... see "General Limitations" below. **Maximum:** One per each #7710 ... three per Synchronous Base Type 1A (#7703), Type 1B (#7704) or Type 2A (#7706) ... six per 2703. **Prerequisites:** #7710 ... #7711.

Synchronous Line Set (#7710): For attachment of up to four synchronous line appearances via facilities C4, C5, C6, D3, D4, D4SB, D5 or D5SB ... accommodates 2701s and 2703s with S/360/370s, System/3s and S/360 mdl 20s with #2074, S/360 mdl 25s with #4580 and #7551 or #7552, 2715 mdl 2s, 2780s and 3780s. See M2700 pages for further information. **Limitations:** See Synchronous Clock (#7705). **Maximum:** Six per Synchronous Base Type 1A (#7703) ... four per Type 1B (#7704) ... three per Type 2A (#7706) ... 12 per 2703. **Prerequisites:** #1440 ... #7702 ... #7703, #7704 or #7706 ... #7715, #7716 or #7717 ... #7705 may be required.

General Limitations

Combinations of the following features may not exceed a total assigned weight of nine per Start/Stop Base-Type I (#7505) or Type II (#7506) and six per Synchronous Base Type 1A (#7703), Type 1B (#7704) or Type 2A (#7706). Due to this limitation, it may be necessary to order three Start/Stop Base-Type Is (#7505) with some unusual configurations.

Feature	Assigned Weight
Data Line Set (#3205)	1
Data Line Set Expander (#3206)	0
Telegraph Line Set (#7897)	1
Telegraph Line Set Expander (#7898)	0
IBM Line Set 1A (#4686)	1
IBM Line Set 1B (#4687)	1
IBM Line Set 2 (#4688)	2
Synchronous Line Set (#7710)	1
Synchronous Clock (#7705)	1

2715 TRANSMISSION CONTROL UNIT

[NO LONGER AVAILABLE]

PURPOSE

The Transmission Control Unit for a 2790 Data Communications System. Controls data transfer between 2790 system components and S/360 models 22-85 (except mdl 44), and 195, any S/370 processor and the 4331 Processor.

MODELS

Model 1 001
Model 2 002

Modems: One IBM Modem can be attached to a 2715 mdl 2 only. Two IBM Modems can be attached with Dual Communications Interface (#3460) installed. Modem 3872 mdl 1, 2400 bps. **Note:** For communications capabilities, product utilization and special features, see M2700 and 3872 pages.

SPECIFY

The following specifys can be changed in the field.

- Voltage (AC, 3-phase, 4-wire, 60 Hz): With locking plug, **#9884** for 208V, **#9886** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Cabling: **#9080** for below-floor, or **#9081** for on-floor.
- Extended Distance Repeater, Receive/Send (#3874/#3875):
  - If #3874 or #3875 is ordered, **#9486** must be specified for 2715s having serial number 10071 or below.
  - If any #3874 or #3875 features are used in the 2790 system, Oscillator Change (**#9548**) must be specified on each 2791 mdl 1 or 2 or 2793 in the system.

  See feature description in M2791 or 2793 pages for prerequisites.

SPECIAL FEATURES

Special features are on an ''as available'' basis for field installation.

Dual Communications Interface (#3460): [Mdl 2] Provides a switched interface which allows the BSC adapter to be manually switched between two types of communications lines for backup purposes. **Limitations:** This feature does not provide the capability to operate two lines simultaneously. **Maximum:** One.

Expanded Capability (#3801): Provides the system with an additional 16K of control storage for a system total of 32K. Required for a maximum of device configuration on a 2715, for control of the External Alarm Contacts (#3690) feature on attached 2791/2793 Area Stations, 2798 Guidance Display Units, or 2792 Remote Communications Controllers, and for message routing independent of host CPU intervention. **Maximum:** One.

Extended Distance Repeater, Receive (#3874): Provides for operation with a 2791, or 2793 Area Station equipped with Extended Distance Repeater, Send (#3875) located up to 6,000 wire-feet away. See *Physical Planning Manual* (GA27-3017), for cable specifications. **Maximum:** Four. **Limitations:** See "Limitations" for Extended Distance Repeater, Send (#3875) below. **Prerequisites:** #3875 on the "up-line" 2791/2793. Also see "Specify".

Extended Distance Repeater, Send (#3875): Provides for operation with a 2791/2793 Area Station equipped with Extended Distance Repeater, Receive (#3874) located up to 6,000 wire-feet away. See *Physical Planning Manual* (GA27-3017), for cable specifications. **Limitations:** [1] The use of two pairs of Extended Distance Repeaters, Receive/Send (#3874, #3875) in tandem is not recommended. If the Area Station having both receive and send repeater features should fail, the entire segment would be inactive. [2] Maximum of eight pairs per transmission line attached to the 2715. Maximum of two pairs may be used on a secondary loop attached to a 2792. [3] In the 2715, each of the four segments may include (a) EDR, Send (#3875) only, or, (b) EDR, Send (#3875) and EDR, Receive (#3874); EDR, Receive (#3874) only is not available. **Maximum:** Four. **Prerequisites:** #3874 on the "down-line" 2791/2793. Also see "Specify".

Line Transfer Switch (#4750): To manually switch the 2790 transmission lines between two adjacent 2715s acting as backup for each other. All terminals must be defined identically in the user tables of both 2715s affected. **Limitations:** When switching from one system to another, the total number of terminals allowed cannot exceed the maximum number allowable on one 2715. **Maximum:** One. **Note:** This feature is required on only one of the two 2715s.

Line Transfer Switch - Third Unit (#4751): To use a third 2715 as backup for either of two other 2715s. All terminals must be defined identically in the user tables of both 2715s affected. **Limitations:** When switching from one system to another, the total number of terminals allowed cannot exceed the maximum number allowable on one 2715. **Maximum:** One. **Prerequisites:** The two primary 2715s must each be equipped with #4750 ... the third (backup) 2715 requires only #4751.

Synchronous Clock (#7705): [Mdl 2] An internal clock for use with data sets which do not provide clocks. See M2700 pages for facilities that require this feature. **Maximum:** One.

Two Processor Switch (#8110): [Mdl 1] To switch the 2715 mdl 1 between two S/360 or S/370 multiplexer channels. **Maximum:** One.

2821 CONTROL UNIT

PURPOSE

Control and buffer storage unit for a card read punch and/or one or more printers in a S/360 mdl 22 through 85 and 195, or any S/370 or 4300 processor.

MODELS

Model 1	001	Controls a 2540 Card Read Punch and one printer.
Model 2	002	Controls one printer.
Model 3	003	Controls two printers ... with Third Printer Control (#7945) controls three printers.
Model 4	004	[NO LONGER AVAILABLE] Controls a 2540 Card Read Punch and one 1404 Printer.
Model 5	005	Controls a 2540 Card Read Punch and two printers ... with Third Printer Control (#7945) controls three printers.
Model 6	006	Controls a 2540 Card Read Punch.

Limitations: **1403s** -- for mdls available for each S/360, S/370 mdl or any 4300 processor, see "Models" under 1403 ... **1404s** -- cannot be attached to a S/360 mdl 22, 44, 65, 67, 75, 85, 195, or any S/370 or 4300 processor.

Prerequisites: A control unit position on a system channel.

S/360 mdl 25: Special feature on 2025: Multiplexer channel, or selector channels.

S/360 mdl 22, 30, 40, 50: Multiplexer channel (standard), selector channels (special features, except on 2022 one selector channel is standard).

S/360 mdl 44: Special features on 2044: Multiplexer channel, high speed multiplexer channels, add'l high speed multiplexer subchannels.

S/360 mdl 65, 75: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870 ... see M2860, 2870 pages.

S/360 mdl 67: Basic multiplexer channel of 2870 ... see M2870 pages.

S/360 mdl 85, 195: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870, shared or unshared subchannels of 2880 (non-shared is recommended) ... see M2860, 2870, 2880 pages.

S/370 mdl 115, 125: Multiplexer channel (special feature) ... see M3115, 3125 pages.

S/370 mdl 135: Multiplexer channel (standard), selector channel block multiplexer channel ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Multiplexer channel (standard), selector channels ... see M3145 pages.

S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 155, 158: Multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 and 3158-3 pages.

S/370 mdl 165, 168, 195: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) of 2870, shared or unshared subchannels of 2880 (non-shared are recommended) ... see M2860, 2870, 2880 pages.

3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031, 3032 pages.

3033 Processor: Byte multiplexer channels (two are standard), block multiplexer channels (ten are standard) ... see M3033 pages.

3081, 3083, 3084 Processor: Byte multiplexer channels, block multiplexer channels ... see M3081, M3083, 3084 pages.

4331 Processor: Byte multiplexer channel (special feature), block multiplexer channel (special feature) ... see M4331 pages.

4341 Processor: Byte multiplexer channel (standard), block multiplexer channels (two are standard) ... see M4341 pages.

HIGHLIGHTS

Mdls 1 and 2: The printer may be a 1403 mdl 2, 3, 7 or N1 ... for attachment for a 1403 mdl 2 or 7, see "Specify" ... for attachment of a 1403 mdl 3 or N1, see 1100 lpm Printer Adapter (#3615) under "Special Features".

Mdls 3 and 5: Two printers, or with Third Printer Control (#7945), three printers can be attached. They may be in any combination of 1403 mdls 2, 3, 7 and N1 ... for attachment of 1403 mdls 2s and 7s, see "Specify" ... for attachment of 1403 mdls 3s or N1s, see 1100 lpm Printer Adapter (#3615) under "Special Features". Program priority for multiple printers on these mdls is:

1st Priority	**Printer Control No. 1**
2nd Priority	**Printer Control No. 2**
3rd Priority	**Printer Control No. 3**

Bibliography: S/360 -- GC20-0360, S/370 -- GC20-0001.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- 1403 Mdl 2 Attachment -- for each 1403 mdl 2 to be attached to a 2821 mdl 1, 2, 3 or 5, specify one of the following: **#9241** -- to attach a 1403 mdl 2 to a 2821 mdl 1 or 2, or to Printer Control No. 1 on a 2821 mdl 3 or 5 ... **#9242** -- to attach a 1403 mdl 2 to Printer Control No. 2 on a 2821 mdl 3 or 5 ... **#9243** -- to attach a 1403 mdl 2 to Printer Control No. 3 on a 2821 mdl 3 or 5. Third Printer Control (#7945) also required ... see "Special Features".
- 1403 Mdl 7 Attachment -- for each 1403 mdl 7 to be attached to a 2821 mdl 1, 2, 3 or 5, specify one of the following: **#9246** -- to attach a 1403 mdl 7 to a 2821 mdl 1 or 2, or to attach Printer Control No. 1 on a 2821 mdl 3 or 5 ... **#9247** -- to attach a 1403 mdl 7 to Printer Control No. 2 on a 2821 mdl 3 or 4 ... **#9248** -- to attach a 1403 mdl 7 to Printer Control No. 3 on a 2821 mdl 3 or 5. Third Printer Control (#7945) also required ... see "Special Features".
- 1403 Mdl 3 or N1 Attachment: Each 1403 mdl 3 or N1 requires the appropriate 1100 lpm Printer Adapter (#3615) ... see "Special Features".
- Compatibility Attachment: If the 2540 is to be used with 1401/1403 Attachment (#4463) with 1401/1440/1460 Basic Compatibility (#4456) or 1620 Compatibility (#7190) on a 2030, or with 1401/1460 Compatibility (#4457) on a 2040, then 2540 Compatibility Attachment (#8065) is required ... see "Special Features".
- Compatibility Attachment: If the 2540 is to be used with 1401/1440/1460 Compatibility (#4457) on a 3115, 3125, 3135, 3135-3, 3138, 3145, 3145-3 or 3148, or with 1401/1440/1460, 1410/7010 Compatibility (#4458) on a 3145, 3145-3 or 3148, or 1401/1440/1460, 1410/7010 Compatibility (#3950) on a 3155, 3158 or 3158-3, then 2540 Compatibility Attachment (#8065) is required ... see "Special Features".
- Compatibility Attachment: If the 2540 is to be used with 1401/1440/1460 Compatibility (#3950) on a 4331 Processor, then 2540 Compatibility Attachment (#8065) is required ... see "Special Features".
- Isolation Feature: May be required on units shipped prior to December 29, 1967 ... see "Special Features".

SPECIAL FEATURES

Column Binary (#1990): [Mdls 1, 5, 6] Cards with multiple significant digit punching in a single card column can be processed by the 2540 ... the Extended BCD Interchange Code used by S/360 assemblers and compilers does not required this feature on the 2821. **Prerequisites:** Column Binary (#1990) on the 2030 Processing Unit if column binary cards are to be processed on the 2540 when the S/360 mdl 30 is operating in 1401/1440/1460 compatibility mode.

1100 lpm Printer Adapter (#3615): [Mdls 1, 2, 3, 5] To attach a 1403 Printer mdl 3 or N1. One #3615 is required for each 1100 lpm printer attached. **Specify:** With each #3615, one of the following, depending upon the control position to which the printer is to be attached: **#9262** -- to a 2821 mdl 1 or 2, or to Printer Control No. 1 on a 2821 mdl 3 or 5 ... **#9263** -- to Printer Control No. 2 on a 2821 mdl 3 or 5 ... **#9264** -- to Printer Control No. 3 on a 2821 mdl 3 or 5. Third Printer Control (#7945) is also required.

Isolation, Control Unit (#4701-#4705): [for field installation on units shipped prior to December 29, 1967 ... standard on units shipped after that] To turn power on or off the 2821 without generating spurious signals. Thus, a processor program, if it can be logically disconnected from the system before power is turned off, can continue operating.

2821 Control Unit (cont'd)

#4702: For a 2821 mdl 1, 2, 3 or 5 with neither Two-Channel Switch (#8100) nor Universal Character Set Adapter (#8637, #8638, #8639).
#4703: For a 2821 mdl 1, 2, 3 or 5 with #8637, #8638 or #8639 but not #8100.
#4704: For a 2821 mdl 1, 2, 3 or 5 with #8100 but not with #8637, #8638 or #8639.
#4705: For a 2821 mdl 1, 2, 3 or 5 with both #8100 and #8637, #8638 or #8639.

Prerequisites: Since in all cases there are compatible EC level requirements, the concurrence of IBM is required for any orders for these features ... #4703 requires #8637, #8638 or #8639 ... #4704 requires #8100 ... #4705 requires both #8100 and #8637, #8638 or #8639.

Punch Feed Read Control (#5895): [Mdls 1, 5, 6] Required for Punch Feed Read (#5890) on a 2540.

Remote Switch Attachment (#6148): [Mdls 1, 2, 3, 5] To attach the Two-Channel Switch (#8100) to a 2167 Configuration Unit in a S/360 mdl 67-2, to a S/360 mdl 65MP which has the Configuration Control Panel (#1505) installed, or to a S/370 mdl 158MP or 168MP.

Selective Tape Listing Control (#6412): Required for Selective Tape Listing (#6410, #6411) on a 1403 mdl 2, 3 or N1. One #6412 is required for each printer equipped with #6410 or #6411. **Specify**: With each #6412, one of the following, depending upon the control position to which the printer with #6410 or #6411 is to be attached:

#9761: To a 2821 mdl 1 or 2, or to Printer Control No. 1 on a 2821 mdl 3 or 5.
#9762: To Printer Control No. 2 on a 2821 mdl 3 or 5.
#9763: To Printer No. 3 on a 2821 mdl 3 or 5 ... **#9745** is also required.

Note: Orders for this feature for a 1403 mdl N1 equipped with Selective Tape Listing (#6410) are no longer accepted ... for 1403 mdl N1s equipped with the new Selective Tape Listing (#6420), see #6425 below.

Selective Tape Listing Control (#6425): [Mdls 1, 2, 3, 5] [for use in S/360 mdls 22, 25, 30, 40, 50 only] Required for the Selective Tape Listing (#6420) on a 1403 mdl N1. One #6425 is required for each printer equipped with #6420. **Specify**: With each #6425, one of the following, depending upon the control position to which the printer with #6420 is to be attached:

#9765: To a 2821 mdl 1 or 2, or to Printer Control No. 1 on a 2821 mdl 3 or 5.
#9766: To Printer Control No. 2 on a 2821 mdl 3 or 5.
#9767: To Printer Control No. 3 on a 2821 mdl 3 or 5 ... #7945 is also required.

Third Printer Control (#7945): [Mdls 3, 5] To attach a third printer, any combination of three 1403s, mdls 2, 3, 7, N1 can be used. An 1100 lpm Printer Adapter (#3615) is required for each 1403 mdl 3 or N1 attached. **Field Installation**: No.

2540 Compatibility Attachment (#8065): [Mdls 1, 5, 6] Required if the 1402/1403 Attachment (#4463) with 1401/1440/1460 Basic Compatibility (#4456) or 1620 Compatibility (#7190) is used on a 2030 Processing Unit, or 1401/1460 Compatibility (#4457) is used on a 2040 Processing Unit ... not required for normal S/360 operation of the 2540. Required if 1401/1440/1460 Compatibility (#4457) is used on a 3115. 3125, 3135, 3135-3, 3145, 3145-3 or 3148 Processing Unit, or if 1401/1440/1460, 1410/7010 Compatibility (#4458) is used on a 3145, 3145-3 or 3148 Processing Unit, or if 1401/1440/1460, 1410/7010 Compatibility (#3950) is used on a 3155, 3158 or 3158-3 Processing Unit ... not required for normal S/370 operation of the 2540. Required if 1401/1440/1460 Compatibility (#3950) is used on a 4331 ... not required for normal 4300 processor operation of the 2540.

Two-Channel Switch (#8100): [Mdls 1, 2, 3, 5] To attach the 2821 to a second channel. Switching is under program control. Includes partitioning. For use in a S/360 mdl 67, a multiprocessor S/360 mdl 65, or a S/370 mdl 158MP or 168MP only. **Field Installation**: No. **Prerequisites**: If the Two-Channel Switch is routed through the Configuration Control Panel (#1505) of a multiprocessing S/360 mdl 65, Remote Control Switch Attachment (#6148) is required. #6148 is also required in a S/360 mdl 67-2, or a S/370 mdl 158MP or 168MP. See above. For a 2821 mdl 1 or 5, a Two-Channel Switch Adapter (#8102) is required on the attached 2540.

Universal Character Set Adapter (#8637-#8639): [Mdls 1, 2, 3, 5] Required for Universal Character Set (#8641 on 1403 mdl 2, #8640 on 1403 mdl 3 or N1) ... one adapter is required for each printer so equipped. Note: A 1403 previously equipped with a Multiple Character Set (#5110 on 1403 mdl 2, #5111 on N1) can be attached to the 2821. The MCS feature provides the same function as the UCS feature on the printer.

#8637: To attach such a printer to a 2821 mdl 1 or 2, or to Printer Control No. 1 on a 2821 mdl 3 or 5.
#8638: To attach such a printer to Printer Control No. 2 on a 2821 mdl 3 or 5.
#8639: To attach such a printer to Printer Control No. 3 on a 2821 mdl 3 or 5 ... #7945 is also required.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

2860 SELECTOR CHANNEL

[NO LONGER AVAILABLE]

(New RPQs will not be accepted.)

PURPOSE

Selector channel(s) for attachment and control of a wide variety of I/O control units for a S/360 mdl 65 through 195, or a S/370 mdl 165, 168, 168-3, 195.

MODELS

Model 1	001	Has one selector channel
Model 2	002	Has two selector channels
Model 3	003	Has three selector channels

Maximum

S/360 mdl 65, 67-1 (2067 mdl 1), 75 -- up to two 2860s in any combination of mdls can be attached. Up to two 2870 Multiplexer Channels can also be attached. Total channels (both 2860 and 2870) cannot exceed seven per CPU.

Limitations: On either a 65MP system with eight 2365 mdl 13 frames, or on a system with four 2361 mdl 2s, only three channel frames or seven logical channels, whichever occurs first, can be attached. The 2860 may only use channel addresses 1 through 6. If no 2870s are attached, only up to six logical channels can be attached per CPU.

S/360 mdl 67-2 (one or two 2067 mdl 2s) -- up to two 2860s in any combination of mdls can be attached to each 2846 Channel Controller. A 2870 Multiplexer Channel can also be attached to each 2846.

S/360 mdl 85, 195, or S/370 mdl 165, 168, 168-3, 195 -- up to two 2860s in any combination of mdls can be attached. 2870 Multiplexer Channels and 2880 Block Multiplexer Channels can also be attached. For combinations possible, see M3165, 3168, 3168-3 or 3195 pages. For 2085, consult IBM.

Prerequisites:

With 2065 or 2067 mdl 1 -- Channel Attachment (**#9065**) is required to attach channels addressed 3 and 4. Channel Attachment (**#9066**) is required in addition to **#9065** to attach channels addressed 5 and 6. See "Specify" in M2065 and 2067 pages.

With 2067 mdl 2 -- a 2846 Channel Controller is required.

With 2075 -- a 2075 Attachment (**#9820**) is required on each 2860 ... see "Specify".

With 2085 -- a 2085 Attachment (**#9821**) is required on each 2860 ... see "Specify". On the 2085, Channel Attachment (**#9065**) is required to attach channels addressed 3 and 4. Channel Attachment (**#9066**) is required in addition to **#9065** to attach channels addressed 5 and 6. Consult IBM.

With 3195 -- a 3195 Attachment (**#9828**) is required on each 2860 ... see "Specify".

With 3165, 3168, 3168-3 -- a 3165/3168/3168-3 Attachment (**#9830**) is required on each 2860 ... see "Specify". When attaching this channel to a S/370 mdl 165, the 3165 must have sufficient addressing capability ... see "Channel Attachment" under "Specify" for the 3165. For S/370 mdl 165 systems, the power distribution unit must be equipped for at least the number of frames actually attached ... see "Channel Frames" under "Specify" for the 3067 mdl 1. Channel Indirect Data Addressing feature is required for a system operating in EC mode ... see "Special Features".

Isolation: Appropriate features are required on any 2860 shipped prior to September 7, 1967 ... see "Special Features".

HIGHLIGHTS

Channels permit data rates up to 1.3 million bytes/second. A full set of channel control and buffer registers permit each channel to operate with minimal interference. Up to eight I/O control units can be attached to each channel, permitting a wide variety of attached devices. I/O operations are overlapped with processing and, depending upon the data rate, all channels can operate simultaneously.

Bibliography: S/360 -- GC20-0360 S/370 -- GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Method of Installation: **#9400**, if 2860 will **not** be installed on a raised floor.
- 2075 Attachment: **#9820** required for attachment to a 2075.
- 2085 Attachment: **#9821** required for attachment to a 2085.
- 3195 Attachment: **#9828** required for attachment to a 3195.
- 3165/3168/3168-3 Attachment: **#9830** required for attachment to a 3165, 3168 or 3168-3.
- Unit Position: Required on 2860s when more than one unit, either 2860 or 2870, is attached to a 2065, 2067 mdl 1, 2075, 2085, 2846, or 3165. Specify **#9501** on each 2860 that is not attached last on the channel bus. If the 2860 is to be last (only when there is no 2870) no code is required. When field installing an additional 2860 which will be last on the bus, order **#9501** for the installed 2860 that is currently last on the bus. All MES orders for **#9501** must give the model, serial number and special features on the installed 2860. On the 3168, 3168-3 or 3195, the bus is two cable strings to which the channels are attached. Therefore, for each string, specify **#9501** for each 2860 that is not attached last on that string. If the 2860 is last on either string, no code is required. When field installing an additional 2860 which is to be last on the string, order **#9501** by MES for the installed 2860 that is currently last on the string.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Two-processor System: A 2860 that is to be used in a S/360 mdl 67-2 with two 2067 mdl 2s requires Address Prefixing (#1095) ... see "Special Features".
- 2301 Drum Storage: In a S/360 mdl 67-2 or 85, or a S/370 mdl 165, High Speed Direct Access Storage Priority (#4597) is required on the selector channel to which the 2820 Storage Control for the 2301 is to be attached ... see "Special Features".
- Isolation Features: Appropriate features must be ordered for field installation on units shipped prior to September 7, 1967 ... see "Special Features".

SPECIAL FEATURES

Address Prefixing (#1095): [S/360 mdl 67-2] One is required on each selector channel in a two-processor system ... provides prefixing to identify the processing unit that has initiated an I/O operation. **Specify: #9026** for first channel of 2860 ... **#9047** for second ... **#9048** for third. **Maximum:** One per 2860 mdl 1, two per 2860 mdl 2, three per 2860 mdl 3.

Channel-To-Channel Adapter (#1850): To interconnect two system channels ... only one of the two connected channels requires this feature. The feature uses one control unit position on each of the channels. The plant must know on which of the three possible 2860 channel gates the adapter is to be installed. **Specify: #9095** for installation on first gate ... **#9096** for second gate ... **#9097** for third gate. **Maximum:** One per gate.

Channel Indirect Data Addressing (#1861-#1863): [For use on a S/370 mdl 165II or 168 ... 3165/3168/3168-3 Attachment (**#9830**) is required on channel] One is required on each selector channel to provide indirect address for data transfer. Required for a system operating in EC mode. #1861 -- for 2860 mdl 1 ... #1862 for 2860 mdl 2 ... #1863 for 2860 mdl 3. **Maximum:** One per 2860.

High Speed Direct Access Storage Priority (#4597): [S/360 mdl 67-2 or 85, or S/370 mdl 165] Gives storage priority to a 2301 Drum over all other devices in the system. Required on a 2860 channel to which a 2301 is attached in the above systems. **Specify: #9171** for installation on first channel ... **#9172** on second channel. **Maximum:** In a S/360 mdl 67-2, only one #4597 may be attached to a 2860, regardless of mdl. Although two 2860s may be attached to a 2846, only one may have this feature. In a S/360 mdl 85 or S/370 mdl 165, up to two features may be used, but they must be located on the first 2860 in the system. **Prerequisite:** #7516 on the 2820 associated with the 2301.

3803 Mdl 2 Attachment (#7850): One is required for each 2860 channel to which 3803 mdl 2s are attached. **Specify:** #9181 for first channel of a 2860 ... #9182 for second channel ... #9183 for third channel. **Maximum:** One for 2860 mdl 1 ... two for 2860 mdl 2 ... three for 2860 mdl 3.

Isolation Features

The following features, as appropriate, must be ordered for field installation on each 2860 installed or shipped prior to September 7, 1967.

Isolation, 2860 Channel (#4611-#4613): Permits power to be turned off or on the 2860 without introducing transient noise signals on the I/O interface bus during the powering operation. #4611 -- for 2860 mdl 1 ... #4612 -- for 2860 mdl 2 ... #4613 -- for 2860 mdl 3. **Maximum:** One per 2860.

Isolation, On Channel-To-Channel Adapter (#4621-#4623): Permits power to be turned on or off the 2860 without introducing transient noise signals on units attached via Channel-to-channel Adapter(s) (#1850) during the powering operation. #4621 -- if there is only one #1850 on the 2860 frame ... #4622 -- if there are two #1850s ... #4623 -- if there are three #1850s. **Maximum:** One #4621, #4622 or #4623. **Prerequisites:** For #4621, one #1850 ... for #4622, two #1850s ... for #4623, three #1850s.

2860 Selector Channel (cont'd)

MODEL CHANGES

Available at time of manufacture only.

2870 MULTIPLEXER CHANNEL

[NO LONGER AVAILABLE]

(New RPQS will not be accepted.)

PURPOSE

For attachment of a wide variety of low to medium speed I/O control units and devices to a S/360 mdl 65, 67, 75, 85, 195, or S/370 mdl 165, 168, 168-3, 195.

MODELS

Model 1 001

Maximum

S/360 mdl 65, 67-1 (2067 mdl 1), 75 -- two 2870s can be attached ... up to two 2860 Selector Channels in any combination of mdls can also be attached. The total number of channels (both 2870s and 2860s) cannot exceed seven per CPU. **Limitations:** On either a 65MP system with eight 2365 mdl 13 frames or on a system with four 2361 mdl 2s, only three channel frames or seven logical channels, whichever occurs first, can be attached. If no 2870s are attached, only up to six logical channels can be attached per CPU. The first 2870 address must be zero and the second is assigned an available address from 1 to 6.

S/360 mdl 67-2 (one or two 2067 mdl 2s) -- one 2870 can be attached to each 2846 Channel Controller ... up to two 2860 Selector Channels in any combination of mdls can also be attached to each 2846.

S/360 mdl 85, 195 and S/370 mdl 165, 168, 168-3, 195 -- two 2870s can be attached. 2860 Selector Channels and 2880 Block Multiplexer Channels can also be attached. For combinations possible, see M3165, 3168, 3168-3 or 3195 pages. For 2085, consult IBM.

Note: The 2870 may be connected to another system channel for channel-to-channel interconnection of two system channels. However, the Channel-to-channel Adapter required for this interconnection must be installed on the other channel, not the 2870 ... unbuffered devices precede buffered devices. A 2821 Control Unit should normally be last in priority because of the high instantaneous data rates.

Prerequisites

With 2065 or 2067 mdl 1 -- Channel Attachment (**#9065**) is required to attach channels addressed 3 and 4. Channel Attachment (**#9066**) is required for channels addressed 5 and 6. See "Specify" in M2065 or 2067 pages.

With 2067 mdl 2 -- a 2846 Channel Controller is required.

With 2075 -- a 2075 Attachment (**#9820**) is required on each 2870 ... see "Specify".

With 2085 -- a 2085 Attachment (**#9821**) is required on each 2870 ... see "Specify". On the 2085, Channel Attachment (**#9065**) is required to attach channels addressed 3 and 4. Channel Attachment (**#9066**) is required for channels addressed 5 and 6. Consult IBM.

With 3195 -- a 3195 Attachment (**#9828**) is required on each 2870 ... see "Specify".

With 3165, 3168, 3168-3 -- a 3165/3168/3168-3 Attachment (**#9830**) is required on each 2870 ... see "Specify". When attaching this channel to a S/370 mdl 165, the 3165 must have sufficient channel addressing capability ... see "Channel Attactment" under "Specify" for the 3165. For S/370 mdl 165 systems, the power distribution unit must be equipped for at least the number of frames actually attached ... see "Channel Frames" under "Specify" for the 3067 mdl 1. Channel Indirect Data Addressing (#1861) is required for a system operating in EC mode ... see "Special Features".

Isolation Feature: An appropriate Isolation Feature is required on any 2870 shipped prior to December 29, 1967 ... see "Special Features".

HIGHLIGHTS

Provides up to 196 subchannels ... including four selector subchannels. See "Special Features". Aggregate data rates range from 110KB to 670KB, depending upon the features installed.

The basic channel can attach up to eight I/O control units and can address up to 192 I/O devices. Up to four selector subchannels can be added, each of which can operate one device simultaneously with the basic channel. Up to eight I/O control units can be attached to each selector subchannel. If one 2841 is attached, no other control unit can be attached to that selector subchannel. A maximum of sixteen devices can be attached to each selector subchannel. The first 2870 attached to a system must be assigned address zero. The second 2870 may be assigned any address 1 through 6, depending upon the total number of channels installed and the priority desired ... see Functional Characteristics SRL for the using system.

Maximum aggregate data rates are shown in the following table. These are machine rates for the 2870 ... for S/360 mdl 65, 67-1, 75 and 85, or S/370 mdl 165, 168, 168-3 or 195, information on system data rates may be found in the appropriate Functional Characteristics SRL.

SELECTOR SUBCHANNELS

Basic Channel	1st #6990	2nd #6991	3rd #6992	4th #6993
110KB	*	*	*	*
88KB	180KB	*	*	*
66KB	180KB	180KB	*	*
44KB	180KB	180KB	180KB	*
30KB	180KB	180KB	180KB	100KB

* Not installed

Bibliography: S/360 -- GC20-0360 S/370 -- GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Method of Installation: **#9400**, if 2870 will **not** be installed on a raised floor.
- 2075 Attachment: **#9820** required for attachment to a 2075.
- 2085 Attachment: **#9821** required for attachment to a 2085.
- 3195 Attachment: **#9828** required for attachment to a 3195. **Note:** 2870s serial numbers 70000 to 79999 must be used with a 3195.
- 3165/3168/3168-3 Attachment: **#9830** required for attachment to a 3165, 3168 or 3168-3. **Note:** 2870s serial numbers 70000 to 79999 must be used with a 3165, 3168 or 3168-3.
- Unit Position: The 2870 is normally last on the channel bus of a 2065, 2067 mdl 1, 2075, 2085, 2846 or 3165. If two 2870s are installed, one should be last and the other next to last on the channel bus. **#9501** must be specified for the 2870 which is next to last. The 2870 which is last does not require a code. All MES orders to add **#9501** to an installed 2870 must specify the serial number and special features on the installed unit. On the 3168, 3168-3 or 3195, the bus is two cable strings to which the channels are attached. Therefore, when one or two 2870s are installed, they should be last on separate strings. If on the same string, one should be last and the other next to last. **#9501** must be specified for the 2870 which is next to last on the string. The 2870 which is last on either string does not require a code. **Note:** 2870s with serial numbers 60002 through 69999 must be installed as the first 2870 with channel address of zero on all systems except the S/360 mdl 195 or S/370 mdl 165.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Two-processor System: A 2870 which is to be used in a S/360 mdl 67-2 with two 2067 mdl 2s requires Address Prefixing (#1095) ... see "Special Features".
- Isolation Feature: The appropriate Isolation Feature must be ordered for field installation on units shipped prior to December 29, 1967 ... see "Special Features".

SPECIAL FEATURES

Address Prefixing (#1095): [S/360 mdl 67-2] One required on each 2870 in a two-processor system ... provides prefixing to identify the processing unit that has initiated an I/O operation. **Maximum:** One per 2870.

Channel Indirect Data Addressing (#1861): [For use on a S/370 mdl 165II or 168 ... 3165/3168/3168-3 Attachment (**#9830**) is required on channel] Provides indirect address for data transfer. Required for a system operating in EC mode.

Selector Subchannel (#6990-#6993): Each selector subchannel permits attachment of up to eight I/O control units for devices with a data rate not exceeding 180KB ... see aggregate data rates possible under "Highlights". Each selector subchannel operates simultaneously with devices on the basic 2870 channel. **Limitation:** Regardless of the number of control units attached, a maximum of sixteen I/O devices can be attached to a selector subchannel. #6990 -- for first selector subchannel ... #6991 -- for second ... #6992 -- for third ... #6993 -- for fourth. **Maximum:** Four on the first or only 2870 (channel address 0) ... two (#6990 and #6991) on the second 2870 (channel address 1 through 6, depending on the number of 2860 and 2880 logical channels also attached). On a 65MP, the maximums are: Four on the first 2870 ... none on the second. **Prerequisites:** #6991 requires #6990 ... #6992 requires #6991 ... #6993 requires #6992.

Isolation Features

One of the following features, as appropriate, must be ordered for field installation on each 2870 shipped prior to December 29, 1967 ... see DP Letter 267-41 for ordering.

Isolation, Channel-Control Unit (#4600, #4601): To turn power on or off the 2870 without introducing noise signals on the I/O interface bus. #4600 -- for a 2870 with no selector subchannels ... #4601 -- for a 2870 with one or more selector subchannels (#6990, 6993). **Maximum:** One per 2870. **Prerequisite:** #4601 requires at least #6990.

MODEL CONVERSIONS: None

2880 BLOCK MULTIPLEXER CHANNEL

[NO LONGER AVAILABLE]

(New RPQs will not be accepted.)

PURPOSE

Block multiplexer channel(s) for attachment and control of a wide variety of I/O control units in a S/360 mdl 85, 195, or S/370 mdl 165, 168, 168-3, 195.

MODELS

Model 1	001	Has one block multiplexer channel
Model 2	002	Has two block multiplexer channels

Maximum

Up to three 2880s (six channels), in any combination of mdls can be attached. With Extended Channels (#3850 on the 2085, #3851 on the 3195, #3850 on the 3165, or #3855 on the 3168 or 3168-3) up to six 2880s (twelve channels) may be attached to a 2085, up to seven 2880s (thirteen channels) may be attached to a 3195, or up to six 2880s (eleven channels) may be attached to a 3165, 3168 or 3168-3. See M3195, 3165, 3168 or 3168-3 pages for allowable channel combinations. For 2085, consult IBM.

Limitations: A 2820 Storage Control equipped with Storage Priority (#7516) cannot be attached to a 2880.

Prerequisites

With 2085 -- 2085 Attachment (**#9821**) is required on each 2880 ... see "Specify". On the 2085, an appropriate Channel Attachment (**#9065-#9069**) may be required. Consult IBM.

With 3195 -- 3195 Attachment (**#9828**) is required on each 2880 ... see "Specify".

With 3165, 3168, 3168-3 -- a 3165/3168/3168-3 Attachment (**#9830**) is required on each 2880 ... see "Specify". When attaching the channel to a S/370 mdl 165, the 3165 must have sufficient channel addressing capability ... see "Channel Attachment" under "Specify" for the 3165. For S/370 mdl 165 systems, the power distribution unit must be equipped for at least the number of frames actually attached ... see "Channel Frames" under "Specify" for the 3067 mdl 1. Channel Indirect Data Addressing feature is required for a system operating in EC mode ... see "Special Features".

HIGHLIGHTS

Channels permit data rates up to 1.5 million bytes/second. With Two Byte Interface (#7850, #7851), data rates up to 3.0 million bytes/second are possible ... see "Special Features".

Provides up to 56 non-shared (block multiplex mode operation) subchannels per block multiplexer channel, allowing up to 56 block multiplex devices to operate concurrently in a burst interleaved mode on the single data path of the channel. Thus, although only one device may actually be transmitting data at any given instant, multiple channel programs may be concurrently active for up to 56 block multiplex devices at one time. Up to eight control units, of which seven may be block multiplexed, can be attached to each channel, permitting a wide variety of attached devices. There will always be one shared (non-block multiplex mode operation) subchannel having all addresses not assigned to non-shared subchannels. Subsequently, the shared channel will always have at least 200 unit addresses and may have up to 256 unit addresses, depending on the number of non-shared subchannels plugged during installation. With the Extended UCW feature installed, the capability of the channel to operate non-shared subchannels is extended from 56 to 256.

All block multiplex devices must be assigned to a non-shared subchannel. All non-block multiplex devices must be assigned to the shared subchannel. (Exception: The 2821 and 3811 control units may be attached to either type of subchannel, but non-shared subchannel attachment is recommended.)

Can be connected to a S/360 or S/370 selector channel via a Channel-to-channel Adapter (#1850) on the selector channel. Can be connected to a 4341 Processor block multiplexer channel via a Channel-to-channel Adapter (#1850) of the block multiplexer channel of the 4341 Processor.

I/O operations are overlapped with processing and, depending upon system considerations and upon data rate, all channels can operate simultaneously.

Bibliography: S/360 -- GC20-0360 S/370 -- GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Method of Installation: **#9400**, if 2880 will **not** be installed on a raised floor.
- 2085 Attachment: **#9821** required for attachment to a 2085.
- 3195 Attachment: **#9828** required for attachment to a 3195.
- 3165/3168/3168-3 Attachment: **#9830** required for attachment to a 3165, 3168 or 3168-3.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Unit Position: **#9505**. For the mdl 165, **#9505** must be specified on the 2880 which is last on the channel bus. For a mdl 168, 168-3 or 195, where there are two cable strings, each 2880 which is last on a string must have **#9505** specified. All MES orders to add **#9505** to an installed 2880 must specify the serial number and special features on the installed unit.

SPECIAL FEATURES

Channel Indirect Data Addressing (#1861, #1862): [For use on a S/370 mdl 165II or 168 ... 3165/3168/3168-3 Attachment (**#9830**) is required on channel] One is required on each channel to provide indirect address for data transfer. Required for a system operating in EC mode. #1861 -- for 2880 mdl 1 ... #1862 -- for 2880 mdl 2. **Maximum**: One per 2880.

Extended Unit Control Words (#3851, #3852): Extends channel storage to 256 unit control words. May be installed on either or both channels of a 2880 mdl 2. #3851 -- for mdl 1 or first channel of a mdl 2 ... #3852 -- for second channel of a mdl 2. **Limitations**: Cannot be installed on the same channel with #7850 or #7851, RPQ WE4259 channel-to-channel adapter and specify feature 2085 Attachment (**#9821**). **Field Installation**: Yes.

Two Byte Interface (#7850, #7851): One is required on each channel attaching a 2835 Storage Control mdl 1 for 2305 Fixed Head Storage(s). #7850 -- for a 2880 mdl 1 or the first channel of a 2880 mdl 2 ... #7851 -- for the second channel of a 2880 mdl 2. **Limitations**: Cannot be installed on the same channel with #3851 or #3852. **Field Installation**: Yes.

MODEL CONVERSIONS

Not recommended for field installation .

3017 POWER UNIT

PURPOSE

Provides power for a 3031 Processor or Attached Processor Complex.

MODELS

Model 1 001

HIGHLIGHTS

One 3017 Power Unit is required with each 3031 Processor. Two Units are required in an Attached Processor Complex.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray, or **#9066** for pearl white. **Note:** End panels are pebble gray on **#9066**.

SUPPLIES (None)

3031 PROCESSOR

PURPOSE

Performs arithmetic, logic, processor storage, channel, and control functions for a 3031 Processor or Attached Processor Complex. 3031 A models are used with a 3041 Attached Processor.

MODELS

		Bytes of Processor Storage
Model 2 or A2	002 or A02	2,097,152
Model 3 or A3	003 or A03	3,145,728
Model 4 or A4	004 or A04	4,194,304
Model 5 or A5	005 or A05	5,242,880
Model 6 or A6	006 or A06	6,291,456
Model 7 or A7	007 or A07	7,340,032
Model 8 or A8	008 or A08	8,388,608

Prerequisites: Each 3031 requires one 3036 Console and one 3017 Power Unit. Two 3017 Power Units, a 3036 Console, a 3041 Attached Processor, and a 3031 Processor mdl A are required in an Attached Processor Complex. See *S/370 Installation Manual - Physical Planning,* GC22-7004.

HIGHLIGHTS

Depending on the mdl, contains up to 8,388,608 bytes of monolithic processor storage ... processor cycle time of 115 nanoseconds ... 8-byte parallel data flow with 4-way interleaving ... 128-word instruction buffer ... processor functions are controlled by reloadable control storage ... includes 32,768 bytes of buffer storage which is transparent to the programmer and reduces the effective cycle time of processor storage ... 16 general purpose and four floating point registers are implemented in high speed internal circuits with a four byte data flow to the I/E function.

Standard Features: S/370 Universal Instruction Set ... extended precision floating point ... interval timer ... store and fetch protect ... byte-oriented operand feature ... main storage error checking and correction ... instruction retry ... dynamic address translation ... extended control mode ... program event recording ... one microsecond time-of-day clock with clock comparator ... one microsecond processor timer ... buffer storage (32,768 bytes) ... reloadable control storage ... integrated channels ... VMA and OS/VS1 ECPS ... S/370 Extended Facility ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... clear I/O ... storage configuration control ... Unit Emergency Power Off.

Channels: Six channels are standard, one byte multiplexer and five block multiplexer channels. The byte multiplexer channel is capable of a data rate of 40-75 KB/second. A block multiplexer channel is capable of a data rate of up to 1.5 MB/second standard, or up to 3.0 MB/second in data streaming mode with Data Streaming (#4850). 256 subchannels per channel, of which up to eight subchannels/channel may be shared. Channel Indirect Addressing is standard. One optional channel-to-channel adapter.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray, or **#9066** for pearl white.
- RETAIN/370: The capability of using remote service/logout analysis facility is standard. Customer must provide interface for this facility to the telephone line if he desires the feature to be utilized. For details on ordering and customer responsibilities, contact IBM.
- Unit Emergency Power Off: See *S/370 Installation Manual - Physical Planning,* GC22-7004, for details.

SPECIAL FEATURES

Channel-To-Channel Adapter (#1850): To interconnect two channels (either S/360, S/370 or 4300 Processor). Only one of the processors requires this feature. Uses one control unit position on each of the connected channels. Function can be expanded under program control so that the adapter will operate as a standard control unit. **Maximum:** One. **Field Installation:** Yes.

Direct Control (#3274): Provides two instructions, "Read Direct" and "Write Direct" and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes, between two cable-connected processors or a cable-connected processor and external devices. The read and write instructions must use real addresses only. **Maximum:** One. **Prerequisites:** External devices must meet the interface specifications outlined in *S/370-Direct Control Feature-OEMI,* GA22-6845. **Cable Order:** Required. **Field Installation:** Yes.

Data Streaming (#4850): Modifies the first two block multiplexer channels to permit each to operate at up to 3.0MB/second with data streaming mode control units. **Maximum:** One.

MODEL CONVERSIONS

Field Installable.

ACCESSORIES (None)

SUPPLIES (None)

3032 PROCESSOR

PURPOSE

Provides arithmetic, logic, processor storage, channels and control functions for a 3032 Processor Complex.

MODELS

		Bytes of Processor Storage
Model 2	002	2,097,152
Model 4	004	4,194,304
Model 6	006	6,291,456
Model 8	008	8,388,608

Prerequisites: Each 3032 requires one 3027 Power and Coolant Distribution Unit, one 3036 Console, and an appropriate 415 Hz power input. A 3032 mdl 8 requires the Extended Storage Feature **(#3870)** on the 3027 Power and Coolant Distribution Unit and an additional cable between the 3027 and 3032. Customer-supplied chilled water is required for cooling the system. See *IBM System/370 Installation Manual-Physical Planning,* GC22-7004.

HIGHLIGHTS

Depending upon the mdl, can contain up to 8,388,608 bytes of monolithic processor storage ... double-word storage accesses are four-way interleaved ... 8-byte parallel data flow ... includes 32,768 bytes of buffer storage which is transparent to the program and significantly reduces the effective access time of storage ... buffer storage does not increase the amount of addressable storage ... 80 nanosecond processor cycle ... overlapped operation of instruction pre-processing and execution functions ... extensive data checking is coupled with increased availability and serviceability. Improved instruction execution rates over the 3158-3. Improved availability and serviceability through dual console and main storage reconfiguration functions.

Standard Features: Universal Instruction Set ... extended precision floating point ... one microsecond time-of-day clock with clock comparator ... one microsecond processor timer ... dynamic address translation ... channel indirect data addressing ... extended control mode ... program event recording ... monitoring ... byte-oriented operand feature ... buffer storage (32,768 bytes) ... fetch and store protection ... direct control feature ... six channels ... S/370 Extended Facility ... remote log analysis and remote support facilities ... storage configuration control ... reloadable control storage ... interval timer ... processor storage error checking and correction ... instruction retry ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... clear I/O ... Unit Emergency Power Off.

Channels: Six functionally independent channels in one group are standard. A group consists of one byte multiplexer channel and five block multiplexer channels. Single block multiplexer channel speed of up to 1.5 MB/second is standard and up to 3 MB/second with the Two-Byte Interface (#7850) ... or in a data streaming mode with Data Streaming (#4850). Each byte multiplexer channel will generally operate in the range of 40-75 KB/second. Each channel has 256 subchannels, of which up to eight subchannels/channel may be shared. One optional Channel-to-Channel Adapter per processor is available. See "Special Features".

With the addition of Extended Channels (#3850), a group of five additional block multiplexer channels and one byte multiplexer channel may be added. Availability and serviceability are improved with the addition of this second group through the independent maintenance capability of each channel group.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Motor Generator Set and Starter: If desired, see "Accessories".
- Color: **#9061** for garnet red, **#9062** for sunrise yellow, **#9060** for willow green, **#9064** for charcoal brown, **#9063** for classic blue, **#9065** for pebble gray, **#9066** for pearl white.
- Unit Emergency Power Off: See *IBM System/370 Installation Planning Manual-Physical Planning,* GC22-7004, for details.

SPECIAL FEATURES

Channel-To-Channel Adapter (#1850): To interconnect two channels (either S/360, S/370 or 4300 Processor). Only one of the processors requires this feature. Uses one control unit position on each of the connected channels. Function can be expanded under program control so that the adapter will operate as a standard control unit. **Limitations:** Cannot be installed on extended channels. **Maximum:** One. **Field Installation:** Yes.

Extended Channels (#3850): To provide an additional group of five block multiplexer channels and one byte multiplexer channel. **Maximum:** One. **Prerequisites:** Specify **#9145** for the 3027 Power and Coolant Distribution Unit. **Cabling:** Additional cables are required. See *IBM System/370 Installation Manual - Physical Planning,* GC22-7004, for required cables. **Field Installation:** Yes.

Data Streaming (#4850): Modifies the first two block multiplexer channels of a channel group to permit each to operate at up to 3.0MB/second with data streaming mode control units. **Limitations:** Mutually exclusive with #7850 on the same channel group. **Maximum:** One per channel group. **Prerequisites:** Second feature requires #3850. **Specify: #9301** for standard channel group, **#9302** for extended channel group. **Field Installation:** Yes.

Two-Byte Interface (#7850): One is required on each channel attaching a 3838 Array Processor in 2-byte mode or 2305 Fixed Head Storage mdl 1. **Limitations:** Mutually exclusive with #4850 on the same channel group. **Maximum:** One per channel group on the first block multiplexer channel of the group. **Prerequisites:** Second Two-Byte Interface feature requires #3850. **Specify: #9201** for standard channel group, **#9202** for Extended Channel group. **Field Installation:** Yes.

Note: Customer price quotations and order acknowledgement letter for purchases MES must state, "Installation of this feature involves removal of parts which become the property of IBM."

MODEL CONVERSIONS

Field installable.

ACCESSORIES

Motor Generator Set: These units are not manufactured by IBM and are available on a purchase-only basis. Manufacturer's warranty will be extended to the purchaser. Installation, check-out and maintenance will not be provided by IBM and any expenses involved must be borne by the customer.
Units must be ordered one year in advance of installation.

For 3032 Processor: If a motor generator set is chosen as the power source, then one Motor Generator Set (with internally mounted starter) is required for each 3032 Processor. **Specify:** Feature number for Motor Generator Set on 3032 machine order .

	Feature
208/230V AC, 3-phase, 60 Hz-Motor Generator Set	**#9447**
440V AC, 3-phase, 60 Hz-Motor Generator Set	**#9449**

Note: If more than one MG set is desired on initial order, specify quantity.

If additional MG set is to be ordered for delivery after system, order as follows:

	P/N
Motor Generator Set ... 208/230V AC	**2574790**
Motor Generator Set ... 440V AC	**2574290**

SUPPLIES (None)

3033 PROCESSOR

PURPOSE

Provides arithmetic, logic, control functions, processor storage and channels for a 3033 Processor Complex. A and M models provide multiprocessing function.

MODELS

Models S	N	U	A	M	Bytes of Processor Storage
S4	N4	U4	A4	M4	4,194,304
		U6*	A6*	M6*	6,291,456
S8	N8	U8	A8	M8	8,388,608
S12	N12	U12	A12	M12	12,582,912
S16	N16	U16	A16	M16	16,777,216
		U24	A24		25,165,824

* Models U6, A6 and M6 are no longer available. Model changes between the U6, A6 and M6 are field installable.

Prerequisites: Each 3033 requires one 3037 Power and Coolant Distribution Unit, one 3036 Console, and an appropriate 415 Hz power input. **Note:** With Mdl Group S, **#9701** is required on the 3037 ... see "Specify" under 3037. Customer-supplied chilled water is required for cooling the system. See *IBM System/370 Installation Manual - Physical Planning,* GC22-7004.

If the 3033 is a mdl U24, #3832 and its associated prerequisites are required on the 3033. Also, the 3037 requires #3824.

The 3033 Attached Processor Complex requires a 3033 mdl A processor, a 3042 Attached Processor, a 3038 Multiprocessor Communication Unit, two 3036 Consoles, and two 3037 Power and Coolant Distribution Units (each equipped with #5050).

If the Attached Processor Complex consists of a 3033 mdl A24, then #3832 and its associated prerequisites are required on the 3033, as well as on the 3042 Attached Processor and on the 3038 Multiprocessor Communication Unit. Also required is #3824 on the 3037 Power and Coolant Distribution Unit attached to the 3033 mdl A24.

A 3033 Multiprocessor Complex requires two 3033 mdl M processors, a 3038 Multiprocessor Communication Unit, two 3036 Consoles, and two 3037 Power and Coolant Distribution Units (each equipped with #5050).

HIGHLIGHTS

Depending upon the mdl, can contain up to 25,165,824 bytes of monolithic processor storage... double-words are 8-way interleaved on U, A and M mdls: 4-way interleaved on Mdl Groups N and S ... 8-byte parallel data flow ... 57 nanosecond cycle buffer storage which is transparent to the program and significantly reduces the effective access time of storage: 65,536 bytes on U, A and M mdls -- 16,384 bytes on Mdl Group N -- 1,024 bytes on Mdl Group S ... buffer storage does not increase the amount of addressable storage ... 57 nanosecond processor cycle ... overlapped operation of instruction and execution functions ... extensive data checking.

A mdls are basically identical to M mdls ... A or M designates whether the mdl is used in an Attached Processor or Multiprocessor Complex. N designates that the mdl is used in a 3033 Processor Complex Mdl Group N. S designates that the mdl is used in a 3033 Processor Mdl Group S.

Standard Features: Universal Instruction Set ... extended precision floating point ... one microsecond time-of-day clock with clock comparator ... one microsecond processor timer ... dynamic address translation ... extended control mode ... program event recording ... byte-oriented operand feature ... buffer storage (65,536 bytes on U, A and M mdls ... 16,384 bytes on Mdl Group N ... 1,024 bytes on Mdl Group S) ... fetch and store protection ... direct control feature ... integrated channels ... S/370 Extended Facility ... storage configuration control ... reloadable control storage ... interval timer ... storage error checking and correction ... instruction retry ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... clear I/O.

In addition to the above, A and M mdls provide channel-set switching and four additional instructions: signal processor ... set prefix ... store prefix ... store CPU address.

Channels: On U, A and M mdls, 12 integrated channels in two groups are standard. Each group consists of one byte multiplexer and five block multiplexer channels. A third group containing four block multiplexer channels or three block multiplexer and one byte multiplexer channels is optional. See #3850.

On Mdl Group N, six integrated channels in one group are standard. Two additional groups are optional. The standard channel group and the first optional channel group each consist of one byte multiplexer and five block multiplexer channels. The second optional group contains four block multiplexer channels, or three block multiplexer and one byte multiplexer channels. See #3850 and #3851.

On Mdl Group S, six integrated channels in one group are standard. A second group is optional. Each group consists of one byte multiplexer and five block multiplexer channels. See #3851.

On all mdls, two channel-to-channel adapters are optional. On Mdl Group N or S, the second channel-to-channel adapter requires #3851.

On all mdls, single block multiplexer channel speed of up to 1.5MB/second is standard and up to 3MB/second with #7850 or in data streaming mode with #4850. 256 subchannels per channel, of which up to eight subchannels/channel may be shared.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Motor Generator Set and Starter: If desired, see "Accessories".
- Unit Emergency Power Off: See *IBM System/370 Installation Manual - Physical Planning,* GC22-7004, for details.
- 3038 Attachment: [A or M mdls] **#9751** if the processor is to be installed without a 3038 Multiprocessor Communication Unit for operation in uniprocessor mode. **Limitations:** Plant only. An optional function similar to #9751 is included in the field upgrade of a U mdl to an A or M mdl ... #9752 if the processor is to be installed with a 3038. **Limitation:** Plant only. Also see #5050 in M3037 pages.

  Field conversion from **#9751** to **#9752** ... Specify code **#9751** must be converted to **#9752** when installing the 3038. Conversion RPQ **8P0870** is required.

  Field conversion from **#9752** to **#9751** ... RPQ **8P0869** provides for field conversion of a 3033 A or M mdl from specify code **#9752** to **#9751** or from a 3033 A or M mdl without **#9752** to **#9751**. This permits a 3033 A or M mdl to operate as a uniprocessor without a 3038.

  An end cover is also required for the 3033 and is ordered by RPQ 8P0868. Contact IBM for lease and purchase prices of the above RPQs.
- Color: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray, **#9066** for pearl white.
- RETAIN/370: The capability of using remote support/logout analysis facility is standard. Customer must provide interface for this facility to the telephone line if he desires to utilize this feature. For details on ordering and customer responsibilities contact IBM.

SPECIAL FEATURES

Channel-to-Channel Adapter (#1850 for first, #1851 for second): To interconnect two channels (either S/360, S/370, or 4300 Processor). Only one of the processors requires this feature. Uses one control unit position on each of the connected channels. Function can be expanded under program control so that the adapter will operate as a standard control unit. **Limitations:** Cannot be installed on #3850 on any mdl ... can be installed on #3851 on Mdl Group N or S. **Maximum:** Two; one #1850 and one #1851. **Prerequisites:** #1851 requires #3851 on Mdl Group N or S. **Field Installation:** Yes.

Extended Addressing (#3832): [U, A, M Mdls] Provides for addressing of up to 32 megabytes of real processor storage. #3832 is required on 3033 mdls U24 and A24. **Maximum:** One. **Prerequisites:** [1] #6850 and #3868 on each 3033 channel group [2] #3832 on the 3038 MCU [3] Both processors in an MP complex must have #3832 [4] In an AP complex both the host 3033 Processor and the 3042 Attached Processor must have #3832. **Specify:** **#9321** for a U mdl, **#9322** for an M mdl, or **#9323** for A mdl. **Note:** Customer price quotations and order acknowledgement letters for purchase MES must state: "Installation of this feature involves removal of parts which become the property of IBM." **Field Installation:** Yes.

Extended Channels (#3850): [U, A, M, N mdls] Provides four additional block multiplexer channels, or three block multiplexer and one byte multiplexer channels. **Maximum:** One. **Prerequisites:** [1] **#9145** on the 3037 Power and Coolant Distribution Unit. See "Specify" under 3037. [2] #3868 is required if #6850 is installed. [3] On Mdl Group N, #3851. **Specify:** **#9150** for four block multiplexer channels, or **#9151** for three block multiplexer and one byte multiplexer channels. **Field Installation:** Yes. See *IBM System/370 Installation Manual - Physical Planning,* GC22-7004, for required cables.

Extended Channels (#3851): [Mdl Group N or S] Provides an additional group of five block multiplexer channels and one byte multiplexer channel. **Maximum:** One. **Prerequisites:** #3868 is required if #6850 is installed. **Note:** Field change from a Mdl Group N processor to a 3033 mdl U processor requires installation of this feature on the Mdl Group N processor. **Field Installation:** Yes. See *IBM System/370 Installation Manual - Physical Planning,* GC22-7004, for required cables.

3033 Processor (cont'd)

Extended Control Storage (#3868): Provides extended control storage for one channel group when #6850 is installed. One #3868 is required for each channel group in the processor. **Maximum:** U, A, M and N mdls -- three ... S mdls -- two. **Prerequisites:** [1] #6850. [2] On U, A or M mdls, third #3868 requires #3850. [3] On Mdl Group N, second #3868 requires #3851, third #3868 requires #3850. [4] On Mdl Group S, second #3868 requires #3851. **Maximum:** U, A, M and N mdls -- three ... S mdls -- two. **Field Installation:** Yes.

Data Streaming (#4850): Modifies the first two block multiplexer channels of a channel group to permit each to operate at up to 3.0MB/second with data streaming mode control units. **Limitation:** Cannot be installed on the same channel group with #7850. **Maximum:** One per channel group. **Prerequisites:** [1] On U, A or M mdls, third #4850 requires #3850. [2] On Mdl Group N, second #4850 requires #3851, third #4850 requires #3850. [3] On Mdl Group S, second #4850 requires #3851. **Specify: #9301** for first channel group, **#9302** for second channel group, **#9303** for third channel group. **Field Installation:** Yes.

3033 Extension (#6850): An architectural extension to the processor which enhances the MVS/System Product. Also provides extended control storage for Virtual Machine Assist, RPQ EJ1156. **Limitations:** The RPQ for Extended Control Storage, RPQ S20587, cannot co-reside with #6850. **Maximum:** One. **Prerequisities:** [1] #3868 ... one #3868 is required for each channel group in the processor. [2] For A mdls, #6850 on the 3042 Attached Processor; for M mdls, #6850 on each processor. **Field Installation:** Yes.

Two-Byte Interface (#7850): One is required on each channel attaching a 3838 Array Processor in 2-byte mode or a 2305 Fixed Head Storage mdl 1. **Limitations:** Cannot be installed on the same channel group with #4850. **Maximum:** One per channel group. **Prerequisites:** [1] On U, A or M mdls, third #7850 requires #3850. [2] On Mdl Group N, second #7850 requires #3851, third #7850 requires #3850. [3] On Mdl Group S, second #7850 requires #3851. **Specify: #9201** for first channel group, **#9202** for second channel group, **#9203** for third channel group. **Note:** Customer price quotations and order acknowledgement letters for purchase MES must state: "Installation of this feature involves removal of parts which become the property of IBM." **Field Installation:** Yes.

Planning For Feature Changes: When a customer requires a combination of features, an order for #3832 or orders for #4850 for installed channel groups must be entered on an individual MES. Also, #6850 must not be ordered on the same MES with #3850 or #3851. Finally, special features must not be consolidated on the same MES with an order for a model conversion or a model (storage) upgrade. Also see Notes under "Model Conversions".

MODEL CONVERSIONS

Model changes are field installable, except field changes from U, A or M models to Model Group N are not recommended ... field changes from U, A, M or N models to S models are not recommended. **Note:** Field change from a Model Group S or N model to a U model requires installation of Extended Channels (#3851) on the Model Group S or N processor.

3033 to 3033 Model Upgrade: Parts removed or replaced in upgrades from models U4/M4/A4, U6/M6/A6, U8/M8/A8, to models U12/M12/A12 or U16/M16/A16 become the property of IBM and must be returned.

ACCESSORIES

Motor Generator Set: These units are not manufactured by IBM and are available on a purchase-only basis. Manufacturer's warranty will be extended to the purchaser. Installation, check-out and maintenance will not be provided by IBM and any expenses involved must be borne by the customer. Units must be ordered one year in advance of installation.

For 3033 Processor: If a motor generator set is chosen as the power source, then one Motor Generator Set (with internally mounted starter) is required for each 3033 Processor or 3042 Attached Processor. Two are required for a 3033 AP or MP complex, one for each MP CPU. **Specify:** Feature number for Motor Generator Set on 3033 machine order .

	Feature
208/230V AC, 3-phase, 60 Hz-Motor Generator Set	**#9447**
440V AC, 3-phase, 60 Hz-Motor Generator Set	**#9449**

Note: If more than one MG set is desired on initial order, specify quantity.

If additional MG set is to be ordered for delivery after system, order as follows:

	P/N
Motor Generator Set ... 208/230V AC	**2574790**
Motor Generator Set ... 440V AC	**2574290**

SUPPLIES (None)

3036 CONSOLE

PURPOSE

Provides the switches, lights, displays, and control function for a 3031, 3032 or 3033 Processor; or 3031 Attached Processor Complex; or 3042 Attached Processor.

HIGHLIGHTS

One 3036 is used with each Processor, or 3031 Attached Processor Complex. Two 3036 Consoles are used in a 3033 AP or MP Complex. Data can be entered into processor storage or into internal registers by means of the keyboard. Contents of storage or internal registers of the processor can be displayed.

Basic diagnostic tests of the processor complex, including processor, storage, channels, and console can be operated from the console. Dual displays, individually addressable, with their associated input keyboards and control logic, combine to provide a complete console I/O function. Either display may be used by the customer as an operator console or by the customer engineer as a service support console. Both displays may be used as operator consoles or service support consoles if desired.

Also included is a device for loading the control store from a diskette drive and a modem for the remote service facility. A systems activity monitor is provided for the 3031, 3032, and 3033 Processors and the 3042 Attached Processor.

Prerequisites: Requires two control unit positions and four device addresses on a channel, or preferably on two channels if a second channel group is installed (3032 and 3033 only). A fifth device address is required if the remote service option is elected.

Bibliography: GC20-0001.

SPECIFY

- RETAIN/370: May be used with the 3031, 3032, or 3033 complex; however, it is not required. The RETAIN/370 specify option provides a physical interface (and internal modem to the telephone switched network for the Remote Support Facility (RSF), an optional service available to enhance customer engineering field serviceability. When the option is selected, the customer must provide the telephone lines required for the Remote Support Facility Modem. The customer must also arrange for the connection of the telephone interface cable provided by IBM to the telephone network. For details on ordering and customer responsibilities, see BOM, Orders and Movements.
- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Unit Emergency Power Off: See *S/370 Installation Manual - Physical Planning,* GC22-7004, for details.

3037 POWER AND COOLANT DISTRIBUTION UNIT

PURPOSE

Provides power and coolant distribution required by a 3033 Processor or a 3042 Attached Processor.

HIGHLIGHTS

One 3037 is used with each 3033 Processoror 3042 Attached Processor. Two 3037s are used in a 3033 AP or MP complex.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray, **#9066** for pearl white.
- Processor: Specify **#9701** for use with the 3033 Processor Model Group S.
- Unit Emergency Power Off: See *S/370 Installation Manual - Physical Planning,* GC22-7004 for details.
- Extended Channels: Specify **#9145** if Extended Channels feature #3850 is installed on the 3033 Processor.

SPECIAL FEATURES

Extended Power (#3824): Provides additional power for 3033 Model U24 or A24. This feature is required on the 3037 attached to the 3033 Model U24 or A24. **Maximum:** One. **Field Installation:** Yes.

Multiprocessing (#5050): Provides functions for operation in 3033 AP or MP complex. The #5050 feature is required on a 3037 whenever the associated processor is attached to a 3038 MCU (3033 or 3042 in an MP or AP Complex). The #5050 feature can be installed on a 3037 used with a 3033 mdl U, but will not be functional. Similarly, the #5050 feature can be installed on a 3037 used with a 3033 mdl A or M containing specify feature **#9751**. **Maximum:** One. **Field Installation:** Yes.

3038 MULTIPROCESSOR COMMUNICATIONS UNIT

PURPOSE

Control unit used in configuring a 3033 Multiprocessor or Attached Processor Complex. One is required for each complex.

MODELS

Model 1 001

HIGHLIGHTS

Contains hardware for communications between two processors, or between a processor and an attached processor.

Prerequisites: Multiprocessing feature (**#5050**) on each 3037 Power and Coolant Distribution Unit in the complex, and specify code **#9752** on the 3033 A mdl, or **#9752** on each 3033 M mdl (see "Specify" under 3033), plus:

In a 3033 MP Complex: Two 3033 Processors mdl M.
In a 3033 AP Complex: A 3033 Processor mdl A and a 3042 Attached Processor.

Field Installation: Yes.

Bibliography: GC20-0001.

SPECIFY

- Color: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray, **#9066** for pearl white. English **#2924**

SPECIAL FEATURES

Extended Addressing (#3832): Provides for addressing up to 32 megabytes of real processor storage. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** On 3033 Processors: (1) Extended Addressing (#3832) and 3033 Extension (#6850) (2) Extended Control Storage (#3868) on all channel groups, (3) Both 3033 Processors in an MP complex must have Extended Addressing (#3832), (4) In a 3033 AP Complex, both the host 3033 Processor and the 3042 Attached Processor must have Extended Addressing (#3832). **Specify: #9322** for MP Complex, **#9323** for AP Complex.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3041 ATTACHED PROCESSOR

PURPOSE

Provides instruction/execution function, buffer control function, and communication logic for a 3031 Attached Processor Complex.

MODELS

Model 1 001

HIGHLIGHTS

Can access up to 8 megabytes of monolithic processor storage on the host 3031 Processor mdl A ... 115 nanosecond processor cycle ... includes 32K bytes of high speed buffer storage ... instruction/execution function similar to the 3031 Processor ... buffer control function similar to the 3031 Processor ... controlled by reloadable control storage.

Standard Features: Universal instruction set ... interval timer ... store and fetch protect ... byte-oriented operand feature ... instruction retry ... dynamic address translation ... control mode ... program event recording ... time-of-day clock with clock comparator ... CPU timer ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... extended precision floating point ... Virtual Machine Assist (VMA) and OS/VS1 Extended Control Program Support (ECPS) when operating under VM/370 ... S/370 Extended Facility.

Prerequisites: The 3041 Attached Processor mdl 1 requires (1) a 3031 Processor mdl A ... (2) a second 3017 Power Unit.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9061** for garnet red, **#9062** for sunrise yellow, **#9060** for willow green, **#9064** for charcoal brown, **#9063** for classic blue, **#9065** for pebble gray, **#9066** for pearl white.

SPECIAL FEATURES

Direct Control (#3274): Provides two instructions: "Read Direct" and "Write Direct", and six distinct external interrupt lines which are independent of data and channel operations. The read and write instructions provide timing signals and transfer a single byte between two cable-connected processing units, or a cable-connected processing unit and external devices. The read and write instructions must use real addresses only. **Maximum:** One. **Cable order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/370 - Direct Control Feature - OEMI,* GA22-6845.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None

3042 ATTACHED PROCESSOR

PURPOSE

Provides arithmetic, logic, and control functions in a 3033 Attached Processor Complex. 3042 AP model 2 also provides channels.

MODELS

	Channels
Model 001	None
Model 002	6 standard, 6 optional

Prerequisites: The 3033 Attached Processor Complex requires a 3042 Attached Processor, a 3033 Processor mdl A, a 3038 Multiprocessor Communication Unit, two 3036 Consoles, two 3037 PCDUs each with Multiprocessing feature **#5050**, and an approximate 415 Hz power input.Customer-supplied chilled water is required for cooling the system. See *IBM System/370 Installation Manual - Physical Planning,* GC22-7004.

If the AP Complex consists of a 3033 mdl A24, then the Extended Addressing feature **(#3832)** and its associated prerequisites are required on the 3033, as well as on the 3042 Attached Processor and on the 3038 Multiprocessor Communication Unit. Also required is the Extended Power feature **(#3824)** on the 3037 attached to the 3033 mdl A24.

HIGHLIGHTS

Can access up to 25,165,824 bytes of processor storage on the host 3033 Processor mdl A ... double-words are 8-way interleaved ... 8-byte parallel data flow ... includes 65,536 bytes of 57 nanosecond cycle buffer storage which is transparent to the program and significantly reduces the effective access time of storage ... buffer storage does not increase the amount of addressable storage ... 57 nanosecond processor cycle ... overlapped operation of instruction and execution functions ... extensive data checking.

Standard Features: Universal Instruction Set ... extended precision floating point ... one microsecond time-of-day clock with clock comparator ... one microsecond processor timer ... dynamic address translation ... extended control mode ... program event recording ... byte-oriented operand feature ... buffer storage (65,536 bytes) ... fetch and store protection ... direct control feature ... S/370 Extended Facility ... reloadable control storage ... interval timer ... instruction retry ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... channel-set switching and four instructions: signal processor, set prefix, store prefix, store CPU address ... 3042 AP mdl 2 includes: Integrated channels ... clear I/O.

Channels: On the 3042 AP mdl 2 ... Six integrated channels in one group are standard. A second group of six is optional. Each group consists of 1 byte multiplexer channel and 5 block multiplexer channels. Single channel block transfer rate of up to 1.5 million bytes/second is standard and up to 3 million bytes/second with the Two-Byte Interface optional feature (#7850) or in data streaming mode with the Data Streaming optional feature (#4850) installed on block multiplexer channels. 256 subchannels per channel, of which up to 8 subchannels per channel may be shared. Two optional channel-to-channel adapters per attached processor are available.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz):**#9903** for 208V, **#9905** for 230V.
- Motor Generator Set and Starter: If desired, see "Accessories".
- Unit Emergency Power Off: See *IBM System/370 Installation Manual - Physical Planning,* GC22-7004, for details.
- Color: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray, **#9066** for pearl white.
- RETAIN/370: The capability of using remote support/logout analysis facility is standard. Customer must provide interface for this facility to the telephone line if he desires to utilize this feature. For details on ordering and customer responsibilities, see BOM, Orders and Movements.

SPECIAL FEATURES

Channel-to-Channel Adapter (#1850 for first, #1851 for second): To interconnect two channels (either S/360 or S/370). Only one of the processors requires this feature. Uses one control unit position on each of the connected channels. Function can be expanded under program control so that the adapter will operate as a standard control unit. **Limitations:** Mdl 2 only. **Maximum:** Two, one #1850 and one #1851. **Field Installation:** Yes. **Prerequisites:** #1851 requires #3851.

Extended Addressing (#3832): Provides for addressing of up to 32 megabytes of real processor storage. Customer price quotations and order acknowledgement letters for purchase MES must state: "Installation of this feature involves removal of parts which become the property of IBM." **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** (1) On the 3042 mdl 1 or 2, 3033 Extension feature (#6850). (2) On the 3042 mdl 2, Extended Control Storage (#3868) on each channel group. (3) In a 3033 AP complex, the Extended Addressing Feature (#3832) is required on the 3033 Processor mdl A, on the 3042 Attached Processor mdl 1 or 2, and on the 3038 MCU.

Extended Channels (#3851): Provides an additional group of five block multiplexer channels and one byte multiplexer channel. **Prerequisites:** #3868 is required if 3033 Extension (#6850) is installed. **Limitations:** Mdl 2 only. **Maximum:** One. **Field Installation:** Yes.

Extended Control Storage (#3868): Provides extended control storage for one channel group when 3033 Extension (#6850) is installed. **Corequisite:** 3033 Extension (#6850). One #3868 is required on each channel group. **Prerequisites:** Second #3868 requires #3851. **Limitations:** Mdl 2 only. **Field Installation:** Yes.

Data Streaming (#4850): Modifies the first two block multiplexer channels of a channel group to permit each to operate at up to 3 megabytes per second with data streaming mode control units. **Limitations:** Mdl 2 only. Mutually exclusive with Two-Byte Interface (#7850) on the same channel group. **Maximum:** One per channel group. **Field Installation:** Yes. **Prerequisites:** Second #4850 requires #3851. **Specify:** **#9301** for standard channel group, **#9302** for Extended Channels (#3851).

3033 Extension (#6850): An architectural extension to the processor which will enhance the MVS/System Product. Also provides extended control storage for Virtual Machine Assist, RPQ EJ1156. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** For 3042 AP mdl 2, #3868 is required on each channel group ... #6850 on host 3033 Processor. **Limitations:** The RPQ for Extended Control Storage, RPQ S20587, cannot coreside with 3033 Extension (#6850).

Two-Byte Interface (#7850): One is required on each channel attaching a 3838 Array Processor in 2-byte mode or 2305 Fixed Head Storage mdl 1. **Prerequisite:** Second Two-Byte Interface Feature requires Extended Channels (#3851). **Limitations:** Mutually exclusive with Data Streaming (#4850) on the same channel group. **Maximum:** One per channel group and installed on the first block multiplexer channel of the group. **Field Installation:** Yes. **Specify:** **#9201** for standard channel group, **#9202** for extended channel group.

Note: Planning for Feature Changes: When a customer requires a combination of features, an order for Extended Addressing (#3832) must be entered on a individual MES. Also, orders for Data Streaming (#4850) for *installed* channel groups must not be consolidated on an MES with another Special Feature. Finally, 3033 Extension (#6850) must not be ordered on the same MES with Extended Channels (#3851).

MODEL CONVERSIONS

Model 1 to model 2 is field installable. If the 3033 Extension feature (#6850) is on the 3042 Attached Processor, each channel group on the model 2 must have Extended Control Store feature (#3868). Parts removed or replaced in upgrades from model 1 to model 2 become the property of IBM and must be returned. Field changes from model 2 to model 1 are not recommended.

ACCESSORIES

See M3033 pages.

SUPPLIES (None)

3046 POWER UNIT

[*NO LONGER AVAILABLE ... features and model conversions can be ordered on an ''as available'' basis.*]

PURPOSE

Provides power for a 3135, 3135-3 or 3138 Processing Unit, or for a 3345 Storage and Control Frame model 1, 2, 4 or 5 with a 3145 Processing Unit model HG or I.

MODELS

Model 1 001

Limitations: Can be used with a 3145 mdl HG or I only when a 3345 mdl 1, 2, 4 or 5 is attached.

Publications: GC20-0001

HIGHLIGHTS (None)

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Cabling: **#9080** for below floor, **#9081** for on floor. If not specified, below floor is assumed.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3047 POWER UNIT

[NO LONGER AVAILABLE ... features and model conversions can be ordered on an "as available" basis.]

PURPOSE

Provides power for a 3145 Processing Unit model H2, HG2, I2, IH2, J2, JI2 or K2, or for a 3145-3 or 3148 Processing Unit.

MODELS

Model 1 001

Model 2 002 See "Field Conversion" under Specify.

HIGHLIGHTS (None)

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Cabling: **#9080** for below floor, **#9081** for on floor.
- Field Conversion of a 3145 mdl FED, GE, GFD, H, HG or I to a 3145 mdl H2, HG2, I2, IH2, J2, JI2 or K2, requires a 3047 mdl 2. Conversion from a mdl FED, GE, GFD, H, HG or I to a mdl JI2 or K2 will be made via RPQ. (The 3047 mdl 2 is to be used for IBM internal ordering and control purposes only, and is to be ordered at no charge. It is not to appear on any agreement.) MES for the 3145 mdl change must also include conversion of the 3047 mdl 2 to mdl 1 with the Plant Order No. of the 3047 mdl 2 indicated. The plant will indicate the serial number of the 3047 mdl 2 on the MES when it is shipped. The 3047 mdl change is to be reported installed on the same date as the CPU mdl change. (For purchase customers, there will be no charge for the 3047 mdl change.) **Note**: The 3047 mdl 2 order is to be entered to displace the 3345 (any mdl) and the 3046.

SPECIAL FEATURES (None)

ACCESSORIES (None)

SUPPLIES (None)

3052 ATTACHED PROCESSING UNIT (APU)

[NO LONGER AVAILABLE]

PURPOSE

Provides arithmetic, logic, control, and communication function for an Attached Processor System.

MODELS

Model 1 001

HIGHLIGHTS

- Can access up to 6,291,456 bytes of monolithic processor storage on the host 3158 or 3158-3.
- 115-nanosecond processor cycle.
- Includes 16,384 bytes of buffer storage which is transparent to the programmer and reduces the effective cycle time accessing the host storage. Sixteen general purpose and four floating point registers are implemented in high-speed internal circuits with a four-byte data flow. The APU functions are controlled by reloadable control storage.

Standard features include:

- Universal instruction set.
- Interval timer.
- Store and fetch protect.
- Byte-oriented operand feature.
- Instruction retry.
- Dynamic address translation.
- Extended control mode.
- Program event recording.
- Time-of-day clock with clock comparator.
- CPU timer.
- Compare and swap.
- Compare double and swap.
- Insert PSW key.
- Set PSW key from address.

Prerequisites: The 3052 APU mdl 1 requires:

- A 3158 or 3158-3 A-Series processing unit.
- A 3056 Remote System Console.

Publications: *IBM System/370 and 4300 Processors Bibliography* (GC20-0001).

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- Cabling: **#9080** for below floor, or **#9081** for on floor.
- If two processors are installed and the 3052 is additional and emergency power-off capability is required on the systems, then the expanded Emergency Power-Off Control (#3622) should be ordered for the host processor.

SPECIAL FEATURES

Direct Control (#3274): Provides two instructions, "Read Direct" and "Write Direct", and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte between two cable-connected processing units, or a cable-connected processing unit and external devices. Cable order is required. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/370 - Direct Control Feature - OEMI* (GA22-6845).

Extended Precision Floating Point (#3700): Provides instructions to handle extended precision (28-hexadecimal digit fraction) floating point operands. Extended precision operands may also be rounded to long-precision format, which in turn may be rounded to short-precision format. **Field Installation:** Yes.

1401/1440/1460, 1410/7010 Compatibility (#3950): Provides the system with the ability to execute 1401/1440/1460 and 1410/7010 instructions under specific conditions of minimum and matching configurations. See P360N pages for DOS and P360C pages for OS. **Limitations:** This feature cannot be loaded at IMPL time concurrently with System/370 Extended (#7730). **Field Installation:** Yes.

OS/DOS Compatibility (#5450): Provides the system with the ability to execute DOS programs under specific conditions. See P360C pages. **Limitations:** This feature cannot be loaded at IMPL time concurrently with System/370 Extended (#7730). **Field Installation:** Yes.

Processor Attach (#5552): Provides additional storage protect capability required when the APU is attached to a mdl A-Series processing unit whose storage size is over one megabyte. One feature is required for each megabyte of storage in the A-Series processor above one megabyte, e.g.:

A-Series Processor Mdl	No. of Processor Attach Features
AP3 or AP4, A33 or A34	1
AP5, A35	2
AP6, A36	3
AP7, A37	4
AP8, A38	5

Maximum: Five. **Field Installation:** Yes.

7070/7074 Compatibility (#7117): Provides the system with the ability to execute 7070/7074 instructions under specific conditions. See P360C pages. **Limitations:** This feature cannot be loaded at IMPL time concurrently with System/370 Extended (#7730). **Field Installation:** Yes.

System/370 Extended (#7730): Provides S/370 Extended facilities which are a prerequisite for operation with the MVS/System Extensions Program Product. **Limitations:** This feature cannot be loaded at IMPL time concurrently with 1401/1440/1460, 1410/7010 Compatibility (#3950), OS/DOS Compatibility (#5450), or 7070/7074 Compatibility (#7117). **Field Installation:** Yes. **Prerequisites:** #7730 and #7731 on the A-Series processor.

Virtual Machine Assist (#8740): Provides assist to VS operating systems operating under VM/370 by emulation of certain privileged operations. **Field Installation:** Yes.

SUPPLIES (None)

3058 MULTISYSTEM UNIT

[NO LONGER AVAILABLE]

PURPOSE

Control unit used in configuring a System/370 model 158 or 158-3 Multiprocessor System. One is required for each MP system containing one or two 3158/3158-3 multiprocessor models.

MODELS

Model 1 001

HIGHLIGHTS

Permits two 3158/3158-3 multiprocessing units to be interconnected to form a multiprocessing system. Contains configuration control facilities for mode of operation (MP/UP), storage address assignment, and attachment of I/O control units having the remote switch attachment feature.

Field Installation: Yes.

Prerequisites: One or two 3158/3158-3 multiprocessing mdls. I/O control units which are to be connected to the I/O assignment switches on the configuration control panel must have the two-channel switch feature and the remote switch attachment feature.

Publications: *IBM System/370 and 4300 Processors Bibliography* (GC20-0001).

SPECIFY

- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- Processor Mdls: Must be specified.

Symmetrical Processors

MP1 or M31	**#9501**
MP2 or M32	**#9502**
MP3 or M33	**#9503**
MP4 or M34	**#9504**
MP5 or M35	**#9505**
MP6 or M36	**#9506**

Asymmetrical Processors

Left Processor	Feature	Right Processor	Feature
M32	**#9181**	M32	**#9182**
M34	**#9183**	M34	**#9184**
M35	**#9185**	M35	**#9186**

3060 SYSTEM CONSOLE

[NO LONGER AVAILABLE]

PURPOSE

Provides the switches and lights necessary to operate the System/360 model 195 or System/370 model 195.

MODELS

Model 1 001

HIGHLIGHTS

One unit is used with each 3195 Processing Unit. Data can be entered into processor storage or into internal registers by keys and switches. Contents of storage or internal registers of the mdl 195 can be displayed. Basic maintenance tests of the processor, including storage, can be operated from the console. A display console is included which is functionally equivalent to a 2250 mdl 1 with the following features: Alphameric keyboard, 8K buffer (4K is maintenance only), character generator, light pen, and OCP-First. The display console and operator console panel which are included may be used as an operator's console.

Prerequisites: A control unit position on a 2860 or 2870 with Selector Subchannel (special feature), or a non-shared subchannel of a 2880.

Publications: *IBM System/360 Bibliography* (GC20-0360) and *IBM System/370 and 4300 Processors Bibliography* (GC20-0001).

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9905** for 230V.

SPECIAL FEATURES

Operator Control Panel - Second (#5476): Provides a duplicate of the on/off and program load facilities (OCP) of a second processing unit. **Maximum:** One. **Field Installation:** On an "as available" basis.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3062 ATTACHED PROCESSING UNIT

[NO LONGER AVAILABLE]

PURPOSE

Provides arithmetic, logic, control, and communication function for a 3168-3 Attached Processor System.

MODELS

Model 1 001

HIGHLIGHTS

- Can access up to 8,388,608 bytes of monolithic processor storage on the host 3168-3.
- Eight-byte parallel data flow.
- Includes up to 32,768 bytes of 80-nanosecond cycle buffer storage which is transparent to the program and significantly reduces the effective cycle time of storage.
- Buffer storage does not increase the amount of addressable storage.
- 80-nanosecond processor cycle.
- Double-words are four-way interleaved.
- Overlapped operation of instruction and execution units.
- Extensive data checking is coupled with 3168-3 reliability, availability, and serviceability.
- Improved availability and serviceability through a service processor.

Standard Features:

- Universal instruction set.
- Extended precision.
- One-microsecond time-of-day clock with clock comparator.
- One-microsecond CPU timer.
- Dynamic address translation.
- Extended control mode.
- Program event recording.
- Additional variable field length instructions.
- Control registers, expanding the functions of PSWs.
- Byte-oriented operand feature.
- Buffer storage (32,768 bytes).
- Fetch and store protection.
- Writable control storage.
- Interval timer.
- Storage error checking and correction.
- Instruction retry.
- Compare and swap.
- Compare double and swap.
- Insert PSW key.
- Set PSW key from address.
- Store CPU ID, additional instructions on the APU signal processor.
- Set prefix.
- Store prefix.
- Store CPU address.

Prerequisites: The 3062 APU mdl 1 requires:

- A 3168 mdl A-Series processor.
- A 3066 System Console mdl 3 (shared with 3168-3).
- A 3067 mdl 5 for the APU.
- A 3062 mdl 1 Attached Processing Unit Support (#7901) on the CPU 3067 mdl 3.
- An appropriate 415 Hz power input.
- Customer-supplied chilled water is required for cooling the system. See *S/370 Installation Manual - Physical Planning* (GC22-7004).
- Special features on the 3062 must match those on the 3168 for a normal installation. When special features do not match, RPQ 8P0810 must be ordered for the 3168.

Publications: *IBM System/370 and 4300 Processors Bibliography*, GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V or **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- Motor Generator Set and Starter (if desired): See "Accessories" for ordering instructions.
- If two processors are installed and the 3062 is added and emergency power-off ability is required on the systems, then the expanded Emergency Power-Off Control (#3624) should be ordered for the host processor.

SPECIAL FEATURES

High-Speed Multiply (#4525): Improves APU speed in both fixed and floating point multiply operations. **Field Installation:** Not recommended. **Prerequisites:** #4525 on the 3066 mdl 3 and the 3067 mdl 5.

System/370 Extended (#7730): Provides System/370 Extended facilities which are a prerequisite for operation with the MVS/System Extensions Program Product. **Field Installation:** Yes. **Prerequisites:** #7730 on the A-Series processor or on a 3168 with RPQs S20579 and S20580.

MODEL CONVERSIONS (None)

ACCESSORIES

Motor Generator Set: These units are not manufactured by IBM and are available on a purchase-only basis. Manufacturer's warranty will be extended to the purchaser. Installation, check-out and maintenance will not be provided by IBM and any expenses involved must be borne by the customer.
Units must be ordered one year in advance of installation. Contact installation planning representative for installation requirements.

If a motor generator set is chosen as the power source, then one Motor Generator Set (with internally mounted starter) is required for each 3062 Attached Processing Unit. **Specify:** Feature number for Motor Generator Set on 3062 machine order (AAS). **Note:** If more than one MG set is desired on initial order, specify quantity.

	Feature
208/230V AC, 3-phase, 60 Hz-Motor Generator Set	**#9447**
440V AC, 3-phase, 60 Hz-Motor Generator Set	**#9449**

If additional MG set is to be ordered for delivery after system, order as follows:

	P/N
Motor Generator Set ... 208/230V AC	**2574790**
Motor Generator Set ... 440V AC	**2574290**

SUPPLIES (None)

3066 SYSTEM CONSOLE MDL 2, 3

The 3066 model 2 is no longer available ... features and model changes can be ordered on an ''as available'' basis.

PURPOSE:

Provides the switches, lights, display and control functions for a S/370 model 168 or 168-3.

MODELS:

Model 2	002	[NO LONGER AVAILABLE] For each 3168/3168-3 Processing Unit.
Model 3	003	For each 3168-3 A-Series to support a 3062-1 APU.

Prerequisites: A control unit position on a 2860 Selector Channel, 2870 Basic Multiplexer Channel, 2870 Selector Subchannel (special feature), or a non-shared subchannel of a 2880 Block Multiplexer Channel ... see M2860, 2870, 2880 pages.

HIGHLIGHTS:

One 3066 mdl 2 is used with each 3168/3168-3 Processing Unit. Data can be entered into processor storage or internal registers by keys and switches. Contents of storage or internal registers of the 3168/3168-3 can be displayed.

Basic maintenance tests of the processor, including storage, can be operated from the console. A display console with a 4K buffer, an input keyboard, and associated control logic combine to provide a complete console I/O function. In normal mode, the CRT and the alphameric keyboard are designed to be used as the operator's console.

Also included is a microfiche projection display, a microfiche document viewer, a main storage configuration plugboard, a systems activity monitor, and a device for inputting microcode from a magnetic disk cartridge to the writeable control storage.

A 3066 mdl 3 is used with each 3168-3 A-Series to support a 3062 APU mdl 1.

Publications: GC20-0001

SPECIFY:

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- 3168-3 Attachment: **#9650** ... required to attach a 3168-3 Processing Unit. **Field Installation:** Yes.

SPECIAL FEATURES:

High Speed Multiply (#4525): Required if feature #4525 is installed on the 3168/3168-3 Processing Unit. **Field Installation:** Yes. **Prerequisites:** #4525 on the 3168/3168-3 and on the 3067 mdl 2, 3 or 5.

Multiprocessing (#5050): [mdl 2] Required if the 3066 mdl 2 is used with a 3168 or 3168-3 multiprocessor model. **Field Installation:** Yes.

Power Warning (#5760): Provides signal to the 3168/3168-3 system when power is outside specified limits. **Prerequisites:** All mdls require customer-supplied uninterruptible power supply with line sensor. Multiprocessing mdls also require special cable ... consult physical planning representative. **Field Installation:** Yes.

7070/7074 Compatibility (#7127): Required if feature #7127 is installed on the 3168/3168-3 Processing Unit. **Field Installation:** Not recommended. **Prerequisites:** #7127 on the 3168/3168-3 and on the 3067 mdl 2 or 3.

7080 Compatibility (#7128): Required if feature #7128 is installed on the 3168/3168-3 Processing Unit. **Field Installation:** Not recommended. **Prerequisites:** #7128 on the 3168/3168-3 and on the 3067 mdl 2 or 3.

709/7090/7094/7094 II Compatibility (#7129): Required if feature #7129 is installed on the 3168/3168-3 Processing Unit. **Field Installation:** Not recommended. **Prerequisites:** #7129 on the 3168/3168-3 and on the 3067 mdl 2 or 3.

MODEL CONVERSIONS:

The model 2 may be field-converted to a model 3.

SUPPLIES: (None)

3067 POWER AND COOLANT DISTRIBUTION UNIT MDL 2

[NO LONGER AVAILABLE]

The 3067 model 2 is no longer available ... features and model changes can be ordered on an ''as available'' basis.

PURPOSE

Provides power and coolant distribution control required by a S/370 model 168.

MODELS

Model 2 002 S/370 model 168

HIGHLIGHTS

One 3067 mdl 2 is used with each 3168 Processing Unit.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.

SPECIAL FEATURES

Buffer Expansion (#1435): Required if feature #1435 is installed on the 3168 Processing Unit. **Field Installation:** Yes. **Prerequisites:** #1435 on the 3168.

High Speed Multiply (#4525): Required if feature #4525 is installed on the 3168 Processing Unit. **Field Installation:** Not recommended. **Prerequisites:** #4525 on the 3168 and on the 3066 mdl 2.

Multiprocessing (#5050): Required if the 3067 is used with a 3168 mdl MP. **Field Installation:** Yes.

7070/7074 Compatibility (#7127): Required if feature #7127 is installed on the 3168 Processing Unit. **Field Installation:** Not recommended. **Prerequisites:** #7127 on the 3168 and on the 3066 mdl 2.

7080 Compatibility (#7128): Required if feature #7128 is installed on the 3168 Processing Unit. **Field Installation:** Not recommended. **Prerequisites:** #7128 on the 3168 and on the 3066 mdl 2.

709/7090/7094/7094 II Compatibility (#7129): Required if feature #7129 is installed on the 3168 Processing Unit. **Field Installation:** Not recommended. **Prerequisites:** #7129 on the 3168 and on the 3066 mdl 2.

3068 MULTISYSTEM COMMUNICATION UNIT

[NO LONGER AVAILABLE]

PURPOSE:

Control unit used in configuring a S/370 model 168 Multiprocessor System. One is required for each system containing one or two 3168/3168-3 multiprocessor models.

MODELS:

Model 1 001 S/370 model 168MP or 168-3MP

Prerequisites: One or two 3168/3168-3 multiprocessor mdls ... I/O control units which are to be connected to the I/O assignment switches on the configuration control panel must have the two-channel switch feature and the remote switch attachment feature. If the 3068 is to be installed with only one of the 3168/3168-3 multiprocessors mdls, order additional end cover via RPQ X66497.

Field Installation: Yes.

HIGHLIGHTS:

Contains hardware for communications between two S/370 mdl multiprocessing processors together with configuration control facilities for mode of operation (MP/UP), storage address assignment, and attachment of I/O control units having the remote switch attachment feature.

Publications: GC20-0001

SPECIFY:

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V, **#9904** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.

SPECIAL FEATURES:

Extended Storage Attachment (#3850): Provides for attachment of Extended Storage Control (greater than 4MB) if either processor is a mdl MP5, MP6, MP7, MP8, M35, M36, M37 or M38. **Maximum:** One. **Field Installation:** Yes.

I/O Assignment Switch Expansion (#4600): Adds an additional 14 assignment switches to the basic 14 on the configuration panel of the 3068. **Maximum:** One. **Field Installation:** Yes.

3080 POWER UNIT

[NO LONGER AVAILABLE]

PURPOSE

Provides power for the S/360 model 195 or S/370 model 195.

MODELS

Model 1	001	Provides power for the Floating Point Execution Element.
Model 2	002	Provides power for the Fixed Point and Variable Field Length Execution Element.
Model 3	003	Provides power for the Instruction Processor and the Storage Control Unit.

HIGHLIGHTS

One unit of each mdl of the 3080 is used with each 3195 Processing Unit.

Publications: S/360 -- GC20-0360, S/370 -- GC20-0001

SPECIFY

- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.

MODEL CONVERSIONS (Not applicable)

ACCESSORIES (None)

SUPPLIES (None)

3081 PROCESSOR UNIT

PURPOSE

Provides arithmetic, logic and control function through two integrated central processors and houses shared central storage and channels for a 3081 Processor Complex.

MODELS

Models			Bytes of Central Storage
D16	K16	G16	16,777,216
D24	K24	G24	25,165,824
D32	K32	G32	33,554,432
	K48	G48	50,331,648

Note: At initial microcode load time, a minimum of 327,680 bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon channel attachment needs for configurations requiring greater than 512 UCWs, additional system area assignments are required. Expansion of the system area occurs automatically in 32KB increments (up to 589,824 bytes) as determined by the size of the I/O configuration. A maximum of 4080 devices is possible.

Limitations: In 370 mode, address translation is limited to 64K byte segments and 4K byte page size (except mdl D16, which translate 2K or 4K byte page size.) In 370 mode, mdl D16 uses 2K storage protect keys, while all other models use 4K storage protect keys.

Prerequisites: Each 3081 Processor Unit requires:

1. One 3082 Processor Controller,
2. One 3087 Coolant Distribution Unit,
3. One 3278-2A Display Console as the system console, and
4. One 3089 Power Unit or other appropriate 400 Hz power source.

Note: Depending upon the 3081 mdl, **#9491**, **#9492**, or **#9493** must be specified on the 3082 Processor Controller. See "Specify" under 3082.

Those customers using the 3087 mdl 1 CDU to cool their systems, must supply chilled water. See *IBM System/370 Installation Manual - Physical Planning,* GC22-7004. In addition, the System Control Program will require an appropriate operator console in addition to the system console. Access to a 3274 mdl X1B or X1D, or availability of an operator console is required to satisfy the minimum service configuration.

HIGHLIGHTS

Depending upon the mdl, contains up to 50,331,648 bytes of monolithic central storage ... 312 nanosecond storage access cycle ... two integrated central processors having a cycle time of 26 nanoseconds ... eight byte data flow between each processor and storage ... each processor has its own high speed buffer having a cycle time of 26 nanoseconds ... buffer storage is transparent to a program and significantly reduces the effective access time of storage ... integrated byte and block multiplexer channels ... extensive use of LSI logic circuitry ... has the ability to operate in S/370 mode or 370-XA mode ... 370 XA mode extends addressing to 2 GB and for hardware controlled channel pathing to an I/O device ... distributed microcode logic and control stores ... microcode assists for both MVS and VM ... extensive data checking.

Standard Features: S/370 mode ... 370-XA mode ... Universal Instruction Set ... S/370 Extended Facility ... 3033 Extension Feature ... extended addressing ... extended control mode ... PSW key handling ... conditional swapping ... set prefix ... store prefix ... signal processor ... store CPU address ... extended precision floating point ... processor checkpoint retry ... time-of-day clock ... clock comparator ... CPU timer ... interval timer ... byte oriented operand feature ... key controlled storage page protection ... tracing protection ... storage error checking and correction ... configuration control ... dynamic address translation ... program event recording ... store status ... program reset ... set system-mask suppression ... integrated channels ... channel set switching ... data streaming ... start I/O fast release ... clear I/O ... Virtual Machine Assist ... Preferred Machine Assist.

Channels: The External Data Controller (EXDC) is an integrated I/O processor containing 16 channels organized in two groups of eight. An additional group of eight channels is available as an optional feature. Channels are configurable as either byte or block multiplexer channels. A maximum of four byte multiplexer channels are permitted and are assignable only within the first two physical channel groups. Byte multiplexer channels can operate only with unshared devices. Where byte multiplexer channels are not needed, block multiplexer channels may be substituted. All block multiplexer channels are capable of data streaming and are capable of operating at data rates up to three million bytes/second across a 1-byte interface. Each channel can address up to 256 I/O devices and may physically attach up to eight control units.

In S/370 mode, channels may be grouped into two logical channel sets, with up to 16 channels to a set, one set assignable to each central processor. Channel set switching is standard. In S/370 mode, physical channels may be given any valid logical designation.

In 370-XA mode, either central processor may initiate an operation with any I/O device and process any I/O interruption, using any of the 24 channel paths to which the device is attached.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9915** for 240V.
- Color: The standard color for this unit is pearl white. Those wishing colored accents should specify **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown or **#9065** for pebble gray.
- Power: When 400 Hz power source is other than the 3089 Power Unit, specify **#9491**.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard external dimensions of Frame S are 945mm wide by 1,778mm long by 1,875mm high (37.2" x 70" x 73.8"). Should these dimensions need reduction, the side covers may be removed, reducing external dimension to 858mm wide by 1,778mm long (33.8" x 70"). This reduction may be obtained by specifying **#9571**. Further reduction may be achieved by splitting Frame S into two subframes, the largest of which has external dimensions of 778mm by 1,778mm long (30.6" x 70"). This reduction may be obtained by specifying **#9572**. Specify either **#9571** or **#9572** as required. For additional information, see *IBM System/370 Installation Manual - Physical Planning,* GC22-7004, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some older elevators may have weight limitations of 1,136kg/2500 lbs and may require partial depopulation of 3081 frames to satisfy this limitation. Specify **#9581** to reduce frame weights to less than 1,136kg/2,500 lbs.
- RETAIN: The capability of using the RETAIN remote service/logout analysis is standard and provided by the 3082 Processor Controller.

SPECIAL FEATURES

Channel Group Add'l (#1550): Provides an add'l group of eight block multiplexer channels. **Prerequisites:** Every #1550 requires support from a 3082 Processor Controller mdl 24. **Limitations:** #1550 may be configured only as block multiplexer channels. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

Model upgrades from model Ds and Gs to model Ks or model upgrades increasing storage capacity are field installable and the parts removed or replaced become the property of IBM and must be returned. Model downgrade from model Ks to model Ds are not available. Model downgrade from a 3081 model G or K to a 3083 is not recommended.

Note: Any 3081-K upgrades to a 3084-Q requires installation of feature #1550 (Channel Group Add'l) on the 3081-K as a prerequisite to upgrading.

Model upgrades combining performance and storage increases should be ordered as a single MES where possible. Feature additions should be ordered separately from any model upgrade MES.

See M3084 pages for 3081-K to 3084-Q upgrade.

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3081 Processor Complex.

Console Table, 308X Processor Complex (#1560): Provides an operator workstation with a durable melamine working surface for up to two operators and their display consoles. The table has a color-accented front modesty panel, internal cable channels for routing phone lines and display cables and is designed for a raised floor environment. A raised accessory panel designed to accommodate wall mountable equipment such as tackboards, telephones or intercoms is attached to either one end or the other of the console table. The table measures 1,780mm x 815mm and the end accessory panel is 265mm higher than the 720mm table height. Specify end attachment of accessory panel and color of modesty panel.

Right end attachment	**#9441**	Sunrise Yellow	**#9163**
Left end attachment	**#9442**	Classic Blue	**#9164**
		Charcoal Brown	**#9165**
Willow Green	**#9161**	Pebble Gray	**#9166**
Garnet Rose	**#9162**	Pearl White	**#9167**

SUPPLIES (None)

3082 PROCESSOR CONTROLLER

PURPOSE

Provides the controlling mechanism for monitoring and supervising either the 3081, 3082, or 3084 Processor Complex and houses the interface adapter elements for each channel. It also contains the adapters for attaching the 3278-2A Display Console, an optional 3287 Printer and an optional 3268-2, a 3230-2 or a 3278-2 Display Station (programming support console). Note: The 3082 Model Q48 is not orderable from the plant and can only be achieved by upgrading a 3082 Model 24.

MODELS

Mdl 8	008	Supports 3083 Processor Units with 8 channels.
Mdl 16	016	Supports 3081 or 3083 Processor Units with 16 channels.
Mdl 24	024	Supports 3081 or 3083 Processor Units with 24 channels.
Mdl Q48	Q48	Supports a 3084 having 24 channels per side.

HIGHLIGHTS

The 3082 provides the machine to human interface for either the 3081, 3083, or 3084 Processor Complex and performs the following: Provides the control unit function for the system console ... provides the control unit function for an integrated service support console ... provides the control unit function for an optional printer and a programming support console ... houses the interface logic and control for each channel ... houses basic switches, lights and indicators ... houses the remote service facility modem used in remote servicing ... contains a diskette drive for maintenance data interchange ... contains fixed media direct access storage for processor data ... monitors power levels and coolant flow ... controls usage configurations and effects reconfiguration ... at initial microcode load, controls microcode loading of distributed control stores ... assist the Processor Unit in error recovery ... provides access to RETAIN for a 3278 Model 2 Display Station with or without Switch Control Unit feature (#1720) ... performs basic diagnostic and failure isolation on a time sharing basis with the above functions and operates concurrently to the processor unit to which it attaches.

One 3082 is required for each 3081, 3083, or 3084 Processor Unit. Each side of a 3082 Model Q48 has the functional attributes of model 24 plus the ability to function in a multiprocessor configuration.

3084 Operation: A 3082-Q48 is required to support any 3084 Processor Complex and contains two Monitoring and System Support Facilities (MSSF). Like the 3084 with which it functions, the 3082-Q48 duplicates most hardware, including two MSSFs. In a single image configuration, one MSSF supervises the 3084 Processor Complex. The second MSSF is capable of automatically assuming supervision of a 3084 Processor Complex for most failures of the primary MSSF.

At the failure of any critical hardware element, the MSSF performs its normal identification of failing componentry but also continues to supervise non-failing elements. This permits the operator to vary-off failing elements and to establish a maintenance configuration so that the failing hardware may be repaired. Using the intercommunication capability between the MSSF and the control program, pages are relocated where necessary and fencing is established between the maintenance configuration and the continuing customer's configuration. Upon verification of repair, the maintenance configuration is eliminated, the operator may vary-on the now repaired hardware and return it to continuing configuration.

When the 3084 if partitioned into two configurations, each side of the processor complex functions independently under the supervision of a dedicated MSSF.

Limitations: Natively attached programming support consoles (3278-2) must have installed a 75-key EBCDIC typewriter keyboard **#4621**.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9915** for 240V.
- Processor Unit Attachment:

3081	3083
any Model D = **#9491**	any Model E = **#9497**
any Model K = **#9492**	any Model B = **#9498**
any Model G = **#9493**	any Model J = **#9499**

- Color: The standard color for this unit is pearl white. Those wishing colored accents should specify: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown or **#9065** for pebble gray.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard external dimensions of Frame E and L are 945mm wide by 1778mm long by 1790mm high (37.2" x 70" x 70.5"). Should shipping dimensions need reduction, the side covers may be removed, reducing external dimensions to 858mm wide by 1778mm long (33.8" x 70"). This reduction may be obtained by specifying **#9571**. Further reduction may be achieved by additionally removing a frame extension which reduces external dimensions to 858mm x 1550mm (33.8" x 61") and is obtainable by specifying **#9573**. Specify **#9571** and **#9573** as required. For additional information, see *IBM System/370 Installation Manual Physical Planning,* GC22-7004, and/or your Installation Planning Representative.
- Remote Servicing: A customer supplied data communication line with an exclusion key telephoneof the WE503 or 2503 type (or equivalent) and a manual answer Data Protective Coupler (CDT type or equivalent)is necessary in order that higher level support may be received from the Field Support Center. These same facilities may also be used with RETAIN. The capability of using the RETAIN remote service/logout analysis is standard.

  An integrated remote service facility modem is standard on 3082 Connection of the IBM provided telephone interface cable to the telephone network must be arranged for by the customer. Each side of the 3082-Q48 has a remote service facility modem.
- Remote 3278-2A Display Console: The standard cable for interconnecting the 3082 and the 3728-2A (system console) is a fixed length, 15 meter (49 feet) cable. Cables greater than 15 meters (49 feet), up to the maximum length of 1,500 meters (4,921 feet), may be obtained by RPQ.

SPECIAL FEATURES

Channel To Channel Adapter (#1850 For First, #1851 For Second): Provides the controlling element to interconnect two processors via their channels (either S/360 or S/370 or 4300). Only one of the interconnected processors needs this feature. Uses one control unit position on each of the connected channels. On Model Q48, the feature is located on the A-side. **Maximum:** Two, one #1850 and one #1851. **Field Installation:** Yes. **Prerequisites:** #1851 requires #1850.

B-side CTC Adapter (#1852 for third, #1853 for fourth): (Mdl Q48 only.) Provides the controlling element to interconnect two processors via their channels (either S/360, S/370 or 4300). Only one of the interconnected processors needs this feature. Uses one control unit position on each of the connected channels. Feature is located on the B-side of the 3082. **Limitations:** Mdl Q48 only. **Maximum:** Two, one #1852 and one #1853. **Field Installation:** Yes. **Prerequisites:** #1853 requires #1852.

I/O Power Sequence Control (#4650): The 3082 has a standard capability of associating up to 32 control units to a 3081, 3083, or the A-side of a 3084 Processor Complex for power-on/power-off control purposes. When requirements exceed these 32 power control relays, #4650 provides for power-on/power/off control for the 33rd through 64th control unit. **Maximum:** One. **Field Installation:** Yes.

B-side I/O Power Sequence Control (#4651): (Mdl Q48 only.) The B-side of 3082-Q48 has a standard capability of associating up to 32 control units to the B-side of the 3084 for power sequence purposes. When requirements exceed these 32 power-control relays, #4651 provides for power-on/power-off control for the 33rd through 64th control unit attached to the B-side. **Limitations:** Available only on mdl Q48. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

Model upgrades are field installable. Upgrade to a Model Q48 may only take place from a Model 24. Model downgrade from a Model Q48 to any other model is not recommended.

ACCESSORIES (None)

SUPPLIES (None)

3083 PROCESSOR UNIT

PURPOSE

Provides arithmetic, logic and control function through a single central processor and houses shared central storage and channels for a 3083 Processor Complex.

MODELS

Models			Bytes of Central Storage
E8	B8	J8	8,388,608
E16	B16	J16	16,777,216
E24	B24	J24	25,165,824
E32	B32	J32	33,554,432

Note: At initial microcode load time, a minimum of 327,680 bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon channel attachment needs for configurations requiring greater than 512 UCWs, additional system area assignments are required. Expansion of the system area occurs automatically in 32KB increments (up to 589,824 bytes) as determined by the size of the I/O configuration. If required, an additional 512K bytes system area is available.

Model Differences: The various models of 3083 are identical in function but vary in instruction execution rate (ranging from the slowest Model E to the fastest Model J).

Prerequisites: Each 3083 Processor Unit requires:

1. One 3082 Processor Controller,
2. One 3087 Coolant Distribution Unit,
3. One 3278-2A Display Console as the system console, and
4. One 3089 Power Unit or other appropriate 400Hz power source.

Note: See "Specify" under the 3082 for appropriate Processor Unit Attachment Code.

Those customers using the 3087-1 CDU to cool their system must supply chilled water. See *S/370 Installation Manual - Physical Planning,* GC22-7004. In addition, the System Control Program will require an appropriate operator console in addition to the system console. Access to a 3274 mdl X1B or X1D, or availability of an operator console is required to satisfy the minimum service configuration.

HIGHLIGHTS

Depending upon the model, contains up to 33,554,432 bytes of monolithic central storage ... 312 nanosecond storage access cycle ... 26 nanosecond central processor cycle ... eight byte data flow between the central processor and storage ... a high speed buffer in the central processor ... buffer storage is transparent to a program and significantly reduces the effective access time of storage ... integrated byte and block multiplexer channels ... extensive use of LSI logic circuitry ... has the ability to operate in S/370 mode or 370-XA mode ... 370 XA mode extends addressing to 2 GB and provides for hardware controlled channel pathing to an I/O device ... distributed microcode logic and control stores ... microcode assists for both MVS and VM ... extensive data checking.

Standard Features: S/370 mode ... 370-XA mode ... Universal Instruction Set ... S/370 Extended Facility ... 3033 Extension Feature ... extended addressing ... extended control mode ... PSW key handling ... conditional swapping ... set prefix ... store prefix ... signal processor ... store CPU address ... extended precision floating point ... processor checkpoint retry ... time-of-day clock ... clock comparator ... CPU timer ... interval timer ... byte oriented operand feature ... key controlled storage page protection ... tracing protection ... storage error checking and correction ... storage configuration and control ... dynamic address translation ... program event recording ... store status ... program reset ... set system-mask suppression ... integrated channels ... channel set switching ... data streaming ... start I/O fast release ... clear I/O ... Virtual Machine Assist ... Preferred Machine Assist.

Channels: The External Data Controller (EXDC) is an integrated I/O processor containing eight channels as basic. One optional channel group is available on mdl E, two optional channel groups are available on mdls B and J. Channels are configurable as either byte or block multiplexer channels. A maximum of four byte multiplexer channels are permitted, and are assignable only within the first two physical channel groups. Byte multiplexer channels can operate only with unshared devices. Where byte multiplexer channels are not needed, block multiplexer channels may be substituted. All block multiplexer channels are capable of data streaming and are capable of operating at data rates up to three million bytes/second across a 1-byte interface. Each channel can address up to 256 I/O devices and may physically attach up to eight control units.

In S/370 mode, physical channels may be given any valid logical designation. In 370-XA mode, the central processor may initiate an operation with any I/O device and process any I/O interruption, using any of the channel paths to which the device is attached.

Limitations: In S/370 mode, address translation of page sizes is limited to 4K bytes and segment sizes to 64K bytes. Only 4K storage protect keys are used.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9915** for 240V.
- Color: The standard color for this unit is pearl white. Those wishing colored accents should specify **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown or **#9065** for pebble gray.
- Power: When 400 Hz power source is other than the 3089 Power Unit, specify **#9491**.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard extenal dimensions of Frame S are 945mm wide by 1,778mm long by 1,875mm high (37.2" x 70" x 73.8"). Should these dimensions need reduction, the side covers may be removed, reducing external dimension to 858mm wide by 1,778mm long (33.8" x 70"). This reduction may be obtained by specifying **#9571**. Further reduction may be achieved by splitting Frame S into two subframes, the largest of which has external dimensions of 778mm by 1,778mm long (30.6" x 70"). This reduction may be obtained by specifying **#9572**. Specify either **#9571** or **#9572** as required. For additional information, see *IBM System/370 Installation Manual - Physical Planning,* GC22-7004, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some older elevators have weight limitations of 1,136kg/2,500 lb and may require partial depopulation of 3083 frames to satisfy this limitation. Specify **#9581** to reduce frame weights to less than 1,136kg/2,500 lb.
- RETAIN: The capability of using the RETAIN remote service/logout analysis is standard and provided by the 3082 Processor Controller.

SPECIAL FEATURES

Channel Group, First Add'l (#1545): Provides the first add'l group of eight channels for any 3083. **Maximum:** One. **Field Installable:** Yes. **Prerequisites:** Every #1545 requires support from the appropriate mdl of a 3082 Processor Controller.

Channel Group, Second Add'l (#1550): Provides the second add'l group of eight channels for any mdl B or J. **Prerequisites:** Every #1550 also requires a #1545. Every #1550 requires support from a 3082 Processor Controller mdl 24. **Limitations:** Not available on mdl E. **Maximum:** One. **Field Installable:** Yes.

MODEL CONVERSIONS

Model upgrade from one 3083 to another is field installable. Parts removed or replaced become the property of IBM and must be returned. Model downgrade from model J to B, or from a model B to E, or from a 3081-K to a 3083-J, or from a 3081-G to a 3083-B, is not recommended.

Model upgrade from a 3083-J to a 3081-K, or from a 3083-B to a 3081-G, is field installable. Parts removed or replaced become the property of IBM and must be returned. Any 3083-J upgrading to a 3081-K, or any 3083-B upgrading to a 3081-G, requires installation of feature #1545 (Channel Group First Add'l) on the 3083 as a prerequisite action.

Model upgrades combining performance and storage increases should be ordered as a single MES where possible. Feature additions should be ordered separately from any model upgrade MES.

ACCESSORIES

The following is available on a purchase only basis for shipment with the 3083 Processor Complex.

Console Table, 308X Processor Complex (#1560): Provides an operator workstation with a durable melamine working surface for up to two operators and their display consoles. The table has a color-accented front modesty panel, internal cable channels for routing phone lines and display cables and is designed for a raised floor environment. A raised accessory panel designed to accommodate wall mountable equipment such as tackboards, telephones or intercoms is attached to either one end or the other of the console table. The table measures 1,780mm x 815mm and the end accessory panel is 265mm higher than the 720mm table height. Specify end attachment of accessory panel and color of modesty panel.

Right end attachment	**#9441**	Sunrise Yellow	**#9163**
Left end attachment	**#9442**	Classic Blue	**#9164**
		Charcoal Brown	**#9165**
Willow Green	**#9161**	Pebble Gray	**#9166**
Garnet Rose	**#9162**	Pearl White	**#9167**

SUPPLIES (None)

3084 PROCESSOR UNIT

PURPOSE

Provides arithmetic, logic and control function through four integrated central processors and houses shared central storage and channels for a 3084 Processor Complex. The processor unit may be partitioned and run as two independent dyadic configurations. The 3084 Processor is not orderable from the plant and can only be achieved by upgrading a 3081-K Processor.

MODELS

Models	Bytes of Central Storage
Q32	33,554,432
Q48	50,331,648
Q64	67,108,864
Q96	100,663,296

Note: At initial microcode load time, a minimum of 327,680 bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon channel attachment needs for configurations requiring greater than 512 UCWs, additional system area assignments are required. Expansion of the system area occurs automatically in 32KB or 64KB increments (up to 589,824 bytes) as determined by the size of the I/O configuration. If required, an additional 512K byte system area is available. A maximum of 4,080 devices is possible.

Limitations: In 370 mode, address translation is limited to 64K byte segments and 4K byte page sizes. Only 4K storage protect keys are used.

Prerequisites: Each 3084 Processor Unit requires:

1. One 3082 mdl Q Processor Controller,
2. Two 3087 mdl 1s or mdl 2s Coolant Distribution Unit,
3. Two 3278 mdl 2A Display Console as the system console, and
4. Two 3089 Power Unit or other appropriate 400 Hz power source.

Those customers using the 3087 mdl 1 CDU to cool their systems must supply chilled water. See *IBM System/370 Installation Manual - Physical Planning*, GC22-7004. In addition, the System Control Program will require an appropriate operator console in addition to the system console. Access to a 3274 mdl X1B or X1D, or availability of an operator console is required to satisfy the minimum service configuration.

See *IBM System/370 Installation Manual - Physical Planning*, GC22-7004 for model upgrade requirements.

HIGHLIGHTS

Depending upon the mdl, contains up to 100,663,296 bytes of monolithic central storage ... 312 nanosecond storage access cycle ... four integrated central processors having a cycle time of 26 nanoseconds ... 8-byte data flow between each processor and storage ... each processor has its own high-speed buffer having a cycle time of 26 nanoseconds ... buffer storage is transparent to a program and significantly reduces the effective access time of storage ... concurrent repair of hardware is the normal maintenance procedure ... may operate as a single multiprocessor or partitioned into two dyadic configurations of an A-side and a B-side ... complete duplication of all critical functional elements ... integrated byte and block multiplexer channels ... extensive use of LSI logic circuitry ... has the ability to operate in S/370 mode or 370-XA mode ... 370 XA mode extends addressing to 2 GB and for hardware controlled channel pathing to an I/O device ... distributed microcode logic and control stores ... microcode assists for both MVS and VM ... extensive data checking.

Standard Features: S/370 mode ... 370-XA mode ... Universal Instruction Set ... S/370 Extended Facility ... 3033 Extension Feature ... extended addressing ... extended control mode ... PSW key handling ... conditional swapping ... set prefix ... store prefix ... signal processor ... store CPU address ... extended precision floating point ... processor checkpoint retry ... time-of-day clock ... clock comparator ... CPU timer ... interval timer ... byte oriented operand feature ... key controlled storage page protection ... tracing protection ... storage error checking and correction ... configuration control ... dynamic address translation ... program event recording ... store status ... program reset ... set system-mask suppression ... integrated channels ... channel set switching ... data streaming ... start I/O fast release ... clear I/O ... Virtual Machine Assist ... Preferred Machine Assist.

Channels: The External Data Controller (EXDC) is an integrated I/O processor containing 24 channels organized in three groups of eight. Two EXDC are integral to each 3084, one per side. Channels are configurable as either byte or block multiplexer channels. A maximum of four byte multiplexer channels are permitted and are assignable only within the first two physical channel groups. Byte multiplexer channels can operate only with unshared devices. Where byte multiplexer channels are not needed, block multiplexer channels may be substituted. All block multiplexer channels are capable of data streaming and are capable of operating at data rates up to three million bytes/second across a 1-byte interface. Each channel can address up to 256 I/O devices and may physically attach up to eight control units.

In S/370 mode, channels may be grouped into two logical channel sets, with up to 16 channels to a set, one set assignable to each central processor. Channel set switching is standard. In S/370 mode, physical channels may be given any valid logical designation.

In 370-XA mode, any central processor may initiate an operation with any I/O device and process any I/O interruption, using any of the 48 channel paths to which the device is attached.

3084 Tightly Coupled Multiprocessing: The 3084 duplicates all critical function elements (4 Central Processors, 2 External Data Controllers, 2 System Controllers) and is supported by two of each type of support unit. Its normal method of operation is in 370-XA mode under the control of a single control program through a single operational interface and provides the greatest computational capability of any 308X Processor Complex. Concurrent repair is the normal mode of maintenance.

The operator has the ability to reconfigure processor elements from the functioning configuration, create a maintenance subsystem, effect concurrent repair and return the repaired subsystem to the continuing configuration without requirement for IPL or IML. The continuing subsystem may consist of either half of the 3084. This provides very high availability of the surviving portion of the processor complex. When run as a 4-way tightly coupled multiprocessor, 3084 may operate only in 370-XA mode.

The 3084 may also be partitioned into two independent dyadic processors. The resultant dyadic configurations may be operated independently of each other in either 370-XA or S/370 mode.

Bibliography: GC20-0001.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9915** for 240V.
- Color: The standard color for this unit is pearl white. Those wishing colored accents should specify **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown or **#9065** for pebble gray.
- Power: When 400 Hz power source is other than the 3089 Power Unit, specify **#9491** for the A-side capability (on 3081) and **#9591** for the B-side capability (on MES).
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard external dimensions of Frame S and Frame T are 945mm wide by 1,778mm long by 1,875mm high (37.2" x 70" x 73.8"). Should these dimensions need reduction, the side covers may be removed, reducing external dimension to 858mm wide by 1,778mm long (33.8" x 70"). This reduction may be obtained by specifying **#9571**. Further reduction may be achieved by splitting Frame S and Frame T into two subframes, the largest of which has external dimensions of 778mm by 1,778mm long (30.6" x 70"). This reduction may be obtained by specifying **#9572**. Specify either **#9571** or **#9572** as required. - RETAIN: The capability of using the RETAIN remote service/logout analysis is standard and provided by the 3082 Processor Controller.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Model upgrades from 3081-K to a 3084-Q and storage upgrades within 3084-Q are field installable. Parts removed or replaced become the property of IBM and must be returned.

Upgrade Prerequisites: Prior to model upgrading any 3081-K to a 3084-Q, the 3081-K must have installed feature **#1550** and one-half of the storage capacity of 3084-Q. Only symmetrical upgrades are allowed.

Model downgrade from 3084-Q to a 3081-K is not recommended.

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3084 Processor Complex.

Console Table, 308X Processor Complex (#1560): Provides an operator workstation with a durable melamine working surface for up to two operators and their display consoles. The table has a color-accented front modesty panel, internal cable channels for routing phone

3084 Processor Unit (cont'd)

lines and display cables and is designed for a raised floor environment. A raised accessory panel designed to accommodate wall mountable equipment such as tackboards, telephones or intercoms is attached to either one end or the other of the console table. The table measures 1,780mm x 815mm and the end accessory panel is 265mm higher than the 720mm table height. Specify end attachment of accessory panel and color of modesty panel.

MACHINES

3087 COOLANT DISTRIBUTION UNIT

PURPOSE

Provides the coolant distribution required by a 3081, 3083, or 3084 Processor Unit.

MODELS

Model 1 001
Model 2 002

HIGHLIGHTS

Contains the heat exchanger, pumps and controls necessary to cool the liquid cooled portion of the 3081, 3083 or 3084 Processor Unit. The 3087-1 uses the efficiency of water cooling and evacuates its heat to chilled water, while the 3087-2 evacuates its heat to the air of the computer room.

The 3087 supports a 3081, 3083 or 3084 Processor Unit. Two 3087 mdl 1s or two 3087 mdl 2s are required to support a 3084 Processor Unit. They cannot be intermixed.

SUPPLIES (None)

3088 MULTISYSTEM CHANNEL COMMUNICATION UNIT MDLS 1, 2

PURPOSE

Provides for interprocessor communications over block multiplexer channels.

MODELS

Model 1	001	Interconnects up to four processors
Model 2	002	Interconnects up to eight processors

Prerequisites: An available control unit position on a block multiplexer channel for each processor connected. A block of modulo 32 or 64 addresses is required on each channel to which the 3088 is attached. Refer to the specific configuration requirements in the *IBM 3088 Multisystem Channel Communication Unit Product Description Manual,* GA22-7081.

HIGHLIGHTS

The 3088 is a stand-alone I/O control unit using a multiple address architecture which operates in a manner similar to current channel-to-channel adapters (CTCA). The mdl 1 supports up to 126 logical CTCAs distributed across four CPU interfaces. The mdl 2 supports up to 252 logical CTCAs distributed across eight interfaces. The 3088 is attached to block multiplexer channels with or without data streaming. Two independent data transfers can be active between two separate pairs of channels in either high-speed transfer mode between 0.7 and 2.1MB/second or in data streaming mode at 3.0MB/second.

Where the 3088 is attached to a low priority block multiplex channel, and where the I/O interface cable lengths are very short (6.1 meters; 20 feet), certain configurations may experience DASD overrun problems with the higher priority block multiplexer channels. In such cases, the 3088 may be configured by service personnel at installation time so that the high-speed transfer mode data rate does not exceed 1.2MB/second.

The early disconnect feature of the 3088 makes possible its coexistence on a channel with other control units through the use of channel command retry. Like the S/370 CTCA feature, each of the 3088 CTCA links can operate in either S/360 compatibility mode or in S/370 extended mode, selectable under program control.

The cable length from the 3088 to the channel can be up to 400 feet, (up to 800 feet of cable between channels) allowing greater configuration flexibility. However, for the maximum distance, the 3088 must be the only control unit on the I/O interface. The number and type of other devices sharing the I/O interface are among the factors which limit the maximum cable length.

System Attachments: The following processor attachments are supported: 4331-2, 4341, 4361, 4381, 3031, 3032, 3033, 3042 Attached Processor mdl 2, 3081, 3083, and 3084 Processor Complexes.

Publications: *IBM 3088 Multisystem Channel Communication Unit Product Description Manual* (GA22-7081).

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V, or **#9914** for 240V.
- Color: The standard color for this unit is pearl white. Those wishing accents should specify **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown or **#9065** for pebble gray.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Model 1 to model 2 conversion.

ACCESSORIES

Cables: Cables to attach 3088 may be purchased from IBM or from a customer-selected source. See *Installation Manual-Physical Planning,* GC22-7064, for specifications.

All cables must be ordered. Four sets, up to 23 meters (75 feet) each may be ordered without charge at initial installation of the mdl 1; eight sets up 31 meters (100 feet) each, at initial installation of the mdl 2. Unused allowances will not be credited for future use, or added to the allowed length of another cable set. For field upgrades from the mdl 1 to the mdl 2, eight sets, up to 31 meters (100 feet) each may be ordered without charge. Other cable lengths over that provided will be charged for on a per foot basis. For example, if a 125 foot cable is ordered for the mdl 1, the customer is charged for the 50 feet of cable over the 23 meters (75 feet) allowance. This is the only applicable charge for cable lengths beyond the lengths provided. Order cables within the allowance via normal cable ordering procedures. Order cables longer than the allowance via MES.

Assembled cables may be purchased from IBM. Specify cable assembly number.

Item	Number	Description	Max Length
Assm.	2281630	OEMI Cable	121.9m (400 feet)

SUPPLIES (None)

3089 POWER UNIT

PURPOSE

Provides 400 Hz power for a 3081/3083/3084 Processor Complex.

MODELS

Model 1 001

Limitations: Cannot be used with 3081 or 3083 Processor Units equipped with specify feature **#9491** or 3084 Processor Units equipped with specify features **#9491** and **#9591.**

HIGHLIGHTS

The 3089 Power Unit is designed to be the standard source of 400 Hz power for the 3081/3083/3084 Processor Complex. Two 3089s are required to support a 3084 Processing Complex. The unit has the same color coordinated covers as other units in the central complex, meets IBM machine room environmental standards and is suitable for locating within the machine room.

Bibliography: GC20-0001.

SPECIFY

3101 DISPLAY TERMINAL

PURPOSE

A stand-alone cathode-ray tube (CRT) display terminal used for displaying up to 1,920 alphameric characters, and for entering data into and retrieving data from a host processor. The 3101 provides an asynchronous communication interface using 7-bit ASCII code and an auxiliary interface is provided for direct attachment of an output device with EIA RS-232-C interface, such as a 3102 Printer. A cable-connected keyboard is provided for operator data input.

The use of ASCII code and asynchronous communication interface allows the 3101 to attach to a variety of processors including the Series/1. The 3101 meets both general industry and unique customer information processing requirements.

MODELS

Models 10, 12 and 13 – For use in the character transmission mode.

Model 10 100 — Provides EIA RS-232-C interface. **Note:** If model 10 with a 3.0m (10.0 ft) modem cable is desired, order 110 in AAS.

Model 12 120 — Provides switch-selectable interface for attachment to a 20 mA current loop, in addition to EIA RS-232-C interface.

Model 13 130 — Provides switch-selectable interface that meets EIA RS-422-A characteristics, in addition to EIA RS-232-C interface.

Models 20, 22 and 23 – For use in switch-selectable block transmission mode, in addition to character mode.

Model 20 200 — Provides EIA RS-232-C interface. **Note:** If model 20 with a 3.0m (10.0 ft) modem cable is desired, order 210 in AAS.

Model 22 220 — Provides switch-selectable interface for attachment to a 20 mA current loop, in addition to EIA RS-232-C interface.

Model 23 230 — Provides switch-selectable interface that meets EIA RS-422-A characteristics, in addition to EIA RS-232-C interface.

Prerequisites: The 3101 requires a host processor to which it communicates. Series/1 prerequisites and supported 3101 models are:

Series/1 Mach Type	Series/1 Feature	3101 Mdl	Interface
4952	#7850	12,22	Current Loop*
4953, 4955	#7850	10,12,13,20,22,23	EIA RS-232-C*
4959	#1310	10,12,13,20,22,23	EIA RS-232-C
	#1310	13,23	EIA RS-422-A
	#1610	10,12,13,20,22,23	EIA RS-232-C**
	#2091, #2092	10,12,13,20,22,23	EIA RS-232-C**
	#2095, #2096	10,12,13,20,22,23	EIA RS-232-C**
	#2095, #2096	12,22	Current Loop*
	#2095, D02350	13,23	EIA RS-422-A
4987	#4700	10,12,13,20,22,23	EIA RS-232-C**
	#4701	10,12,13,20,22,23	EIA RS-232-C**
	#4704	12,22	Current Loop*
	#4709	10,12,13,20,22,23	EIA RS-232-C*

* Direct Attach Only. Interface is not intended for use with modems.
** Direct Attach or via modem.

HIGHLIGHTS

Displays up to 1,920 characters, 24 rows of 80 characters each. Each character is represented in a maximum 7x14 dot matrix in the 9x16 contiguous box matrix. Handles the 128 characters of the 7-bit ASCII code. Displays the 95 graphic character set: 52 upper and lower case alphabetics, 10 numerics and 32 special characters plus Space. Can also display the 33 control characters (including Null and Delete) when in the transparent mode. The monocase switch provides automatic conversion of the lower case to the upper case, thus allowing display of the 64 graphic character set (including Space) for input.

The character transmission mode provides the capability to transmit a character over a communication line upon depression of each key. The block transmission mode, switch-selectable on mdls 20, 22 and 23 only, allows buffered transmission of data as well as field manipulation of data by use of the attribute characters.

The 3101 consists of three Workstation Elements (WSEs): The Video, Logic and Keyboard elements.

Communications Flexibility: Use of ASCII code and the asynchronous communication interface allows the 3101 to attach to a variety of processors. This capability is commonly referred to as "Teletype®-compatible" or "TTY-compatible" (TTY is short for teletypewriter). Various communications options, such as line speed and parity bits, can be selected by the customer on the setup switches.

Operator Factors: The 3101 has a contrast enhancement filter. Indicators are displayed on the bottom (25th row) of the data display area, and provide useful operator information. An audible alarm is provided to alert the operator, and its volume can be adjusted by the operator. The video element can be tilted and swiveled to change the screen angle for the operator. The cable-connected keyboard can be moved and has separators to help prevent accidental striking of control keys. Automatic scroll of the screen, the reverse video image and the blinking cursor can be specified at setup time.

Input Editing Capability: Cursor move, backspace, home and extended erase (erase to end-of-line, erase all keyboard input data, erase entire screen and erase to end-of-screen) are all provided. In addition, mdls 20, 22 and 23 provide insert line, delete line, insert character, delete character, and back-tab as well as extended field handling using an attribute character. All alphameric, special character, and cursor move keys have typamatic capability. A twelve-key numeric keypad, eight Program Function keys at alternate positions and print keys are also provided.

Output Device Attachment: An auxiliary interface is provided for attachment of an output device with EIA RS-232-C interface, such as a 3102 Printer.

The 3101 transparent and program modes provide users such as systems programmers with additional capabilities to facilitate debugging of the host communication software.

Communications: The 3101 communicates with a variety of host processors using asynchronous transmission control, over communication facilities. Communications speed can be selected at setup time from 110, 150, 200, 300, 600, 1200, 1800, 2400, 4800 and 9600 bps. Other communications options such as half-duplex/full-duplex, stop bits and parity bits can also be specified by selecting the appropriate setup switches.

When using the EIA RS-232-C interface, the 3101 can communicate, through a modem, to a remote host processor at 110 - 1200 bps; or it can directly (without a modem) attach to a host processor within 12.2m (40.0 ft) at 110 - 9600 bps.

> **Note:** For direct connect to the 8100 system, the 3.0m (10.0 ft) 3101 Modem Cable must be used; and the length of the 8100 direct connect cable cannot exceed 9.1m (30.0 ft), thus the total maximum cable length from the 8100 system to the 3101 being 12.2m (40.0 ft).

When the interface for attachment to a 20 mA current loop is used, line speeds of 110 - 9600 bps are supported up to 12.2m (40.0 ft). The actual line speed possible beyond 12.2m (40.0 ft) is dependent upon the length and the type of communications cable used. A shielded communication cable must be used.

When the interface that meets EIA RS-422-A characteristics is used, the 3101 can communicate with a host processor, without a modem, up to a distance of 1,219m (4,000 ft) at 110 - 9600 bps. When the EIA RS-422-A interface is used, shielded communications cable must be employed.

Communications Facilities: When using EIA RS-232-C interface the 3101 operates in point-to-point mode only. On half-duplex or full-duplex facilities at transmission speeds of 300, 600 and 1200/600 bps on nonswitched facilities. In addition, the 3101 operates on switched facilities at transmission speeds of 110, 150, 200, 300, 600 and 1200/600 bps. For communication capabilities, product utilization and special features, see M2700 pages.

Modems: The 3.0m (10.0 ft) 3101 modem cable or equivalent, is required for attachment to a modem. By ordering 110 or 210 in AAS, the 3101 mdl 10 or 20 respectively with modem cable can be obtained. There are no IBM modems that can be used for the 3101. PTT mandatory modems complying with CCITT Recommendations (1976) V.24, V.28, ISO standard 2110 and either CCITT Recommendations V.21 (for switched or nonswitched lines), or V.23 (for nonswitched lines) may be attached. Other non-IBM modems may be attached subject to the Multiple Supplier Systems Bulletin.

Customer Problem Analysis And Resolution: Function has been designed into the 3101 to enhance availability to the customer. This has been done through the use of Customer Problem Analysis and Resolution (CPAR) routines, and procedures that are used by the operator. See "Customer Responsibilities" below.

Customer Setup (CSU): The 3101 is designated a customer setup machine. Set up instructions are included with each machine.

3101 Display Terminal (cont'd)

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Obtaining a communications cable (current loop cable, modem cable or direct connect cable) and auxiliary interface cable if used.
- Receipt at customer's receiving dock, unpacking and placement of unit.
- Setup of unit, connection of cables to communication lines, modems, processors, switch settings and checkout.
- Price quotations, installation and cost of common carrier equipment and service.
- Fuse replacement.
- Determination of the required number of spares.
- Performing Customer Problem Analysis and Resolution.
- Returning failing workstation element to repair center with a completed Repair Authorization form..

Each customer must order the *IBM 3101 Display Terminal Description,* GA18-2033, for installation planning work.

Spares: It is recommended that the customer replace a failing 3101 element with a spare 3101 element and that the customer be advised to purchase sufficient spare 3101 units for such use. The number of spare units recommended is dependent upon the number of 3101 units the customer has installed, his application requirements, physical locations, and layouts. Determination of the required number of spares is a customer responsibility. However, the minimum number of spare units recommended where one unit consists of a keyboard, logic and a video element is shown in the following table:

Recommended Minimum Number of Spare 3101s:

Number of 3101s Installed	Spare 3101s
15	1
30	1
50	1
75	2
100	2
200	3
300	3
500	5
700	6
1000	7

The customer should be advised to test spares for correct operation before putting them on the shelf.

For ordering spare 3101 Display Terminal Workstation Elements (WSEs), see "Accessories".

Warranty Service And Maintenance: The normal procedure will be for the customer to isolate the failure to a WSE and ship it to the designated IBM Repair Center. All maintenance, parts replacement, adjustments, and repair shall normally be performed at the designated IBM Repair Center. When maintenance is required, it shall be the customer's responsibility to determine the failing WSE, pack the WSE in the designated shipping container and ship it prepaid to the designated Repair Center. During warranty IBM will ship the repaired unit prepaid. There is no regularly scheduled preventive maintenance recommended by IBM on these units.

Repair center service is available during the warranty period, under the IBM Maintenance Agreement and the IBM Repair Center Service Amendment (Z120-2240-5) or on a Time and Material basis.

Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center for repair. The IBM Machine Repair Authorization Form is to be completed with all shipments to the repair center. Alternatively, upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling, inspection, cleaning, adjustments, testing, estimating of repair charges .

IBM Repair Center Service: The 3101 is eligible for maintenance agreement coverage immediately following expiration of the service and parts warranty for an annual charge.

If maintenance agreement coverage is not contracted for immediately following expiration of the service and parts warranty and the customer subsequently wants maintenance coverage, he must ship the machine(s) to the designated IBM Repair Center for an inspection. If, on the basis of an inspection, the repair center concludes that a machine does not qualify for maintenance agreement coverage, no further work will be performed and the machine will be returned to the customer subject to minimum charge.

In all other cases, a minimum charge per Workstation Element to cover handling, inspection, cleaning, adjustments, testing and return shipping charges will be applied. In addition, all parts needed will be billed at IBM's prevailing parts prices and the additional time required for repairs will be billed at IBM's applicable service rates. The machine will then be eligible for maintenance agreement coverage.

Machine Element Replacement Service: A customer desiring replacement service for a defective Work Station Element, may call the local branch office to have a FE bring a replacement spare to the customer site. The FE will verify the failure, remove the defective element and install and test the replacement element. The defective element becomes the property of IBM. This service is available only under the terms of the IBM Repair Center Maintenance and Machine Element Replacement Service Amendment with annual fee.

Customer responsibility for damaged or altered elements: Determination by IBM that damage to a replaced unit is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged for at the then current IBM rates and terms.

This service is available during the warranty period only under the IBM Repair Center Maintenance and Machine Element Replacement Service Amendment to the IBM Purchase Agreement for a one-time charge. During the warranty period, this service is available 24 hours-a-day, seven days-a-week. After the warranty period this service is available only under the IBM Repair Center and Machine Element Replacement Amendment to the IBM Maintenance Agreement for an annual charge. This service is available from 8:00 a.m. to 5:00 p.m. Monday through Friday.

On-Site Assistance: If the customer desires assistance to perform CPAR, the local FE branch office may be called for customer engineering assistance. The FE will respond to the customer site to aid the customer in performing CPAR procedures using the same documentation available to the customer.

Customer-owned spare WSEs will be installed by the FE upon customer request. Shipping of defective WSEs to the repair center is a customer responsibility. FE assistance is billable at the current FE rate.

Bibliography: See *KWIC Index,* G320-1621, or specific system bibliography.

SPECIFY

- Power: (120V AC, 1-phase, 3-wire, 60 Hz)
- Power Cable: 1.8m (6.0 ft), non-locking plug. No Specify required.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Customers may change between character-mode (models 10, 12, 13) and block-mode (models 20, 22, 23) by purchasing and installing the appropriate logic element.

ACCESSORIES

Workstation Elements: Workstation elements may be ordered to provide individual elements as needed by the customer in the use of the 3101 Display Terminal. Physical planning and setup are the responsibility of the customer. The customer should have on hand, or should order, the *IBM 3101 Display Terminal Description Manual,* GA18-2033, for installation planning work. **Warranty:** Category B. **Maintenance:** Maintenance for workstation elements is available on a Time and Materials basis at an IBM Repair Center.

Workstation elements of the 3101 can be ordered as follows:

Mdl	WSE	Number*
All	Video	5640540
All	Keyboard	5640534
10	Logic	5640410
12	Logic	5640412
13	Logic	5640414
20	Logic	5640411
22	Logic	5640413
23	Logic	5640415

* Same as Bill of Material number.

Modem Cable: This 3m (10 ft) modem cable can also be ordered separately (not required for mdls 11 and 12 [AAS models 110 and 120]). The cable has a male plug on both ends. For direct connect to the 8100 system, this cable *MUST* be used. The length of the 8100 direct connect cable cannot exceed 9.1m (30 ft); thus the total maximum cable length from the 8100 system to the 3101 is 12.2m (40 ft).

Description	P/N
Modem Cable	**5640736**

For connection to IBM modems or PTT modems the above IBM cables or equivalent must be used.

Note: Wrap socket can be ordered separately as P/N **5640724.**

3101 Display Terminal (cont'd)

Field Packaging Materials: The field packaging materials below can be used for shipping the 3101 Display Terminal or the individual Workstation Elements to and from the IBM Repair Center.

Description	B/M Number
For Video element	2655956
For Logic element	2655957
For Keyboard element	2655958
For large packaging material to contain all above three packaging materials	2655959
For obtaining all above four packaging materials 2655956-2655959. This is required to ship the entire 3101 Display Terminal.	2655960

Line Cord: The line cord to the 3101 can be ordered separately as follows:

P/N 5640670

Keyboard Palmrest (P/N 5641369): The keyboard palmrest, which increases the total depth of the front end palmrest area of the 3101 Display Terminal Keyboard from 25mm to approximately 85mm, can be ordered separately.

Description	P/N
Keyboard Palmrest	**5641369**
Can be applied to the following keyboards:	
English US Keyboard	**6827894**
French Keyboard	**5640432**
German Keyboard	**5640433**
Italian Keyboard	**5640434**
English UK Keyboard	**5640435**

Replacement Parts: Replacement parts to the 3101 Display Terminal can be ordered from the designated distribution center as follows:

Description	P/N
Display Filter	**5640517**
Contrast Control Knob	**5640737**
Brightness Control Knob	**5640738**
Fuse	**1176668**

SUPPLIES (None)

3104 DISPLAY TERMINAL

PURPOSE

Cathode ray tube (CRT) display terminal is used for displaying up to 1,920 alphameric characters, and for entering data to or receiving data from the 8100 Information System or the 4331 Processor. A keyboard permits an operator to display and manipulate data on the screen in a flexible and efficient manner. The 3104 Display Terminal meets both general and unique display requirements.

MODELS

Model B1 B01 — Displays 1,920 characters and provides 75-key 3104 Data Entry Keyboard

Model B2 B02 — Displays 1,920 characters and provides 87-key EBCDIC 3104 Typewriter keyboard

Note: For details of keyboards, see "Keyboards" below.

Customer Setup (CSU): The 3104 is designated as a Customer Setup machine. Setup instructions are included with each machine.

HIGHLIGHTS

Displays up to 1,920 characters in 24 rows of 80 characters each. Each character is represented in a maximum 7x14 dot matrix in the 9x16 contiguous box matrix. All 3104 Display Terminals include 62 alphameric and 32 special characters, and the space and null characters. Use of 3270 Field Formatting capability permits individual fields of data on the screen to be program-defined with various attributes such as protected/unprotected, alphameric/numeric, normal/highlighted intensity, cursor selectable/non-cursor selectable, and displayable/non-displayable.

The 3104 Display Terminal communicates with a 4331, 8130, or 8140 Processor using Synchronous Data Link Control (SDLC) over either a direct or data-link attached loop. The 3104 offers functions equivalent to the 3276 mdl 12, 3278 mdl 2, and 8775 mdl 1 (without the attachment capability of the other displays/printers) displays (960/1,920 characters only) with features/functions of 87-key/75-key keyboard, Keyboard Numeric Lock, Audible Alarm, and Monocase Switch. The 3104 Display Terminal is data-stream-compatible with the 3276, 3278, and 8775.

The 3104 consists of three workstation elements (WSEs): Video, logic, and keyboard elements.

Operator Factors: The 3104 has a contrast enhancement filter. Indicators are displayed on the bottom row of the screen, outside the data display area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underlined type cursor and a rectangular reverse video cursor, with blinking option, are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard is light and thin, and the keyboard surface angle can be adjusted to either 12 degrees by attaching or 6 degrees by detaching the keyboard foot assembly offered as an accessory.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all provided. All alphameric, special symbols, and cursor move keys have typamatic capability. Double-speed cursor typamatic is attained with a simultaneous depressing of the ALT key and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. Ten Program Function (PF) keys are available on the Data Entry Keyboard; 24 PF keys are available on the Typewriter Keyboard.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying it on the screen. This capability allows customer-supplied security program routines to control access to data and to record an audit of actions.

Communications: The 3104 is attached to customer-owned loops. A direct attached loop to an 8100 System or 4331 Processor may operate at a data rate of 9600 bps, or 38.4K bps. A data-link attached loop may be connected to an 8100 System and to a 4331 Processor via a 3843 Loop Control Unit. The 3843 provides an interface to a synchronous modem transmitting at 2400, 4800, or 9600 bps. These speeds are switch-selectable on the 3104 at setup time. In support of half-speed operation of the Multiuse Communication Loop, the 3104 is also switch-selectable for 1200 bps. The 3843 Loop Control Unit supports point-to-point or multipoint telecommunication links. Refer to the M3843 pages for more information.

Customer Problem Analysis And Resolution (CPAR): Functions have been designed into the 3104 to enhance the availability to the customer. This has been done through the use of customer problem analysis and resolution (CPAR) routines and procedures that are used by the operator. See "Customer Responsibilities" below.

Communication network management problem determination support for 4331 loop attached 3104 is provided via NCCF/NPDA.

Spares: It is recommended that the customer replace a failing WSE with a spare element and that the customer be advised to purchase sufficient spare 3104 units for such use. The number of spare units recommended is dependent upon the number of the 3104 units the customer has installed, his application requirements, physical locations, and layout. Determination of the required number of spares is a customer responsibility. However, the minimum number of spare units recommended where one unit consists of a keyboard, a logic element, and a video element is shown in the following table:

Recommended Minimum Number of Spare 3104 Machines

Number Installed	Recommended Spare Machines
1 - 50	1
51 - 100	2
101 - 300	3
301 - 500	5
501 - 700	6
701 - 1000	7

The customer should be advised to test spares for correct operation before putting them on the shelf.

For ordering spare WSEs, see "Machine Elements" below.

Keyboards:

- 75-Key 3104 Data Entry Keyboard: Movable with 35 data keys, 10 PF keys, and 30 control keys.
- 87-Key EBCDIC 3104 Typewriter Keyboard: Typewriter-like layout, movable with 49 alphameric data keys, 26 control keys, and 12 PF keys (total 24 PF keys).

  Notes: Keyboards used on 3101, 3275, 3276, 3277, 3278, 3279, and 8775 machines are not interchangeable with keyboards used on the 3104.

  A 0.9 meter (3 foot) keyboard cable is attached.

  Keyboard foot assembly is offered as an accessory to provide a keyboard surface angle of 12 degrees (6 degrees without the foot assembly).

Customer Responsibilities: The customer is responsible for:

- Adequate site and system preparation.
- Receipt at customer's receiving dock, unpacking, and placement of unit.
- Physical setup, connection of cables, and checkout.
- Fuse and display screen filter replacement.
- Determination of the required number of spares.
- Performing customer problem analysis and resolution.
- Returning failing WSE to the Repair Center with a completed Repair Authorization Form.
- Contacting IBM Branch Office if Machine Element Replacement Service is required.
- Procurement, installation, and maintenance of the loop network
- Each customer must order the *IBM 3104 Display Terminal Description Manual* (GA18-2084) for site planning and preparation work since this is not shipped with each machine.

Warranty Service and Maintenance: The normal procedure will be for the customer to isolate the failure to a WSE and ship to the designated IBM Repair Center. All maintenance, parts replacement, adjustments, and repair shall normally be performed at the designated IBM Repair Center. When maintenance is required, it shall be the customers responsibility to determine the failing WSE, pack the WSE in the designated shipping container and ship it prepaid to the designated Repair Center. IBM will return the repaired unit prepaid. There is no regularly scheduled preventive maintenance recommended by IBM on these units.

Repair Center Service is available during the warranty period without any charges except customer prepaid shipping charges for machines/elements to the IBM Repair Center, or after the Warranty period under the IBM Maintenance Agreement and the IBM Repair Center Service Amendment (Z120-2240) at an annual charge.

Machine Element Replacement Service is also available under Agreement for the Purchase of IBM Machines and the IBM Repair Center Maintenance and Machine Element Replacement Service Amendement (Z120-2240-6) during the warranty period at a one-time charge of per machine. Center Maintenance and Machine Element Replacement Service Amendment to the IBM Maintenance Agreement for an annual charge. Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center for repair on a time and material basis. The IBM Machine Repair Authorization Form is to be completed with all

3104 Display Terminal (cont'd)

shipments to the repair center. Upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling, inspection, cleaning, adjustments, testing, estimating of repair charges, and return shipping charges.

IBM Repair Center Service: The 3104 is eligible for maintenance agreement coverage at an annual charge immediately following expiration of the service and parts warranty.

If maintenance agreement coverage is not contracted for immediately following expiration of the service and parts warranty and the customer subsequently wants maintenance coverage, the customer must ship the machine(s) to the designated Repair Center for an inspection. A minimum charge per WSE to cover handling, inspection, cleaning, adjustments, testing, and return shipping charges will be applied. In addition, all parts needed will be billed at IBM's prevailing parts prices and the additional time required for repairs will be billed at IBM's applicable service rates. The machine will then be eligible for maintenance agreement coverage.

If, on the basis of an inspection, the Repair Center concludes that a machine is not repairable, no further work will be performed and the machine will be returned to the customer subject to minimum charge.

Machine Element Replacement Service: This service allows the customer to call the local branch office, after the customer has performed CPAR, and have a representative of the Field Engineering Division bring a replacement element to the customer site, install it, and test the replacement element. The failing element becomes the property of IBM.

This service is available during the warranty period only under the IBM Repair Center Maintenance and Machine Element Replacement Service Amendment to the IBM Purchase Agreement, 24 hours per day, 7 days per week, for a one-time charge. After the warranty period, this service is available only under the IBM Repair Center Maintenance and Machine Element Replacement Amendment to the IBM Maintenance Agreement from 8:00 a.m. to 5:00 p.m. Monday through Friday, for an annual charge.

Customer Responsibility For Damaged Or Altered Elements: Determination by IBM that damage to a replaced unit is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered, or non-IBM parts will be charged for at IBM's then applicable time and material charges.

Customer Engineering On-Site Assistance: If the customer desires assistance in performing CPAR, the local FE Branch Office may be called for their assistance. The CE will respond to the customer site to aid the customer in performing CPAR procedures using the same documentation available to the customer.

Customer-owned spare WSEs may be installed to replace defective WSEs by the CE upon customer request. Shipping of defective WSEs to the repair center is a customer responsibility. All on-site CE assistance is available on a per-call basis at the applicable hourly rate.

Publications: See *KWIC Index* (G320-1621) or specific system bibliography (GC20-0001 and GC20-8100).

SPECIFY

- Power: 120V AC, 1-phase, 3-wire, 60 Hz.
- Power Cord: 1.8 meters (6 feet), nonlocking plug.
- Communication Cable: A 2.7 meter (9 foot) communication cable is provided for attachment to a direct or data-link-attached loop.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

The following accessories can be ordered. They must be ordered from the FE branch office or parts distribution center.

Field Packaging Materials: The field packaging materials below must be used for shipping the 3104 Display Terminal or the individual workstation elements to and from the IBM Repair Center.

Description	Part Number
For Video Element	**2655956**
For Logic Element	**7310884**
For Keyboard Element	**7310985**

Keyboard Foot Assembly: It provides a keyboard surface angle of 12 degrees.

Description	Part Number
Keyboard Foot Assembly (Consists of 2 pieces)	**5641297**

Display Screen Filter: It provides a contrast enhancing screen. (The Display Screen Filter is provided on all 3104s as a standard offering.)

Description	Part Number
Display Screen Filter	**5640517**

MACHINE ELEMENTS

Workstation elements may be ordered to provide individual elements as needed by the customer in the use of the 3104.

Site Planning and Preparation: These are the responsibility of the customer. The customer should have on hand, or should order, the *IBM 3104 Display Terminal Description Manual,* GA18-2084, for site planning and preparation work.

Maintenance: Maintenance for workstation elements is available on a time-and-material basis at an IBM Repair Center. A minimum charge is applied.

The video, logic and keyboard workstation elements of the 3104 Display Terminal can be ordered as follows:

To Fit Model	Workstation Element	Number*
B1/B2	Video	**5640540**
B1/B2	Logic (Note 1,2)	**5894025**
B1	Keyboard	**5894060**
B2	Keyboard	**5894050**

* Same as Bill of Material number.

Note 1: 2.7 meter (9 foot) Communication Cable is provided with the Logic Element.

Note 2: Power cord with nonlocking plug is provided with the Logic Element.

SUPPLIES

Machine Elements: WSEs may be ordered to provide individual elements as needed by the customer in the use of the 3104 Display Terminal.

3115 PROCESSING UNIT

[NO LONGER AVAILABLE]

The 3115 is No Longer Available ... MES orders for model conversions, features, released RPQs and accessories are not affected. No new RPQs will be accepted.

PURPOSE

Provides main and control storage, plus arithmetic and logic circuits for a S/370 model 115 including a direct disk attachment.

MODELS

The 3115-0 and 3115-2 Processing Units are available in the following model groups:

Models

3115-0		3115-2		Processor Storage Size
F	F00	F2	F02	65,536 bytes
FE	FE0	FE2	FE2	98,304 bytes
G	G00	G2	G02	131,072 bytes
GE	GE0	GE2	GE2	163,840 bytes
GF	GF0	GF2	GF2	196,608 bytes
		H2	H02	262,144 bytes
		HG2	HG2	393,216 bytes §

§ **Note:** If 3411 Magnetic Tape and Control is attached, see Magnetic Tape Adapter special feature paragraph for RPQ requirement.

HIGHLIGHTS

Depending upon the mdl, 65,536 to 393,216 bytes of processor storage are available. The basic main memory cycle time is 480 nanoseconds for 2 bytes. Sixteen general, sixteen control and four floating point registers are provided. The system design provides distributed microcoded processors within the Central Processing Unit for the independent handling of programs, input/output processing and diagnostic/maintenance. Direct attachment of the 3340 DASF Subsystem or the 3340/3344 DAS Subsystem (3115-2 only) is provided. Depending on the mdl and feature up to eight drives can be attached. In a 3340 DASF Subsystem, via the string switch capability (**#9315**), the 3340 mdl A2 can be shared with another S/370, except 3115-0 and 3125-0. For details and restrictions refer to the 'Direct Disk Attachment' paragraph.

The 2311 Mdl 1/3340 - Series and the 2314/3340 - Series Compatibility features are available as options. They are mutually exclusive. Emulation is under DOS/VS only. 2311 mdl 1 emulation under DOS/VS requires SYRES on 3340.

Capability to attach the 3803/3420 or 3411/3410 magnetic tape subsystem mdl 1, 2 or 3 via the optional Magnetic Tape Adapter.

Capability to natively attach one of the following card I/O: 2560 mdl A1 or A2, or the 5425 mdl A1 or A2 (96-column card) via the optional integrated Card I/O Attachment features.

Capability to attach a wide variety of I/O devices via the optional Byte Multiplexer Channel. **Note:** The Integrated Card I/O Attachment and the Byte Multiplexer Channel cannot be installed on the same system unless RPQs 7B0132 and 7B0141 are installed.

Capability to natively attach the 5213 Printer mdl 1 (85 cps) is provided with the optional integrated console printer attachment on the 3115. This console printer provides hardcopy output of operator messages presented on the Display Operator Console (DOC).

The optional 1052 Compatibility feature is available to emulate the 1052 Printer keyboard in the S/370 mdl 115. 1052 Compatibility (**#8005**) in combination with the 5213 Printer mdl 1 allows the mdl 115 to be used as a remote workstation with HASP-RMT/360. **Note:** The 1052 compatibility mode is not supported under DOS/VS. With DOS/VS, the 5213 mdl 1 will act as a slave unit to the DOC.

Capability to attach up to 5 synchronous lines, or up to 4 synchronous and up to 8 asynchronous lines is provided by the optional Integrated Communications Adapter with appropiate features.

Capability to attach the 5203 Printer mdl 3 or 3203 Printer mdl 1 or 2 is provided with optional Integrated Printer Attachment features.

The optional S/360 Mdl 20 and 1401/1440/1460 Compatibility features are available to allow execution of the instructions of those programs.

The Display Operator Console (DOC) is an integral part of the S/370 mdl 115 operator-machine communications. Data can be entered into main storage or into internal registers via the keyboard. Contents of storage or internal registers of the S/370 mdl 115 can be shown on the video screen with 16 lines of 56 characters/line. A portion of the screen is reserved to display machine status. The Service Processor (SVP) continously monitors system operation and logs errors on the magnetic IBM Diskette device. The SVP initates recovery on detection of error conditions and provides control for the display, keyboard, console file and optional console printer.

The standard console file is the basic microprogram loading device for the system. It contains a small file device, which reads and writes on a removable magnetic IBM Diskette. The diskettes that will contain the required microcode for the basic system, the optional features ordered for system, and CE diagnostics.

The CE logout of machine and I/O related control checks and errors are recorded on the diskette for CE diagnosis, to enhance the reliability, availability, and serviceability of the S/370 mdl 115.

Dynamic Address Translation (DAT) is a standard facility on the mdl 115. Since logical storage addressing is not limited by the amount of available real storage, program size may exceed real storage size. This logical storage is referred to as "virtual storage" and may be as large as 16,777,216 bytes on the mdl 115.

Standard features include S/370 commercial instruction set, Extended Control (EC) Mode, Dynamic Address Translation, Channel Indirect Data Addressing, Program Event Recording (PER), Monitor Call, interval timer, time of day clock, CPU-Timer and Clock Comparator, store and fetch protect, byte oriented operand feature error checking and correction of single bit errors on main storage, and Audible Alarm.

Control Storage: On the 3115-0, reloadable control storage for Service Processor (SVP), and Direct Disk Attachment and the basic part of the Machine Instruction Processor (MIP) is provided as standard on the 3115 Processor Unit. In addition, reloadable control storage is provided with the optional Card I/O Attachment, Printer Attachment, Integrated Communications Adapter (ICA), Byte Mulitplexer Channel. The MIP contains as standard, 20K words of 22 bits of control storage and may be expanded either to 24K words (4K Control Storage Extension, #4101) or to 28K words (8K Control Storage Extension, #4104). #4101 and #4104 are mutually exclusive. See Chart A below for possible feature combinations and control storage requirements.

Note: Customers who elect to purchase the 4K Control Storage Extension and later upgrade to the 8K Control Storage Extension should consider the purchase of the 8K Control Storage Extension initially because this field upgrade requires replacement of the 4K Control Storage Extension and installation of the 8K Control Storage Extension. This is, however, not recommended for customers considering to eventually convert to a 3115-2.

On the 3115-2, the Instruction Processing Unit (IPU) contains as standard, 12K words of control storage. Certain feature combinations can use up to two additional 4K words increments totaling 20K words of control storage. See Chart B for details.

Chart A: Listed below are the valid feature combinations and their respective requirements for additional control storage on the 3115-0.

Optional Features -- Mdl 3115-0	Basic Control Storage			4K Control Storage Extension -- (4101) Required								8K Control Storage Extension -- (#4104) Required						
Floating Point (#3900)**		x	x				x	x		x	x					x	x		x	x	
Floating Point Including Extended Precision (#3910)**			x	x					x	x		x	x					x	x		x	x
1401/1440/1460 Cmpt (#4457)	x					x				x	x	x	x	x	x				x	x	x	
S/360 Mdl 20 Cmpt (#7520)	x			x	x		x	x				x	x			x	x	x	x	x		
2311-1/3340 Series Cmpt (#8060)***					x			x	x		x				x		x		x		x	
2314/3340 Series Cmpt (#8070)***					x		x		x	x						x		x		x		x

* #4101 and #4104 are mutually exclusive.
** #3900 and #3910 are mutually exclusive.
*** #8060 and #8070 are mutually exclusive. In addition, #8060 and #8070 are mutually exclusive with specify **#9190.**

Chart B: Listed below are the valid feature combinations and their respective requirements for additional control storage on the 3115-2.

3115 Processing Unit (cont'd)

Optional Features —Mdl 3115-2	Basic Control Storage				First Control Storage Increment ... (#4101) Required								Second Control Storage Increment ... (#4101) & (#4102) Required **				
Floating Point Including Extended Precision (#3910)			X	X		X	X			X		X				X	X
1401/1440/1460 Compatibility (#4457) **	X				X	X	X						X	X			X
S/360 mdl 20 Compatibility (#7520) **		X		X	X		X				X				X	X	
2311-1/3340 Series Compatibility (#8060) *								X		X	X		X		X		X
2314/3340 Series Compatibility (#8070) *									X			X	X	X		X	

* #8060 and #8070 are mutually exclusive. In addition, #8060 and #8070 are mutually exclusive with Specify feature **#9190** or 3344 Attachment specify feature **#9317**.

** 1401/1440/1460 Compatibility (#4457) and S/360 Mdl 20 Compatibility (#7250) are mutually exclusive (may not be ordered on the same system unless RPQ SU0002 is installed on the 3115-2). **Note:** RPQ SU0002 cannot be installed if the 2311 mdl 1/3340-Series Compatibility (#8060) or 2314/3340-Series Compatibility (#8070) is installed. Cannot be installed with 3344 Attachment (**#9317**).

Specify feature **#9315** is mutually exclusive with #4102 and/or #4460.

Input/Output Attachment - Native: The following integrated I/O attachments/adapters are provided for controlling the designated I/O devices. They are designed to interact with their respective I/O devices and should be installed or removed with them since the system is inoperative with only the attachment/adapter installed.

Direct Disk Attachment (standard): This attachment is provided to attach the 3340 mdl A2 dual drive unit and control directly to the S/370 mdl 115. The is addressed as channel 1. This attachment provides block multiplexing.

3340 DASF Subsystem: On the 3115-0 one 3340 mdl A2 and one 3340 mdl B1/B2 can be attached to provide up to four spindles. On the 3115 mdl 2 (w/o 3344 Attachment **#9317**) one 3340 mdl A2 and up to three 3340 mdl B1/B2s can be attached to provide up to eight spindles.

3340/3344 DAS Subsystem: On the 3115-2 with 3344 Attachment **#9317** installed. One 3340 mdl A2 and any combination of up to three 3340 mdl B1/B2s and 3344 mdl B2/B2Fs can be attached. With the String Switch (#8150) installed, the 3340 mdl A2 may be shared with another S/370 except 3115-0 and 3125-0. Specify features, String Switch Capability (**#9315**) and 3344 Attachment (**#9317**) are mutually exclusive. String Switch capability is not supported on a 3344 configuration. 4K DASF Control Storage Extension is required when either **#9315** or **#9317** is installed. Specify Fixed Head Attachment (**#9190**) if Fixed Head Feature on 3340 is installed on 3340 Series drives. See Chart A for control storage requirements.

Magnetic Tape Adapter (optional) -- this feature attaches one of the following tape control units and is addressed as channel 2:

3411 Magnetic Tape Unit and Control mdl 1 -- tape control (20 KB) housing one tape drive. Up to three 3410 Magnetic Tape Unit mdl 1s may be attached to the 3411 mdl 1.

3411 Magntic Tape Unit and Control mdl 2 -- tape control (40 KB) housing one tape drive. Up to five 3410 Magnetic Tape Unit mdl 2s may be attached to the 3411 mdl 2.

3411 Magnetic Tape Unit and Control mdl 3 -- tape control (80 KB) housing one tape drive. Up to five 3410 Magnetic Tape Unit mdl 3s may be attached to the 3411 mdl 3.

3803 Tape Control mdl 3 -- up to eight 3420 mdl 3 (120 KB) or mdl 5 (200 KB) may be attached to the 3803.

Integrated Card I/O Attachments (optional): These features provide native attachment of one of the following:
2560 Multifunction Card Machine mdl A1 or A2
5425 Multifunction Card Unit mdl A1 or A2.

The Integrated Card I/O Attachment uses channel 0. Device address X'00D' is reserved for the 2560 or 5425.

The Integrated Card I/O Attachments and the optional Byte Multiplexer Channel cannot be installed together on the same system unless RPQs 7B0132 and 7B0141 are installed.

Integrated Printer Attachment (optional): Attachment features for the 5203 Printer mdl 3 or the 3203 Printer mdl 1 or 2 are provided. One printer unit may be natively attached. The printer attachment is addressed as channel 0 and the device address is X'00E'. The Universal Character Set (UCS) control is standard on the 3203. On the 5203, UCS control may be specified on Integrated 5203 Mdl 3 Attachment (#4690).

Integrated Console Printer Attachment (optional): Attaches the 5213 Printer mdl 1 to the 3115 to provide hard copy of operator messages presented on the standard Display Operator Console. It uses address X'01F' (same as the Display Operator Console) on Channel 0. When the 1052 Compatibility feature is installed, the 5213 Printer mdl 1 is required.

Integrated Communications Adapter (ICA) (optional): Provides the basic control storage and common circuits for direct attachment of up to five synchronous (BSC) communications lines OR up to eight asynchronous (Start/Stop) lines. See individual ICA features for limitations. The Integrated Communications Adapter Extension (ICAE) provides the capability to attach up to four BSC AND up to eight Start/Stop lines. IBM line adapters are provided within the mdl 115.

Input/Output Channel

Byte Multiplexer Channel (Optional) provides for the attachment of a wide variety of low speed devices. The single channel available on the S/370 mdl 115 is functionally equivalent to the Byte Multiplexer Channel on the S/360 mdls 22, 25, 30 and 40 and provides for a maximum of up to eight control unit positions. 32 subchannels are provided as standard and are divided into 8 shared and 24 unshared subchannels.

The Integrated Card I/O Attachments and the Byte Multiplexer Channel cannot be installed together on the same system unless RPQs 7B0132 and 7B0141 are installed.

Console Function: System control functions are provided by the standard integrated Display Operator Console. It has the switches, keyboard, and lights necessary to operate and control the system. It uses address X'01F' on channel 0. The 5213 mdl 1 console printer (85 cps) may be attached optionally.

Publications: GC20-0001

SPECIFY

- Voltage: (AC, 3-phase, 4 wire, 60 Hz): **#9903** for 208V, **#9905** for 230V
- Color **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Fixed Head Attachment (**#9190**)§ If Fixed Head Feature is installed on 3340 Series drives. **Note:** The Fixed Head Attachment (**#9190**) cannot be installed with 2311-1/3340 Series Compatibility (#8060) or 2314/3340 Series Compatibility (#8070).
- String Switch Capability (**#9315**)§ If String Switch (#8150) is installed on the 3340 mdl A2. **Note:** 4K DASF Control Storage Extension (#4210) is prerequisite. Cannot be installed with #4102 or #4460 or 3344 Attachment **#9317**. When String Switch is installed, an Emergency Power-Off connection between the sharing systems is mandatory. RPQ DC3621 (two system connection) or DC3622 (multiple system connection) must be ordered.

  The 3115-2 uses fixed addresses 160 to 167 for its attached disk drives. In the case of string switch, to avoid confusion in Job Control and Operation, the same addresses should be assigned to shared drives on the other system. In the case of the 3135, 3135-3, 3138 IFA, this requires specify code **#9821** on the 3135 providing addresses 160 through 167 to comply with the fixed addresses of the 3115. If intermixing 3330s and 3340s on the 3135 (**#9315**), no string switching with the 3115-2 is possible.

  Note: The string switch of the DASD hardware function can be operated with the present DOS/VS standard DASD support. DOS/VS does not support the device reserve/release channel commands for program controlled sharing of attached DASD units. Therefore, it is the user's responsibility by appropiate organization and programming procedures to resolve conflicting references to shared files and insure data integrity. One method for controlling potential conflicts involves the use of operator commands DVC UP/DVC DN. For additional information, consult *DOS/VS System Management Guide,* GC33-5371.
- On the 3115-2 ... specify 3344 Attachment (**#9317**)§ when 3344 mdl B2/B2F are installed. 4K DASF Control Storage Extension is required. Cannot be installed with any of the following: String Switch Capability (**#9315**), 231X/3340 Compatibility (#8060/ #8070), S/360 Mdl 20 Compatibility (#7520). 1401/1440/ 1460 Compatibility (#4457), or 1403/3203 Carriage Control Feature (#4460).
- Minimum Configuration: See "Minimum Configuration" in "Systems" for minimum I/O units required on a S/370 mdl 115.
- 1255, 1259 or 1419 Attachment: Specify **#9336** (3115-0 only). External Signal (#3898) is required to attach a 1255, 1259 or 1419.

3115 Processing Unit (cont'd)

- Specify **#9807** for attachment of 3803 mdl 3 on the Magnetic Tape Adapter (#4675).

Note: RETAIN/370 ... CE access is by telephone.

Planning for Mdl Conversions: When a customer requires feature changes and/or memory upgrades in addition to a mdl upgrade, consolidating the several changes into a single MES is not recommended. In these cases a planning session between sales, FE and the customer is required to develop the proper sequence of MES ordering.

SPECIAL FEATURES

Expansion Base (#3860): [3115-2] Provides additional gate and blowers, etc., and is required if RPQs 7B0132 and 7B0141 are not installed:
- for all mdls H2 and HG2
- for mdls F2, FE2, GE2 or GF2 if a Line Adapter Base 2 (#4792) or Line Adapter Base 3 (#4793) is required.

Maximum: One. **Field Installation**: Yes.

External Signals (#3898): Provides six distinct external interrupt lines to request and identify an external interrupt response from the processing unit. **Maximum**: One per 3115. **Cable Order**: Required. **Field Installation**: Yes. **Prerequisites**: External devices must meet the interface specifications outlined in *S/360 Direct Control Feature - OEM I*, GA22-6845.

Floating Point (#3900): [3115-0] Adds 44 floating point arithmetic instructions ... these instructions with the standard set make up the Scientific Instruction Set. **Field Installation**: Yes. **Limitations**: Cannot be installed with Floating Point Including Extended Precision (#3910).

Floating Point Including Extended Precision (#3910): Adds 51 floating point arithmetic instructions. Provides for floating point operation including extended precision to 28 hexadecimal digits. **Field Installation**: Yes. **Limitations**: Cannot be installed with Floating Point (#3900). **Prerequisites**: See Charts A/B above for control storage requirements.

4K Control Storage Extension (#4101): Adds 4,096 words (22 bits wide) of control storage to the Machine Instruction Processor (3115-0) or Instruction Processing Unit (3115-2). Required for certain feature combinations ... See Charts A/B above for details. **Limitations**: Cannot be installed with 8K Control Storage Extension (#4104). **Field Installation**: Yes ... see "Note" following "Field Installation" for 8K Control Storage Extension (#4104) below.

4K Control Storage Increment - 2nd (#4102): [3115-2] Expands the IPU control storage by 4,096 words (22 bits wide). Required for certain feature combinations ... see Chart B. **Limitations**: Cannot be installed with #4210 or specify feature **#9315**. **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: #4101.

8K Control Storage Extension (#4104): [3115-0] Adds 8,192 words (22 bits wide) of control storage to the Machine Instruction Processor. Required for certain feature combinations ... see Chart A above for details. **Limitations**: Cannot be installed with 4K Control Storage Extension (#4101). **Field Installation**: Yes ... **Note**: Customers who may elect to purchase the 4K Control Storage Extension and later upgrade to the 8K Control Storage Extension should consider the purchase of the 8K Control Storage Extension initially because this field upgrade requires replacement of the 4K Control Storage Extension and installation of the 8K Control Storage Extension.

4K DASF Control Storage Extension (#4210): [3115-2] Adds 4,096 words (22 bits wide) to the DDA control storage. Required for string switch capability specify feature (**#9315**) or 3344 Attachment specify feature (**#9317**). **Limitations**: Cannot be installed with #4102 or #4460. **Maximum**: One. **Field Installation**: Yes.

1401/1440/1460 Compatibility (#4457): Microprogram controlled feature which, in combination with an emulator program under DOS/VS, permits the system to execute 1401/1440/1460 instructions. **Field Installation**: Yes. **Prerequisites**: See Charts A/B above for control storage requirements. **Note**: On the 3115-2, #4457 and S/370 Mdl 20 Compatibility (#7250) are mutually exclusive (may not be ordered on the same system unless RPQ SU0002 is installed). **Limitations**: Cannot be installed with 3344 Attachment (**#9317**).

1403/3203 Carriage Control Feature (#4460): Allows the 3203 Printer with its tapeless carriage control to emulate the function of a tape controlled carriage and thus run programs written for a 1403 Printer. **Limitations**: The 5203 Printer is not supported by this feature. Cannot be installed with string switch capability (**#9315**) or 3344 Attachment specify feature (**#9317**). **Field Installation**: Yes. **Prerequisites**: 3203 Printer. **Note**: This feature is not required with DOS/VS Release 31 and subsequent releases.

Integrated 3203 Printer Attachment (#4650): Control for attaching the 3203 Printer mdl 1 or 2. The Universal Character Set is standard. **Specify**: **#9770** for mdl 1 or **#9771** for mdl 2. **Limitations**: Cannot be installed with Integrated 5203 Attachment (#4690). **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: #4653.

Integrated 3203/5203 Printer Prerequisite (#4653): Provides a common control base for attaching either the 3203 or 5203 Printer. Required as a feature for installation of the Integrated 3203 Printer Attachment (#4650), or Integrated 5203 Printer Attachment (#4690). **Maximum**: One. **Field Installation**: Yes.

Integrated 2560 Attachment (#4670): Control for attaching the 2560 Multi-function Card Machine mdl A1 or A2. **Specify**: **#9800**§ for mdl A1, or **#9801**§ for mdl A2. **Limitations**: Cannot be installed with Integrated 5425 Attachment (#4695) or Basic Byte Multiplexer Channel (#5248) ... installation of RPQs 7B0132 and 7B0141 are required to install #4670 with Basic Byte Multiplexer Channel (#5248). **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: **#9727** is required on the 2560 MFCM ... see "Specify" in M2560 pages.

2560 Card Print Control (#4674): Provides control for Card Print capability on the 2560 Multi-function Card Machine mdl A1. **Specify**: **#9797**§ for first two print lines, **#9798**§ for second two, **#9799**§ for third two, when corresponding Card Print features (#1575, #1576, #1577) are installed on the 2560 mdl A1. **Field Installation**: Yes. **Prerequisites**: #4670 on the 3115.

Magnetic Tape Adapter (#4675: Provides control for attachment of one 3411 Magnetic Tape Unit and Control mdl 1, 2 or 3 or one 3803 Tape Control mdl 3. See M3420 and 3803 or 3411 and 3410 pages for additional ordering instructions. The Magnetic Tape Adapter is addressed as Channel 2. **Maximum**: One. **Specify**: **#9807** for attachment of 3803 mdl 3. See "Highlights" for additional information. **Field Installation**: Yes. **Limitations**: A 3803 and 3411 cannot coexist on the Magnetic Tape Adapter. **Prerequisites**: #7361 on the 3411, except for 3115 mdl HG2. When attached to 3115 mdl HG2, RPQ 870061 is required on the 3411.

Integrated 5203 Mdl 3 Printer Attachment (#4690): Control for attaching the 5203 Printer mdl 3. **Limitations**: Cannot be installed with Integrated 3203 Printer Attachment (#4650). **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: #4653 and **#9223** on the 5203 mdl 3. **Specify**: **#9195**§ for 5203 with 120 print positions, or **#9152**§ for 5203 with 132 print positions. Specify Universal Character Set Control (**#9848**)§ when Universal Character Set Attachment (#8639) is specified on the 5203 mdl 3.

Integrated 5213 Printer Mdl 1 Attachment (#4692): Attaches the 5213 Printer mdl 1. Includes a special cable to support the printer. **Maximum**: One. **Field Installation**: Yes.

Integrated 5425 Attachment (#4695): Control for attaching the 5425 Multi-function Card Unit mdl A1 or A2. **Specify**: **#9183**§ for mdl A1, or **#9184** for mdl A2. **Limitations**: Cannot be installed with Integrated 2560 Attachment (#4670) or Basic Byte Multplexer Channel (#5248) ... installation of RPQs 7B0132 and 7B0141 are required to install #4695 with Basic Byte Multiplexer Channel (#5248). **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: If the 5425 is attached to 3115 either a 3203 or 5203 Printer is required to provide the necessary power. If however, a separate power supply for the 5425 is desired, IBM will provide it on an RPQ basis.

Basic Byte Multiplexer Channel (#5248): To attach low speed byte multiplex devices ... see "Byte Multiplexer Channel" under "Input/Output Channel". Feature includes control storage necessary for IOP operation. **Limitations**: The basic Byte Multiplexer Channel (#5248) and the Integrated Card I/O Attachments (#4670 or #4695) cannot be installed together on the same system unless RPQs 7B0132 and 7B0141 are installed. On the 3115-2, only the Extended Byte Multiplexer Channel (#5249 with #5248 as a prerequisite) with a data rate up to 25KB is available. **Specify**: On the 3115-0, specify **#9336** when attaching a 1255, 1259 or 1419. **Maximum**: One. **Field Installation**: Yes.

Extended Byte Multiplexer Channel (#5249): [3115-2] Provides the additional circuitry to enable the Basic Byte Multiplexer Channel to operate at an improved byte data rate up to 25KB. **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: #5248.

S/360 Mdl 20 Compatibility (#7520): Microprogram controlled feature which, in combination with special software, permits the system to execute S/360 mdl 20 instructions. **Field Installation**: Yes. **Note**: On the 3115-2, #7520 and 1401/1440/1460 Compatibility (#4457) are mutually exclusive (may not be ordered on the same system unless RPQ SU0002 is installed). **Limitations**: Cannot be installed with 3344 Attachment (**#9317**).

1052 Compatibility (#8005): Operates on the 5213 Printer mdl 1 and standard keyboard as an operator console in S/360 1052 mode only. In this emulation mode of operation the Video/Display acts as a slave unit to the printer. The 1052 Compatibility feature in combination with the 5213 Printer mdl 1 allows running of HASP/360 RMT 360 (stand-alone program) on the S/370 mdl 115. **Note**: The 1052 compatibility mode is not supported under DOS/VS. With DOS/VS the 5213 mdl 1 acts as a slave unit to the DOC. **Field Installation**: Yes. **Prerequisites**: #4692 and the 5213 Printer mdl 1.

§ CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

3115 Processing Unit (cont'd)

2311 Mdl 1/3340 - Series Compatibility (#8060): Permits the emulation of 2311 mdl 1 files on the 3340 disk storage. The user program may access both the emulated 2311 mdl 1 data as well as the native data set. This provides a "mixed mode" operating environment. **Limitations:** #8060 cannot be installed with #8070, **#9190** or **#9317**. **Field Installation:** Yes. **Prerequisites:** See Charts A/B above for control storage requirements. **Note:** When running DOS Rel. 21 through 26 , 1052 Compatibility (#8005), the 5213 mdl 1 console printer and, if a 3203 Printer is attached, the 1403/3203 Carriage Control Feature (#4460) are prerequisites. The 5203 Printer is not supported by #4460. Emulation under DOS/VS requires SYRES on the 3340 DASF.

2314/3340 - Series Compatibility (#8070): Permits the emulation of 2314 files on the 3340 disk storage. The user program may access both the emulated 2314 data set as well as the native data set. This provides a "mixed mode" operating environment. **Limitations:** #8070 cannot be installed with #8060, **#9190** or **#9317**. **Field Installation:** Yes. **Prerequisites:** See Charts A/B above for control storage requirements. **Note:** When running DOS Rel. 21 through 26, 1052 Compatibility (#8005), the 5213 mdl 1 console printer and if a 3203 Printer is attached, the 1403/3203 Carriage Control Feature (#4460) are prerequistes. The 5203 Printer is not supported by #4460. Emulation under DOS/VS requires SYRES on the 3340 DASF.

COMMUNICATIONS FEATURES

Integrated Communications Adapter (ICA) (#4640): Provides the basic control storage and common circuits for direct attachment of up to five synchronous (BSC) communication lines or up to eight asynchronous (Start/Stop) communication lines depending upon line speed. All combinations of BSC and Start/Stop lines require the Integrated Communications Adapter Extension (#4641). Additional features are required to create appropriate line interfaces for the individual lines. Figures 1A and 1B schematically represent the feature build-up. Figure 1A shows the feature build-up for asynchronous lines or for combinations of asynchronous and synchronous lines. Figure 1B shows the feature build-up when only synchronous lines are required. The ICA provides as a standard:

• Autopoll	Start/Stop and BSC
• Multipoint central station functions	Start/Stop and BSC
• Multipoint tributary station functions	BSC only
• EBCDIC transparent mode	BSC only
• EBCDIC or ASCII code	BSC only

Refer to Figures 2A and 2B for attachable terminals and for configuration requirements prior to ordering features below. The normal procedure requires completion of ICA Specification Form Z120-2499 with each mdl 115 containing feature #4640. Retain this form with the DP Order Guide. Any subsequent MES orders affecting #4640 or its sub-features should follow this procedure.

Note: To configurate the ICA refer to *ICA Configurator Manual,* GA33-1513.

Customer Responsibilities: See M2700 pages for customer responsibilities regarding communications facilities and services. **Communications Facilities:** See M2700 pages for communications facility requirements with this feature. **Maximum:** One. **Field Installation:** Yes.

Integrated Communications Adapter Extension (ICAE) (#4641): This feature is required for all combinations of BSC and Start/Stop lines. Extends the communications capability to up to four BSC and up to eight Start/Stop lines depending upon line speed. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4640.

Asynchronous Line Group (ALG) (#1201): Permits attachment of up to four Medium Speed Asynchronous Lines (AL) (#1231) or up to four Low Speed Asynchronous Lines Pairs (ALP) (#1241) or up to four Telegraph Line Pairs (TLP) (#7881). The lines within the ALG positions A1 through A4, must be installed in ascending order. **Specify:** One line control specify code from Figure 2A. **Limitations:** All lines in the ALG must have the same line speed and control. Different terminals can be attached, provided they use the same speed and line control. See Figure 2A. ALG (#1201) and SLHS (#7121) are mutually exclusive. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4640.

Asynchronous Line, Medium Speed (AL) (#1231): Provides for the attachment of one nonswitched 600 bps Start/Stop communications line. The 3767 terminal can be attached to this feature (at EC 380427 plus EC 380628) via switched or nonswitched lines at 300 bps and via nonswitched lines at 600 or 1200 bps. Clocking speed is selected at installation time. Connects to the line via a modem or IBM Line Adapter. The lines are installed in ascending order, A1 through A4. **Note:** IBM Line Adapters are tied to specific line positions ... see Figures 4C and 4D. **Limitations:** See Figure 5, Max. ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG. **Maximum:** Four. **Field Installation:** Yes. **Prerequisites:** #1201.

Asynchronous Line Pair, Low Speed (ALP) (#1241): Provides for the attachment of two switched 110 bps or two switched or nonswitched 134.5 bps Start/Stop communications lines. Connects to the line via a modem or IBM Line Adapter. The lines are installed in ascending order, A1 through A4. **Note:** IBM Line Adapters are tied to specific line positions ... see Figures 4C and 4D. **Limitations:** See Figure 5, Max. ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG. **Maximum:** Four. **Field Installation:** Yes. **Prerequisites:** #1201.

Auto Call Adapter (ACA) (#1291, #1292, #1295, #1296): Provides automatic dialing capabilities on switched facilities. One of these features is required for each line equipped to automatically originate calls on switched networks. See Figure 3 for the selection of correct feature code. **Limitations:** The use of Auto Call in a line group precludes the last two lines/line pairs of that group ... see Figure 3. **Maximum:** Two per line group ... maximum total, four. **Field Installation:** Yes. **Prerequisites:** See Figure 3.

IBM Leased Line Adapter (#4743): A modem for Start/Stop data transmission at 134.5 or 600 bps over nonswitched facilities. This line adapter operates with Leased Line Adapters on other IBM products. Selection between 2-wire and 4-wire operation is made at installation time. See Leased Line Adapter in GA24-3435 for specifications and restrictions. **Specify:** See Figures 4C and 4D. **Maximum:** See Figures 4C and 4D. **Field Installation:** Yes. **Prerequisites:** AL (#1231) or ALP (#1241) and a Line Adapter Base (#4792 or #4793) ... also see Figures 4C and 4D.

IBM 1200 bps Line Adapter (#4781, #4782, #4791): A modem for BSC data transmission at up to 1200 bps over nonswitched facilities or switched network. Also for Start/Stop transmission at 300, 600 or 1200 bps over nonswitched facilities to the 3767 terminal. Unclocked and must interface to an SLC (#7141-7144) or AL (#1231).

The Line Adapter is available in three different versions:

#4781 -- nonswitched
#4782 -- switched with auto answer
#4891 -- switched with autocall and auto answer.

Attachment to nonswitched facilities is via an IBM-provided cable directly to the line. Attachment to the switched network is via an IBM-provided cable to FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. **Customer Responsibilities** ... see M2700 pages. **Communciations Facilities** ... see M2700 pages. **Specify:** See Figures 4C and 4D. **Maximum:** See Figures 4C and 4D. **Field Installation:** Yes. **Prerequisites:** #7141-#7144 or #1231 ... #4792 or #4793. Also see Figures 4C and 4D. #1295 or #1296 is required for #4791.

Line Adapter Base 2 (LAB 2) (#4792): Permits attachment of up to two IBM 1200 bps Line Adapters and up to four IBM Leased Line Adapters. The Line Adapters are tied to specific line positions. See Figure 4C for configuration and possible line combinations. **Note:** LAB 2 is required for IBM 1200 bps Line Adapters with Autoanswer (#4782) or with Autocall and Autoanswer (#4782) or with Autocall and Autoanswer (#4791). **Limitations:** LAB 2 (#4792) and LAB 3 (#4793) are mutually exclusive. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** On 3115-2, #3860 unless RPQs 7B0132 and 7B0141 are installed.

Line Adapter Base 3 (LAB 3) (#4793): Provides attachment of up to four IBM 1200 bps Line Adapters and up to eight IBM Leased Line Adapters. The Line Adapters are tied to specific line positions. See Figure 4D for configuration and possible line combinations. **Limitations:** LAB 2 (#4792) and LAB 3 (#4793) are mutually exclusive. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** On 3115-2, LAB 3 requires Expansion Base (#3860) unless RPQs 7B0132 and 7B0141 are installed.

Synchronous Line Group (SLG) (#7100): Permits attachment of up to four medium speed BSC lines, SLC (#7141-#7144) and/or SL (#7151-#7154). Maximum line speed is 1200 and 7200 bps respectively. The lines in this group, positions S1 through S4, must be installed in ascending order. The lines can have different line speeds within the maximum specified. **Specify:** Maximum line speed in the group: **#9751**§ for 1200 bps maximum ... **#9753**§ for 2400 bps maximum ... **#9754**§ for 4800 bps maximum ... **#9757**§ for 7200 bps maximum. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** ICA (#4640).

Synchronous Line High Speed (SLHS) (#7121): Provides for the attachment of one nonswitched BSC line at speeds up to 50K bps. See Figure 1B. This a digital current interface for attachment to facility E1, E2 or E3. **Note:** Only for nonswitched point-to-point lines. **Limitations:** This line has a load factor of 100% and must not be operated simultaneously with any other line in the ICA ... see Figure 1B. SLHS (#7121) and (ALG) (#1201) are mutually exclusive. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4640.

Synchronous Line Medium Speed Clock (SLC) (#7141-#7144):

#7141 -- Line position S1
#7142 -- Line position S2
#7143 -- Line position S3
#7144 -- Line Position S4

Line positions S1 through S4 must be installed in ascending order.

§ CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

3115 Processing Unit (cont'd)

Each feature provides for the attachment of one switched or nonswitched BSC line. The clock can be set by the user for a transmission rate of 600 bps or 1200 bps. Connects to the line via an unclocked modem or IBM Line Adapter. **Notes:** IBM Line Adapters are tied to specific line positions ... see Figures 4C and 4D. SL (#7151-#7154) may be intermixed with SLC (#7141-#7144) within the SLG. **Limitations:** See Figure 5, Max. ICA Configuration. #7141 is mutually exclusive with #7151, #7142 with #7152, #7143 with #7153, and #7144 with #7154. **Maximum:** #7141 through #7144, one each. **Field Installation:** Yes. **Prerequisites:** #7100.

Synchronous Line Medium Speed (SL) (#7151-#7154):

#7151 -- Line position S1
#7152 -- Line position S2
#7153 -- Line position S3
#7154 -- Line position S4

Line positions S1 through S4 must be installed in ascending order.

Each feature provides for the attachment of one switched or nonswitched BSC line. Nonswitched lines are with switched network backup are supported. Maximum line speed on nonswitched line is 7200 bps; on switched backup network 3600 bps; on switched network 4800 bps. See Figure 2B for detailed speed and facility information. Connects to the line via a modem. The modem must provide clocking. Note: SL (#7151-#7154) may be intermixed with SLC (#7141-#7144) within the SLG. **Limitations:** See Figure 5, Max. ICA Configuration. #7151 is mutually exclusive with #7141, #7152 with #7142, #7153 with #7143, and #7154 with #7144. **Maximum:** #7151 through #7154, one each. **Field Installation:** Yes. **Prerequisites:** #7100.

Telegraph Line Pair (TLP) (#7881): Provides for the attachment of two nonswitched single current telegraph lines at 45.5, 56.9, 74.2 or 75 bps. Attachment to the lines is via an IBM-provided external cable. Lines A1 through A4 are installed in ascending order. **Limitations:** See Figure 5, Max. ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG. **Maximum:** Four. **Field Installation:** Yes. **Prerequisites:** #1201.

Modems: One of the following modems can be attached to each of the BSC lines of the ICA (#4640). **Prerequisites:** #7151-#7154.

Modem	Speed (bps)
3863 mdl 1	2400
3864 mdl 1	4800
3872 mdl 1	2400/1200
3874 mdl 1	4800/2400
3875 mdl 1	7200/3600/1800

Note: For communications capabilities, product utilization and special features, see M2700, 3863, 3864, 3872, 3874 and 3875 pages.

A2 (2)	#4743 or #4781	#9482, #9502§	#1231	Excludes line adapter in position S3 (#9495)
A3 (2)	#4743 or #4781	#9483, #9503§	#1231	Excludes line adapter in position S2 (#9494)
A4 (2)	#4743 or #4781	#9484, #9504§	#1231	Excludes line adapter in position S1 (#9493)
S1	#4781	#9493§	#7141	Excludes line adapter in position A4 (#9484)
S2	#4781	#9494§	#7142	Excludes line adapter in position A3 (#9483)
S3	#4781	#9495§	#7143	Excludes line adapter in position A2 (#9482)
S4	#4781	#9496§	#7144	Excludes line adapter in position A1 (#9481)

(2) #4781 may be used only with the 3767 terminal.

§ CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

FIGURE 5

MAXIMUM ICA CONFIGURATION

All lines/line pairs are assigned load factors. The sum of all load factors must not exceed 100%.

LOAD FACTOR IN %

ASYNCHRONOUS LINES	1-2 Line Pairs (1-4 lines)	3-4 Line Pairs (5-8 lines)
TLP at 45.5 & 56.9 bps	20	20
TLP at 74.2 & 75 bps	20	40
ALP at 110 & 134.5 bps	20	40
ALG up to 4 lines		
AL at 300/600/1200 bps	20	

SYNCHRONOUS LINES	1-2 Lines		3-4 Lines	
	Autopoll Not Used	Autopoll Used	Autopoll Not Used	Autopoll Used
SLG w max 1200 bps	20	25	20	25
SLG w max 2400 bps	20	25	40	50
SLG w max 4800 bps	40	50	80	100
SLG w max 7200 bps	60	75		
	1 Line pt-to-pt			
SLHS at max. 50K bps	100			

MODEL CONVERSIONS

Field installable ... model downgrade from 3115-2 to 3115-0 is not recommended for field installation.

ACCESSORIES (None)

SUPPLIES (None)

3125 PROCESSING UNIT

[NO LONGER AVAILABLE]

The 3125 is No Longer Available ... MES orders for model changes, features, released RPQs and accessories are not affected. No new RPQs will be accepted.

PURPOSE

Provides main and control storage, plus arithmetic and logic circuits for a S/370 mdl 125.

MODELS

The 3125-0 and 3125-2 Processing Units are available in the following model groups:

3125-0		3125-2		Processor Storage Size
FE	FE0	FE2	FE2	98,304 bytes
G	G00	G2	G02	131,072 bytes
GE	GE0	GE2	GE2	163,840 bytes
GF	GF0	GF2	GF2	196,608 bytes
H	H00	H2	H02	262,144 bytes
		HG2	HG2	393,216 bytes *
		I2	I02	524,288 bytes *

* If 3411 Magnetic Tape and Control is attached see Magnetic Tape Adapter special feature paragraph for RPQ requirement.

HIGHLIGHTS

98,304 bytes up to 524,288 bytes of processor storage are available. The basic main memory cycle time is 480 nanoseconds for two bytes. 16 general purpose, 16 control, and four floating point registers are provided. The system design provides distributed microcoded sub-processors for the independent handling of programs ... Instruction Processing Unit (IPU), Input/Output Processing (IOPs), and Diagnostic/Maintenance (SVP).

Direct attachment of the 3333/3330 DASD Subsystem or the 3340 DASF Subsystem or the 3340/3344 DAS Subsystem (3125-2 only) is provided. Depending on model and features up to 16 spindles can be attached. In a 3340 Subsystem the 3340 mdl A2 and its attached 3340 drives can be shared with another S/370, except 3115-0 or 3125-0, via the String Switch capability (**#9315**).

The 2311/3330 Series, the 2311-1/3340 Series and the 2314/3340 Series Compatibility features are available as options. They are mutually exclusive. Emulation is under DOS and DOS/VS only. 2311 mdl 1 emulation under DOS/VS requires SYSRES on 3340 or on 3330.

Capability to attach the 3803/3420 or 3411/3410 Magnetic Tape Subsystem mdls 1, 2, or 3 via the Magnetic Tape Adapter.

Capability to natively attach the following card I/Os through appropriate Integrated Card I/O Attachments: 2560 mdl A1; 3504 mdls A1, A2; 3525 mdls P1, P2, P3; and the 5425 mdls A1, A2 (96-column card).

Capability to natively attach the 5213 mdl 1 Console Printer (85 cps) is provided with the Integrated 5213 Printer Mdl 1 Attachment. This console slave printer provides hard copy output of operator messages presented on the Video/Display (CRT) Console. The 1052 compatibility feature is also available.

Capability to natively attach up to six synchronous and up to 16 asynchronous lines is provided by the Integrated Communications Adapter with appropriate features.

Capability to natively attach the 1403 Printer (mdl 2 or 7 or N1) is provided with the Integrated Printer Attachment.

Capability to natively attach the 3203 Printer is provided with the Integrated 3203 Printer Attachment.

The 1403/3203 Carriage Control Feature provides the capability to load information contained in the 1403 Carriage Control Tape into the 3203 Forms Control Buffer.

S/360 Model 20 Compatibility and 1401/1440/1460 Compatibility Features are provided to allow execution of the instructions of those systems.

The Operator Console is an integral part of the 3125. The standard online Video/Display-Keyboard enhances operator (human factor) machine communications. Data can be manually entered into the processor's main storage or into internal registers via the keyboard. Contents of storage or internal registers of the 3125 can be displayed on the Video/Display screen. The Video/Display with 16 lines of 56 characters/line and keyboard are designed for use as an operator console. A portion of the screen is reserved to display machine status. The Service Processor (SVP) continuously monitors system operation and logs errors on the magnetic diskette device. The SVP initiates recovery on detection of error conditions and provides control for the display, keyboard, magnetic diskette and optional console printer.

The standard console file is the basic microprogram loading device for the system. The console file contains a small read/write file device that provides the microcode for the system on removable magnetic IBM Diskettes. The diskettes that will be supplied with the system will contain the required microcode for the basic system, the optional features ordered for the system, and CE diagnostics.

The CE logout of machine and I/O related control checks and errors is recorded on the console file diskette for CE diagnosis, to enchance the reliability, availability, and serviceability of the mdl 125.

Extended Control (EC) Mode expands the structure of the Program Status Word to accommodate the control of S/370 features and extends the number of permanently assigned main storage locations. The mdl 125 can operate in either EC Mode or Basic Control (BC) Mode as defined for the S/360.

Dynamic Address Translation (DAT) is a standard facility on the mdl 125. When the mdl 125 is in Extended Control (EC) Mode with Translation Mode operable, programs are not required to be completely resident in main memory for execution. Under Supervisor control, portions of programs ("pages") may be stored on a direct access device until needed, at which time they are returned to main storage and may be relocated to any available location. Program addresses are treated as "logical addresses" and the translation feature develops "real addresses". Since logical storage addressing is not limited by the amount of available real storage, program size may exceed real storage size. This logical storage is referred to as "virtual storage" and may be as large as 16,777,216 bytes on the mdl 125.

Program Event Recording (PER), a standard feature, is a debugging aid which permits four types of events to be selectively monitored: (1) successful branches, (2) instruction fetch address compare, (3) main storage alteration address compare, (4) general register alteration address compare.

Standard features include a S/370 commercial instruction set, Extended Control (EC) Mode, Dynamic Address Translation, Channel Indirect Data Addressing, Program Event Recording, Monitor Call, interval timer, time-of-day clock, CPU Timer and Clock Comparator, store and fetch protect, byte-oriented operand feature, error checking and correction in main storage, automatic instruction retry, and Audible Alarm.

Control Storage: Reloadable control storage for the Service Processor (SVP), direct DASD attachment, and Instruction Processing Unit (IPU) are provided as standard on the 3125 Processing Unit. In addition reloadable control storage is available for the optional Card I/O Attachment, Printer Attachment, Integrated Communications Adapter (ICA), Byte Multiplexer Channel, and Console Printer Attachment. Control storage is loaded from the diskette housed in the Service Console Unit.

The IPU of the 3125-0 contains as standard 12K words of control storage. Certain features/combinations require up to two 4K word increments in addition. See Chart A for details.

The IPU of the 3125-2 contains as standard 16K words of control storage. One 8K word increment may be ordered as an optional feature for use with certain feature combinations. See Chart A for details.

3125 Processing Unit (cont'd)

CHART A: Listed below are the valid feature combinations and their respective requirements for additional control storage.

Optional Features																
Model 3125-2	Basic Control Storage								(#4105) Control Storage Extension Required							
Model 3125-0	Basic Control Storage	First Control Storage Increment... (#4101) Required							Second Control Storage Increment ... (#4101) and (#4102) Required							
1401/1440/ 1460 Compatibility (#4457) *	x		*	x	*				x	*	x	x		x	*	x	x
S/360 Mdl 20 Compatibility (#7520) *	x	x	*		*		x	x	x	*		x	x	x	*		
Floating Point Including Extended Precision (#3910)		x	x	x	x		x	x	x			x	x	x	x	x	x
2311 Mdl 1/3330 Series Compatibilty (#8040) **					x		x	x			x	x		x	x		
2311 Mdl 1/3340 Series Compatibilty (#8060) **						x			x	x			x			x	
2314/3340 Series Compatibility (#8070) **						x				x	x		x		x		x

* 1401/1440/1460 Compatibility (#4457) and S/360 Mdl 20 Compatibility (#7520) are mutually exclusive (may not be ordered on the same system unless RPQ SU0002 is installed on the 3125.) Cannot be installed with 3344 Attachment **(#9317)**. **Note:** RPQ SU0002 cannot be installed if the 2311 Mdl 1/3340-Series Compatibility (#8060) or 2314/3340-Series Compatibility (#8070) is installed.

** #8040 and #8060 and #8070 are mutually exclusive. In addition, #8060 and #8070 are mutually exclusive with specify feature **#9190** or 3344 Attachment specify feature **(#9317)**. **#9190** does not require additional control storage.

Note: Specify feature **#9315** is mutually exclusive with #4105 and/or #4460.

Input/Output Attachment - Native: The following integrated I/O attachments/adapters are provided for controlling the designated I/O devices. They are designed to interact with their respective I/O devices and should be installed/removed with them since the system is inoperative with only the attachment/adapter installed.

Direct Disk Attachment (standard): Attaches either the 3340 mdl A2 or the 3333 mdl 1 dual disk drive and control unit directly to the 3125. The attachment supports block multiplexing. Channel address is 1, physical spindle addresses are 160 to 167 on the first string and 168 to 16F on the second string. For logical address assignment for 3344 refer to the *Functional Characteristics Manual*, GA33-1506.

3333/3330 DASD Subsystem: One 3333 mdl 1 and one additional 3330 mdl 1 or 2 can be attached to provide up to four spindles.

3340 DASF Subsystem: On the 3125-0 one 3340 mdl A2 and up to three 3340 mdls B1/B2 can be attached to provide up to eight spindles. On the 3125-2 (with 16-Drive Expansion **#9315**) one or two 3340 mdls A2 can be directly attached with up to three 3340 mdls B1/B2 attached to each of the 3340 mdl A2 to provide up to 16 spindles on the system.

3340/3344 DAS Subsystem: On the 3125-2 with 3344 Attachment **#9317** installed: One 3340 mdl A2 and any combination of up to three 3340 mdls B1/B2 and 3344 mdl B2/B2F can be attached on the first string. In addition, on the 3125-2, one 3340 mdl A2 and up to three 3340 mdls B1/B2 can be attached on the second string to provide up to 16 physical or the equivalent of up to 34 logical spindles on the system.

Magnetic Tape Adapter (optional): This feature attaches one of the following tape control units and is addressed as channel 2:

3411-1 Tape Control (data rate 20KB) housing one tape drive. Up to three additional 3410-1 Magnetic Tape Drives may be attached to the 3411-1 Control Unit.

3411-2 Tape Control (data rate 40KB) housing one tape drive. Up to five additional 3410-2 Magnetic Tape Drives may be attached to the 3411-2 Control Unit.

3411-3 Tape Control (data rate 80KB) housing one tape drive. Up to five additional 3410-3 Magnetic Tape Drives may be attached to the 3411-3 Control Unit.

3803-3 Tape Control. Up to eight 3420 Tape Units Mdl 3 or 5 may be attached to the 3803.

Integrated Card I/O Attachments (optional): These features provide native attachment of one of the following:

3504 Card Reader mdls A1 or A2
3525 Card Punch mdl P1, P2, or P3
2560 Multi-function Card Machine mdl A1
5425 Multi-function Card Unit mdls A1 or A2
3504 Card Reader and 3525 Card Punch
3504 Card Reader and 2560 MFCM
3504 Card Reader and 5425 MFCU

The Integrated Card I/O Attachment uses channel 0. Device address X'00C' is reserved for the 3504 reader and device address X'00D' is reserved for the 2560, 5425, or 3525.

Integrated Printer Attachment (optional): Attachment features for the 1403 Printer mdls 2, 7, and N1 and for the 3203 Printer mdl 1 or 2 are available. Only one printer unit can be natively attached. The printer adapter is addressed as channel 0 and the device address is X'00E'. The Universal Character Set feature can be optionally selected for the 1403-2 or N1 on the 3125 at no charge.

Integrated Console Printer Attachment (optional): Attaches the 5213 mdl 1 Printer to the 3125 to provide hard copy of operator messages presented on the standard Display Operator Console. It uses address X'01F' (same as the Display Operator Console) on channel 0. When the 1052 Compatibility feature is installed, 5213 mdl 1 Printer is required.

Integrated Communications Adapter (ICA) (optional): Provides the basic control storage and common circuits for direct attachment of up to six synchronous (BSC) communication lines or up to 16 asynchronous (start/stop) lines. The **Integrated Communications Adapter Extension (ICAE)** #4641 adds the capability to attach up to six BSC and up to 16 start/stop lines. IBM line adapters are provided within the mdl 125.

Input/Output Channel:

Byte Multiplexer Channel (optional): A wide variety of I/O devices may be attached to the S/370 mdl 125 via the optional byte multiplexer channel. One channel is available on the 3125 as a special feature and is functionally equivalent to the byte multiplexer channel on S/360 mdls 22, 25, 30, and 40. Thirty-two subchannels are provided as standard. (Eight channels may be shared and 24 are unshared). The byte multiplexer channel provides eight control unit positions and permits I/O units to operate normally in byte mode, giving the effect of several I/O operations simultaneous with computing. In burst mode, the channel handles one high-speed unit with a maximum data rate of 29KB per second. It is capable of sustained data rates up to 25KB per second in byte mode. It is addressed as channel 0. For OS/360 exclusions, refer to *System/360 Operating System Generation*, GC28-6554.

Console Function: System control functions are provided by the standard integrated Video/Display-Keyboard. It has the switches and lights necessary to operate and control the system. Optionally, the 5213-1 Console Printer (85 cps) may be attached via feature number #4692. The optional 1052 Compatibility (#8005) operates the 5213-1 printer and standard systems keyboard as an operator console in S/360-1052 mode only. In this mode of operation, the Video/Display-Keyboard acts as a slave unit to the printer.

Publications: GC20-0001

SPECIFY

- Voltage: (AC, 3-phase, 4 wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color Group: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Cabling: **#9080** for below the floor, or **#9081** for on the floor.
- CPU Configuration: **#9091** for Configuration 1 (CPU located behind console table), or **#9092** for Configuration 2 (CPU bolted to right side of console table). Configuration 2 excludes a 5425 MFCU from being natively attached. See *S/370 Installation Manual* for details.
- Minimum Configuration:
- DASD Attachment: Specify one - **#9313**§ for 3330 Attachment or **#9314**§ for 3340/3344 Attachment (3125-2 only). Specify Fixed Head Attachment **(#9190)**§ if Fixed Head Feature is installed on the 3340 Series drives. **Note:** The Fixed Head Attachment Feature **(#9190)** cannot be installed with 2311 Mdl 1/3340-Series Compatibility (#8060) or 2314/3340-Series Compatibility (#8070).
- Specify String Switch Capability/16-Drive Expansion **(#9315)**§ (3125-2 only) if String Switch (#8150) is installed on one or both 3340 mdl A2s, or if a second 3340 mdl A2 is installed no matter how many drives there are (16-Drive Expansion). Specify **#9306** Second String if two 3340 mdl A2s are installed. **#9315** requires 4K DASF Control Storage Extension (#4210). **#9315** cannot be installed with #4105 or #4460, and is mutually exclusive with 3344 Attachment **#9317**§.

3125 Processing Unit (cont'd)

When String Switch is installed, an Emergency Power Off connection between the sharing systems is mandatory. RPQ DC3621 (two system connection) or DC3622 (multiple system connection) must be ordered.

The 3125-2 uses fixed addresses 160 to 16F for its attached disk drives. In the case of string switch, to avoid confusion in Job Control and Operation, the same addresses should be be assigned to shared drives on the other system. In the case of the 3135, 3135-3, 3138 IFA, this requires specify code **#9821** on the 3135 providing addresses 160 through 16F to comply with the fixed addresses of the 3125. If intermixing 3330 and 3340 on the 3135, 3135-3, 3138 (**#9315**), no string switching with the 3125-2 is possible.

Note: The string switch of the DASD hardware function can be operated with the present DOS/VS standard DASD support. DOS/VS does not support the device reserve/release channel commands for program controlled sharing of attached DASD units. Therefore, it is the user's responsibility by appropriate organization and programming procedures to resolve conflicting references to shared files and insure data integrity. One method for controlling potential conflicts involves the use of operator commands DVC UP/DVC DN. For additional information, consult *DOS/VS System Management Guide,* GC33-5371.

- On the 3125-2 ... specify 3344 Attachment (**#9317**)§ when 3344 mdl B2/B2Fs are installed. 4K DASF Control Storage Extension is required. Cannot be installed with any of the following: String Switch Capability (**#9315**), 231X/3340 Compatibility (#8060/#8070), S/360 Mdl 20 Compatibility (#7520) ... 1401/1440/1460 Compatibility (#4457) ... 1403/3203 Carriage Control Feature (#4460). Specify **#9306**, Second String, if two 3340 mdl A2s are installed.
- Specify **#9807** for attachment of 3803 mdl 3 on the Magnetic Tape Adapter (#4675).

Note: RETAIN/370 ... CE access is by telephone.

SPECIAL FEATURES

External Signals (#3898): Provides six distinct external interrupt lines to request and identify an external interrupt response from the processing unit. **Maximum:** One per 3125. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/360 Direct Control Feature - OEMI,* GA22-6845.

Floating Point Including Extedded Precision (#3910): Adds 51 floating point arithmetic instructions. Provides for floating point operation including extended precision to 28 hexadecimal digits. **Field Installation:** Yes. **Limitations:** Cannot be installed with Floating Point (#3900). **Prerequisites:** See Charts A/B above for control storage requirements.

4K Control Storage Increment (#4101, 4102): [Mdl 0] Each adds 4,096 words (22 bits wide) of control storage. Required for certain feature combinations ... See "Control Storage Requirements" under "Highlights" for details. #4101 for first 4K increment ... #4102 for second 4K increment. **Field Installation:** Yes. **Prerequisites:** #4102 requires #4101.

8K Control Storage Extension (#4105): [Mdl 2] Adds 8,192 words (22 bits wide) of control storage to the IPU. Required for some combinations ... see Chart A. **Limitations:** Cannot be installed with #4210 or **#9315**. **Field Installation:** Yes. **Maximum:** One.

4K DASF Control Storage Extension (#4210): [Mdl 2] Adds 4,096 words (22 bits wide) to the DDA control storage for use with either or both the String Switch Capability or 16 Drive Expansion specify feature (**#9315**) or 3344 Attachment specify feature (**#9317**). **Limitations:** Cannot be installed with #4105 or #4460. **Maximum:** One. **Field Installation:** Yes.

1401/1440/1460 Compatibility (#4457): Microprogram controlled feature which, in combination with an emulator program under DOS/VS, permits the system to execute 1401/1440/1460 instructions. **Field Installation:** Yes. **Prerequisites:** See "Control Storage Requirements" under "Highlights" above. **Limitations:** Cannot be installed with 3344 Attachment (**#9317**) or with S/360 Mdl 20 Compatibility (#7520) unless RPQ SU0002 is installed on the 3125 ... RPQ SU0002 cannot be installed if the 2311 Mdl 1/3340 or 2314/3340 Compatibility feature (#8060, #8070) is installed.

1403/3203 Carriage Control Feature (#4460): Allows the 3203 Printer with its tapeless carriage control to emulate the function of a tape controlled carriage and thus run programs written for a 1403 Printer. **Limitations:** The 5203 Printer is not supported by this feature. Cannot be installed with string switch capability (**#9315**) or 3344 Attachment specify feature (**#9317**). **Field Installation:** Yes. **Prerequisites:** 3203 Printer. Note: This feature is not required with DOS/VS Release 31 and subsequent releases.

5425 Multi-Function Card Unit Power Prerequisite (#4500): Provides the power supply for the 5425 Multi-function Card Unit when no native printer (1403 or 3203) is attached. **Limitations:** Cannot be installed with 1403 Printer/5425 Card Unit Power Prerequisite (#4505). **Maximum:** One. **Field Installation:** Yes.

1403 Printer/5425 Card Unit Power Prerequisite (#4505): Provides the power supply for the natively attached 1403 Printer with or without a 5425 MFCU. **Limitations:** Cannot be installed with 5425 Multi-function Card Unit Power Prerequisite (#4500). **Maximum:** One. **Field Installation:** Yes.

Integrated 3203 Printer Attachment (#4650): Control for attaching the 3203 Printer mdl 1 or 2. **Limitations:** Cannot be installed with Integrated 1403 Printer Attachment (#4662, #4667 or #4668). **Maximum:** One. **Field Installation:** Yes.

Integrated 1403 Printer Mdl 2 Attachment (#4662): Provides control for attaching the 1403 Printer mdl 2. **Specify: #9847**§ to support UCS (#8641) on the 1403 mdl 2. **Limitations:** Cannot be installed with Integrated 3203 Printer Attachment (#4650). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4667 and #4505.

Integrated 1403 Printer Attachment (#4667): Control for attaching the 1403 Printer mdl 7. Prerequisite feature required for installation of the Integrated 1403 Printer Mdl 2 or Mdl N1 Attachment (#4662, #4668). **Limitations:** Cannot be installed with Integrated 3203 Printer Attachment (#4650) **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4505.

Integrated 1403 Printer Mdl N1 Attachment (#4668): Control for attaching the 1403 Printer mdl N1. **Specify: #9847**§ to support UCS (#8640) on the 1403 mdl N1. **Limitations:** Cannot be installed with Integrated 3203 Printer Attachment (#4650). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4662, #4667, #4505.

Integrated 2560 Attachment (#4670): Control for the 2560 Multi-function Card Machine mdl A1. **Limitations:** Cannot be installed with Integrated 3525 Card Punch Attachment (#4685) or with Integrated 5425 Attachment (#4695). **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #9726** is required on the 2560 mdl A1 ... see "Specify" in M2560 pages.

2560 Card Print Control (#4674): Provides control for Card Print capability on the 2560 Multi-function Card Machine mdl A1. **Specify: #9797**§ for first two print lines, **#9798**§ for second two, **#9799**§ for third two, when corresponding Card Print features (#1575, #1576, #1577) are installed on the 2560 mdl A1. **Field Installation:** Yes. **Prerequisites:** #4670 on the 3125.

Magnetic Tape Adapter (#4675): Provides control for attachment of one 3411 Magnetic Tape Unit and Control mdl 1, 2 or 3 or one 3803 Tape Control mdl 3. See M3420 and 3803 or 3411 and 3410 pages for additional ordering instructions. The Magnetic Tape Adapter is addressed as Channel 2. **Maximum:** One. **Specify: #9807** for attachment of 3803 mdl 3. See "Highlights" for additional information. **Field Installation:** Yes. **Limitations:** A 3803 and 3411 cannot coexist on the Magnetic Tape Adapter. **Prerequisites:** #7361 on the 3411, except for 3125 mdl HG2. When attached to 3125 mdl HG2, RPQ 870061 is required on the 3411.

Integrated 3504 Card Reader Attachment (#4680): Control for attaching the 3504 Card Reader mdl A1 or A2. Supports Read Column Eliminate capability on the 3504 Card Reader. **Specify: #9781** for 3504 mdl A1, or **#9782** for 3504 mdl A2; **#9783** provides Optical Mark Read capability on the 3125 when Optical Mark Read (#5450) is installed on the 3504 mdl A1 or A2; **#9784** provides the capability of using the Selective Stacker (#6555) feature on the 3504 mdl A1 or A2. **Maximum:** One. **Field Installation:** Yes.

Integrated 3525 Card Punch Attachment (#4685): Control for attaching the 3525 Card Punch mdl P1, P2 or P3. **Specify: #9791**§ for 3525 mdl P1, **#9792**§ for 3525 mdl P2, or **#9793**§ for 3525 mdl P3. Specify **#9794**§ when the Card Read (#1533) feature is installed on the 3525. **Limitations:** Cannot be installed with Integrated 2560 Mdl A1 Attachment (#4670) or Integrated 5425 Attachment (#4695). **Maximum:** One. **Field Installation:** Yes.

Integrated 5213 Printer Mdl 1 Attachment (#4692): Attaches the 5213 Printer mdl 1. Includes a special cable to support the printer. **Maximum:** One. **Field Installation:** Yes.

3525 Card Print Control (#4693): Provides control for Card Print (#8339, #5273) capability on the 3525 Card Punch. **Specify: #9795**§ when Two-line Card Print (#8339) is installed on the 3525, or **#9796**§ when Multiline Card Print (#5273) is installed on the 3525. **Field Installation:** Yes. **Prerequisites:** Integrated 3525 Card Punch Attachment (#4685).

Integrated 5425 Attachment (#4695): Control for attaching the 5425 Multi-function Card Unit mdl A1 or A2. **Specify: #9183**§ for mdl A1, or **#9184**§ for mdl A2. **Limitations:** Cannot be installed with Integrated 3525 Card Punch Attachment (#4685) or with Integrated

§ CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

3125 Processing Unit (cont'd)

2560 Mdl A1 Attachment (#4670). Can only be installed with CPU Configuration 1 (**#9091**) ... see "Specify" above. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** 1403 Printer/5425 Card Unit Power Prerequisite (#4505) required when 1403 is natively attached, or 5425 Multi-function Card Unit Power Prerequisite (#4500) if no native printer (1403 or 3203) is configured. When 3203 Printer is attached, #4500 or #4505 is not required.

Basic Byte Multiplexer Channel (#5248): To attach low speed byte multiplex devices ... see "Byte Multiplexer Channel" under "Input/Output Channel". Feature includes control storage necessary for IOP operation. **Maximum:** One. **Field Installation:** Yes.

S/360 Mdl 20 Compatibility (#7520): Microprogram controlled feature which, in combination with special software, permits the system to execute S/360 mdl 20 instructions. **Field Installation:** Yes. **Limitations:** Cannot be installed with 3344 Attachment (**#9317**) or with 1401/1440/1460 Compatibility (#4457) unless RPQ SU0002 is installed on the 3125 ... RPQ SU0002 cannot be installed if either 2311 Mdl 1/3340 or 2314/3340 compatibility feature (#8060, #8070) is installed. Also note control storage requirements in Chart A. **Prerequisites:** See "Control Storage Requirements" under "Highlights" above.

1052 Compatibility (#8005): Operates the 5213 Printer mdl 1 and standard keyboard as an operator console in S/360 1052 mode only. In this emulation mode of operation the Video/Display acts as a slave unit to the printer. **Field Installation:** Yes. **Prerequisites:** #4692 and the 5213 Printer mdl 1.

2311 Mdl 1/3330 - Series Compatibility (#8040): Permits the emulation of 2311 mdl 1 files on the 3333/3330 Disk Storage. The user program may access both the emulated 2311 mdl 1 data set as well as the native data set. This provides a "mixed-mode" operating environment. **Prerequisites:** Minimum of one 4K Increment of Control Storage (#4101, #4102) ... see "Control Storage Requirements" under "Highlights" above. Note: When running DOS Release 21-27, 1052 Compatibility (#8005) is a prerequisite. The 1403/3203 Carriage Control Feature (#4460) is also required if a 3203 Printer is attached. Emulation under DOS/VS requires SYSRES on 3330 in native mode. **Field Installation:** Yes. **Limitations:** #8040, #8060 and #8070 are mutually exclusive.

2311 Mdl 1/3340 - Series Compatibility (#8060): Permits the emulation of 2311 mdl 1 files on the 3340 disk storage. The user program may access both the emulated 2311 mdl 1 data as well as the native data set. This provides a "mixed mode" operating environment. **Limitations:** #8060 cannot be installed with **#9317**. ... #8040, #8060, #8070 and **#9190** are mutually exclusive. **Field Installation:** Yes. **Prerequisites:** Minimum of one 4K Increment of Control Storage (#4101, #4102) ... see "Control Storage Requirements" under "Highlights" above. Note: When running DOS Rel. 21 through 27 , 1052 Compatibility (#8005) is a prerequisite. The 1403/3203 Carriage Control Feature (#4460) is also required if a 3203 Printer is attached. Emulation under DOS/VS requires SYRES on the 3340 DASF.

2314/3340 - Series Compatibility (#8070): Permits the emulation of 2314 files on the 3340 disk storage. The user program may access both the emulated 2314 data set as well as the native data set. This provides a "mixed mode" operating environment. **Limitations:** #8070 cannot be installed with 3344 Attachment (**#9317**) ... #8040, #8060, #8070 and **#9190** are mutually exclusive. **Field Installation:** Yes. **Prerequisites:** Minimum of one 4K Increment of Control Storage (#4101, #4102) ... also see "Control Storage Requirements" under "Highlights" above. Note: When running DOS Rel. 21 through 27, 1052 Compatibility (#8005) is a prerequisite. The 1403/3203 Carriage Control Feature (#4460) is also required if a 3203 Printer is attached. Emulation under DOS/VS requires SYRES on the 3340 DASF in native mode.

COMMUNICATIONS FEATURES

Integrated Communications Adapter (ICA) (#4640): Provides the basic control storage and common circuits for direct attachment of up to six synchronous (BSC) communication lines or up to 16 asynchronous (Start/Stop) communication lines depending upon line speed. All combinations of BSC and Start/Stop lines require the Integrated Communications Adapter Extension (#4641). Additional features are required to create appropriate line interfaces for the individual lines. Figure 1A schematically represents the feature build-up. Figure 1A shows the feature build-up for asynchronous lines or for combinations of asynchronous and synchronous lines. The ICA provides as a standard:

- Autopoll — Start/Stop and BSC
- Multipoint central station functions — Start/Stop and BSC
- Multipoint tributary station fnctns — BSC only
- EBCDIC transparent mode — BSC only
- EBCDIC or ASCII code — BSC only

§ CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Refer to Figures 2A and 2B for attachable terminals and for configuration requirements prior to ordering features below. The normal procedure requires completion of ICA Specification Form Z120-2472 with each 3125 containing feature #4640. Retain this form with the DP Order Guide. Any subsequent orders affecting #4640 or its subfeatures should follow this procedure.

Note: An APL Configurator is available from IBM in configurating the ICA (or refer to *ICA Configurator Manual*, GA33-1508,).

Customer Responsibilities: See M2700 pages for customer responsibilities regarding communications facilities and services. **Communications Facilities:** See M2700 pages for communications facility requirements with this feature. **Maximum:** One. **Field Installation:** Yes.

Integrated Communications Adapter Extension (ICAE) (#4641): This feature is required for all combinations of BSC and Start/Stop lines. Extends the communications capability to up to six BSC and up to 16 Start/Stop lines depending upon line speed. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4640.

Asynchronous Line Group 1 (ALG1) (#1201): Permits attachment of up to four Medium Speed Asynchronous Lines (AL) (#1231) or up to four Low Speed Asynchronous Lines Pairs (ALP) (#1241) or up to four Telegraph Line Pairs (TLP) (#7881). The lines within the ALG positions A1 through A4, must be installed in ascending order. **Specify:** One line control specify code from Figure 2A. **Limitations:** All lines in the ALG1 must have the same line speed and line control. Different terminals can be attached within one line group, provided they use the same speed and line control. See Figure 2A. ALG1 (#1201) and SLHS (#7121) are mutually exclusive. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4640.

Asynchronous Line Group 2 (ALG2) (#1202): Permits attachment of up to four medium speed asynchronous lines (AL) (#1232) or up to four low speed asynchronous line pairs (ALP) (#1242) or up to four telegraph line pairs (TLP) (#7882). ALG1 and ALG2 are identical in function and either one can be installed as the first line group in the ICA. The lines within ALG2, positions A5 through A8, must be installed in ascending order. **Limitations:** All lines in ALG2 must have the same line speed and line control. Different terminals using the same line speed and line control can be attached within one line group. See Figure 2A. **Specify:** One line control specify code from Figure 2A. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4640.

Asynchronous Line, Medium Speed (AL) (#1231 in ALG1, #1232 in ALG2): Provides for the attachment of one nonswitched 600 bps Start/Stop communications line. The 3767 terminal can be attached to this feature (at EC 380427 plus EC 380627) via switched or non-switched lines at 300 bps and via nonswitched lines at 600 or 1200 bps. Clocking speed is selected at installation time. Connects to the line via a modem or IBM Line Adapter. The lines are installed in ascending order, A1 through A4 in ALG1 and A5 through A8 in ALG2. Note: IBM Line Adapters are tied to specific line positions ... see Figure 4C and 4D. **Limitations:** See Figure 5, Maximum ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG1. #1232, #1242 and #7882 cannot be intermixed within ALG2. **Maximum:** Four each of #1231 and #1232. **Field Installation:** Yes. **Prerequisites:** #1201.

Asynchronous Line Pair, Low Speed (ALP) (#1241 in ALG1, #1242 in ALG2): Provides for the attachment of two switched 110 bps or two switched or nonswitched 134.5 bps Start/Stop communications lines. Connects to the line via a modem or IBM Line Adapter. The lines are installed in ascending order, A1 through A4 in ALG1 and A5 through A8 in ALG2. Note: IBM Line Adapter are tied to specific line positions ... see Figure 4C and 4D. **Limitations:** See Figure 5, Maximum ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG1. #1232, #1242 and #7882 cannot be intermixed within ALG2. **Maximum:** Four. **Field Installation:** Yes. **Prerequisites:** #1201 is prerequisite to #1231. #1202 is prerequisite to #1232.

Auto Call Adapter (ACA) (#1291, #1292, #1295, #1296): Provides automatic dialing capabilities on switched facilities. One of these features is required for each line equipped to automatically originate calls on switched networks. See Figure 3 for the selection of correct feature code. **Limitations:** The use of Auto Call in a line group precludes the last two lines/line pairs of that group ... see Figure 3. **Maximum:** Two per line group ... maximum total, six. **Field Installation:** Yes. **Prerequisites:** See Figure 3.

IBM Leased Line Adapter (#4743): A modem for Start/Stop data transmission at 134.5 or 600 bps over nonswitched facilities. This line adapter operates with Leased Line Adapters on other IBM products. Selection between 2- and 4-wire operation is made at installation time. See "Leased Line Adapter" in GA24-3435 for specifications and restrictions. **Specify:** See Figure 4C and 4D. **Maximum:** See Figure 4C and 4D. **Field Installation:** Yes. **Prerequisites:** #4792 or #4793 ... also see Figure 4C and 4D.

IBM 1200 bps Line Adapter (#4781, #4782, #4791): A modem for BSC data transmission at up to 1200 bps over nonswitched facilities or switched network. Also for Start/Stop transmission at 300, 600 or

3125 Processing Unit (cont'd)

1200 bps over nonswitched facilities to the 3767 terminal. Unclocked and must interface to an SLC (#7141-#7144) or AL (#1231).

The Line Adapter is available in three different versions:

#4781 -- nonswitched
#4782 -- switched with auto answer
#4891 -- switched with autocall and auto answer.

Attachment to nonswitched facilities is via an IBM-provided cable directly to the line. Attachment to the switched network is via an IBM-provided cable to FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. **Customer Responsibilities:** See M2700 pages. **Communciations Facilities:** See M2700 pages. **Specify:** See Figure 4C and 4D. **Maximum:** See Figure 4C and 4D. **Field Installation:** Yes. **Prerequisites:** #7141-#7144 or #1231 ... #4792 or #4793. Also see Figure 4C and 4D. #1295 or #1296 is required for #4791.

Line Adapter Base 2 (LAB2) (#4792): Permits attachment of two IBM 1200 bps Line Adapters for BSC lines and up to four IBM Leased Line Adapters. The Line Adapters are tied to specific line positions. See Figure 4C for configuration and possible line combinations. **Note:** LAB2 is required for IBM 1200 bps Line Adapters with Autoanswer (#4782) or with Autocall and Autoanswer (#4791). **Limitations:** LAB2 (#4792) and LAB3 (#4793) are mutually exclusive. **Maximum:** One. **Field Installation:** Yes.

Line Adapter Base 3 (LAB3) (#4793): Provides attachment of up to 12 IBM 1200 bps Line Adapters and IBM Leased Line Adapters. The Line Adapters are tied up to specific line positions. See Figure 4D for configuration and possible line combinations. **Limitations:** LAB2 (#4792) and LAB3 (#4793) are mutually exclusive. **Maximum:** One. **Field Installation:** Yes.

Synchronous Line Group (SLG) (#7100): Permits attachment of up to four medium speed BSC lines, SLC (#7141-#7144) and/or SL (#7151-#7154). Maximum line speed is 1200 and 7200 bps respectively. The lines in this group, positions S1 through S4, must be installed in ascending order. The lines can have different line speeds within the maximum specified. **Specify:** Maximum line speed in the group: **#9751**§ for 1200 bps maximum ... **#9753**§ for 2400 bps max ... **#9754**§ for 4800 bps max ... **#9757**§ for 7200 bps max. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4640.

Synchronous Line High Speed (SLHS) (#7121): Provides for the attachment of one nonswitched BSC line at speeds up to 50K bps. See Figure 1. This is a digital current interface for attachment to facility E1, E2 or E3. **Note:** Only for nonswitched point-to-point lines. **Limitations:** This line has a load factor of 100% and must not be operated simultaneously with any other line in the ICA. See Figure 5, Maximum ICA Configuration. #7121 and #7131 are mutually exclusive. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4640.

Synchronous Line, Low Load (SLLL) (#7131 - 1st Line, #7132 - 2nd Line): Each provides for the attachment of one switched or nonswitched BSC line. Nonswitched lines with switched network backup are supported. Maximum line speed on nonswitched lines is 7200 bps. Maximum line speed on switched backup network is 3600 bps. Maximum line speed on switched network is 2400 bps. See Figure 2B for detailed speed and facility information. Requires external modem. This feature has a lower load factor than #7151-#7154 ... see Figure 5. The Modem must provide clocking. **Specify:** The highest line speed used on #7131 and #7132: **#9758** if the highest line speed is from 1200 bps up to 4800 bps. **#9759** if the highest line speed is above 4800 bps and up to 7200 bps. **Note:** 1200 bps is the *LOWEST* allowed line speed for these features. SLG (#7100) not required as a prerequisite. **Limitations:** See Figure 5, Maximum ICA Configuration ... #7121 and #7131 are mutually exclusive. **Maximum:** One each, #7131 and #7132. **Field Installation:** Yes. **Prerequisites:** ICA (#4640) ... #7132 requires #7121 or #7131.

Synchronous Line Medium Spedd Clock (SLC) (#7141-#7144):

#7141 -- Line position S1
#7142 -- Line position S2
#7143 -- Line position S3
#7144 -- Line Position S4

Line positions S1 through S4 must be installed in ascending order. Each feature provides for the attachment of one switched or nonswitched BSC line. The clock can be set by the user for a transmission rate of 600 bps or 1200 bps. Connects to the line via an unclocked modem or IBM Line Adapter. **Notes:** IBM Line Adapters are tied to specific line positions ... see Figure 4C and 4D. SL (#7151-#7154) may be intermixed with SLC (#7141-#7144) within the SLG. **Limitations:** See Figure 5, Max. ICA Configuration. #7141 is mutually exclusive with #7151, #7142 with #7152, #7143 with #7153, and #7144 with #7154. **Maximum:** #7141 through #7144, one each. **Field Installation:** Yes. **Prerequisites:** #7100.

§ CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Synchronous Line Medium Speed (SL) (#7151-#7154):

#7151 -- Line position S1
#7152 -- Line position S2
#7153 -- Line position S3
#7154 -- Line position S4

Line positions S1 through S4 must be installed in ascending order. Each feature provides for the attachment of one switched or nonswitched BSC line. Nonswitched lines with switched network backup are supported. Maximum line speed on nonswitched line is 7200 bps; on switched backup network 3600 bps; on switched network 4800. See Figure 2B for detailed speed and facility information. Connects to the line via a modem. The modem must provide clocking. **Note:** SL (#7141-#7154) may be intermixed with SLC (#7141-#7144) within the SLG. **Limitations:** See Figure 5, Max. ICA Configuration. #7151 is mutually exclusive with #7141, #7152 with #7142, #7153 with #7143, and #7154 with #7144. **Maximum:** #7151 through #7154, one each. **Field Installation:** Yes. **Prerequisites:** #7100.

Telegraph Line Pair (TLP) (#7881 in ALG1, #7882 in ALG2): Provides for the attachment of two nonswitched single current telegraph lines at 45.5, 56.9, 74.2 or 75 bps. Attachment to the lines is via an IBM-provided external cable. Lines A1 through A4 in ALG1 and A5 through A8 in ALG2 are installed in ascending order. **Limitations:** See Figure 5, Max. ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG1. #1232, #1242 and #7882 cannot be intermixed within ALG2. **Maximum:** Four each. **Field Installation:** Yes. **Prerequisites:** #1201 is prerequisite to #7881. #1202 is prerequisite to #7882.

Modems: One IBM modem can be attached to each of the BSC lines of the ICA (#4640). **Prerequisites:** #7151-#7154 or #7131, #7132.

Modem	Speed (bps)
3863	2400/1200

3125 Processing Unit (cont'd)

MODEL CONVERSIONS

Planning for Mdl Conversions: When a customer requires feature changes and/or memory upgrades in addition to a mdl upgrade, consolidating the several changes into a single MES is not recommended. In these cases a planning session between sales, FE and the customer is required to develop the proper sequence of MES ordering.

Field installable.

3135 PROCESSING UNIT

[NO LONGER AVAILABLE]

The 3135 Is No Longer Available ... features and model changes can be ordered on an 'as available' basis.

PURPOSE

Has main and control storage, plus arithmetic and logic circuits for a S/370 model 135.

MODELS

Model FE	FE0	98,304 bytes of processor storage
Model GD	GD0	147,456 bytes of processor storage
Model GF	GF0	196,608 bytes of processor storage
Model H	H00	262,144 bytes of processor storage
Model HF	HF0	327,680 bytes of processor storage
Model HG	HG0	393,216 bytes of processor storage
Model I	I00	524,288 bytes of processor storage

For additional models of the 3135, see M3135-3 pages. **Prerequisites:** Each 3135 requires a 3046 Power Unit. See M3046 pages.

HIGHLIGHTS

Depending on the mdl, up to 524,288 bytes of processor storage are available. CPU cycle time varies from 275 to 1485 nanoseconds, depending on the internal operation being performed. Sixteen general-purpose and four floating point registers are provided.

Capability to natively attach a 2319 Disk Storage mdl A1 (and additional 2319 mdl A3, 2312 or 2318 Disk Storage). Capability to natively attach one or two 3333 Disk Storage and Control modules. Capability to natively attach one or two 3340 Direct Access Storage Facility mdl A2s. See 3340 and 3333 in "Machines". Capability to natively attach a 1403 Printer mdl 2, 7 or N1. See "Special Features." **Note:** 2312s, 2318s, and 2319 all mdls are no longer available.

Virtual storage capability to increase the effective utilization of main storage.

Up to eight teleprocessing lines are attachable via the Integrated Communications Adapter (#4640).

Standard features include a commercial instruction set, additional S/370 instructions, Extended Control (EC) Mode, Dynamic Address Translation, Channel Indirect Data Addressing, Program Event Recording, interval timer, time-of-day clock, store and fetch protect, console file, byte-oriented operand feature, error checking and correction on main and control storage, automatic instruction retry, channel command retry, byte multiplexer channel, OS/DOS Compatibility Feature, and audible alarm.

A standard console file is the basic microprogram loading device for the system. The console file contains a small, low-performance, read-only file device that provides all the microcode for the system on removable magnetic disk cartridges. The disks supplied with the system contain all of the required microcode for the basic system, the optional features ordered for the system, and CE diagnostics.

An optional Clock Comparator and Timer provide additional timing facilities for the programmer.

Control Storage Requirements

Reloadable Control Storage is housed in the 3135 and is loaded from the Console file. 24,576 bytes of control storage are standard; two additional increments of 12,288 bytes are available if required to support special features.

Table of Control Storage Requirements	Bytes
Basic Systems Microcode	15,482

String Switch Attachment (#9841) w/**#9316*****	0
Synchronous Data Adapter Type II (**#9649-#9656**)*	3,700
Adapter Base Type I +*	1,200
Terminal Adapter Type I Model II (**#9721-#9728**)+*	1,700
Telegraph Adapter Type II (**#9785-#9792**)+*	200
Terminal Adapter Type III (**#9753-#9760**)*	2,100
Fixed Head Attachment (**#9190**) with **#9314**	300
Fixed Head Attachment (**#9190**) with **#9315**	300

* The specified control storage is required only once for any number of lines of one type.

\+ For Telegraph Adapter Type II or Terminal Adapter Type I Model II, the control storage required is the Adapter Base Type I plus the control storage for the appropriate adapter. One copy of Adapter Base Type I is automatically included whenever either or both of these adapters are ordered.

++ Requires **#9314**

*** Requires either **#9313** or **#9315**

For the basic system and applicable special features, total the control storage requirements given in the table. If the total exceeds 24,576 bytes, First 12K C ontrol Storage Increment (#7861) is required. If the total exceeds 36,864 bytes, Second 12K Control Storage Increment (#7862) is also required.

Limitations: The maximum configuration that can operate at any one time is determined by the available control storage (maximum 49,152 bytes). Alternate feature configurations can be operated by utilizing additional magnetic disk cartridges with another set of 3135 features. Alternate cartridges for an installation with be available by RPQ.

Virtual Storage

Extended Control (EC) Mode expands the structure of the Program Status Word to accommodate the control of additional S/370 features and extends the number of permanently assigned main storage locations. The S/370 mdl 135 can operate in either EC Mode or Basic Control (BC) Mode as defined for the S/360. Dynamic Address Translation (DAT) is a standard feature on the S/370 mdl 135. When the S/370 mdl 135 is in Extended Control (EC) Mode with Translation Mode operable, program addresses are treated as "logical addresses" and the translation feature develops "real addresses". Since logical storage addressing is not limited by the amount of available real storage, program size may exceed real storage size. This logical storage is referred to as "virtual storage" and may be as large as 16,777,216 bytes on the S/370 mdl 135. For I/O operations, Channel Indirect Data Addressing provides a means to transmit data that spans pages in non-contiguous real storage.

Program Event Recording, a standard feature, is a debugging aid which permits four types of events to be selectively monitored in a virtual environment: (1) successful branches; (2) instruction fetch address compare; (3) main storage alteration address compare; (4) general-purpose register alteration address compare.

Input/Output Attachments: A wide variety of I/O devices may be attached to the S/370 mdl 135 via the standard byte multiplexer and optional selector channels. There are, additionally, five direct attachment features for the 3135. They are:

Console Printer-Keyboard (required): This unit serves as the online I/O device for operator/system communications. It provides a means of manually entering data into the system, altering or displaying data already in storage, and for printing error logout messages.

2319 Integrated File Adapter (#4650) (Optional): This feature enables native attachment of a 2319 Disk Storage mdl A1 (and a 2319 mdl A3, 2312 mdl A1s, or 2318 mdl A1), up to a total of eight drives. The IFA is addressed as channel 1. **Limitations:** Cannot be installed if 3333/3340 Intermix (**#9315**) is specified when 3330/3340 Series IFA (#4655) is also ordered.

3330/3340 Series Integrated File Adapter (#4655) (Optional): This feature allows the native attachment of one or two 3333 modules or 3340 A2 units. Each 3333 module (either mdl 1 or mdl 11) can attach up to three 3330 modules (any combination of mdls 1, 2 or 11). Each 3340 mdl A2 can attach 3340 mdl B2 or B1 units, and one 3340 mdl A2 can also attach 3344 units to a maximum of eight drives. One but not both 3340 mdl A2s which can attach to an IFA may have up to three 3344s attached. Maximum is sixteen drives per IFA. If 2319 IFA (#4650) is also present, IFA Conversion (#4645) is required.

Integrated Communications Adapter (#4640) (Optional): This feature provides attachment of up to eight teleprocessing lines to the

3135 Processing Unit (cont'd)

3135. These may be any combination of supported BSC and Start/Stop lines and appear to the processor as if connected via one or more 2701s on the byte multiplexer channel.

Integrated Printer Adapter (Optional): This feature enables native attachment of a 1403 Printer mdl 2, 7 or N1. The Universal Character Set Feature can be optionally specified on the 1403 mdl 2 or N1.

Input/Output Channels

Byte Multiplexer Channel: One is standard on the 3135 and is functionally equivalent to the byte multiplexer channel on S/360 mdl 22, 25, 30, 40, 50. Sixteen subchannels are provided as standard, with the option to extend to 64, 128 or 256. See "Special Features". From the number of subchannels chosen, one must be allocated to the Console Printer-Keyboard (see "Specify") and one to each ICA line installed. The byte multiplexer channel provides eight control unit positions and permits I/O units to operate normally in byte mode, giving the effect of several I/O operations simultaneous with computing. Burst mode operation of unbuffered devices operating in excess of 10KB is not allowed for concurrent operation with the Integrated File Adapter, the Integrated Communications Adapter, or a Selector Channel. See *IBM S/370 Mdl 135 Channel Characteristics Manual,* GA33-3010 for further clarification. For OS exclusion, refer to *System Generation,* GC28-6554.

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See Multiplexer Subchannels, Additional, in "Special Features".

Selector Channels: Two are available as special features. Data rates are 1.3 megabytes per second. Direct access devices may be attached to selector channels and/or to the Integrated File Adapters. If either or both the 2319 IFA and the 3330/3340 IFA is present, the following applies:

- Direct access devices should be attached to the higher priority selector channel (normally the first).
- If the device on the higher priority selector channel is the 3330/3340 Disk Storage Series, the lower priority selector channel should be limited to devices with data rates not exceeding 144KB per second.
- The selector channel priorities for command chaining may be reversed by specifying Channel Priority (#1501).

If the 3330/3340 Series IFA or both IFAs are present without additional direct access devices attached via a selector channel, tape units on selector channels 2 and 3 are limited to an aggregate 950KB.

If an IFA is not present, two channels of 3330/3340/3350 Series DASD can be attached. For additional information and limitations, see *S/370 Mdl 135 Channel Characteristics,* GA33-3010.

Attention: If Block Multiplexer Channel(s) are installed, subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. Also see Block Multiplexer Shared Subchannels in "Special Features".

Console Function: A standard system control panel is located on the 3135. It has switches and lights necessary to operate and control the system. A system console I/O function is provided with either of two alternatives. Feature #7844 attaches the 3210 Console Printer-Keyboard mdl 1 (15.5 cps) on the console table reading board. Optionally, the 3215 Console Printer-Keyboard (85 cps) may be attached via feature #7855. A right reading board extension is standard on the 3135; a left extension is not available. Either feature #7844 or #7855 is required in the system. See "Special Features".

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Cabling: **#9080** for below the floor; **#9081** for on the floor.
- Console Printer Keyboard Address: Recorded on console file disk at the plant **#9101**‡ for "01F" or **#9102**‡ for "009".
- Minimum Configuration: See "Minimum Configurations" in "Systems" for minimum I/O units required in a S/370 mdl 135.
- Console Printer-Keyboard: A 3210 mdl 1 or 3215 is required in every system. See M3210, 3215 pages and "Special Features" below.

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

- Shipping Instructions: Unless otherwise specified, shipping dimensions of the 3135 Frame 01 (CPU) are 31-1/2 inches wide x 70 inches long x 60 inches high. Removal of the side covers will reduce the width to 29-1/2 inches. If further reduction in length is required, specify **#9570**. Shipping dimensions will then be 29-1/2 inches wide x 60 inches long x 60 inches high.

Note: RETAIN/370 ... CE access is by telephone.

SPECIAL FEATURES

APL Assist (#1005): Provides performance assist to APL programs when used with VS APL PP (#5748-AP1). **Prerequisites:** #7861, #7862 and #3900. **Field Installation:** Yes.

Conditional Swapping (#1051): Provides two additional instructions: COMPARE and SWAP COMPARE DOUBLE and SWAP. This feature is a prerequisite for the execution of VTAM programming support and for TCAM/NCP. **Field Installation:** Yes.

Autocall (#1290): : Provides automatic calling capabilities on facilities C1, C2, C4 or C5 to initiate (dial), through stored program control, a data link to a remote station. For the appropriate calling units, see M2700 pages. **Specify:** Refer to Table 1C for Terminal Adapter Type I Mdl II or Table 1E for Synchronous Data Adapter Type II or Table 1-F for Telegraph Adapter Type II for appropriate feature code according to line positions desired. **Limitations:** Each Autocall feature installed reduces the number of lines available on the ICA by one. Autocall must be ordered once for each line where the function is desired. Thus, the ICA can accommodate a maximum of four lines if each of these lines also has the Autocall feature. A single Autocall feature can be associated with any of the lines from one to seven. **Cable Order:** Required. **Maximum:** Four. **Prerequisites: 9721-#9728** or **9649-#9656 #9785-#9792** and **#9625-#9632**; and **9625-#9632 Field Installation:** Yes.

Block Multiplexer Channel (#1421): Increases the efficiency of the 3330/3340 Series IFA and selector channel(s) when using direct access storage devices equipped with rotational position sensing or other devices capable of disconnected command chaining. The disconnected command chaining feature of the channel allows multiple devices to perform non-data transfer operation concurrently with one data transfer operation. This permits increased utilization of the channel(s) by performing operations of other devices while the channel would normally have been waiting on one device. The feature provides 16 non-shared and one shared selector subchannel. The shared selector subchannel may attach a control unit having a maximum of 16 device addresses. Devices on a block multiplexer channel which cannot utilize the block multiplexer feature will function as if attached to a conventional selector channel. **Maximum:** One. Applies to both selector channels and to the 3330/3340 Series IFA. **Field Installation:** Yes. **Prerequisites:** #6981 or #4655.

Block Multiplexer Shared Subchannel (#1431): (Note: This feature should only be installed if devices capable of "Block Shared" operation are installed on the block multiplexer channel. See *I/O Configuration Form,* GA22-7002.)

Allows any one of the following combinations of "Non-Shared", "Block Shared", or selector subchannels to be attached to the Block Multiplexer Channel (#1421): [1] 16 non-shared and one shared selector (see "Address Restrictions") ... [2] 8 non-shared, 8 block shared, and 1 shared selector (see "Address Restrictions") ... [3] 8 non-shared, 4 block shared, 1 shared selector (see "Address Restrictions"). If option [2] is selected, then each block shared subchannel may have attached to it a control unit having a maximum of 16 device addresses. If option [3] is selected, the four block shared subchannels may each have attached a control unit having a maximum of 32 device addresses. If option [1] is selected, no block shared subchannels are available, and addresses X00 through X7F are not available. With any option, the selector subchannel may have attached to it control units with a maximum of 16 device addresses. This feature will apply to both selector channels if installed. The options are selectable by the Customer Engineer and may be defined differently on each channel. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1421.

Address Restrictions with #1431:

a) Addresses X00 through X7F are assigned as block shared subchannels. With option [1], they may not be used. With option [2], each control unit address position, i.e., X00, X10, X20, etc., through X70 is available. With option [3], "even" control unit address positions only are available, i.e., 00, 20, 40 and 60.

b) Selector and non-shared addresses are limited to addresses X80 through XFF.

Channel Priority (#1501): When the IFA (#4650 or #4655) and both selector channels are present, this feature changes the higher priority for command chaining from the first selector channel (Channel 2) to the second selector channel (Channel 3). #1501 is required if any DASD devices are to be attached to Channel 3. **Field Installation:** Yes. **Prerequisites:** #4650 or #4655 and both #6981 and #6982.

Clock Comparator and CPU Timer (#2001): The Clock Comparator provides a means of causing an interruption when the time-of-day clock has passed a program-specified value. The CPU Timer is a binary counter which is decremented every microsecond but has a resolution of 16 microseconds. It provides a means for measuring elapsed CPU

‡ CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

3135 Processing Unit (cont'd)

time by causing an interruption when a prespecified amount of time has elapsed. **Maximum:** One. **Field Installation:** Yes.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct, and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes, between two cable-connected processing units, or cable-connected processing unit and external devices. **Maximum:** One. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/360 Direct Control Feature - OEMI,* GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning,* GC22-7004. **Field Installation:** Yes.

Extended Precision Floating Point (#3840): Extends the precision of floating point instructions to 28 hexadecimal digits. **Field Installation:** Yes. **Prerequisites:** #3900.

Floating Point (#3900): Adds 44 floating point arithmetic instructions, which, with the Standard Set, make up the Scientific Instruction Set. **Field Installation:** Yes.

Multiplexer Subchannels, Add'l (#3905-#3907): To increase the number of I/O devices on the byte multiplexer channel, the number of subchannels can be increased by specifying one of the following: #3905 for 64 subchannels), #3906 for 128 subchannels, #3907 for 256 subchannels. The maximum number of shared subchannels is eight. When 256 subchannels are installed, there are no shared subchannels. Also see "Byte Multiplexer Channel" under "Input/Output Channels" above. **Note:** The number of subchannels ordered must be equal to or greater than the device addresses. **Field Installation:** Yes.

1401/1440/1460 Compatibility (#4457): Microprogrammed controlled feature, which, in combination with special software, permits the system to execute 1401/1440/1460 instructions. **Field Installation:** Yes.

Integrated Communications Adapter (#4640): Provides the circuits and controls for direct attachment of up to eight teleprocessing lines to the 3135. The controls for the first line adapter are included in this feature. Lines can be any combination of Start/Stop or BSC. Provides for the attachment of 1050, 2260 mdl 1, 2260 mdl 2, 2265 mdl 1, 2740 mdl 1, 2740 mdl 2, 2741 mdl 1, 2760 mdl 1, 5010 AXX, or any IBM computer, multiplexer, or terminal conforming to the Binary Synchronous Communication (BSC) standard. **Note:** In addition to the appropriate adapter, each communication line attached to the system requires an external modem. Refer to Table 2 below to define customer configuration requirements prior to ordering features below. **Customer Responsibilities:** See M2700 pages for customer responsibilities regarding communication facilities and servicing requirements. **Communications Facilities:** See M2700 pages for communication facility requirements with this feature. **Field Installation:** Yes. See "Specify Requirements for Integrated Communication Adapter" under "Specify".

IFA Conversion (#4645): Permits co-residence of both 2319 IFA (#4650) and 3330/3340 Series IFA (#4655). Both IFAs are addressed as Channel 1. **Limitations:** Cannot be installed if 3333/3340 Intermix (**#9315**) or 3344 Attach (**#9317**) is specified. Cannot be installed with 2314/3340 Compatibility Feature (#8070). **Maximum:** One per 3135. **Prerequisites:** #4650 and #4655. **Field Installation:** Yes.

2319 Integrated File Adapter (#4650): Permits native attachment of a 2319 Disk Storage mdl A1 (and a 2319 mdl A3, 2312 mdl A1, or 2318 mdl A1) up to a total of eight drives. Standard features include file scan and record overflow functions. The IFA is always addressed as channel 1. **Note:** 2312 mdl A1s, 2318 mdl A1s, and 2319 all mdls are no longer available. **Limitations:** Cannot be installed if 3333/3340 Intermix (**#9315**) is specified. Cannot be installed with 2314/3340 Compatibility (#8070). **Maximum:** One per 3135. **Prerequisites:** #4645 is required if installed with 3330 or 3340 Series IFA (#4655). **Field Installation:** Yes.

3330/3340 Series Integrated File Adapter (#4655): Permits native attachment of up to two 3333s or 3340 mdl A2s. A maximum of sixteen 3330 or 3340 Series drives may be attached to the IFA. The IFA supports rotational position sensing, disconnected command chaining, and multiple requesting. Record overflow is standard. For 3330, standard I/O addresses are (hex) 150 through 15F. For 3340, standard addresses are (hex) 1C0 through 1CF. For 3340 with 3344 standard addresses are (hex) 1C0 through 1E1. **Maximum:** One. **Prerequisites:** #4645 is required if installed with 2319 IFA (#4650). **Field Installation:** Yes. **Note:** 2319 all mdls no longer available.

Specify:

1. DASD Designation. Specify *ONE* of the following: **#9313**‡ (DASD 3333/3330) to attach up to two 3333 mdl 1s, each with up to three 3330 mdls 1, 2 in any combination. **#9314**‡ (DASD 3340 only) to attach up to two 3340 mdl A2s, each with up to three 3340 mdls B1, B2 in any combination. **#9315**‡ (3333/3340 Intermix) to attach one 3333 mdl 1 (with up to three 3330 mdls 1, 2 in any combination) plus one 3340 mdl A2 (with up to three 3340 mdls B1, B2 in any combination). **#9315** cannot be installed with IFA Conversion Feature (#4645).

2. If any 3333 mdl 11 and/or 3330 mdl 11 is to be attached, also specify **#9316**‡ (3333/3330 mdl 11) in addition to **#9313** or **#9315**.

With **#9313** plus **#9316** a mixture of one 3333 mdl 1 and one 3333 mdl 11, each with up to three 3330 mdls 1, 2 and 11 (in any combination) can be attached, or two 3333 mdl 11s, each with any mixture of up to three 3330 mdls 1, 2 and 11.

With **#9315** plus **#9316**, one 3333 (either mdl 1 or mdl 11) with up to three 3330 mdls 1, 2 and 11 (in any combination) can be attached in addition to one 3340 mdl A2 with up to three associated mdls B1, B2. The standard addresses with **#9315** for 3330 are (hex) 150 through 157, for 3340 (hex) 158 through 15F.

3. If any 3344 is to be attached, specify **#9317**‡ in addition to **#9314** (**#9317** and **#9315** are mutually exclusive). **#9190**‡ must also be specified if 3344 mdl B2Fs or the 3340 Fixed Head Feature (#4301, #4302) is ordered.

With **#9314, #9317** and **#9190** up to three 3344 mdl B2/B2F and/or 3340 mdl B2, B1 units in any combination can be attached to one 3340 mdl A2. The second 3340 mdl A2 if present can attach up to three 3340 mdl B1/B2 units.

#9317 is mutally exclusive with IFA Conversion Feature (#4645) and with 2314/3340 Compatibility Feature (#8070).

4. When just **#9314** is specified, also specify 3340 Address Designation: **#9820**‡ for addresses (hex) 1C0 through 1CF, or **#9821**‡ for addresses (hex) 160 through 16F. The specification of 160 allows the 3135 IFA addresses to coincide with those of the 3115 and 3125 IFAs.

5. When **#9314** or **#9315** is specified, also specify **#9190**‡ (Fixed Head Attachment) if Fixed Head Feature (#4301, #4302) is ordered for any 3340 attached to the IFA.

6. If String Switch (#8150) is ordered for any attached 3333 or 3340 mdl A2, specify String Switch Attachment (**#9841**)‡.

7. When **#9821**‡ is specified in conjunction with **#9813** the addresses for the 3333/3330s are (HEX) 160 thru 16F.

8. When **#9821**‡ is specified and both **#9314** and **#9317** are specified the addresses for the 3340/3344s are as follows:

	3340 A2		---- 3344 B2/B2Fs ----					
String 0	160	161	162	163	164	165	166	167
			172	173	174	175	176	177
			1E2	1E3	1E4	1E5	1E6	1E7
			1F2	1F3	1F4	1F5	1F6	1F7
Physical Drive	0	1	2	3	4	5	6	7

	3340 A2		---- 3340 B2s ----					
String 1	168	169	16A	16B	16C	16D	16E	16F

Note 1: The DASD control combinations that can be attached to the 3330/3340 Series IFA (#4655) are shown in the left hand column of the table below. From Section A of the table select one of the feature numbers shown (one and only one must be selected). From Section B select the feature number(s) required to support your configuration (select none, one, or more than one from Section B). Section C of the table shows the addresses available. The specification of the (hex) 160 addresses allows the 3135 IFA addresses to coincide with those of the 3115 and 3125 IFA. Select a number from Section C if required.

Note 2: Any change to an installed DASD configuration requires an MES ONLY if the new configuration indicates that a different Specify and/or Special Features not previously installed AND removal of any not listed as required for the new configuration.

*** Mutually exclusive with 3344 Attachment (**#9317**) and 2314/3340 Compatibility (**#8070**).

Integrated Printer Adapter Basic Control (#4670): Provides the power supply and basic control for a natively attached 1403 Printer. The standard address is '00E'. **Specify: #9485**‡ if optional address of '00F' is desired. **Maximum:** One. **Field Installation:** Yes.

Note: If the optional addresses of '01F' for the Console Printer Keyboard (#3210 or #3215) and '00F' for the integrated 1403 are both used, Multiplexer Subchannels, Add'l (#3905) must be specified.

Integrated 1403 Printer Mdl 2/Mdl N1 Attachment (#4672): Provides control for attaching 1403 mdl 2 or mdl N1. Specify: **#9182**‡ to attach 1403 mdl 2, **#9188**‡ to attach 1403 mdl N1. **Maximum:** One. **Prerequisites:** #4670. On the 1403, **#9709** and **#9725** are required on a mdl 2; **#9726** is required on a mdl N1. See Specify under 1403. **Field Installation:** Yes.

Integrated 1403 Printer Mdl 7 Attachment (#4677): Provides control for attaching 1403 mdl 7. **Maximum:** One. **Prerequisites:** #4670. On the 1403, **#9725** is required on a mdl 7. See "Specify" under 1403. **Field Installation:** Yes.

Additional Lines (#4722-#4728): Each provides circuits and controls for attachment of an additional line adapter, for a total of eight lines in the system. **Specify:** Order additional lines according to line position required. See Table 1-A. Each line specified requires the next lower order line as a prerequisite. **Maximum:** One of each (#4722 through #4728). **Field Installation:** Yes. **Prerequisites:** #4640.

Specify Requirements For Integrated Communications Adapter:

For each line (#4722-#4728) attached to the ICA, including the first line included in #4640, one of the following line adapters must be specified: Terminal Adapter Type 1 Mdl II (**#9721-#9728**), Terminal Adapter Type III (**#9753-#9760**),

Telegraph Adapter Type II (**#9785-#9792**) or Synchronous Data Adapter Type II (**#9649-#9656**). Each line adapter and all associated features must be specified according to the line position to which they correspond. Refer to Table 2 below prior to ordering features for the ICA.

Selector Channel (#6981, #6982): Each adds a high-speed channel to the system. The channel permits overlapped I/O operation with processing. Eight control unit positions are provided on each channel. If an Integrated File Adapter (#4650 or #4655) is present, these channels are addressed as 2 and 3, respectively. Otherwise, they are addressed as 1 and 2. #6981 for first selector channel, #6982 for second. **Field Installation:** Yes. **Prerequisites:** #6982 requires #6981.

‡ **CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.**

S/360 Mdl 20 Compatibility (#7520): Microprogram-controlled feature, which, in combination with special software, permits the system to execute S/360 mdl 20 or S/360 mdl 25 in mdl 20 mode instructions. **Field Installation:** Yes.

3210 Mdl 1 Adapter (#7844): To attach a 3210 Console Printer-Keyboard mdl 1 (15.5 cps) for systems console I/O; includes an alter-display ability. **Maximum:** One. **Limitations:** Cannot be installed with 3215 Adapter (#7855). **Field Installation:** Yes. **Prerequisites:** Uses one address on the standard byte multiplexer channel, but does not use a control unit position. See "Specify."

3215 Adapter (#7855): To attach a 3215 Console Printer-Keyboard (85 cps) for system console I/O; includes alter-display ability. **Maximum:** One. **Limitations:** Cannot be installed with 3210 mdl 1 Adapter (#7844). **Field Installation:** Yes. **Prerequisites:** Uses one address on the standard byte multiplexer channel, but does not use a control unit position. See "Specify."

12K Control Storage Increments (#7861, #7862): Each adds 12,288 bytes of control storage. Required for some feature combinations. See "Control Storage Requirements under "Highlights" for detail. #7861 for first 12K increment, #7862 for second. **Field Installation:** Yes. **Prerequisites:** #7862 requires #7861.

2314/3340 Compatibility (#8070): Permits the emulation of 2314/2319 volumes on the 3340 Disk Storage. The user program may access both the emulated 2314 data set as well as 3340 volumes. This provides a "mixed-mode" operating environment. "Mixed-mode" is only possible with DOS releases which support 3340 on mdl 135. **Maximum:** One. **Limitations:** Cannot be installed with IFA Conversion (#4645), 2319 IFA (#4650), 3330/3340 Intermix (**#9315**), 3344 Attach (**#9317**), or String Switch Attachment (**#9841**). **Field Installation:** Yes. **Prerequisites:** **#9314** on 3330/3340 Series IFA (#4655).

Universal Character Set Adapter (#8637): Permits the use of the Universal Character Set Feature on a 1403 Mdl 2 or Mdl N1 attached via the Integrated 1403 Printer Mdl 2, Mdl N1 Attachment (#4672). **Maximum:** One. **Prerequisites:** #4670, #4672. **Field Installation:** Yes.

Virtual Machine Assist (#8740): Provides assist to VS operating systems operating under VM/370 by emulation of certain privileged operations. **Field Installation:** Yes. **Prerequisites:** #2001 and #3900.

300 bps (#9593-#9600)‡: Allows the Terminal Adapter Type 1 Mdl II to operate at 300 bps. **Specify:** Refer to Table 1-C for Terminal Adapter Type I Mdl II for appropriate feature code according to the line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Terminal Adapter Type 1 Mdl II. 3863 mdl 1, or 3872 mdl 1) which, although basically 2400 bps modems, offer a 1200 bps half-speed facility. Since the requirements for the Modem Clocking feature are defined by the type of modem, not the line speed, the Modem Clocking Feature (**#9609-#9616**) is still required as a prerequisite on the ICA when such modems are attached to the Synchronous Data Adapter Type II and are switched for 1200 bps operation. **Specify:** Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for approprite feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Terminal Adapter Type III or Synchronous Data Adapter Type II.

Half-Duplex Facility (#9617-#9624)‡: Required if the Synchronous Data Adapter Type II is attached to a two-wire facility. **Note:** This feature is not required with Switched Network (**#9625-#9632**) or Tributary Station (**#9665-#9672**). **Specify:** Refer to Table 1-E for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Synchronous Data Adapter Type II.

Switched Network Facility (#9625-#9632)‡: Allows the Terminal Adapter Type I mdl II or the Synchronous Data Adapter Type II to operate over C-type switched lines. **Specify:** Refer to Table 1-C for Terminal Adapter Type I mdl II or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Terminal Adapter Type I mdl II, or Synchronous Data Adapter Type II.

Synchronous Data Adapter Type II (#9649-#9656)‡: Provides control of data transfers between the 3135 and binary synchronous terminals. See "Binary Synchronous Terminals" under 2701 Data Adapter Unit. Control Station is included with this feature. **Specify:** Refer to Table 1-B for appropriate feature code according to line position(s) desired.

Speed Selection: Provides operation over C3, D2, and D3 facilities at 600 bps if 600 Bits Per Second feature is specified ... see above. Provides operation over C4 and D3 facilities at 1200 bps (no speed need be specified). Provides operation over C5M facility at 2000 bps if Modem Clocking is specified ... see above. Provides operation over C5, D4, or X1M at 2400 bps, over C6, D5, or X2M at 4800 bps, or over D6 at 7200 bps ... see above.

Field Installation: Yes. **Prerequisites:** #4640.

3135 Processing Unit (cont'd)

For special requirements: See Table 1-E and features below for additional specify requirements if Half-duplex Facility, Transparency, Tributary Station, Switched Network Facility, Autocall, EON, or New Sync are required. See Table 1-E and 600 Bits Per Second (#9601-#9608) if operation at 600 bps is required. See Table 1-E and Modem Clocking below if 2000 bps, 2400 bps, 4800 bps, or 7200 bps operation is required. The appropriate Data Code feature must be specified if other than EBCDIC is required as the primary data code. See "Data Code Features" below.

Limitations: For line speed limitations, refer to *Mdl 135 Channel Characteristics Manual*, GA33-3010.

Note on Data Code Features:

The primary data code for the SDA Type II is EBCDIC. As an option to EBCDIC, either ASCII or 6-bit Transcode (2780 Data Transmission Terminal only) may be specified as the primary code. In addition to the primary data code, an alternate data code, selected under program control, may be specified for the Synchronous Data Adapter Type II. EBCDIC, ASCII, or 6-bit Transcode may be selected as an alternate code. **Specify (for data code features):** Refer to Table 1-E for appropriate feature codes according to line position(s) desired. **Field Installation (of data code features):** Yes. **Prerequisites (for data code features):** Synchronous Data Adapter Type II.

Tributary Station (#9665-#9672)‡: Required when a Synchronous Data Adapter Type II is installed and functioning as a leased communication line, as a tributary station, and not functioning as a control station. **Specify:** Refer to Table 1-E for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Synchronous Data Adapter Type II.

Transparency (#9673-#9680)‡: Provides the Synchronous Data Adapter Type II with the ability to transmit and receive 8-bit binary data as well as EBCDIC or ASCII codes; or 6-bit binary data as well as 6-bit Transcode. This feature with ASCII modifies VRC/LRC checking to VRC/CRC checking. **Limitation:** ASCII code and Transparency cannot be installed together for the same line position when attached to the 2770, 2780, 3780, S/3 or S/7. On S/32, EBCDIC and EBCDIC Transparency are standard, and one is selected by programming. **Specify:** Refer to Table 1-E for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Synchronous Data Adapter Type II.

Terminal Adapter Type I Model II (#9721-#9728)‡: Controls data transfers between the 3135 and 1050/2740 mdl 1/2741/5010 mdl Axx over facility C1 or D1, and between the 3135 and 2740 mdl 2 or 5010 mdl Axx over facility D1 or D2. Includes vertical and longitudinal checking for 1050 terminals and 2740s equipped with Record Checking (#6114). **Specify:** Refer to Table 1-B for appropriate feature code according to line position(s) desired. **Special Requirements:** See Table 1-C and features below for additional specify requirements if Switched Network Facility, Write Interrupt, Unit Exception Suppression, Read Interrupt, or Autocall are required. Normal operation is at 134.5 bps. 600 Bits Per Second feature must be specified for operation at 600 bps to 2740s or 5010 mdl Axx. **Field Installation:** Yes. **Prerequisites:** #4640.

Unit Exception Suppression (#9729-#9736)‡: If this feature is installed with Terminal Adapter Type 1 Mdl II, Unit Exception will not be set in response to a Circle C. Not supported under BTAM, QTAM or TCAM. **Specify:** Refer to Table 1-C for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Terminal Adapter Type 1 Mdl II.

Read Interrupt (#9737-#9744)‡: Allows the Terminal Adapter Type I mdl II to operate with a 2741 equipped with Transmit Interrupt (#7900). Not supported under BTAM, QTAM or TCAM. **Specify:** Refer to Table 1-C for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Terminal Adapter Type 1 Mdl II.

Write Interrupt (#9745-#9752)‡: Allows the Terminal Adapter Type 1 Mdl II to operate with a 2741 equipped with Receive Interrupt (#4708). Not supported under BTAM, QTAM or TCAM. **Specify:** Refer to Table 1-C for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Terminal Adapter Type I mdl II.

Terminal Adapter Type III (#9753-#9760)‡: Controls data transfers between the 3135 and either remote 2845 Display Controls or 2848 Display Controls operating at 1200 bps over facility D3. Permits operation at 2400 bps over facility D4 if Modem Clocking is specified. **Specify:** Refer to Table 1-B for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** #4640.

Multipoint (#9761-#9768)‡: Specifies that a Terminal Adapter Type III is to operate in multipoint mode. If **#9761-#9768** is not ordered for a given Terminal Adapter Type III, point-to-point operation is presumed. **Specify:** Refer to Table 1-D for appropriate feature code according to line positions desired. **Prerequisites:** Terminal Adapter Type III. **Field Installation:** Yes.

Telegraph Adapter Type II (#9785-#9792)‡: Controls data transfers between ICA and Mdl 33/35 TTY terminals (8 level code at 110 bps only) with facility C2. **Specify:** Refer to Table 1-B for appropriate feature code according to line positions desired. **Field Installation:** Yes. **Prerequisites:** #4640 and **#9625-#9632**.

EON (#9801-#9807)‡ : Automatically generates an EON digit at the end of the dial sequence. **Specify:** Refer to Table 1E for appropriate feature code according to line position desired. Specify for 3872 and 3874 with EON option. **Field Installation:** Yes. **Prerequisites:** #1290, **#9649-#9656**.

New Sync (#9808-#9815)‡: Allows Synchronous Data Adapter Type II or Terminal Adapter Type III to be connected to modems which offer the New Sync feature option and have this option installed. New Sync feature minimizes modem turn-around and allows faster bit synchronization of the following data. **Specify:** Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites: #9609-#9616** and a modem offering New Sync. **Note:** New Sync is not required if **#9617-#9624**, **#9665-#9672**, or **#9625-#9632** is installed for the line position in question.

Modems:

Up to eight modems can be attached to a 3135, any mdl. **Prerequisites:** Integrated Communications Adapter (#4640) and Synchronous Communications Adapter Type II (**#9649-#9656**) 2400 bps to 7200 bps, Terminal Adapter Type 1 Mdl II (**#9721-#9728**) 134.5 bps to 600 bps, or Terminal Adapter Type III (**#9753-#9760**) 1200 bps or 2400 bps. See feature descriptions for limitations.

Modem	Speed (bps)
3863	2400
3864	4800
3872	2400
3874	4800
3875	7200

Note: For communications capabilities, product utilization, and special features, see M2700, 3863, 3864, 3872, 3874, 3875.

MES Orders

For an MES order containing multiple features, the sequence of installation of individual features is determined at the plant of manufacture. No change to MES content or sequence can be made at installation time. If changes are required, the original MES must be cancelled and a new one originated.

Communication Information Tables

Before ordering, check Special Feature write-ups for Prerequisites and Limitations.

TABLE 1-A ADDITIONAL LINE APPEARANCES

	Line Position							
FEATURE	1	2	3	4	5	6	7	8
Additional Lines	4640	4722	4723	4724	4725	4726	4727	4728

Specify additional lines according to line positions.

TABLE 1-B TERMINAL ADAPTERS

		Line Position							
FEATURE		1	2	3	4	5	6	7	8
Terminal Adapter Type 1 mdl II‡	9721	9722	9723	9724	9725	9726	9727	9728	
Terminal Adapter Type III‡	9753	9754	9755	9756	9757	9758	9759	9760	
Synchronous Data Adapter Type II‡	9649	9650	9651	9652	9653	9654	9655	9656	
Telegraph Adapter Type II‡	9785	9786	9877	9788	9789	9790	9791	9792	

Any adapter added, removed, or relocated to another line position requires reconfiguration of the entire line.

Select one terminal adapter for each line position specified in Table 1-A.

‡ CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

2848 Display Control mdls 1, 2 and 3 (point-to-point or multipoint)		1200	D3	Terminal Adapter Type III multipoint for multipoint operation
	3872 mdl 1	2400	D4	Terminal Adapter Type III, Modem Clocking multipoint for multipoint operation, New Sync (if required)
3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (without interrupt feature)		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, 300 Bits Per Second Line Speed
			D1	Terminal Adapter Type 1 mdl II, 300 Bits Per Second Line Speed
3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt feature)		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Transmit Interrupt feature)		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Read Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt and Transmit Interrupt features)		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Write Interrupt, Read Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
3767 Communication Terminal mdl 1 or 2 with #7111 - 2740 Line Control		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, 300 Bits Per Second Line Speed
			D1	Terminal Adapter Type 1 mdl II, 300 Bits Per Second Line Speed
3767 Communication Terminal mdl 1 or 2 or 3 with #7112 - 2740-2 Line Control		600	D2	Terminal Adapter Type 1 mdl II, 600 Bits Per Second Line Speed
System/7		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility
			D1	Terminal Adapter Type 1 mdl II
		600	D2	Terminal Adapter Type 1 mdl II, 600 Bits Per Second Line Speed
5100/5110 Computer		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, Write Interrupt, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Read Interrupt, Write Interrupt, Unit-Exception Suppression (if required)
		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Read Interrupt, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
TTY 33/35		110	C2	Telegraph Adapter Type II

3135 Processing Unit (cont'd)

TABLE 2 -- Part 2 **FEATURES REQUIRED FOR BINARY SYNCHRONOUS TERMINALS**

Line Speed (bps)	IBM Modem	Manner of Line Operation	Communication Line and Modem Facilities	Features Required
600		Point-to-Point	D3 (two-wire)	Synchronous Data Adapter Type II, 600 Bits Per Second, Half Duplex Facility, Data Code features
			D2 (four-wire)	Synchronous Data Adapter Type II, 600 Bits Per Second, Data Code features
			C3	Synchronous Data Adapter Type II, 600 Bits Per Second, Switched Network facility, Data Code features
		Multipoint -- 3135 as Control Station	D2 (four-wire)	Synchronous Adapter Type II, 600 Bits Per Second, Data Code features
		Multipoint -- 3135 as Tributary Station	D2 (four-wire)	Synchronous Data Adapter Type II, 600 Bits Per Second, Tributary Station, Data Code features
1200		Point-to-Point	D3 (two-wire)	Synchronous Data Adapter Type II, Half Duplex Facility, Data Code features
			D3 (four-wire)	Synchronous Data Adapter Type II, Data Code features
			C4	Synchronous Data Adapter Type II, Switched Network Facility, Data Code features
		Multipoint -- 3135 as Control station	D3 (four-wire)	Synchronous Data Adapter Type II, Data Code features
		Multipoint -- 3135 as Tributary Station	D3 (four-wire)	Synchronous Data Adapter Type II, Tributary Station, Data Code features
2400	3863	Point-to-Point	D4	Synchronous Data Adapter Type II, Modem Clocking, Half Duplex Facility, Switched Network Facility, Data Code features
2400	3863	Multipoint -- 3135 as Control Station	D4	Synchronous Data Adapter Type II, Modem Clocking, Data Code features, New Sync (if required)
2400	3863	Multipoint -- 3135 as Tributary Station	D4	Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features
2400	3872 mdl 1	Point-to-Point	C5	Synchronous Data Adapter Type II, Modem Clocking, Half Duplex Facility, Switched Network Facility, Data Code features
2400	3872 mdl 1	Point-to-Point	D4 (two-wire)	Synchronous Data Adapter Type II, Modem Clocking, Half Duplex Facility, Data Code features
			D4 (four-wire)	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
		Multipoint -- 3135 as Control Station	D4 (four-wire)	Synchronous Data Adapter Type II, Modem Clocking, Data Code features, New Sync (if required)
		Multipoint -- 3135 as Tributary Station	D4 (four-wire)	Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features
		Point-to-Point, Multipoint	X1M	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
4800	3864	Point-to-point	D5	Synchronous Data Adapter Type II, Modem Clocking, Switched Network Facility, Data Code features
4800	3864	Multipoint -- 3135 as Control Station	D5	Synchronous Data Adapter Type II, Modem Clocking, Data Code features, New Sync (if required)
4800	3864	Multipoint -- 3135 as Tributary Station	D5	Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features
4800	3874 mdl 1	Point-to-Point	C6	Synchronous Data Adapter Type II, Modem Clocking, Switched Network Facility, Data Code features
		Point-to-Point	D5	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
		Multipoint -- 3135 as Control Station	D5	Synchronous Data Adapter Type II, Modem Clocking, Data Code features, New Sync
		Multipoint -- 3135 as Tributary Station	D5	Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features
		Point-to-Point, Multipoint	X2M	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
7200	3875 mdl 1	Point-to-Point	D6 (with C2 Conditioning)	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
		Multipoint -- 3135 as Control Station	D6 (with C2 conditioning)	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
		Multipoint -- 3135 as Tributary Station	D6 (with C2 conditioning)	Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features

ACCESSORIES (None)

SUPPLIES (None)

3135-3 PROCESSING UNIT

[NO LONGER AVAILABLE]

The 3135-3 Is No Longer Available ... features and model changes can be ordered on an 'as available' basis.

PURPOSE

Provides a performance improvement for S/370 model 135 models H, HF, HG and I only.

MODELS

Model A1*	A01	262,144 bytes of processor storage
Model A2*	A02	327,680 bytes of processor storage
Model A3*	A03	393,216 bytes of processor storage
Model A4*	A04	524,288 bytes of processor storage

Note: The 3135-3 is available as a non-removable, field installable upgrade to a S/370 model 135 model H, HF, HG and I only.

* A complete review by IBMis required before ordering.

Prerequisites: The following prerequisites apply to each 3135-3 processor mdl.

(1) 3046 Power Unit ... see M3046 pages.
(2) Extended Precision Floating Point Feature (#3840).

HIGHLIGHTS

Depending on the mdl, up to 524,288 bytes of processor storage are available. CPU cycle time varies from 275 to 1485 nanoseconds, depending on the internal operation being performed. Sixteen general-purpose and four floating point registers are provided.

Standard Features Include: APL Assist ... Audible Alarm ... Byte Oriented Operand ... 1 Byte Multiplexer Channel ... 64 Byte Multiplexer Subchannels ... Channel Command Retry ... Channel Indirect Addressing ... Clock Comparator and CPU Timer ... Conditional Swapping ... Console File ... Control Registers ... Dynamic Address Translation ... Error Checking and Correction (on Main and Control Storage ... Extended Control Mode ... Extended Control-Program Support ... Instruction Retry ... Interval Timer ... Machine Check Handling ... OS/DOS Compatibility ... Program Event Recording ... Storage Protection (Store and Fetch) ... S/370 Universal Instruction Set (Floating Point included) ... Time of Day Clock ... PSW Key Handling.

Control Storage: 131,072 bytes of Reloadable Control Storage are provided for each mdl in additon to the applicable main storage. This feature permits emulator and control routines to function. Reloadable Control Storage is housed in the CPU and is loaded from the Console file. Reloadable Control Storage is not addressable by the user.

Virtual Storage: Virtual Storage capability is provided to increase the effective utililization of main storage.

Console File (standard): This is the basic microprogram loading device for the system. The console file contains a small file device that provides all of the microcode for the system on removable magnetic disks. The several disks that will be provided with the system will supply all of the required microcode for CE diagnostics, basic system features, plus the optional features ordered for the system.

Console Function: Operator communications with the system is via a system control panel located on the 3135-3 and a 3210 mdl 1 or 3215 Console Printer-Keyboard as on other mdls of the S/370 mdl 135. A right reading board extension is standard ... a left extension is not available.

Input/Output Channels:

Byte Multiplexer Channel: One is standard on the 3135 and is functionally equivalent to the byte multiplexer channel on S/370 mdl 135. Provides eight control unit positions in byte mode, permits simultaneous operation of many low-speed devices. Burst mode operation of unbuffered devices operating in excess of 10KB is not allowed for concurrent operation with the integrated File Adapter, the Integrated Communications Adapter, or the Block Multiplexer Channel -- see *IBM S/370 Channel Characteristics Manual*, GA33-3010 for further clarification. For OS exclusion, refer to GC28-6554, *System Generation.*

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See Multiplexer Subchannels, Additional, in "Special Features".

Block Multiplexer Channels: Two are available as special features. Data rates are 1.3 megabytes per second. Permits simultaneous operation of high-speed devices. Ability to "Block Multiplex" provides greater channel efficiency. Devices on these channels which cannot utilize block multiplexing will function as if attached to selector channels. If the 3330/3340 Series Integrated File Adapter is present these channels are addressed as 2 and 3 respectively. Otherwise they are addressed as 1 and 2.

Subchannels: On the byte multiplexer channel, 64 subchannels are provided as standard with the option of 128 or 256 (see "Special Features"). On each of the two available block multiplexer channels, 16 non-shared subchannels and 1 shared subchannel are provided as standard with the option of 8 non-shared and 9 shared or 8 non-shared and 5 shared (see "Special Features"). On a block multiplexer channel, a single shared subchannel may attach a control unit having a maximum of 16 device addresses.

Attention: If Block Multiplexer Channel(s) are installed, subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. Also see Block Multiplexer Shared Subchannels in "Special Features".

Input/Output Attachments:

Non-native: A wide variety of I/O devices may be attached to these models of the S/370 mdl 135 via the standard byte multiplexer channel, and/or the optional block multiplexer channel(s). In particular, any device which is attachable to a 3135 is attachable to a 3135-3.

Native: The following integrated I/O attachments/adapters are provided for controlling the designated I/O devices.

Console Printer-Keyboard: [required] This unit serves as the online I/O device for operator/system communications. It provides a means of manually entering data into the system, altering or displaying data already in storage, and for printing error logout messages.

2319 Integrated File Adapter (#4650): [optional] This feature enables native attachment of a 2319 Disk Storage mdl A1** (and a 2319 mdl A3**, 2312 mdl A1s** or 2318 mdl A1**) up to a total of eight drives. The IFA is addressed as channel 1. **Limitation** Cannot be installed if 3333/3340 Intermix (**#9315**) is specified when 3330/3340 Series IFA (#4655) is also ordered.

** No longer available.

3330/3340 Series Integrated File Adapter (#4655): [optional] This feature allows the native attachment of one or two 3333 modules or 3340 mdl A2 units. Each 3333 module (either mdl 1 or mdl 11) can attach up to three 3330 modules (any combination of mdls 1, 2 or 11). Each 3340 mdl A2 can attach 3340 mdl B2 or B1 units, and one 3340 mdl A2 can also attach 3344 units to a maximum of eight drives. Maximum is sixteen drives per IFA. If 2319 IFA (#4650) is also present, IFA Conversion (#4645) is required.

Integrated Communications Adapter (#4640): [optional] This feature provides attachment of up to eight teleprocessing lines to the 3135-3. These may be any combination of supported BSC and Start/Stop lines and appear to the processor as if connected via one or more 2701s on the byte multiplexer channel.

Integrated Printer Adapter: [optional] This feature enables native attachment of a 1403 Printer mdl 2, 7 or N1. The Universal Character Set Feature can be optionally specified on the 1403 mdl 2 or N1.

Programming Features:

APL Assist: [standard] This feature is an APL emulator. It replaces functions performed by the APL software interpreter. This feature can provide a performance improvement for many APL applications when used with VS APL (5748-AP1).

Conditional Swapping: [standard] Provides two additional instructions ... Compare and Swap ... Compare Double and Swap

PSW Key Handling: [standard] Provides two additional instructions ... Insert PSW Key ... Det PSW Key from Address.

Extended Control Program Support: [standard] The 3135-3 processor mdls of the S/370 mdl 135 include Extended Control Program Support. This is a hardware assist that reduces the CPU time needed to execute certain frequently used supervisor functions in both VS1 and VM/370.

The functional areas for VM/370 include:

Virtual Machine I/O
Storage Management
Page Management
SVC Handler
Priviledged Instruction Interfaces
Dispatching
Virtual Interval Timer

For VS1 the functional areas are:

Storage Management
IOS
SVC FLIH
System Trace
Page Management

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.

3135-3 Processing Unit (cont'd)

- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Cabling: **#9080** for below the floor; **#9081** for on the floor.
- Console Printer Keyboard Address: Recorded on console file disk at the plant **#9101**‡ for "01F" or **#9102**‡ for "009".
- Minimum Configuration: See "Minimum Configurations" in "Systems" for minimum I/O units required in a S/370 mdl 135.
- Console Printer-Keyboard: A 3210 mdl 1 or 3215 is required in every system. See M3210, 3215 pages "Special Features" below.

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

- Shipping Instructions: Unless otherwise specified, shipping dimensions of the 3135 Frame 01 (CPU) are 31-1/2 inches wide x 70 inches long x 60 inches high. Removal of the side covers will reduce the width to 29-1/2 inches. If further reduction in length is required, specify **#9570**. Shipping dimensions will then be 29-1/2 inches wide x 60 inches long x 60 inches high.
- RETAIN/370: CE access is by telephone.

SPECIAL FEATURES

AUTOCALL (#1290): : Provides automatic calling capabilities on facilities C1, C2, C4 or C5 to initiate (dial), through stored program control, a data link to a remote station. For the appropriate calling units, see M2700 pages. **Specify:** Refer to Table 1C for Terminal Adapter Type I Mdl II or Table 1E for Synchronous Data Adapter Type II or Table 1-F for Telegraph Adapter Type II for appropriate feature code according to line positions desired. **Limitations:** Each Autocall feature installed reduces the number of lines available on the ICA by one. Autocall must be ordered once for each line where the function is desired. Thus, the ICA can accommodate a maximum of four lines if each of these lines also has the Autocall feature. A single Autocall feature can be associated with any of the lines from one to seven. **Cable Order:** Required. **Maximum:** Four. **Prerequisites: #9721-#9728** or **#9649-#9656 #9785-#9792** and **#9625-#9632**; and **#9625-#9632**. **Field Installation:** Yes.

Block Multiplexer Channel (#1425, #1426): Each adds a block multiplexer channel with 16 non-shared subchannels and 1 shared selector subchannel to the system. #1425 first ... #1426 second. If the 3330/3340 Series Integrated File Adapter is present these channels are addressed as 2 and 3 respectively. Otherwise they are addressed as 1 and 2. **Field Installation:** Yes. **Prerequisites:** #1426 requires #1425.

Block Multiplexer Shared Subchannel (#1431): (Note: This feature should only be installed if devices capable of "Block Shared" operation are installed on the block multiplexer channel. See *I/O Configuration Form,* GA22-7002.)

Allows any one of the following combinations of "Non-Shared", "Block Shared", or selector subchannels to be attached to the Block Multiplexer Channel (#1421): [1] 16 non-shared and one shared selector (see "Address Restrictions") ... [2] 8 non-shared, 8 block shared, and 1 shared selector (see "Address Restrictions") ... [3] 8 non-shared, 4 block shared, 1 shared selector (see "Address Restrictions"). If option [2] is selected, then each block shared subchannel may have attached to it a control unit having a maximum of 16 device addresses. If option [3] is selected, the four block shared subchannels may each have attached a control unit having a maximum of 32 device addresses. If option [1] is selected, no block shared subchannels are available, and addresses X00 through X7F are not available. With any option, the selector subchannel may have attached to it control units with a maximum of 16 device addresses. This feature will apply to both selector channels if installed. The options are selectable by the Customer Engineer and may be defined differently on each channel. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1421.

Address Restrictions with #1431:

a) Addresses X00 through X7F are assigned as block shared subchannels. With option [1], they may not be used. With option [2], each control unit address position, i.e., X00, X10, X20, etc., through X70 is available. With option [3], "even" control unit address positions only are available, i.e., 00, 20, 40 and 60.

b) Selector and non-shared addresses are limited to addresses X80 through XFF.

Channel Priority (#1501): When the IFA (#4650 or #4655) and both selector channels are present, this feature changes the higher priority for command chaining from the first selector channel (Channel 2) to the second selector channel (Channel 3). #1501 is required if any DASD devices are to be attached to Channel 3. **Field Installation:** Yes. **Prerequisites:** #4650 or #4655 and both #1425 and #1426.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct, and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes, between two cable-connected processing units, or cable-connected processing unit and external devices. **Maximum:** One. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/360 Direct Control Feature-OEMI,* GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning,* GC22-7004. **Field Installation:** Yes.

Extended Precision Floating Point (#3840): Extends the precision of floating point instructions to 28 hexadecimal digits. **Field Installation:** Yes. **Prerequisites:** #3900.

Multiplexer Subchannels, Add'l (#3906-#3907): To increase the number of I/O devices on the byte multiplexer channel, the number of subchannels can be increased by specifying one of the following: #3906 for 128 subchannels, #3907 for 256 subchannels. The maximum number of shared subchannels is eight. When 256 subchannels are installed, there are no shared subchannels. Also see "Byte Multiplexer Channel" under "Input/Output Channels" above. **Note:** The number of subchannels ordered must be equal to or greater than the device addresses. **Field Installation:** Yes.

1401/1440/1460 Compatibility (#4457): Microprogrammed controlled feature, which, in combination with special software, permits the system to execute 1401/1440/1460 instructions. **Field Installation:** Yes.

Integrated Communications Adapter (#4640): Provides the circuits and controls for direct attachment of up to eight teleprocessing lines to the 3135. The controls for the first line adapter are included in this feature. Lines can be any combination of Start/Stop or BSC. Provides for the attachment of 1050, 2260 mdl 1, 2260 mdl 2, 2265 mdl 1, 2740 mdl 1, 2740 mdl 2, 2741 mdl 1, 2760 mdl 1, 5010 AXX, or any IBM computer, multiplexer, or terminal conforming to the Binary Synchronous Communications (BSC) standard. **Note:** In addition to the appropriate adapter, each communication line attached to the system requires an external modem. Refer to Table 2 below to define customer configuration requirements prior to ordering features below. **Customer Responsibilities:** See M2700 pages for customer responsibilities regarding communication facilities and servicing requirements. **Communications Facilities:** See M2700 pages for communication facility requirements with this feature. **Field Installation:** Yes.

See "Specify Requirements for Integrated Communication Adapter" under "Specify".

IFA Conversion (#4645): Permits co-residence of both 2319 IFA (#4650) and 3330/3340 Series IFA (#4655). Both IFAs are addressed as Channel 1. **Limitations:** Cannot be installed if 3333/3340 Intermix (**#9315**) or 3344 Attach (**#9317**) is specified. Cannot be installed with 2314/3340 Compatibility Feature (#8070). **Maximum:** One per 3135. **Prerequisites:** #4650 and #4655. **Field Installation:** Yes.

2319 Integrated File Adapter (#4650): Permits native attachment of a 2319 Disk Storage mdl A1 (and a 2319 mdl A3, 2312 mdl A1, or 2318 mdl A1) up to a total of eight drives. Standard features include file scan and record overflow functions. The IFA is always addressed as channel 1. **Note:** 2312 mdl A1s, 2318 mdl A1s and 2319 all mdls are no longer available. **Limitations:** Cannot be installed if 3333/3340 Intermix (**#9315**) is specified. Cannot be installed with 2314/3340 Compatibility (#8070). **Maximum:** One per 3135. **Prerequisites:** #4645 is required if installed with 3330 or 3340 Series IFA (#4655). **Field Installation:** Yes.

3330/3340 Series Integrated File Adapter (#4655): Permits native attachment of up to two 3333s or 3340 mdl A2s. A maximum of sixteen 3330 or 3340 Series drives may be attached to the IFA. The IFA supports rotational position sensing, disconnected command chaining, and multiple requesting. Record overflow is standard. For 3330, standard I/O addresses are (hex) 150 through 15F. For 3340, standard addresses are (hex) 1C0 through 1CF. For 3340 with 3344 standard addresses are (hex) 1C0 through 1E1. **Maximum:** One. **Prerequisites:** #4645 is required if installed with 2319 IFA (#4650) **Field Installation:** Yes. **Note:** 2319 all mdls are no longer available.

SPECIFY

1. DASD Designation. Specify *ONE* of the following: **#9313**‡ (DASD 3333/3330) to attach up to two 3333 mdl 1s, each with up to three 3330 mdls 1, 2 in any combination. **#9314**‡ (DASD 3340 only) to attach up to two 3340 mdl A2s, each with up to three 3340 mdls B1, B2 in any combination. **#9315**‡ (3333/3340 Intermix) to attach one 3333 mdl 1 (with up to three 3330 mdls 1, 2 in any combination) plus one 3340 mdl A2 (with up to three 3340 mdls B1, B2 in any combination). **#9315** cannot be installed with IFA Conversion Feature (#4645).

2. If any 3333 mdl 11 and/or 3330 mdl 11 is to be attached, also specify **#9316**‡ (3333/3330 mdl 11) in addition to **#9313** or **#9315**.

‡ CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

3135-3 Processing Unit (cont'd)

With **#9313** plus **#9316** a mixture of one 3333 mdl 1 and one 3333 mdl 11, each with up to three 3330 mdls 1, 2 and 11 (in any combination) can be attached, or two 3333 mdl 11s, each with any mixture of up to three 3330 mdls 1, 2 and 11.

With **#9315** plus **#9316**, one 3333 (either mdl 1 or mdl 11) with up to three 3330 mdls 1, 2 and 11 (in any combination) can be attached in addition to one 3340 mdl A2 with up to three associated mdls B1, B2. The standard addresses with **#9315** for 3330 are (hex) 150 through 157, for 3340 are (hex) 158 through 15F.

3. If any 3344 is to be attached, specify **#9317**‡ in addition to **#9314** (**#9317** and **#9315** are mutually exclusive). **#9190**‡ must also be specified if 3344 mdl B2Fs or the 3340 Fixed Head Feature (#4301, #4302) is ordered.

With **#9314**, **#9317** and **#9190** up to three 3344 mdl B2/B2F and/or 3340 mdl B2, B1 units in any combination can be attached to one 3340 mdl A2. The second 3340 mdl A2 if present can attach up to three 3340 mdl B1/B2 units.

#9317 is mutally exclusive with IFA Conversion Feature (#4645) and with 2314/3340 Compatibility Feature (#8070).

4. When just **#9314** is specified, also specify 3340 Address Designation: **#9820**‡ for addresses (hex) 1C0 through 1CF, or **#9821**‡ for addresses (hex) 160 through 16F. The specification of 160 allows the 3135 IFA addresses to coincide with those of the 3115 and 3125 IFAs.

5. When **#9314** or **#9315** is specified, also specify **#9190**‡ (Fixed Head Attachment) if Fixed Head Feature (#4301, #4302) is ordered for any 3340 attached to the IFA.

6. If String Switch (#8150) is ordered for any attached 3333 or 3340 mdl A2, specify String Switch Attachment (**#9841**)‡.

7. When **#9821**‡ is specified in conjunction with **#9813** the addresses for the 3333/3330s are (HEX) 160 through 16F.

8. When **#9821**‡ is specified and both **#9314** and **#9317** are specified the addresses for the 3340/3344s are as follows:

	3340 A2		----3344 B2/B2Fs----					
String 0	160	161	162	163	164	165	166	167
			172	173	174	175	176	177
			1E2	1E3	1E4	1E5	1E6	1E7
			1F2	1F3	1F4	1F5	1F6	1F7
Physical Drive	0	1	2	3	4	5	6	7
	3340 A2		----3340 B2s----					
String 1	168	169	16A	16B	16C	16D	16E	16F

Note 1: The DASD control combinations that can be attached to the 3330/3340 Series IFA (#4655) are shown in the left hand column of the table below. From Section A of the table select one of the feature numbers shown (one and only one must be selected). From Section B select the feature number(s) required to support your configuration (select none, one, or more than one from Section B). Section C of the table shows the addresses available. The specification of the (hex) 160 addresses allows the 3135 IFA addresses to coincide with those of the 3115 and 3125 IFA. Select a number from Section C if required.

Note 2: Any change to an installed DASD configuration requires an MES ONLY if the new configuration indicates that a different Specify and/or Special Features not previously installed AND removal of any not listed as required for the new configuration.

‡ CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

3135 3330/3340 IFA (#4655)

* No feature number required.
** Mutually exclusive with String Switch **#9841**, 2319 IFA (#4650), IFA Conversion feature (#4645), 3344 Attachment (**#9317**).
*** Mutually exclusive with 3344 Attachment (**#9317**) and 2314/3340 Compatibility (#8070).

Integrated Printer Adapter Basic Control (#4670): Provides the power supply and basic control for a natively attached 1403 Printer. The standard address is '00E'. **Specify**: **#9485**‡ if optional address of '00F' is desired. **Maximum**: One. **Field Installation**: Yes.

Note: If the optional addresses of '01F' for the Console Printer Keyboard (#3210 or #3215) and '00F' for the integrated 1403 are both used, Multiplexer Subchannels, Add'l (#3905) must be specified.

Integrated 1403 Printer Mdl 2/Mdl N1 Attachment (#4672): Provides control for attaching 1403 mdl 2 or mdl N1. Specify: **#9182**‡ to attach 1403 mdl 2, **#9188**‡ to attach 1403 mdl N1. **Maximum**: One. **Prerequisites**: #4670. On the 1403, **#9709** and **#9725** is required on a mdl 2; **#9726** is required on a mdl N1. See "Specify" under 1403. **Field Installation**: Yes.

Iintegrated 1403 Printer Mdl 7 Attachment (#4677): Provides control for attaching 1403 mdl 7. **Maximum**: One. **Prerequisites**: #4670. On the 1403, **#9725** is required on a mdl 7. See "Specify" under 1403. **Field Installation**: Yes.

Additional Lines (#4722-#4728): Each provides circuits and controls for attachment of an additional line adapter, for a total of eight lines in the system. **Specify**: Order additional lines according to line position required. See Table 1-A. Each line specified requires the next lower order line as a prerequisite. **Maximum**: One of each (#4722 through #4728). **Field Installation**: Yes. **Prerequisites**: #4640.

Specify Requirements For Integrated Communications Adapter:

For each line (#4722-#4728) attached to the ICA, including the first line included in #4640, one of the following line adapters must be specified: Terminal Adapter Type I Mdl II (#9721-#9728), Terminal Adapter Type III (#9753-#9760),

Telegraph Adapter Type II (#9785-#9792) or Synchronous Data Adapter Type II (#9649-#9656). Each line adapter and all associated features must be specified according to the line position to which they correspond. Refer to Table 2 below prior to ordering features for the ICA.

S/360 Mdl 20 Compatibility (#7520): Microprogram-controlled feature, which, in combination with special software, permits the system to execute S/360 mdl 20 or S/360 mdl 25 in mdl 20 mode instructions. **Field Installation**: Yes.

3135-3 Processing Unit (cont'd)

3210 Mdl 1 Adapter (#7844): To attach a 3210 Console Printer-Keyboard mdl 1 (15.5 cps) for systems console I/O; includes an alter-display ability. **Maximum**: One. **Limitations**: Cannot be installed with 3215 Adapter (#7855). **Field Installation**: Yes. **Prerequisites**: Uses one address on the standard byte multiplexer channel, but does not use a control unit position. See "Specify."

3215 Adapter (#7855): To attach a 3215 Console Printer-Keyboard (85 cps) for system console I/O; includes alter-display ability. **Maximum**: One. **Limitations**: Cannot be installed with 3210 mdl 1 Adapter (#7844). **Field Installation**: Yes. **Prerequisites**: Uses one address on the standard byte multiplexer channel, but does not use a control unit position. See "Specify."

2314/3340 Compatibility (#8070): Permits the emulation of 2314/2319 volumes on the 3340 Disk Storage. The user program may access both the emulated 2314 data set as well as 3340 volumes. This provides a "mixed-mode" operating environment. "Mixed-mode" is only possible with DOS releases which support 3340 on mdl 135. **Maximum**: One. **Limitations**: Cannot be installed with IFA Conversion (#4645), 2319 IFA (#4650), 3330/3340 Intermix (**#9315**), 3344 Attach (**#9317**), or String Switch Attachment (**#9841**). **Field Installation**: Yes. **Prerequisites**: **#9314** on 3330/3340 Series IFA (#4655).

Univesal Character Set Adapter (#8637): Permits the use of the Universal Character Set Feature on a 1403 Mdl 2 or Mdl N1 attached via the Integrated 1403 Printer Mdl 2, Mdl N1 Attachment (#4672). **Maximum**: One. **Prerequisites**: #4670, #4672. **Field Installation**: Yes.

300 Bits Per Second (#9593-#9600)‡: Allows the Terminal Adapter Type I Mdl II to operate at 300 bps. **Specify**: Refer to Table 1-C for Terminal Adapter Type I Mdl II for appropriate feature code according to the line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Terminal Adapter Type I Mdl II.

600 Bits Per Second (#9601-#9608)‡: Allows the Terminal Adapter Type I mdl II or the Synchronous Adapter Type II to operate at 600 bps. **Specify**: Refer to Table 1-C for Terminal Adapter Type I mdl II or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Terminal Adapter Type I Mdl II, or Synchronous Data Adapter Type II.

Modem Clocking (#9609-#9616): Allows a Terminal Adapter Type III to operate at 2400 bps or a Synchronous Data Adapter Type II to operate at 2000 bps, 2400 bps, 4800 bps or 7200 bps. Requires the appropriate clocking to be in the attached modem. It should be pointed out, however, that there are certain modems (for example, the 3863 mdl 1, or 3872 mdl 1) which, although basically 2400 bps modems, offer a 1200 bps half-speed facility. Since the requirements for the Modem Clocking feature are defined by the type of modem, not the line speed, the Modem Clocking Feature (#9609-#9616) is still required as a prerequisite on the ICA when such modems are attached to the Synchronous Data Adapter Type II and are switched for 1200 bps operation. **Specify**: Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Terminal Adapter Type III or Synchronous Data Adapter Type II.

Half-Duplex Facility (#9617-#9624)‡: Required if the Synchronous Data Adapter Type II is attached to a two-wire facility. **Note**: This feature is not required with Switched Network (#9625-#9632) or Tributary Station (#9665-#9672). **Specify**: Refer to Table 1-E for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Synchronous Data Adapter Type II.

Switched Network Facility (#9625-#9632)‡: Allows the Terminal Adapter Type I mdl II or the Synchronous Data Adapter Type II to operate over C-type switched lines. **Specify**: Refer to Table 1-C for Terminal Adapter Type I mdl II or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Terminal Adapter Type I mdl II, or Synchronous Data Adapter Type II.

Synchronous Data Adapter Type II (#9649-#9656)‡: Provides control of data transfers between the 3135 and binary synchronous terminals. See "Binary Synchronous Terminals" under 2701 Data Adapter Unit. Control Station is included with this feature. **Specify**: Refer to Table 1-B for appropriate feature code according to line position(s) desired.

> **Speed Selection**: Provides operation over C3, D2, and D3 facilities at 600 bps if 600 Bits Per Second feature is specified ... see above. Provides operation over C4 and D3 facilities at 1200 bps (no speed need be specified). Provides operation over C5M facility at 2000 bps if Modem Clocking is specified ... see above. Provides operation over C5, D4 or X1M at 2400 bps, over C6, D5 or X2M at 4800 bps, or over D6 at 7200 bps ... see above.

Field Installation: Yes. **Prerequisites**: #4640.

For special requirements: See Table 1-E and features below for additional specify requirements if Half-duplex Facility, Transparency, Tributary Station, Switched Network Facility, Autocall, EON, or New Sync are required. See Table 1-E and 600 Bits Per Second (#9601-#9608) if operation at 600 bps is required. See Table 1-E and Modem Clocking below if 2000 bps, 2400 bps, 4800 bps or 7200 bps operation is required. The appropriate Data Code feature must be specified if other than EBCDIC is required as the primary data code. See "Data Code Features" below.

Limitations: For line speed limitations, refer to *Mdl 135 Channel Characteristics Manual,* GA33-3010.

> **Note on Data Code Features:**
>
> The primary data code for the SDA Type II is EBCDIC. As an option to EBCDIC, either ASCII or 6-bit Transcode (2780 Data Transmission Terminal only) may be specified as the primary code. In addition to the primary data code, an alternate data code, selected under program control, may be specified for the Synchronous Data Adapter Type II. EBCDIC, ASCII, or 6-bit Transcode may be selected as an alternate code. **Specify (for data code features)**: Refer to Table 1-E for appropriate feature codes according to line position(s) desired. **Field Installation (of data code features)**: Yes. **Prerequisites (for data code features)**: Synchronous Data Adapter Type II.

Tributary Station (#9665-#9672)‡: Required when a Synchronous Data Adapter Type II is installed and functioning as a leased communication line, as a tributary station, and not functioning as a control station. **Specify**: Refer to Table 1-E for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Synchronous Data Adapter Type II.

Transparency (#9673-#9680)‡: Provides the Synchronous Data Adapter Type II with the ability to transmit and receive 8-bit binary data as well as EBCDIC or ASCII codes; or 6-bit binary data as well as 6-bit Transcode. This feature with ASCII modifies VRC/LRC checking to VRC/CRC checking. **Limitation**: ASCII code and Transparency cannot be installed together for the same line position when attached to the 2770, 2780, 3780, S/3 or S/7. On S/32, EBCDIC and EBCDIC Transparency are standard, and one is selected by programming. **Specify**: Refer to Table 1-E for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Synchronous Data Adapter Type II.

Terminal Adapter Type I Mdl II (#9721-#9728)‡: Controls data transfers between the 3135 and 1050/2740 mdl 1/2741/5010 mdl AXX over facility C1 or D1, and between the 3135 and 2740 mdl 2 or 5010 mdl AXX over facility D1 or D2. Includes vertical and longitudinal checking for 1050 terminals and 2740s equipped with Record Checking (#6114). **Specify**: Refer to Table 1-B for appropriate feature code according to line position(s) desired. **Special Requirements**: See Table 1-C and features below for additional specify requirements if Switched Network Facility, Write Interrupt, Unit Exception Suppression, Read Interrupt, or Autocall are required. Normal operation is at 134.5 bps. 600 Bits Per Second feature must be specified for operation at 600 bps to 2740s or 5010 mdl AXX. **Field Installation**: Yes. **Prerequisites**: #4640.

Unit Exception Suppression (#9729-#9736)‡: If this feature is installed with Terminal Adapter Type I Mdl II, Unit Exception will not be set in response to a Circle C. Not supported under BTAM, QTAM or TCAM. **Specify**: Refer to Table 1-C for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Terminal Adapter Type I Mdl II.

Read Interrupt (#9737-#9744)‡: Allows the Terminal Adapter Type I mdl II to operate with a 2741 equipped with Transmit Interrupt (#7900). Not supported under BTAM, QTAM or TCAM. **Specify**: Refer to Table 1-C for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Terminal Adapter Type I Mdl II.

Write Interrupt (#9745-#9752)‡: Allows the Terminal Adapter Type 1 Mdl II to operate with a 2741 equipped with Receive Interrupt (#4708). Not supported under BTAM, QTAM or TCAM. **Specify**: Refer to Table 1-C for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: Terminal Adapter Type I mdl II.

Terminal Adapter Type III (#9753-#9760)‡: Controls data transfers between the 3135 and either remote 2845 Display Controls or 2848 Display Controls operating at 1200 bps over facility D3. Permits operation at 2400 bps over facility D4 if Modem Clocking is specified. **Specify**: Refer to Table 1-B for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: #4640.

Multipoint (#9761-#9768)‡: Specifies that a Terminal Adapter Type III is to operate in multipoint mode. If **#9761-#9768** is not ordered for a given Terminal Adapter Type III, point-to-point operation is presumed. **Specify**: Refer to Table 1-D for appropriate feature code according to line positions desired. **Prerequisites**: Terminal Adapter Type III. **Field Installation**: Yes.

‡ **CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.**

3135-3 Processing Unit (cont'd)

Telegraph Adapter Type II (#9785-#9792)‡: Controls data transfers between ICA and Mdl 33/35 TTY terminals (8 level code at 110 bps only) with facility C2. **Specify**: Refer to Table 1-B for appropriate feature code according to line positions desired. **Field Installation**: Yes. **Prerequisites**: #4640 and **#9625-#9632**.

EON (#9801-#9807)‡ : Automatically generates an EON digit at the end of the dial sequence. **Specify**: Refer to Table 1E for appropriate feature code according to line position desired. Specify for 3872 and 3874 with EON option. **Field Installation**: Yes. **Prerequisites**: #1290, **#9649-#9656**.

New Sync (#9808-#9815)‡: Allows Synchronous Data Adapter Type II or Terminal Adapter Type III to be connected to modems which offer the New Sync feature option and have this option installed. New Sync feature minimizes modem turn-around and allows faster bit synchronization of the following data. **Specify**: Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. **Field Installation**: Yes. **Prerequisites**: **#9609-#9616** and a modem offering New Sync. **Note**: New Sync is not required if **#9617-#9624**, **#9665-#9672**, or **#9625-#9632** is installed for the line position in question.

Modems

Up to eight modems can be attached to a 3135, any mdl. **Prerequisites**: Integrated Communications Adapter (#4640) and Synchronous Communications Adapter Type II (**#9649-#9656**) 2400 bps to 7200 bps, Terminal Adapter Type I Mdl II (**#9721-#9728**) 134.5 bps to 600 bps, or Terminal Adapter Type III (**#9753-#9760**) 1200 bps or 2400 bps. See feature descriptions for limitations.

Modem	Speed (bps)
3863	2400
3864	4800
3872	2400
3874	4800
3875	7200

Note: For communications capabilities, product utilization and special features, see M2700, 3863, 3864, 3872, 3874, 3875.

MES Orders:

For an MES order containing multiple features, the sequence of installation of individual features is determined at the plant of manufacture. No change to MES content or sequence can be made at installation time. If changes are required, the origina l MES must be cancelled and a new one originated.

Communication Information Tables

Before ordering, check Special Feature write-ups for Prerequisites and Limitations.

TABLE 1-A ADDITIONAL LINE APPEARANCES

	Line Position							
FEATURE	1	2	3	4	5	6	7	8
Additional Lines	4640	4722	4723	4724	4725	4726	4727	4728

Specify additional lines according to line positions.

TABLE 1-B TERMINAL ADAPTERS

	Line Position							
FEATURE	1	2	3	4	5	6	7	8
Terminal Adapter Type 1 mdl II‡	9721	9722	9723	9724	9725	9726	9727	9728
Terminal Adapter Type III‡	9753	9754	9755	9756	9757	9758	9759	9760
Synchronous Data Adapter Type II‡	9649	9650	9651	9652	9653	9654	9655	9656
Telegraph Adapter Type II‡	9785	9786	9877	9788	9789	9790	9791	9792

Any adapter added, removed, or relocated to another line position requires reconfiguration of the entire line.

Select one terminal adapter for each line position specified in Table 1-A.

‡ CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

Table 1-C OPTIONS FOR TERMINAL ADAPTER TYPE 1 MDL II

	Line Position							
FEATURE	1	2	3	4	5	6	7	8
300 bps‡	9593	9594	9595	9596	9597	9598	9599	9600
600 bps‡	9601	9602	9603	9604	9605	9606	9607	9608
Switched Network Facility‡	9625	9626	9627	9628	9629	9630	9631	9632
Unit Exception Suppression‡	9729	9730	9731	9732	9733	9734	9735	9736
Read Interrupt‡ 9737	9738	9739	9740	9741	9742	9743	9744	
Write Interrupt‡	9745	9746	9747	9748	9749	9750	9751	9752
Autocall	9777	9778	9779	9780	9781	9782	9783	

TABLE 1-D OPTIONS FOR TERMINAL ADAPTER TYPE III

	Line Position							
FEATURE	1	2	3	4	5	6	7	8
Modem Clocking	9609	9610	9611	9612	9613	9614	9615	9616
Multipoint‡	9761	9762	9763	9764	9765	9766	9767	9768
New Sync‡	9808	9809	9810	9811	9812	9813	9814	9815

Select modem clocking feature for each line position for which Terminal Adapter Type III is needed and operation at 2400 bps is desired.

TABLE 1-E OPTIONS FOR SYNCHRONOUS DATA ADAPTER TYPE II

	Line Position							
FEATURE	1	2	3	4	5	6	7	8
600 bps‡	9601	9602	9603	9604	9605	9606	9607	9608
Modem Clocking	9609	9610	9611	9612	9613	9614	9615	9616
Half Duplex Fac.‡	9617	9618	9619	9620	9621	9622	9623	9624
Switched Network Facility‡	9625	9626	9627	9628	9629	9630	9631	9632
Connect Data Set to Line	9633	9634	9635	9636	9637	9638	9639	9640
Switched Speed	9641	9642	9643	9644	9645	9646	9647	9648
Tributary Station‡	9665	9666	9667	9668	9669	9670	9671	9672
Transparency‡	9673	9674	9675	9676	9677	9678	9679	9680

6-Bit Transcode *	9713	9714	9715	9716	9717	9718	9719	9720

Select one of the above data codes if required in lieu of EBCDIC for each line position for which Synchronous Data Adapter Type II is specified.

* 6-Bit Transcode can be used only with a 2780 Data Transmission Terminal

3135-3 Processing Unit (cont'd)

TABLE 2 -- Part 1 **FEATURES REQUIRED FOR START/STOP TERMINALS**

Terminal	IBM Modem	Line Speed (bps)	Communication Line and Modem Facilities	Features Required
1050 Data Communication System		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility
			D1	Terminal Adapter Type 1 mdl II
2260 Display Station mdl 1	Connects via 2848 Display Control mdl 3 - see this table			
2260 Display Station mdl 2	Connects via 2848 Display Control mdl 1 or 2 - see this table			
2265 Display Station mdl 1	Connects via the 2845 Display Control mdl 1 - see this table			
2740 Communication Terminal mdl 1		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility
			D1	Terminal Adapter Type 1 mdl II
2740 Communication Terminal mdl 2		134.5	D1	Terminal Adapter Type 1 mdl II
		600	D2	Terminal Adapter Type 1 mdl II, 600 Bits Per Second
2741 Communication Terminal mdl 1 (without interrupt feature)		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility
			D1	Terminal Adapter Type 1 mdl II
2741 Communication Terminal mdl I (with Receive Interrupt feature)		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Write Interrupt, Unit-Exception Suppression (if required)
2741 Communication Terminal mdl 1 (with Transmit Interrupt feature)		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Read Interrupt Unit-Exception Suppression (if required)
2741 Communication Terminal mdl I (with Receive Interrupt and Transmit Interrupt features)		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, Read Interrupt, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Write Interrupt, Read Interrupt, Unit-Exception Suppression (if required)
2760 Optical Image Unit mdl I	Connects via 2740 Communication Terminal mdl I - see this table			
2845 Display Control mdl I (point-to-point or multipoint)		1200	D3	Terminal Adapter Type III multipoint for multipoint operation
	3872 mdl I	2400	D4	Terminal Adapter Type III, Modem Clocking multipoint for multipoint operation, New Sync (if required)
2848 Display Control mdls 1, 2 and 3 (point-to-point or multipoint)		1200	D3	Terminal Adapter Type III multipoint for multipoint operation
	3872 mdl 1	2400	D4	Terminal Adapter Type III, Modem Clocking multipoint for multipoint operation, New Sync (if required)
3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (without interrupt feature)		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, 300 Bits Per Second Line Speed
			D1	Terminal Adapter Type 1 mdl II, 300 Bits Per Second Line Speed
3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt feature)		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Transmit Interrupt feature)		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Read Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt and Transmit Interrupt features)		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Write Interrupt, Read Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
3767 Communication Terminal mdl 1 or 2 with #7111 - 2740 Line Control		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, 300 Bits Per Second Line Speed
			D1	Terminal Adapter Type 1 mdl II, 300 Bits Per Second Line Speed
3767 Communication Terminal mdl 1 or 2 or 3 with #7112 - 2740-2 Line Control		600	D2	Terminal Adapter Type 1 mdl II, 600 Bits Per Second Line Speed
System/7		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility
			D1	Terminal Adapter Type 1 mdl II
		600	D2	Terminal Adapter Type 1 mdl II, 600 Bits Per Second Line Speed
5100/5110 Computer		134.5	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, Write Interrupt, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Read Interrupt, Write Interrupt, Unit-Exception Suppression (if required)
		300	C1	Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
			D1	Terminal Adapter Type 1 mdl II, Read Interrupt, Write Interrupt, 300 Bits Per Second Line Speed, Unit-Exception Suppression (if required)
TTY 33/35		110	C2	Telegraph Adapter Type II

3135-3 Processing Unit (cont'd)

TABLE 2 -- Part 2 **FEATURES REQUIRED FOR BINARY SYNCHRONOUS TERMINALS**

Line Speed (bps)	IBM Modem	Manner of Line Operation	Communication Line and Modem Facilities	Features Required
600		Point-to-Point	D3 (two-wire)	Synchronous Data Adapter Type II, 600 Bits Per Second, Half Duplex Facility, Data Code features
			D2 (four-wire)	Synchronous Data Adapter Type II, 600 Bits Per Second, Data Code features
			C3	Synchronous Data Adapter Type II, 600 Bits Per Second, Switched Network facility, Data Code features
		Multipoint -- 3135 as Control Station	D2 (four-wire)	Synchronous Adapter Type II, 600 Bits Per Second, Data Code features
		Multipoint -- 3135 as Tributary Station		Synchronous Data Adapter Type II, 600 Bits Per Second, Tributary Station, Data Code features
1200		Point-to-Point	D3 (two-wire)	Synchronous Data Adapter Type II, Half Duplex Facility, Data Code features
			D3 (four-wire)	Synchronous Data Adapter Type II, Data Code features
			C4	Synchronous Data Adapter Type II, Switched Network Facility, Data Code features
		Multipoint -- 3135 as Control station	D3 (four-wire)	Synchronous Data Adapter Type II, Data Code features
		Multipoint -- 3135 as Tributary Station		Synchronous Data Adapter Type II, Tributary Station, Data Code features
2400	3863	Point-to-Point	D4	Synchronous Data Adapter Type II, Modem Clocking, Half Duplex Facility, Switched Network Facility, Data Code features
		Multipoint -- 3135 as Control Station		Synchronous Data Adapter Type II, Modem Clocking, Data Code features, New Sync (if required)
		Multipoint -- 3135 as Tributary Station		Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features
	3872 mdl 1	Point-to-Point	C5	Synchronous Data Adapter Type II, Modem Clocking, Half Duplex Facility, Switched Network Facility, Data Code features
			D4 (two-wire)	Synchronous Data Adapter Type II, Modem Clocking, Half Duplex Facility, Data Code features
			D4 (four-wire)	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
		Multipoint -- 3135 as Control Station		Synchronous Data Adapter Type II, Modem Clocking, Data Code features, New Sync (if required)
		Multipoint -- 3135 as Tributary Station		Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features
		Point-to-Point, Multipoint	X1M	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
4800	3864	Point-to-point	D5	Synchronous Data Adapter Type II, Modem Clocking, Switched Network Facility, Data Code features
		Multipoint -- 3135 as Control Station		Synchronous Data Adapter Type II, Modem Clocking, Data Code features, New Sync (if required)
		Multipoint -- 3135 as Tributary Station		Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features
	3874 mdl 1	Point-to-Point	C6	Synchronous Data Adapter Type II, Modem Clocking, Switched Network Facility, Data Code features
			D5	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
		Multipoint -- 3135 as Control Station		Synchronous Data Adapter Type II, Modem Clocking, Data Code features, New Sync
		Multipoint -- 3135 as Tributary Station		Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features
		Point-to-Point, Multipoint	X2M	Synchronous Data Adapter Type II, Modem Clocking, Data Code features
7200	3875 mdl 1	Point-to-Point	D6 (with C2 Conditioning)	
		Multipoint -- 3135 as Control Station		
		Multipoint -- 3135 as Tributary Station		Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features

MODEL CONVERSIONS

Field Installable.

Planning For Model Conversions: When a customer requires feature changes (except for the prerequisite feature Extended Precision Floating Point, #3840), and/or memory upgrades in addition to a model upgrade to a 3135-3, consolidating the several changes into a single MES is not recommended. In these cases, a planning session between sales, FE and the customer is required in addition to the normally required branch office review/approval to develop the proper sequence of MES ordering.

ACCESSORIES (None)

SUPPLIES (None)

3138 PROCESSING UNIT

PURPOSE

Provides main and control storage plus arithmetic and logic circuits for the S/370 mdl 138.

MODELS

Model I	I00	524,288 bytes of processor storage
Model J	J00	1,048,576 bytes of processor storage

Prerequisites: Each S/370 mdl 138 requires a 3046 power unit ... see M3046 pages.

HIGHLIGHTS

524,288 bytes or 1,048,576 bytes of processor storage are provided. CPU cycle time ranges from 275 to 1485 nanoseconds depending on the internal operation being performed. 16 general purpose and four floating point registers are provided.

Standard Features Include: Conditional Swapping ... APL Assist ... Audible Alarm ... Byte Oriented Operand ... 1 Byte Multiplexer Channel ... 64 Byte Multiplexer Subchannels ... 2 Block Multiplexer Channels ... 16 Non-Shared Block Multiplexer Subchannels ... 1 Shared Block Multiplexer Subchannel ... Channel Command Retry ... Channel Indirect Addressing ... Clock Comparator & CPU Timer ... Console File ... Control Registers ... Dynamic Address Translation ... Error Checking and Correction (on Main and Control Storage) ... Extended Control Mode ... Extended Control-Program Support ... Extended Precision Floating Point ... Instruction Retry ... Floating Point ... Interval Timer ... Machine Check Handling ... OS/DOS Compatibility ... Program Event Recording ... Storage Protection (Store and Fetch) ... S/370 Universal Instruction Set ... Time of Day Clock ... PSW Key Handling.

Control Storage: 131,072 bytes of Reloadable Control Storage are provided in addition to main storage. This permits emulator and control routines to function. The Reloadable Control Storage is housed in the CPU and is loaded from the Console File which is located beneath the operator's display console. Reloadable Control Storage is not available to the user.

Virtual Storage: Virtual Storage capability is provided to increase the effective utilization of main storage.

Console File (Standard): This is the basic microprogram loading device for the system. The console file contains a small file device that provides all of the microcode for the system on removable magnetic disks. The several disks that will be supplied with the system will supply all of the required microcode for diagnostics, basic systems features, plus the optional features ordered for the system.

Console Function: A display console is standard ... includes a cathode ray tube, and a keyboard ... functions as an operator's I/O console to communicate with the operating system ... standard attachment for an optional 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 for hard copy output. CRT can accommodate twenty-four 80-character lines of information. A system control panel is also located on the 3138 for additional operator communication with the system. Three console modes are available: "Printer-keyboard" Mode, "Display" Mode, "115/125 Console-display-emulation" Mode.

In "Printer-keyboard" mode, the display console uses the keyboard for input and the CRT and a recommended 3286 mdl 2 or 3287 mdl 1 and 2 for output. The CRT, keyboard and printer appear to the system as a 3215 Console Printer-Keyboard. "Printer-Keyboard" mode is supported by DOS, DOS/VS, OS/360, OS/VS and VM/370.

In "Display" mode, the keyboard is used for input, the CRT with 24 lines by 80 characters/line for output, and DIDOCS or equivalent support is required. DOS/VS does not support Display Mode. The 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 (optional) has a separate address and requires MCS support or equivalent. When present, the printer appears to the system as a 3213 Console Printer.

In "115/125 Console-display-emulation" mode, the keyboard is used for input, the CRT is used for output, and the CRT displays twelve 56-character lines of information. The 3286 mdl 2 or 3287 mdl 1 or 2 are optional. When present, the printer emulates a 5213 Printer mdl 1 and acts as a slave unit to the display console. That is, the 3286 mdl 2 or 3287 mdl 1 or 2 are not separately addressable in this mode. The "115/125 Console-display-emulation" mode is available in DOS/VS Release 28 and above.

The display console provides the capability to select three aspects of the system's environment at IMPL time:

Console mode - See above (Mode Descriptions).

CPU mode (3138 or 3135) - See "Programming Features".

Unit addresses of natively attached I/O.

Integrated Communications Adapter Line Characteristics - See "Integrated Communications Adapter Features".

These selections will be recorded on the console file for permanent reuse until such time as any new selection is made during a subsequent IMPL. (**Note:** This is the only user access to the console file.) A right reading board extension is standard ... a left extension is not available.

Input/Output Channels:

Byte Multiplexer Channel: One is standard ... functionally equivalent to the byte multiplexer channel on the S/370 mdl 135 ... provides eight control unit positions ... in byte mode, permits simultaneous operation of many low-speed devices ... burst mode operation of unbuffered devices operating in excess of 10KB is not allowed for concurrent operation with the Integrated File Adapter, the Integrated Communications Adapter, or a Block Multiplexer Channel - see *IBM S/370 Model 138 Channel Characteristics Manual,* GA24-3633, for further clarification ... for OS exclusion refer to SRL GC28-6554, *System Generation.*

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See Multiplexer Subchannels, Add'l, in "Special Features".

Block Multiplexer Channels: Two are standard ... data rates are 1.3 megabytes per second ... permits simultaneous operation of high-speed devices ... ability to "Block Multiplex" provides greater channel efficiency and increases the efficiency of the 3330/3340 Series IFA when using direct access storage devices equipped with rotational position sensing ... devices on these channels which cannot utilize block multiplexing will function as if attached to selector channels ... if the 3330/3340 Series Integrated File Adapter is present these channels are addressed as 2 and 3 respectively. Otherwise they are addressed as 1 and 2.

Subchannels: On the byte multiplexer channel 64 subchannels are provided as standard with the option of 128 or 256 (see "Special Features") ... for each of the two standard block multiplexer channels 16 non-shared subchannels and 1 shared selector subchannel are provided as standard with the option of 8 non-shared and 9 shared or 8 non-shared and 5 shared (see "Special Features") ... each of the standard single shared subchannels may attach a control unit having a maximum of 16 device addresses.

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

Input/Output Attachment

Non-Native: A wide variety of I/O devices may be attached to the S/370 mdl 138 via the standard byte multiplexer channel or any of the two standard block multiplexer channels.

Native: The following integrated I/O attachments/adapters are provided for controlling the designated I/O devices:

Integrated 3203-4 Printer Attachment, First Printer (Optional) - Provides the capability to natively attach the 3203 Printer mdl 4 as the first systems printer. The Universal Character Set feature is standard on the 3203.

Integrated 3203-4 Printer Attachment, Second Printer (Optional) - Provides the capability to natively attach the 3203 Printer mdl 4 as the second systems printer. The Universal Character Set feature is standard on the 3203.

Integrated 1403 Printer Adapter (Optional) - This feature allows native attachment of a 1403 Printer mdl 2, 7, or N1 ... the Universal Character Set Feature can be optionally specified on the 1403 mdl 2 or N1.

Integrated Console Printer Adapter (Standard) - Provides the capability to natively attach the optional 3286 Printer mdl 2, 3287 Printer mdl 1 and 2 as a hard copy console printer.

3330/3340 Series Integrated File Adapter (Optional) - This feature allows the native attachment of one or two 3333 modules or 3340 mdl A2 units ... each 3333 module (either mdl 1 or mdl 11) can attach up to three 3330 modules (any combination of mdls 1, 2 or 11) ... each 3340 mdl A2 can attach 3340 mdl B2 or B1 units, and one 3340 mdl A2 can also attach 3344 units to a maximum of eight drives ... maximum is 16 drives per IFA.

Integrated Communications Adapter (Optional) - This feature provides for attachment of up to eight teleprocessing lines to the S/370 mdl 138 ... these may be any combination of supported BSC and Start/Stop lines and appear to the processor as if connected via one or more 2701s on the byte multiplexer channel.

Integrated Communications Adapter Features: To improve the ordering of the ICA on the S/370 mdl 138, the user may define, from the display-console-keyboard, the following line characteristics for each line installed (a maximum of 8 lines are attachable to the ICA):

[1] Leased Facility* or Switched Network Facility: Allows the Terminal Adapter Type 1 mdl II, Synchronous Data Adapter Type II (SDA), or Telegraph Adapter Type II to operate over leased or C-type switched lines.

[2] Half-Duplex Facility or Full Duplex Facility* - Allows the user to make a business tradeoff between his TP applications and turn-around requirements and available teleprocessing facilities.

3138 Processing Unit (cont'd)

and the cost of those facilities ... half-duplex is required if the Synchronous Data Adapter Type II is attached to a 2-wire facility or that facility is part of a switched network unless that facility is a leased line and the Synchronous Data Adapter Type II is installed and functioning as a tributary station and not functioning as a control station on that leased line.

[3] Primary Code for the SDA Type II (EBCDIC*, ASCII, 6-Bit).

[4] Secondary or Alternate Code for the SDA Type II (EBCDIC*, ASCII, 6-Bit).

[5] Tributary Station Address - Allows the user to specify a station address A to R of any Synchronous Data Adapter Type II which is installed and functioning on a leased communications line as a tributary station and not functioning as a control station on that leased line. (Station address 0829*.) Only addresses A to R are valid.

[6] Line Speed:

(a) 134 bps*,300 bps, or 600 bps for Terminal Adapter Type 1 mdl II.

(b) 600 bps or 1200 bps* for Synchronous Data Type II.

(c) Not applicable for Terminal Adapter Type III or Telegraph Adapter Type II.

[7] Transparency - Yes or No* - Provides the SDA Type II with the ability to transmit and receive 8-bit binary as well as EBCDIC or ASCII codes or 6-bit binary data as well as 6-bit Transcode ... Transparency with ASCII modifies VRC/LRC checking to VRC/CRC checking ... **Limitations:** ASCII code and Transparency cannot be installed together for the same line position when attached to the 2780, 3780, System/3, System/7, System/32 or System/34. **Prerequisite:** SDA II.

[8] Write Interrupt - Yes or No* - Allows the Terminal Adapter Type 1 mdl II to operate with a 2741 equipped with Receive Interrupt (#4708). **Limitations:** Not supported under BTAM, QTAM, or TCAM. **Prerequisite:** Terminal Adapter Type 1 mdl II.

[9] Read Interrupt - Yes or No* - Allows the Terminal Adapter Type 1 mdl II to operate with a 2741 equipped with Transmit Interrupt (#7900). **Limitations:** Not supported under BTAM, QTAM, or TCAM. **Prerequisite:** Terminal Adapter Type 1 mdl II.

[10] New SYNC - Yes or No* - Allows the Synchronous Data Adapter Type II or Terminal Adapter Type III to be connected to modems which offer the New Sync feature option and have this option installed. New Sync minimizes modem turnaround and allows faster bit synchronization of the following data. **Prerequisites:** Modem Clocking (#9606-#9616), and a modem offering New Sync. **Note:** New Sync is not required if Half Duplex Facility, Tributary Station, or Switched Network is selected for the line position in question.

[11] Multipoint - Yes or No* - Specifies that a Terminal Adapter Type III is to operate in multipoint mode. If multipoint is not selected for a given Terminal Adapter Type III, point-to-point operation is presumed. **Prerequisite:** Terminal Adapter Type III.

[12] Unit Exception Supression - Yes or No* - If selected with Terminal Adapter Type 1 mdl II, Unit Exception will not be set in response to a circle C. **Limitations:** Not supported under BTAM, QTAM, or TCAM. **Prerequisite:** Terminal Adapter Type 1 mdl II.

* These options will comprise the standard microcode on the console file as shipped from the plant. They may be altered, as explained, from the display-console-keyboard at the operator's discretion.

Note: See "Special Features" for optional "ICA features" on the S/370 mdl 138.

Programming Features

Conditional Swapping (Standard): Provides two additional instructions ... Compare and Swap ... Compare Double and Swap.

PSW Key Handling (Standard): Provides two additional instructions ... Insert PSW Key ... Set PSW Key from Address.

APL Assist (Standard): This feature is an APL emulator. It replaces functions performed by the APL software interpreter. This feature can provide a performance improvement for many APL applications when used with VS APL PP (5748-AP1).

IMPL 3135 CPU Mode Selection: Provides the capability to "run" on S/370 mdl 138 any SCP which will "run" today on a S/370 mdl 135. No performance degradation or loss of S/370 mdl 135 recovery from error capabilities will be experienced in this mode. That is, in 3135 CPU Mode the improved hardware performance of the S/370 mdl 138 will be available to the user. Moreover, the user will have the same recovery capabilities on the S/370 mdl 138 as he has on a S/370 mdl 135 when 3135 CPU Mode is selected. **Note:** S/370 mdl 138 Extended Logout/EREP is not supported in this mode.

Extended Control Program Support (Standard): The S/370 mdl 138 includes Extended Control-Program Support. This is a hardware assist that reduces the CPU time needed to execute certain frequently used supervisor functions in both VS1 and VM/370.

The functional areas for VM/370 include:

Virtual Machine I/O
Storage Management
Page Management
SVC Handler
Privileged Instruction Interfaces
Dispatching
Virtual Interval Timer

For VS1 the functional areas are:

Storage Management
IOS
SVC FLIH
System Trace
Page Management

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Cabling: **#9080** for below the floor, **#9081** for on the floor.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Minimum Configuration: See "Minimum Configurations" in "Systems" for minimum I/O units required in S/370 mdl 138.
- Shipping Instructions: Unless otherwise specified, shipping dimensions of the 3138 Frame 01 (CPU) are 800mm (31-1/2 inches) wide x 1778mm (70 inches) long x 1524mm (60 inches) high. Removal of the side covers will reduce the width to 749mm (29-1/2 inches). If further reduction in width is required, specify **#9570**. Shipping dimensions will then be 749mm (29-1/2 inches) wide x 1524mm (60 inches) long x 1524mm (60 inches) high.

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

Note: RETAIN/370: CE access is by telephone.

SPECIAL FEATURES

Autocall (#1290): Provides automatic calling capabilities on the public switched telephone network to initiate (dial) through stored program control, a data link to a remote station. For the appropriate automatic calling units, see M2700 pages. **Specify:** Refer to Table 1-C for Terminal Adapter Type 1 mdl II or Table 1-E for Synchronous Data Adapter Type II or Table 1-F for Telegraph Adapter Type II for approprite feature code according to line positions desired. **Maximum:** Four. **Limitations:** Each Autocall feature installed reduces the number of lines available on the ICA by one. Autocall must be ordered once for each line where the function is desired. Thus, the ICA can accommodate a maximum of four lines if each of these lines also has the Autocall feature. A single Autocall feature can be associated with any of the lines from one to seven. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** #9721-#9728, #9649-#9656, or #9785-#9792 and Switched Network Facility selection from the display console.

Block Multiplexer Shared Subchannel (#1431): Note: This feature should be installed only if devices capable of "Block Shared" operation are installed on the block multiplexer channel. See *370 I/O Configuration Form,* GA22-7002. Allows any one of the following combinations of "Non-Shared", "Block Shared" or selector subchannels to be attached to the block multiplexer channel: [1] 16 Non-Shared and 1 Shared Selector (see address restrictions) ... [2] 8 Non-Shared, 8 Block Shared and 1 Shared Selector (see address restrictions) ... [3] 8 Non-Shared, 4 Block Shared and 1 Shared Selector (see address restrictions). If option [2] is selected, then each block shared subchannel may have attached to it a control unit having a maximum of 16 device addresses. If option [3] is selected, the four block shared subchannels may each have attached a control unit having a maximum of 32 device addresses. If option [1] is selected, no block shared subchannels are available, and addresses X00 through X7F are not available. With any option, the selector subchannel may have attached to it control units with a maximum of 16 device addresses. This feature will apply to both selector channels if installed. The options are selectable by the Customer Engineer and may be defined differently on each channel. **Maximum:** One. **Field Installation:** Yes.

3138 Processing Unit (cont'd)

Address Restrictions with #1431:

a) Addresses X00 through X7F are assigned as block shared subchannels. With option [1] they may not be used. With option [2] each control unit address position, i.e., X00, X10, X20, etc., through X70, is available. With option [3] "even" address positions only are available, i.e., 00, 20, 40 and 60.

b) Selector and Non-Shared addresses are limited to addresses X80 through XFF.

Channel Priority (#1502): When the IFA (#4655) is present, this feature changes the higher priority for command chaining from the first block multiplexer channel (Channel 2) to the second block multiplexer channel (Channel 3). #1502 is required if any DASD devices are to be attached to Channel 3. **Field Installation:** Yes. **Prerequisites:** #4655.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct, and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes between two cable-connected processing units, or a cable-connected processing unit and external devices. **Maximum:** One. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/360 Direct Control Feature - OEMI*, GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning*, GC22-7004. **Field Installation:** Yes.

Multiplexer Subchannels, Add'l (#3906, #3907): To increase the number of I/O devices on the byte multiplexer channel, the number of subchannels can be increased by specifying one of the following: ... #3906 -- for 128 subchannels ... #3907 -- for 256 subchannels. The maximum number of shared subchannels is eight. When 256 subchannels are installed there are no shared subchannels. **Note:** The number of subchannels ordered must be equal to or greater than the device addresses. Also see "Byte Multiplexer Channel" under "Input/Output Channels" above. **Field Installation:** Yes.

1401/1440/1460 Compatibility (#4457): Microprogram controlled feature, which, in conjunction with special software, permits the system to execute 1401/1440/1460 instructions. **Field Installation:** Yes.

Integrated Communications Adapter (#4640): Provides the circuits and controls for direct attachment of up to eight teleprocessing lines to the S/370 mdl 138. The controls for the first line adapter are included in this feature. Lines can be any combination of Start/Stop or BSC. Provides for the attachment of 1050, 2260 mdl 1, 2260 mdl 2, 2265 mdl 1, 2740 mdl 1, 2740 mdl 2, 2741 mdl 1, 2760 mdl 1, 5010 AXX, or any IBM computer multiplexer or terminal conforming to the Binary Synchronous Communications (BSC) standard. **Note:** In addition to the appropriate adapter, each communications line attached to the system requires an external modem. Refer to Table 2 below to define customer configuration requirements prior to ordering features below. **Customer Responsibilities** -- see M2700 pages for customer responsibilites communications facilities and servicing requirements. **Communications Facilities** -- see M2700 pages for communications facility requirements with this feature. **Field Installation:** Yes.

See "Specify Requirements for Integrated Communication Adapter" under "Specify".

3330/3340 Series Integrated File Adapter (#4655): Permits native attachment of up to two 3333s or 3340 mdl A2s. A maximum of sixteen 3330 or 3340 series drives can be attached to the IFA. The IFA supports rotational position sensing, disconnected command chaining and multiple requesting. Record overflow is standard. For 3330, standard I/O addresses are (hex) 150 through 15F. For 3340, standard addresses are (hex) 1C0 through 1CF. For 3340 with 3344, standard addresses are (hex) 1C0 through 1E1. **Maximum:** One. **Field Installation:** Yes.

Specify:

[1] DASD Designation -- Specify ONE of the following -- **#9313‡** (DASD 3333/3330) to attach up to two 3333 mdl 1s, each with up to three 3330 mdls 1/2 in any combination ... **#9314‡** (DASD 3340 only) to attach up to two 3340 mdl A2s, each with up to three 3340 mdls B1/B2 in any combination ... **#9315‡** (3333/3340 Intermix) to attach one 3333 mdl 1 (with up to three 3330 mdls 1/2 in any combination) plus one 3340 mdl A2 (with up to three 3340 mdls B1/B2 in any combination).

[2] If any 3333 mdl 11 and/or 3330 mdl 11 is to be attached, also specify **#9316‡** (3333/3330 mdl 11) in addition to **#9313** or **#9315**.

With **#9313** plus **#9316**, a mixture of one 3333 mdl 1 and one 3333 mdl 11, each with up to three 3330 mdls 1, 2, and 11 (in any combination) can be attached ... or two 3333 mdl 11s, each with any mixture of up to three 3330 mdls 1, 2, and 11.

With **#9315** plus **#9316**, one 3333 (either mdl 1 or mdl 11) with up to three 3330 mdls 1, 2, and 11 (in any combination) can be attached in addition to one 3340 mdl A2 with up to three associated mdls B1/B2. The standard addresses with **#9315** for 3330 are (hex) 150 through 157, for 3340 (hex) 158 through 15F.

[3] If any 3344 is to be attached, specify **#9317‡** in addition to **#9314** (**#9317** and **#9315** are mutually exclusive). **#9190‡** must also be specified if 3344 mdl B2Fs or the 3340 Fixed Head Feature (#4301/#4302) is ordered.

With **#9314**, **#9317**, and **#9190** up to three 3344 mdl B2/B2F and/or 3340 mdl B2, B1 units in any combination can be attached to one 3340 mdl A2. The second 3340 mdl A2, if present, can attach up to three 3340 mdl B1/B2 units.

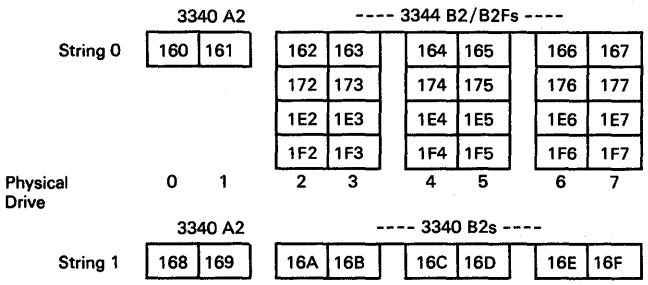
[4] When **#9314** is specified, also specify 3340 Address Designation: **#9820‡** for addresses (hex) 1C0 through 1CF, or **#9821‡** for addresses (hex) 160 through 16F. The specification of 160 allows the 3138 IFA addresses to coincide with those of the 3115 and 3125 IFAs.

[5] When **#9314** or **#9315** is specified, also specify **#9190‡** (Fixed Head Attachment) if Fixed Head Feature (#4301/#4302) is ordered for any 3340 attached to the IFA.

[6] If String Switch (#8150) is ordered for any attached 3333 or 3340 mdl A2, specify String Switch Attachment (**#9841.‡**

[7] When **#9821‡** is specified in conjunction with **#9313** the addresses for the 3333/3330s are (hex) 160 through 16F.

[8] When **#9821‡** is specified and both **#9314** and **#9317** are specified, the addresses for the 3340/3344s are as follows:



Note: 1 The DASD control combinations that can be attached to the 3330/3340 Series IFA (#4655) are shown in the left hand column of the table below. From Section A of the table select one of the feature numbers shown (one and only one must be selected). From Section B select the feature number(s) required to support your configuration (select none, one, or more than one from Section B). Section C of the table shows the addresses available. The specification of the (hex) 160 addresses allows the 3138 IFA addresses to coincide with those of the 3115 and 3125 IFA. Select a number from Section C if required.

Note 2: Any change to an installed DASD configuration requires an MES ONLY if the new configuration indicates that a different Specify and/or Special Features not previously installed AND removal of any not listed as required for the new configuration.

3138 3330/3340 IFA (#4655)

	DASD Control Combinations on IFA (#4655)	3333 Disk Storage Control	3333/ 3340 Intermix	3340 Direct Access Storage Facility
Section A	DASD Designation, one req'd	#9313‡	#9315‡	#9314‡

‡ CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

3138 Processing Unit (cont'd)

	Address 160	**#9821**‡ Hex 160-16F	—	**#9821**‡ Not 3344 Hex 160-16F	See Item 8 above

* No feature number required.

** Mutually exclusive with String Switch (**#9841**), 3330/3340 Intermix (**#9315**), 3344 Attachment (**#9317**).

Integrated 1403 Printer Adapter Basic Control (#4670): Provides the power supply and basic control for a natively attached 1403 Printer. **Maximum:** One. **Field Installation:** Yes.

Integrated 1403 Printer Mdl 2, Mdl N1 Attachment (#4672): Provides control for attaching 1403 mdl 2 or N1. **Specify: #9182** ‡ to attach 1403 mdl 2, **#9188**‡ to attach 1403 mdl N1. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4670. On the 1403, **#9709** and **#9725** are required on a mdl 2; **#9726** is required on a mdl N1. See Specify under 1403.

Integrated 1403 Printer Mdl 7 Attachment (#4677): Provides control for attaching a 1403 mdl 7. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4670. On the 1403, **#9725** (see "Specify" in M1403 pages).

Add'l Lines (#4722-#4728): Each provides circuits and controls for attachment of an additional line adapter ... for a total of eight lines in a system. **Specify:** Order additional lines according to line position required ... see Table 1-A below. Each line specified requires the next lower order line as a prerequisite. **Maximum:** One of each (#4722 through #4728). **Field Installation:** Yes. **Prerequisites:** #4640.

Specify Requirements For Integrated Communications Adapter: For each line (#4722-#4728) attached to the ICA, including the first line included in the Integrated Communications Adapter (#4640), one of the following line adapters must be specified: Terminal Adapter Type 1 mdl II (#9721-#9728), Terminal Adapter Type III (#9753-#9760), Telegraph Adapter Type II (#9785-#9792), or Synchronous Data Adapter Type II (#9649-#9656). Each line adapter and all associated features must be specified according to the line position to which they correspond. Refer to Table 2 below prior to ordering features for the ICA.

S/360 Mdl 20 Compatibility (#7520): Microprogram controlled feature which, in combination with special software, permits the system to execute S/360 mdl 20 or S/360 mdl 25 in mdl 20 mode instructions. **Field Installation:** Yes.

2314/3340 Compatibility Feature (#8070): Permits the emulation of 2314/2319 volumes on the 3340 Disk Storage. The user program may access both the emulated 2314 data set as well as 3340 volumes. This provides a "mixed-mode" operating environment. "Mixed-mode" is only possible with DOS releases which support 3340 on the mdl S/370 mdl 138. **Maximum:** One. **Field Installation:** Yes. **Limitations:** Cannot be installed with 3333/3340 Intermix (**#9315**), 3344 Attach (**#9317**), or String Switch Attachment (**#9841**). **Prerequisites: #9314** on #4655.

‡ CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

Integrated 3203-4 Printer Attachment, First Printer (#8075): Provides the capability to natively attach the 3203 Printer mdl 4. **Maximum:** One. **Field Installation:** Yes.

Integrated 3203-4 Printer Attachment, Second Printer (#8076): Provides the capability to natively attach a second 3203 Printer mdl 4. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #8075.

Universal Character Set Adapter (#8637): Permits the use of the Universal Character Set feature on a 1403 mdl 2 or N1 attached via the Integrated 1403 Printer mdl 2, mdl N1 Attachment (#4672). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4670, #4672.

Modem Clocking (#9609-#9616): Allows a Terminal Adapter Type III to operate at 2400 bps or a Synchronous Data Adapter Type II to operate at 2000 bps, 2400 bps, 4800 bps or 7200 bps. Requires the appropriate clocking to be in the attached modem. **Note:** Certain modems such as the 3872 mdl 1, although basically 2400 bps modems, offer a 1200 bps half speed facility. Since the requirements for the Modem Clocking feature are defined by the type of modem, not the line speed, when such modems are attached to the Synchronous Data Adapter Type II and are switched for 1200 bps operation, Modem Clocking is still required as a prerequisite on the ICA. **Specify:** Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** Terminal Adapter Type III or Synchronous Data Adapter Type II.

Synchronous Data Adatper Type II (#9649-#9656): ‡ Provides control of data transfers between the 3138 and binary synchronous terminals. See "Binary Synchronous Terminals" under 2701 Data Adapter Unit. Control Station is included with this feature. **Specify:** Refer to Table 1-B for appropriate feature code according to line position(s) desired. **Speed Selection:** Provides operation over facilities at 600 bps if 600 Bits Per Second is selected from the display console. Provides operation over the Public Switched Telephone Network or nonswitched Voice Grade Lines at 1200 bps (no speed need be specified). Provides operation over the Public Switched Telephone Network at speeds up to 4800 bps, nonswitched Voice Grade Lines at speeds up to 7200 bps and Public Switched and nonswitched Data Networks at speeds up to 4800 bps all provided that the clocking is supplied from the attached DCE. **Field Installation:** Yes. **Prerequisites:** #4640.

Special Requirements: See Table 1-E for additional specify requirements if Autocallor EON are required. See Table 1-E and Modem Clocking above if 2000 bps, 2400 bps, 4800 bps, or 7200 bps operation is required. The appropriate Data Code must be selected from the display console.

Limitations: For line speed limitations, refer to *Model 138 Channel Characteristics Manual*, GA33-3010.

Terminal Adapter Type 1 Mdl II (#9721-#9728): ‡ Controls data transfers between the 3138 and 1050/2740 mdl 1/2741/5010 mdl AXX between the 3138 and 2740 model 2 or 5010 mdl AXX between the 3138 and a 2741 over Facility K1M. Includes vertical and longitudinal checking for 1050 terminals and 2740s equipped with Record Checking (#6114). **Specify:** Refer to Table 1-B for appropriate feature code according to line position(s) desired. **Special Requirements:** See Table 1-C for additional specify requirements if Autocall is required. **Field Installation:** Yes. **Prerequisites:** #4640.

Terminal Adapter Type III (#9753-#9760): ‡ Controls data transfers between the 3138 and either remote 2845 Display Controls or 2848 Display Controls operating at 1200 bps. Permits operation at 2400 bps if Modem Clocking is specified. **Specify:** Refer to Table 1-B for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** #4640.

Telegraph Adapter Type II (#9785-#9792): ‡ Controls data transfers between ICA and Model 33/35 TTY terminals (8 level code at 110 bps only). **Specify:** Refer to Table 1-B for appropriate feature code according to line position(s) desired. **Field Installation:** Yes. **Prerequisites:** #4640 and Switched Network Facility selection from the display console.

EON (#9801-#9807): ‡ Automatically generates an EON digit at the end of the dial sequence. **Specify:** Refer to Table 1-E for appropriate feature code according to line position(s) desired. Specify for 3872 and 3874 Modem with EON option. **Field Installation:** Yes. **Prerequisites:** #1290 ... Synchronous Data Adapter Type II.

Modems

Up to eight modems can be attached to a 3138. **Prerequisites:** Integrated Communications Adapter (#4640) and Synchronous Data Adapter Type II (#9649-#9656) 2400 bps to 7200 bps, Terminal

3138 Processing Unit (cont'd)

Adapter Type 1 mdl II (#9721-#9728) 134.5 bps to 600 bps, or Terminal Adapter Type III (#9753-#9760) 1200 bps or 2400 bps. See feature descriptions for limitations.

Modem	Speed (bps)
3863	2400
3864	4800
3872 mdl 1	2400

Note: for communications capabilities, product utilization and special features, see M2700, 3863, 3864, 3872, pages.

Communication Information Tables

Before ordering, check Special Feature write-ups for Prerequisites and Limitations.

TABLE 1-A ADDITIONAL LINE APPEARANCES

	Line Position							
FEATURE	1	2	3	4	5	6	7	8
Additional Lines	4640	4722	4723	4724	4725	4726	4727	4728

Specify additional lines according to line positions.

TABLE 1-B TERMINAL ADAPTERS

	Line Position							
FEATURE	1	2	3	4	5	6	7	8
Terminal Adapter Type 1 mdl II‡	9721	9722	9723	9724	9725	9726	9727	9728
Terminal Adapter Type III‡	9753	9754	9755	9756	9757	9758	9759	9760
Synchronous Data Adapter Type II‡	9649	9650	9651	9652	9653	9654	9655	9656

Any adapter added, removed, or relocated to another line position requires reconfiguration of the entire line.

Select one terminal adapter for each line position specified in Table 1-A.

Table 1-C OPTIONS FOR TERMINAL ADAPTER TYPE 1 MODEL II

	Line Position

3145 PROCESSING UNIT

[NO LONGER AVAILABLE]

[The 3145 is No Longer Available ... features and model changes can be ordered on an 'as available' basis.]

PURPOSE

Has program, control and auxiliary storage, plus arithmetic and logic circuits for a S/370 mdl 145.

Model GE	GE0	163,840 bytes of processor storage
Model GFD	GFD	212,992 bytes of processor storage
Model H	H00	262,144 bytes of processor storage
Model HG	HG0	393,216 bytes of processor storage when used with a 3345 mdl 1 or 4
Model I	I00	524,288 bytes of processor storage when used with a 3345 mdl 2 or 5
Model H2	H02	262,144 bytes of processor storage
Model HG2	HG2	393,216 bytes of processor storage
Model I2	I02	524,288 bytes of processor storage
Model IH2	IH2	786,432 bytes of processor storage
Model J2	J02	1,048,576 bytes of processor storage
Model JI2	JI2	1,572,864 bytes of processor storage
Model K2	K02	2,097,152 bytes of processor storage

For additional models of the 3145, see M3145-3 pages.

Prerequisites

For 3145 mdl HG or I -- 3345 Storage and Control Frame and 3046 Power Unit.

For 3145 mdl H2, HG2, I2, IH2, J2, JI2 or K2 -- 3047 Power Unit.

HIGHLIGHTS

Depending upon the processing unit mdl, up to 2,097,152 bytes of processor storage are available. CPU cycle of 202.5 - 315 nanoseconds depending upon internal operation being performed. Sixteen general purpose and four floating point registers.

Virtual storage capability to increase the effective utilization of main storage.

On the 3145 mdls FED (no longer available), GE, GFD, H, HG or I, the 2319 Disk Storage mdl A1 (with 2312, 2313, 2318 or 2319 mdl A2 Disk Storages) can be natively attached via the Integrated File Adapter (#4650). 3333 Disk Storage and Control modules (with 3330 modules) and/or 3340 Disk Storage mdl A2s (with 3340 B mdls and/or 3344s) and/or 3350 Disk Storage mdls A2/A2F (with 3350 B2/B2F, C2/C2F mdls) can be attached to 3145 mdls FED, GE, GFD, H, HG or I via the Integrated Storage Control on 3345 mdls 3, 4 or 5. Attachment of 3330 series, 3340 series and 3344s and/or 3350 series disk storage to 3145 mdls H2, HG2, I2, IH2, J2, JI2 or K2 is via the Integrated Storage Control (#4660).

In addition to main storage, 32,768 bytes of Reloadable Control Storage are included in the CPU for all storage configurations. This feature permits emulator and control routines to function. Any expansion of control storage beyond 32,768 bytes (up to 65,536 bytes maximum) is provided in 2,048 byte increments at the expense of main memory ... see "Control Storage Requirements" below for basic machine and selected feature requirements in microcode.

An optional Clock Comparator and CPU Timer provide additional timing facilities for the programmer.

Virtual Storage: Extended Control (EC) Mode expands the structure of the Program Status Word to accommodate the control of new S/370 features and extends the number of permanently assigned main storage locations. The S/370 mdl 145 can operate in either EC Mode or Basic Control (BC) Mode as defined for S/360. Dynamic Address Translation (DAT) is a standard feature on the S/370 mdl 145. When the S/370 mdl 145 is in EC Mode, with Translation Mode operable, program addresses are treated as "logical addresses" and the translation feature develops "real addresses". Since logical storage addressing is not limited by the amount of available real storage, program size may exceed real storage size. This logical storage is referred to as "virtual storage" and may be as large as 16,777,216 bytes on the S/370 mdl 145. For I/O operations, Channel Indirect Addressing provides a means to transmit data that spans pages of noncontiguous real storage.

Program Event Recording, a standard feature, is a debugging aid which permits four types of events to be selectively monitored in a virtual environment: [1] Successful branches ... [2] Instruction fetch address compare ... [3] Main Storage alteration address compare ... [4] General Purpose Register alteration address compare.

Standard features include a commercial instruction set, new S/370 instructions, Extended Control (EC) Mode, Dynamic Address Translation, Channel Indirect Data Addressing, Program Event Recording, interval timer, time-of-day clock, store and fetch protect, console file, byte-oriented operand feature, error checking and correction code on main storage, micro-instruction retry, channel retry information, byte multiplexer channel, audible alarm, OS/DOS Compatibility Feature, and one selector channel.

Control Storage Requirements: The Reloadable Control Storage is housed in the CPU and is loaded from the Console File, which is located below the console reading board. This area of control storage is not available to the user. Control storage requirements for the system are as follows:

	Bytes
Basic System Microcode: Does not include 16 standard subchannels on the byte multiplexer channel	26,000
Byte Multiplexer Channel UCWs: Select one of the following:	
1. 16 MPX Channel Units	256
2. 32 MPX Channel Units	512
3. 64 MPX Channel Units	1024
4. 128 MPX Channel Units	2048
5. 256 MPX Channel Units	4096
Optional System Features	
1. Console Printer/Keyboard and Alternate Console Facility ... select one of the following:	
3210 Console Printer-Keyboard mdl 1	3200
3210 Console Printer-Keyboard mdl 1 with remote 3210 mdl 2	3440
3215 Console Printer-Keyboard	3800
3215 Console Printer-Keyboard with remote 3210 mdl 2	4570
2. Selector Channel Block Multiplex Feature (basic microcode which supports any and all selector channels with block multiplexer)	2500
3. UCWs for the Block Multiplex Channel come in multiples of 16 which are shared among all Block Multiplexer Channels	
8 bytes x no. of UCWs = **Note:** 512 UCWs are maximum.	———
4. Integrated File Adapter	9760
5. Compatibility Support: Select one:	
1401/1440/1460 Compatibility	5200
1401/1440/1460, 1410/7010 Compatibility	6000
6. Floating Point	2240
7. Direct Control Feature	80
8. Clock Comparator and CPU Timer	1800
9. Conditional Swapping	140
10. Advanced Control Program Support	860
11. Virtual Machine Assist	2400
12. APL Assist	19500

Control storage requirements in excess of 32,768 bytes will reduce processor storage by the amount exceeding 32,768 bytes in 2,048-byte increments to a maximum of 65,536 bytes.

Example:

Basic System	26,000 bytes
16 UCWs on byte multiplexer channel	256 bytes
3210 Console Printer-Keyboard mdl 1	3,200 bytes
Integrated File Adapter	9,760 bytes
1401/1440/1460 Compatibility	5,200 bytes
	Total = 44,416 bytes

The Movable Control Storage Boundary is set on 2,048 bytes. Control Storage required is 45,056 (32,768 + 6 x 2,048). The impact on processor storage is 12,288 bytes.

The address boundary between control and processor storage is assigned at Initial Micro Program Load (IMPL) time The boundary is established by the value loaded (during IMPL) according to the requirements in the console file. The boundary established is the upper limit of main storage addresses. If an I/O operation or program instruction attempts to address a main storage location at or above this boundary, an address check occurs and no storage location is accessed. If a control storage access is attempted below the boundary, a machine check occurs. Control storage will never be less than 32,768 bytes. Above this amount - to a maximum of 65,536 bytes - control storage is allocated from processor storage in 2,048-byte increments depending upon requirements specified to the system. This allocation can be changed by utilizing an alternate magnetic disk cartridge with another set of 3145 features. Alternate cartridges for an installation will be available via RPQ.

For S/360 Programming Systems (DOS and OS), the amount of processor storage available after control storage requirements have been met must be equal to or larger than the S/360 memory size that the version of the operating system requires. Any decrementing of processor storage for control storage requirements will be made in increments of 2,048 bytes.

Input/Output Attachment: A wide variety of I/O devices may be attached to the S/370 mdl 145 via the standard byte multiplexer channel and the optional selector channels. There are, however, four

3145 Processing Unit (cont'd)

direct attachment features for the 3145. They are:

Console File [standard] -- this is the basic microprogram loading device for the system. The console file contains a small, low-performance read-only file device that provides all of the microcode for the system on removable magnetic disk cartridges. The several disks that will be supplied with the system will supply all of the required microcode for FEdiagnostics, basic systems features, plus the optional features ordered for the system.

Console Printer-Keyboard [required] -- this unit serves as the online input/output device for operator/system communications. It provides a means of manually entering data into the system, altering data already in storage, and for printing error logout messages.

Integrated File Adapter [optional on 3145 mdls FED, GE, GFD, H, HG or I ... not available on mdls H2, HG2, I2, IH2, J2, JI2 or K2] -- this feature enables native attachment of 2319 Disk Storage mdl A1 (and additional 2312, 2313, 2318 or 2319 mdl A2 Disk Storages) through an integrated adapter. The adapter is permanently assigned to the standard selector channel (Channel 1), and requires space normally assigned to Selector Channel 4. When the IFA is installed, Selector Channel 2 becomes standard, and only Selector Channel 3 can be ordered. **Note:** 2312s, 2313s, 2318s and 2319 all models are no longer available.

Integrated Storage Control [optional on mdls H2, HG2, I2, IH2, J2, JI2 or K2 ... not available on mdls FED, GE, GFD, H, HG or I] -- this feature allows native attachment of 3333 Disk Storage and Control modules (with 3330 modules) and/or 3340 Disk Storage mdl A2s (with 3340 B mdls and/or 3344s) and/or 3350 Disk Storage mdls A2/A2F (with 3350 B2/B2F, C2/C2F mdls). This feature requires an available control unit position on a system channel. A Block Multiplexer Channel and one unshared subchannel per logical device are required for support of block multiplexing and rotational position sensing. If this support is not required, attachment to a system selector channel is permitted.

This attachment capability is provided for the 3145 mdls FED, GE, GFD, H, HG or I via the 3345 mdls 3, 4 and 5 ... see M3345 pages.

Input/Output Channels

Byte Multiplexer Channel -- one is standard on the 3145 and is functionally equivalent to the byte multiplexer channel on the S/360 mdls 30, 40 and 50. Sixteen subchannels are provided as standard with the option of 32, 64, 128 or 256 ... see "Special Features". At system order time, the number of units on the multiplexer channel must be specified in order that the correct amount of control storage is reserved. The byte multiplexer channel provides eight control unit positions and permits I/O units to operate normally in byte mode, giving the effect of several I/O operations simultaneous with computing. In burst mode, the channel handles one high speed unit. For Operating System/360 exclusion, refer to SRL GC28-6554, *System/360 Operating Systems System Generation.*

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See Multiplexer Subchannels, Additional, in "Special Features".

Selector Channels -- one is standard ... three additional are available ... see "Special Features". **Note:** If the Integrated File Adapter is specified, see "Selector Channel" under "Special Features" for limitations. With the optional Word Buffer installed, the selector channel data rate will approximate 1.85 megabytes/second, while the unbuffered data rate will be 820 KB. The Block Multiplexer Channel is also available for the selector channels and the channel data rates apply with or without the feature. On channels without the Word Buffer (#8810), the 3330/3830 or 3345 mdl 3, 4, 5 with 3330 drives must be attached to channel 1 of non-IFA systems and to channel 2 of IFA systems. On channels with #8810, the 2305/2835 mdl 2 must be attached to channel 1 on non-IFA systems and to channel 2 on IFA systems, and the 3330/3830 or 3345 mdl 3, 4, 5 may be attached to any available channel. **Note:** If block multiplexing or rotational position sensing is required, the Block Multiplexer Channel feature must be installed. The Word Buffer (#8810) is required to attach the 2305/2835 mdl 2 or 3340. If the S/370 mdl 145 has 3 or 4 selector channels (IFA counts as a selector channel), the Word Buffer (#8810) is required to attach a 3330 series facility.

Attention: If Block Multiplexer Channels are installed, UCW requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

Console Function -- a standard system control panel is located on the 3145. It has switches and lights necessary to operate and control the system. A systems control I/O function is provided with either of two alternatives. Feature #7844 attaches the 3210 Console Printer-Keyboard mdl 1 (15.5 cps) on the console table reading board. Optionally, the 3215 Console Printer-Keyboard (85 cps) can be attached via feature #7855. Either #7844 or #7855 is required in the system. A remote 3210 mdl 2 may also be attached ... see "Special Features".

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#990***s* for 208V or **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Console Table (Reading Board) Extension: **#9824** for extension to operator's right or **#9825** for extension to left.
- Cabling: **#9080** for below the floor or **#9081** for on the floor.
- Additional Multiplexer channels: 16 are standard ... if more are required, see "Special Features".
- Emergency Power-Off Control: May be required ... see "Special Features" and *S/370 Installation Manual - Physical Planning,* GC22-7004, for requirements.
- Minimum Configuration: See "Minimum Configurations" in "Systems" for minimum I/O units required on a S/370 mdl 145.

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

- RETAIN/370: **#9570** for non-use of FE DAU, **#9571** for first CPU using FE DAU, **#9572** for second CPU using FE DAU, or **#9573** for third CPU using FE DAU. Customer must provide interface for FE DAU to the telephone line. For details on ordering and customer responsibilities, see BOM, Orders and Movements. Note: Up to three CPUs in the same physical location can be serviced by a single FE DAU.
- Shipping Instructions: Unless otherwise specified, shipping dimensions of the 3145 Frame 01 (CPU) are 31-1/2" wide x 70" long x 60" high. Removal of the side covers will reduce the width to 29-1/2". If further reduction in length is required, specify **#9692**. Shipping dimensions will then be 29-1/2" wide x 60" long x 60" high.
- Console Printer-Keyboard Address: [Recorded on the console file disk at the plant] **#9101**** for "01F," or **#9102**** for "009".
- Alternate Console Printer-Keyboard Address: **#9105**** ... alternate address of "009" for the Second Console Printer-Keyboard (3210 mdl 2). Address is in lieu of the standard Alternate Console Printer-Keyboard address of "01E" when the Primary Console Printer-Keyboard address in "01F". Recorded on the console file disk at the plant. **Prerequisites: #9101**, Primary Console Printer-Keyboard Address "01F".

  ** CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on same diskette.
- When attaching a 3345 mdl 3, 4 or 5, specify **#9851**.

SPECIAL FEATURES

Advanced Control Program Support (#1001): Provides four additional instructions and a new function ... Compare and Swap ... Compare Double and Swap ... Insert PSW Key ... Set PSW Key from Address ... Clear I/O Function. This feature is a prerequisite for the execution of MVS (OS/VS2 Release 2 and above) and/or VTAM and for TCAM/NCP. **Limitations:** Cannot be installed if Conditional Swapping (#1051) is installed. **Field Installation:** Yes.

APL Assist (#1005): Provides performance assist to APL programs when used with the VS APL PP #5748-AP1. **Field Installation:** Yes.

Conditional Swapping (#1051): Provides two additional instructions ... Compare and Swap ... Compare Double and Swap. This feature is a prerequisite for the execution of VTAM programming support and for TCAM/NCP. **Limitations:** Cannot be installed if Advanced Control Program Support (#1001) is installed. **Field Installation:** Yes.

Block Multiplexer Channel (#1421): Increases the efficiency of the selector channel when using direct access storage devices equipped with rotational position sensing. The disconnected command chaining feature of the channel allows multiple devices to perform non-data transfer operation concurrently with one data transfer operation. This permits increased utilization of the channel by performing operations on other devices while the channel would have normally been waiting on one device. This feature provides Block Multiplexer capabilities for all system Selector Channels. **Field Installation:** Yes. **Specify:** The number of UCWs (available in multiples of 16) for Block Multiplexer Channels must be specified. Select one of the following numbers, which will supply the specified number of UCWs to be shared by the Block Multiplexer Channels(s) ... field installable.

3145 Processing Unit (cont'd)

Code	UCWs	Code	UCWs	Code	UCWs	Code	UCWs
#9491*	16	**#9499***	144	**#9507***	272	**#9515***	400
9492*	32	**9500***	160	**9508***	288	**9516***	416
9493*	48	**9501***	176	**9509***	304	**9517***	432
9494*	64	**9502***	192	**9510***	320	**9518***	448
9495*	80	**9503***	208	**9511***	336	**9519***	464
9496*	96	**9504***	224	**9512***	352	**9520***	480
9497*	112	**9505***	240	**9513***	368	**9521***	496
9498*	128	**9506***	256	**9514***	384	**9522***	512

* CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

Note: The number of UCWs specified for the Block Multiplexer Channels(s) does *NOT* affect the number of Multiplexer Subchannels. See Multiplexer Subchannels, Add'l (#4951 - 4954).

Channel-To-Channel Adapter (#1850): To interconnect two channels (either S/360, S/370 or 4300 processor). Only one of the processors requires this feature. Uses two control unit positions on each of the connected channels. **Maximum**: One. **Field Installation**: Yes.

Clock Comparator and CPU Timer (#2001): The Clock Comparator provides a means of causing an interruption when the time-of-day clock has passed a program-specified value. The CPU Timer is a decrementing binary counter with a resolution of one microsecond. It provides a means for measuring elapsed CPU time by causing an interruption when a pre-specified amount of time has elapsed. **Maximum**: One. **Field Installation**: Yes.

Control Store Extension (#2150): [Mdls H2, HG2, I2, IH2, J2, JI2, K2] Provides additional control storage for microprogram use on the ISC (#4660) ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Maximum**: One. **Field Installation**: Yes. **Limitations**: Cannot be installed with Expanded Control Store (#2152).

Expanded Control Store (#2152): [Mdls H2, HG2, I2, IH2, J2, JI2, K2] Provides additional control storage for microprogram use on the ISC (#4660) ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Limitations**: Cannot be installed with Control Store Extension (#2150). **Maximum**: One. **Field Installation**: Yes.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes between two cable-connected processing units, or a cable-connected processing unit and external devices. **Maximum**: One. **Cable Order**: Required. **Field Installation**: Yes. **Prerequisites**: External devices must meet the interface specifications outlined in *S/360 - Direct Control Feature - OEM,* SRL GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning,* GC22-7004. **Field Installation**: Yes.

Floating Point (#3910): Adds floating point instructions to the S/370 mdl 145 standard instruction set. Provides for floating point operations including extended precision to 28 hexadecimal digits. **Field Installation**: Yes.

1401/1440/1460 Compatibility (#4457): Microprogram controlled feature which, in combination with special software, permits the system to execute 1401/1440/1460 instructions. **Field Installation**: Yes.

1401/1440/1460, 1410/7010 Compatibility (#4458): Gives 1401/1440/1460 compatibility, plus 1410/7010 compatibility. **Field Installation**: Yes.

Integrated File Adapter (#4650): [Mdls FED, GE, GFD, H, HG, I] Permits native attachment of the 2319 Disk Storage mdl A1 (and additional 2312, 2313, 2318 or 2319 mdl A2 Disk Storages ... up to eight drives total) through an integrated adapter. Standard features include file scan and record overflow functions. **Specify**: One of the following additional power features -- **#9303** for three drives ... **#9304** for four ... **#9305** for five ... **#9306** for six ... **#9307** for seven ... **#9308** for eight. See M2319 pages for additional ordering instructions. **Limitations**: Cannot be installed on mdls H2, HG2, I2, IH2, J2, JI2 or K2. **Field Installation**: Not recommended ... but may be removed in the field. Contact IBMfor system time required.

Note: Field removal of this feature by MES provides for the installation of Selector Channel #1 in its place. When this occurs, the currently installed standard selector channel (Channel 2) becomes an optional channel which **Is Billable**. A concurrent MES should be submitted to remove any unwanted optional selector channels.

Integrated Storage Control (#4660): [Mdls H2, HG2, I2, IH2, J2, JI2, K2] Provides for the attachment of 3333s (mdls 1 and/or 11) and/or 3340 mdl A2s and/or 3350 mdl A2s/A2Fs ... see DASD Configuration under Specify, below. Additional storage is provided by attaching 3330 modules to the 3333 or by attaching 3340 mdl Bs and/or 3344s to the 3340 mdl A2 or by attaching 3350 mdl Bs and/or a mdl C to the 3350 mdl A2 or A2F ... see DASD Configuration table below and M3330, 3333, 3340, 3344, 3350 pages. **Maximum**: One. **Field Installation**: Yes. **Limitations**: Cannot be installed on mdls FED, GE, GFD, H, HG or I. **Prerequisites**: Requires a control unit position on a system channel. A block multiplexer channel and one unshared subchannel per logical device are required for support of block multiplexing and rotational position sensing. If this support is not required, attachment to a system selector channel is permitted. Word Buffer (#8810) is required to support the 3340, or if the system includes Selector Channel, 3rd (#6983). **Specify**: The available combinations of storage devices which can be attached are shown in the table below. One, two or three Xs in a vertical column indicate the type of machines(s) listed under DASD Configuration which can be attached when the "Required DASD Specify Features" are installed. Based on the DASD, and the Special Features listed below being ordered for them, order the Required DASD Specify Feature(s). [Note that **#9190** is 3340 Fixed Head Attachment for **#9314** and **#9315** and is *not* specified for **#9317** or **#9318.**]

Multiplexer Subchannels, Add'l (#4951-#4954): To increase the number of I/O devices on the multiplexer channel, the number of subchannels can be increased by specifying one of the following: #4951 -- for 32 multiplexer subchannels ... #4952 -- for 64 ... #4953 -- for 128 ... or #4954 -- for 256. The maximum number of shared subchannels is eight. When 256 multiplexer subchannels are installed there are *NO* shared subchannels. **Note**: The number of Multiplexer Subchannels does not affect the number of UCWs specified for the Block Multiplexer Channel(s). See Block Multiplexer Channel (#1421) specify. **Field Installation**: Yes.

Register Expansion (#6111): Provides additional registers for microprogram use on the ISC ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Field Installation**: Yes. **Maximum**: One.

Selector Channel (#6982-#6984): Each adds a high-speed channel to the system. The channel permits overlapped I/O operation with processing. Eight control unit positions are provided on each channel. #6982 -- for second selector channel ... #6983 -- for third ... #6984 -- for fourth. **Limitations**: If Integrated File Adapter (#4650) is installed, Selector Channels 1 and 4 are preempted, Channel 2 becomes standard and only Channel 3 (#6983) can be ordered. **Field Installation**: Yes. **Prerequisites**: #6983 requires #6982 or #4650 ... #6984 requires #6983 ... if 3330 or 3333 drives are to be attached to the system, #6983 requires #8810.

3210 Mdl 1 Adapter (#7844): To attach a 3210 Console Printer-Keyboard mdl 1 (15.5 cps) for systems console I/O ... includes an alter-display ability. Position of the 3210 to the right or left of the operator depends on Console Table Extension (**#9824** or **#9825**) ... see "Specify" above. **Limitations**: Cannot be installed with 3215 Adapter (#7855). **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: Uses one address on the standard byte multiplexer channel, but does not use a control unit position.

3210 Mdl 2 Adapter (#7845): To attach a free-standing 3210 Console Printer-Keyboard mdl 2 for remote systems console I/O. **Limitations**: Maximum distance from the console is 75 feet. **Maximum**: One. **Cable Order**: Required. **Field Installation**: Yes. **Prerequisites**: Either a #7844 or #7855 and a #4951, 4952, 4953 or 4954. Uses one address on the standard byte multiplexer channel, but does not use a control unit position. The standard address for the Alternate Console Printer-Keyboard is "01E" if the Primary Console Printer-Keyboard address is "01F". If the Primary Console Printer-Keyboard address is "009", the standard address for the Alternate Console Printer-Keyboard is "008". Also see "Specify" for alternate address.

3215 Adapter (#7855): To attach a 3215 Console Printer-Keyboard (85 cps) for systems console I/O ... includes alter-display ability. Position of the 3215 to the right or left of the operator depends upon Console Table Extension (**#9824** or **#9825**) ... see "Specify" above. **Limitations**: Cannot be installed with 3210 Mdl 1 Adapter (#7844). **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: Uses one address on the standard byte multiplexer channel, but does not use a control unit position.

Two Channel Switch (#8100): [Mdls H2, HG2, I2, IH2, J2, JI2, K2] To attach the Integrated Storage Control (#4660) to a second channel ... the two-channels may be on the same or different CPUs. Switching is under program control. The ISC feature in the 3145 can be dedicated to a single channel by means of an Enable/Disable switch. **Limitations**: Cannot be installed on a mdl FED, GE, GFD, H, HG or I. **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: See "Prerequisites" under ISC (#4660).

3145 Processing Unit (cont'd)

ISC (#4660) WITH ONE CHANNEL OR WITH TWO CHANNEL SWITCH (#8100)

DASD Configuration		Required DASD Specify Features*																	
		† 9313		† 9314		† 9314 9190	** † 9315			** † 9315 9190				+ † 9317		++† 9318	
3333 Only	One or two 3333s with associated 3330s	x	x														
	Up to four 3333s with associated 3330s						x	x									
	String Switch (#8150) on any 3333		x				x										
3340 Only	One or two 3340 mdl A2s with associated mdl B1/B2s			x	x	x				x							
	Up to four 3340 mdl A2s with associated mdl B1/B2s							x	x		x	JC	x				
	String Switch (#8150) on any 3340 mdl A2				x				x	x		x					
	Fixed Head feature (#4301/ 4302) on any 3340					x				x	x	x					
3340 3344	Up to four 3340 mdl A2s of which up to two may attach 3344s													x	x		
	String Switch (#8150) on any 3340 mdl A2 and/ or Fixed Head feature (#4301/ 4302) on any 3340														x		
3333 3340 -not 3344	3333s and 3340 mdl A2s (any combination of 2, 3, or 4) each with associated drives								x	x			x	x			
	String Switch (#8150) on any 3333 or 3340 mdl A2								x				x				
	Fixed Head feature (#4301/ 4302) on any 3340												x	x			
3350 Only	Up to four 3350 mdl A2/ A2Fs with associated mdl B2/B2Fs, C2/C2Fs															x	x
	String Switch (#8150) on any 3350 mdl A2/A2F, C2/C2F															x	
3333 3340	3333s, 3340 mdl A2s and 3350 mdl A2/A2Fs (any combination of 2, 3, or 4) with associated drives																x x
3350 -not 3344	String Switch (#8150) on any 3333, 3340 mdl A2, or 3350 mdl A2/A2F, C2/C2F and/ or Fixed Head feature (#4301/ 4302) on any 3340																x

† ISC diskette only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. $290 on purchased machines to include any number of diskette-only changes ordered on the same diskette.

* Any change to an installed DASD configuration requires an MES *ONLY* if the new configuration indicates that a different Specify and/or Special Feature(s) is required. The MES must include addition of any new Specify and/or Special Features not previously installed *AND* removal of any not listed as required for the new configuration.

** Control Store Extension (#2150) is prerequisite. With **#9315**, the ISC requires 32 contiguous device addresses regardless of the number of drives attached.

\+ Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group the ISC uses 64 contiguous device addresses irrespective of the number of drives attached. The 3340 mdl A2s on the first and third strings may attach up to three 3340 mdl B1s, B2s, and/or 3344s in any combination. The 3340 mdl A2 on the second string may attach up to three 3340 mdl B1/B2s. The 3340 mdl A2 on the fourth string may attach one 3340 mdl B1 or B2.

++ Expanded Control Store (#2152) and Register Expansion (#6111) are prerequisites. For configurations in this group the ISC uses 8 or 16 or 32 or 64 device addresses depending upon the DASD configuration installed and whether any 3350 drive is in 3330-1 compatibility mode.

Note: Customers who may elect to purchase Control Store Extension (#2150) and later upgrade to Expanded Control Store (#2152) should consider the purchase of Expanded Control Store (#2152) initially because this field upgrade requires replacement of Control Store Extension (#2150) and installation of Expanded Control Store (#2152). The prerequisite of Control Store Extension (#2150) for **#9315** or **#9317** can be satisfied by Expanded Control Store (#2152).

Virtual Machine Assist (#8740): Provides assist to VS operating systems operating under VM/370 by emulation of certain privileged operations. **Field Installation:** Yes. **Prerequisites:** #2001 and #3910.

Word Buffer (#8810): Increases the data rate capability of the selector channels on the 3145 from a maximum aggregate data rate of 1.55 megabytes per second to 5.3 megabytes, and the maximum single channel rate from 0.82 megabytes to 1.85 megabytes. When installed, applies to all selector channels. **Field Installation:** Yes. **Prerequisites:** This feature is required to operate 3330 series drives when the system configuration includes an Integrated File Adapter and two Selector Channels, or three or more Selector Channels. It is also required whenever 3340, 3344 or 3350 series drives are attached.

MODEL CONVERSIONS

Field installable as follows. When ordering field conversion of a 3145 mdl FED, GE, GFD, H, HG or I to a mdl H2, HG2, I2, IH2, J2, JI2 or K2, see "Specify" in M3047 pages for additional requirements.

From To	GFD	H	HG	I
GE	X	X	X	X
GFD		X	X	X
H			X	X
HG				X

From To	H2	HG2	I2	IH2	J2	JI2	K2
GE	X	X	X	X	X	RPQ	RPQ
GFD	X	X	X	X	X	RPQ	RPQ
H	X	X	X	X	X	RPQ	RPQ
HG	RPQ	RPQ	X	X	X	RPQ	RPQ
I			RPQ	X	X	RPQ	RPQ
H2		X	X	X	X	X	X
HG2			X	X	X	X	X
I2				X	X	X	X
IH2					X	X	X
J2						X	X
JI2							X

Customer price quotations and customer order acknowledgement letters for purchase MESs must state: "Installation of model changes to the '2' series from the non '2' series involves the removal of parts which become the property of IBM."

ACCESSORIES (None)

SUPPLIES (None)

3145-3 PROCESSING UNIT

[NO LONGER AVAILABLE]

[*The 3145-3 is No Longer Available ... features and model changes can be ordered on an 'as available' basis*]

PURPOSE

Provides a performance improvement for S/370 model 145 models H2, HG2, I2, IH2, J2, JI2 and K2 only.

MODELS

Model A1*	A01	196,608 bytes of processor storage
Model A2*	A02	327,680 bytes of processor storage
Model A3*	A03	458,752 bytes of processor storage
Model A4*	A04	720,896 bytes of processor storage
Model A5*	A05	983,040 bytes of processor storage
Model A6*	A06	1,507,328 bytes of processor storage
Model A7*	A07	2,031,616 bytes of processor storage

Prerequisites: The following prerequisites apply to each 3145-3 processor model:

[1] 3047 Power Unit ... see M3047 pages.
[2] Clock Comparator and CPU Timer Feature (#2001) ... see "Special Features".
[3] Word Buffer Feature (#8810) ... see "Special Features".

Note 1: The 3145-3 is available as a non-removable, field installable upgrade to a S/370 mdl 145 model H2, HG2, I2, IH2, J2, JI2 and K2.

Note 2: Up to 64K of main memory is removed during the conversion to a 3145-3 resulting in the memory sizes as specified.

HIGHLIGHTS

Depending on the mdl, up to 2,031,616 bytes of processor storage are available. CPU cycle time varies from 180 to 270 nanoseconds depending upon the internal operation being performed. 16 general purpose and four floating point registers are provided.

Standard Features Include: Advanced Control Program Support ... APL Assist ... Audible Alarm ... Byte Oriented Operand ... 1 Byte Multiplexer Channel ... 64 Byte Multiplexer Subchannels ... 1 Block Multiplexer Channel ... 64 Block Multiplexer Subchannels ... Channel Command Retry ... Channel Indirect Addressing ... Console File ... Control Registers ... Dynamic Address Translation ... Error Checking and Correction (in Main and Control Storage) ... Extended Control Mode ... Extended Control-Program Support ... Extended Precision ... Interval Timer ... Machine Check Handling ... Microprogram Instruction Retry ... OS/DOS Compatibility ... Program Event Recording ... Storage Protection (Store and Fetch) ... S/370 Universal Instruction Set ... Time-of-Day Clock.

Control Storage: 131,072 bytes of Reloadable Control Storage are provided in addition to main storage. This permits emulator and control routines to function. The Reloadable Control Storage is housed in the CPU and is loaded from the Console File which is located beneath the operator's console. Reloadable Control Storage is not accessible to the user.

Virtual Storage: Virtual Storage capability is is provided to increase the effective utilization of main storage.

Console File (standard): This is the basic microprogram loading device for the system. The console file contains a small file device that provides all of the microcode for the system on removable magnetic disks. The several disks that will be supplied with the system will supply all of the required microcode for CE diagnostics, basic system features, plus the optional features ordered for the system.

Console Function: Operator communication with the system is via a system control panel located on the 3145-3 and a 3210 mdl 1 or a 3215 Console Printer-Keyboard as on other models of the S/370 mdl 145. A remote 3210 mdl 2 may also be attached ... see "Special Features".

INPUT/OUTPUT CHANNELS

Byte Multiplexer Channel -- one is standard ... functionally equivalent to the byte multiplexer channel of the S/370 mdl 145 ... provides eight control unit positions ... in byte mode, permits simultaneous operation of many low-speed devices ... in burst mode, handles one high-speed unit.

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See Multiplexer Subchannels, Add'l, in "Special Features".

Block Multiplexer Channels -- one is standard ... three are available as special features ... the Word Buffer feature applies to any block multiplexer channels which are attached to the system ... as described, each Block Multiplexer Channel approximates 1.85 megabytes/second ... ability to "Block Multiplex" provides greater channel efficiency when using direct access storage devices equipped with rotational position sensing ... devices on these channels which cannot use block multiplexing will function as if attached to selector channels.

Subchannels -- on the byte multiplexer channel 64 subchannels are provided as standard with the option of 128 or 256 (see "Special Features") ... 64 block multiplexer subchannels (UCWs) are provided as standard with the option of 128, 256, or 512 (see "Special Features") ... the number of block multiplexer subchannels (UCWs) chosen will be shared by the number of Block Multiplexer Channel(s) attached to the system.

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

Input/Output Attachment

Non-native -- a wide variety of I/O devices may be attached to these models of the S/370 mdl 145-3 via the standard byte multiplexer channel, the standard block multiplexer channel, and/or the optional block multiplexer channels. In particular, any I/O device which is attachable to a 3145 is attachable to a 3145-3.

Native -- the following integrated I/O attachments/adapters are provided for controlling the designated I/O devices:

Console Printer-Keyboard (required) -- the unit serves as the online input/output device for operator/system communications. It provides a means of manually entering data into the system, altering data already in storage, and for printig error logout messages.

Integrated Storage Control -- this feature allows native attachment of 3333 Disk Storage and Control modules (with 3330 modules) and/or 3340 Disk Storage mdl A2s (with 3340 B mdls and/or 3344s) and/or 3350 Disk Storage mdls A2/A2F (with 3350 B2/B2F, C2/C2F mdls). This feature requires an available control unit position on a system channel.

Programming Features

Advanced Control Program Support (standard) -- provides four additional instructions and an additional function ... Compare and Swap ... Compare Double and Swap ... Insert PSW Key ... Set PSW Key from Address ... Clear I/O Function.

APL Assist (standard) -- this feature is an APL emulator. It replaces functions performed by the APL software interpreter. This feature can provide a performance improvement for many APL applications when used with VS APL (#5748-AP1).

Extended Control Program Support (standard) -- the 3145-3 processor mdls of the S/370 mdl 145 include Extended Control-Program Support. This is a hardware assist that reduces the CPU time needed to execute certain frequently used supervisor functions in both VS1 and VM/370.

The functional areas for VM/370 include:

Virtual Machine I/O
Storage Management
Page Management
SVC Handler
Privileged Instruction Interfaces
Dispatching
Virtual Interval Timer

For VS1 the functional areas are:

Storage Management
IOS
SVC FLIH
System Trace
Page Management

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V or **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Console Table (Reading Board) Extension: **#9824** for extension to operator's right, **#9825** for extension to the left.
- Cabling: **#9080** for below the floor, **#9081** for on the floor.
- Additional Multiplexer Subchannels: 64 are standard ... if more are required, see "Special Features".
- Emergency Power-Off Control: May be required ... see "Special Features" and *S/370 Installation Manual - Physical Planning*, GC22-7004, for requirements.
- RETAIN/370: **#9570** for non-use of FE DAU, **#9571** for first CPU using FE DAU, **#9572** for second CPU using FE DAU, or **#9573** for third CPU using FE DAU. Customer must provide interface for FE DAU to the telephone line. For details on ordering and customer responsibilities, see BOM, Orders and Movements. **Note:** Up to three CPUs in the same physical location can be serviced by a single FE DAU.

3145-3 Processing Unit (cont'd)

Attention: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

- Unless otherwise specified, shipping dimensions of the 3145-3 Frame 01 (CPU) are 800mm (31-1/2") wide by 1778mm (70") long by 1524mm (60") high. Removal of the side covers will reduce the width to 749mm (29-1/2"). If further reduction in length is required, specify **#9692**. Shipping dimensions will then be 749mm (29-1/2") wide by 1524mm (60") long by 1524mm (60") high.
- Console Printer-Keyboard Address: [Recorded on the console file disk at the plant] **#9101*** for "01F", or **#9102*** for "009".
- Alternate Console Printer-Keyboard Address: **#9105*** ... alternate address of "009" for the Second Console Printer-Keyboard (3210 mdl 2). Address is in lieu of the standard Alternate Console Printer-Keyboard address of "01E" when the Primary Printer-Keyboard address is "01F". Recorded on the console file disk at the plant. **Prerequisites: #9101**, Primary Console Printer-Keyboard Address "01F".

SPECIAL FEATURES

Block Multiplexer Channel (#1427-#1429): Each adds a high-speed channel to the system. The channel permits overlapped I/O operation with processing. Eight control unit positions are provided on each channel. #1427 -- for second channel ... #1428 -- for third ... #1429 -- for fourth. **Field Installation:** Yes. **Prerequisites:** #1428 requires #1427 ... #1429 requires #1428.

Block Multiplexer Subchannels, Add'l (#1450): To increase the number of I/O devices on the block multiplexer channels, the number of subchannels (UCWs) can be increased by specifying one of the following: **#9581*** for 128 ... **#9582*** for 256 ... **#9583*** for 512. The number of subchannels selected will be shared by the Block Multiplexer Channel(s) attached to the system.

Channel-to-Channel Adapter (#1850): To interconnect two-channels (either S/360, S/370 or 4341 Processor). Only one of the processors requires this feature. Uses two control unit poisitions on each of the connected channels. **Maximum:** One. **Field Installation:** Yes.

Clock Comparator and CPU Timer (#2001): [Prerequisite for 3145-3] The Clock Comparator provides a means of causing an interruption when the time-of-day clock has passed a program-specified value. The CPU Timer is a decrementing binary counter with a resolution of one microsecond. It provides a means for measuring elapsed CPU time by causing an interruption when a pre-specified amount of time has elapsed. **Maximum:** One. **Field Installation:** Yes.

Control Store Extension (#2150): Provides additional control storage for microprogram use on the ISC (#4660) ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Maximum:** One. **Field Installation:** Yes. **Limitations:** Cannot be installed with Expanded Control Store (#2152).

Expanded Control Store (#2152): Provides additional control storage for microprogram use on the ISC (#4660) ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Limitations:** Cannot be installed with Control Store Extension (#2150). **Maximum:** One. **Field Installation:** Yes.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes between two cable-connected processing units, or a cable-connected processing unit and external devices. **Maximum:** One. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/360 - Direct Control Feature - OEM*, GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning*, GC22-7004. **Field Installation:** Yes.

1401/1440/1460 Compatibility (#4457): Microprogram controlled feature which, in combination with special software, permits the system to execute 1401/1440/1460 instructions. **Field Installation:** Yes.

1401/1440/1460, 1410/7010 Compatibility (#4458): Gives 1401/1440/1460 compatibility, plus 1410/7010 compatibility. **Field Installation:** Yes.

Integrated Storage Control (#4660): Provides for the attachment of 3333s (mdls 1 and/or 11) and/or 3340 mdl A2s and/or 3350 mdl A2s/A2Fs ... see DASD Configuration under Specify. Additional storage is provided by attaching 3330 modules to the 3333 or by attaching 3340 mdl Bs and/or 3344s to the 3340 mdl A2 or by attaching 3350 mdl Bs and/or a mdl C to the 3350 mdl A2 of A2F ... see DASD Configuraton table under Specify and M3330, 3333, 3340, 3344, 3350 pages. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Requires a control unit position on a block multiplexer channel. Block multiplexing and rotational position sensing require one unshared subchannel on the block multiplexer channel per logical device. **Specify:** The available combinations of storage devices which can be attached are shown in the table below. One, two or three Xs in a vertical column indicate the type of machines(s) listed under DASD Configuration which can be attached when the "Required DASD Specify Features" are installed. Based on the DASD, and the special features listed below being ordered for them, order the Required DASD Specify Feature(s).

[Note that **#9190** is 3340 Fixed Head Attachment for **#9314** and **#9315**, and is not specified for **#9317** or **#9318**.]

Multiplexer Subchannels, Add'l (#4953, #4954): To increase the number of I/O devices on the byte multiplexer channel, the number of subchannels can be increased by specifying one of the following: #4953 for 128 or #4954 for 256. The maximum number of shared subchannels is eight. When 256 multiplexer subchannels are installed there are *NO* shared subchannels. **Note:** The number of Multiplexer Subchannels does not affect the number of UCWs specified for the Block Multiplexer Channel(s). See Block Multiplexer Subchannels, Add'l (#1450) specify. **Field Installation:** Yes.

Register Expansion (#6111): Provides additional registers for microprogram use on the ISC ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Field Installation:** Yes. **Maximum:** One.

3210 Mdl 1 Adapter (#7844): To attach a 3210 Console Printer-Keyboard mdl 1 (15.5 cps) for systems console I/O ... includes an alter-display ability. Position of the 3210 to the right or left of the operator depends on Console Table Extension (**#9824** or **#9825**) ... see "Specify" above. **Limitations:**Cannot be installed with 3215 Adapter (#7855). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Uses one address on the standard byte multiplexer channel, but does not use a control unit position.

3210 Mdl 2 Adapter (#7845): To attach a free-standing 3210 Console Printer-Keyboard mdl 2 for remote systems console I/O. **Limitations:** Maximum distance from the console is 75 feet. **Maximum:** One. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** Either a #7844 or #7855 and a #4953 or #4954. Uses one address on the standard byte multiplexer channel, but does not use a control unit position. The standard address for the Alternate Console Printer-Keyboard is "01E" if the Primary Console Printer-Keyboard address is "01F". If the Primary Console Printer-Keyboard address is "009", the standard address for the Alternate Console Printer-Keyboard is "008". Also see "Specify" for alternate address.

3215 Adapter (#7855): To attach a 3215 Console Printer-Keyboard (85 cps) for systems console I/O ... includes alter-display ability. Position of the 3215 to the right or left of the operator depends upon Console Table Extension (**#9824** or **#9825**) ... see "Specify" above. **Limitations:** Cannot be installed with 3210 Mdl 1 Adapter (#7844). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Uses one address on the standard byte multiplexer channel, but does not use a control unit position.

Two-Channel Switch (#8100): To attach the Integrated Storage Control (#4660) to a second channel ... the two channels may be on the same or different CPUs. Switching is under program control. The ISC feature in the 3145-3 can be dedicated to a single channel by means of an Enable/Disable switch. **Limitations:** Cannot be installed on a mdl FED, GE, GFD, H, HG or I. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Prerequisites" under ISC (#4660).

Word Buffer (#8810): [Prerequisite for 3145-3] Increases the data rate capability of the selector channels on the 3145-3 from a maximum aggregate data rate of 1.55 megabytes per second to 5.3 megabytes, and the maximum single channel rate from 0.82 megabytes to 1.85 megabytes. When installed, applies to all selector channels. **Field Installation:** Yes. **Prerequisites:** This feature is required to operate 3330 series drives when the system configuration includes an Integrated File Adapter and two Selector Channels, or three or more Selector Channels. It is also required whenever 3340, 3344 or 3350 series drives are attached.

* CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

3145-3 Processing Unit (cont'd)

ISC (#4660) With One Channel or With Two Channel Switch (#8100)

DASD Configuration		Required DASD Specify Features*															
		† 9313		† 9314		† 9314 9190	** † 9315			** † 9315 9190			+ † 9317		++† 9318	
3333 Only	One or two 3333s with associated 3330s	x	x													
	Up to four 3333s with associated 3330s						x	x								
	String Switch (#8150) on any 3333		x				x									
3340 Only	One or two 3340 mdl A2s with associated mdl B1/B2s			x	x	x				x						
	Up to four 3340 mdl A2s with associated mdl B1/B2s						x	x			x	x				
	String Switch (#8150) on any 3340 mdl A2				x			x		x		x				
	Fixed Head feature (#4301/#4302) on any 3340					x				x	x	x				
3340 3344	Up to four 3340 mdl A2s of which up to two may attach 3344s												x	x		
	String Switch (#8150) on any 3340 mdl A2 and/or Fixed Head feature (#4301/#4302) on any 3340													x		
3333 3340 -not 3344	3333s and 3340 mdl A2s (any combination of 2, 3, or 4) each with associated drives								x	x			x	x		
	String Switch (#8150) on any 3333 or 3340 mdl A2								x				x			
	Fixed Head feature (#4301/#4302) on any 3340												x	x		
3350 Only	Up to four 3350 mdl A2/ A2Fs with associated mdl B2/B2Fs, C2/C2Fs														x	x
	String Switch (#8150) on any 3350 mdl A2/A2F, C2/C2F														x	
3333 3340	3333s, 3340 mdl A2s and 3350 mdl A2/A2Fs (any combination of 2, 3, or 4) with associated drives															x x
3350 -not 3344	String Switch (#8150) on any 3333, 3340 mdl A2, or 3350 mdl A2/A2F, C2/C2F and/ or Fixed Head feature (#4301/ #4302) on any 3340															x

† ISC diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

* Any change to an installed DASD configuration requires an MES *ONLY* if the new configuration indicates that a different Specify and/or Special Feature(s) is required. The MES must include addition of any new Specify and/or Special Features not previously installed *AND* removal of any not listed as required for the new configuration.

** Control Store Extension (#2150) is prerequisite. With **#9315**, the ISC requires 32 contiguous device addresses regardless of the number of drives attached.

\+ Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group the ISC uses 64 contiguous device addresses irrespective of the number of drives attached. The 3340 mdl A2s on the first and third strings may attach up to three 3340 mdl B1s, B2s, and/or 3344s in any combination. The 3340 mdl A2 on the second string may attach up to three 3340 mdl B1/B2s. The 3340 mdl A2 on the fourth string may attach one 3340 mdl B1 or B2.

++ Expanded Control Store (#2152) and Register Expansion (#6111) are prerequisites. For configurations in this group the ISC uses 8 or 16 or 32 or 64 device addresses depending upon the DASD configuration installed and whether any 3350 drive is in 3330-1 compatibility mode.

Note: Customers who may elect to purchase Control Store Extension (#2150) and later upgrade to Expanded Control Store (#2152) should consider the purchase of Expanded Control Store (#2152) initially because this field upgrade requires replacement of Control Store Extension (#2150) and installation of Expanded Control Store (#2152). The prerequisite of Control Store Extension (#2150) for **#9315** or **#9317** can be satisfied by Expanded Control Store (#2152).

MODEL CONVERSIONS

Field installable as follows:

From to	A1	A2	A3	A4	A5	A6	A7
H2	X	X	X	X	X	X	X
HG2		X	X	X	X	X	X
I2			X	X	X	X	X
IH2				X	X	X	X
J2					X	X	X
JI2						X	X
K2							X
A1		X	X	X	X	X	X
A2			X	X	X	X	X
A3				X	X	X	X
A4					X	X	X
A5						X	X
A6							X

Planning for Model Conversions: When a customer requires feature changes (except for one or both of the prerequisite features - Word Buffer #8810, and Clock Comparator and CPU Timer #2001) and/or memory upgrades in addition to a model upgrade to a 3145-3, consolidating the several changes into a single MES is not recommended.

ACCESSORIES (None)

SUPPLIES (None)

3148 PROCESSING UNIT

[No Longer Available ... features and model conversions can be ordered on an "as available" basis.]

PURPOSE

Provides main and control storage plus arithmetic and logic circuits for the S/370 model 148.

MODELS

Model J	J00	1,048,576 bytes of processor storage
Model K	K00	2,097,152 bytes of processor storage

Prerequisites: Each S/370 mdl 148 requires a 3047 Power Unit ... see M3047 pages.

HIGHLIGHTS

1,048,576 bytes or 2,097,152 bytes of processor storage are provided. CPU cycle time ranges from 180 to 270 nanoseconds depending upon the internal operation being performed. 16 general purpose and four floating point registers are provided.

Standard Features Include: Advanced Control Program Support ... APL Assist ... Audible Alarm ... Byte Oriented Operand ... 1 Byte Multiplexer Channel ... 128 or 256 Byte Multiplexer Subchannels ... 4 Block Multiplexer Channels ... 512 Block Multiplexer Subchannels ... Channel Command Retry ... Channel Indirect Addressing ... Clock Comparator and CPU Timer ... Console File ... Control Registers ... Dynamic Address Translation ... Error Checking and Correction (in Main and Control Storage) ... Extended Control Mode ... Extended Control-Program Support ... Extended Precision Floating Point ... Interval Timer ... Machine Check Handling ... Microprogram Instruction Retry ... OS/DOS Compatibility ... Program Event Recording ... Storage Protection (Store and Fetch) ... S/370 Universal Instruction Set ... Time-of-Day Clock ... Word Buffer ... 1401/1440/1460, 1410/7010 Compatibility (selectable by CE).

Control Storage: 131,072 bytes of Reloadable Control Storage are provided in addition to main storage. This permits emulator and control routines to function. The Reloadable Control Storage is housed in the CPU and is loaded from the Console File. Reloadable Control Storage is not available to the user.

Virtual Storage: Virtual Storage capability is provided to increase the effective utilization of main storage.

Console File (Standard): This is the basic microprogram loading device for the system. The console file contains a small file device that provides all of the microcode for the system on removable magnetic disks. The several disks that will be supplied with the system will supply all of the required microcode for CE diagnostics, basic systems features, plus the optional features ordered for the system.

Console Function: A display console is standard ... includes a cathode ray tube, and a keyboard ... functions as an operator's I/O console to communicate with the operating system ... standard attachment for an optional 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 for hard copy output. CRT can accommodate twenty-four 80-character lines of information. A system control panel is also located on the 3148 for additional operator communication with the system.

Three console modes are available -- "Printer-Keyboard" Mode, "Display" Mode, "115/125 Console-Display-Emulation" Mode.

In "Printer-Keyboard" mode, the display console uses the keyboard for input and the CRT and a recommended 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 for output. The CRT, keyboard and printer appear to the system as a 3215 Console Printer-Keyboard. "Printer-Keyboard" mode is supported by DOS, DOS/VS, OS/360, OS/VS and VM/370.

In "Display" mode, the keyboard is used for input, the CRT with 24 lines by 80 characters/line for output, and DIDOCS or equivalent support is required. DOS/VS does not support Display Mode. The 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 (optional) has a separate address and requires MCS support or equivalent. When present, the printer appears to the system as a 3213 Console Printer.

In "115/125 Console-Display-Emulation" mode, the keyboard is used for input, the CRT is used for output, and the CRT displays twelve 56-character lines of information. The 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 is optional. When present, the printer emulates a 5213 Printer mdl 1 and acts as a slave unit to the display console. That is, the 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 is not addressable in this mode. The "115/125 Console-Display-Emulation" mode is available in DOS/VS Release 28 and above.

The display console provides the capability to select three aspects of the system's environment at IMPL time:

Console Mode -- see above (Mode descriptions)

CPU Mode (3148 or 3145) -- see "Programming Features"

Unit addresses of natively attached I/O (except for those attached to the Integrated Storage Control)

These selections will be recorded on the console file for permanent reuse until such time as any new selection is made during a subsequent IMPL. **Note:** This is the only user access to the console file.

Input/Output Files

Byte Multiplexer Channel -- one is standard ... functionally equivalent to the byte multiplexer channel on the S/370 mdl 145 ... provides eight control unit positions ... in byte mode, permits simultaneous operation of many low-speed devices ... in burst mode, handles one high-speed unit.

Either 128 or 256 subchannels are available, and are selectable by the CE. When 256 multiplexer subchannels are selected, there are NO shared subchannels

Block Multiplexer Channels -- four are standard ... each contains the Word Buffer ... as described, each Block Multiplexer Channel approximates 1.85 megabytes/second ... ability to "Block Multiplex" provides greater channel efficiency when using direct access storage devices equipped with rotational position sensing ... devices on these channels which cannot use block multiplexing will function as if attached to selector channels.

Subchannels -- on the byte multiplexer channel 128 or 256 subchannels are provided and are selectable by the CE ... for the four block multiplexer channels, 512 block multiplexer subchannels (UCWs) are provided as standard. The 512 subchannels (UCWs) are shared by the four block multiplexer channels.

Input/Output Attachments

Non-Native -- a wide variety of I/O devices may be attached to the S/370 mdl 148 via the standard byte multiplexer channel or any of the four standard block multiplexer channels.

Native -- the following integrated I/O attachments/adapters are provided for controlling the designated I/O devices:

Integrated 3203-4 Printer Attachment, First Printer (optional) -- provides the capability to natively attach the 3203 Printer mdl 4 as the first systems printer.

Integrated 3203-4 Printer Attachment, Second Printer (optional) -- provides the capability to natively attach the 3203 Printer mdl 4 as the second systems printer.

Integrated Console Printer Adapter (standard) -- provides the capability to natively attach the optional 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 as a hard copy printer.

Integrated Storage Control (optional) -- allows native attachment of 3333 Disk Storage and Control modules (with 3330 modules) and/or 3340 Disk Storage mdl A2s (with 3340 B mdls and/or 3344s) and/or 3350 Disk Storage mdls A2/A2F (with 3350 B2/B2F, C2/C2F mdls) ... requires an available control unit position on a block multiplexer channel ... block multiplexing and rotational position sensing require one unshared subchannel on the block multiplexer channel per logical device.

Programming Features

Advanced Control Program Support (standard) -- provides four additional instructions and an additional function ... Compare and Swap ... Compare Double and Swap ... Insert PSW Key ... Set PSW Key from Address ... Clear I/O Function.

APL Assist (standard) -- this feature is an APL emulator. It replaces functions performed by the APL software interpreter. This feature can provide a performance improvement for many APL applications when used with VS APL (5748-AP1).

IMPL 3145 CPU Mode Selection -- provides the capability to "run" on S/370 mdl 148 any SCP which will "run" today on a S/370 mdl 145. No performance degradation or loss of S/370 mdl 145 recovery from error capabilities will be experienced in this mode. That is, in 3145 CPU Mode, the improved hardware performance of the S/370 mdl 148 will be available to the user. Moreover, the user will have the same recovery capabilities on the S/370 mdl 148 as he has on a S/370 mdl 145 when 3145 CPU Mode is selected. **Note:** S/370 mdl 148 Extended Logout/EREP is not supported in this mode.

Extended Control-Program Support (standard) -- the S/370 mdl 148 includes Extended Control-Program Support. This is a hardware assist that reduces the CPU time needed to execute certain frequently used supervisor functions in both VS1 and VM/370.

The functional areas for VM/370 include:

Virtual Machine I/O
Storage Management
Page Management
SVC Handler
Privileged Instruction Interfaces
Dispatching
Virtual Interval Timer

3148 Processing Unit (cont'd)

For VS1 the functional areas are:

Storage Management
IOS
SVC FLIH
System Trace
Page Management

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V.
- Cabling: **#9080** for below the floor, **#9081** for on the floor.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.

@SS@

- Minimum Configuration: See "Minimum Configurations" in "Systems" for minimum I/O units required in S/370 mdl 148.
- Console Table (Reading Board) Extension: **#9824** for extension to operator's right, **#9825** for extension to operator's left. **Note:** Extension direction may not be changed in the field.
- RETAIN/370: **#9570** for non-use of FE DAU, **#9571** for first CPU using FE DAU, **#9572** for second CPU using FE DAU, or **#9573** for third CPU using FE DAU. Customer must provide interface for FE DAU to the telephone line. For details on ordering and customer responsibilities, see BOM, Orders and Movements. **Note:** Up to three CPUs in the same physical location can be serviced by a single FE DAU.
- Shipping Instructions: Unless otherwise specified, shipping dimensions of the 3148 Frame 01 (CPU) are 800mm (31-1/2") wide by 1,778mm (70") long by 1,524mm (60") high. Removal of the side covers will reduce the width to 749mm (29-1/2"). If further reduction in length is required, specify **#9692**. Shipping dimensions will then be 749mm (29-1/2") wide by 1,524mm (60") long by 1,524mm (60") high.
- Emergency Power-Off Control: May be required ... see "Special Features" and *System/370 Installation Information - Physical Planning* for requirements.

SPECIAL FEATURES

Channel-to-Channel Adapter (#1850): To interconnect two channels (either S/360, S/370 or 4300 processor). Only one of the processors requires this feature. Uses two control unit positions on each of the connected channels. **Maximum:** One. **Field Installation:** Yes.

Control Store Extension (#2150): Provides additional control store for microprogram use on the ISC (#4660) ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Maximum:** One. **Field Installation:** Yes. **Limitation:** Cannot be installed with Expanded Control Store (#2152).

Expanded Control Store (#2152): Provides additional control storage for microprogram use on the ISC (#4660) ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Limitation:** Cannot be installed with Control Store Extension (#2150). **Maximum:** One. **Field Installation:** Yes.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct, and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes between two cable-connected processing units, or a cable-connected processing unit and external devices. **Maximum:** One. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/360 - Direct Control Feature - OEM,* GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning,* GC22-7004. **Field Installation:** Yes.

Integrated Storage Control (#4660): Provides for the attachment of 3333s (mdls 1 and/or 11) and/or 3340 mdl A2s and/or 3350 mdl A2s/A2Fs ... see DASD Configuration under "Specify" below. Additional storage is provided by attaching 3330 modules to the 3333 or by attaching 3340 mdl Bs and/or 3344s to the 3340 mdl A2 or by attaching 3350 mdl Bs and/or a mdl C to the 3350 mdl A2 or A2F ... see DASD Configuration table below and M3330, 3333, 3340, 3344, 3350 pages. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Requires a control unit position on a block multiplexer channel. Block multiplexing and rotational position sensing require one unshared subchannel on the block multiplexer channel per logical device. **Specify:** The available combinations of storage devices which can be attached are shown in the table below. One, two or three Xs in a vertical column indicate the type of machines(s) listed under DASD Configuration which can be attached when the "Required DASD Specify Features" are installed. Based on the DASD, and the special features listed below being ordered for them, order the Required DASD Specify Feature(s). [Note that **#9190** is 3340 Fixed Head Attachment for **#9314** and **#9315** and is *not* specified for **#9317** or **#9318**.]

Register Expansion (#6111): Provides additional registers microprogram use on the ISC ... see "Specify" under Integrated Storage Control (#4660) to determine when required. **Field Installation:** Yes. **Maximum:** One.

Integrated 3203-4 Printer Attachment, First Printer (#8075): Provides the capability to natively attach the 3203 Printer mdl 4. **Maximum:** One. **Field Installation:** Yes.

Integrated 3203-4 Printer Attachment, Second Printer (#8076): Provides the capability to natively attach a second 3203 Printer mdl 4. **Maximum:** One. **Field Installation:** Yes.

Two-Channel Switch (#8100): To attach the Integrated Storage Control (#4660) to a second channel ... the two channels may be on the same or different CPUs. Switching is under program control. The ISC feature in the 3148 can be dedicated to a single channel by means of an Enable/Disable switch. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Prerequisites" under ISC (#4660).

MODEL CONVERSIONS

Field installable.

ACCESSORIES (None)

SUPPLIES (None)

3148 Processing Unit (cont'd)

ISC (#4660) With One Channel Or With Two Channel Switch (#8100)

DASD Configuration		Required DASD Specify Features*															
		† 9313		† 9314		† 9314 9190	** † 9315			** † 9315 9190				+ † 9317		++† 9318	
3333 Only	One or two 3333s with associated 3330s	x	x														
	Up to four 3333s with associated 3330s						x	x									
	String Switch (#8150) on any 3333		x				x										
3340 Only	One or two 3340 mdl A2s with associated mdl B1/B2s			x	x	x				x							
	Up to four 3340 mdl A2s with associated mdl B1/B2s							x	x		x	x					
	String Switch (#8150) on any 3340 mdl A2				x				x	x		x					
	Fixed Head feature (#4301/#4302) on any 3340					x				x	x	x					
3340 3344	Up to four 3340 mdl A2s of which up to two may attach 3344s													x	x		
	String Switch (#8150) on any 3340 mdl A2 and/ or Fixed Head feature (#4301/#4302) on any 3340														x		
3333 3340 -not 3344	3333s and 3340 mdl A2s (any combination of 2, 3, or 4) each with associated drives								x	x			x	x			
	String Switch (#8150) on any 3333 or 3340 mdl A2								x				x				
	Fixed Head feature (#4301/#4302) on any 3340												x	x			
3350 Only	Up to four 3350 mdl A2/ A2Fs with associated mdl B2/B2Fs, C2/C2Fs															x	x
	String Switch (#8150) on any 3350 mdl A2/A2F, C2/C2F															x	
3333 3340 3350 -not 3344	3333s, 3340 mdl A2s and 3350 mdl A2/A2Fs (any combination of 2, 3, or 4) with associated drives																x x
	String Switch (#8150) on any 3333, 3340 mdl A2, or 3350 mdl A2/A2F, C2/C2F and/ or Fixed Head feature (#4301/ #4302) on any 3340																x

† ISC diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

* Any change to an installed DASD configuration requires an MES *ONLY* if the new configuration indicates that a different Specify and/or Special Feature(s) is required. The MES must include addition of any new Specify and/or Special Features not previously installed *AND* removal of any not listed as required for the new configuration.

** Control Store Extension (#2150) is prerequisite. With **#9315**, the ISC requires 32 contiguous device addresses regardless of the number of drives attached.

\+ Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group the ISC uses 64 contiguous device addresses irrespective of the number of drives attached. The 3340 mdl A2s on the first and third strings may attach up to three 3340 mdl B1s, B2s, and/or 3344s in any combination. The 3340 mdl A2 on the second string may attach up to three 3340 mdl B1/B2s. The 3340 mdl A2 on the fourth string may attach one 3340 mdl B1 or B2.

++ Expanded Control Store (#2152) and Register Expansion (#6111) are prerequisites. For configurations in this group the ISC uses 8 or 16 or 32 or 64 device addresses depending upon the DASD configuration installed and whether any 3350 drive is in 3330-1 compatibility mode.

Note: Customers who may elect to purchase Control Store Extension (#2150) and later upgrade to Expanded Control Store (#2152) should consider the purchase of Expanded Control Store (#2152) initially because this field upgrade requires replacement of Control Store Extension (#2150) and installation of Expanded Control Store (#2152). The prerequisite of Control Store Extension (#2150) for **#9315** or **#9317** can be satisfied by Expanded Control Store (#2152).

3158 PROCESSING UNIT

[NO LONGER AVAILABLE]

[*The 3158 is No Longer Available ... New RPQs that do not entail new functions will continue to be accepted.*]

PURPOSE

Performs arithmetic, logic, processor storage and control functions for a S/370 Model 158.

MODELS

..... Models				Bytes of Processor Storage
I	I00	AP1	MP1	524,288
J	J00	AP2	MP2	1,048,576
JI	JI0	AP3	MP3	1,572,864
K	K00	AP4	MP4	2,097,152
KJ	KJ0	AP5	MP5	3,145,728
L	L00	AP6	MP6	4,194,304
LJ	LJ0	AP7		5,242,880
LK	LK0	AP8		6,291,456

HIGHLIGHTS

Depending upon the mdl contains up to 6,291,456 bytes of monolithic processor storage with a cycle time of 1,035 nanoseconds for a 16-byte read, of 690 ns for an 8-byte write, 920 ns for a write of 1 to 7 bytes, and 920 ns for a write of 9 to 16 bytes ... 16-byte parallel data flow ... includes 8,192 bytes of buffer storage which is transparent to the programmer and reduces the effective cycle time of processor storage. 16 general purpose and four floating point registers are implemented in high-speed internal circuits with a 4-byte data flow. The 115 nanosecond cycle CPU and I/O functions are controlled by reloadable control storage. An optional integrated storage controls feature allows direct attachment of 3330, 3340, 3344, 3350 direct access storage devices. Attached Processing is provided by attachment of a 3052 Attached Processing Unit mdl 1.

Standard features include: S/370 universal instruction set ... interval timer ... store and fetch protect ... byte oriented operand feature ... error checking and correction code on main storage ... instruction retry ... channel retry ... one byte multiplexer channel ... block multiplexer channels number one and two ... dynamic address translation ... extended control mode ... program event recording ... time-of-day clock with clock comparator ... CPU timer ... channel indirect addressing function for channels ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... clear I/O. Four additional instructions on MP mdls -- signal processor, set prefix, store prefix, store CPU address.

Byte Multiplexer Channel: Permits simultaneous operation of many low-speed devices. Can be operated in "burst" mode for attachment of high-speed devices. For OS exclusion, refer to GC28-6554, *OS System Generation,* ... for OS/VS exclusion, refer to GC26-3791, *OS/VS1 System Generation,* and GC26-3792, *OS/VS2 System Generation.* Eight control unit positions are provided on the channel.

Block Multiplexer Channels: Up to five ... first two are standard ... up to three more can be attached. See "Special Features". Permits simultaneous operation of high-speed devices ... ability to "Block Multiplex" provides greater channel efficiency when using direct access storage devices equipped with rotational position sensing or buffered devices ... provides block multiplexing compatible with the same function on the 2880 Block Multiplexer Channel ... operates as a conventional selector channel otherwise.

Subchannels: 256 non-shared subchannels or 120 non-shared and 8 shared subchannels on 1st Byte Multiplexer Channel ... 256 non-shared or 120 non-shared and 8 shared subchannels on 2nd Byte Multiplexer Channel ... 16 shared subchannels on Block Multiplexer Channels ... 480 non-shared subchannels on Block Multiplexer Channels.

Console Function: A Display Console is standard ... includes light pen, keyboard, cathode ray tube, two console files, and control store ... functions as a manual console for IPL, reset, etc., as an operator's console to communicate with the operating system, an indicator display console, and as a diagnostic console for maintenance ... optional attachment for a 3213 Printer (85 cps) for hard copy output. CRT has twenty-five 80-character lines of information; as a system console, the last line displays machine status. Optional attachment for a 3056 Remote System Console for console operation from an additional keyboard and cathode ray tube up to 150 feet from the processor.

In "Printer-Keyboard" mode, the Display Console uses the keyboard for input and CRT and mandatory 3213 for output. It appears to the system as a 3215, and is supported by DOS, DOS/VS, OS/360, OS/VS, and VM/370. In "Display" mode, the keyboard and light-pen are used for input, the CRT for output, and DIDOCS support or equivalent is required. The 3213 (optional) has a separate address and requires MCS support or equivalent.

The Display Console replaces the conventional indicators and switches with displays, and diagnostics can be loaded under light-pen control from one of the console files.

Prerequisites:

Each AP system requires:
(1) a 3158 A series processing unit,
(2) a 3052 APU mdl 1,
(3) a 3056 Remote System Console mdl 1.

Identical MP CPU mdls are required for a multiprocessor system. The 3158 and 3158-3 may be intermixed. However, when mixtures occur, asymmetric MP storage is not an option. In addition, alternate CPU power down does not function. Asymmetric MP storage configuration options are available in 3158-3 mdls with 1, 2, 3, or 4 megabytes of storage in each processor. The 3058 Multisystem Unit is required for each one or two processor MP system.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V or **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Console Table (Reading Board) Extension: **#9824** for extension to operator's right, or **#9825** for extension to left.
- Cabling: **#9080** for below the floor, or **#9081** for on the floor.
- Emergency Power-Off Control: May be required ... see "Special Features" and *S/370 Installation Manual - Physical Planning,* GC22-7004, for details. If two processors are installed and the 3052 is to be added and emergency power off ability is required on the systems, then the expanded Emergency Power Off Control (#3622) should be ordered for the host processor. (Contact your Installation Planning Representative.)
- Minimum Configuration: See "Minimum Configurations" in "Systems" for minimum I/O units required in a S/370 mdl 158.
- RETAIN/370: Provided by integrated data adapter which is standard on the console. Customers must provide interface to telephone line. For details on customer responsibility, see BOM, Orders and Movements.
- CPU Position: (In MP Configuration Only) **#9441** for left CPU, or **#9442** for right CPU.
- Processor Attach Feature: When one processor is combined with another in a multiprocessor system, each processor must contain sufficient storage protect capability for the total storage in the system. Therefore, each processor must add additional storage protect capability to reflect the storage in the remote processor. The first megabyte of storage protect capability for the remote processor is included in the MP1 and MP2 Processors. One Processor Attach Feature is required in an MP processor for each additional megabyte, beyond the first megabyte in the remote processor. See "Special Features".

SPECIAL FEATURES

Block Multiplexer Channel (#1433-#1435): Each adds a channel for attachment of I/O devices . The channel permits overlapped I/O operation with processing. Eight control unit positions are provided on each channel. Channel Indirect Addressing is included in each channel. #1433 -- for third block multiplexer channel ... #1434 -- for fourth ... #1435 -- for fifth. **Limitations:** #1434 cannot be installed if 2nd Byte Multiplexer Channel #4990 is installed. **Field Installation:** Yes. **Prerequisites:** #1434 requires #1433 ... #1435 requires #1434 or #4990.

Channel-To-Channel Adapter (#1850): To interconnect two channels (either S/360, S/370 or 4300 processor). Only one of the processors requires this feature. Uses one control unit position on each of the connected channels. Function can be expanded under program control so that the adapter will operate as a standard control unit. **Maximum:** One. **Field Installation:** Yes.

ISC Control Store Extension (#2150): Provides additional control store for microprogram use on the ISC #4650. When the Staging Adapter for ISC #7220 is *NOT* ordered, see "Specify" under Integrated Storage Controls #4650 to determine when required. **Note:** When #7220 *IS* ordered, #2150 is prerequisite. **Maximum:** One. **Field Installation:** Yes.

Expanded Control Store (#2151): Provides additional control storage for microprogram use on the ISC ... see "Specify" under Integrated Storage Control #4650 to determine when required. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2150 and #6111.

ISC/SA Control Store Add'l (#2152): Provides additional control store for microprogram use on the ICS (#4650). Required if 3350 DASD is attached to an ISC/SA (#7220). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #7220, #6111 and #2151.

3158 Processing Unit (cont'd)

Direct Control (#3274): Provides two instructions, "Read Direct" and "Write Direct", and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes, between two cable-connected processing units, or a cable-connected processing unit and external devices. **Maximum:** One. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/370-Direct Control Feature-OEMI,* GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning,* GC22-7004. **Field Installation:** Yes.

Emergency Power-off Panel Expansion (#3625): The basic S/370 mdl 158 provides for EPO control for up to 16 control units. When single mdl 158 configurations exceed this limit, #3625 should be ordered. Each #3625 attaches up to four additional EPO terminations. **Maximum:** Five. Where assistance is needed in determining requirements, consult Installation Planning Representatives. **Field Installation:** Yes.

Extended Precision Floating Point (#3700): Provides instructions to handle extended precision (28-hexadecimal digit fraction) floating point operands. Extended precision operands may also be rounded to long-precision format, which in turn may be rounded to short-precision format. This function is also included in and enabled by the OS/VS1 ECPS (#8750). **Field Installation:** Yes.

1401/1440/1460, 1410/7010 Compatibility (#3950): Provides the system with the ability to execute 1401/1440/1460 and 1410/7010 instructions under specific conditions of minimum and matching configurations. **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730), S/370 Extended, Add'l (#7731), or with OS/VS1 ECPS (#8750). **Field Installation:** Yes.

Integrated Storage Controls (ISC) (#4650): Provides for the attachment of 3333s (mdls 1 and/or 11) and/or 3340 mdl A2s and/or 3350 mdl A2s/A2Fs when Staging Adapter for ISC (#7220) is *NOT* ordered. Add'l storage is provided by attaching 3330 modules to the 3333 or by attaching 3340 mdl Bs and/or 3344s to the 3340 mdl A2 or by attaching 3350 mdl Bs and/or a mdl C to the 3350 mdl A2/A2F ... see DASD Configuration table below and M3333, 3330, 3340, 3344, 3350 pages. The ISC is organized functionally into two separate paths with up to 16 drives per path ... up to 32 drives per path when ISC Control Store Extension (#2150) is installed. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Each ISC path requires a control unit position on a block multiplexer channel. **Specify:** The following applies only when Staging Adapter for ISC (#7220) is *NOT* ordered:

The available combinations of storage devices which can be attached are shown in the table below. One, two, or three Xs in a vertical column indicate the type of machine(s) listed under DASD Configuration which can be attached when the "Required DASD Specify Features" are installed. Based on the DASD, and the Special Features listed below being ordered for them, order the required DASD Specify Feature(s). **Note:** The selected "Required DASD Specify Feature(s)" applies to both ISC paths. Within this constraint the DASD Configuration on one ISC path may be different from the DASD configuration on the other ISC path.

Second Byte Multiplexer Channel (#4990): Provides the same function as the standard multiplexer channel ... contains Channel Indirect Data Addressing. Takes the place of Block Multiplexer Channel No. 4. **Limitations:** Cannot be installed with Block Multiplexer Channel No. 4 (#1434). **Field Installation:** Yes. **Prerequisites:** #1433.

OS/DOS Compatibility (#5450): Provides the system with the ability to execute DOS programs under specific conditions. **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730), S/370 Extended, Add'l (#7731), or with OS/VS1 ECPS (Extended Control Program Support) (#8750). **Field Installation:** Yes.

Processor Attach (#5552): [MP mdls] One is required for each megabyte of storage over one megabyte in the remote processor of an MP system.

Remote Processor Storage Size (Megabytes)	Quantity of Processor Attach Features (Req'd)
1/2,1	0
1-1/2,2	1
3	2
4	3
5	4
6	6

Field Installation: Yes. **Corequisite:** MP mdl.

ISC (#4650) WITH ONE CHANNEL OR WITH TWO CHANNEL SWITCH (#7905)

DASD Configuration		Required DASD Specify Features*																	
		† 9313		† 9314		† 9314 9190		** † 9315			** † 9315 9190				+ † 9317		++† 9318		
3333 Only	One or two 3333s with associated 3330s	x	x

	String Switch (#8150) on any 3333, 3340 mdl A2, or 3350 mdl A2/A2F, C2/C2F and/ or Fixed Head feature (#4301/ 4302) on any 3340																	x	

† ISC diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

* Any change to an installed DASD configuration requires an MES *ONLY* if the new configuration indicates that a different Specify and/or Special Feature(s) is required. The MES must include addition of any new Specify and/or Special Features not previously installed *AND* removal of any not listed as required for the new configuration.

** ISC Control Store Extension (#2150) is prerequisite. With **#9315**, each path of the ISC requires 32 contiguous device addresses regardless of the number of drives attached.

\+ Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group the 3830-2 uses 64 contiguous device addresses irrespective of the number of drives attached. The 3340 mdl A2s on the first and third strings may attach up to three 3340 mdl B1s, B2s, and/or 3344s in any combination. The 3340 mdl A2 on the second string may attach up to three 3340 mdl B1/B2s. The 3340 mdl A2 on the fourth string may attach one 3340 mdl B1 or B2.

++ Expanded Control Store (#2151) and Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group each ISC path uses 8 or 16 or 32 or 64 device addresses depending upon the respective DASD configuration installed and whether any 3350 drive is in 3330-1 compatibility mode.

Power Warning (#5760): Provides signal to the 3158 system when power is outside specified limits. **Field Installation:** Yes. **Prerequisites:** All mdls require customer-supplied uninterruptable

3158 Processing Unit (cont'd)

power supply with line sensor. MP mdls also require special cable -- consult Physical Planning Representative.

Register Expansion (#6111): Provides additional registers for microprogram use on the ISC ... see "DASD Configuration" table under Integrated Storage Control (#4650) to determine when required. **Maximum:** One. **Field Installation:** Yes.

7070/7074 Compatibility (#7117): Provides the system with the ability to execute 7070/7074 instructions under specific conditions. **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730), S/370 Extended, Add'l (#7731), Virtual Machine Assist (#8740), or with OS/VS1 ECPS (#8750). **Field Installation:** Yes.

Staging Adapter For ISC (#7220): Enables each path of the ISC to attach a maximum of four 3333 mdls 1 and 11 and/or 3350 mdl A2/A2Fs with associated 3330 mdls 1, 2, and 11 and 3350 mdls B2/B2F and C2/C2F, for a maximum of 32 drives per path. See M3333, 3330 and 3350 pages for additional information. Also see note on M3333 pages for feature changes required when 3333s are retained for use with a 3851. Provides up to 64 virtual 3330 addresses for each channel interface on each path of the ISC. Provides for the attachment of up to four Data Recording Controls in one or two 3851 Mass Storage Facilities to each path of the ISC. **Limitations:** If String Switch (#8150) is installed on a 3333, see writeup for this feature on M3333 page. 3340 drives cannot be attached to the ISC when 7220 is installed. 3350 drives attached to the ISC when #7220 is installed cannot be used as staging drives and must be designated as real in 3350 native mode only. 3350 devices may not be mixed with other type devices in the same string. **Maximum:** One. **Field Installation:** Yes ... MES must include removal of any of the following which are installed: **#9190, #9313, #9314, #9315,, #9317, #9318. Prerequisites:** #4650 and #2150. For 3350 attachment the additional prerequisites are #2151, #6111 and #2152. **Specify: #9319.**

S/370 Extended (#7730): Provides System/370 Extended facilities which are a prerequisite for operation with the MVS/System Extensions Program Product. **Limitations:** This feature cannot be loaded at IMPL time, concurrently with 1401/1440/1460, 1410/7010 Compatibility (#3950), OS/DOS Compatibility (#5450), 7070/7074 Compatibility (#7117), Virtual Machine Assist (#8740), or with OS/VS1 ECPS (#8750). **Field Installation:** Yes. **Prerequisites:** Required, together with #7731, on each processor in an MP system and on the A-Series processor in an AP system. #7730 is also required on the 3052 Attached Processing Unit in an AP system.

S/370 Extended, Add'l (#7731): Provides S/370 Extended facilities which are a prerequisite for operation with the MVS/System Extensions program product. **Limitations:** This feature cannot be loaded at IMPL time, concurrently with 1401/1440/1460, 1410/7010 Compatibility (#3950), OS/DOS Compatibility (#5450), 7070/7074 Compatibility (#7117), Virtual Machine Assist (#8740), or with OS/VS1 ECPS (#8750). **Field Installation:** Yes. **Prerequisites:** Required, together with #7730, on each processor in an MP system, and on the A-Series processor in an AP system. #7730 is also required on the 3052 Attached Processing Unit in an AP system.

3056 Remote Console Attachment (#7820): Provides attachment to the Display Console of an optional console up to 150 feet away. **Maximum:** One. **Field Installation:** Yes.

3213 Printer Attachment (#7840): To attach a 3213 Printer to the Display Console for optional hard copy. **Maximum:** One. **Field Installation:** Yes.

Two-Channel Switch For ISC (#7905): To provide each of the two paths of an ISC with the capability of attaching to a second channel. The channels may be on the same CPU or different CPUs. Switching is under program control. Each path of the ISC can be dedicated to a single channel by means of a configuration switch. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available control unit position and one unshared subchannel for each logical unit address on each of two system block multiplexer channels. For S/360 mdl 195 and S/370 mdls 165, 168, 195, see M2880 pages. For S/370 mdls 135, 135-3, 138, 145, 145-3, 148, 155, 158, 3031, 3032, 3033 Processors, see M3135, 3135-3, 3138, 3145, 3145-3, 3148, 3155, 3158, 3031 or 3032, or 3033 pages respectively. For 4300 processors, see M4331, 4341, 4361, 4381 pages.

Virtual Machine Assist (#8740): Provides assist to VS operating systems operating under VM/370 by emulation of certain privileged operations. This function is also included in and enabled by the OS/VS1 ECPS (#8750). **Limitations:** This function cannot be loaded at IMPL time, concurrently with 7070/7074 Compatibility (#7117), S/370 Extended (#7730), or with S/370 Extended, Add'l (#7731). **Field Installation:** Yes.

OS/VS1 ECPS (Extended Control Program Support) (#8750): Provides assist to OS/VS1 by emulation of certain supervisor functions. This feature also includes and enables Virtual Machine Assist and Extended Precision Floating Point functions. **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with 1401/1440/1460, 1410/7010 Compatibility (#3950), OS/DOS Compatibility (#5450), 7070/7074 Compatibility (#7117), S/370 Extended (7730), S/370 Extended, Add'l (7731), or in Multiprocessing Mode. **Field Installation:** Yes. **Prerequisites:** Feature must be selected at system generation on OS/VS1 Release 6 or subsequent releases. Customer price quotations and customer order acknowledgement letters for Extended Control Store (#2151) and Staging Adapter for ISC (#7220) must state: "Installation of this feature involves the removal of parts which become the property of IBM."

MODEL CONVERSIONS

Field installable.

3158	to	3158 MP
3158	to	3158 AP
3158 AP	to	3158 MP

Models may be upgraded within the 3158, 3158 MP and 3158 AP.

Notes:

1. There are no additional installation charges over the above mdl conversion and mdl upgrade prices.
2. The above mdl conversions and mdl upgrades are field installable.
3. Planning for Mdl Conversions and Mdl Upgrades: When a customer requires storage upgrades in addition to a mdl conversion, the changes must not be consolidated into a single MES. Also, storage upgrades for storage above two megabytes should be ordered individually in one megabyte increments. A planning session between Marketing, FE, and the customer should be held to develop the proper sequence of MES ordering.
4. When an MES for an MP storage upgrade is submitted, the proper number of Processor Attach Features (#5552) for the remote processor should be ordered.
5. When an MES for an AP storage upgrade is submitted, the proper number of Processor Attach Features (#5552) for the 3052 APU should be ordered.
6. When an MES for an upgrade to an MP system is submitted, the proper number of Processor Attach Features (#5552) for the remote processor must be ordered.
7. 3158 machines with S/370 Extended (#7730) that convert to an AP require S/370 Extended, Add'l (#7331) on the A-Series Processor.
8. 3158 machines with S/370 Extended (#7730) that convert to an MP require S/370 Extended (#7730) and S/370 Extended, Add'l (#7731) on both processors.

ACCESSORIES (None)

SUPPLIES

Contact IBM.

3158-3 PROCESSING UNIT

[NO LONGER AVAILABLE]

[The 3158-3 is No Longer Available ... new RPQs that do not entail new functions will continue to be accepted.]

PURPOSE

Performs arithmetic, logic, processor storage and control functions for a S/370 model 158-3.

MODELS

Models	Bytes of Processor Storage	Models	Bytes of Processor Storage
U31 A31 M31	524,288	U35 A35 M35	3,145,728
U32 A32 M32	1,048,576	U36 A36 M36	4,194,304
U33 A33 M33	1,572,864	U37 A37 M37	5,242,880
U34 A34 M34	2,097,152	U38 A38 M38	6,291,456

Prerequisites: Each AP system requires (1) a 3158-3 A series processing unit, (2) a 3052 APU mdl 1, (3) a 3056 Remote System Console mdl 1. Identical MP CPU mdls are not required for a multiprocessor system. 3158 and 3158-3 mdls may be intermixed. However, when mixtures occur asymmetric MP storage is not an option. In addition, alternate CPU power down does not function. Asymmetric MP storage configuration options are available in the 3158-3 mdls with 1, 2, 3, or 4 megabytes of storage in each processor. The 3058 Multisystem Unit is required for each one or two processor MP system.

HIGHLIGHTS

Depending upon the mdl contains up to 6,291,456 bytes of monolithic processor storage with a cycle time of 1,035 nanoseconds for a 16-byte read, of 690 ns for an 8-byte write, 920 ns for a write of 1 to 7 bytes, and 920 ns for a write of 9 to 16 bytes ... 16-byte parallel data flow ... includes 16,384 bytes of buffer storage which is transparent to the programmer and reduces the effective cycle time of processor storage. 16 general purpose and four floating point registers are implemented in high-speed internal circuits with a four byte data flow. The 115 nanosecond cycle Processor and I/O functions are controlled by reloadable control storage. An optional integrated storage control feature allows direct attachment of 3330, 3340, 3344, 3350 direct access storage devices. The 3158-3 has 128 word instruction buffer, improved instruction execution times over the 3158, increased block multiplexer subchannel pool over the 3158. Asymmetric multiprocessor storage. Alternate Processor power down while all storage is left available to the other processor (MP mdls only). Attached Processing is by attachment of a 3052 Attached Processing Unit mdl 1.

Standard features include: S/370 universal instruction set ... interval timer ... store and fetch protect ... byte oriented operand feature ... error checking and correction code on main storage ... instruction retry ... channel retry ... one byte multiplexer channel ... block multiplexer channels number one and two ... dynamic address translation ... extended control mode ... program event recording ... time-of-day clock with clock comparator ... CPU timer ... channel indirect addressing function for channels ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... clear I/O. Four additional instructions on MP mdls -- signal processor ... set prefix ... store prefix ... store CPU address.

Byte Multiplexer Channel: Permits simultaneous operation of many low-speed devices. Can be operated in "burst" mode for attachment of high-speed devices. For OS exclusion, refer to GC28-6554, *OS System Generation* ... for OS/VS exclusion, refer to GC26-3791, *OS/VS1 System Generation* and GC26-3792, *OS/VS2 System Generation*. Eight control unit positions are provided on the channel.

Block Multiplexer Channels: Up to five ... first two are standard ... up to three more can be attached. See "Special Features". Permits simultaneous operation of high-speed devices ... ability to "Block Multiplex" provides greater channel efficiency when using direct access storage devices equipped with rotational position sensing or buffered devices ... provides block multiplexing compatible with the same function on the 2880 Block Multiplexer Channel ... operates as a conventional selector channel otherwise.

Subchannels: In a 3158-3, byte multiplexer channel 0 or 4 may have 256 non-shared subchannels less 16 or 32 for each shared subchannel. A 3158-3 block multiplexer channel may have 40 shared subchannels when the second byte multiplexer channel is not installed. When the second byte multiplexer channel is installed, the block multiplexer channel may have 32 shared subchannels. The block multiplexer channel may have 736 non-shared subchannels when the second byte multiplexer channel is not installed on the 3158-3 and 480 non-shared subchannels when the second byte multiplexer channel is installed.

Console Function: A Display Console is standard ... includes light-pen, keyboard, cathode ray tube, two console files, and control store ... functions as a manual console for IPL, reset, etc., as an operator's console to communicate with the operating system, an indicator display console, and as a diagnostic console for maintenance ... optional attachment for a 3213 Printer (85 cps) for hard copy output. CRT has twenty-five 80-character lines of information; as a system console, the last line displays machine status. Optional attachment for a 3056 Remote System Console for console operation from an additional keyboard and cathode ray tube up to 150 feet from the processor.

In "Printer-Keyboard" mode, the Display Console uses the keyboard for input and CRT and mandatory 3213 for output. It appears to the system as a 3215, and is supported by DOS, DOS/VS, OS/360, OS/VS, and VM/370. In "Display" mode, the keyboard and light-pen are used for input, the CRT for output, and DIDOCS support or equivalent is required. The 3213 (optional) has a separate address and requires MCS support or equivalent.

The Display Console replaces the conventional indicators and switches with displays, and diagnostics can be loaded under light-pen control from one of the console files.

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V or **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Console Table (Reading Board) Extension: **#9824** for extension to operator's right, or **#9825** for extension to left.
- Cabling: **#9080** for below the floor, or **#9081** for on the floor.
- Emergency Power-Off Control: May be required ... see "Special Features" and *S/370 Installation Manual - Physical Planning*, GC22-7004 for details. If two processors are installed and the 3052 is to be added and emergency power off ability is required on the systems, then the Expanded Power Off Control (#3622) should be ordered for the host processor. (Contact IBM.)
- RETAIN/370: Provided by integrated data adapter which is standard on the console. Customers must provide interface to telephone line.
- Processor Position: (In MP configuration only) **#9441** for left processor, or **#9442** for right processor.
- Remote MP Processor: Asymmetric MP storage provides asymmetric multiprocessor storage on the 3158-3 with the use of the appropriate optional specify feature to specify the mdl of the remote processor. The 3158-3 multiprocessor may have asymmetric mdl combinations of M32, M34, M35, and M36. With this feature, symmetric mdl combinations are standard. For asymmetric combinations specify: Remote Processor-- **#9001** for 1 megabyte ... **#9002** for 2 megabytes ... **#9003** for 3 megabytes ... **#9004** for 4 megabytes ... **#9005** for 5 megabytes ... **#9006** for 6 megabytes. **Field Installation:** Yes.
- Processor Attach Feature: When one processor is combined with another in a multiprocessor system, each processor must contain sufficient storage protect capability for the total storage in the system. Therefore, each processor must add additional storage protect capability to reflect the storage in the remote processor. The first megabyte of storage protect capability for the remote processor is included in the M31 and M32 Processors. One Processor Attach Feature is required in an MP processor for each additional megabyte, beyond the first megabyte in the remote processor. See "Special Features".
- Keyboard and Printer Language Groups (must be specified on either 3210 or 3215): **#2956**.

SPECIAL FEATURES

Block Multiplexer Channel (#1433-#1435): Each adds a channel for attachment of I/O devices . The channel permits overlapped I/O operation with processing. Eight control unit positions are provided on each channel. Channel Indirect Addressing is included in each channel. #1433 -- for third block multiplexer channel ... #1434 -- for fourth ... #1435 -- for fifth. **Limitations:** #1434 cannot be installed if 2nd Byte Multiplexer Channel (#4990) is installed. **Field Installation:** Yes. **Prerequisites:** #1434 requires #1433 ... #1435 requires #1434 or #4990.

Channel-to-Channel Adapter (#1850): To interconnect two channels (either S/360, S/370 or 4300 processor). Only one of the processors requires this feature. Uses one control unit position on each of the connected channels. Function can be expanded under program control so that the adapter will operate as a standard control unit. **Maximum:** One. **Field Installation:** Yes.

ISC Control Store Extension (#2150): Provides additional control store for microprogram use on the ISC (#4650). When the Staging Adapter for ISC (#7220) is *NOT* ordered, see "Specify" under Integrated Storage Controls (#4650) to determine when required. **Note:** When #7220 *IS* ordered, #2150 is prerequisite. **Maximum:** One. **Field Installation:** Yes.

3158-3 Processing Unit (cont'd)

Expanded Control Store (#2151): Provides additional control storage for microprogram use on the ISC ... see "Specify" under Integrated Storage Control (#4650) to determine when required. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2150 and #6111.

ICA/SA Control Store Add'l (#2152): Provides additional control store for microprogram use on the ISC (#4650). Required if 3350 DASD is attached to an ISC/SA (#7220). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #7220, #6111 and #2151.

Direct Control (#3274): Provides two instructions, "Read Direct" and "Write Direct", and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes, between two cable-connected processing units, or a cable-connected processing unit and external devices. **Maximum:** One. **Cable Order:** Required. **Field Installation:** Yes. **Prerequisites:** External devices must meet the interface specifications outlined in *S/370-Direct Control Feature-OEMI,* GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning,* GC22-7004. **Field Installation:** Yes.

Emergency Power-Off Panel Expansion (#3625): The basic S/370 mdl 158 provides for EPO control for up to 16 control units. When single mdl 158 configurations exceed this limit, #3625 should be ordered. Each #3625 attaches up to four additional EPO terminations. **Maximum:** Five. Where assistance is needed in determining requirements, consult Installation Planning Representatives. **Field Installation:** Yes.

Extended Precision Floating Point (#3700): Provides instructions to handle extended precision (28-hexadecimal digit fraction) floating point operands. Extended precision operands may also be rounded to long-precision format, which in turn may be rounded to short-precision format. This function is also included in and enabled by the OS/VS1 ECPS (Extended Control Program Support) (#8750). **Field Installation:** Yes.

1401/1440/1460, 1410/7010 Compatibility (#3950): Provides the system with the ability to execute 1401/1440/1460 and 1410/7010 instructions under specific conditions of minimum and matching configurations . **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730), S/370 Extended, Add'l (#7731), or with OS/VS1 ECPS (Extended Control Program Support) (#8750). **Field Installation:** Yes.

Integrated Storage Controls (ISC) (#4650): Provides for the attachment of 3333 mdl 1s and/or 11s and/or 3340 mdl A2s and/or 3350 mdl A2s/A2Fs when Staging Adapter for ISC (#7220) is *NOT* ordered. Additional storage is provided by attaching 3330 modules to the 3333 or by attaching 3340 mdl Bs and/or 3344s to the 3340 mdl A2 or by attaching 3350 mdl Bs and/or a mdl C to the 3350 mdl A2/A2F ... see DASD Configuration table below and M3333, 3330, 3340, 3344, 3350 pages. The ISC is organized functionally into two separate paths with up to 16 drives per path ... up to 32 drives per path when ISC Control Store Extension (#2150) is installed. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Each ISC path requires a control unit position on a block multiplexer channel. **Specify:** The following applies only when Staging Adapter for ISC (#7220) is *NOT* ordered:

The available combinations of storage devices which can be attached are shown in the table which follows. One, two, or three Xs in a vertical column indicate the type of machine(s) listed under DASD Configuration which can be attached when the "Required DASD Specify Features" are installed. Based on the DASD, and the Special Features listed below being ordered for them, order the required DASD Specify Feature(s). **Note:** The selected "Required DASD Specify Feature(s)" applies to both ISC paths. Within this constraint, the DASD Configuration on one ISC path may be different from the DASD Configuration on the other ISC path.

Second Byte Multiplexer Channel (#4990): Provides the same function as the standard multiplexer channel ... contains Channel Indirect Data Addressing. Takes the place of Block Multiplexer Channel 4. **Limitations:** Cannot be installed with Block Multiplexer Channel 4 (#1434). **Field Installation:** Yes. **Prerequisites:** #1433.

OS/DOS Compatibility (#5450): Provides the system with the ability to execute DOS programs under specific conditions. **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730), S/370 Extended, Add'l (#7731), Virtual Machine Assist (#8740), or with OS/VS1 ECPS (Extended Control Program Support) (#8750). **Field installation:** Yes.

Customer price quotations and customer order acknowledgement letters for Extended Control Store (#2151) and Staging Adapter for ISC (#7220) must state: "Installation of this feature involves the removal of parts which become the property of IBM."

ISC (#4650) WITH ONE CHANNEL OR WITH TWO-CHANNEL SWITCH (#7905)

DASD Configuration		Required DASD Specify Features*															
		† 9313		† 9314		† 9314 9190	** † 9315			** † 9315 9190				+ † 9317		++† 9318

3350 -not 3344	String Switch (#8150) on any 3333, 3340 mdl A2, or 3350 mdl A2/A2F, C2/C2F and/ or Fixed Head feature (#4301/ #4302) on any 3340																x

† ISC diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

* Any change to an installed DASD configuration requires an MES *ONLY* if the new configuration indicates that a different Specify and/or Special Feature(s) is required. The MES must include addition of any new Specify and/or Special Features not previously installed *AND* removal of any not listed as required for the new configuration.

** ISC Control Store Extension (#2150) is prerequisite. With **#9315**, each path of the ISC requires 32 contiguous device addresses regardless of the number of drives attached.

\+ Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group the 3830-2 uses 64 contiguous device addresses irrespective of the number of drives attached. The 3340 mdl A2s on the first and third strings may attach up to three 3340 mdl B1s, B2s, and/or 3344s in any combination. The 3340 mdl A2 on the second string may attach up to three 3340 mdl B1/B2s. The 3340 mdl A2 on the fourth string may attach one 3340 mdl B1 or B2.

++ Expanded Control Store (#2151) and Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group each ISC path uses 8 or 16 or 32 or 64 device addresses depending upon the respective DASD configuration installed and whether any 3350 drive is in 3330-1 compatibility mode.

3158-3 Processing Unit (cont'd)

Processor Attach (#5552): [MP mdls only] One is required for each megabyte of storage over one megabyte in the remote processor of an MP system.

Remote Processor Storage Size (Megabytes)	Quantity of Processor Attach Features (Req'd)
1/2,1	0
1-1/2,2	1
3	2
4	3
5	4
6	6

Field Installation: Yes. **Corequisite:** MP mdl.

Power Warning (#5760): Provides signal to the 3158/3158-3 system when power is outside specified limits. **Field Installation:** Yes. **Prerequisites:** All mdls require customer-supplied uninterruptable power supply with line sensor. MP mdls also require special cable. Contact IBM.

Register Expansion (#6111): Provides additional registers for microprogram use on the ISC ... see "DASD Configuration" table under Integrated Storage Control (#4650) to determine when required. **Maximum:** One. **Field Installation:** Yes.

Remote Switch Attachment (#6148): [MP mdls only] To attach the Two-Channel Switch for ISC (#7905) to the configuration control panel on the 3058 Multisystem Unit. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #7905.

7070/7074 Compatibility (#7117): Provides the system with the ability to execute 7070/7074 instructions under specific conditions . **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730), S/370 Extended, Add'l (#7731), Virtual Machine Assist (#8740) or with OS/VS1 ECPS (Extended Control Program Support) (#8750). **Field Installation:** Yes.

Staging Adapter For ISC (#7220): Enables each path of the ISC to attach a maximum of four 3333 mdls 1 and 11 and/or 3350 mdl A2/A2Fs with associated 3330 mdls 1, 2, and 11 and 3350 mdls B2/B2F and C2/C2F, for a maximum of 32 drives per path. See M3333, 3330 and 3350 pages for additional information. Also see note on M3333 pages for feature changes required when 3333s are retained for use with a 3851. Provides up to 64 virtual 3330 addresses for each channel interface on each path of the ISC. Provides for the attachment of up to four Data Recording Controls in one or two 3851 Mass Storage Facilities to each path of the ISC. **Limitations:** If String Switch (#8150) is installed on a 3333, see write-up for this feature on M3333 page. 3340 drives cannot be attached to the ISC when (#7220) is installed. 3350 drives attached to the ISC when #7220 is installed cannot be used as staging drives and must be designated as real in 3350 native mode only. 3350 devices may not be mixed with other type devices in the same string. **Maximum:** One. **Field Installation:** Yes ... MES must include removal of any of the following which are installed: **#9190, #9313, #9314, #9315,, #9317, #9318**. **Prerequisites:** #4650 and #2150. For 3350 attachment the additional prerequisites are #2151, #6111 and #2152. **Specify: #9319**.

S/370 Extended (#7730): Provides S/370 Extended facilities which are a prerequisite for operation with the MVS/System Extensions Program Product. **Limitations:** This feature cannot be loaded at IMPL time, concurrently with 1401/1440/1460, 1410/7010 Compatibility (#3950), OS/DOS Compatibility (#5450), 7070/7074 Compatibility (#7117), Virtual Machine Assist (#8740), or with OS/VS1 ECPS (Extended Control Program Support) (#8750). **Field Installation:** Yes. **Prerequisites:** Required, together with #7731, on each processor in an MP system and on the A-Series processor in an AP system. #7730 is also required on the 3052 Attached Processing Unit in an AP system.

S/370 Extended, Add'l (#7731): Provides S/370 Extended facilities which are a prerequisite for operation with the MVS/System Extensions Program Product. **Limitations:** This feature cannot be loaded at IMPL time, concurrently with 1401/1440/1460, 1410/7010 Compatibility (#3950), OS/DOS Compatibility (#5450), 7070/7074 Compatibility (#7117), Virtual Machine Assist (#8740), or with OS/VS1 ECPS (Extended Control Program Support) (#8750). **Field Installation:** Yes. **Prerequisites:** Required, together with #7730, on each processor in an MP system, and on the A-Series processor in an AP system. #7730 is also required on the 3052 Attached Processing Unit in an AP system.

3056 Remote Console Attachment (#7820): Provides attachment to the Display Console of an optional console up to 150 feet away. **Maximum:** One. **Field Installation:** Yes.

3213 Printer Attachment (#7840): To attach a 3213 Printer to the Display Console for optional hard copy. **Maximum:** One. **Field Installation:** Yes.

Two-Channel Switch For ISC (#7905): To provide each of the two paths of an ISC with the capability of attaching to a second channel. The channels may be on the same CPU or different CPUs. Switching is under program control. Each path of the ISC can be dedicated to a single channel by means of a Configuration Switch. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available control unit position and eight non-shared subchannels on a system block multiplexer channel. For S/360 mdl 195 and S/370 mdls 165, 168, 195, see M2880 pages. For S/370 mdls 135, 135-3, 138, 145, 145-3, 148, 155, 158, or 3031, 3032, 3033 Processors, see M3135, 3135-3, 3138, 3145, 3145-3, 3148, 3155, 3158, 3031, 3032 or 3033 pages, respectively. For 4300 processors, see M4331, 4341, 4361, 4381 pages.

Virtual Machine Assist (#8740): Provides assist to VS operating systems operating under VM/370 by emulation of certain privileged operations. This function is also included in and enabled by the OS/VS1 ECPS (Extended Control Program Support) (#8750). **Limitations:** This function cannot be loaded at IMPL time, concurrently with 7070/7074 Compatibility (#7117), S/370 Extended (#7730), or with S/370 Extended, Add'l (#7731). **Field Installation:** Yes.

OS/VS1 ECPS (Extended Control Program Support) (#8750): Provides assist to OS/VS1 by emulation of certain supervisor functions. This feature also includes and enables Virtual Machine Assist and Extended Precision Floating Point functions. **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with 1401/1440/1460, 1410/7010 Compatibility (#3950), OS/DOS Compatibility (#5450), 7070/7074 Compatibility (#7117), S/370 Extended (#7730), S/370 Extended, Add'l (#7731) or in Multiprocessing Mode. **Field Installation:** Yes. **Prerequisites:** Feature must be selected at system generation on OS/VS1 Release 6 or subsequent releases.

MODEL CONVERSIONS

3158 to 3158-3 Model Conversion

3158	to	3158 U3
3158 AP	to	3158 A3
3158 MP	to	3158 M3

3158-3 to 3158-3 Model Conversion

3158 U3	to	3158 M3
3158 U3	to	3158 A3
3158 A3	to	3158 M3

Notes:

1. There are no additional installation charges above mdl conversion and mdl upgrade costs.
2. The above mdl conversions and mdl upgrades are field installable.
3. Planning for Mdl Conversions and Mdl Upgrades: When a customer requires storage upgrades in addition to a mdl conversion, the changes must not be consolidated into a single MES. Also, storage upgrades above two megabytes should be ordered individually in one megabyte increments.
4. When an MES for an MP storage upgrade is submitted, the proper number of Processor Attach Features (#5552) for the remote processor should be ordered.
5. When an MES for an AP storage upgrade is submitted, the proper number of Processor Attach Features (#5552) for the 3052 APU should be ordered.
6. Field change from 3158-3 to 3158 is not recommended.
7. When an MES for an upgrade to an MP system is submitted, the proper number of Processor Attach Features (#5552) for the remote processor must be ordered.
8. 3158-3 machines with S/370 Extended (#7730) that convert to an AP require S/370 Extended, Add'l (#7731) on the A-Series Processor.
9. 3158-3 machines with S/370 Extended (#7730) that convert to an MP require S/370 Extended (#7730) and S/370 Extended, Add'l (#7331) on both processors.

3168 PROCESSING UNIT

[NO LONGER AVAILABLE]

[The 3168 is No Longer Available ... new RPQs that do not entail new functions will continue to be accepted.]

PURPOSE

Provides arithmetic, logic, processor storage and control functions for a S/370 mdl 168.

MODELS

Models		Bytes of Processor Storage	
J	J00	MP1	1,048,576
K	K00	MP2	2,097,152
KJ	KJ0	MP3	3,145,728
L	L00	MP4	4,194,304
LJ	LJ0	MP5	5,242,880
LK	LK0	MP6	6,291,456
LKJ	LKJ	MP7	7,340,032
M	M00	MP8	8,388,608

Prerequisites: Each 3168 requires [1] At least one selector channel (2860), block multiplexer channel (2880), or a 2870 with at least one Selector Subchannel ... [2] One 3066 System Console mdl 2 ... [3] One 3067 Power and Coolant Distribution Unit mdl 2 ... [4] An appropriate 415 Hz power input. Customer-supplied chilled water is required for cooling the system. See *S/370 Installation Manual - Physical Planning,* GC22-7004.

An MP system requires two MP CPU mdls of any size. Each MP CPU mdl requires Multiprocessing (#5050) on both the 3066 mdl 2 and the 3067 mdl 2. The 3068 Multisystem Communication Unit is required for each one or two processor MP system. If either of the processors is a mdl MP5, MP6, MP7 or MP8, Extended Storage Attachment (#3850) is required on the 3068.

HIGHLIGHTS

Depending upon the mdl, can contain up to 8,388,608 bytes of monolithic processor storage ... eight byte parallel data flow ... includes up to 16,384 bytes of 80 nanosecond cycle buffer storage which is transparent to the program and significantly reduces the effective cycle time of storage ... buffer storage does not increase the amount of addressable storage ... 80 nanosecond processor cycle ... double-words are four-way interleaved ... overlapped operation of instruction and execution units ... extensive data checking is coupled with increased reliability, availability and serviceability.

Standard Features: Universal instruction set ... extended precision ... one-microsecond time-of-day clock with clock comparator ... one-microsecond CPU timer ... dynamic address translation ... extended control mode ... program event recording ... dual channel I/O bus ... additional variable field length instructions ... control registers, expanding the functions of PSWs ... byte-oriented operand feature ... buffer storage (8,192 bytes) ... fetch and store protection ... direct control feature ... attachment for 2860 Selector Channel(s), 2870 Multiplexer Channel(s), and 2880 Block Multiplexer Channel(s) ... storage configuration control ... writable control storage ... interval timer ... storage error checking and correction ... instruction retry ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... clear I/O. Channel Reconfiguration Hardware and four additional instructions on the MP mdls: signal processor ... set prefix ... store prefix ... store CPU address.

Channels: Separate channnels facilitate maximum overlap with processing. Channel speeds of 1.5 million bytes/second are standard and up to 3 million bytes/second with Two Byte Interface (#7850, 7851) on the 2880 Block Multiplexer Channel. Up to seven logical channels can be attached per CPU. Valid combinations include: (a) One 2870 plus up to six channels of 2860s and 2880s ... (b) Two 2870s plus up to five channels of 2860s and 2880s ... (c) If no 2870 is attached, only up to six channels, 2860s and/or 2880s, can be attached per CPU. See 2860, 2870, 2880.

With the addition of Extended Channels (#3855), up to twelve channels can be attached ... for valid combinations, see "Special Features". Depending upon data rates, all channels, including the Selector Subchannels and basic multiplexer channel of the 2870 can operate concurrently. Each selector or block multiplexer channel can control up to eight control units. The basic multiplexer channel and each Selector Subchannel of the 2870 controls up to eight control units. If one 2841 is attached, no other control unit can be attached to that Selector Subchannel ... see 2841.

Publications: GC20-0001.

SPECIFY

- Voltage: (AC, 3-phase, 4-wire, 60 Hz). Specify **(#9903)** for 208V or **(#9905)** for 230V.
- Motor Generator Set and Starter: If desired, see M10000 pages for ordering instructions and prices.
- Channel Attachment: The basic 3168 has connection facilities for channels addressed 0-6. For channels 7-11, see Extended Channels (#3855).
- Emergency Power-Off Control: May be required ... see "Special Features" and *S/370 Installation Manual - Physical Planning,* GC22-7004, for details.
- Color: Specify **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- RETAIN/370: Customer must provide interface for FE DAU to the telephone line. For details on ordering and customer responsibilities, see BOM, Order and Movements. **Note:** Up to three CPUs in the same physical location can be serviced by a single FE DAU.

SPECIAL FEATURES

Buffer Expansion (#1435): Expands the basic 8,192-byte buffer to 16,384 bytes. **Field Installation:** Yes. **Prerequisites:** Buffer Expansion (#1435) on the 3067 Power and Coolant Distribution Unit mdl 2.

ISC Control Store Extension (#2150): Provides additional control store for microprogram use on the ISC (#4650). When the Staging Adapter for ISC (#7220) is *NOT* ordered, see "Specify" under Integrated Storage Controls (#4650) to determine when required. **Note:** When #7220 *IS* ordered, #2150 is prerequisite. **Maximum:** One. **Field Installation:** Yes.

Expanded Control Store (#2151): Provides additional control storage for microprogram use on the ISC. See "Specify" under Integrated Storage Control (#4650) to determine when required. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2150 and #6111.

ISC/SA Control Store Additional (#2152): Provides additional control store for microprogram use on the ISC (#4650). Required if 3350 DASD is attached with Staging Adapter for ISC (#7220). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2151, #6111 and #7220.

Emergency Power-Off Control (#3623, #3624): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3623 to interconnect two emergency power-off switches; #3624 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning,* GC22-7004. **Field Installation:** Yes.

Extended Channels (#3855): To attach up to 12 channels, in combinations of 2860 Selector Channels, 2870 Multiplexer Channels and 2880 Block Multiplexer Channels. A maximum of 12 channels, or a total of seven channel frames, whichever occurs first, can be attached. The feature includes the capability of addressing channels 7 thru 11. Valid maximum channels attachable are:

2860s -- maximum 6 channels
2870s -- maximum 2 channels
2880s -- maximum 11 channels.

Limitations: 2860 channel addresses must be numbered one thru six. The first 2870 must be numbered zero. The second 2870 must be numbered one thru six. The 2880 channel addresses may be any number one thru eleven. If the address of the 2880 is seven thru eleven, only 2301s, 2303s, 2305s, 2311s, 2314s, 2321s, 2420s, 3211s, 3330s, 3340s, 3350s, 3420s, 3505s or 3705s may be attached. **Field Installation:** Yes.

High Speed Multiply (#4525): Improves processor speed in both fixed and floating point multiply operations. **Field Installation:** Not recommended. **Prerequisites:** #4525 on the 3066 System Console mdl 2 and on the 3067 Power and Coolant Distribution Unit mdl 2.

Integrated Storage Controls (ISC) (#4650): Provides for the attachment of 3333s (mdls 1 and/or 11) and/or 3340 mdl A2s and/or 3350 mdl A2s/A2Fs when Staging Adapter for ISC (#7220) is *NOT* ordered. Additional storage is provided by attaching 3330 modules to the 3333 or by attaching 3340 mdl Bs and/or 3344s to the 3340 mdl A2, or by attaching 3350 mdl Bs and/or a mdl C to the 3350 mdl A2/A2F ... see DASD Configuration table below and 3333, 3330, 3340, 3350 "Machines" pages. The ISC is organized functionally into two separate paths with up to 16 drives per path ... up to 32 drives per path when ISC Control Store Extension (#2150) is installed. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Each ISC path requires a control unit position on a block multiplexer channel. **Specify:** The following applies only when Staging Adapter for ISC (#7220) is *NOT* ordered:

The available combinations of storage devices that can be attached are shown in the table below. One, two or three Xs in a vertical column indicate the type of machine(s) listed under DASD Configuration which can be attached when the "Required DASD Specify Features" are installed. Based on the DASD, and the Special Features listed below being ordered for them, order the Required DASD Specify Feature(s). *NOTE:* The selected "Required DASD Specify Feature(s)" applies to both ISC paths. Within this constraint

3168 Processing Unit (cont'd)

the DASD Configuration on one ISC path may be different from that on the other ISC path.

Register Expansion (#6111): Provides additional registers for microprogram use on the ISC ... see "DASD Configuration" table under

ISC (#4650) WITH ONE CHANNEL OR WITH TWO-CHANNEL SWITCH (#7905)

DASD Configuration		Required DASD Specify Features*																	
		† 9313		† 9314		† 9314 9190		** † 9315			** † 9315 9190			+ † 9317		++† 9318	
3333 Only	One or two 3333s with associated 3330s	x	x																
	Up to four 3333s with associated 3330s							x	x										
	String Switch (#8150) on any 3333		x					x											
3340 Only	One or two 3340 mdl A2s with associated mdl B1/B2s			x	x	x					x								
	Up to four 3340 mdl A2s with associated mdl B1/B2s								x	x		x	x						
	String Switch (#8150) on any 3340 mdl A2				x				x		x		x						
	Fixed Head feature (#4301/#4302) on any 3340					x					x	x	x						
3340 3344	Up to four 3340 mdl A2s of which up to two may attach 3344s													x	x				
	String Switch (#8150) on any 3340 mdl A2 and/or Fixed Head feature (#4301/#4302) on any 3340														x				
3333	3333s and 3340 mdl A2s (any combination of 2, 3, or 4) each with associated drives									x	x			x	x				
3340 -not 3344	String Switch (#8150) on any 3333 or 3340 mdl A2									x				x					
	Fixed Head feature (#4301/#4302) on any 3340													x	x				
3350 Only	Up to four 3350 mdl A2/ A2Fs with associated mdl B2/B2Fs, C2/C2Fs															x	x		
	String Switch (#8150) on any 3350 mdl A2/A2F, C2/C2F															x			
3333 3340	3333s, 3340 mdl A2s and 3350 mdl A2/A2Fs (any combination of 2, 3, or 4) with associated drives																	x	x
3350 -not 3344	String Switch (#8150) on any 3333, 3340 mdl A2, or 3350 mdl A2/A2F, C2/C2F and/ or Fixed Head feature (#4301/ #4302) on any 3340																		x

† ISC diskette only specify feature. No fee when ordering at time of manufacture or with changeable feature that supplies diskette. A fee on purchase machines to include any number of diskette-only changes ordered on the same diskette.

* Any change to an installed DASD configuration requires an MES *ONLY* if the new configuration indicates that a different Specify and/or Special Feature(s) is required. The MES must include addition of any new Specify and/or Special Features not previously installed *AND* removal of any not listed as required for the new configuration.

** ISC Control Store Extension (#2150) is prerequisite. With 9315, each path of the ISC requires 32 contiguous device addresses regardless of the number of drives attached.

\+ Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group the 3830-2 uses 64 contiguous device addresses irrespective of the number of drives attached. The 3340 Model A2s on the first and third strings may attach up to three 3340 Model B1s, B2s, and/or 3344s in any combination. The 3340 Model A2 on the second string may attach up to three 3340 Model B1/B2s. The 3340 Model A2 on the fourth string may attach one 3340 Model B1 or B2.

++ Expanded Control Store (#2151) and Control Store Extension (2150) and Register Expansion (#6111) are prerequisites. For configurations in this group each ISC path uses 8 or 16 or 32 or 64 device addresses depending upon the respective DASD configuration installed and whether any 3350 drive is in 3330-1 compatibility mode.

Integrated Storage Control (#4650) to determine when required. **Field Installation:** Yes. **Maximum:** One.

Remote Switch Attachment (#6148): To attach the Two Channel Switch for ISC (#7905) to the configuration control panel on the 3068 Multisystem Communication Unit. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #7905.

7070/7074 Compatibility (#7127): Provides the system with the ability to execute 7070 and 7074 instructions. This capability is integrated under OS and emulated programs operate as processing programs under MFT and MVT. 7070/7074 system features included are: Channels, 729 magnetic tape, 7501 Console Card Reader, and Floating Point Decimal Arithmetic. *NOT* included are: Teleprocessing equipment, disk storage, punched card I/O, printer, Hypertape, Interval Timer, and core storage addresses above 9989. For a detailed explanation of system requirements with this feature, see "Compatibility Features" under S/370 in "Systems". **Limitations:** Cannot be installed with any other compatibility feature. Cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730). **Field Installation:** Not recommended. **Prerequisites:** #7127 on the 3066 System Console mdl 2 and on the 3067 Power and Coolant Distribution Unit mdl 2.

7080 Compatibility (#7128): Provides the system with the ability to execute 705 and 7080 instructions. This capability is integrated under OS and emulated programs operate as processing programs under MFT and MVT. 7080 system features included are: Channels, punched card input, typewriter, and 729 magnetic tape. *NOT* included are: Teleprocessing equipment, disk storage, Hypertape, and 705 units on-line with the 7080. Only the 7080 is emulated, but 705 programs can be run because the "705 mode" of the 7080 is emulated. For a detailed explanation of system requirements with this feature, see "Compatibility Features" under S/370 in "Systems". **Limitations:** Cannot be installed with any other compatibility feature. Cannot be loaded, at IMPL time, concurrently with System/370 Extended (#7730). **Field Installation:** Not recommended. **Prerequisites:** 7080 Compatibility (#7128) on the 3066 System Console mdl 2 and on the 3067 Power and Coolant Distribution Unit mdl 2.

709/7090/7094/7094 II Compatibility (#7129): Provides the system with the ability to execute 709, 7090, 7094 and 7094 II instructions. This capability is integrated under OS and emulated programs operate as processing programs under MFT and MVT. Included are the following features of those systems: Channels, punched card I/O, printer, and 729 magnetic tape. *NOT* included are: Hypertape, teleprocessing equipment, direct couple, disk storages, drum storages, 1401 adapter, direct data on 7094 special and custom systems. For a detailed explanation of system requirements with this feature, see "Compatibility Features" under S/370 in "Systems". **Limitations:** Cannot be installed with any other compatibility feature. Cannot be loaded, at IMPL time, concurrently with System/370 Extended (#7730). **Field Installation:** Not recommended. **Prerequisites:** #7129 on the 3066 System Console mdl 2 and on the 3067 Power and Coolant Distribution Unit mdl 2.

Staging Adapter For ISC (#7220): Enables each path of the ISC to attach a maximum of four 3333 Mdls 1 and 11 and/or 3350 Mdl A2/A2F's with associated 3330 Mdls 1, 2 and 11 and 3350 Mdls B2/B2F and C2/C2F, for a maximum of 32 drives per path. See 3333, 3330 and 3350 for additional information. Also see note on M3333 pages for feature changes required when 3333s are retained for use with a 3851. Provides up to 64 virtual 3330 addresses for each channel interface on each path of the ISC. Provides for the attachment of up to four Data Recording Controls in one or two 3851 Mass Storage Facilities to each path of the ISC. **Maximum:** One. **Field Installation:** Yes ... MES must include removal of any of the following which are installed: **#9190, 9313, 9314, 9315, 9317, 9318, 9317, 9318. Prerequisites:** #4650 and #2150. For 3350 attachment the additional prerequisites are Expanded Control Store (#2151), Register Expansion (#6111) and ISC/SA Control Store Additional (#2152). **Limitations:** If String Switch (#8150) is installed on a 3333, see writeup for this feature in M3333 page. 3340 drives cannot be attached to the ISC when #7220 is installed. 3350 drives attached to the ICS when #7220 is installed cannot be used as staging drives and must be designated as real in 3350 native mode only. 3350 devices may not be mixed with other type devices in the same string. **Specify: #9319** (Staging Adapter 3333/3330/3350).

S/370 Extended (#7730): Provides S/370 Extended facilities which are a prerequisite for operation with the MVS/System Extensions Program Product. **Field Installation:** Yes. **Prerequisites:** RPQ S20579, Performance Improvements. RPQ S20580, APU Attach, is also required if the 3168 is used with a 3062. Required on each processor in an MP system and on a 3168 with RPQs S20579 and S20580. System/370 Extended (#7730) is also required on the 3062 Attached Processing Unit in an AP system. **Limitations:** This feature cannot be loaded, at IMPL time, concurrently with 7070/7074 Compatibility (#7127), 7080 Compatibility (#7128), or 709/7090/ 7094/7094 II Compatibility (#7129).

3168 Processing Unit (cont'd)

Two-Channel Switch For ISC (#7905): To provide each of the two paths of an ISC with the capability of attaching to a second channel. The channels may be on the same CPU or different CPUs. Switching is under program control. Each path of the ISC can be dedicated to a single channel by means of a Configuration Switch. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available control unit position and eight unshared subchannels on a system block multiplexer channel. For S/360 mdl 195 and S/370 mdls 165, 168, see 2880 Block Multiplexer Channel. For S/370 mdls 135, 135-3, 138, 145, 145-3, 148, 155, 158, or 3031, 3032 or 3033 Processor, see M3135, 3135-3, 3138, 3145, 3145-3, 3148 3155, 3158, 3031, 3032 or 3033 pages respectively. For 4300 processors, see M4331, 4341, 4361, 4381 pages.

ACCESSORIES

Motor Generator Set

These units are not manufactured by IBM and are available on a purchase-only basis. Manufacturer's warranty will be extended to the purchaser. Installation, check-out and maintenance will not be provided by IBM, and any expenses involved must be borne by the customer. Units must be ordered one year in advance of installation. For additional information, contact IBM. Contact installation planning representative for installation requirements.

For 3168 Processor: If a motor generator set is chosen as the power source, then one Motor Generator Set (with internally mounted starter) is required for each 3168 Processor. **Specify:** Feature number for Motor Generator Set on 3168 machine order.

	Feature
208/230V AC, 3-phase, 60 Hz-Motor Generator Set	**#9447**
440V AC, 3-phase, 60 Hz-Motor Generator Set	**#9449**

Note: If more than one MG set is desired on initial order, specify quantity.

If additional MG set is to be ordered for delivery after system, order as follows:

	Part No.
Motor Generator Set ... 208/230V AC	**2574790**
Motor Generator Set ... 440V AC	**2574290**

SUPPLIES (None)

3168-3 PROCESSING UNIT

[NO LONGER AVAILABLE]

The 3168-3 is No Longer Available ... Features and Model Conversions can be ordered on an 'as available' basis.

PURPOSE

Provides arithmetic, logic, processor storage and control functions for a S/370 model 168.

U35	M35	A35	5,242,880
U36	M36	A36	6,291,456
U37	M37	A37	7,340,032
U38	M38	A38	8,388,608

Prerequisites: Each 3168-3 requires [1] At least one selector channel (2860), block multiplexer channel (2880), or a 2870 with at least one Selector Subchannel ... [2] One 3066 System Console mdl 2 ... [3] One 3067 Power and Coolant Distribution Unit mdl 3 ... [4] An appropriate 415 Hz power input. Customer-supplied chilled water is required for cooling the system. See *S/370 Installation Manual - Physical Planning,* GC22-7004.

An AP system requires [1] one 3062 APU mdl ... [2] at least one 2860 selector channel, or one 2870 byte multiplexer channel with at least one selector subchannel ... [3] one 3066 System Console mdl 3 ... [4] one 3067 Power and Coolant Distribution Unit mdl 3 ... [5] one 3067 Power and Coolant Distribution Unit mdl 5 ... [6] two motor generator sets.

Each AP system requires [1] a 3168-3 mdl A series processor ... [2] a 3062 APU mdl 1 ... [3] a 3066 System Console mdl 3 ... and [4] a 3067 PDU/CDU mdl 5.

An MP system requires two M CPU mdls of any size. Each M CPU mdl requires Multiprocessing (#5050) on both the 3066 mdl 2 System Console and the 3067 mdl 2 Power and Coolant Distribution Unit. The 3068 Multisystem Communication Unit is required for each one or two processor M system. If either of the processors is a mdl MP5, MP6, MP7, MP8, M35, M36, M37 or M38, Extended Storage Attachment (#3850) is required on the 3068.

HIGHLIGHTS

Depending upon the mdl, can contain up to 8,388,608 bytes of monolithic processor storage ... 8-byte parallel data flow ... includes up to 32,768 bytes of 80 nanosecond cycle buffer storage which is transparent to the program and significantly reduces the effective cycle time of storage ... buffer storage does not increase the amount of addressable storage ... 80 nanosecond processor cycle ... double-words are 4-way interleaved ... overlapped operation of instruction and execution units ... extensive data checking is coupled with increased reliability, availability and serviceability. Improved instruction execution times over the 3168. Improved interrupt execution times over the 3168. Improved availability and serviceability through a service processor. Attached Processing by attachment of a 3062 Attached Processing Unit mdl 1.

Standard Features: Universal instruction set ... extended precision ... one-microsecond time-of-day clock with clock comparator ... one-microsecond CPU timer ... dynamic address translation ... extended control mode ... program event recording ... dual channel I/O bus ... additional variable field length instructions ... control registers, expanding the functions of PSWs ... byte-oriented operand feature ... buffer storage (32,768 bytes) ... fetch and store protection ... direct control feature ... attachment for 2860 Selector Channel(s), 2870 Multiplexer Channel(s), and 2880 Block Multiplexer Channel(s) ... storage configuration control ... writable control storage ... interval timer ... storage error checking and correction ... instruction retry ... compare and swap ... compare double and swap ... insert PSW key ... set PSW key from address ... clear I/O. Channel Reconfiguration and four additional instructions on the M mdls: Signal processor ... set prefix ... store prefix ... store CPU address.

Channels: Separate channnels facilitate maximum overlap with processing. Channel speeds of 1.5 million bytes/second are standard and up to 3 million bytes/second with Two Byte Interface (#7850, 7851) on the 2880 Block Multiplexer Channel. Up to seven logical channels can be attached per CPU. Valid combinations include: (a) One 2870 plus up to six channels of 2860s and 2880s ... (b) Two 2870s plus up to five channels of 2860s and 2880s ... (c) If no 2870 is attached, only up to six channels, 2860s and/or 2880s, can be attached per CPU. See M2860, 2870, 2880 pages.

With the addition of Extended Channels (#3855), up to 12 channels can be attached ... for valid combinations, see "Special Features". Depending upon data rates, all channels, including the Selector Subchannels and basic multiplexer channel of the 2870 can operate concurrently. Each selector or block multiplexer channel can control up to eight control units. The basic multiplexer channel and each Selector Subchannel of the 2870 controls up to eight control units. If one 2841 is attached, no other control unit can be attached to that Selector Subchannel ... see M2841 pages.

Bibliography: GC20-0001

SPECIFY

- Voltage: (AC, 3-phase, 4-wire, 60 Hz). Specify **#9903** for 208V or **#9905** for 230V.
- Motor Generator Set and Starter: If desired, see M10000 pages for ordering instructions.
- Channel Attachment: The basic 3168-3 has connection facilities for channels addressed 0-6. For channels 7-11, see Extended Channels (#3855).
- Emergency Power-Off Control: May be required ... see "Special Features" and *S/370 Installation Manual - Physical Planning,* GC22-7004, for details.

  If two processors are installed, the 3062 is to be added, and emergency power off ability is required on the systems, then the expanded Emergency Power Off Control (#3624) should be ordered. (Contact IBM.
- Color: Specify **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- RETAIN/370: Customer must provide interface for FE DAU to the telephone line. RETAIN may be used with the 3168-3, however it is not required. Remote service is a customer option where it is available. When the option is selected, the customer must provide the telephone lines required for the service processor remote link capability. The customer must also arrange the connection of the telephone interface cable provided by IBM to the telephone network. **Note:** Up to three CPUs in the same physical location can be serviced by a single FE DAU.

SPECIAL FEATURES

ISC Control Store Extension (#2150): Provides additional control store for microprogram use on the ISC (#4650). When the Staging Adapter for ISC (#7220) is *NOT* ordered, see "Specify" under Integrated Storage Controls (#4650) to determine when required. *Note:* When #7220 *IS* ordered, #2150 is prerequisite. **Maximum:** One. **Field Installation:** Yes.

Expanded Control Store (#2151): Provides additional control storage for microprogram use on the ISC ... see "Specify" under Integrated Storage Control (#4650) to determine when required. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2150 and #6111.

ISC/SA Control Store Add'l (#2152): Provides additional control store for microprogram use on ISC. Required if 3350 DASD is attached with Staging Adapter for ISC (#7220). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #7220, #6111 and #2151

Emergency Power-Off Control (#3623, #3624): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3623 to interconnect two emergency power-off switches; #3624 to interconnect up to 12 emergency power-off switches. For further information, see *S/370 Installation Manual - Physical Planning,* GC22-7004. **Field Installation:** Yes.

Extended Channels (#3855): To attach up to 12 channels, in combinations of 2860 Selector Channels, 2870 Multiplexer Channels and 2880 Block Multiplexer Channels. A maximum of 12 channels, or a total of seven channel frames, whichever occurs first, can be attached. The feature includes the capability of addressing channels 7 through 11. Valid maximum channels attachable are:

2860s -- maximum 6 channels
2870s -- maximum 2 channels
2880s -- maximum 11 channels.

Limitations: 2860 channel addresses must be numbered one through six. The first 2870 must be numbered zero. The second 2870 must be numbered one through six. The 2880 channel addresses may be any number one through eleven. If the address of the 2880 is seven through eleven, only 2301s, 2303s, 2305s, 2311s, 2314s, 2321s, 2420s, 3211s, 3330s, 3340s, 3350s, 3420s, 3505s or 3705s may be attached. **Field Installation:** Yes.

High-Speed Multiply (#4525): Improves processor speed in both fixed and floating point multiply operations. **Field Installation:** Not recommended. **Prerequisites:** #4525 on the 3066 System Console mdl 2 and on the 3067 Power and Coolant Distribution Unit mdl 3 and/or mdl 5. **Specify:** [A mdls only] **#9440** for #4525 on the 3062 APU, or **#9441** for no #4525 on the 3062 APU.

Integrated Storage Controls (ISC) (#4650): Provides for the attachment of 3333s (mdls 1 and/or 11) and/or 3340 mdl A2s and/or 3350 mdl A2s/A2Fs when Staging Adapter for ISC (#7220) is *NOT*

3168-3 Processing Unit (cont'd)

ordered. Additional storage is provided by attaching 3330 modules to the 3333 or by attaching 3340 mdl Bs and/or 3344s to the 3340 mdl A2, or by attaching 3350 mdl Bs and/or a mdl C to the 3350 mdl A2/A2F ... see DASD Configuration table below and M3333, 3330, 3340, 3350 pages. The ISC is organized functionally into two separate paths with up to 16 drives per path ... up to 32 drives per path when ISC Control Store Extension (#2150) is installed. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Each ISC path requires a control unit position on a block multiplexer channel. **Specify:** The following applies only when Staging Adapter for ISC (#7220) is *NOT* ordered:

The available combinations of storage devices that can be attached are shown in the table below. One, two or three Xs in a vertical column indicate the type of machine(s) listed under DASD Configuration which can be attached when the "Required DASD Specify Features" are installed. Based on the DASD, and the Special Features listed below being ordered for them, order the Required DASD Specify Feature(s). *Note:* The selected "Required DASD Specify Feature(s)" applies to both ISC paths. Within this constraint the DASD Configuration on one ISC path may be different from that on the other path.

Register Expansion (#6111): Provides additional registers for microprogram use on the ISC ... see "DASD Configuration" table under Integrated Storage Control (#4650) to determine when required. **Field Installation:** Yes. **Maximum:** One.

Remote Switch Attachment (#6148): To attach the Two Channel Switch for ISC (#7905) to the configuration control panel on the 3068 Multisystem Communication Unit. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Two Channel Switch for ISC (#7905).

7070/7074 Compatibility (#7127): Provides the system with the ability to execute 7070 and 7074 instructions. This capability is integrated under OS and emulated programs operate as processing programs under MFT and MVT. 7070/7074 system features included are: Channels, 729 magnetic tape, 7501 Console Card Reader, and Floating Point Decimal Arithmetic. *NOT* included are: Teleprocessing equipment, disk storage, punched card I/O, printer, Hypertape, Interval Timer, and core storage addresses above 9,989. **Limitations:** Cannot be installed with any other compatibility feature. Cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730). **Field Installation:** Not recommended. **Prerequisites:** #7128 on the 3066 System Console mdl 2 and on the 3067 Power and Coolant Distribution Unit mdl 3.

7080 Compatibility (#7128): Provides the system with the ability to execute 705 and 7080 instructions. This capability is integrated under OS and emulated programs operate as processing programs under MFT and MVT. 7080 system features included are: Channels, punched card input, typewriter, and 729 magnetic tape. *NOT* included are: Teleprocessing equipment, disk storage, Hypertape, and 705 units on-line with the 7080. Only the 7080 is emulated, but 705 programs can be run because the "705 mode" of the 7080 is emulated. **Limitations:** Cannot be installed with any other compatibility feature. Cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730). **Field Installation:** Not recommended. **Prerequisites:** #7128 on the 3066 System Console mdl 2 and on the 3067 Power and Coolant Distribution Unit mdl 3.

709/7090/7094/7094 II Compatibility (#7129): Provides the system with the ability to execute 709, 7090, 7094 and 7094 II instructions. This capability is integrated under OS and emulated programs operate as processing programs under MFT and MVT. Included are the following features of those systems: Channels, punched card I/O, printer, and 729 magnetic tape. *NOT* included are: Hypertape, teleprocessing equipment, direct couple, disk storages, drum storages, 1401 adapter, direct data on 7094 special and custom systems. **Limitations:** Cannot be installed with any other compatibility feature. Cannot be loaded, at IMPL time, concurrently with S/370 Extended (#7730). **Field Installation:** Not recommended. **Prerequisites:** #7129 on the 3066 System Console mdl 2 and on the 3067 Power and Coolant Distribution Unit mdl 3.

Staging Adapter For ISC (#7220): Enables each path of the ISC to attach a maximum of four 3333 mdls 1 and 11 and/or 3350 mdl A2/A2Fs with associated 3330 mdls 1, 2 and 11 and 3350 mdls B2/B2F and C2/C2F, for a maximum of 32 drives per path. See M3333, 3330 and 3350 pages for additional information. Also see note on M3333 pages for feature changes required when 3333s are retained for use with a 3851. Provides up to 64 virtual 3330 addresses for each channel interface on each path of the ISC. Provides for the attachment of up to four Data Recording Controls in one or two 3851 Mass Storage Facilities to each path of the ISC. **Maximum:** One. **Field Installation:** Yes ... MES must include removal of any of the following which are installed: #9190, #9313, #9314, #9315, #9317, #9318. **Prerequisites:** #4650 and #2150. For 3350 attachment the additional prerequisites are #2151, #6111 and #2152. **Limitations:** If String Switch (#8150) is installed on a 3333, see writeup for this feature on M3333 page. 3340 drives cannot be attached to the ISC when #7220 is installed. 3350 drives attached to the ISC when #7220 is installed cannot be used as staging drives and must be designated as real in 3350 native mode only. 3350 devices may not be mixed with other type devices in the same string. **Specify: #9319** (Staging Adapter 3333/3330/3350).

ISC (#4650) WITH ONE CHANNEL OR WITH TWO-CHANNEL SWITCH (#7905)

DASD Configuration		Required DASD Specify Features*															
		† 9313		† 9314		† 9314 9190	** † 9315			** † 9315 9190				+ † 9317		++† 9318	
3333 Only	One or two 3333s with associated 3330s	x	x														
	Up to four 3333s with associated 3330s						x	x									
	String Switch (#8150) on any 3333		x				x										
3340 Only	One or two 3340 mdl A2s with associated mdl B1/B2s			x	x	x				x							
	Up to four 3340 mdl A2s with associated mdl B1/B2s							x	x		x	x					
	String Switch (#8150) on any 3340 mdl A2				x			x		x		x					
	Fixed Head feature (#4301/#4302) on any 3340					x				x	x	x					
3340 3344	Up to four 3340 mdl A2s of which up to two may attach 3344s													x	x		
	String Switch (#8150) on any 3340 mdl A2 and/or Fixed Head feature (#4301/#4302) on any 3340														x		
3333 3340 -not 3344	3333s and 3340 mdl A2s (any combination of 2, 3, or 4) each with associated drives								x	x			x	x			
	String Switch (#8150) on any 3333 or 3340 mdl A2									x			x				
	Fixed Head feature (#4301/#4302) on any 3340												x	x			
3350 Only	Up to four 3350 mdl A2/ A2Fs with associated mdl B2/B2Fs, C2/C2Fs															x	x
	String Switch (#8150) on any 3350 mdl A2/A2F, C2/C2F															x	
3333 3340 3350 -not 3344	3333s, 3340 mdl A2s and 3350 mdl A2/A2Fs (any combination of 2, 3, or 4) with associated drives																x x
	String Switch (#8150) on any 3333, 3340 mdl A2, or 3350 mdl A2/A2F, C2/C2F and/ or Fixed Head feature (#4301/ #4302) on any 3340																x

† ISC diskette-only specify feature. No fee when ordering at time of manufacture or with changeable feature that supplies diskette. A fee on purchase machines to include any number of diskette-only changes ordered on the same diskette.

* Any change to an installed DASD configuration requires an MES *ONLY* if the new configuration indicates that a different Specify and/or Special Feature(s) is required. The MES must include addition of any new Specify and/or Special Features not previously installed *AND* removal of any not listed as required for the new configuration.

** ISC Control Store Extension (#2150) is prerequisite. With 9315, each path of the ISC requires 32 contiguous device addresses regardless of the number of drives attached.

\+ Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group the 3830-2 uses 64 contiguous device addresses irrespective of the number of drives attached. The 3340 mdl A2s on the first and third strings may attach up to three 3340 mdl B1s, B2s, and/or 3344s in any combination. The 3340 mdl A2 on the second string may attach up to three 3340 mdl B1/B2s. The 3340 mdl A2 on the fourth string may attach one 3340 mdl B1 or B2.

++ Expanded Control Store (#2151) and Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group each ISC path uses 8 or 16 or 32 or 64 device addresses depending upon the respective DASD configuration installed and whether any 3350 drive is in 3330-1 compatibility mode.

S/370 Extended (#7730): Provides S/370 Extended facilities which are a prerequisite for operation with the MVS/System Extensions program product. **Field Installation:** Yes. **Prerequisites:** Required on each processor in an MP system, and on the A-series processor in an AP system. S/370 Extended (#7730) is also required on the 3062 Attached Processing Unit in an AP system. **Limitations** This feature cannot be loaded, at IMPL time, concurrently with 7070/7074

3168-3 Processing Unit (cont'd)

Compatibility (#7127), 7080 Compatibility (#7128), or 709/7090/7094/7094 II Compatibility (#7129).

3213 Integrated Printer Attachment (#7850): Provides the interface needed to attach the optional 3213 Printer to the service processor on the 3168-3. The 3213 can be used to print error data captured and stored in the service processor. The printer does not attach to the channel interface. **Field Installation:** Yes.

Two-Channel Switch For ISC (#7905): To provide each of the two paths of an ISC with the capability of attaching to a second channel. The channels may be on the same CPU or different CPUs. Switching is under program control. Each path of the ISC can be dedicated to a single channel by means of a Configuration Switch. **Prerequisites:** An available control unit position and one unshared subchannel for each logical unit address on each of two system block multiplexer channels. For S/370 mdl 195 and S/370 mdls 165, 168, 195, see M2880 pages. For S/370 mdls 135, 135-3, 138, 145, 145-3, 148, 155, 158, and 3031, 3032 or 3033 Processor, see M3135, 3135-3, 3138, 3145, 3145-3, 3148 3155, 3158 and 3031, 3032 or 3033 pages. For 4300 processors, see M4341 pages.

Note: Customer price quotations and customer order acknowledgement for feature #7220 (Staging Adapter for ISC) must state: "Installation of this feature involves removal of parts which become the property of IBM."

MODEL CONVERSIONS

Field Installable.

3168 to 3168-3 Model Conversion:

3168 to 3168 U3 (no change in storage size)
3168 MP to 3168 M3 (no change in storage size)

3168-3 to 3168-3 Model Conversion:

3168 U3 to 3168 M3 (no change in storage size)
3168 U3 to 3168 A3 (no change in storage size)
3168 A3 to 3168 M3 (no change in storage size)

3168-3 to 3168-3 Model Upgrade:

A37							x

Notes:

1. There are no additional installation charges over the model conversion and model upgrade prices.
2. The above model conversion and model upgrades are field installable.
3. Planning for Model Conversions and Model Upgrades: When a customer requires model (storage) upgrades in addition to a model conversion, the changes must not be consolidated into a single MES. Also, model (storage) upgrades should be ordered individually in one-model increments. A planning session between Marketing, FE, and the customer should be held to develop the proper sequence of MES ordering.
4. Field change from 3168-3 to a 3168 is not recommended.
5. Customer price quotations and customer order acknowledgement letters for purchase MESs must state: "All parts which are removed from purchased processors to accomplish a model change to and from the A series become the property of IBM."

ACCESSORIES (None)

SUPPLIES

Contact IBM.

3178 DISPLAY STATION

PURPOSE

A cathode-ray tube (CRT) display station used in clusters with the 3274 Control Unit, the 3276 Control Unit Display Station, the 4701 Controller,the 4321 Processor or the 4331 Processor with Display Printer Adapter for displaying alphameric data, and for entering data into and retrieving data from S/360, S/370, an 4300 Processor, or 8100 System. A keyboard permits an operator to display and manipulate data on the screen. The 3178 meets both general-purpose and unique display requirements.

MODELS

Model C10: Displays up to 1,920 characters and provides 75-key Data Entry Keyboard Entry keyboard.

Model C20: Displays up to 1,920 characters and provides 87-key Typewriter Keyboard .

Model C3: Displays up to 1,920 characters and provides an 87-key Typewriter Keyboard which includes a numeric pad. This model attaches to the 3274 or 3276 and requires a no-charge microcode RPQ in the control unit.

Prerequisites :

Attachment	Required on Control Unit
3274	Available Category A terminal port.
	Mdl C3 attachment to a 3274 requires one of four no-charge microcode RPQs in the 3274: 8K1034 or 8K1035 for 3274s with Configuration A, B, C or support with or without the numeric lock feature, or 8K1164 or 8K1165 for 3274s with Configuration D support with or without the numeric lock features. numeric lock feature. *Caution:* PRQs must be ordered well in advance of the Model C3 to assure receipt prior to the Mdl C3.
3276	Available port or added #3255, #3256 or #3257.
	Mdl C3 attachment to a 3276 requires RPQ 8K1059 or 8K1059 or 8K1060, a no-charge microcode RPQ with or without the numeric lock feature, in the 3276. *Caution:* RPQs must be ordered well in advance of the Mdl C3 to assure receipt prior to the Mdl C3.
4321	Standard Display/Printer Adapter on 4321.
	Attachment of the 3178 mdl C3 to the 4321 is not supported.
4331	Standard Display/Printer Adapter on 4331 or Display/Printer Adapter Expansion (#2001) on a 4331 mdl group 1 or 2.
	Attachment of the 3178 mdl C3 to the 4331 is not supported.
4701	Available Port on optional DCA adapter.

HIGHLIGHTS

Displays up to 1,920 characters in 24 rows of 80 characters each. Each character is represented in a maximum 7 X 14 dot matrix in the 9 X 16 contiguous box matrix. Displays a 94 character set: 26 upper case alphabetic, 26 lower case alphabetic, 10 numeric and 32 special characters.

The 3178 offers functions equivalent to the 3278 model 2 Display Station with features of an 87-key/75-key Keyboard, Keyboard Numeric Lock, Audible Alarm and Security Keylock.
The Mdl C3 provides a keyboard layout like that provided with RPQ 8K1038 for the 3278.

A monocase switch, located on the keyboard, provides the capability of switching to uppercase alphameric mode for 3277 compatibility. Uses 3270 field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/unprotected, alphameric, normal/ intensified, and displayable/ non-displayable.

The operator may initiate a local display-to-printer copy function (i.e., without host intervention) from the keyboard of 3178. When the 3178 is attached to a 3274 Control Unit or 4300 Processor Display Printer Adapter, the printer designation is controlled by operator use of the IDENT key and by: (a) a printer authorization matrix which is loaded into the 3274 Control Unit through a user written host application program, or, (b) a customer definable matrix loaded from the system diskette at IML time. For further details, see the *IBM 3270 Information Display System Planning and Setup Guide,* GA27-2827.

When the 3178 is attached to a 3276 Control Unit Display Station, the printer designation is controlled by operator use of the IDENT Key and by a configuration default matrix. This matrix is determined by the relative positions of devices attached to the 3276. (The host can perform a copy in a manner compatible with 3271/3272 support.)

The 3178 consists of three workstation elements (WSEs): video, logic and keyboard elements. With optional extension cables, provided as accessory, the logic unit may be placed away from the video unit and the keyboard. The logic unit may be mounted on a vertical surface such as the side of a desk or a wall using a mounting bracket provided as a separate accessory.

Operator Factors: The 3178 has an etched screen, which minimizes glare and fingerprint. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option, are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard is light and thin, and the keyboard can be adjusted to either 12 degrees by attaching or 6 degrees by detaching the keyboard foot assembly offered as basic.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphameric, special symbol, and cursor move keys have typamatic capability. Double speed cursor typamatic is attached with a simultaneous depressing of the ALT key and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. Ten Program Function (PF) keys are available on the Data Entry Keyboard; 24 PF keys are available on the Typewriter Keyboard.

When attached to a 3274 Control Unit with Configuration Support C with Entry Assist RPQ or with Configuration Support D and with a typewriter keyboard (3178 Model C2), it provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3274 Sales pages for languages supported.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of data in the display terminal unless the key is turned to the "on" position.

These capabilities and the terminal's ability to identify itself to the host program allow customer-supplied security program routines to control access to data and audit of actions.

Customer Problem Analysis and Resolution: Functions have been designed into the 3178 to enhance the availability to the customer. This has been done through the use of customer problem analysis and resolution (CPAR) routines and procedures that are used by the operator. See "Customer Responsibilities" below.

Customer Set-Up (CSU): The 3178 is designated as a customer setup machine except for the Logic Unit Mounting Bracket accessory. The customer is responsible for arranging for the attachment of the Mounting Bracket to the desk, wall or other surface . Setup instructions are included with each machine, as a part of the IBM 3178 Display Station Operator Reference Guide.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at customer's receiving dock, unpacking and placement of unit.
- Physical setup, connection of cables in customer access areas, switch settings and checkout.
- Contact an IBM customer service coordinator for attachment of the 3178 communications cable to an on-site serviced IBM control unit where customer access area is not provided.
- Determination of the required number of spares.

3178 Display Station (cont'd)

- Performing customer problem analysis and resolution (CPAR).
- Returning failing workstation element to the Repair Center or to the Service/Exchange Center with a completed Service/Replacement Order Form for repairs.
- Call the National Support Center on a toll-free number for service.
- Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time and material basis.)
- Each customer must order the *IBM 3178 Display Station Description Manual,* GA18-2127, for site planning and preparation work since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3178 units for such use. The number of spare units is dependent upon the number of the 3178 units the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Warranty Service and Maintenance:

Customer Carry-in/Repair is available for a five year maintenance charge.

In addition, following services are available for an annual charge:

- Customer On-site Exchange
- Customer Carry-in Exchange
- IBM On-site Exchange

  IBM warranty service is provided using the Customer On-site Exchange service.

The warranty period is 3 months following the date of installation.

There is no regularly scheduled preventive maintenance recommended by IBM on these units.

Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center or IBM Service/Exchange Center for repair on a time and material basis. The Service/Replacement Order Form is to be completed with all shipments to the Repair Center. Upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling, inspection, cleaning, testing, estimating of repair charges, and return shipping charges. The 3178 qualifies for an IBM maintenance agreement immediately following expiration of the service and parts warranty.

If an IBM maintenance agreement is not contracted for immediately following expiration of the service and parts warranty and the customer subsequently wants maintenance coverage, the customer must ship the machine(s) to the designated IBM Repair Center or Service/Exchange Center for an inspection. A minimum charge to cover handling, inspection, cleaning, testing and return shipping charges will be applied. In addition, all time and parts required to qualify the machine for maintenance agreement acceptability will be billed at IBM's then current rates and terms. The machine will then qualify for an IBM maintenance agreement coverage.

If on the basis of an inspection, IBM concludes that a machine is not repairable, no further work will be performed and the machine will be returned to the customer subject to minimum charge.

Customer Carry-in/Repair: After isolating the failure to a workstation element, the customer calls the National Support Center on a toll free number and carries in the failing workstation element to a Service/Exchange Center (S/EC). The S/EC will ship the workstation element to an IBM Repair Center. IBM will then ship the repaired workstation element to the S/EC to hold for customer pick-up. Alternatively, the customer may ship the failing workstation element directly to an IBM Repair Center. It is the customer's responsibility to pack the failing WSE in the original shipping container or equivalent and ship it prepaid to the designated IBM Repair Center. IBM will return the repaired unit prepaid.

Customer Carry-in Exchange: To use this service, a customer calls the National Support Center on a toll-free number. After isolating a failing element using CPAR, the customer transports the failing element to an IBM Service/Exchange Center. IBM will provide a replacement element on an exchange basis. The customer is responsible for delivering the failing element to/from the Service/Exchange Center. For further information on the Customer Carry-in Exchange, see the General Information section of the sales manual.

Customer On-site Exchange: To use the service a customer calls the IBM National Support Center on a toll-free number. IBM arranges for delivery of a replacement element to the customer site specified by the customer using various delivery methods within or outside Designated Service Area (DSA).

The customer is responsible for the installation and the test of the replacement element using the customer set-up (CSU) procedures. The currier returns the defective element to IBM as instructed by IBM. The delivery transportation charge to/from the customer site is paid by IBM.

IBM On-site Exchange: This service allows the customer to call the National Support Center on a toll-free number , after the customer has performed CPAR, and have a representative bring a replacement element to the customer site, install and test the replacement element. The failing element becomes the property of IBM.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged for at IBM's then applicable time and material charges. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing CPAR, the National Support Center on a toll-free number may be called for their assistance. The CE will respond to the customer site to aid the customer in performing CPAR procedures using the same documentation available to the customer.

Customer owned spare Workstation Elements (WSE) may be installed to replace defective workstation elements by the CE upon customer request. Shipping of defective WSEs to the Repair Center or Service/Exchange Center is a customer responsibility. All on-site assistance is available on a per-call basis at the applicable hourly rates and terms.

Keyboards: (See Notes 1, 2 and 3 below):

- 75-key Data Entry Keyboard: Movable with 35 data keys, 10 program function keys and 30 control keys.
- 87-key Typewriter Keyboard: Typewriter-like layout, moveable with 49 alphameric keys, 26 control keys and 12 program function keys (total 24 PF keys).
- 87-key Typewriter Keyboard: Typewriter-like layout, moveable with 49 alphameric keys, 26 control keys and a block of 12 keys which are PF 1-12, PF 13-24, or a numeric pad (0-9, plus decimal and tab), depending on upper/lower shift status and use of the Alt key.

Note 1: Keyboards used on 3101, 3104, 3275, 3276, 3277, 3278, 3279, or 8775 machines are not interchangeable with keyboards used on 3178.

Note 2: A 0.9 meter (3 foot) keyboard cable is provided, as basic. The keyboard cables can be extended to 3.0 meters (10 feet) with 2.1 meters (7 feet) Keyboard Extension Cable provided as accessory.

Note 3: Keyboard foot assembly is provided as basic. It provides a keyboard surface angle of 12 degrees (6 degrees without the foot assembly).

Bibliography: *IBM 3178 Display Station Description,* GA18-2127; *IBM 3178 Display Station Operator Reference Guide,* GA18-2128. For others, see *KWICK Index,* G320-1621, or specific system bibliography.

SPECIFY

* Voltage (120V, AC, 1-phase, 3-wire, 60Hz)

* Power Cable:

* 1.8 meter (6 feet), non-locking plug.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Field installable.

ACCESSORIES

The following accessories can be ordered using a feature code via AAS when ordered with machine; and using a part number when ordered separately from machine. IBM Distribution Center at Mechanicsburg will ship to customer.

Extension Cables: Provides 2.1 meter (7-feet) Video Extension Cable, (Total 2.7 meters (9 feet) with 0.6 meter (2-feet) standard Video cable), and 2.1 meter (7-feet) Keyboard Extension Cable (Total 3.0 meters (10 feet) with 0.9 meter (3-feet) standard keyboard cable). With this

3178 Display Station (cont'd)

accessory, the Logic unit can be located away from the Video unit and the Keyboard.

Extension Cables are designated as a customer set-up accessory. Set-up instructions are included with each accessory.

Extension Cable **P/N 5641829 feature #3696**

Logic Unit Mounting Bracket: Provides a mounting bracket to mount Logic unit on a vertical surface such as the side of a desk or a wall when Logic unit is placed away from Video unit and Keyboard using Extension Cables accessory. Arrangements for mounting the bracket is the customer's responsibility.

Logic Unit Mounting Bracket **P/N 5641651 or feature #4956**

CUSTOMER REPLACEMENT PARTS

Following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order through Branch Office Spare Parts and/or parts Distribution Centers to FED Greencastle or the customer directly places orders to the IBM Parts Order Center in Greencastle.

Description	Part Number	
Pedestal	5641300	
Keyboard Feet (pair)	5641297	
Keyboard Extn Cable	5641815	
Video Extension Cable	5641814	
Field Packaging Material		
For Video	2655956	
For Logic	8665651	
For Keyboard	7387286	
Keys*	5641830	for Flat key
	5641800	for Tubular key
Power Cable	5640670	

Note 1. * The 3178 is shipped with two keys. Additional keys may be purchased from IBM. Key identification number must accompany each order. Note: If the key identification number is unknown, the Logic WSE should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on a time and material basis.

Note 2. Logic Unit Mounting Bracket accessory is not covered by an IBM maintenance agreement. Order as an accessory when the replacement is needed.

MACHINE ELEMENTS

Workstation Elements may be ordered to provide individual elements as needed by the customer in the use of the 3178 Display Station.

3178 Display Terminal Workstation Elements:

Order Entry: For shipment, specify MACHINE ELEMENT (B/M) Number at time of order entry.

1) Order entry via NAD/NMD marketing representative and/or account administrator.
2) Account administrator should complete MES order form.
3) Form is mailed to:
   IBM Corporation
   IBM Parts Order Center
   P.O. Box 505
   Greencastle, IN 46135
4) FE and I&D/Greencastle will ship to customer. bill customer

Workstation elements may be ordered to provide individual elements as needed by the customer in the use of the 3178.

Customer Responsibilities: The customer's responsibilities are the same as those above under "Customer Responsibilities".

Site Planning and Preparation: These are the responsibility of the customer. The customer should have on hand, or should order the IBM 3178 Display Station Description Manual, (GA18-2127) for site planning and preparation work.

Warranty: Category B (Customer On-site Exchange)

Maintenance: Maintenance for individual workstation element is only available on a time-and-material basis at an IBM Repair Center or through an IBM Service/Exchange Center. Minimum charge is applied.

The video, logic and keyboard workstation elements of the 3178 Display Station can be ordered as follows:

To Fit Model	Workstation Element	Number*
C1/C2	Video	5894000
C1/C2	Logic	5640980
C1	Keyboard	5640991
C2	Keyboard	5640987

Note:
- Logic does not include a power cable.
- Keyboard includes a pair of Keyboard Feet.
- Video does not include Pedestal.

* Same as Bills of Material number.

SUPPLIES (None)

3195 PROCESSING UNIT

[NO LONGER AVAILABLE]

The 3195 is no longer available ... features and model changes can be ordered on an "as available" basis.

PURPOSE

Provides arithmetic, logic, control and processing storage for a S/360 or S/370 model 195.

MODELS

For S/360		
Model J	J00	1,048,576 bytes
Model K	K00	2,097,152 bytes
Model KJ	KJ0	3,145,728 bytes
Model L	L00	4,194,304 bytes
For S/370		
Model J1	J10	1,048,576 bytes
Model K1	K10	2,097,152 bytes
Model KJ1	KJ1	3,145,728 bytes
Model L1	L10	4,194,304 bytes

Prerequisites: Each 3195 requires: [1] At least one selector channel (2860), or block multiplexer channel (2880), or a 2870 with at least one Selector Subchannel ... [2] One 3060 System Console ... [3] One 3080 Power Unit mdl 1, one 3080 mdl 2 and one 3080 mdl 3 ... [4] One 3085 Power Distribution Unit ... [5] One 3086 Coolant Distribution Unit ... [6] A Motor Generator Set with Motor Starter. See "Specify".

Customer-supplied chilled water is required for cooling the system ... see *S/360 Installation Manual - Physical Planning,* GC22-6820.

HIGHLIGHTS

Depending upon the mdl, includes up to 4,194,304 bytes with a 756-nanosecond cycle time ... eight byte parallel data flow ... includes 32,768 bytes of 54-nanosecond cycle buffer storage which is transparent to the programmer and reduces the effective cycle time of processor storage ... buffer storage does notpincrease the amount of addressable storage ... 54-nanosecond processor cycle ... double words are 8-way interleaved on mdl J; 16-way on mdl K and L; 16-way on the first 2 million bytes and 8-way on the third million bytes on mdl KJ ... overlapped operation of instruction and execution units, as well as concurrent operations in multiple execution units and with the instruction unit ... performance emphasis on floating point arithmetic.

Because of the high performance emphasis, there are operational differences from other S/360 and S/370 models.

[1] The quotient of a floating point divide operation may differ in the mdl 195 from that of other models by an amount equal to one bit in the low order fraction position. For zero remainders, however, the results will be identical.

[2] Several program interruptions that should, according to the IBM *S/360 Principles of Operation,* store a non-zero Instruction-Length Code (ILC) are imprecise in the mdl 195 and store a zero ILC. This zero ILC indicates that the address of the instruction causing the interruption has not been retained. When precise program interruptions occur, the interruption code portion of the current PSW is used in a special way.

[3] The mdl 195 is capable of executing processor stores out of sequence. Logical consistency is maintained among processor fetches and stores -- including the beginning and ending I/O operations. However, if a program is to modify a string of CCWs while they are being used by the channel, then steps must be taken to arrange the program so that the stores are made in sequence. This is described in the *Model 195 Functional Characteristics* (GA22-6943).

[4] If a floating point underflow occurs, the result will be replaced by all zeros. If an overflow occurs, the result will be replaced by all ones with the correct sign. For those instructions that change the condition code, the code is 1 or 2 for overflow, and 0 for underflow.

With each 3195, a Basic Storage Module Analyzer and one additional basic storage module is provided, along with two carriers. Each carrier provides for supporting and moving a basic storage module from the processor to a service area. Use of these items normally reduces the duration of system interruption when a failure occurs in one of the basic storage modules in the system. IBM maintenance agreements normally allow for offline servicing and repair of a failing basic storage module.

Standard Features (All Mdls): Universal instruction set, extended precision floating point arithmetic, fetch protection (read and write), internal timer (9.6 khz -- about 104us interval), byte-oriented operands, direct control, attachment for 2860 Selector Channels, 2870 Multiplexer Channels, and 2880 Block Multiplexer Channels.

Additional Standard Features (S/370 Mdls): In addition to those features listed above, the S/370 models include a 250-nanosecond time-of-day clock, additional variable field length instructions, control registers (expanding the functions of the PSWs).

Channels: Separate channels facilitate maximum overlap with processing. Channel speeds of 1.5 million bytes/second are standard and up to 3.0 million bytes/second with Two-Byte Interface (#7850, #7851) on the 2880 Block Multiplexer Channel. Up to seven logical channels can be attached per CPU. Valid combinations include: (a) One 2870 plus up to six channels of 2860s and/or 2880s ... (b) Two 2870s plus up to five channels of 2860s and/or 2880s ... (c) If no 2870 is attached, only up to six channels, 2860s and/or 2880s, can be attached per CPU. See 2860, 2870 and 2880. With the addition of Extended Channels (#3851), up to 14 channels can be attached ... for valid channel combinations, see "Special Features". Depending upon data rates, all channels, including the Selector Subchannels of the 2870s, can operate concurrently. Each selector or block multiplexer channel can control up to eight control units. The basic multiplexer channel of the 2870 and each Selector Subchannel controls up to eight control units. The 2841 is restricted to one control unit per Selector Subchannel ... see M2841 pages.

Limitations: A 3195 can accommodate three 2880 channels attaching either the 2835 Storage Control mdl 1 or 2 or the 2820 Storage Control. The channels attaching 2835s or 2820s must be assigned the highest priorities in the system.

Console Function: An operator control panel, a system control panel and a display console are included with the 3630 mdl 1. They have switches and lights necessary to operate and control the system. The display console may be used as an operator's console. The display console is functionally equivalent to a 2250 mdl 1 with the following features: alphameric keyboard, 8K buffer (4K is maintenance only), character generator, light-pen, and OCP, First. The operator control section may be duplicated once to provide a remote operator panel by ordering the appropriate feature on a 2150 Console or 2250 Display Unit mdl 1 ... see M2150 and M2550 pages. An optional operator console function can be provided by using a 2150 and a 1052 Printer-Keyboard mdl 7 in combination ... see M2150 pages. Additional console functions can be provided through use of other I/O units such as readers, displays, punches and printers.

Emergency Power-Off Control, a standard feature on the 3060, provides, in effect, a single emergency power-off switch in a "room" or "area". To interconnect up to six Emergency Power-Off Switches, see *S/360 Installation Manual - Physical Planning* GC22-6820, for details.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9905** for 230V.
- Motor Generator and Starter.
- Remote Operator Control Panel Attachment: **#9560**, required if the operator control panel of the 3195 is to be duplicated by use of an Operator Control Panel (#5475, #5476) on a 2150 Console or 2250 Display Unit mdl 1. Field Installation: Yes.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- RETAIN/370: **#9570** for non-use of FE DAU, **#9571** for first CPU using FE DAU, **#9572** for second CPU using FE DAU, or **#9573** for third CPU using FE DAU. Customer must provide interface for FE DAU to the telephone line.

  Note: *Up to three CPUs in the same physical location can be serviced by a single FE DAU.*

SPECIAL FEATURES

Extended Channels (#3851): Provides for attachment of up to 14 channels, combinations of 2860 Selector channels, 2870 Multiplexer Channels, and 2880 Block Multiplexer Channels. A maximum of 14 channels or a total of eight channel frames, whichever occurs first, can be attached. Valid maximum combinations of channels are:

2860s -- maximum of 2 (6 channels)
2870s -- maximum of 2 (2 channels)
2880s -- maximum of 7 (13 channels)

Limitations: The 2860 channel addresses must be numbered one through six. The first 2870 channel must be number zero, the second must be any number one through six. The 2880 channel addresses may be any number one through 13. If the address of the 2880 is seven through 13, only 2301s, 2303s, 2305s, 2311s, 2314s, 2321s, 2420s, 3211s or 3330s may be attached. **Field Installation:** Yes. **Prerequisites:** On 2150 -- **#9175** if Operator Control Panel, First (#5475) is to be installed on the 2150 ... **#9176** if Operator Control Panel, Second (#5476) is to be installed. On 2250 ... **#9175** if Operator Panel, First (#5475) is to be installed on 2250 ... **#9176** if Operator Control Panel, Second (#5476) is to be installed.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3203 PRINTER

PURPOSE

Printer output unit for System/38, all virtual storage S/370, 3031, 3032, 3033, 3081, 3083, 3084 Processors and the 3777 Communication Terminal.

MODELS

Model 1	001	[NO LONGER AVAILABLE] 600 lpm -- native attachment on S/370 models 115 and 125 only.
Model 2	002	[NO LONGER AVAILABLE] 1,200 lpm -- native attachment on S/370 models 115 and 125 only.
Model 3	003	1,000 lpm -- for use with a 3777 Communication Terminal model 1, 2 or 3.
Model 4	004	[NO LONGER AVAILABLE] 1,200 lpm -- native attachment on S/370 models 138 and 148 only.
Model 5	005	1,200 lpm -- channel attachment on all Virtual Storage S/370, 3031, 3032, 3033, 3081, 3083, 3084, 4331 or 4343 Processor, System/38.

Note: All rated speeds are based on a 48-character set.

Limitations: [1] Only marginally-punched, pin-fed, continuous forms can be used. For multiple part forms, it is preferred that both sides be securely fastened. However, when only one side is fastened, it must be the right side. No staples are permitted in the print train area ... [2] The 3203 may be used to generate input in OCR applications ... see M1287, 1288, 3881 and 3886 pages for information on acceptable characters and printing devices. For OCR applications, a special ribbon is recommended ... [3] Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results, use single-part forms for OCR printing ... [4] Print quality and forms feeding varies with paper specifications, ribbon and number of copies. Multiple copy forms of more than four parts and forms with a first part heavier than 49 grams/sq. meter (13-pounds) should be tested under operating conditions to determine that results are satisfactory for the user's application ... [5] The 3203 may not be natively attached on a S/370 mdls 115, 125 with a natively attached 1403.

Maximum: A maximum of two 3203 mdl 5s can be attached to a System/38. See System/38 special features for attachment explanation. Only one 3203 mdl 1 or 2 can be natively attached to a S/370 mdl 115 or 125. Only one 3203 mdl 3 can be attached to a 3777. A maximum of two 3203 mdl 4s can be natively attached to a S/370 mdl 138 or 148. 3203 mdl 5 is limited only by the number of control unit positions available on a system channel.

Prerequisites: One 1416 Interchangeable Train Cartridge is required for each 3203. See M1416 page. In addition, the following are required, depending upon the 3203 mdl:

Model 1	An Integrated 3203 Printer Attachment (#4650) on the 3115 or 3125. In addition, on the 3115 only, Integrated 3203/5203 Printer Prerequiste (#4653) is required. On the 3115 and 3125, specify **#9770** for 3203 mdl 1.
Model 2	#4650 on the 3115 or 3125. In addition on the 3115 only, #4653 is required. On the 3115 and 3125, specify **#9771** for 3203 mdl 2.
Model 3	A 3777 Communication Terminal mdl 1, 2 or 3.
Model 5	For System/38 ... 3203-5 Printer Attachment Feature (#1135 or #1136) on the System/38 system unit. See M5381 special features. Cables for the 3203-5 must be ordered when attaching to a System/38. Refer to the *System/38 Installation Manual-Physical Planning* for ordering information.

HIGHLIGHTS

132 print positions are standard. Horizontal spacing is 10 characters per inch. Vertical spacing is 6 or 8 lines per inch under operator control.

Forms skipping and spacing are controlled by a forms control buffer. The carriage is a dual speed unit for mdls 1, 2, 4 and 5, and single speed for mdl 3. Normal skipping for mdls 1, 2, 4 and 5 is up to 24 inches per second with high speed skip of up to 55 inches per second after 6 lines have passed. The carriage speed for mdl 3 is up to 18 inches per second.

A Universal Character Set buffer of 240 positions is standard. Use of graphics sets from 30 to 240 characters are allowed. Print speeds vary depending upon frequency of character repetition on the cartridge. One 1416 Interchangeable Train Cartridge is required for each 3203 Printer. The 3203 uses the proven train printing principle of the 1403 mdl N1 and maintains comparable high quality printing. Additionally, the 3203 has the capability of producing better copies.

Continuous marginally punched forms are fed by a forms tractor. Maximum forms dimensions are: *Width* -- 20 inches; *Length* -- 24 inches. Minimum forms dimensions are: *Width* -- 3-1/2 inches; *Length* -- 3 inches. Mdls 1, 2, 4 and 5 of the 3203 have a power-assisted stacker.

For full flexibility of column location for margins, 17-25/32 inches maximum width is recommended. If forms greater than 14 inches in length are used, the rear stacker enclosure must be opened. If forms greater than 17 inches in length are used, the forms compartment front door must be opened. See *Forms Design Manual*, GA24-3488.

Bibliography: S/370 -- GC20-0001, S/3770 -- GA27-3097. System/38 -- *System/38 Installation Manual - Physical Planning* (GA21-9293), *3203-5 Printer Component Description and Operator's Guide* (GA33-1529), and *Form Design Reference Guide for Printers* (GA24-3488).

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9905** for 230V ... must be consistent with system voltage for the mdl 1, 2 or 4.
- Color: Mdls 1, 2, and 4 -- **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white. Mdl 3 -- blue is supplied as standard. Mdl 5 -- available from plant in pearl white only, MES orders will retain original color.
- Train Arrangement: See page TC 3203 in Type Catalog and M1416 pages for arrangements and required feature numbers.
- System Attachment: Specify **#9501** for S/370 Mdl 115 Adapter, or **#9502** for S/370 mdl 125 Adapter or **#9503** for the first 3203 mdl 4 on S/370 mdl 138 or 148 and **#9504** for the second 3203 mdl 4 on S/370 mdl 138 or 148.

  System/38: Specify **#9509** for the first 3203-5 to be installed at a customer's locations. This provides one tool kit required for CE maintenance. Another tool kit for the second 3203-5 installed on the system is not necessary. When rental machines are purchased, a tool kit can, if necessary, be ordered on a no-charge MES.
- Tool Kit - Mdl 5: Specify **#9190** for first and fifth 3203 mdl 5 in a multiple rental machine installation. Specify **#9191** for the second to fourth and sixth to ninth 3203 mdl 5 in a multiple rental machine installation. The **#9191** eliminates tool kit shipment(s) to second to fourth and sixth to ninth printer. Check with Field Engineering for additional tool kit requirement in multiple machine installation(s) or in case of machine transfer(s).
- Specify **#9190** for all purchase machines.
- When installed rental 3203 mdl 5s are purchased, a tool kit has to be ordered on a no-charge MES for each printer requiring one.
- When installed rental 3203 mdl 5 out of multiple printer installation is transferred and becomes a first or fifth printer, a tool kit has to be ordered on a no-charge basis MES.
- On mdl upgrades from mdls 1, 2 or 4, no tool kit is to be specified.
- OCR: When OCR ribbons are used for either OCR printing or other applications, specify **#9488.** **Field Installation:** Yes.

MODEL CONVERSIONS

Can be made in the field between models 1, 2, 4 and 5. Model upgrades of models 1 to 4 or 1 to 5 require multiple MES orders. Prices are additive. When upgrading from models 4 to 5 or 2 to 5, specify on MES orders the required power/voltage and frequency. For model 5, see above specify/feature codes.

SPECIAL FEATURES

Speed Enhancement (#6360): [Mdl 3] Provides capability to operate the 3203 mdl 3 at 1,200 lpm. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5595 on the 3777.

3210 CONSOLE PRINTERnKEYBOARD

[NO LONGER AVAILABLE]

PURPOSE

Selectric® console typewriter for use as an input (keyboard) and output (printer) unit for a S/370 model 135, 135-3, 145, 145-3 or 155.

MODELS

Model 1	001	For mounting on the console table reading board.
Model 2	001	For remote use ... not available for S/370 models 135, 135-3, 138.

HIGHLIGHTS

Both mdls consist of a Selectric keyboard printer. Mdl 1 is mounted on the 3135, 3135-3, 3145, 3145-3 or 3155 reading board. Mdl 2 is supplied with a stand which can be located up to 75 feet from the processor. For the mdl 1, a forms rack is supplied with the system. A forms rack is standard with the mdl 2.

In both mdls, the keyboard and printer operate independently under program control. The general facilities provided are: direct data entry into the system, printed output from the system, and switches and lights for system control.

The keyboard on both mdls is similar to other Selectric typewriters. However, it provides only those functions useful and necessary in a system console. Functions such as tab, tab set and clear, backspace, ribbon shift, and end-of-line bell are not included. On mdl 1, keys and lights are provided so that the operator can "display and alter" processor storage and system control information.

The printer for both mdls has an 88-character data set and a 125-character print line. It operates at a rated speed of 15.5 characters/second, has a stationary carriage and an interchangeable print element. A 15-inch carriage provides a 12-1/2" writing line at 10 characters/inch. A 6 lines/inch pin feed platen (13-1/8" pin-to-pin) is standard. A maximum of an original and five carbon copies can be prepared, depending upon paper, carbon quality and thickness. A Data 1 Font, dual case printing element is provided ... see "Type Catalog" pages for character layout.)

Limitations: One of each mdl can be attached to a system ... mdl 1 cannot be attached if a 3215 Console Printer-Keyboard is installed.

Prerequisites: Mdl 1 -- requires a 3210 mdl 1 Adapter (#7844) on the 3135, 3135-3 3145, 3145-3 or 3155 Processing Units. **Mdl 2** -- requires a 3210 mdl 2 Adapter (#7845) on the 3145, 3145-3 or 3155.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): [Mdl 2] -- **#9901** for 115V, **#9902** for 208V, **#9904** for 230V.

3211 PRINTER

PURPOSE

Printed output unit for S/360 models 22, 30, 40, 50, 65, 67 (in model 65 mode), 75, 85, 195, any S/370 Processor (except 3115 and 3125) or a 4321, 4331, 4341 Processor.

MODELS

Model 1 001

Prerequisites: [1] One 3811 Printer Contol Unit for each 3211 Printer ... see M3811 pages for attachment details. [2] One 3216 Interchangeable Train Cartridge for each 3211 Printer ... see M3216 pages for details.

HIGHLIGHTS

2,000 lpm rated speed for nine equal and alike arrays of 48-character sets. Other speeds are obtained when using other character arrays repeated with different frequencies. The Universal Character set capability is standard. Also, the 3216 Interchangeable Train Cartridge must be specified. This allows maximum flexibility in train layout to obtain maximum speed for varying character sets.

The 3211 has 132 print positions as standard. 18 additional positions are available as a special feature. Horizontal spacing is 10 characters per inch. Vertical spacing is 6 or 8 lines per inch under program control. Continuous marginally punched form spacing and skipping are controlled by a forms control buffer, a standard feature of the 3811. This program-controlled buffer allows skipping at 30 inches per second with a high-speed skip of 90 inches per second after seven lines have passed. Maximum form length is 22.5 inches at 8 lines per inch and 24 inches at 6 lines per inch. Form width may vary from 3.5 inches to 18.75 inches. Minimum form length is 3 inches. A pair of guides may be purchased for use with forms having a fanfold depth greater than 18 inches. A powered stacker helps refold the forms after printing. The 3211 is used in Optical Character Recognition applications when equipped with the OCR Print Package feature.

Limitations: Form sets of more than four parts should be tested for acceptable print quality of the last copies. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results, use 20-24 lb. Bond in single-part forms for OCR printing. OCR forms utilizing other papers should be tested for satisfactory results with user requirements. When reading 3211 documents on the 3886, Reread On Reject capability and 3211/5211 Compatability (**#9701**) should be used on the 3886.

For preprinted forms having print position 1 more than 33.02mm (1.3 inches) from the left edge, electronic indexing will be needed, see GA24-3543. For layout dimensions ... see GA24-3488. For forms sets that vary in thickness in excess of 0.0762mm (0.003") across either the width or length of the form, see GA24-3488.

The 3211 may be used to generate input in OCR applications ... see "Type Catalog", 3216 Interchangeable Train Cartridge section, for printable OCR characters. The OCR Print Package (#5450) is a prerequisite for OCR applications.

For 3211 Printer diagnostic support, OLTEP facilities are required under OS or DOS. Standalone diagnostics require 32K storage and a disk or tape.

Arrays of less than 27 characters should not be used on the 3211 Printer.

Paper form crimp should be on the left side of the form ... see *Forms Design Consideration for System Printers,* GA24-3488.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V or **#9905** for 230V ... must be consistent with system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Kickstrips: **#9350**, if desired ... also available on MES. When kickstrips are installed, the open area underneath the machine is enclosed. They reduce the amount of "toe-room" and may be inconvenient to the user if the power outlet is located beneath the machine.
- Required for use in OCR printing: #5450 for the OCR Print Package ... see "Special Features" below.
- Tool Kit: **#9710** (standard) or **#9711** (OCR). Required for CE maintenance. **For Rental Customer:** Specify **#9710** on first 3211 without OCR Print Package (#5450) ordered for a customer ... specify **#9711** on first 3211 with #5450 ordered for a customer. If required for a multiple machine installation, an additional Tool Kit(s) is available on no-charge MES. **For Purchase Customer:** Specify **#9710** on **each** 3211 without #5450 machine order ... specify **#9711** on **each** 3211 without #5450 machine order. When installed rental 3211s are purchased, a Tool Kit is to be ordered on no-charge MES for each machine.

SPECIAL FEATURES

OCR Print Package (#5450): Provides additional manual operator platen controls; required for OCR applications. **Field Installation:** Yes, on machines with serial number above 10081 . Available at time of manufacture only for machines with serial numbers below 10082 . **Prerequisites:** **#9711** ... see "Specify".

Print Positions, 18 Add'l (#5554): Increased print positions from 132 to 150. Operation of the 3211 printer remains unchanged. **Field Installation:** Yes. **Prerequisites:** #5553 on the 3811.

MODEL CONVERSIONS (None)

ACCESSORIES

Forms Stacker Guides (P/N 2471661): Useful on 3211s when it is required to print on forms having a fanfold depth greater than 18 inches. One guide supports the paper supply stack and the other extends the stacking area to accommodate the long folds. The rear stacker guide prevents automatic operation at the power stacker folding belts only when in use.

SUPPLIES

Contact IBM.

3216 INTERCHANGEABLE TRAIN CARTRIDGE

PURPOSE

A cartridge and print train which provides interchangeability of type font for the 3211 Printer.

MODELS

Model 1 001

HIGHLIGHTS

At least one 3216 is required when running a 3211 Printer. OCR type styles are available.

Interchangeability: When multiple 3216s are available, they can be interchanged by the operator, providing flexibility for printing different type fonts, type styles or character arrangements. Character sets up to 254 characters can be provided for unique requirements.

Prerequisites: The 3216 functions only when mounted in a 3211 Printer.

Bibliography: S/360 -- GC20-0360, S/370 -- GC20-0001

SPECIFY

- Print Train Arrangement: See "Type Catalog" for characters in each standard arrangement and feature numbers to be specified.
- Storage Container: **#9668**, if needed for the 3216 ... recommended for storage use when multiple 3216s are ordered for a single 3211.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3230 PRINTER

[NO LONGER AVAILABLE]

PURPOSE:

Provides single part output.

MODELS

Model 1	001	Attaches to the 8100 Information System via the direct attached loop or data link attached loop.
Model 2	002	Attaches to the 3274 Control Unit as a category A terminal, 3276 Control Unit Display Station, 8775 Display Station or to the 3081, 3083 or 3084 via the 3082 Processor Controller or to the 4321/4331 via Display/Printer Adapter, APL/Text, SCS and Character Print Operation are not supporter.

Prerequisites:

For Mdl 1: Direct Attached Loop Operation -- #4380 or #4835 on the 8100 System. For Data Link Attached Loop Operation -- 3842 or 3843 Loop Control Unit.

For Mdl 2: 3274 Attachment:

- An available Category A port and 3274 Configuration Support at the designated or higher release number.
- Configuration Support A (**#9110**) - Release Number 13.
- Configuration Support B (**#9111**) - Release Number 24.
- Configuration Support C (**#9112**) - Release Number 43.
- Configuration Support D (**#9124**)
- 3081/3083 Standard Adapter on 3082

3276 Attachment:

- A 3276 mdl that can support the 3230 Character Print Operation Feature Selected.

8775 Display Terminal attachment:

- 8775 Printer Attachment feature (#5580).

Customer Setup: Machine only.

HIGHLIGHTS

The 3230 prints at a burst speed of 350 cps at 10 characters per 25.4mm (1 inch) and 450 cps at 13-1/3 characters per 25.4mm (1 inch) bidirectionally. Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration and line transmission speed, output format, and programming application processing must all be considered in determining actual throughput. See *3230 Printer Model 1 Product Description,* GA24-3760, or *3230 Printer Model 2 Product Description,* GA24-3759 for throughput considerations.

The 3230 consists of control functions, printer and indicator lights in one integrally designed table-top unit.

Printer: Uses aluminized coated single-ply friction-feed roll paper only (see SSD Sales Manual). Roll paper is available in 215.9mm (8.5-inch) or 279.4mm (11-inch) width only. This printer uses the electromatrix print technology which removes the aluminum coating on the paper exposing a black under-surface. Characters are formed within a 10 x 18 dot matrix cell with a resolution of 160 dots per 25.4mm (1 inch) both vertically and horizontally. Character spacing is 13-1/3 per 25.4mm (1 inch) and 10 per 25.4mm (1 inch). At 13-1/3 characters per 25.4mm (1 inch), a maximum of 132 characters can be printed on 279.4mm (11-inch) wide paper; and at 10 characters per 25.4mm (1 inch), a maximum of 100 characters can be printed. At 13-1/3 characters per 25.4mm (1 inch), a maximum of 100 characters can be printed on 215.9mm (8.5-inch) wide paper and at 10 characters per 25.4mm (1 inch) a maximum of 80 characters can be printed. Line spacing is 3, 4, 6 or 8 lines per 25.4mm (1 inch). A tear bar located approximately 25.4mm (1 inch) from the print line is provided. An audible alarm is also provided for operator intervention-required situations. Graphic Escape APL/Text is included in the 3230 mdl 2. Expands the character handling capability to accommodate the APL, text and graphic plot character sets.

Control Functions: The mdl 1 operates in SCS (SNA Character Stream) mode which provides for customer program definable horizontal and vertical formatting and line spacing of 3, 4, 6 or 8 lines per 25.4mm (1 inch). Printer address, data rate, carrier rate and language are selected by the customer via customer accessible switches. A Cancel Switch is provided on the Operator Panel which allows operator termination of the current print operation.

Character spacing (mdl 1 and 2), 10 or 13-1/3 characters per 25.4mm (inch), is selectable by the printer operator only via the "Change CPI" button.

The mdl 1 operates at 2400, 4800, 9600 and 38,400 bps. Selection is made by the customer via customer accessible switches.

The mdl 2 operates in 3270 Data Stream and SCS (SNA Character Stream) mode. When operating in SCS mode, the mdl 2 has the same program-controlled function characteristics as the mdl 1. Also provided are Cancel, Buffer Reprint, and Program Attention 1/Program Attention 2 (PA1/PA2) switches. The Cancel switch allows operator termination of the current print operation. The Buffer Reprint allows one successful reprint of the contents of the buffer when in 3270 Data Stream mode or reprint from the previous chain boundary when in SCS mode. The PA1/PA2 switch allows an operator to request a specific action from the user-written program in the host.

The mdl 2, when operating in 3270 Data Stream mode or in SCS mode and no control function data has been received by the printer, allows the printer operator to have control via the Operator Panel. Buttons or switches are provided to select 6 or 8 lines per 25.4mm (inch). Single/Double line spacing, Page Length Control, Maximum Print Positions and Mono/Dual Case. Change case (Mono/Dual) button is not effective when the printer terminal is operating in SCS mode, copying from a display or operating in APL mode.

Maintenance: 3230s utilize IBM Service Center Service either under the "Maintenance" or "Replacement" option. See "Replacement" option. See IBM for description and procedures associated with Service Center Service.

It is the customer's responsibility to set-up the equipment and to determine when maintenance is required. The customer may wish to replace a failing unit with a spare and should be advised to purchase sufficient spare units if such use is planned. Under Service Center Maintenance, it is the customer's responsibility to disconnect the unit(s), transport them to a designated IBM location and pick them up when repair is completed. Alternately, the customer may ship them prepaid to a mail-in service location. IBM will repair the units and return-ship them to the customer. Re-setup of the units is the customer's responsibility. Under Service Center Replacement it is the customer's responsibility to disconnect the units, transport them to a designated IBM location and exchange the defective unit with IBM for an equivalent unit in good working order. The defective unit becomes the property of IBM.

Maintenance is provided during the warranty period, under the Terms and Conditions of Service Center Maintenance.

Customers with 3230s not covered by IBM Maintenance Agreements may have the unit(s) repaired, if repairable, through a designated IBM location for a time and material charge.

If maintenance coverage is not contracted for immediately following expiration of any service and parts warranty and the customer subsequently wants IBM Maintenance Agreement coverage, he may have the machine(s) inspected. This inspection will be done through a designated IBM location for a fixed charge. Alternately, inspection may be performed at the customer's site on a time and material basis or under CSS contract.

If the unit requires repair and the repair is requested, all parts needed are billed at IBM's prevailing parts prices and the additional time required for repairs is billed at IBM's applicable service rates. The machine then is eligible for IBM Maintenance Agreement Coverage.

Replacement Parts and Maintenance Information Manuals: Replacement parts and maintenance information manuals for maintenance of Service Center purchased machines are available for sale and may be ordered by the customer through the local DP branch office.

Spares: It is recommended that the customer replace a failing printer with a spare printer, and that the customer be advised to purchase sufficient spare printers for such use. Customers should be advised that warranty on spares matures to expiration whether the spares are in operation or on the shelf. The number of spare printers recommended is dependent upon the number of printers the customer has installed, his application requirements, physcial locations, and layouts. Determination of the required number of spares is a customer responsibility. The minimum number of spare units recommended is shown in the following.

3230 Printer (cont'd)

Recommended Minimum Number of Spare 3230 Printers

Number of 3230s Installed	Minimum Number of Spares Recommended
1 to 10	1
15	2
50	3
75	4
100	5
200	8
300	12
500	18
700	24
1000	30

The customer should be advised that warranty on spares matures to expiration whether the spares are in operation or on the shelf, and to test spares for correct operation before putting them on the shelf.

Customer Problem Determination Aids: Problem determination is a customer responsibility. Through the use of off-line tests, status indicators on the printer and the 3230 Problem Determination Procedure, the customer can determine if service is required. If customer is not certain the terminal requires service, the customer may obtain problem determination assistance from IBM by calling:

800 942-1918 NY State
800 431-2670 Continental US outside NY
914 696-6840 Collect-Alaska, Hawaii, Puerto Rico

Problem determination assistance is available for those terminals by an IBM Maintenance Agreement or under warranty, from 8:30 AM to 5:00 PM. EST, Monday through Friday, excluding holidays.

Note: IBM reserves the right to withdraw this service upon 90 days notice.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other customer preparation
- Receipt at the customer's receiving dock, unpacking and placement of the 3230 at initial setup and re-setup after repair or replacement.
- Procurement, installation and maintenance of the communications/ loop network. See "Accessories" section.

  For mdl 1, see "3630 System and 8100 System Loop Cable and 3730, 8100 Loop Accessories."

  For mdl 2, see "Cables for attachment to the 3271/3272, 3274 Control Units and 3276 Control Unit Display Stations."
- Physical setup, connection of cables, switch settings and checkout.
- Use and follow the Problem Determination Procedures.
- Using and following the Problem Determination Procedures and filling out the applicable replacement/ service authorization form prior to bringing or shipping the printer to IBM for service.
- Disconnecting and transporting the machine to and from a designated IBM location for maintenance or replacement or disconnecting, packing, moving to the customer shipping dock and shipping the printer prepaid to an IBM location offering mail-in service. Machines so shipped will be repaired and returned, shipped prepaid to the customer.
- Providing a desk or table top to support the 3230.
- Replacing worn or defective printheads and maintaining a supply of spare printheads.

Customer Setup (CSU): The 3230 is designated customer setup, thereby offering the customer early availability and relocation flexibility. Detailed setup instructions are included with each printer.

Customer Assistance Group: Assistance in customer setup and problem determination is available. See "Customer Problem Determination Aids."

On-Site Problem Determination: If the customer desires on-site assistance to perform Problem Determination, the local FE branch office may be called for Customer Engineering assistance. The CE will do Problem Determination using the same documentation available to the customer. Shipping of defective printers to the Repair Center or the local service center remains a customer responsibility. CE assistance is billable at the current CE hourly rate.

Shipping Materials: All shipments are from the plant of manufacture and are shipped in specially designed containers. The customer should be advised to store some of these containers so that they will be available to ship a failing printer to the IBM Repair Center. Additional containers can be purchased from IBM. IBM will ship the repaired printer prepaid to the customer.

IBM Aids: The CF3270 configurator aid available on HONE supports the 3230.

Five 3270 is being enhanced to provide performance estimates for the 3268. This aid will be available within 30 days.

Bibliography: See *KWIC Index,* GA20-1621, or specific system bibliography.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

Specify codes may not be necessary to order a 3230. If codes are not specified, the following defaults are assumed:

- Voltage (120V AC, 1-phase, 3-wire, 60 Hz): Non-locking plug. If locking type plug is required, specify **#9890**. If hospital grade plug is required, specify **#9885**.
- Power Cable Length: 2.8 meters (9 feet). If standard 2.8 meter (9 foot) power cable is not desired, specify **#9511** for a 1.8 meter (6 foot) or **#9513** for a 4.3 meter (14 foot) cable.
- Communication Cable:

  Mdl 1: A communications cable terminated with a right angle connector to plug into a Loop Station Connector (LSC) is provided. Cable Length: 1.8 meters (6 feet). If the 1.8 meter (6 foot) cable is not desired, specify **#9405** for a 4.3 meter (14 foot) cable.

  Mdl 2: See "Accessories" and "Price List" section for additional information.
- Color: Pearl white is the only available color.
- Compatibility Specify Options for 3270 Data Stream (non-SCS) Operation: (mdl 2) Operation of the 3230 is defined as standard. Alternate operation may be specified.

  Note: Standard 3230 mdl 2 operation is the same as the standard 3287 mdls 1 and 2.

  1. Carriage Return (CR) at MPP Plus 1:

     Std: An automatic New Line (NL) is executed at MPP plus 1, then the CR is executed. The next print position will be the first print position of the next line.

     #9501: No automatic New Line (NL) is executed. The CR is executed at MPP plus 1. The next print position will be the first print position of the current line. Compatible with 3287 RPQ S30219.

  2. New Line (NL) at MPP Plus 1:

     Std: An automatic New Line (NL) is executed at MPP plus 1, then the NL is executed. The next print position will be the first print position of the current line plus 2.

     #9502: No automatic New Line (NL) is executed. The NL is executed at MPP plus 1. The next print position will be the first print position of the next line. Compatible with 3287 RPQ S30219.

  3. Form Feed Followed by Data:

     Std: The form will be skipped to the first line of the next form and the next print position will be the second print position of that line.

     #9503: The form will be skipped to the first line of the next form and the next print position will be the first print position of that line. Compatible with 3289 RPQ S30220 - SC3752.

  4. Form Feed is Last Character in Print Order:

     Std: An automatic New Line (NL) is executed after the form feed is completed. The next print position will be the first print position of the second line on the next form.

     #9504: The automatic New Line (NL) is suppressed at completion of the form feed. The next print position will be the first print position of the first line of the next form. Compatible with 3287 RPQ S30219 - SC3749.

  5. Null Suppression:

     Std: If an entire print line contains no printable characters, no New Line (NL) is performed. Space (X'40') is considered a printable character. The next print position is the first print position of the current line.

     #9505: Prints all non-printable character lines as a blank line and performs a New Line (NL). The next print position is the first print position of the next line. Compatible with 3287 RPQ ML0442 - SC3741 or 3287 RPQ MK3988 - SC3741.

3230 Printer (cont'd)

6. Form Feed (FF) Order Position:

   Std: Execute a Form Feed (FF) Order only if it occurs at the first print position in a line or at MPP plus 1. Treat FF at other positions as spaces.

   #9506: Execute a Form Feed (FF) Order whenever it is encountered in the Data Stream. Compatible with 3287 RPQ ML0442 - SC3739 or 3287 RPQ MK3988 - SC3739.

7. Automatic Function at End of Print Buffer:

   Std: An automatic New Line (NL) is executed following a print order. The next print position is the first print position of the next line.

   #9507: An automatic Form Feed (FF) is executed following a print order. The next print position is the first print position of the first line of the next form. Compatible with 3287 RPQ MK3988 - SC3740.

- Character Print Operation: (mdl 2 only) The basic machine provides for operation with a program which requires a print buffer of 1920 bytes while using Erase/Write Alternate Command. For other buffer size requirements, specify as listed below:

  #9521 (960-character print operation) for use with a program which requires a printer buffer size of 960 bytes while using Erase/Write Alternate Command.

  #9523 (2560-character print operation) for use with a program which requires a printer buffer size of 2560 bytes while using Erase/Write Alternate Command.

  #9524 (3440-character print operation) for use with a program which requires a printer buffer size of 3440 bytes while using Erase/Write Alternate Command.

  #9525 (3564-character print operation) for use with a program which requires a printer buffer size of 3564 bytes while using Erase/Write Alternate Command. Limitations: This specify code is not valid when the 3230 is attached to a 3274 with Configuration Support A (feature **#9110**).

  Note: To provide compatibility with current application programs on the 3270 Information Display System, the customer can use an Erase/Write command for **#9521** to provide 480-character print operation and specify **#9523**, **#9524** and **#9525** to provide 1920-character print operation. Allowable usage in SNA Character String of the full buffer varies according to the control unit (3274 or 3276) to which the printer is attached and to programming considerations. See *3276 Description and Programmers Guide*, GA18-2081 or *3274 Description and Programmers Guide*, GA23-0061. Copy operation from larger screen display to smaller printer buffer is not acceptable.

  Mdl 2 Printer Attachment Table:

Mdl 2 Character Print Operation

3276 Mdl	480/960	1920/1920	1920/2560	1920/3440
1	Yes	No	No	No
11	Yes	Yes	Yes	Yes
2	Yes	Yes	No	No
12	Yes	Yes	Yes	Yes
3	Yes	Yes	Yes	No
13	Yes	Yes	Yes	Yes
4	Yes	Yes	Yes	Yes
14	Yes	Yes	Yes	Yes

Note: 3276 mdls 1, 2 and 3 with SDLC/BSC Switch feature installed and operating in SDLC mode will support all 3230 Character Print Operations, except **#9525** (3564-character print operation). See also previous Copy restrictions in Note above.

SPECIAL FEATURES (None) **MODEL CONVERSION**

Not recommended.

ACCESSORIES

Accessories are available on a purchase-only basis. Order part number as indicated below at the price indicated in the "Price List section".

CABLES - Mdl 2

Cables and or associated parts to attach the subject machines to the 3271/3272/3274 Control Units and 3276 Control Unit Display Station, or Display/Printer Attachment feature (#1420) on the 3814 Switching Management System, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning*, GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	2577672	Cable Assembly In-Door
Bulk	0323921	Coax Wire (Note 2)
P/N	1836418	Connector Kit (No te 2)
Assm	1833108	Cable Assembly Out-Door
Bulk	5252750	Coax Wire (Note 3)
P/N	1836419	Connector Kit (Note 3)
P/N	2621414	Modification Kit (Note 4)
P/N	1833106	Station Protector Attachment Kit (Note 6)
P/N	5252643	Adapter (Note 8)
P/N	1830818	Station Protection Kit, Gas (Note5)
P/N	5252899	Station Protector Element, Gas (Note7)

Notes:

1. Order via MSORDER (Category = Bulk Cable) on AAS. Specify Part Number, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.
2. Coax wire and one connector kit (includes two connectors #1836446) required for each indoor cable assembly.
3. Coax wire and one connector kit (includes two connectors #1836447) required for each outdoor cable assembly.
4. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
5. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
6. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
7. Replacement station protector elements.
8. Use to join two #2577672 or two #1833108 cable assemblies together.

CABLES-COMMUNICATION (LSA) GROUP

Cable to attach the 3230 Model 1 to the loop.

Part Number	Length
4440786	1.8 meter (6')
99240819	4.3 meter (14')

FIELD PACKAGING MATERIAL

For the 3230 part number 7323495, order via MES. To be used for shipping the printer to the IBM Repair Center.

POWER LINE CORDS

Part Number	Length	Plug Description
5699344	1.8 m (6')	Locking
4448996	2.8 m (9')	Locking
5699343	4.3 m (14')	Locking
5699370	1.8 m (6')	Nonlocking, Hospital Grade
4448999	2.8 m (9')	Nonlocking, Hospital Grade
5699369	4.3 m (14')	Nonlocking, Hospital Grade
5699346	1.8 m (6')	Nonlocking
4448997	2.8 m (9')	Nonlocking
5699345	4.3 m (14')	Nonlocking

SUPPLIES

Electrosensitive Roll Paper: P/N 7032529 (215.9mm x 71.6m (8.5-inch x 235 foot)) roll, or 7032530 (279.4mm x 71.6m (11-inch x 235 foot)) roll, or other commercially available equivalent paper may be used. Print quality and printhead wear vary as a function of the paper used. See SSD sales manual.

Printhead: One printhead is shipped with the printer. Head life is estimated to be 30 million characters, including spaces, when using P/N 7032529 or 7032530 or equivalent, paper. The printhead is a consummable item and it is recommended that the customer have one spare printhead per printer on hand.

Ordering Information: Electrosensitive paper and customer replaceable printheads can be ordered by calling the IBM Direct Telephone number:

800/631-5582 outside New Jersey
800/352-4960 within New Jersey.

3232 KEYBOARD PRINTER TERMINAL MDL 1, 11

[NO LONGER AVAILABLE]

PURPOSE:

A desk top interactive keyboard printer terminal for entering data into and retrieving data from a host processor. The 3232 provides in a single unit, a keyboard, a high quality printer for a hard copy record of information keyed and received, control to manage terminal and communications functions and a communications attachment.

MODELS

Model 1 001

Model 1 uses SNA LU-Type 1 protocol to communicate over data link facilities with any suitably equipped and programmed virtual storage S/370, 3031, 3032, 3033, 3081. Attachment to the 8100 is via Direct Connection Attachment or Communication Attached (DCE). Attachment can be either point-to-point or multipoint. The 3232 mdl 1 obtains its clocking from an external modem and operates at speeds up to and including 9600 bits per second in synchronous, half-duplex mode on half or full duplex communications facilities. The model 1 connects to communications facilities via its standard connector that complies with EIA RS-232-C Standard. Terminal address is set from the keyboard.

Model 11 011

Model 11 uses SNA LU-Type 1 protocol to communicate with the 8100 Information System via the direct loop of the 8101, 8130 or 8140. Remote attachment is via a data link attached 3842 or 3843 Loop Control Unit. Communication speeds are 9600 or 38400 bps per second when attached to a directly attached loop, or 2400 bps when data link attached to the 3842 loop control unit, or 2400, 4800 or 9600 bps when data link attached to the 3843 Loop Control Unit.

Station address is user-selectable from the terminal's keyboard. Carrier rate and data rate are selectable via operator accessible switches on the rear of the 3232 model 11. Single line edit and horizontal tabulation are standard operator selectable functions of this terminal.

Prerequisites: For mdl 1, a modem cable is required. See Specify below.

For mdl 11 Direct Attached Loop Operation - Specify **#4830** or **#4835** on the 8100 System; specify **#4830** or **#4831** on the 4331 System.

Customer Setup: Machine only.

HIGHLIGHTS

The 3232 keyboard printer communications terminal configuration and function supports an operator/machine relationship that supports interactive applications. Backspace and overstrike APL is standard on both mdls as an operator selectable alternate character set.

Control Function: Provides control for online and offline operations.

Mdl 1: Facilitates communications in SDLC line discipline as an LU-Type 1 attached via a data link. SCS processing provides customer program-definable horizontal and vertical formatting and tabulation, page length, and line spacing (3, 4, 6 or 8 lines per 25.4mm (inch)). The mdl 1 also has single line editing, auto (EOB/EOM) key function, dynamic control of four 256-byte buffers for keyed and received data and automatic answer and disconnect on switched facilities.

SDLC as used in the 3232 conforms to a subset (unbalanced normal mode) of both the ISO HDLC and ANSI AADCP standards. For details of this conformance, see the *General Information Manual, IBM Synchronous Data Link Control,* GA27-3093.

Mdl 11: Facilitates communications in SNA LU-Type 1 discipline on an 8100 or 4331 direct attached loop; or remote data link attached loop. SCS processing provides customer program-definable horizontal and vertical formatting and tabulation, page length, and line spacing (3, 4, 6 or 8 lines per 25.4mm (inch)). It also has controls for single line editing, auto (EOB/EOM) key function and dynamic control of four 256-byte buffers for keyed and received data.

Keyboard: A 64-key keyboard is a standard part of every 3232 terminal. Tactile keys provide positive feedback to the operator. Buffering is provided to prevent input data loss during keying. Numerics are located on the top row of keys. A data entry keyboard is not available. The keyboard has the character set graphics engraved on the left side of the key tops. The alternate APL character set is engraved on the right side of the key tops. All control functions are printed on the key fronts. Typamatic keys are provided on some (backspace, line feed, advance, space, return, hyphen, and underscore) or all key basis under operator control.

Printer: Printing is accomplished using a multi-element matrix printhead and aluminum coated single-ply roll friction-feed paper (see SSD sales manual). Roll paper is available in 215.9mm (8.5-inch) and 279.4mm (11.0-inch) widths. The 3232 prints at burst speeds up to 350 characters per second at 10 characters per 25.4mm (inch) and up to 450 cps at 13-1/3 characters per 25.4mm (inch) pitch. Actual printer speed is dependent on operational and system characteristics such as communication facilities, print format and application program processing. Paper skip speed is approximately 127mm (5 inches) per second. The printer uses electromatrix printing technology. Imaging is accomplished by electrically removing dots of the paper's aluminum coating, thereby exposing the dark contrast layer. Character graphics are formed in a 10x18 dot matrix cell. Maximum print line lengths at 10 character pitch on 215.9mm (8.5-inch) and 279.4mm (11-inch) wide paper are 80 and 100 characters, respectively. Maximum print line lengths at 13-1/3 character pitch on 215.9mm (8.5-inch) and 279.4mm (11-inch) wide paper are 106 and 132 characters, respectively. Vertical print line spacing is at 3, 4, 6 or 8 lines per 25.4mm (inch). A tear bar is located approximately 25.4mm (1 inch) from the print line. A print position column scale is provided for both 10 and 13-1/3 pitch printing. A line on the top of the printhead, visible through the terminal cover, points to the scale position identifying the next column to be printed. The narrow profile printhead provides last-line and character-printed visibility from the operator position. Printer control logic and bidirectional printing capability help optimize printing performance by minimizing head movement while paper is advanced to the next print line. The printhead is user-replaceable and is considered a consumable item (see SSD sales manual).

Indicator Lights: Nine indicators are provided. In operating mode, the lights display terminal status conditions such as test, communications, APL character set, shift lock and print inhibit, and power on. In exception mode, conditions such as machine check, out-of-forms and head trouble are indicated.

Operator Factors: The 3232 provides the operator last-line and character-printed visibility by way of its thin and low profile printhead. Legibility of printing is good due to the paper-to-character contrast and the dense dot matrix used in forming characters. The light weight (13.6kg (30 lbs.)), compact 530mm (20.9 inch) wide by (488mm (19.2-inch) deep by 150mm (5.9-inch)) desk-top design of the terminal makes it readily movable for operator convenience. The printer's high speed permits better utilization of communication facilities and potentially improved user productivity. The print position scale defines the next position to be keyed and printed and aids in the setting of tabs and margins. The electromatrix printing technology make this terminal quieter than conventional matrix printers, thereby helping to minimize operator distraction due to noise. Control keys allow the operator to tailor the terminal to job requirements, thus helping to improve operator productivity. Indicator lights show terminal status.

Communications Facilities: The 3232 mdl 1 communicates to a host processor via the following facilities:

Mdl 1: SNA/SDLC operates in synchronous half duplex mode on the following *modem clocked* 2- and 4-wire facilities:

–Switched pt-to-pt Public Telephone Network:

1200 bps on C2M Facilities.

2400 bps on C3 or C3M Facilities.

4800 bps on C4 or C4M Facilities.

–Nonswitched pt-to-pt and multipoint Public Telephone Network:

1200 bps on D3M Facilities.

2000 bps on D4M Facilities.

2400 bps on D5, D5M or D5SB Facilities.

4800 bps on D6, D6M or D6SB Facilities.

7200 bps on D7M Facilities.

9600 bps on D8, D8M or D8SB Facilities.

–Nonswitched pt-to-pt and multipoint Base Band at 2400, 4800 or 9600 bps on or G3M Facilities.

Mdl 11: Attached to customer-owned loops. A direct loop to an 8100 or 4331 may operate at 9600 or 38400 bps. A data link attached loop may be connected to an 8100 via a 3843 Loop Control Unit, or to a 4331 via a 3843 Loop Control Unit. The 3843 provides for attachment to a synchronous external modem operating at 2400, 4800 or 9600 bps. The Loop Control Units support pt-to-pt or multipoint telecommunications links. Refer to the 3843 pages for further information.

For additional information regarding communications capabilities, see the M2700 pages and appropriate modem machine pages.

Customer Setup (CSU): The 3232 is designated a customer setup terminal, thereby offering the customer early availability and relocation

3232 Keyboard Printer Terminal Mdl 1, 11 (cont'd)

flexibility. Assistance in customer setup is available. See Customer Problem Determination Aids.

Maintenance: 3232 utilizes IBM Service Center Service either under the "Maintenance" or "Replacement" option ... see IBM for description and procedures associated with Service Center Service.

It is the customer's responsibility to set-up the equipment and to determine when maintenance is required. The customer may wish to replace a failing unit with a spare and should be advised to purchase sufficient spare units if such use is planned. Under Service Center Maintenance, it is the customer's responsibility to disconnect the unit(s), transport them to a designated IBM location and pick them up when repair is completed. Alternately, the customer may ship them prepaid to a mail-in service location. IBM will repair the units and return ship them to the customer. Re-setup of the units is the customer's responsibility. Under Service Center Replacement, it is the customer's responsibility to disconnect the units, transport them to a designated IBM location and exchange the defective unit with IBM for an equivalent unit in good working order. The defective unit becomes the property of IBM.

Maintenance is provided during the warranty period under terms and conditions of Service Center Maintenance.

Customers with 3232s not covered by IBM Maintenance Agreements may have the unit(s) repaired, if repairable, through a designated IBM location for a time and material charge.

If maintenance coverage is not contracted for immediately following expiration of any service and parts warranty and the customer subsequently wants IBM Maintenance Agreement coverage, he may have the machine(s) inspected. This inspection will be done through a designated IBM location for a fixed charge. Alternately, inspection may be performed at the customer's site on a time and material basis or under a CSS contract.

If the unit requires repair and the repair is requested, all parts needed are billed at IBM's prevailing parts prices and the additional time required for repairs is billed at IBM's applicable service rates. The machine is eligible for IBM Maintenance Agreement Coverage.

Contact IBM for information on IBM locations designated to support these offerings

Note: RPQ's may affect the eligibility for the service center replacement option.

Customer Problem Determination Aids: Problem determination is a customer responsibility. Through the use of off-line tests, status indicators on the terminal and the 3232 Visual Error Conditions and Recovery Actions, the customer can determine if service is required. If the customer is not certain the terminal requires service, the customer may obtain problem determination assistance from IBM by calling:

800 492-1918 NY State
800 431-2670 Continental US outside NY
914 696-6840 Collect-Alaska, Hawaii, Puerto Rico

Problem determination assistance is available for those terminals covered by an IBM Maintenance Agreement or under Warranty, from 8:30 AM to 5:00 PM, EST, Monday through Friday, excluding holidays.

Note: IBM reserves the right to withdraw this service upon 90 days notice.

Spares: It is recommended that the customer replace a failing terminal with a spare terminal and that the customer be advised to purchase or lease sufficient spare terminals for such use. The number of spare terminals recommended is dependent upon the number of terminals the customer has installed, his application requirements, physical locations, and layouts. However the minimum number of spare terminals recommended is shown in the following table:

Number of 3232s Installed	Minimum Number of Spares Recommended
1 to 10	1
15	2
50	3
75	4
100	5
200	8
300	12
500	18
700	24
1000	30

THE CUSTOMER SHOULD BE ADVISED THAT WARRANTY ON SPARES MATURES TO EXPIRATION WHETHER THE SPARES ARE IN OPERATION OR ON THE SHELF, AND TO TEST SPARES FOR CORRECT OPERATION BEFORE PUTTING THEM ON THE SHELF.

Shipping Materials: All shipments are from the plant of manufacture and are shipped in specially designed containers. The customer should be advised to store some of these containers, if he elects repair center maintenance, so that they will be available to ship a failing terminal to the IBM Repair Center. Additional containers can be purchased from IBM (see "Accessories" M10000 pages).

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other customer preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3232 at initial setup and re-setup after repair or replacement.
- Replacement of the failing terminal from his spares inventory.
- Determination of the required number of spare terminals.
- Procurement, installation and maintenance of the communications facilities. For the 3232 mdl 1 this includes the required modems and terminal to modem cables. For the 3232 mdl 11, this includes the multi-use communications loop cable and accesory units (LSCs). (See M2700 and M10000 pages).
- Physical setup, connection of cables, terminal function settings and checkout.
- Use and follow the Problem Determination Procedures and fill out the applicable Replacement/ Service Authorization form prior to bringing or shipping the terminal to the IBM Repair Center or transporting to the IBM Service Center.
- Detaching and transporting the machine to and from a designated IBM location for maintenance or replacement or disconnecting, packing and moving to the customer shipping dock when sending the terminal to an IBM location offering mail-in service.
- If applicable, shipping the terminal prepaid to an IBM location offering mail-in service. IBM will return ship the repaired terminal prepaid.
- Providing a desk or table top to support the 3232.
- Replacing worn or defective printheads and maintaining a supply of spare printheads.

Bibliography: See *KWIC Index,* G320-1621 or specific system bibliography.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

Specify codes may not be necessary to order a 3232. If codes are not specified, the following defaults are assumed:

- Voltage (120V AC, 1-phase, 3-wire, 60 Hz): Non-locking plug. If locking type plug is required, specify **#9890**. If hospital grade plug is required, specify **#9885**.
- Model 11 Keyboard: If the ASCII keyboard is required, specify **#2950**.

  Note: To print the ASCII-B character set, the control unit to which the printer is attached must support ASCII transmission code.
- Power Cable Length: 2.8m (9 feet). If standard 2.8m (9 foot) power cable is not desired, specify **#9511** for 1.8 m (6 foot), or **#9513** for a 4.3m (14 foot) cable.
- Communication Cable:

  Mdl 1: An external modem cable is required to attach the the 3232 to a modem (DCE). The standard 6.1m (20 foot) communication cable is provided. If the standard communication cable is not desired, specify **#9061** for 3.0m (10 foot) cable, **#9062** for 9.1m (30 foot) cable or **#9063** for 12.2m (40 foot) cable. See M10000 pages for ordering instructions.

  Note: For direct connect to the 8100 System, 3.0m (10 foot) modem cable must be used. The length of the 8100 direct connect cable cannot exceed 9.1m (30 feet), thus the total cable length from the 8100 System to the 3232 mdl 1 cannot exceed 12.2m (40 feet).

  Mdl 11 A communication cable terminated with a right angle connector to a plug into a Loop Station Connector is provided.

  Cable Length: 1.8m (6 feet). If the 1.8m (6 foot) cable is not desired, specify **#9405** for a 4.3m (14 foot) cable.
- Character Sets: No specify required. Mdl 1 and 11 are 96-character set EBCDIC and APL/Text.
- Color: Pearl white is the only available color.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Available at time of manufacture only.

3232 Keyboard Printer Terminal Mdl 1, 11 (cont'd)

ACCESSORIES

Accessories are available on a purchase-only basis. Order part number indicated below at the price indicated in the Price List section.

COMMUNICATION CABLES - Mdl 1

External modem cable to attach the 3232 to a modem (DCE).

Part Number	Length
5640736	3.0 m (10')
2721244	6.1 m (20')
2721246	9.1 m (30')
2721248	12.2 m (40')

Note: For direct connect to the 8100 System, the 3.0 meter (10') modem cable must be used. The length of the 8100 direct connect cable cannot exceed 9.1 meters (30'), thus the total cable length from the 8100 System to the 3232 cannot exceed 12.1 meters (40 feet).

For connection to IBM modems one of the above IBM cables, or equivalent, must be used.

COMMUNICATION CABLE (LSA) GROUP - Mdl 11

Cable to attach the 3232 to the loop.

Part Number	Length
4440786	1.8 m (6')
4440819	4.3 m (14')

FIELD PACKAGING MATERIALS

The original shipping containers should be used for shipping the 3232 printer to the IBM Repair Center. Additional or replacement field packaging material can be ordered via MES as follows:

Field Packaging Material	Part Number
3232 Printer	**7323495**

POWER LINE CORDS

Part Number	Length	Plug Description
5699344	1.8 m (6')	Locking
4448996	2.8 m (9')	Locking
5699343	4.3 m (14')	Locking
5699370	1.8 m (6')	Nonlocking, Hospital Grade
4448999	2.8 m (9')	Nonlocking, Hospital Grade
5699369	4.3 m (14')	Nonlocking, Hospital Grade
5699346	1.8 m (6')	Nonlocking
4448997	2.8 m (9')	Nonlocking
5699345	4.3 m (14')	Nonlocking

SUPPLIES

Electrosensitive Roll Paper: P/N 7032529 (215.9mm x 71.6m (8.5-inch x 235 feet) roll); or 7032530 279.4mm x 71.6m (11-inch x 235 feet) roll, or other commercially available equivalent paper may be used. Print quality and printhead wear may vary as a function of the paper used. See Sales Manual.

Printhead: One printhead is shipped with the terminal. Head life is estimated at 30 million characters, including spaces, when using P/N 7032529 or 7032530 or equivalent paper. P/N 7032851 (package of two print heads), or P/N 7032850 (package of five print heads) may be ordered.

Ordering Information: Paper and printheads may be ordered by calling the IBM Direct Telephone number:

800/631-5582 for outside New Jersey
800/352-4960 for New Jersey.

3232 MODEL 51 KEYBOARD PRINTER TERMINAL

[NO LONGER AVAILABLE]

PURPOSE

A desk top interactive keyboard printer terminal for entering data into and retrieving data from a host processor. The 3232 Model 51 provides in a single unit, a keyboard, a high quality printer for a hard copy record of information keyed and received, control to manage terminal and communications functions and a communications attachment.

MODELS

Model 51 uses asynchronous transmission and ASCII data and control codes to communicate over data link facilities with any suitably equipped and programmed OEM Host Processor, S/370 or 4300 processor. The 3232 Model 51 also attaches to the 8100 Information System via the communication capabilities of the 8101, 8130, or 8140. The Model 51 provides business machine (DTE) clocking. Transmission speed is operator selectable at 300, 600, and 1200 bits per second. For 8130 attachment, 300 bps is the only line speed supported; and the aggregate line speed must not exceed 330 bps. For 8140 attachment, 300 and 600 bps are the only line speeds supported; and the aggregate line speed must not exceed 660 bps. The Model 51 operates over full duplex communications facilities only. The Model 51 interfaces to communications facilities via its standard interface that complies with the EIA RS 232-C standard.

Prerequisites: For the 3232 Model 51 a modem cable is required. See Specify section.

Customer Setup: Machine only.

HIGHLIGHTS

The 3232 Model 51 keyboard printer communications terminal configuration and function supports an operator/machine relationship that supports interactive applications. Backspace and overstrike APL is standard as an operator selectable alternate character set. APL operates in the full ASCII mode.

Control Function: Provides control for on-line and off-line operations.

The model 51 uses asynchronous transmission and ASCII data and control codes as a full 128 character ASCII or CPT-TWX 33/35 terminal. It also controls basic functions such as margins, horizontal tabbing, end of line alarm, character data receive buffer, data loss indication, parity selection (odd, even, mark-hold, space-hold), half or full duplex ASCII terminal mode operation, business machine (DTE) clocking, transmit/receive interrupt and line spacing (3, 4, 6 or 8 lines per 25.4mm or 1 inch).

Keyboard: A sixty-four (64) key keyboard is a standard part of every 3232 Model 51 terminal. Tactile keys provide positive feed back to the operator. Buffering is provided to prevent input data loss during keying. Numerics are located on the top row of keys. A data entry keyboard is not available. The keyboard has the ASCII graphics engraved on the left side of the key tops. The alternate APL character set is engraved on the right side of the key tops. All control functions are printed on the key fronts. Typamatic function is provided for some (backspace, line feed, advance, space, return, hyphen, and underscore) or all keys under operator control.

Printer: Printing is accomplished using a multi-element matrix print head and aluminum coated single ply roll friction feed paper. Roll paper is available in 215.9mm (8.5) inches and 279.4mm (11.0 inches) widths. The 3232 Model 51 prints at burst speeds up to 350 characters per second (cps) at 10 characters per 25.4mm (1 inch) and up to 450 cps at 13 1/3 characters per 25.4mm (1 inch) pitch. Actual printer speed is dependent on operational and system characteristics such as communication facilities, line speed, print format and application program processing. Paper skip speed is approximately 127mm (5 inches) per second. The printer uses electromatrix printing technology. Imaging is accomplished by electrically removing dots of the paper's aluminum coating thereby exposing the dark contrast layer. Character graphics are formed in a 10 x 18 dot matrix cell. Maximum print line lengths at 10 character pitch on 215.9mm (8.5 inch) and 279.4mm (11 inch) wide paper are 80 and 100 characters respectively. Maximum print line lengths at 13 1/3 character pitch on 215.9mm (8.5 inch) and 279.4mm (11 inch) wide paper are 106 and 132 characters respectively. Vertical print line spacing may be set at 3, 4, 6 or 8 lines per 25.4mm (1 inch). A tear bar is located approximately 25.4mm (1 inch) from the print line. A print position column scale is provided for both 10 and 13 1/3 pitch printing. A line on the top of the print head, visible through the terminal cover, points to the scale position identifying the next column to be printed. The narrow profile print head provides last line and last character printed visibility from the operator position. Printer control logic and bidirectional printing capability help optimize printing performance by minimizing head movement while paper is advanced to the next print line. The print head is user replaceable and is considered a consumable item.

Indicator Lights: Nine (9) indicators are provided. In operating mode, the lights display terminal status conditions such as test, communications, APL character set, shift lock and print inhibit, and power on. In exception mode, conditions such as machine check, out of forms, and head trouble are indicated.

Operator Factors: The 3232 Model 51 provides the operator last line and last character printed visibility by way of its thin and low profile print head. Legibility of printing is good due to the paper to character contrast and the dense dot matrix used in forming characters. The light weight 13.6kg (30 lbs), compact 530mm (20.9 in) wide by 488mm (19.2 in) deep by 150mm (5.9 in)) desk-top design of the terminal makes it readily movable for operator convenience. The printer's high speed permits better utilization of communication facilities and potentially improved user productivity. The print position scale defines the next position to be keyed and printed and aids in the setting of tabs and margins. The electromatrix printing technology make this terminal quieter than conventional matrix printers thereby helping to minimize operator distraction due to noise. Control keys allow the operator to tailor the terminal to job requirements thus helping to improve operator productivity. Indicator lights show terminal status.

Communications Facilities: The 3232 Model 51 communicates to a host processor via the following facilities.

- 3232 Model 51 - operates asynchronously in CPT-TWX 33/35, or 128 character ASCII mode over the following (duplex only) facilities.
  - Switched point-to-point public telephone networks at 300 bps using C1M facilities; 600 or 1200 bps using C2M facilities.
  - Nonswitched point-to-point public telephone networks at 300 bps using D1M facilities; 600 bps using D2M facilities; 600 or 1200 bps using D3M facilities.

For additional information regarding communications capabilities, see the M2700 pages.

Customer Setup: The 3232 Model 51 Keyboard Printer is designated a customer setup (CSU) machine thereby offering the customer early availability and relocation flexibility. Detailed setup instructions are included with each machine. CSU will be considered complete after receipt by the

On-Site Problem Determination: If the customer desires on-site assistance to perform problem determination, the local FE branch office may be called for Customer Engineering assistance. The CE will do problem determination using the same documentation available to the customer. Shipping of defective printers to the Repair Center or the local Service Center remains a customer responsibility. CE assistance is billable at the current CE hourly rate.

Maintenance: 3232-51s utilize IBM Service Center Service either under the "Maintenance" or "Replacement" option ... Contact IBMfor description and procedures associated with Service Center service.

It is the customer's responsibility to set-up the equipment and to determine when maintenance is required. The customer may wish to replace a failing unit with a spare and should be advised to purchase sufficient spare units if such use is planned. Under Service Center Maintenance, it is the customer's responsibility to disconnect the unit(s), transport them to a designated IBM location and pick them up when repair is completed. Alternately, the customer may ship them prepaid to a mail in service location. IBM wil repair the units and return ship them to the customer. Reset-up of the units is the customer's responsibility. Under Service Center Replacement, it is the customer's responsibility to disconnect the units, transport them to a designated IBM location and exchange the defective unit with IBM for an equivalent unit in good working order. The defective unit becomes the property of IBM.

Maintenance is provided during the warranty period, under the Terms and Conditions of Service Center Maintenance.

Customers with 3232-51s not covered by IBM Maintenance Agreements may have the unit(s) repaired, if repairable, through a designated IBM location for a time and material charge.

If maintenance coverage is not contracted for immediately following expiration of any service and parts warranty and the customer subsequently wants IBM Maintenance Agreement coverage, he may have the machine(s) inspected. This inspection will be done through a designated IBM location for a fixed charge. Alternately, inspections may be performed at the customer's site on a time and material basis or under a CSS contract.

If the unit requires repair and the repair is requested, all parts needed are billed at IBM's prevailing parts prices and the additional time required for repairs is billed at IBM's applicable service rates. The machine then is eligible for IBM Maintenance Agreement Coverage.

A list of IBM locations designated to support these offerings may be found in the GI section under Field Engineering services.

Replacement Parts And Maintenance Information Manuals: Replacement parts and maintenance information manuals for maintenance of Service Center purchased machines are available for sale and

3232 Model 51 Keyboard Printer Terminal (cont'd)

may be ordered by the customer through the authorized IBM Distributors or the local IBM Branch Office.

Spares: It is recommended that the customer replace a failing terminal with a spare terminal and that the customer be advised to purchase sufficient spare terminals for such use. The number of spare terminals recommended is dependent upon the number of terminals the customer has installed, his application requirements, physical locations, and layouts. However, the minimum number of spare terminals recommended is shown in the following table:

Number of 3232 Model 51s Installed	Minimum Number of Spares Recommended
1 to 10	1
15	2
50	3
75	4
100	5
200	8
300	12
500	18
900	24
1000	30

The customer should be advised that warranty of spares matures to expiration whether the spares are in operation or on the shelf, and to test spares for correct operation before putting them on the shelf.

Customer Problem Determination Aids: Problem determination is a customer responsibility. Through the use of off-line tests, status indicators on the terminal and the 3232 Model 51 Visual Error Conditions and Recovery Actions, the customer can determine if service is required.

If the customer is not certain the terminal requires service, the customer may obtain problem determination assistance from IBM by calling:

800 942-1918 (NY State)
800 431-2670 (Continental US outside NY)
914 696-6840 (Collect-Alaska, Hawaii, Puerto Rico)

Problem determination assistance is available for those terminals covered by an IBM Maintenance Agreement or under warranty, from 8 AM to 5:30 PM, EST, Monday through Friday, excluding holidays.

Shipping Materials: All shipments are from the plant of manufacture and are shipped in specially designed containers. The customer should be advised to store some of these containers, if he elects mail-in service, so that they will be available to ship a failing terminal to IBM. Additional containers can be purchased from IBM for a charge. See Accessories section.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other customer preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3232 Model 51 at initial setup and re-setup after repair or replacement.
- Replacement of the failing terminal from spares inventory.
- Determination of the required number of spare terminals.
- Procurement, installation and maintenance of the communications facilities. For the 3232 Model 51 this includes the required modems and connection of the IBM supplied terminal to modem cable.
- Physical setup, connection of cables, terminal function settings and checkout.
- Using and following the Problem Determination Procedures and filling out the applicable replacement/service authorization form prior to bringing or shipping the printer to IBM for service.
- Disconnecting and transporting the machine to and from a designated IBM location for maintenance or replacement - or disconnecting, packing, moving to the customer shipping dock and shipping the printer prepaid to an IBM location offering mail-in service. Machines so shipped will be repaired and return shipped prepaid to the customer.
- If applicable shipping the terminal prepaid to an IBM location offering mail-in service. IBM will return ship the repaired terminal prepaid.
- Providing a desk or table top to support the 3232 Model 51.
- Replacing worn or defective printheads and maintaining a supply of spare printheads.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

Specify codes are not necessary to order a 3232 Model 51. The following defaults are assumed:

- Voltage (120V AC, 1-Phase, 3-wire, 60Hz): Non-locking plug. See Accessories section.
- Power Cable Length: 2.8 meter (9 foot).
- Communication Cables:
  - 3232 Model 51 - An external modem cable is required to attach the 3232 Model 51 to a modem (DCE). The standard 20 foot (6.1 meter) communication cable is provided. See Accessories section.

    Note: For direct connect to the 8100 System, a 3.0 meter (10 feet) modem cable must be used. See Aaccessories section. The length of the 8100 direct connect cable cannot exceed 9.1 meters (30 feet). Thus the total cable length from the 8100 system to the 3232 Model 51 cannot exceed 12.2 meters (40 feet).
- Character Sets: No specify required. 3232 Model 51 has 95 character set ASCII and APL/Text.
- Color: Pearl white is the only available color.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (NONE)

ACCESSORIES

Accessories are available on a "Purchase Only" basis. Order part number indicated below at the price indicated in the Price List section.

COMMUNICATION CABLES

External modem cable to attach the 3232 to a modem (DEC).

Part Number	Length
5640736	3.0 m 10'
2721244	6.1 m 20'
2721246	9.1 m 30'
2721248	12.2 m 40'

Note: For direct connect to the 8100 System, the total cable length from the 8100 System to the 3232 cannot exceed 12.1 meters (40 feet).

FIELD PACKAGING MATERIALS

For shipping the printer to the IBM Repair Center, P/N **7323495**.

POWER LINE CORDS

Part Number	Length	Plug Description
5699344	1.8 m (6')	Locking
4448996	2.8 m (9')	Locking
5699343	4.3 m (14')	Locking
5699370	1.8 m (6')	Nonlocking, Hospital Grade
4448999	2.8 m (9')	Nonlocking, Hospital Grade

4448997	2.8 m (9')	Nonlocking
5699345	4.3 m (14')	Nonlocking

SUPPLIES

- **Electrosensitive roll paper:** IBM Part No. **7032529** (215.9mm x 71.6m (8.5 inches x 235 feet roll)); or **7032530** (279.4mm x 71.6m (11 inches x 235 feet roll)) or other commercially available equivalent paper may be used. Print quality and printhead wear may vary as a function of the paper used.
- **Printhead:** One spare printhead is shipped with the terminal. Head life is estimated at 30 million characters, including spaces, when using part number **7032529** or **7032530** or equivalent paper. Part No. **7032851** (package of two printheads) or Part No. **7032850** (package of five printheads) may be ordered.

  Ordering Information: Paper and printheads may be ordered by calling the IBM Direct Telephone number:

  800/631-5582 for outside New Jersey
  800/352-4960 for New Jersey

3251 DISPLAY STATION MDL 1

PURPOSE

An interactive computer graphics display station for the display of graphical and alphameric data generated within a S/370, 30XX or 43XX processor. The display station may have attachments for operator interaction with the displayed picture, thereby providing highly interactive man-machine communication.

The 3251 requires a 3255 Display Control and a 3258 Control Unit or a 5088 Graphics Channel Controller. It may be used in multiple display station configurations for Computer Aided Design, Computer Aided Manufacturing, and scientific analysis applications. It is particularly suited to those applications requiring a high interaction rate and the display of pictures containing a high vector and character content.

Up to two 3251 model 1s can be attached to each 3255 model 1, or up to three 3251 model 1s to each 3255 model 2. The first 3251 must be located adjacent to the 3255, the second and third 3251s may be located up to 15.2m (50 feet) from the 3255. Up to 16 3255s may be attached to each 3258 or 5088 model 1 via up to a total of four high speed point-to-point or multipoint coaxial cable connections, with up to four 3255s per multipoint coaxial cable connection. Similarly, up to 32 3255s may be attached to a 5088 model 2. However, the maximum number of 3251s supported by a 3258 or 5088 model 1 is 16, and the maximum number of 3251s supported by a 5088 model 2 is 32.

MODELS

Model 1 001

Prerequisites: A 3255 Display Control mdl 1 adjacent or up to 15.2m (50 feet) away ... maximum of two 3251 mdl 1s per 3255 mdl 2 ... see M3255 pages.

Publications: GC20-0001

HIGHLIGHTS

- A free-standing, tabletop mounted, interactive computer graphics display station for the display of graphical and alphameric data generated within a S/370, 30XX or 43XX processor.
- A 534mm (21 inch) diagonal, directed beam, display unit having a 305mm x 305mm (12" x 12") viewing area.
- Vector graphics - straight lines may be displayed between any of the 1024 x 1024 addressable positions on the screen. Display buffer orders are provided which enable the expression of vector endpoint coordinates in absolute form, or incrementally, relative to the current beam position.
- Graphical data can be displayed as a series of points (Point Plot orders), or in one of four line types: -- solid, dotted, dashed, dot-dashed (Vector Plot orders).
- Eight programmable intensities (including blank) for points, vectors or characters; the three brightest levels can be detected by the light-pen.
- Audible and visible (blink) alerts which can be programmed to notify the display station operator of exceptional conditions.
- Free standing Alphameric Keyboard ... see "Special Features".
- Backlighted 32 key Program Function Keyboard ... see "Special Features".
- Light-Pen ... see "Special Features".
- The 3250 is generally upward compatible from the 2250 Graphic Display mdl 3. Valid programs written for the 2250 can be used on the 3250 without change, with minor exceptions:
  - 3250 supports one cursor per display station.
  - Some previously undefined orders have a defined function in the 3250.
  - Lower case characters are displayed as lower case by the 3250.
  - 3250 does not have Program Function Keyboard overlay sense switches.
  - 3250 shares display buffers among a maximum of two display stations.
  - Undefined characters in 3250 text strings are treated as blanks or nulls.
- Software support via Graphic Programming Services (GPS), which includes the Graphic Access Method (GAM), and Graphic Subroutine Package (GSP). These are SCP programs running under OS/VS1 and OS/VS2 operating systems. GAM/SP Release 1 program product provides support under VM/SP-CMS. GAM/SP Release 2 program product provides support under VM/SP-CMS, MVS, and MVS-XA.

Human Factors: The 3251 has an antiglare screen designed to reduce reflection in office lighting. Brightness and focus controls are provided for operator adjustment to best suit ambient lighting. Program Function Keyboard angled for operator convenience ... see "Special Features". Alphameric Keyboard has separators to help prevent accidental striking of control keys. It also has a palm rest on the keyboard ... see "Special Features". The keyboards are free standing to allow placement to suit the operator.

Input-Output Flexibility:

- Alphameric Keyboard, or Numeric-Keypad Alphameric Keyboard, with upper and lower case input. Cancel, Jump, Backspace and Enter function keys, continuous-type key ... see "Special Features". Input assisted by provision of visible cursor on the screen and display buffer orders enabling definition of fields either protected or unprotected from operator input.
- Program Function Keyboard with 32 backlighted keys. Lighting of keys is under S/370, 30XX or 43XX processor program control ... see "Special Features".
- Light-Pen; hand held, pen-like device for interaction with the displayed image ... see "Special Features".

Performance (Basic performance characteristics):

See the appropriate M3255-1 or M3255-2 pages for basic performance characteristics.

When the 3251 mdl 1 displays images at a regeneration rate of 40 cycles per second, the picture quality is superior to that of images displayed by the 2250 Display Unit mdl 3 at 40 cycles per second. As the picture content is reduced the regeneration rate increases up to a maximum of 46 cycles per second.

SPECIFY

- Voltage (AC, 1-phase, 3 wire, 60 Hz): Locking Plug -- **#9880** for 115V, **#9884** for 208V, **#9886** for 230V, **#9894** for 240V. Non-locking plug -- **#9881** for 115V, **#9885** for 208V, **#9887** for 230V, **#9895** for 240V
- Power Cable Length: If standard 4.3 meter (14 foot) is not desired, specify **#9511** for 1.8 meter (6 foot) power cable.
- Cables: For cables between 3251 mdl 1 and 3255, specify **#9071** for the first head. For each add'l head, if appropriate, specify **#9071** for 4.6 meters (15 feet), **#9072** for 9.1 meters (30 feet), or **#9073** for 15.2 meters (50 feet).
- Extended Keyboard Support: Always specify **#9145.**

SPECIAL FEATURES

Alphameric Keyboard (#4621): Typewriter-like layout, movable, with data keys and control keys. **Maximum:** One #4621 or one #4627 per 3251 mdl 1. **Field Installation:** Yes.

Numeric-Keyboard Alphameric Keyboard (#4627): As Alphameric Keyboard (#4621) but with add'l right-hand numeric keypad and special drafting symbols. **Prerequisites:** Extended Keyboard Support (#9145); 3251 mdl 1 attached to a 3255 mdl 2. **Maximum:** One #4627 or one #4621 per 3251 mdl 1. **Field Installation:** Yes.

Light-Pen (#4750): A hand-held, pen-like device which permits the operator to interact with the displayed image. **Maximum:** One per 3251 mdl 1. **Field installation:** Yes.

Program Function Keyboard (#5555): 32 keys with program controlled indicators. **Maximum:** One per 3251. **Field installation:** Yes.

ACCESSORIES (None)

SUPPLIES (None)

3251 DISPLAY STATION MDL 2

PURPOSE

An interactive computer graphics display station for the display of graphic and alphameric data generated within a 7361 Fastdraft System. The display station has attachments for operator interaction with the displayed picture, thereby providing highly interactive man-machine communication. Up to two 3251 model 2s can be attached to a 7361 Graphics Processing Unit.

MODELS

Model 2 002

Prerequisites: A 7361 Graphics Processing Unit. The first 3251 mdl 2 is cable-connected to the 7361 by a 4.6 meter (15 foot) cable and must be sited adjacent to the 7361. The second 3251 may be attached via a cable up to 15.2 meters (50 feet) in length ... see M7361 pages. Alphameric Keyboard (#4621) and Light-Pen (#4750) are required for the Fastdraft System.

HIGHLIGHTS

- A free-standing, table-top, interactive computer graphics display station for the display of graphic and alphameric data generated by a 7361 Fastdraft System.
- A 534mm (21 inch) diagonal, directed beam, display unit having a 305mm x 305mm (12 inches x 12 inches) graphics display area plus a 54mm x 305mm (2.1 inches x 12 inches) menu area situated to the left or right of the graphics display area (under program control).
- The amount of data displayable depends on many factors, including the mix of vectors and characters. With two 3251 mdl 2s attached to a 7361, the amount of data displayable is slightly less than half of that displayable when only one 3251 mdl 2 is attached.
- 75-key alphameric keyboard with upper, lower, and alternate case input. Has Program Function Keys, Cancel, Jump, Backspace, and Enter function keys ... see "Special Features". Input assisted by provision of visible cursor on the screen.
- Light-Pen: Hand-held, pen-like device for interaction with the displayed image ... see "Special Features".
- Software support via the 7361 Fastdraft System licensed program (5719-GP1).

Human Factors: The 3251 mdl 2 has brightness and focus controls for operator adjustment to best suit ambient lighting. The alphameric keyboard has separators to help prevent accidental striking of control keys. It also has a palm rest on the keyboard. The keyboard is free-standing to allow placement to suit the operator.

Installation: The 3251 mdl 2 will be installed by a Customer Engineer.

Physical Specifications:

Width	556mm (22.25 inches)
Depth	681mm (27.25 inches)
Height	450mm (18 inches)
Weight	64kg (140 pounds)

Publications: *IBM Fastdraft Systems Guide* (SC34-0514), *IBM Fastdraft Training Guide* (SC34-0515), *IBM 7361 Fastdraft Workstation Reference* (SC34-0516).

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz):
  #9884 for 208V with locking plug
  #9894 for 240V with locking plug
  #9885 for 208V with non-locking plug
  #9895 for 240V with non-locking plug

  Note: The voltage for each 3251 mdl 2 must be the same as the operating voltage for the 7361 to which each will be attached. See voltage options in M7361 pages.
- Power Cable Length: If standard 4.3 meter (14 foot) cable is not desired, specify **#9511** for 1.8 meter (6 foot) power cable.
- Cables: For cables between 3251 mdl 2 and the 7361, specify **#9071** for the first 3251 mdl 2. For the second 3251 mdl 2, if appropriate, specify **#9071** for 4.6 meters (15 feet), **#9072** for 9.1 meters (30 feet), or **#9073** for 15.2 meters (50 feet).

SPECIAL FEATURES

Alphameric Keyboard (#4621): 75-key typewriter-like layout, movable, with data keys, program function keys, and control keys. See "Keyboard Language" under "Specify". **Maximum:** One per 3251 mdl 2. **Field installation:** Yes.

Light-Pen (#4750): A hand-held, pen-like device which permits the operator to interact with the displayed image. **Maximum:** One per 3251 mdl 2. **Field installation:** Yes.

ACCESSORIES (None)

SUPPLIES (None)

3255 DISPLAY CONTROL MDL 1

[NO LONGER AVAILABLE]

PURPOSE

Control unit that provides common controls and attachments for up to two 3251 model 1 Display Stations.

MODELS

Model 1 001

Prerequisites: Control Unit -- a channel attached 3258 or 5088 mdl 1 which attaches to up to 16 3255s via up to a total of four high-speed point-to-point or multipoint coaxial cable connections. Similarly, up to 32 3255s may be attached to a 5088 mdl 2. A maximum of four 3255s may be attached to a single multipoint coaxial cable connection. The maximum total cable length between a 3258 or 5088 and an attached 3255 depends upon the characteristics of the customer-supplied coaxial cable. A maximum length of 1,525m (5,000 feet) can be achieved using coaxial cable of standard specification available from multiple sources; greater lengths can be achieved using coaxial cable of a higher specification. (Refer to *IBM 3250 Installation Manual - Physical Planning,* GA33-3036.) Note that 75 ohm coaxial cable must be used in any configuration incorporating a 3258 or 3255.

HIGHLIGHTS

- Free-standing floor-mounted unit attached to a 3258 Control Unit or a 5088 Graphics Channel Controller via a high-speed point-to-point or multipoint coaxial cable connection. Supports one or two 3251 mdl 1s at distances of up to 15.2m (50 feet). **Note:** At least one of the 3251s must be adjacent to the 3255.
- The maximum number of 3251 mdl 1s supported by a 3258 or 5088 mdl 1 is 16. The 5088 mdl 2 will support up to 32 3251s.
- 32,768 byte user-programmable display buffer shared under S/370, 30XX or 43XX processor software control among the attached 3251 Display Stations. Capability for dynamic assignment of refresh buffer to specific 3251s, under S/370, 30XX or 43XX processor software control - such as is provided by the OS/VS1 and OS/VS2 Graphic Programming Services (GPS) SCP, which includes Graphics Access Method (GAM), and the GAM/SP Release 1 program product under VM/SP-CMS. GAM/SP Release 2 program product provides support under VM/SP-CMS, MVS, and MVS-XA.
- Eight light-pen display buffer orders enabling the creation of display buffer programs which perform functions such as light-pen track and drag, without recourse to the S/370, 30XX or 43XX processor.
- Data transferred across 1M bit per second serial link between 3258 or 5088 and 3255 ... maximum effective data rates approximate to 100K bytes per second, depending on message lengths.

Publications: GC20-0001

Performance (Basic performance characteristics):

- Vector draw speed of 8,890m (350,000 inches) per second, i.e., 34 microseconds for 305mm (12 inch) screen deflection.
- Vector move speed of 22 microseconds for 305mm (12 inch) screen deflection.
- Character draw average speed of 4.2 microseconds for a BASIC size character [height 4.1mm (0.16 inches)].

The amount of data displayable depends on many factors, including the mix of vectors and characters. With one 3251 mdl 1 attached to a 3255 mdl 1, then at 40 cycles per second regeneration rate, at least the following can be displayed:

Either - 9,500 Incremental vectors of 9.5mm (0.375 inches), or
2,150 Absolute vectors of 76mm (3 inches), or
5,250 BASIC size characters (average mix).

With two 3251s attached to a 3255 mdl 1, the performance is slightly less than half that shown above.

When the 3251 displays images at a regeneration rate of 40 cycles per second, the picture quality is superior to that of images displayed by the 2250 Display Unit mdl 3 at 40 cycles per second. As the picture content is reduced the regeneration rate increases up to a maximum of 46 cycles per second.

SPECIFY

- Voltage (AC, 1-phase, 3 wire, 60 Hz): Locking Plug -- **#9880** for 115V, **#9884** for 208V, **#9886** for 230V. Non-locking plug -- **#9881** for 115V, **#9885** for 208V, **#9887** for 230V. A 3255 and its attached 3251s must all be connected to the same supply phase.
- Power Cable Length: If standard 4.3 meter (14 feet) is not desired, specify **#9511** for 1.8 meter (6 feet).
- Cables: Refer to *IBM 3250 Installation Manual - Physical Planning,* GA33-3036.

3255 DISPLAY CONTROL MDL 2

PURPOSE

Control unit that provides common controls and attachments for up to three 3251 model 1 Display Stations.

MODELS

Model 1 001

Prerequisites: Control Unit -- a channel attached 3258 or 5088 mdl 1 which attaches to up to 16 3255s via up to a total of four high-speed point-to-point or multipoint coaxial cable connections. Similarly, up to 32 3255s may be attached to a 5088 mdl 2. A maximum of four 3255s may be attached to a single multipoint coaxial cable connection. The maximum total cable length between a 3258 or 5088 and an attached 3255 depends upon the characteristics of the customer-supplied coaxial cable. A maximum length of 1,525m (5,000 feet) can be achieved using coaxial cable of standard specification available from multiple sources; greater lengths can be achieved using coaxial cable of a higher specification. (Refer to *IBM 3250 Installation Manual - Physical Planning,* GA33-3036.) Note that 75 ohm coaxial cable must be used in any configuration incorporating a 3258 or 3255.

HIGHLIGHTS

- Free-standing floor-mounted unit attached to a 3258 Control Unit or a 5088 Graphics Channel Controller via a high-speed point-to-point or multipoint coaxial cable connection. Supports up to three 3251 mdl 1s at distances of up to 15.2m (50 feet). **Note:** At least one of the 3251s must be adjacent to the 3255.
- The maximum number of 3251 mdl 1s supported by a 3258 or 5088 mdl 1 is 16. The 5088 mdl 2 will support up to 32 3251s.
- Two 32,768 byte user-programmable display buffers. Capability for dynamic assignment of refresh buffer under S/370, 30XX or 43XX processor software control - such as is provided by the OS/VS1 and OS/VS2 Graphic Programming Services (GPS) SCP, which includes Graphics Access Method (GAM), or the GAM/SP Release 1 program product under VM/SP-CMS. GAM/SP Release 2 program product provides support under VM/SP-CMS, MVS, and MVS-XA.
- Eight light-pen display buffer orders enabling the creation of display buffer programs which perform functions such as light-pen track and drag without recourse to the S/370, 30XX or 43XX processor.
- Data transferred across 1M bit per second serial link between 3258 or 5088 and 3255 ... maximum effective data rates approximate to 100K bytes per second, depending on message lengths.

Publications: GC20-0001

Performance (Basic performance characteristics):

- Vector draw and move speeds of 15,240m (600,000 inches) per second, i.e., 20 microseconds for 305mm (12 inch) screen deflection.
- Character draw average speed of 4.2 microseconds for a BASIC size character [height 4.1mm (0.16 inches)].

The amount of data displayable depends on many factors, including the mix of vectors and characters. With one 3251 mdl 1 attached to a 3255 mdl 2, then at 40 cycles per second regeneration rate, at least the following can be displayed:

Either - 12,500 Incremental vectors of 9.5mm (0.375 inches), or
3,550 Absolute vectors of 76mm (3 inches), or
5,750 BASIC size characters (average mix).

With two or three 3251s attached to a 3255 mdl 2 the performance is slightly less than half or one-third respectively of that shown above.

When the 3251 displays images at a regeneration rate of 40 cycles per second, the picture quality is superior to that of images displayed by the 2250 Display Unit mdl 3 at 40 cycles per second. As the picture content is reduced the regeneration rate increases up to a maximum of 46 cycles per second.

SPECIFY

- Voltage (AC, 1-phase, 3 wire, 60 Hz): Locking Plug -- **#9880** for 115V, **#9884** for 208V, **#9886** for 230V, **#9894** for 240V. Non-locking plug -- **#9881** for 115V, **#9885** for 208V, **#9887** for 230V, **#9895** for 240V. A 3255 and its attached 3251s must all be connected to the same supply phase.
- Power Cable Length: If standard 4.3 meter (14 feet) is not desired, specify **#9986** for 1.8 meter (6 feet).
- Cables: Refer to *IBM 3250 Installation Manual - Physical Planning,* GA33-3036.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3258 CONTROL UNIT

PURPOSE

A channel-attached control unit which supports up to 16 3251 model 1 Display Stations attached to the 3258 via up to 16 3255 Display Control units model 1 or model 2 which are connected to the 3258 via high-speed point-to-point and/or multipoint coaxial cable connections. The 3258 can also support up to 16 5085 Graphics Processors or a mix of up to a total of 16 3255s or 5085s. A maximum of four coaxial cable connections may be made to the 3258; a maximum of four 3255s or 5085s may be attached to a single multipoint coaxial cable connection. The maximum total cable length between a 3258 and an attached 3255 or 5085 depends upon the characteristics of the customer-supplied coaxial cable. A maximum length of 1,525m (5,000 feet) can be achieved using coaxial cable of standard specification available from multiple sources; greater lengths can be achieved using coaxial cable of a higher specification. (Refer to *IBM 3250 Installation Manual - Physical Planning,* GA33-3036.) Note that 75 ohm coaxial cable must be used in any configuration incorporating a 3258 or 3255.

MODELS

Model 1 001

HIGHLIGHTS

Free-standing floor-mounted unit capable of receiving data from a S/370, 30XX or 43XX processor channel at rates of up to 250K bytes per second, transmitting data to 3255 Display Control units or 5085 Graphics Processors over 1M bit per second serial links ... maximum effective data rates approximate to 100K bytes per second, depending on message lengths.

Prerequisites: Channel Attachment -- a control unit position on a system channel.

Processors	Channel Type		
3115, 3125 - (no DOS/VS support for 3250)	Byte Multiplexer in burst mode only		
	Selector	**Block Multiplexer**	**Selector Subchannel**
3135	X	X	
3135-3, 3138, 3145-3, 3148		X	
3145	X		
3155-2, 3158		X	
3165-2, 3168	X	X	
3031, 3032, 3033		X	
3081		X	
4331, 4341, 4361, 4381		X	

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 1-phase, 3 wire, 60 Hz): Locking Plug -- **#9880** for 115V, **#9884** for 208V, **#9886** for 230V. Non-locking plug -- **#9881** for 115V, **#9885** for 208V, **#9887** for 230V.
- Power Cable Length:) If standard 4.3 meter (14 feet) is not desired, specify **#9511** for 1.8 meter (6 feet).
- Cables: Cables to S/370, 3000 or 4300 processor must be ordered. See *IBM 3250 Installation Manual - Physical Planning,* GA33-3036.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3262 LINE PRINTER MDLS 1, 2, 3, 11, 12, 13

PURPOSE

A series of line printers for attachment to the 3274, 3276, 3601, 3602, 3694, 3777, 4321, 4331, 4701, 8100 or 8775.

MODELS

Model 1	001	4321 or 4331 Processor via Display Printer Adapter.
Model 2	002	8100 Information System via the loop (9.6 and 38.4 KB). 3777-4 Communication Terminal via direct attachment (38.4 KB).
Model 3	003	3601 Controller models 3A or 3B, 3602 Finance Communication Controller, 4701 Finance Communication Controller model 1, 3694 Document Processor, 3274 Control Unit and System/3 via the 3274 Control Unit.
Model 11	011	4321 or 4331 Processor via Display Printer Adapter.
Model 12	012	8100 Information System via the loop (9.6 and 38.4 KB). 3777-4 Communication Terminal via direct attachment (38.4 KB).
Model 13	013	3601 Controller models 3A or 3B, 3602 Finance Communication Controller, 4701 Finance Communication Controller model 1or 2, 3694 Document Processor, 3274 Control Unit, 3276 Control Unit Display Station and System/3 via the 3276 Control Unit Display station and 8775 Display Station via Printer Attachment feature (#5580).

Limitations:

1. Only pinfed, continuous forms can be used.
2. Both edges of the forms must be engaged by the forms tractor pin feed.
3. No staples are permitted in the areas exposed to the interchangeable print belt.
4. Printer operation and print quality vary with paper and number of copies. Form sets of more than four parts (one part with specify ,**#9529**, and one part with 128 character text print bands) should be tested in operating conditions to verify that results are satisfactory. Maximum forms thickness is .51mm (.020 inch).
5. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results, use 20-24 lb OCR bond in single-part forms for OCR printing. OCR forms utilizing other papers should be tested for satisfactory results with user requirements. When reading 3262 documents on the 3886, reread on reject capability and 3211/5211 Compatibility (**#9701**) should be used on the 3886. OCR printing is limited to controlled DP room environment. *Refer to Site Planning and Preparation Guide,* GA24-3734. The OCR feature #5450 is a prerequisite for OCR Applications.

Maximum: Up to two 3262 Printers (mdl 1 and/or 11) may be attached to a 4321 or 4331 Processor ... for mdl 2s/12s, see 3777 mdl 4, 8101, 8130 or 8140 ... for mdl 3s/13s, see 3274 mdl 1A, 1B, 1C, 1D, 3274 mdl 51C, 3602, 3694 or 4701 ... for mdl 13s, see 3276.

Prerequisites:

Model 1 and 11 -- a position on the 4321 or 4331 standard Display/Printer Adapter or the Display/Printer Adapter Expansion (#2001) on the 4331 Model Group 1 or 2 ... see M 4321 or 4331 pages.

Model 2 and 12 -- a position on an 8100 system loop ... see 8101, 8130 or 8140, or direct attachment to a 3777 mdl 4 ... see 3777 mdl 4.

Model 3 and 13 -- an available Category A terminal port on a 3274, or a Device Cluster Adapter (#3101) on a 3601 mdl 3A or 3B, 3602, 3694, 8775 Display Station via the Printer Attachment feature (#5580) or 4701 ... see M3274, 3601, 3602, 3694, 4701 or 8775 pages.

Model 13 -- an available terminal port on a 3276 ... see M3276 pages.

HIGHLIGHTS

132 print positions are standard. Horizontal spacing is 10 characters per 25.4mm. Vertical spacing is 3, 4, 6 or 8 Lines per 25.4mm for the mdls 1 and 11 under system control. Forms skipping and spacing are program controlled. The carriage is a single speed unit allowing skipping up to 508mm (20 inches) per second. Continuous forms are fed by a forms tractor, which accepts forms of up to a maximum of 406.4mm (16 in.) wide. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design considerations. 288 character Universal Character Set Buffer is standard (for mdls 1 and 11 only).

Print Format Compatibility: Compatibility Options for 3270 Data Stream (Non-SCS) Operation mdls 3 and 13 only. Differences in the functional responses of the 3287, 3289 and 3262 result in differences in the format of the printed output. A no-charge RPQ MM4370 can be ordered for print format compatibility when compared to a 3287 or 3289 printer. For additional information refer to the 3262 mdl 3 or 13 *Component Description Manual,* GA24-3741-1 or the DP-Hone/Smart Data Base.

Decompaction: (mdls 2 and 12) Provides the decompaction function associated with the receipt of a compaction data stream whereby a pair of consecutive alpha numeric characters is represented by a single transmission byte. The function is dependent upon receipt from the host of a decompaction table corresponding to the compaction table used by the host programming in creating the compacted data stream. The master character count may range from 3 to 16.

Decompression: (mdls 2 and 12) Provides expansion of compressed data streams whereby a two byte identifying sequence is substituted for each occurrence of two or more consecutive duplicate characters and one byte is substituted for each occurrence of two or more consecutive blank characters.

Performance Considerations: Actual printer throughput is dependent upon operational and programming characteristics. The following factors must be considered in determining actual throughput:

- System Configuration
  - Loop speed (mdls 2 and 12 on S/8100)
  - Transmission speeds (mdls 2 and 12 on 3777-4)
  - Multiple device operational loads
- Host Link Communications Facility
  - Communication protocol (BSC/SDLC)
  - Transmission line speed
  - Compression and compaction characteristics
- Application Processing
  - Data organization
  - Output format: skipping ... spacing ... print line length Character set size of print band application program.

Model 3 and 13 Performance Considerations: In addition to the performance considerations listed above, the 3262 mdls 003 and 013 are sensitive to data stream characteristics. Optimum throughput can be achieved using SN LU-1-Datastreams. Significantly less than maximum rated speed may be experienced when using BSC or DSC (SNA-LU-3) Datastreams. Refer to the *Component Description Manual* for additional details.

The FIVE3270 SE aid is available to estimate printer performance for the particular environment in which the mdls 3 and 13 will be installed. Use of the aid is essential for understanding the effects of transmission speed, datastream protocol, and message sized on printer throughput.

Print Bands: Operator interchangeable print bands are available which offer the following character sets and maximum rated speeds:

	Maximum Rated Speed (lpm) Mdl 1,2,3	Mdl 11,12,13
48-character set	650	325
64-character set	467	230
96-character set (94 printable)	364	180
128-Character set	253	125

A general purpose optimized 63 character set print band is available which can provide speeds of up to 310 LPM on the mdls 11 and 12 and up to 625 LPM on the mdls 1 and 2. The optimized 63-character print band can be used on the mdls 003 and 013, however, performance may be limited by system configurations and other factors described under Performance Considerations. *See Component Description Manual,* GA24-3741.

A special 128 character set Distributed Office print band is available on mdls 2 and 12.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities" below.

Customer Setup (CSU): The 3262 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, refer to the General Information section.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3262.
- Physical setup, connection of cables, switch settings and checkout, with the exception that the FE will connect the printer communication cable to the 3777-4.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling IBM for service.

3262 Line Printer Mdls 1, 2, 3, 11, 12, 13 (cont'd)

- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Replacing a worn print band with the spare provided and rotating the platen per the instructions provided with the printer, and order another spare band.
- Procurement, installation, and management of the loop network see Accessories section.

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture.

- The basic machine is shipped with the following: Voltage 120V, AC, 1-phase, 3-wire, 60 Hz, power plug non-locking, power cable length 4.3 meter (14 foot).
- The following options may be specified: **#9081** for locking plug, **#9080** water tight plug (required where connection is beneath raised floor) or **#9511** for 1.8 meter (6 foot) cable length.
- Power Cord: If standard 4.3m (14.0 ft) power cord is not required, specify **#9511** for 1.8m (6.0 ft) power cord.
- Color: Background color is pearl white. One color accent panel must be specified: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray.
- Cables: For the mdls 1, 3, 11 and 13, the customer is responsible for procurement, maintenance and installation of coaxial signal cable. See Accessories for ordering instructions, see Price List section for prices. For the mdls 2 and 12, a 1.8m (6.0 ft) communication cable (Loop Station Connector (LSC) cable) is provided as standard for attachment to a direct attached or data link attached loop. If the standard length cable is not desired, specify **#9405** for a 4.3m cable.
- Print Band Character Set: Specify one number from Group A (character set size) and one number from Group B (character set height). When printing 8 lpi, 2.0mm (.079") character height is recommended. Two print bands (same specify code) will be shipped with the printer. The second band will be a spare for use by the customer as a back-up. When the customer installs this back-up band, a replacement should be ordered via an MES, and the platen rotated as described in the instructions provided with the printer. The customer will be billed at the current accessory band price. If the customer desires to have field engineering replace or install the print band, or rotate the platen, the CE time involved will be billed to the customer. Available at time of manufacture only. See Print Band, Add'l, in "Accessories" if more than one band is required.

Group A

Specify Number	Character Set Size
#9520	48-character set EBCDIC
#9522	64-character set EBCDIC
#9523	63-character EBCDIC (optimized)
#9526 (1)(2)	96-character set EBCDIC
#9527 (2)	128-text character set (mdls 3 and 13 only).
#9529 (2)	128-character Distributed Office (mdls 2 and 12 only).

Notes:
(1) Not available with System/3.
(2) Available only with 2.4mm (0.095") character height (**#9950**).

Group B

Specify Number	Character Set Height
#9951*	2.0mm (0.079")
#9950	2.4mm (0.095")

*Recommended for printing 8 lpi (25.4mm)

ASCII or back level EBCDIC character sets may be requested by RPQ.

If Spanish N (with Tilde) printing capability is desired on the print band provided with the 3262, order **#2961** and one number from Group A (character set size) and one number from Group B (character set height).

Group A

Specify	Character Set Size
#9520	48 - Character Set
#9522	64 - Character Set
#9526*	96 - Character Set

*Available only with 2.4mm (0.095") character height (**#9950**).

Group B

Specify	Character Set Height
#9950	2.4mm (0.095")
#9951*	2.0mm (0.079")

*Recommended for printing 8 lpi (25.4mm)

Character Print Operations: For mdls 3 and 13 only, the basic machine is shipped for use with a program which assumes the buffer size to be 1920 bytes while using Erase/Write Alternate Command. Specify the following options only to alter the basic machine:

#9200 960-Character Print Operation: For use with a program which assumes the buffer size is 960 bytes while using Erase/Write Alternate Command.

#9202 2,560-Character Print Operation: For use with a program which assumes the buffer size is 2,560 bytes while using Erase/Write Alternate Command.

#9203 3,440-Character Print Operation: For use with a program which assumes the buffer size is 3,440 bytes while using Erase/Write Alternate Command.

#9204 3,564 Character Print Operation: For use with a program which assumes the buffer size is 3,564 bytes while using Erase/Write Alternate Command. **Limitation:** This specify code is not valid when the 3262 mdls 3 or 13 is attached to a 3274 Display Controller with Configuration Support A **#9110**.

Note: To provide compatibility with programs written for 3271/3272 using Erase/Write Command, **#9200** provides 480-character print operation. Specify **#9202**, **#9203** and **#9204** provide 1,920-character print operation. Allowable usage in SNA character string of the full buffer varies according to the control unit (3274 or 3276) to which the printer is attached and to programming consideration. See *IBM Information Display Component Description,* GA27-2749. Copy operation from larger screen size display to smaller printer buffer is not accepted.

SPECIAL FEATURES

Audible Alarm Feature (#1090): Audibly notifies the operator that manual intervention or problem determination is required. On mdls 2, 3, 12 and 13, the alarm sounds when the printer receives the SCS "Bell Code" or when the "Check Indicator" goes on. On mdls 1 and 11, the alarm is under printer control and is activated only when the "Check Indicator" is turned on. A switch on the operator's panel can disable the alarm. **Maximum:** One. **Field Installation:** Yes.

OCR Print Feature (#5450): Provides a manual selection for OCR print applications.

One of the following OCR bands (numerics only) must also be specified.

#9666 OCR-AON 48 Character Set (1)
#9667 OCR-BON 48 Character Set (1)

Notes:
(1) Non-OCR characters are 2.4mm (0.095") in height

Two OCR print bands (OCR numerics and specials only) will be shipped with #5450, in addition to the bands shipped with the basic printer. The second band will be a spare for use by the customer for backup. When the customer installs the backup band, a replacement should be ordered via an MES, billing, warranty and ordering additional bands is the same as for non-OCR bands shipped with the printer. **Field Installable:** Yes

MODEL CONVERSIONS

Model 11 to a model 1, model 12 to a model 2, and model 13 to model 3 are field installable.

Cables: Cables and or associated parts to attach the subject machines to the 3271/3272/3274 Control Units and 3276 Control Unit Display Station, or Display/Printer Attachment feature (#1420) on the 3814 Switching Management System, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item Number	Description
Assm 2577672	Cable Assembly In-Door
Bulk 0323921	Coax Wire (Note 2)
P/N 1836418	Connector Kit (Note 2)
Assm 1833108	Cable Assembly Out-Door
Bulk 5252750	Coax Wire (Note 3)
P/N 1836419	Connector Kit (Note 3)
P/N 2621414	Modification Kit (Note 4)
P/N 1833106	Station Protector Attachment Kit (Note 6)
P/N 5252643	Adapter (Note 8)
P/N 1830818	Station Protection Kit, Gas (Note 5)
P/N 5252899	Station Protector Element, Gas (Note 7)

3262 Line Printer Mdls 1, 2, 3, 11, 12, 13 (cont'd)

Notes:

1. Order via MSORDER (Category = Bulk Cable) on AAS. Specify Part Number, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.
2. Coax wire and one connector kit (includes two connectors #1836446) required for each indoor cable assembly.
3. Coax wire and one connector kit (includes two connectors #1836447) required for each outdoor cable assembly.
4. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
5. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
6. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
7. Replacement station protector elements.
8. Use to join two #2577672 or two #1833108 cable assemblies together.

Print Band, Add'l: Permits the customer to obtain more than one character set print band for various applications. When ordering, use one feature number for character set size and one feature number for character height. Installation and replacement of these bands are the customer's responsibility. If customer desires to have IBM Field Engineering replace or install the print band, the CE time will be billed to the customer.

Character Set Size	Feature
48-character EBCDIC	**#5940**
48 OCR-AON (numeric and specials)*	**#5974**
48 OCR-BON (numeric and specials)*	**#5975**
63-character EBCDIC (optimized)	**#5946**
64-character EBCDIC	**#5944**
96-character EBCDIC*	**#5948**
128-character Text* (mdl 3, 13 only)	**#5961**
North American 128 distributed office (Models 2 and 12 only)	**#5962**

Character Set Height	Feature
2.0mm (0.079")**	**#5951**
2.4mm (0.095")	**#5950**

* Available only with 2.4mm (0.095") character height (#9950).
** Recommended for 8 lpi operation.
Note: ASCII bands available by RPQ.

SUPPLIES

Ribbons: A black ribbon, P/N 7819690, or equivalent, is required. An OCR ribbon P/N 7032877 or equivalent is required with OCR feature #5450.

3262 LINE PRINTER MDLS B1, C1

PURPOSE

The 3262 mdl B1 is the printed output unit for System/34 and System/38. The 3262 mdl C1 is the printed output unit for System/36.

MODELS

Model B1 B01 650 lpm Stand-alone
Model C1 C01 650 lpm CSU Stand-alone

The above nominal rated speed is based on a standard 48-character set.

Limitations:

1. Only pinfed, continuous forms can be used.
2. Both edges of the forms must be fastened in the forms tractors.
3. No staples are permitted in the areas exposed to the interchangeable print band.
4. Printer operation and print quality vary with paper and number of copies. Forms sets of more than four parts should be tested in operating conditions to verify that results are satisfactory.
5. Due to the complexity of certain characters on the multinational print bands, multiple part forms should be tested in operating conditions to ensure that results are satisfactory.
6. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results use 20-24 lb (75-90g/sg. m.) OCR bond in single-part forms. OCR forms utilizing other papers should be tested for satisfactory results with the user requirements. When reading 3262 documents on the 3886, Re-read on Reject capability and 3211/5211 compatibility **(#9701)** should be used on the 3886. OCR printing is limited to controlled DP room environment. Refer to system planning guides. The OCR feature is a prerequisite for OCR applications.

Maximum: Two 3262 Printers can attach to System/38, one 3262 Printer can attach to System/36, one 3262 Printer can attach to System/34.

Prerequisites: A 3262 Attachment on the 5381 System Unit. Specify #1100 or #1110 on 5381. See 5381 Special Features.

A 3262 attachment on the 5360 System Unit. A 3262 printer attachment feature (#5830) is required on the 5360 System Unit. See 5360 special features. 5360-AXX mdls additionally require processor unit expansion A (#5732).
Note: If an installed 3262 mdl B1 is to be attached to a 5360 system unit, see specify **#9876** in the 5360 pages. See 5360 special features.
Note: An installed 3262 mdl B1 can attach to the 5360 System via specify code **#9030** which is a no-charge MES on the printer. No new orders will be accepted in AAS for a 3262 mdl B1 printer for attachment to the 5360 System.

A 3262 Printer Attachment Feature (#5815) and a 5211/3262 Base Printer Attachment (#1110) are required on the 5340 System Unit. See 5340 Special Features.

For 3262 mdl	Attached to System	Specify System Prereq.	Printer Specify Features	System Sales Pages
B1	5381	#1100 or #1110	#9020	5381
B1	5340	#5815 & #1110	#9010	5340
B1	5360	#9876	#9030	5360
C1	5360-AXX	#5830 & #5732	N/A	5360
C1	5360-BXX	#5830	N/A	5360

Customer Setup (CSU): Yes, mdl C1 only.

HIGHLIGHTS

A universal character set buffer of 288 positions in the 3262 Attachment allows use of graphic sets of up to 288 characters. A general purpose optimized print band of 64-characters is available. (See 3262 in Type Catalog section.) The 64-character optimized print band can provide speeds up to a maximum of 625 lpm. Should specific application data have unique characteristics and not conform to the 64 character set optimized print band, the normal print bands will provide the following nominal rated speeds:

	Nominal Rated Speeds(lpm)
48-character set	650
64-character set	467
96-character set	364

132 print positions are standard. Horizontal spacing is 10 characters per inch. Vertical spacing is six or eight lines per inch under system control for System/38 and operator control for System/34 and System/36. Forms skipping and spacing are program controlled. The carriage is a single speed unit allowing skipping up to 20 inches per second. Continuous forms are fed by a forms tractor. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design considerations.

OCR capability is provided as a feature (#5460). See special features. The 48 character bands containing numeric A or B font (10 numbers and 3 special characters) are available only as part of the feature. The new OCR feature is supported by the System/38 hardware and software beginning with Release 3.0. The OCR feature is also supported by the System/34 and System/36.

Customer Setup (CSU): The 3262 mdl C1 is designated as a customer setup device. The Marketing Representative must advise the customers of their responsibilities before receipt of the device.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Power cord and plug: (120 V AC 1-phase, 3 wire, 60 Hz) The standard power cord is 4.3m (14 ft) long with locking plug; specify **#9081**. For Chicago the cord is 1.8m (6 ft) long with a locking plug, specify both **#9986** and **#9081**. For a watertight power cord (System/38 only), specify **#9080**.
- Color: Background color is pearl white. A color accent must be specified. **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray or **#9066** for pearl white.
- Interchangeable Print Bands [Plant only] See "Type Catalog" for print band arrays. When ordering, indicate one specify code for character set and one specify code for character height. When printing 8 lpi, 2.0mm (0.079") character height is recommended.

  Two print bands (same specify code) will be shipped with the printer. The second band will be a spare for use by the customer as a back up. When the customer installs this backup band, a replacement should be ordered via MES and the platen rotated as described in the instructions provided with the printer (exception is when OCR feature is installed). In this case the platen is single surface and cannot be rotated. The customer will be billed at the current accessory band price. Replacement and installation of the print band is the customer's responsibility. If the customer desires to have Field Engineering replace or install the print band, the CE time will be billed to the customer.

Specify	Character Set Size
#9520	48-Character
#9565	48-Character FORTRAN ***
#9521	60-Character S/38 Special **
#9522	64-Character EBCDIC
#9523	64-Character EBCDIC (Optimized)
#9524	64-Character ASCII
#9525	64-Character ASCII (Optimized)
#9564	64-Multinational *
#9526	96-Character EBCDIC *
#9528	96-Character ASCII *
#9563	96-Multinational *
#9562	188-Multinational *

* Available only with 2.4mm (0.095") character height **(#9950)**.

** This specially designed band for the System/38 only will enable the user to print the System/38 Control Language characters.

*** Available on System/34 and System/36.

Specify	Character Height
#9951*	2.0mm (0.079")
#9950	2.4mm (0.095")

* Recommended for printing 8 lpi (25.4mm).

If Spanish N (with Tilde) printing capability is desired on the print bands provided with the 3262, order **#2961** plus two additional Specify Codes selected from the following offerings of character set size and character height:

Specify	Character Set Size
#9520	48-Character
#9522	64-Character
#9523	64-Character (Optimized)
#9526*	96-Character

* Available only with 2.4mm (0.095") character height **(#9950)**.

3262 Line Printer Models B1, C1 (cont'd)

Specify	Character Height
#9951*	2.0mm (0.079")
#9950	2.4mm (0.095")

* Recommended for printing 8 lpi (25.4mm).

System Attachment: For attachment to System/34, specify **#9010**. For attachment to System/38 specify **#9020**. When changing from System/34 to System/38, **#9010** must be removed and **#9020** must be added. When changing from System/34 to System/36, **#9030** must be added.

SPECIAL FEATURES

OCR Print Feature (#5460): Provides for manual operator selection of print hammer controls for OCR applications. One of the following OCR print bands must be specified:

Specify	Band Description
#9666	48-Character OCR-AON (1)
#9667	48-Character OCR-BON (1)

Notes:
(1) Non-OCR characters are 2.4mm (0.095") in height.

Two OCR print bands (OCR numerics and 3 specials) will be shipped with #5460 in addition to the two standard bands shipped with the basic printer. The second band will be a spare for use by the customer for backup. When the customer installs the backup band, a replacement should be ordered via an MES. Billing, warranty and ordering additional bands (see Accessories section) is the same as for standard bands shipped with the printer. **Field Installation:** CSU.

MODEL CONVERSIONS (None)

ACCESSORIES

Prints Bands: Two print bands are included with the initial shipment. Additional print bands permit the customer to print more than one character set for various applications and can be interchangeably used with the band provided with the machine. OCR print bands are for use only with OCR Feature #5460. See "Type Catalog" for print band arrays. When ordering, indicate one feature code for character set size and one feature code for character height. Interchangeable Print Bands: See "Specify".

Print Band, Add'l: Permits the customer to obtain more than one character set print band for various applications. When ordering, use one feature number for character set size and one feature number for character height. Installation and replacement of these bands are the customer's responsibility. If customer desires to have IBM Field Engineering replace or install the print band, the CE time will be billed to the customer.

Character Set Size	Feature
48-character EBCDIC	**#5940**
48 OCR-AON (numeric and specials)*	**#5974**
48 OCR-BON (numeric and specials)*	**#5975**
64-character EBCDIC (optimized)	**#5946**
64-character EBCDIC	**#5944**
96-character EBCDIC*	**#5948**
128-character Text* (mdl 3, 13 only)	**#5961**

Character Set Height	Feature
2.0mm (0.079")**	**#5951**
2.4mm (0.095")	**#5950**

* Available only with 2.4mm (0.095") character height (**#9950**).
** Recommended for 8 lpi operation.
Note: ASCII bands available by RPQ.

SUPPLIES

Ribbons: A black ribbon, P/N **7819690**, or equivalent, is required. An OCR ribbon P/N **032877** or equivalent is required with OCR feature #5460.

3262 LINE PRINTER MDL 5

PURPOSE

Printer output for attachment to a processor channel.

MODELS

Model 5	005	Printer output unit for 4300 Processors, all Virtual Storage S/370 (except 158II or 168II), 3031, 3032, 3033, 3081, 3083 or 3084 Processors.

Limitations:

1. Only pinfed, continuous forms can be used.
2. Both edges of the forms must be engaged by the forms tractor pin feed.
3. No staples are permitted in the areas exposed to the interchangeable print band.
4. Printer operation and print quality vary with paper and number of copies. Form sets of more than four parts (and one part with 128 character text print bands) should be tested under operating conditions to verify that results are satisfactory. Maximum forms thickness is 0.51mm (0.020 inch).
5. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results, use 20-24 lb OCR bond in single-part forms for OCR printing. OCR forms utilizing other papers should be tested for satisfactory results with user requirements. When reading 3262 documents on the 3886, reread on reject capability and 3211/5211 Compatibility (**#9701**) should be used on the 3886. OCR printing is limited to controlled DP room environment. The OCR feature #5450 is a prerequisite for OCR Applications.

Maximum: The number of 3262 mdl 5s that can be attached is limited only by the number of control unit positions available on the system channel. Channel loading and system configuration may affect printer performance.

Prerequisites: An available control unit position on a system channel.

HIGHLIGHTS

132 print positions are standard. Horizontal spacing is 10 characters per 25.4mm. A fine horizontal vernier adjustment is provided on the mdl 5 to allow the operator to horizontally position printed characters in predetermined print positions. The maximum amount of movement is the width of one and one half print positions 3.8mm (.150 inch) at 10 characters per 25.4mm (1 inch). Vertical spacing is 6 or 8 lines per 25.4mm (1 inch) under system control. Forms skipping and spacing are program controlled. The forms carriage is a single speed unit allowing skipping up to 508mm (20 inches) per second. Continuous forms are fed by a forms tractor, which accepts forms of up to a maximum of 406.4mm (16 inches) wide. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design considerations.

Performance Considerations: Actual printer throughput is dependent upon operational and programming characteristics. The following factors must be considered in determining actual throughput:

- System Configuration
- Application Processing
  - Data organization
  - Output format:
    skipping ... spacing ... print line length
    Character set size of print
    band application program.

Print Bands: Operator interchangeable print bands are available which offer the following character sets and nominal speeds:

	Nominal Speed (lpm)
48-character set	650
64-character set	466
96-character set	363
128-character set	252

A general purpose optimized 63-character set print band is available which can provide speeds of up to 625 lpm. The expected performance of the 63-character optimized band is not determinable unless sample data streams are printed. It is possible that the performance could be less than the 64-character band if the low frequency occurring characters on the 63-character band are used at a higher rate.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Receipt at the customer's receiving dock, unpacking and placement of the 3262.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out Trouble Report Form prior to calling IBM for service.
- Packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Replacing a worn print band with the spare provided and ordering another spare band.
- Rotating the platen per the instructions provided with the printer, The special platen for OCR cannot be rotated when the OCR feature #5450 is installed.

Bibliography: GC20-0001

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- The basic machine is shipped with 120V, AC, 1-phase, 3-wire, 60 Hz, watertight power plug (Russell and Stoll). Power cord length is 4.3m (14 foot). If a 1.8m (6 foot) power cord is desired, specify **#9986**.
- Color: Will be pearl white and accent covers will be pebble gray.
- Print Band Character Set: Specify one number from Group A (character set size) and one number from Group B (character set height). When printing 8 lpi, 2.0mm (0.079") character height is recommended. Two print bands (same specify code) will be shipped with the printer. The second band will be a spare for use by the customer as a backup. When the customer installs this backup band, a replacement should be ordered via an MES. The customer will be billed at the current accessory band price. If the customer desires to have Field Engineering replace or install the print band, or rotate the platen, the CE time involved will be billed to the customer. Available at time of manufacture only. See "Print Band, Add'l" in Accessories section if more than one band style is required.

Group A

Specify Number	Character Set Size
#9520	48-character set EBCDIC
#9530	48-character set International
#9522	64-character set EBCDIC
#9523	63-character EBCDIC (optimized)
#9526*	96-character set EBCDIC
#9536*	96-character set International
#9527*	128-text character set EBCDIC

* Available only with 2.4mm (0.095") character height (**#9950**).

Group B

Specify Number	Character Set Height
#9950	2.4mm (0.095")
#9951*	2.0mm (0.079")

* Recommended for printing 8 lines per 25.4mm (inch)

Character sets may be requested by RPQ.

If Spanish N (with Tilde) printing capability is desired on the print band provided with the 3262, order **#2961** and one number from Group A (character set size) and one number from Group B (character set height).

Group A

Specify	Character Set Size
#9520	48-Character Set
#9522	64-Character Set
#9526*	96-Character Set

* Available only with 2.4mm (0.095") character height (**#9950**).

Group B

Specify	Character Set Height
#9950	2.4mm (0.095")
#9951*	2.0mm (0.079")

*Recommended for printing 8 lines per 25.4mm (inch)

SPECIAL FEATURES

Audible Alarm Feature (#1090): Audibly notifies the operator that manual intervention or problem determination is required. The alarm is under printer control and is activated only when the "Check Indicator" is turned on. A switch on the operator's panel can disable the alarm. **Maximum:** One. **Field Installation:** Yes.

OCR Print Feature (#5450): Provides a manual selection for OCR print applications.

3262 Line Printer Mdl 5 (cont'd)

One of the following OCR bands (numerics only) must also be specified.

#9666 OCR-AON 48-Character Set (1)
#9667 OCR-BON 48-Character Set (1)

Notes:
(1) Non-OCR characters are 2.4mm (0.095") in height

Two OCR print bands (OCR numerics and specials only) will be shipped with #5450, in addition to the bands shipped with the basic printer. The second OCR band will be a spare for use by the customer for backup. When the customer installs the backup band, a replacement should be ordered via an MES. Billing, warranty and ordering additional bands are the same as for non-OCR bands shipped with the printer. **Field Installation:** Yes.

MODEL CONVERSIONS

The model 5 cannot be changed to any other model of the 3262 Printer.

ACCESSORIES

The following items are available on a purchase-only basis. Order the feature number indicated below at the price listed in the Price List section. Order by MES. Only one print band per MES.

Print Band, Add'l: Permits the customer to obtain more than one character set. Installation and replacement of these print bands is the customer's responsibility. If the customer desires to have Field Engineering replace or install the print band, the CE time will be billed to the customer. **Maximum:** One per machine order. Order by MES only.

When ordering, indicate one feature code for character set size and one feature code for character set height.

Feature Number	Description
#5940	48-character EBCDIC
#5944	64-character EBCDIC
#5946	63-character EBCDIC Optimized
#5948*	96-character EBCDIC
#5961*	128-character text

* Available only with 2.4mm (0.095") character height (**#5950**)

Specify	Character Set Height
#5950	2.4mm (0.095")
#5951*	2.0mm (0.079")

* Recommended for printing 8 lines per 25.4mm (inch)

SUPPLIES

Ribbons: A black ribbon, P/N **7819690** or equivalent, is required. An OCR ribbon, P/N **7032877** or equivalent, is required with OCR feature #5450.

3268 PRINTER MDL 1

PURPOSE

Provides hard copy output for the 8100 Information System via Loop attachment, printing at a maximum speed of 340 cps.

MODELS

Model 1 001

Prerequisites: For direct attached loop operation: **#4830** or **#4835** on the 8101, 8130, or 8140. For data link attached loop operation: 3842 or 3843 Loop Control Unit.

Customer Setup (CSU): The 3268 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, refer to the GI section.

HIGHLIGHTS

The 3268 mdl 1 consists of control functions, printer and indicator lights in one integrally designed pedestal unit. 132 printer positions are standard. Horizontal spacing is 10 characters per 25.4 mm (inch) and 16.7 characters per 25.4mm (inch). Selection of horizontal spacing is via a manual switch on the operator panel or via data stream control. Vertical spacing is 3, 4, 6 or 8 lines per 25.4mm (inch). The printer operates in SCS (SNA LU1) mode, which provides for customer program definable horizontal and vertical formatting. APL/TEXT, Dual Case Operation, Audible Alarm and Cancel Print are provided as standard functions.

Continuous forms are fed by a forms tractor which accepts forms up to 406.4mm (16 inches) wide. Up to 6-part forms may be used. 5- and 6-part forms should be tested on an individual basis for acceptable feeding, registration and print quality.

See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design considerations.

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done by the use of problem determination and recovery routines and procedures that can be understood and used by the operator. See "Customer Responsibilities", below.

Performance Considerations: Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration, line transmission speed, loop speed, output format, and program application processing must all be considered in determining actual throughput. Refer to *IBM 3268 Printer Component Description,* GA27-3267, for more detail.

Customer Responsibilities: The Customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3268.
- Physical setup, connection of cables, switch settings and checkout.
- Notifying IBM of intent to relocate and follow IBM instructions for relocation.
- Using and following the problem determination procedures and filling out the trouble report prior to calling for IBM Service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Ordering and replacing a worn printhead and insuring that a functional printhead is available for use by a service personnel. The customer must be advised that on his request, FE can provide on-site installation of the customer-supplied printhead (P/N 7033524) on a per call billable basis.
- Procurement, installation, and maintenance of the loop network.

Communication Cable: A communication cable (Loop Station Connector (LSC) cable) is provided as standard for attachment to a direct attached or data link attached loop. Standard cable is 4.3 meters (14 feet) in length.

Bibliography: See *KWIC Index,* GA20-1621, or specific system bibliography.

SPECIFY

- The basic machine is shipped with the following: Voltage 120V, AC, 1-phase, 3-wire, 60 Hz; power plug non-locking; power cord lengths of 2.8 meters (9 feet).

  The following options may be specified: **#9890** for locking plug; **#9511** for 1.6 meters (5 foot) power cord.

- **Language:** National Use Character Sets are selected via the operator panel. APL/TEXT may be selected via the SCS data stream.

  Character Sets which may be selected include:

- Machine Nomenclature: Available at time of manufacture only.

  Nomenclature default is as follows:
  All other countries default to English. Alternate nomenclature may be chosen by specifying one of the following:

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Not recommended for field installation.

ACCESSORIES

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order **#4450**. Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. This accessory is a one-shelf forms stand. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design and stacking considerations.

For field installation:

Forms Stand P/N 8678375 or Feature **#4450**

SUPPLIES

Ribbon (P/N 7032821): A Black Ribbon Cartridge, P/N 7032821 or equivalent, is required. The ribbon cartridge has a print life* of five million characters. Replacement printheads and ribbon cartridges are available for purchase from SSD ... see SSD sales manual.

* Ribbon print life is derived from IBM - conducted tests. Ribbon life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings, and paper quality.

Printhead (P/N 7033524): The life expectancy** of the printhead is 300 million characters.

** Printhead life expectancy is derived from IBM - conducted tests. Printhead life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings, and ribbon used.

3268 PRINTER MDL 2

PURPOSE

Provides hard copy output for the 3270 System via a 3274, 3276 or 8775, a 4321 or 4331 Processor via Display/Printer Adapter, the 3081/3083/ 3084 via the 3082 Processor Controller, and the 4341 via a console position, printing at a maximum speed of 340 cps.

MODELS

Model 2 002

Prerequisites:

Attachment	Device Adapter
3274	Available Category A terminal port.
3276	Available port or added **#3255, #3256, or #3257.**
4321/4331	Available position on Display/Printer Adapter (APL/Text, SCS and Character Print Operation specifies are not supported on the 4321/4331). Specify code **#9841** must be ordered.
4341/4361/4381	Available console position on 4341. (APL/Text, SCS and Character Print Operation specifies are not supported on the 4341).
3081/3083/3084	Attaches via 3082 Processor Controller.
3694	Attaches via the 3694 Device Cluster Adapter #3101.
8775	Printer Attachment Feature (#5580)

Customer Setup (CSU): The 3268 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

The 3268 mdl 2 consists of control functions, printer and indicator lights in one integrally designed pedestal unit.

The printer operates in either 3270 mode (BSC or SNA LU3) or SCS (SNA LU1) mode. 132 print positions are standard. Horizontal spacing is 10 characters per 25.4mm (inch) and 16.7 characters per 25.4mm (inch). Selection of horizontal spacing is via a manual switch on the operator panel or via data stream control. Vertical spacing is 3, 4, 6 and 8 lines per 25.4mm (inch). Vertical spacing may be selected via manual switch on the operator panel or via the program when in SCS mode of operation. APL/TEXT, Dual Case operation, Audible Alarm and Cancel Print are provided as standard functions.

Continuous forms are fed by a forms tractor which accepts forms up to 406.4mm (16 inches) wide. Up to 6-part forms with a total thickness of 0.457mm (0.018 inches) may be used. 5- and 6-part forms should be tested on an individual basis for acceptable feeding, registration, and print quality. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design considerations.

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done by the use of problem determination and recovery routines and procedures that can be understood and used by the operator. See "Customer Responsibilities", below.

Performance Considerations: Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration, line transmission speed, loop speed, output format, and program application processing must all be considered in determining actual throughput. Refer to *IBM 3268 Printer Component Description,* GA27-3267, for more detail.

The FIVE3270 SE Aid is available to estimate printer performance for the particular environment in which the 3268 mdl 2 will be installed. Use of this aid is essential for understanding the effects of transmission speed, data stream protocol, and message sizes on printer throughput.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking, and placement of the 3268.
- Physical setup, connection of cables, switch settings and checkout.
- Notifying IBM of intent to relocate and following IBM instructions for relocation.
- Using and following the problem determination procedures and filling out the trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Contact Field Engineering to make cable connection of IBM CSU units to IBM non-CSU units where customer access areas are not provided.
- Ordering and replacing a worn printhead and insuring that a functional printhead is available for use by service personnel. The customer must be advised that on his request, FE can provide on-site installation of the customer-supplied printhead (P/N 7033524) on a per call billable basis.

Bibliography: See *KWIC Index,* GA20-1621, or specific system bibliography.

SPECIFY

- The basic machine is shipped with the following: Voltage 120V, AC, 1-phase, 3-wire, 60 Hz; power plug non-locking; power cord length of 2.8 meters (9 feet). Character print operation: 1920 characters. Standard operations: are as specified in paragraphs marked "Standard" under "Compatibility Options for 3270 Data Stream (Non-SCS) Operations", below.
- The following options may be specified: **#9890** for locking plug; **#9511** for 1.6 meter (5 foot) power cord.
- Cables: See "Accessories" and *IBM Information Display System Installation Manual - Physical Planning,* GA27-2787, for cable details.
- Language: National Use Character Sets are selected via the operator panel. APL/TEXT may be selected via the SCS data stream.

  Character Sets which may be selected include:
- Machine Nomenclature: Available at time of manufacture only. Nomenclature default is as follows:

  All other countries default to English. Alternate nomenclature may be chosen by specifying one of the following:
- Compatibility Options for the 3270 Data Stream (non-SCS) Operation: Operation of the 3268 mdl 2 is defined as standard. Alternate operation may be specified. **Note:** Standard 3268 mdl 2 operation is the same as the standard 3287 mdls 1 and 2.

Field Installation: Yes. Contact local FE Branch Office for installation.

Carriage Return (CR) at MPP Plus 1

Standard: An automatic New Line (NL) is executed at MP plus 1, then the CR is executed. The next print position will be the first print position of the next line.

#9501 No automatic New Line (NL) is executed. The CR is executed at MPP plus 1. The next print position will be the first print position of the current line. Compatible with 3287 RPQ S30219.

New Line (NL) at MPP Plus 1

Standard: An automatic New (NL) is executed at MPP plus 1, then the NL is executed. The next print position will be the first print position of the current line plus 2.

#9502 No automatic New Line (NL) is executed. The NL is executed at MPP plus 1. The next print position will be the first print position of the next line. Compatible with 3287 RPQ S30219.

Form Feed Followed by Data

Standard: The form will be skipped to the first line of the next form and the next print position will be the second print position of that line.

#9503 The form will be skipped to the first line of the next form and the next print position will be the first print position of that line. Compatible with 3289 RPQ S30220 - SC3752.

Form Feed is Last Character in Print Order

Standard: An automatic new Line (NL) is executed after the form feed is completed. The next print position will be the first print position of the second line on the next form.

#9504 The automatic New Line (NL) is suppressed at completion of the form feed. The next print position will be the first print position of the first line of the next form. Compatible with 3287 RPQ S30219 - SC3749.

Null Suppression

Standard: If an entire print Line contains no printable characters, no New Line (NL) is performed. Space (X'40') is considered a printable character. Next print position is first print position of current line.

#9505 Prints all null lines as a blank line and performs a new Line (NL). Next print position is first print position of next line. Compatible with 3287 RPQ ML0442 - SC 3741 or 3287 RPQ MK3988 - SC3741.

Form Feed (FF) Command Position

3268 Printer Mdl 2 (cont'd)

Standard: Execute a Form Feed (FF) command only if it occurs at the first print position in a line or at MPP plus 1. Treat Form Feed (FF) at other positions as spaces.

#9506 Execute a Form Feed (FF) command whenever it is encountered in the Data Stream. Compatible with 3287 RPQ ML0442 - SC3739 or 3287 RPQ MK3988 - SC3739.

Automatic Function at End of Print Buffer

Standard: An automatic New Line (NL) is executed following a print order. Next print position is first print position of the next line.

#9507 An automatic Form Feed (FF) is executed following a print order. Next print position is first print position of first line of next form. Compatible with 3287 RPQ MK3988 - SC3740.

- **Character Print Operation:** The basic machine provides for operation with a program which requires a print buffer of 1,920 bytes while using Erase/Write Alternate Command. For other buffer size requirements, specify as listed below.

  Field Installation: Yes. Contact local FE Branch Office for installation.

  #9521 (960 character print operation) for use with a program which requires a printer buffer size of 960 bytes while using Erase/Write Alternate Command.

  #9523 (2,560 character print operation) for use with a program which requires a printer buffer size of 2,560 bytes while using Erase/Write Alternate Command.

  #9524 (3,440 character print operation) for use with a program which requires a print buffer size of 3,440 bytes while using Erase/Write Alternate Command.

  #9525 (3,564 character print operation) for use with a program which requires a print buffer size of 3,564 bytes while using Erase/Write Alternate Command. **Limitation:** This specify code is not valid when the 3268 is attached to a 3274 with Configuration Support A (**#9110**).

- **#9181** - Provides the following:
  - Up to 220 characters per line at 16.7 characters per inch.
  - Set print density control code support via data stream.
  - Save/restore formats structured field - provides for saving the current printer format parameters and restoring the previously saved parameters.
  - Query list structured field - provides capability for the application to selectively query the printer.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Not recommended for field installation.

ACCESSORIES

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order **#4450**. Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. This accessory is a 1-shelf forms stand. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design and stacking considerations.

For field installation:

Forms Stand P/N 8678375 or Feature **#4450**

Cables: Cables and or associated parts to attach the 3268 to 3271s/3272s/3274s and the 3276, or Display/Printer Attachment feature (#1420) on the 3814 Switching Management System, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	2577672	Cable Assembly In-Door
Bulk	0323921	Coax Wire (Note 1)
P/N	1836418	Connector Kit (Note 1)
Assm	1833108	Cable Assembly Out-Door
Bulk	5252750	Coax Wire (Note 2)
P/N	1836419	Connector Kit (Note 2)
P/N	2621414	Modification Kit (Note 3)
P/N	1833106	Station Protector Attachment Kit (Note 5)
P/N	5252643	Adapter (Note 7)
P/N	1830818	Station Protection Kit, Gas (Note 4)
P/N	5252899	Station Protector Element, Gas (Note 6)

Specify Part Number, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N **#1836446**) required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N **#1836447**) required for each outdoor cable assembly.
3. Customers replacing 2260s may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N **#2577672** or two P/N **#1833108** cable assemblies together.

SUPPLIES

Ribbon (P/N 7032821): A Black Ribbon Cartridge, P/N 7032821 or equivalent, is required. The ribbon cartridge has a print life* of five million characters. Replacement printheads and ribbon cartridges are available for purchase from SSD ... see SSD sales manual.

* Ribbon print life derived from IBM - conducted tests. Ribbon life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings and paper quality.

Printhead (P/N 7033524): The life expectancy** of the printhead is 300 million characters.

** Printhead life expectancy is derived from IBM - conducted tests. Printhead life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings, and ribbon used.

3268 COLOR PRINTER MDL 2C

PURPOSE

Provides hard copy output in black and color by using replaceable ribbon cartridges at a maximum speed of 340 cps. Attaches to a 3270 Information Display System via a 3274 or a 3276, a 4321 or 4331 via a port on the Display/Printer Adapter and a 4341 via a console position.

MODELS

Model 2C C02

Prerequisites:

Attachment	Required on Control Unit
3274	Available Category A terminal port.
3276 (1)	Available port or added #3255, #3256 or #3257.
4321 (2)	Available port on Standard Display/Printer Adapter.
4331 (2)	Available port on Standard Display/Printer Adapter or #2001 on 4331 Mdl Group 1 or 2.
4341 (2)	Available console position on 4341.
4361/4381	Available console position on 4361/4381.

Note (1): Programmed Symbols (PS) is not supported on 3276.

Note (2): PS, APL/TEXT, SCS and Character Print Operation specifies are not supported on 4321, 4331 or 4341.

Customer Setup (CSU): The 3268-2C is designed as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

The unit consists of control functions, printer and indicator lights in one integrally designed pedestal unit. The printer operates in either 3270 mode (BSC or SNA LU3) or SCS (SNA LU1) mode. 132 print positions at 10 characters per 25.4mm (inch) and 220 print positions at 16.7 characters per 25.4mm (inch) are standard. Selection of horizontal spacing (10 cpi or 16.7 cpi) is via a manual switch on the operator panel or via the program when in SCS mode of operation. Vertical spacing is 3, 4, 6 and 8 lines per 25.4mm (inch). Vertical spacing may be selected via manual switches on the operator panel or via the program when in SCS mode of operation. APL/TEXT, Dual Case operation, Audible Alarm, Cancel Print, Extended Character Set Adapter and PS are provided as standard functions.

PS may be configured either as six single-plane 190-symbol sets whose shapes and codes are customer definable and which allow printing within a character location a single selected color (green, blue, red or black) or as three single-plane 190-symbol sets and one triple-plane 190-symbol set. The triple-plane symbol set allows printing of up to four colors within a single character position. Selection of the PS configuration is via the operator panel. Prerequisite for use of PS is attachment to a 3274 with Configuration Support C or D.

Continuous forms are fed by a forms tractor which accepts forms up to 406.4mm (16 inches) wide. Up to 6-part forms with a total thickness of 0.457mm (0.018 inches) may be used. 5- and 6-part forms should be tested on an individual basis for acceptable feeding, registration, and print quality. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design considerations.

Using the replaceable multi-color ribbon cartridge, two modes of color selection (base color and extended color) may be employed. Base Color Printing is the selection of color at the field level as a function of the 3270 Data Stream protect and intensify attribute byte. The display to printer mapping is as follows:

3270 Attribute Byte	Color Displayed	Color Printed	
		Base Color -Black	Base Color -Green
Not Protected, Normal Intensity	Green	Black	Green
Protected, Intensified	White	Green	Black
Not Protected, Intensified	Red	Red	Red
Protected, Normal Intensity	Blue	Blue	Blue

Extended color printing is the selection of color at the character level in addition to the field level. The display to printer color mapping for extended color is:

Color Displayed	Color Printed
White	Black
Red	Red
Blue	Blue
Green	Green
Turquoise	Black (by default)
Pink	Black (by default)
Yellow	Black (by default)

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done by the use of problem determination and recovery routines, and procedures that can be understood and used by the operator. See "Customer Responsibilities" below.

Performance Considerations: Actual printer throughput is dependent upon operational and system characteristics. Factors such as control unit configuration, line transmission speed, output format, and programming application processing must all be considered in determining actual throughput.

Compared to black or monochrome printing, throughput will be reduced when printing in multi-color as a function of the number of color changes on the page due to a separate pass of the printhead for each color on a line. In addition, when printing in other than the standard character format (4 of 7 horizontal X 8 vertical dots) and using PS, the printer will print at reduced speeds. Under these conditions the printer prints unidirectionally at 147 cps. Dense printing when using PS will also lessen printer throughput. Refer to the *IBM 3268 Printer Component Description,* GA27-3268, for more details.

The FIVE3270 SE Aid is available to estimate printer performance for the particular environment in which the 3268 will be installed. Use of this aid is essential for understanding the effects of transmission speed, data stream protocol, and message sizes on printer throughput.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking, and placement of the 3268.
- Physical setup, connection of cables, switch settings and checkout.
- Notifying IBM of intent to relocate and following IBM instructions for relocation.
- Using and following the problem determination procedures and filling out the trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Contact Field Engineering to make cable connection of IBM CSU units to IBM non-CSU units where customer access areas are not provided.
- Ordering and replacing a worn printhead and ensuring that a functional printhead is available for use by service personnel. The customer must be advised that on his request, Field Engineering can provide on-site installation of the customer-supplied printhead (P/N **7033701**) on a per-call billable basis.

Bibliography: See *KWIC Index,* G320-1621, or specific system bibliography.

SPECIFY

- Voltage: The basic machine is shipped with: 120V, AC, 1-phase, 3-wire, 60 Hz; power plug non-locking; power cord length of 2.8 meters (9.1 feet).

  The following options may be specified: **#9890** for locking plug; **#9511** for 1.6 meter (5.2 feet) power cord.

- Cables: See "Accessories" and *IBM Information Display System Installation Manual - Physical Planning,* GA27-2787, for cable details.

- Language: National Use Character Sets are selected via the operator panel.

  Character Sets which may be selected include:

- Machine Nomenclature: Available at time of manufacture only. Nomenclatures default is as follows:

  All other countries default to English. Alternate nomenclature may be chosen by specifying one of the following:

- Compatibility Options for the 3270 Data Stream (Non-SCS) Operation: Standard operations of the 3268 mdl 2C are described in the paragraph marked "standard". Alternate operation may be specified. **Note:** Standard 3268 mdl 2C operation is the same as the standard 3287 mdls 1 and 2 and 3268-2. **Field Installation:** Yes. Contact local FE Branch Office for installation.

  Carriage Return (CR) at MPP Plus 1

  Standard: An automatic New Line (NL) is executed at MP plus 1, then the CR is executed. The next print position will be the first print position of the next line.

  #9501 No automatic New Line (NL) is executed. The CR is executed at MPP plus 1. The next print position will be the first print position of the current line. Compatible with 3287 RPQ S30219.

  New Line (NL) at MPP Plus 1

3268 Color Printer Mdl 2C (cont'd)

Standard: An automatic New Line (NL) is executed at MPP plus 1, then the NL is executed. The next print position will be the first print position of the current line plus 2.

#9502 No automatic New Line (NL) is executed. The NL is executed at MPP plus 1. The next print position will be the first print position of the next line. Compatible with 3287 RPQ S30219.

Form Feed (FF) Followed by Data

Standard: The form will be skipped to the first line of the next form and the next print position will be the second print position of that line.

#9503 The form will be skipped to the first line of the next form and the next print position will be the first print position of that line. Compatible with 3289 RPQ S30220 - SC3752.

Form Feed (FF) is Last Character in Print Order

Standard: An automatic New Line (NL) is executed after the Form Feed (FF) is completed. The next print position will be the first print position of the second line on the next form.

#9504 The automatic New Line (NL) is suppressed at completion of the Form Feed (FF). The next print position will be the first print position of the first line of the next form. Compatible with 3287 RPQ S30219 - SC3749.

Null Suppression

Standard: If an entire print line contains no printable characters, no New Line (NL) is performed. Space (X'40') is considered a printable character. Next print position is first print position of current line.

#9505 Prints all null lines as a blank line and performs a New Line (NL). Next print position is first print position of next line. Compatible with 3287 RPQ ML0442 - SC 3741 or 3287 RPQ MK3988 - SC3741.

Form Feed (FF) Command Position

Standard: Execute a Form Feed (FF) command only if it occurs at the first print position in a line or at MPP plus 1. Treat Form Feed (FF) at other positions as spaces.

#9506 Execute a Form Feed (FF) command whenever it is encountered in the Data Stream. Compatible with 3287 RPQ ML0442 - SC3739 or 3287 RPQ MK3988 - SC3739.

Automatic Function at End of Print Buffer

Standard: An automatic New Line (NL) is executed following a print order. Next print position is first print position of the next line.

#9507 An automatic Form Feed (FF) is executed following a print order. Next print position is first print position of first line of next form. Compatible with 3287 RPQ MK3988 - SC3740.

Full Page on Skip Suppress

Standard: Execute an automatic form feed when the number of lines set in the maximum page length counter has been printed when operating in skip suppress mode.

RPQ S30277 Print a full page prior to automatic form feed when operating in skip suppress mode. Compatible with 3287 RPQ S30273. Full page is defined by the values of maximum page length times lines per inch (MPL)x(LPI). **Note:** Machines will be shipped from plant with RPQ S30277 installed.

Field Installation: Yes. Contact local FE Branch Office for installation.

Form Feed after Local Copy

Standard: An automatic New Line (NL) is executed following a print order resulting from an operator-initiated local copy if specify feature **#9507** is not selected.

#9508 An automatic Form Feed (FF) is executed following a print order resulting from an operator-initiated local copy. The operator uses the print key on the display keyboard to initiate a local copy. A host-initiated local or a host direct print does not cause this form feed.

- **Character Print Operation:** The basic machine provides for operation with a program which requires a print buffer of 1,920 bytes while using Erase/Write Alternate Command. For other buffer size requirements, specify as listed below. **Field Installation:** Yes. Contact local FE Branch Office for installation.

  #9521 (960 character print operation) for use with a program which requires a printer buffer size of 960 bytes while using Erase/Write Alternate Command.

  #9523 (2,560 character print operation) for use with a program which requires a printer buffer size of 2,560 bytes while using Erase/Write Alternate Command.

  #9524 (3,440 character print operation) for use with a program which requires a printer buffer size of 3,440 bytes while using Erase/Write Alternate Command.

  #9525 (3,564 character print operation) for use with a program which requires a printer buffer size of 3,564 bytes while using Erase/Write Alternate Command.

- **Base Color Print Operation:** The basic machine is shipped with base color black. For base color green order (**#9136**). Base color is defined under "Highlights" above.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Not recommended for field installation.

ACCESSORIES

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order **#4450**. Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. This accessory is a 1-shelf forms stand. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design and stacking considerations. For field installation: Forms Stand P/N **8678375** or Feature **#4450**.

Cables: Cables and or associated parts to attach the 3268-2C to the 3271s/3272s/3274s and the 3276, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description

P/N	**5252899**	Station Protector Element, Gas (Note 6)

Specify P/N, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N **1836446**) required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N **1836447**) required for each outdoor cable assembly.
3. Customers replacing 2260s may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N **2577672** or two P/N **1833108** cable assemblies together.

SUPPLIES

Ribbon (P/N 7037980): A multi-colored ribbon cartridge, P/N **7037980** or equivalent, is required for color printing. A black ribbon cartridge P/N **7037979** or equivalent may be used for printing only black.

The multi-colored ribbon cartridge has a print life* of one million characters for red, green and blue tracks, and two million characters for the black track. The all-black ribbon cartridge has a print life* of eight million characters. Replacement printheads and ribbon cartridges are available for purchase from SSD ... see SSD sales manual.

* Ribbon print life is derived from IBM-conducted tests. Ribbon life experienced by a user may vary significantly depending on

3268 Color Printer Mdl 2C (cont'd)

the user's own quality criteria and on factors such as printer condition, machine settings and paper quality.

Printhead (P/N 7033701): The life expectancy** of the printhead is 175 million characters.

** Printhead life expectancy is derived from IBM-conducted tests. Printhead life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings, and ribbon used.

3274 CONTROL UNIT STANDARD MODEL SELECTION GUIDE

STANDARD MODELS

For simplified order processing, some 3274 models, with certain Specify and Special Features installed as default options, have been designated "3274 Standard Models".

To order a 3274 selected from the 3274 Standard Models Selection Chart, it is only necessary to specify the 3274, the model selected, and any Special Feature indicated by the chart.

It should be noted that requests for accessories, other features, RPQ's, or any other alterations will *NOT* be accepted for shipment with a Standard Model. Any desired deviation from a Standard Model configuration necessitates normal ordering procedures and reference to the M3274 pages which follow this Standard Model Selection Guide.

3274 STANDARD MODEL SELECTION

When selecting a 3274, it is necessary to know the host attachment method, the desired terminal features/functions, plus the quantity and type of terminals to be attached. It should be noted that two terminal ports are required to attach a Displaywriter System when it includes a printer. A Glossary at the end of this guide may aid in understanding the above criteria and the 3274 Standard Models Selection Chart below.

3274 STANDARD MODELS SELECTION CHART

Category A Terminal	LOCAL (1)		REMOTE	
	SNA	Non-SNA	Base Function (2)	Enhanced Functions (3)
8	----	----	51C Standard Model	----
16	----	----	----	61C Std Mdl plus #9901 or #9908
24	----	----	21C Std Mdl	----
32	41A Std Mdl plus #9901 or #9908	41D Std Mdl plus #9901 or #9908	21C Std Mdl plus #6903	41C Std Mdl plus #9901 or #9908

Notes:

(1) These local machines are shipped with the following Specify and Special Features as default options:

Power: 200-240V AC, 1-phase, 3-wire, 60 Hz with non-locking plug.

Power Cable Length: 4.3 meters (14 feet).

Configuration Support D: See "Function List #2" for functions supported.

(2) These remote machines are shipped with the following Specify and Special Features as default options:

Power: 120V AC, 1-phase, 3-wire, 60 Hz with non-locking plug.

Power Cable Length: 4.3 meters (14 feet).

Communications Adapter: Common Communications Adapter w/o Business Machine Clock #6302.

Communications Interface: External Modem Interface #3701.

Terminal Adapters (except 51C): Type A1 #6901 and Type A2 #6902.

Configuration Support: CS-A **#9110**. See "Function List #1" for functions supported.

Communications Cable Length: 5.1 meters (20 feet).

(3) These remote machines are shipped with the following Specify and Special Features as default options:

Power: 100-127V AC, 1-phase, 3-wire, 60Hz with non-locking plug.

Power Cable Length: 4.3 meters (14 feet).

Communications Adapter: Common Communications Adapter w/o Business Machine Clock #6302.

Communications Interface: External Modem Interface #3701.

Configuration Support: CS-D. See "Function List #2" for functions supported.

The above standard models have been chosen because they are the machines commonly ordered by customers. If additional function or capability is required, use the detail M3274 pages or CF3270 to configure the 3274.

PERFORMANCE

Performance is a function of many variables. It should not be inferred that the number of terminals indicated can operate concurrently with satisfactory performance in all situations. Use FIVE3270 to predict performance for individual cases.

Function List #1: All functions/features *NOT* applicable to all models:

- SNA/SDLC or BSC operation
- Category A Terminals

3178 mdl C1, C2, C3	Display Station
3262 mdl 3, 13	Line Printer
3268 mdl 2	Printer
3268 mdl 2C (Base Color)	Color Printer
3270 Personal Computer (Control Unit Terminal Mode)	
3278 mdl 1, 2, 3, 4	Display Station

  - Typewriter (ASCII) #4624 and #4628, or
  - Data Entry #4622, or
  - Data Entry - Keypunch Layout #4623
- 3289 Text Print Feature #1130

Function List #2: This list includes all of the functions in Function List #1, plus the following:

- Category A Terminals

3268 mdl 2C	Color Printer
3270 Personal Computer	
3278 mdl 5	Display Station
3279 (Extended Color)	Color Display Station
3287 mdl 1C, 2C	Printer

- 3278/3279 Keyboard #4626, #4629, #4640, #4651, #4652 - (APL, Text, Overlay, Attribute Select, and Attribute Select/APL, respectively).
- APL/Text Control Function
- Extended Highlighting
- Summary Maintenance Statistics (SNA)
- Programmed Symbols (PS)
- Decompression of PS Load Data
- Inbound Pacing (SNA)
- Automatic Session Recovery (SNA-remote)
- Power On/Off Notification (SNA)
- Text Blocking (BSC)
- Transparency (BSC)
- Entry Assist Function.

GLOSSARY

Local Attachment: For attachment to a host via a byte multiplexer, selector, or block multiplexer channel.

Remote Attachment: For attachment to a host in data half-duplex mode via half-duplex or duplex communications facilities.

Enhanced Functions: Support for:

APL
Extended Highlighting
Extended Color
Programmed Symbols (PS)
Query

SNA: Systems Network Architecture

Control Unit Terminal Mode: The 3270 Personal Computer operates as a 3178, 3278 mdl 2 or 3279.

3274 CONTROL UNIT MDL 1

[NO LONGER AVAILABLE]

PURPOSE

Provides the capability of controlling up to a maximum cluster of 32 terminals consisting of display stations, and/or printers. Two categories of terminal adapters are used in attaching the desired displays or printers (see terminal attachment list below). The basic 3274 allows attachment of up to eight Category A terminals. The two categories of terminal adapters can be featured in various combinations to provide the maximum terminal configuration of 32 terminals (a maximum of 16 of the 32 terminals can be Category B units and at least one Category A Display Station with keyboard is needed for diagnostic purposes). The 3274 has one model for communicating in data half-duplex mode via half-duplex or duplex communications facilities and three models for local channel attachment.

ATTACHABLE TERMINALS

Category A Terminals

3178 mdl C1, C2	Display Station
3178 mdl C3	Display Station
3262 mdl 3 & 13	Line Printer
3268 mdl 2	Impact Matrix Printer
3268 mdl 2C	Color Impact Matrix Printer
3270 Personal Computer (Control Unit Terminal Mode)	
3278 mdl 1, 2, 3, 4, & 5 (See Note 1)	Display Station
3279 mdl 2A, 2B, 3A, & 3B S2A, S2B, S3G, 02X & 03X	Color Display Station
3287 mdl 1, 2	Impact Matrix Printer
3287 mdl 1C, 2C w/#8331	Color Impact Matrix Printer
3289 mdl 1 & 2	Line Printer
3290 mdl 1	Information Panel
4250 (See Notes 2 and 3)	APA Printer
5210 mdl G1, G2	Printwheel Printer
6580 mdl A04, A06, A08, A10, B04, B06, B08, B10; w/#8332 and L.P. 5608-SR9 (See Note 4)	Displaywriter System

Notes:

1. Mdl 5 cannot be attached to a 3274 mdl 1B.
2. 4250 cannot attach to 3274 mdls 1B and 1C.
3. Because of the high data volumes possible with this printer, it is strongly recommended the IBM Aid FIVE3270 be used to predict the effect the 4250 has on subsystem performance.
4. Two terminal ports are required to attach a Displaywriter System when it includes a printer.

Category B Terminals

3277 mdl 1 & 2	Display Station
3284 mdl 1 & 2	Impact Matrix Printer
3286 mdl 1 & 2	Impact Matrix Printer
3287 mdl 1 & 2 (with 3271/3272 attachment feature)	Impact Matrix Printer
3288 mdl 2	Line Printer

MODELS

Model 1A A01 — For local (SNA version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370 processor; or any 4300 processor via a byte multiplexer or block multiplexer channel.

Model B1 B01 — For local (3272 version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370 processor, or S/360 mdls 30, 40, 50, 65, 75, and 195; or any 4300 processor via a byte multiplexer or block multiplexer channel.

*Note: Attachment to a non-DCC subchannel of a block multiplexer channel or to a selector channel is not recommended due to performance considerations which may yield less than maximum throughput.

Model 1C C01 — For communicating in data half-duplex mode over half-duplex or duplex communications facilities with the following:

- A S/370 or 4300 processor via 3704 or 3705 (or via the Communications Adapter feature on the 4331), using Synchronous Data Link Control (SDLC/SNA).
- A S/370 or 4300 processor via (where applicable) 2701 , 2703, a 3704 or 3705, or a Communications Adapter feature on the 4331, using Binary Synchronous Communications (BSC).
- S/370 mdls 115, 125, 135 and 138 via Integrated Communications Adapter (ICA) using BSC.
- S/360 mdls 30, 40, 50, 65, 75, and 195 via 2701 , 2703, or a 3704 or 3705 using BSC.

Model 1D D01 — For Local (3272 version) attachment, via a byte multiplexer, selector or *block multiplexer channel, to a virtual storage S/370 processor, or any 4300 processor via a byte multiplexer or block multiplexer channel.

*Note: Attachment to non-DCC subchannel of a block multiplexer channel or to a selector channel is not recommended due to performance considerations which may yield less than maximum throughput.

Prerequisites:

(1) One 3278 or 3279 with keyboard is needed on each 3274 as a diagnostic aid. It must be attached to the first terminal address on the control unit (Port 0).

(2) A 3274 mdl 1C requires a Communications Adapter and a Communication Interface for host communications. An external modem is required with the External Modem Interface (#3701) and the CCITT V.35 Interface (#1550) unless the 3274 mdl 1C is to be directly attached to its host. The Data Circuit-Terminating Equipment or direct attachment host to which the 3274 mdl 1C is attached must provide clocking.

Customer Setup (CSU): The 3274 mdl 1C is designated as Customer Setup thereby offering the customer early availability and terminal relocation flexibility. The customer is responsible for attaching CSU units to the 3274.

HIGHLIGHTS

The 3274 is a terminal control unit which can attach up to 32 displays, and/or printers, unless a Displaywriter System(s), which includes a printer, is to be attached. A Displaywriter System without a printer requires one terminal port (the same as other terminals), but when a Displaywriter System includes a printer, two terminal ports are required to attach. These terminals are grouped into two categories. The Category A terminals are a display and printers which were developed for attachment to the 3274, while the Category B terminals were designed for attachment to the 3271s and 3272s. The 3274 attaches the Category B terminals with certain limitations. A maximum of 16 of the 32 attachable terminals can be Category B terminals. During a write operation, a 3277 attached to a 3274 via a Type B Terminal Adapter will blink more frequently than when attached to a 3271 or 3272. Category A terminals can be driven up to a maximum of 1,500 meters (4,920 feet) while Category B terminals can only be driven a maximum of 610 meters (2,000 feet). Both categories of terminals attach to their respective Terminal Adapter by the same type coaxial cable and connectors which are used between a 3271 or 3272 and its display or printer terminals.

The 3274 can communicate with a S/360, S/370 or 4300 Processor by local channel attach or remotely via communications facilities. The channel attached Control Unit is available in three mdls; mdl 1A for SNA operation with extended data stream handling capabilities, mdl 1B for 3272 operation, and mdl 1D for 3272 operation with extended data stream handling capabilities. The mdl 1C can operate with extended data stream handling capabilities as either a BSC 3271 or as an SNA/SDLC unit.

The flexibility of 3274s enables the user to configure a display sub-system for initial requirements, and later change hardware and functions to meet future needs. Function configurability is attained through a Configuration Support option via feature and system diskettes.

One Feature Diskette and two System Diskettes are shipped with each 3274. An Encrypt/Decrypt Feature Diskette is also shipped with the Encrypt/Decrypt feature (#3680) on a 3274 mdl 1C. As part of the installation procedure, a customized System diskette is generated. The generation process is accomplished by the customer keying in system configuration parameters. A unique configuration table is written on the System Diskette along with the necessary control code to accomplish the functions. For example, during subsequent control unit loading or initialization of a mdl 1C, BSC or SNA/SDLC mode of operation is determined by the configuration recorded on the System Diskette used. It is possible to create two different System Diskettes; one to be used for BSC (3271 compatible) operation and the other to be used when operating SNA/SDLC.

The control unit is initialized with control code and configuration parameters as a result of Power On or by pressing the IML push button. The load occurs from an integrated diskette drive using the previously

3274 Control Unit Mdl 1 (cont'd)

customized System Diskette. The loading process starts with the execution of extended tests contained on the diskette.

The character set to be used on attached terminals is specified on the customized IML Diskette during installation procedure. All attached terminals must have the same character set.

Either EBCDIC or ASCII can be selected during 3274 mdl 1C customization. Both ASCII transmission codes and ASCII data codes are supported in BSC. Only ASCII alphanumeric data bytes of Function Management Request/Response Units are supported in SNA/SDLC. SCS, APL/Text, and the 3270 data stream extensions included in the Structured Field and Attribute Processing (SFAP) customization option are not supported in either BSC or SNA/SDLC when ASCII is used.

Detailed information for initial customizing, for customizing made necessary by changing configurations, and for optionally updating the diskettes, is contained in the *IBM 3270 Information Display System, IBM 3274 Control Unit Planning, Setup and Customizing Guide,* GA27-2827.

COMMUNICATIONS

The 3274 mdl 1C communicates in half duplex mode with a S/370 or 4300 Processor using SDLC over duplex or half-duplex communications facilities to a 3704/3705 (or via Communications Adapter feature (#1601) on the 4331); or by BSC to a S/360, S/370 or 4300 Processor, over duplex or half-duplex communications facilities via (where applicable) a 2701, 2703, or a 3704/3705.

Communications with a S/370 mdl 115, 125, 135, or 138 can also be via the Integrated Communications Adapter (4640) and appropriate BSC features on a 3115, 3125, 3135, or 3138. Communications with a 4331 Processor can be via the Communications Adapter (#1601) using BSC or SDLC/SNA protocols.

SDLC as used in the 3274-1C conforms to a subset (unbalanced normal mode) of both the ISO HDLC and ANSI ADCCP standards. For details of this conformance, see General Information Manual GA27-3093, *IBM Synchronous Data Link Control.*

A 3274 mdl 1C can be used with X.25 communications facilities by using Configuration Support P #9116 and having appropriate hardware features to support this Configuration Support Option. See "X.25 Support" under "Control Storage Functions" and the Configuration Support P description for details.

Performance: For many 3274 mdl 1C, 21C, 31C and 51C systems, response time is limited by transmission line speeds. For these cases, applicable line speed upgrades can be translated into immediate response time improvements. However, performance is also data stream-dependent. Refer to IBM Aids for performance evaluation information.

Communications Facilities: The 3274 mdl 1C operates in half-duplex point-to-point or multipoint mode on half-duplex or duplex facilities at transmission speeds of 2000, 2400, 4800, 7200 and 9600 bps on nonswitched facilities. See M2700 pages for facilities .

Multipoint and point-to-point communications at speeds up to 56K bps are also possible where facilities are available. In addition, communications through a 3705, or to the 4331 Communications Adapter can be via direct connection (without modems or communications facilities) at speeds up to 57.6K bps. All communications at speeds greater than 9600 bps must use SDLC. See M3705 and 4331 pages for details.

Communications Adapters: Communications adapters handle the transmission control protocols (SDLC and BSC) for the 3274 mdl 1C.

Communications Interfaces: Communications interfaces connect the 3274 mdl 1C to the host link. One and only one, can be selected.

MODEMS

Unless the 3274 mdl 1C will be directly attached to its host, an external modem with its own clocking is required when the External Modem Interface (#3701) or CCITT V.35 Interface (#1550) feature is installed.

Modem	Speed (bps)
3863 mdl 1	2400/1200
3864 mdl 1	4800/1200
3865 mdl 1/2	9600/4800
3868 mdl 1	2400/1200
3868 mdl 2	4800/2400
3868 mdl 3/4	9600/4800
3872 mdl 1	2400/1200

Four-wire Switched Network Back-up is available on 3863, 3864, and 3865 modems with Auto Answer.

Switched network backup operation with Manual Call and Manual or Auto Answer is available on the 3863 mdl 1, 3864 mdl 1, 3865 mdl 1, 3865 mdl 2 and 3872 mdl 1. For communications capabilities, product utilization and features, see M2700, 3863, 3864, 3865 and 3872 pages.

DIRECT CONNECTION ATTACHMENT

In addition to host attachment via modems or other data circuit-terminating equipment (DCE), attachment can be made by direct connect, without the need for intervening DCE. The direct connect is made by using either the External Modem Interface (#3701) or the V.35 Interface (#1550), the corresponding host interface feature(s), and a connecting cable. Shown below are the hosts that provide direct connection attachment for the 3274. Only the basic features needed by the 3274 direct connect hosts are listed. These features may have prerequisites, therefore the machine pages for those hosts should also be reviewed. Physical planning manuals for the respective direct connect hosts can provide additional information on the connecting cables.

Attach Host	Speeds(bps)	Host Feature #	BSC	SDLC	Max Cable Length	3274 Feature No.
3705	14.4K,57.6K	4727(1W)	-	x	57m(190')	#1550,#6303
3705	14.4K,57.6K	4728(1Z)	-	x	57m(190')	#1550,#6303
4331	2400	4801	x	x	400m(1312')	#3701,#6302
4331	4800	4801	x	x	200m(656')	#3701,#6302
4331	9600	4801	x	x	100m(328')	#3701,#6302 or #6303

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities".

The Network Problem Determination Application (NPDA), a program product, operates with VTAM and TCAM to assist in performing communication network problem determination/ isolation and enhances the availability and serviceability of the 3274 for the above environments in all host attachment modes. See NPDA in the Program Products Section.

Display Exception Monitoring Facility (DEMF), a software tool for network problem determination/isolation enhances the availability and serviceability of the 3274 in BSC mode or channel attachment. See DEMF in the SCP sections for OS/VS1 and OS/VS2.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Physical setup, connection of cables to communication lines/modems and IBM devices incorporating protected customer access areas, switch settings, and check out.
- Contact Field Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Receipt at the customer's receiving dock, unpacking, and placement of the 3274.
- Contacting IBM Field Engineering to accomplish the channel connection tasks for the 3274 mdls 1A, 1B, or 1D.
- Connection of communication cable to the communications facility for the 3274 mdl 1C.
- Performing 3274 customization in accordance with IBM-supplied procedures:
  a. For initial installation.
  b. When made necessary by changes in configuration.
  c. For updating of the control unit diskettes (at customer option).

SPECIFY

- Voltage: (AC, 1-phase, 3-wire, 60 Hz):

	Locking Plug			Non-Locking Plug		
MDL	120V	208V	240V	120V	208V	240V
1A,B,D	NA	#9884*	#9894*	NA	#9885	#9895
1C	#9890	#9884	#9894	#9891	#9885	#9895

* For a Waterproof Connector, see "Special Features".
NA Not Applicable

- Power Cable Length: If standard 4.3 meter (14 feet) power cable is not desired, specify **#9511** for 1.8 meter (6 feet).
- Communication Cable: [mdl 1C only] If the standard 6.1 meter (20 feet) communication cable is not desired, specify one of the following: **#9061** for 3.0 meters (10 feet), **#9062** for 9.1 meters (30 feet) or **#9063** for 12.2 meters (40 feet).
- Configuration Support: The Configuration support required for the 3274 must be determined before ordering special features or attaching certain terminals. Refer to the 3274 Control Storage Requirements Tables under "Special Feature" Extended Function Store (EFS) for a detailed listing of the functions supports by each option. **Field Installation:** Yes. **Customer Setup:** Yes. **Limitations:** Certain functions require host software support in order to be utilized. Refer to host programming support descriptions to determine the levels of software required. **Note:** When operating a large screen (screen size greater than 1920 characters) display station that is connected to a 3274 mdl 1B, 1C, or 1D in a VM/370 environment, an RPQ is recommended to change the function of the display keyboard Clear key so that it will not place the display in default mode. See RPQ 8K0976, 8K0977, or 8K0978.
- Configuration Support A (**#9110**): This Configuration Support is shipped with all 3274s unless Configuration Support B **#9111** or C **#9112** or P **#9116** is specified. It provides support for all 3270 functions listed in Table 1 (see EFS under "Special Features"), plus support for solicitation of summary maintenance statistics from a 3274 mdl 1A or a 3274 mdl 1C with SNA/SDLC IML, through the use of Network Problem Determination Application (NPDA), and support for base color on attached terminals and 3270 Personal Computer (Control Unit Terminal Mode).
- Configuration Support B (**#9111**): [Mdls 1A, 1C, 1D] Provides support for all 3270 functions included in Configuration Support A **#9110** plus the ability to attach 3278 mdl 5 displays, and support for the following functions:
  - Pacing of inbound message traffic (mdls 1A and 1C/SNA).
  - Automatic Session recovery in both single and multidomain networks (mdl 1C/SNA).
  - Host notification of changes in the power on/off status at attached terminals (mdls 1A and 1C/SNA).
- Configuration Support C (**#9112**): [Mdls 1A, 1C, 1D] Provides support for all 3270 functions included in Configuration Support B, plus support for the following additional functions:
  - Structured Field and Attribute Processing. [3]
  - Programmed Symbols (PS) on attached Terminals. [3]
  - Extended Color on attached terminals. [3]
  - Extended Highlighting on attached terminals. [3]
  - Decompression of PS Load data. [3]
  - BSC Text Blocking.
  - BSC Transparency.
  - Entry Assist RPQ
  - 4250 attachment (mdls 1A and 1D only)
  - Alert Function (mdls 1A and 1C/SNA)

  Notes:

  1. The APL/Text Control Function, which is a separate option in Configuration Support A and B, is included as a basic function of Configuration Support C.

  2. Configuration Support C, unlike Configuration Support A or B, generates a program check (X PROG 470) whenever an EBCDIC datastream contains a device control code(s) that the 3274 does not support. To prevent the program check, users must purge the unsupported code(s) from the datastream. Alternately, order RPQ 8K0980. Refer to the RPQF file in the SMART data base for details.

  3. The extended data stream functions (extended color, extended highlighting and Programmed Symbols) that require the Structured Field and Attribute Processing (SFAP) option in Configuration Support C will *NOT* operate with ASCII unless RPQ 8K1037 is installed.

  Configuration Support C requires **#3623** or **#3625** as a prerequisite.
- Configuration Support P (**#9116**): [Mdl 1C] Provides functions equivalent to Configuration Support A, but is for X.25 operation only. The necessary keyboard labels required for X.25 support on the attached 3178, 3278 or 3279 terminals are shipped with each Configuration Support P #9116. **Prerequisites:** [1] 128K of control storage - #1801, #3622, #3625, and #3628, or #1801, #3623, and #3628. [2] #6303.
- Configuration Support T (**#9113**): [Mdls 1A, 1C, 1D] Provides support for the 3290 or 3270 Personal Computer (Distributed Function Mode) in addition to the other 3270 functions and terminals except:

  Category B Terminals
  3279 "Extended Color" Mdls
  Structured Field and Attribute Processing
  Programmed Symbols
  Loop Adapter
  X.21 Adapter
  Encrypt/Decrypt
  Entry Assist
  4250 Printer Attachment
  Alert Function
  Response Time Monitor
  X.25

  Two 3290 microcode load diskettes are automatically included with Configuration Support T (only one System Diskette is included with Configuration Support T). A Utility Diskette is provided to customize keyboard and keypad layouts. This Configuration Support option was developed for the user who desires to evaluate the operation of the 3290 or 3270 Personal Computer (Distributed Function Mode) on existing 3274s. Based on the intended use and inherent limitations, IBM has no intent to enhance Configuration Support T.

  Prerequisites: 128K of control storage - #1801, #3622, #3625, and #3628 or #1801, #3623, and #3628. **Limitations:** Because Configuration Support T was developed as the configuration support for evaluating of 3290s or 3270 Personal Computer (Distributed Function Mode) it does not restrict having one of the other Configuration Support A, B, or C, options although they cannot be used concurrently. **Specify: #9111** for Configuration Support B, **#9112** for C, **#9116** for P or for T, specify **#9113.**
- Alternate Mailing Address (**#9011**): For diskette only updates. Order this optional feature to specify that diskette only updates are to be mailed to an alternate site address supplied by Field Engineering using a Teleprocessing Control number (TPC) rather than to the address of the 3274 installation site. The alternate address selected is usually that of a central site location. Redistribution of the diskettes containing the diskette update is the responsibility of the customer. The user may decide to replace the existing diskette himself with the diskette containing the updates or, if requested, the IBM Field Engineer will replace the diskette. The purpose of this feature is to assist the customer with his network management. **Field Installation:** Yes. Submit Record Purpose Only MES.

Customers who have ordered, or plan to order for purchase, 3274 mdls 1A/B/C/D and anticipate later upgrading to mdls 31A/C/D should consider purchase of mdls 21A/B/C/D initially, because field upgrade of the mdl 1A/B/C/D requires replacement of the base storage at an additional cost.

SPECIAL FEATURES

Note: After the configuration support and the desired special features have been selected, the control storage requirement must be determined by using the tables under Extended Function Store (EFS) features below. Some combinations of functions and features may exceed the capacity of the control storage in the basic machine, in which case table 2 will identify what EFS features must be ordered. Still other combinations may exceed the maximum control storage possible with all EFS features. Such combinations are invalid configurations and cannot be configured. In these situations, feature(s) must be forfeited in order to reduce the control storage requirement to an amount not exceeding the maximum control storage possible.

Control Storage Expansion (#1801): Provides the ability to install storage above the basic level. This feature must be installed with EFS - Type C1 (#3622), or Type C2 (#3623). This combination is also a prerequisite to installing the other EFS features (Types C3/ #3625, D1/ #3627, D2/ #3628). **Limitations:** Cannot be installed on 3274 mdl 1B. **Maximum:** One. **Field Installation:** Yes.

3274 Control Unit Mdl 1 (cont'd)

Extended Function Store (EFS) Type C1, C2, C3 (#3622, #3623, #3625) and Types D1, D2 (#3627, #3628:) Provide increments of control storage to accommodate combinations of functional features that exceed the storage capacity of the base machine. Types C1, C3, and D1 each provide 16,384 additional positions of control storage. Types C2 and D2 each provide 32,768 additional positions of control storage. To determine which EFS features may be required, refer to the 3274 Control Storage Requirements in Tables 1 and 2 below.

Note: A description of non-"Specify", non-"Feature", non-"Machine" Control Storage Requirement Functions is given later in this section, with the exception of "Category A Terminals", "Category B Terminals", EBCDIC, and ASCII, which have been described above.

3274 Control Storage Requirement Tables: Use the following procedure to determine which, if any, EFS features must be ordered on the mdl 1A, 1C or 1D:

Step #1: Select the Configuration Support option which contains the functions desired. If T is selected, go directly to Table 2, line 6, for EFS feature codes needed, otherwise continue to Step #2.

Step #2: After determining the desired Configuration Support, refer to the appropriate part of Table 1 and select the features desired:

3274 mdl 1A, refer to Table 1, Part 1.
3274 mdl 1C/SNA, refer to Table 1, Part 2.
3274 mdl 1C/BSC, refer to Table 1, Part 3.
3274 mdl 1D, refer to Table 1, Part 4.

Step #3: Determine the total Type C and total Type D storage required for the features and functions selected in Step #2.

Step #4: Add the Type C and Type D totals to determine the total control storage required. If the total is equal to or less than 65,536, no EFS features are required. If the total is greater than 65,536, continue with Step #5.

Step #5: Refer to Table 2. For Configuration Support A or B, begin at line 1 and work down. For C, begin at line 4 and work down. Stop at the first line that satisfies the control storage requirements determined in Steps 3 and 4. Order the EFS features listed in the last column.

Notes For Table 1 - Parts 1, 2, 3 and 4

[1] Configuration Support A Consideration Only: If all three keyboard types (Typewriter, Data Entry and Data Entry-Keypunch-like) are required on display stations attached to the 3274, add 1000 to the Type D storage requirements in addition to that listed in the table.

[2] If the total Type D storage requirement calculated for Category A, plus Category B terminals, exceeds the applicable maximum storage value listed below, use the applicable maximum value.

Unit	Maximum Storage Value
3274-1A	10,744
3274-1C/SNA	10,744
3274-1C/BSC	6,844
3274-1D	8,844

[3] There is no customizing option nor additional control storage required to support 10 Numeric-only Character Set for Operator Identification Card Reader (#4600) on 3277s (Category B terminals) which are attached to a 3274.

[4] Add the indicated amount for each keyboard type to be used.

[5] The SFAP function is also required when the SCS Support for SFAP (#9661) feature is to be used on 3287 mdls 1, 2, 1C or 2C.

[6] SCS Printer Support is required for DCA-LV2 Word Processing applications. This support also required for 5210 mdls G01 or G02, attached to 3274 mdls 1A and 1C SNA for applications that utilize the cut sheet feed attachment feature (#7860) when operating with 2 drawers.

[7] Configuration Support C (#9112) is required for 5210 mdls G01, G02 attached to 3274 mdls 1A and 1C SNA for support of Word Processing applications. This includes those applications which utilize the cut sheet feed attachment feature (#7860) when operating with 2 drawers.

[8] The SFAP function is also required when the Query function is used with 3262 mdls 3 and 13, and 3268 mdl 2 printers. The Query function allows the application to interrogate the printer to determine what function is supported.

[9] For 4250 attachment to 3274 mdls 1A and 1D, the SFAP function is required plus support for one Extended Attribute Terminal for each 4250 attached.

[10] SCS printer support required for 4250 attachment.

[11] A Displaywriter System requires two terminal ports when it includes a printer.

[12] **Limitations:** This function does *NOT* support ASCII unless RPQ 8K1037 is installed.

TABLE 1 - PART 1

3274 Model 1A	TYPE C	TYPE D
Mdl 1A Base (including copy) (Choose one)		
Configuration Support A (#9110)	41,200	13,600

TABLE 2

EFS-Type C1 (#3622): [Mdls 1A, 1C, 1D] Provides 16,384 positions of additional control storage. **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #1801. Limitations:** Cannot be installed with #3623.

EFS-Type C2 (#3623): [Mdls 1A, 1C, 1D] Provides 32,768 positions of additional control storage. **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #1801. Limitations:** Cannot be installed with #3622.

EFS-Type C3 (#3625): [Mdls 1A, 1C, 1D] Provides 16,384 positions of additional control storage. **Maximum:** One. **Field Installation:** Yes. (Field Installation only.) **Prerequisites: #3622. Limitations:** Field Installation only.

EFS-Type D1 (#3627): [Mdls 1A, 1C, 1D] Provides 16,384 positions of additional control storage. **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #3622 or #3623.**

EFS-Type D2 (#3628): [Mdls 1A, 1C, 1D] Provides 32,768 positions of additional control storage. **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #3622 or #3623.**

NON-COMMUNICATIONS FEATURES

Encrypt/Decrypt (#3680): Provides the Federal Data Encryption Standard algorithm to encrypt and decrypt data messages under a 56-bit key variable. When used in conjunction with the ACF/VTAM Encrypt/Decrypt feature (Feature #6010, Program #5735-RC2) or ACF/TCAM Version 2 (Program Number 5735-RC3) and either the 3848 and the OS/VS1 and OS/VS2 MVS Cryptographic Unit Support Program Product (5740-XY6), or the OS/VS1 and OS/VS2 MVS Programmed Cryptographic Facility Program Product (#5740-XY5), data transmitted over unprotected communications lines can be safeguarded through cryptography. **Limitations:** [1] 3274 mdl 1C (SDLC only). [2] Mutually exclusive with X.25. The crypto feature cannot be used with X.25 operation. **Maximum:** One. **Field Installation:** Yes. **Note:** A mercury battery, P/N **1743456**, or equivalent, is needed. A battery is shipped with this feature. See "Accessories" for additional or replacement battery. Replacement or the discharged battery is the customer's responsibility. The discharged IBM battery should be returned to IBM.

Waterproof Power Connector (#8801): [Mdls 1A, 1B, 1D] Provides a waterproof connector on the power cable to satisfy local ordinances requiring this type termination in specific locations. See "Specify" for cable length to be ordered. **Limitations:** The only valid Voltage Specify codes are **#9884 and #9894.** One of these two codes must be specified when ordering this feature. **Maximum:** One. **Field Installation:** Not Recommended.

COMMUNICATION ADAPTERS

Common Communications Adapter Without Business Machine Clock (#6302): [Mdl 1C]. Required for communications at speeds up to 9600 bps (see "Limitations" below when a terminal Adapter(s) Type B (#7802-#7805) is installed). SNA/SDLC and BSC transmission control protocols are supported. Clocking must be provided by the modem or communications facility. **Limitations:** [1] **#6303** must be ordered/installed in lieu of this feature, if SNA/SDLC protocol is required with a line speed greater than 7200 bps and a Category B Terminal Adapter(s) (#7802-#7805) is installed. [2] This feature cannot be ordered/installed with #6303. **Maximum:** One. **Field Installation:** Yes.

High Performance Communications Adapter (#6303): [Mdl 1C]. When SNA/SDLC protocol is required with a line speed of 9600 bps and a Category B Terminal Adapter(s) is installed, or with a line speed greater than 9600 bps or for X.25 support, this feature is required for attachment to the communications lines through either an IBM or a non-IBM modem with its own clocking. **Limitations:** [1] With this feature installed, operation is restricted to SNA/SDLC protocol. IML for BSC protocol is no longer possible. [2] This feature cannot be ordered/ installed with #6302. **Maximum:** One. **Field Installation:** Yes.

COMMUNICATIONS INTERFACES

CCITT V.35 Interface (#1550): [Mdl 1C] Provides a cable and a CCITT interface for attachment to an external modem or other DCE complying with CCITT Recommendation (1976) V.35, ISO Standard 2593, other relevant CCITT Recommendations, and provides clocking of up to 56K bps. Attachment to non-IBM DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 3705 at speeds up to 57.6K bps. See "Specify" section for communication cable length. **Limitations:** [1] Cannot be installed with any other communications Interface Feature. [2] BSC is not supported at speeds greater than 9600 bps. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] **#6302 or #6303** for communications up to 9600 bps. [2] **#6303** for communications above 9600 bps or for X.25 operation up to a maximum of 9600 bps.

Note: Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

External Modem Interface (#3701): [Mdl 1C] Provides a cable and a RS-232C interface for attachment to an external IBM modem that provides clocking of up to 9600 bps. Attachment to a non-IBM modem or other DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 4331 Processor at speeds up to 9600 bps. See "Specify" for communication cable length. **Limitations:** Cannot be installed with any other Communications Interface feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #6302 or #6303. #6303** is required for X.25 operation.

Digital Data Service (DDS) Adapter (#5650, #5651): [#5650 - For Point-to-Point Operation; #5651 - For Multipoint Operation] [Mdl 1C] An adapter for BSC or SDLC data transmission at speeds of 2400, 4800 or 9600 bps, or SDLC data transmission at 56K bps over the AT&T nonswitched Dataphone® Digital data service network. The DDS Adapter interfaces to a DDS Channel Service Unit, the customer site termination of the DDS network. See "Specify" section for communication cable length. **Specify: #9822** for 2400 bps, **#9823** for 4800 bps, **#9825** for 9600 bps, or **#9833** for 56K bps. To change specify on an installed machine, contact Field Engineering Branch Office. MES number 999999 is to be used for Incident Report (IR) completion data. **Limitations:** Cannot be installed with any other Communications Interface feature. **Maximum:** One #5650 or #5651. **Field Installation:** Yes. **Prerequisites:** [1] **#6302 or #6303** for communications up to 9600 bps. [2] **#6303** for communications above 9600 bps. **Note:** [1] After installation of either feature #5650 or #5651, the operational mode can be changed to the other (Point-to-Point to Multipoint or vice versa) by simply re-customizing the System Diskette to select the desired operational mode. [2] Depending on the length and content of the data stream, an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be

3274 Control Unit Mdl 1 (cont'd)

experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

TERMINAL ADAPTERS

Terminal Adapter Type A1, A2, A3 (#6901, #6902, #6903): One each of these adapters can be installed. Each adapter provides for the attachment of an additional eight Category A terminals. It should be noted that two terminal ports are required to attach a Displaywriter System when it includes a printer. The base control unit, which provides for attachment of eight Category A terminals, can be expanded with these three terminal adapters to a maximum configuration of 32 Category A terminals. These terminal adapters must be installed in sequence, making it important to order the correct adapter feature code(s).

Terminal Adapter Type A1 (Terminals 9-16) - #6901
Terminal Adapter Type A2 (Terminals 17-24) - #6902
Terminal Adapter Type A3 (Terminals 25-32) - #6903

Limitations: #6903 is mutually exclusive with #7804 and #7805. **Maximum:** One of each type terminal adapter. **Field Installation:** Yes. **Prerequisites:** #6902 requires **#6901** ... #6903 requires **#6902.** **Note:** To attach Category A terminals via the 3299 , refer to RPQ 8K1156.

Terminal Adapter Type B1 (#7802): Permits the attachment of four Category B terminals and provides for the installation of Terminal Adapter Types B2, B3 and B4 when additional Category B terminals are desired. **Maximum:** One. **Field Installation:** Yes. **Note:** When installed on a 3274 mdl 1A, or on a 3274 mdl 1C/SNA, EFS feature(s) (#3622, #3625, #3627) and Control Storage Expansion (#1801) are required. See "3274 Control Storage Requirements Tables" under EFS features to accurately determine what storage features are required on 3274 mdls 1A, 1C and 1D in specific configurations.

Terminal Adapter Type B2, B3, B4 (#7803, #7804, #7805): Each of these terminal adapters permits the attachment of four additional Category B terminals. A maximum of one each of these terminal adapters can be installed for a combined total of 12 additional or 16 total Category B terminals attached to a control unit. These terminal adapters must be installed in sequence, making it important to order the correct adapter feature code(s).

Terminal Adapter Type B2 (Terminals 5-8) - #7803
Terminal Adapter Type B3 (Terminals 9-12) - #7804
Terminal Adapter Type B4 (Terminals 13-16) - #7805

Limitations: #7804 and #7805 are mutually exclusive with #6903. **Maximum:** One of each type terminal adapter. **Field Installation:** Yes. **Prerequisites:** **#7802.**

CONTROL STORAGE FUNCTIONS

APL/Text Control Function: This function, selectable during the customization of a 3274 mdl 1A, 1C or 1D, expands the character handling capability of the 3274 to accommodate the APL, Text, and graphic plot character sets on 3278s, 3268 mdl 2, 3262s (text only), 3279 , and 3287s attached via Type A Terminal Adapters (#6901, #6902, #6903).

Note: The 3274, with or without this APL/Text control function, does *NOT* support the 3270 Data Analysis/APL Feature (#1066) on attached 3277s or 3284, 3286 or 3287s, *NOR* does it support the Text Print Feature (#7880) on attached 3288s.

3289 Text Print Control Function: This function, selectable during customization of a 3274 mdl 1A, 1C, or 1D, extends the character handling capability of the 3274 to accommodate the text characters for the text print feature (#1130) on attached 3289s.

Copy Function: This function, selectable during the customization of a 3274 mdl 1C (BSC) or 1D, enables the copying of the screen contents of an attached 3278 or 3279 to an attached 3268, 3287 or 3289 through use of the Local Print Key on the display keyboard. This function is provided as basic on the 3274 mdls 1A, 1B and 1C (SNA). The ability to perform host initiated local copies from a 3278 or 3279, to a 3268, 3287 or 3289 attached to a 3274 mdl 1A or 1C (SNA) is also provided as basic. In addition, the 3274 mdl 1C (BSC) supports the 3270 host Copy command as basic.

Local Copy Summary

3274 Mdl	Print Key	Host Initiated
1A	Basic	Basic
1B	Basic	Not Applicable
1C (BSC)	Cust. Option	Basic
1C (SNA)	Basic	Basic
1D	Cust. Option	Not Applicable

Note: The 3274 does not support copying the screen contents of an attached display station to an attached 4250.

Host Loadable Print Authorization Matrix: This function, selectable during the 3274 customization process, provides the capability for the 3274, during subsequent IBM procedures, to receive, from a user-written application program at the host CPU, an updated Printer Authorization Matrix to override the matrix created by the customization operator or by system default.

Between Bracket Printer Sharing Function: This function, selectable during the customization of a 3274 mdl 1A or 1C (SNA), enables attached 3268s, 3287s and 3289s to be used as Local Copy output devices for the screen contents of attached 3278, and 3279s, when the printers are Between Brackets with the host application program. Printers are available for Local Copy operations only when they are not in session with an application program if this option is not selected.

Color Convergence Function: This function, selectable during the customization of any mdl 3274, provides the mechanism through which the operator of a 3279 can perform color convergence for the 3279.

Structured Field and Attribute Processing (SFAP) Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, provides a new 3270 command and several new orders that extend the functional capabilities of appropriately featured 3278, 3279, and 3287 terminals. Data Streams sent to these attached terminals can include extended color, extended highlighting, or Programmed Symbols, in any combination. **Prerequisites:** BSC hosts that utilize this function must transmit in transparent-text mode.

Limitations: This function does *NOT* support ASCII unless RPQ 8K1037 is installed.

Programmed Symbols (PS) Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, enables the customer to define, store, and access up to six, 190-symbol sets on appropriately featured 3278s, 3279s, 3268 mdl 2C and 3287s. **Prerequisites:** SFAP.

Decompression Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, decompresses data streams containing compressed Programmed Symbols generated by the Graphical Data Display Manager (GDDM) program product. Its usage is recommended for all 3274 TP host attachments that use GDDM. **Prerequisites:** SFAP.

Extended Attribute Terminals: This function, selectable during the customization of any mdl 3274 except mdl 1B, establishes an internal control table for each terminal on which Extended Color, Extended Highlighting, and Programmed Symbols, will be used or when a 4250 will be attached. If more extended attribute terminals are attached to the 3274 than are specified during customization, the excess terminals will execute only base-level function. **Prerequisites:** SFAP.

X.25 Support: [Mdl 1C] This function, through the use of Configuration Support P (**#9116**) on a 3274 mdl 1C, provides for attachment to X.25 data transmission services having an interface which complies with Recommendation X.25 (Geneva 1980) of the International Telegraph and Telephone Consultative Committee (CCITT). IBM conformance to this X.25 interface is defined in *IBM General Information Manual - The X.25 Interface for Attaching IBM SNA nodes to Packet - Switched Data Networks,* GA27-3345. Keyboard labels on attached 3178s, 3278s or 3279s keyboards and display screen indicators are provided for operator reference during the calling, data exchange, and disconnecting phases. See "X.25 Keyboard Labels" under "Accessories" for details on the labels required for selected keyboards on terminals connected to a 3274 attached to a X.25 communications facility. **Limitations:** #3680 is mutually exclusive with 3274 X.25 capability. The crypto feature cannot be used with X.25 operation. **Prerequisities:** [1] Configuration Support P. [2] SNA/SDLC protocol. [3] Configuration Support P requires 128K of control storage. [4] One of the following Communications Interfaces: **#3701, #5655 or #1550.** **Note:** The maximum line speed supported with any of these Communications Interface features is 9600 bps with X.25. The Communications Interface feature required depends upon the X.25 physical interface provided by the network. [5] **#6303.**

IBM Personal Computer Attachment Support: This function, selectable during the customization of any mdl 3274, except mdls 1B and 21X, provides support for attachment of an IBM Personal Computer to a 3278 or 3279. **Prerequisites:** SFAP.

3274 Entry Assist RPQ: This RPQ provides capabilities which facilitate entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, improved character and word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist RPQ is intended for use with a specific set of host editor programs. See RPQ 8K1147 Description and Price Transmittal for storage requirements and prerequisites.

Alert Function: This function, selectable during the customization of 3274 mdls 1A and 1C/SNA reports problem determination data to the host, for recording and display, when NPDA Version 3 is installed in the host.

MODEL CONVERSIONS

See table below for field installation of model changes.

3274 Control Unit Mdl 1 (cont'd)

From Model	To Model 1A/B/D	1C	21A/B/D	21C	31A/D	31C
1A/B/D	Yes(1)	No	NR	No	Yes	No
1C	No	-	No	NR	No	Yes
21A/B/D	NR	No	Yes(1)	No	Yes	No
21C	No	NR	No	-	No	Yes
31A/D	NR	No	NR	No	Yes	No
31C	No	NR	No	NR	No	-

NR = Field Installation NOT recommended.

Note 1: When making model changes, the applicable Control Storage Requirement Table must be used to determine if sufficient control storage is available. Also, when changing models, refer to FIVE3270 to evaluate expected performance.

Note 2: Customers who have ordered, or plan to order for purchase, IBM 3274 models 1A/B/C/D and anticipate later upgrading to models 31A/C/D should consider purchase of models 21A/B/C/D initially, because field upgrade of models 1A/B/C/D requires replacement of the base storage at an additional cost.

ACCESSORIES

Battery, Mercury: To provide power to sustain the master key of the Encrypt/Decrypt feature **#3680** on the 3274 when normal power is not present. A 4.14 volt mercury battery (**P/N 1743456**). This supply item has a shelf life of one year under normal conditions, and can be expected to provide 3.5 years of normal service. Additional or replacement batteries can be ordered from IBM. Discharged batteries should be returned to IBM for disposal. Return information is printed on the label of the battery.

X.25 Keyboard Labels: Stick-on labels are used on the keyboards of 3178s, 3278s and 3279s attached to a 3274 mdl 1C using X.25 communications facilities. These labels are normally provided with Configuration Support P (**#9116**). If new or additional labels are required, they can be obtained by ordering Form Number GX23-0285. Each form number is a sheet containing 16 sets of stick-on labels, enough for 16 keyboards, and the installation procedure for installing the labels.

SUPPLIES (None)

3274 CONTROL UNIT MDLS 21, 31, 51C

PURPOSE

Provides the capability of attaching 3270 Information Display System displays and printers to System/3, S/360, S/370, 4300, 303X, 3081 processors, and the 8100 Information System. Models 21A, 21B, 21D, 31A and 31D are for local channel attachment. Models 21C, 31C and 51C are used for communicating in data half-duplex mode via half-duplex or duplex communications facilities.

For System/3 attachment, each of the control units can communicate via Binary Synchronous Communications (BSC) in data half-duplex mode over half-duplex or full duplex communications facilities with a suitably equipped System/3 model 4, 8, 10, 12, or 15 at speeds up to 9600 bps.

ATTACHABLE TERMINALS

Category A Terminals

3178 mdl C1, C2	Display Station
3178 mdl C3	Display Station
3262 mdl 3 & 13	Line Printer
3268 mdl 2	Impact Matrix Printer
3268 mdl 2C	Color Impact Matrix Printer
3270 Personal Computer Control Unit Terminal Mode (See Note 2)	3270 Personal Computer Distributed Function Mode
3278 mdl 1, 2, 3, 4, & 5 (See Note 1)	Display Station
3279 (except mdl 2C)	Color Display Station
3287 mdl 1, 2 w/#8331	Impact Matrix Printer
3287 mdl 1C, 2C	Color Impact Matrix Printer
3289 mdl 1 & 2	Line Printer
3290 (See Note 2)	Information Panel Display
4250 (See Notes 3 and 4)	APA Printer
5210 mdl G1, G2	Printwheel Printer
6580 mdl A04, A06, A08, A10, B04, B06, B08, B10; w/#8332 and L.P. 5608-SR9 (See Note 5)	Displaywriter System

Notes:

1. Mdl 5 cannot be attached to a 3274 mdl 21 or a mdl 51C without Extended Function Store #1800.
2. 3274 Model 31X and 51C.
3. 4250 cannot attach to 3274 mdl 21X, 31C and 51C.
4. Because of the high data volumes possible with this printer, it is strongly recommended that the IBM AID FIVE/3270 be used to predict the effect the 4250 has on subsystem performance.
5. Two terminals ports are required to attach a Displaywriter System when it includes a printer.

Category B Terminals*

3277 mdl 1 & 2	Display Station
3284 mdl 1 & 2	Impact Matrix Printer
3286 mdl 1 & 2	Impact Matrix Printer
3287 mdl 1 & 2 (with 3271/3272 attachment feature)	Impact Matrix Printer
3288 mdl 2	Line Printer
5160 mdl 588 & 568	IBM Personal Computer XT/370
5160 mdl 087	IBM Personal Computer - with XT/370 Option (1503891)

* Category B Terminals cannot be attached to a 3274 mdl 21A, mdl 21C/SNA or a mdl 51C/SNA without Extended Function Store #1800.

Mdl 21s have 64K bytes of control storage and do not support all terminal features. Mdl 31s have 128K bytes of control storage and do support all terminal features, except for limitations on some feature combinations for mdls 31A, 31C/SNA, and 51C (with EFS)/SNA (see Special Considerations table with the Configuration Support Requirements Tables). The mdl 51C has 64K bytes of control storage with a feature for adding 64K bytes to provide for support of all terminal features.

The basic mdl 21s and 31s allow attachment of up to eight Category A terminals. Two types of terminal adapter features are offered to attach additional terminals. The two types can be ordered in various combinations to attach up to a maximum cluster of 32 terminals ... a maximum of 16 of the terminals can be Category B terminals.

Note: The 3274 mdls 21C and 31C are functionally equivalent to the 3274 mdl 1C.

The mdl 51C has 64K bytes for central storage with a feature for adding 64K bytes to provide for support of all terminal features. The basic mdl 51C allows attachment of up to eight Category A terminals. A terminal adapter feature can be used to attach up to four Category B terminals giving a maximum cluster size of 12 terminals.

MODELS

Model 21A A21
Model 31A A31

For local (SNA version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370 processor; or a 4300 Processor via a byte multiplexer or multiplexer channel.

Model 21B B21

For local (3272 version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370 processor, or S/360 mdls 30, 40, 50, 65, 75, and 195; or a 4300 Processor via a byte multiplexer or multiplexer channel.

Model 21C C21
Model 31C C31
Model 51C C51

For communicating in data half-duplex mode over half-duplex or duplex communications facilities with the following:

- A S/370 or 4300 processor via 3704, 3705, or 3725 (or via the Communications Adapter feature on the 4321 or 4331), using Synchronous Data Link Control (SDLC/SNA).
- A S/370 or 4300 processor via (where applicable) 2701 , 2703, a 3704, 3705, or 3725, or a Communications Adapter feature on the 4321 or 4331, using BSC.
- S/370 mdls 115, 125, 135 and 138 via Integrated Communications Adapter (ICA) using BSC.
- S/360 mdls 30, 40, 50, 65, 75, and 195 via 2701 , 2703, or a 3704 or 3705 using BSC.
- 4331/4361 Processor - The model 51C can also attach to a 4331 via a direct- or data link-attached loop using SDLC.
- 8100 Information System - The model 51C can attach using SDLC via a data link or a direct attached or data link attached loop.

Model 21D D21
Model 31D D31

For Local (3272 version) attachment, via a byte multiplexer, selector or *block multiplexer channel, to a virtual storage S/370 processor, or a 4300 processor via a byte multiplexer or block multiplexer channel.

Prerequisites:

[1] One 3178, 3278 or 3279 with keyboard is needed on each 3274 as a diagnostic aid. It must be attached to the first terminal address on the control unit (Port 0).

[2] A 3274 mdl 21C or 31C requires a Communications Adapter and a Communication Interface for communications. An external Data Circuit-terminating Equipment (DCE) is required with the External Modem Interface (#3701) or the CCITT V.35 Interface (#1550) or CCITT X.21 Interface (#5655) unless the 3274 model 21C/31C is to be direct connected. The DCE or direct connected unit to which the 3274 mdl 21C or 31C is attached must provide clocking.

For use with System/3, the 3274 requires an Integrated Modem Feature #5500 (51C only) or External Modem Interface #3701, or DDS Adapter (#5650 or #5651) for host communications. An external modem is not required with the External Modem Interface #3701 when attached locally to System/3 via BSCA/EIA Local, BSCC/EIA Local, LCA, or ICA.

[3] The 3274 mdl 51C requires a Communications Adapter and a Communications Interface for host communications. An external DCE may be required with the External Modem Interface (#3701), and the CCITT V.35 Interface (#1550), and the CCITT X.21 Interface (#5655 and #5656).

Customer Setup (CSU): The 3274 mdls 21C, 31C, and 51C are Customer Setup thereby offering the customer early availability and terminal relocation flexibility. The customer is responsible for attaching CSU units to the 3274. For additional information on CSU, contact IBM.

STANDARD MODELS

For ease of configuration and simplification in ordering, some predefined configurations for 3274 mdls 21C and 51C have been

* **Note:** Attachment to a non-DCC subchannel of a block multiplexer channel or to a selector channel is not recommended due to performance considerations which may yield less than maximum throughput.

3274 Control Unit Mdls 21, 31, 51C (cont'd)

designated Standard Models. These Standard Models are based on commonly ordered configurations and should satisfy a majority of customer requirements. Refer to 3274 Control Unit Standard Model Selection Guide pages for Standard Model descriptions, selection and ordering details.

HIGHLIGHTS

These units can attach up to 32 (12 on the mdl 51C) displays, and/or printers, unless a 6580 Displaywriter System, which includes a printer, is to be attached. A Displaywriter System without a printer requires one terminal port (the same as other terminals), but when a Displaywriter System includes a printer, two terminal ports are required to attach. These terminals are grouped into two categories. The basic unit provides for attachment of up to eight of the Category A terminals. Additional terminals are attached via terminal adapter features. The Category A terminals are a display and printers which were developed for attachment to the 3274s, while the Category B terminals were designed for attachment to the 3271s and 3272s. The 3274s attach the Category B terminals with certain limitations. A maximum of four on the mdl 51C or 16 of the 32 attachable terminals on mdls 21 and 31 can be Category B terminals. During a write operation, a 3277 attached to a 3274 via a Type B Terminal Adapter will blink more frequently than when attached to a 3271 or 3272. Category A terminals can be located up to a maximum of 1,500 meters (4,920 feet) while Category B terminals can only be driven a maximum of 610 meters (2,000 feet). Both categories of terminals attach to their respective Terminal Adapter by the same type coaxial cable and connectors which are used between a 3271 or 3272 and its display or printer terminals.

The 3274 can communicate with a S/360, S/370 or 4300 Processor by local channel attach or remotely via communications facilities. The channel attached Control Units are the mdls 21A and 31A for SNA operation with extended data stream handling capabilities, mdl 21B for 3272-like operation, and mdls 21D and 31D for 3272-like operation with extended data stream handling capabilities. The mdls 21C and 31C can operate with extended data stream handling capabilities using either BSC or SNA/SDLC.

The mdl 51C can also attach via a Data Link to the 8100 Information System or to the 8100 or 4331/4361 via a Direct or Data Link attached Loop.

The flexibility of 3274s enables the user to configure a display sub-system for initial requirements, and later change hardware and functions to meet future needs. Function configurability is attained through Configuration Support options, via Feature and System Diskettes.

One Feature Diskette and two System Diskettes are shipped with each 3274. An Encrypt/Decrypt Feature Diskette is also shipped with the Encrypt/Decrypt feature (#3680) on a 3274 mdl 21C, 31C, or 51C. As part of the installation procedure, a customized System Diskette is generated. The generation process is accomplished by the customer keying in system configuration parameters. A unique configuration table is written on the System Diskette along with the necessary control code to accomplish the functions. For example, during subsequent control unit loading or initialization of a mdl 21C, 31C, or 51C, BSC or SNA/SDLC mode of operation is determined by the configuration recorded on the System Diskette used. It is possible to create two different System Diskettes; one to be used for BSC operation and the other to be used when operating SNA/SDLC.

The control unit is initialized with control code and configuration parameters as a result of Power On or by pressing the IML pushbutton. The load occurs from an integrated diskette drive using the previously customized System Diskette. The loading process starts with the execution of extended tests contained on the diskette.

The character set to be used on attached terminals is specified on the customized IML Diskette during installation procedure. All attached terminals must have the same character set.

Either EBCDIC or ASCII can be selected during 3274 mdl 21C, 31C, or 51C customization. ASCII support is provided to correspond with transmission code that is used by System/3. Both ASCII transmission codes and ASCII data codes are supported in BSC. Only ASCII alphameric data bytes of Function Management Request/Response Units are supported in SNA/SDLC. SCS, APL/Text, and the 3270 data stream extensions included in the Structured Field and Attribute Processing (SFAP) customization option are not supported in either BSC or SNA/SDLC when ASCII is used.

Detailed information for initial customizing, for customizing made necessary by changing configurations, and for optionally updating the diskettes, is contained in the *IBM 3270 Information Display System, IBM 3274 Control Unit Planning, Setup and Customizing Guide,* GA27-2827.

COMMUNICATIONS

The 3274 mdls 21C, 31C, and 51C communicate by BSC in data half-duplex mode with a System/3 over duplex or half-duplex communications facilities as follows:

System/3 mdl 4 via BSCA
System/3 mdl 8 via ICA or BSCA
System/3 mdl 10 via BSCA or LCA
System/3 mdl 12 via ICA or BSCA
System/3 mdl 15 via BSCA or LCA
System/3 mdl 15D via BSCA, BSCC, or LCA

Communications Facilities (System/3): The 3274 mdls 21C, 31C, and 51C operate over data half-duplex mode on point-to-point or multipoint half-duplex or duplex nonswitched facilities at transmission speeds of 1200 (51C only), 2000, 2400, 4800, 7200, and 9600 bps. See M2700 pages for facilities.

The 3274 mdls 21C, 31C, or 51C communicates with a S/370 or 4300 Processor using SDLC over duplex or half-duplex communications facilities to a 3704, 3705, or 3725 or via the Communications Adapter on the 4321 or 4331 (SNA/SDLC), or by BSC to a S/360, S/370 or 4300 Processor, over duplex or half-duplex communications facilities via (where applicable) a 2701, 2703, or a 3704, 3705, 3725 (see note 1), or the Communications Adapter on a 4321 or 4331. Communications with a 4331 Processor is also provided via a direct or data link attached loop for the mdl 51C.

Communications with a S/370 mdl 115, 125, 135, or 138 can also be via the Integrated Communications Adapter (#4640) and appropriate BSC features on a 3115, 3125, 3135, or 3138.

The mdl 51C communicates with the 8100 Information System, using SDLC, via a data link, a direct or data link attached loop, or direct connection.

SDLC as used in the 3274-21C or 31C conforms to a subset (unbalanced normal mode) of both the ISO HDLC and ANSI ADCCP standards. For details of this conformance, see General Information Manual GA27-3093, *IBM Synchronous Data Link Control.*

A 3274 mdl 31C or 51C can be used with X.25 communications facilities by using Configuration Support P (**#9116**), or by customization with Configuration Support D (**#9124**) (release level 62 or higher). Appropriate hardware features must be installed to support the Configuration Support option being used. See "X.25 Support" under "Control Storage Functions" and the Configuration Support P and D descriptions for details.

Note 1: The 3725 is not connectable to a S/360.

Performance: For many 3274 mdl 21C, 31C and 51C systems, response time is limited by transmission line speeds. For these cases, applicable line speed upgrades can be translated into immediate response time improvements. However, performance is also data stream dependent. Refer to IBM Aids for performance evaluation information.

Communications Facilities: The 3274 mdl 21C, 31C, or 51C operate in half-duplex point-to-point or multipoint mode on half-duplex or duplex facilities, using SDLC or BSC, at transmission speeds of 1200/600 (mdl 51C only), 2000, 2400/1200, 4800/2400, 7200/3600 and 9600/4800 bps on nonswitched facilities. In addition, the 3274 mdl 51C operates in half-duplex point-to-point mode using SDLC at transmission speeds of 1200/600, 2400/1200 4800/2400, and 9600/4800 bps on switched facilities. See M2700 pages for facilities .

The 3274 mdl 51C also operates in half-duplex mode at 9600 or 38.4K bps over a direct attached loop, and at 2400, 4800, or 9600 bps over a data link attached loop.

Multipoint and point-to-point communications at speeds up to 56K bps are also possible where facilities are available. In addition, communications through a 3705, or to the Local Attachment Interface #4801 on the 4331 or to an 8130/8140 Processor can be via direct connection without the need for communications facilities or modems. All communications at speeds greater than 9600 bps must use SDLC. See M3705, 4331, 8101, 8130 and 8140 pages for details.

Modems: Unless the 3274 mdls 21C, 31C, or 51C will be direct connected, an external Data Circuit-terminating Equipment (DCE) is required when the External Modem Interface (#3701) or CCITT V.35 Interface (#1550) or CCITT X.21 Interface (#5655 or #5656) is installed.

For use with the System/3, unless a Digital Data Service (DDS) Adapter #5650 or #5651 is installed, a 1200 bps integrated modem feature #5500 [51C only] or an external modem must be attached to the 3274 mdl 21C, 31C, or 51C. External modems require the External Modem Interface #3701. No external modem is required when attached locally to System/3 through BSCA/EIA Local, BSCC/EIA Local, LCA or ICA; however, External Modem Interface #3701 is required.

Modem	Speed (bps)
3863 mdl 1/2	2400/1200
3864 mdl 1/2	4800/2400
3865 mdl 1/2	9600/4800
3868 mdl 1	2400/1200
3868 mdl 2	4800/2400
3868 mdl 3/4	9600/4800
3872 mdl 1	2400/1200

3274 Control Unit Mdls 21, 31, 51C (cont'd)

Switched network backup (SNBU) operation with Manual Call and Manual or Auto Answer is available on the 3872 mdl 1. Four-wire SNBU operation with Manual Call and Auto Answer is available on the 3863 mdl 1, 3864 mdl 1, and 3865 mdls 1 and 2. For communications capabilities, product utilization and features, see M2700, 3863, 3864, 3865 and 3872 pages.

Direct Connection Attachment: In addition to host attachment via modems or other DCE, attachment can be made by direct connect, without the need for intervening DCE. The direct connect is made by using either the External Modem Interface (#3701) or the V.35 Interface (#1550), the corresponding host interface feature(s), and a connecting cable. Shown below are the hosts that provide direct connection attachment for the 3274. Only the basic features needed by the 3274 direct connect hosts are listed. These features may have prerequisites, therefore the machine pages for those hosts should also be reviewed. Physical planning manuals for the respective direct connect hosts can provide additional information on the connecting cables.

MODELS 21C and 31C

Unit Atch	Speeds(bps)	Host Feature Number	BSC	SDLC	Max Cable Length	3274 Feature Number
3705-1, 2, 80						
	14.4K,57.6K	4727(1W)	-	x	57m(190')	1550,6303
	14.4K,57.6K	4728(1Z)	-	x	57m(190')	1550,6303
3705-80						
	14.4K,57.6K	6715(LS5)	-	x	60m(200')	1550,6303
4331 Mdl Grp 1 and 2						
	2400	4801	x	x	400m(1312')	3701,6302
	4800	4801	x	x	200m(656')	3701,6302
	9600	4801	x	x	100m(328')	3701,6302 or 6303

MODEL 51C

Unit Atch	Speeds(bsp)	Host Feature Number	BSC	SDLC	Max Cable Length	3274 Feature Number
3704						
	1200	4716(1F)	x	x	30m(100')	3701,6301
3705-1, 2, 80						
	1200	4716(1F)	x	x	30m(100')	3701,6301
	14.4K,57.6K	4727(1W)	-	x	57m(190')	1550,6303
	14.4K,57.6K	4728(1Z)	-	x	57m(190')	1550,6303
3705-80						
	14.4K,57.6K	6715(LS5)	-	x	60m(200')	1550,6303
4331 Mdl Grp 1 and 2						
	1200	4801	x	x	800m(2625')	3701,6302
	2400	4801	x	x	400m(1312')	3701,6302
	4800	4801	x	x	200m(656')	3701,6302
	9600	4801	x	x	100m(328')	3701,6302 or 6303
8101/8130/8140						
	1200,2400	3701(FAC 15)	-	x	12m(40')	3701,6302
	4800,9600	3701(FAC 16)	-	x	12m(40')	3701,6302
	1200,2400	1550(FAC 24)	-	x	300m(1000')	1550,6302
	4800,9600	1550(FAC 25)	-	x	300m(1000')	1550,6302
8101/8140BXX						
	56K	1550(FAC 26)	-	x	300m(1000')	1550,6303
8140 CXX						
	4800	1621	-	x	13m(40')	3701,6302
	56K	1614	-	x	300m(1000')	1550,6303

Communications Adapters: [Mdls 21C, 31C, 51C] Communications adapters handle the transmission control protocols (SDLC and BSC). One, and only one can be selected, but one is required on each 21C, 31C or 51C.

Communications Interfaces: [Mdls 21C, 31C and 51C] Communications interfaces connect a mdl 21C, 31C or 51C to the host link. One and only one, can be selected, but one is required.

Problem Determination Procedure: Significant function has been designed into these units to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities".

The Network Problem Determination Application (NPDA), a program product, operates with VTAM and TCAM to assist in performing communication network problem determination/ isolation and enhances the availability and serviceability of the 3274 for the above environments in both BSC and SDLC attachment modes. See NPDA in the Program Products Section of the Sales Manual.

Display Exception Monitoring Facility (DEMF), a software tool for network problem determination/isolation, enhances the availability and serviceability of the 3274 in BSC mode. See DEMF in the SCP sections for OS/VS1 and OS/VS2.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Physical setup, connection of cables to communication lines/modems and IBM devices incorporating protected customer access areas, switch settings, and check out.
- Contact Field Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Receipt at the customer's receiving dock, unpacking, and placement of the 3274.
- Contacting IBM Field Engineering to accomplish the channel connection tasks for the 3274 mdls 21A, 21B, 21D, 31A or 31D.
- Connection of communication cable to the communications facility for the 3274 mdl 21C or 31C or 51C.
- Procurement, installation, and maintenance of the loop network when applicable on a 3274 mdl 51C.
- Performing 3274 customization in accordance with IBM-supplied procedures:
  a. For initial installation.
  b. When made necessary by changes in configuration.
  c. For updating of the control unit diskettes (at customer option).

Bibliography: See *KWIC Index,* G320-1621, or applicable system bibliography:

GC20-0360	S/360
GC20-0001	S/370
GC20-0001	4300
GC20-8100	8100

Note: Use the HONE configurator (CF3270) to assist in configuring the 3274 before entering an order .

BASIC CONFIGURATION

Specify codes are not normally required to order a 3274. If codes are not specified otherwise, the machines are shipped as follows:

- Voltage: [Mdls 21A, 21B, 21D, 31A, 31D] 208V AC, 1-phase, 3-wire, 60 Hz, non-locking plug.
- Voltage: [Mdls 21C, 31C, 51C] 120V AC, 1-phase, 3-wire, 60 Hz, non-locking plug.
- Power Cable Length: 4.3 meters (14 feet).
- Communications Cable Length: [Mdls 21C, 31C, 51C] 6.1 meters (20 feet).

CONFIGURATION SUPPORT

- Configuration Support A -**#9110**

SPECIFY

The Specify section can be ignored unless the options provided in the "Basic Configuration" above do not meet your needs.

- Voltage: (AC, 1-phase, 3-wire, 60 Hz)

MDLS	Locking Plug 120V	Locking Plug 208V	Locking Plug 240V	Non-Locking Plug 120V	Non-Locking Plug 208V	Non-Locking Plug 240V
21A, B, D 31A, D +	NA	#9884	#9894	NA	D	#9895
21C, 31C	#9890	#9884	#9894	D	#9885	#9895
51C	#9890	NA	NA	D	NA	NA

D -- Default Option
NA -- Not Available
+ -- For Waterproof Connector, see "Special Features"

- Power Cable Length: If standard 4.3 meter (14 feet) power cable is not desired, specify **#9511** for 1.8 meter (6 feet).

3274 Control Unit Mdls 21, 31, 51C (cont'd)

- Communication Cable: A 6.1 meter (20 foot) communication cable is provided as standard with each Communications Interface feature except the Loop Adapter #4850. If the standard 6.1 meter (20 foot) communication cable is not desired, specify one of the following: **#9061** for 3.0 meter (10 feet), **#9062** for 9.1 meter (30 feet) or **#9063** for 12.2 meter (40 feet) cable.

  A 1.8 meter (6 foot) communication cable (Loop Station Connector (LSC) cable) is provided as standard for mdl 51C attachment to a direct attached or data link attached loop. If standard cable is not desired, specify **#9405** for 4.3 meter (14 feet) cable.

- Configuration Support: The Configuration support required for the 3274 must be determined before ordering special features or attaching certain terminals. Refer to the 3274 Control Storage Requirements Tables for a detailed listing of the functions supported by each option. **Field Installation:** Yes. **Customer Setup:** Yes. **Limitations:** Certain functions require host software support in order to be utilized. Refer to host programming support descriptions to determine the levels of software required.
  Note: When operating a large screen (screen size greater than 1,920 characters) display station that is connected to a 3274 mdl 21B, 21C, 31C 21D, 31D or 51C in a VM/370 environment, an RPQ is recommended to change the function of the display keyboard Clear key so that it will not place the display in default mode. See RPQ 8K0976, 8K0977, or 8K0978.

- Configuration Support A (**#9110**): This Configuration Support is the default option and is shipped with all 3274s unlessDiskette Distribution Alternative RPQ (8K1072), Configuration Support C (**#9112**), D (**#9124**) or Configuration Support P (**#9116**) is specified. It need not be specified unless it is being ordered to replace Configuration Support B (no longer available), C or D (**#9111, #9112 or #9124** respectively) in the field. It provides support for all 3270 functions listed in Table 1, plus support for solicitation of summary maintenance statistics from a 3274 mdl 21A, 31A, 21C/SNA, 31C/SNA, 51C/SNA through the use of Network Problem Determination Application (NPDA), and support for base color on attached terminals. It also supports the X.21 Adapter for Non-switched Networks and 3270 Personal Computer (Control Unit Terminal Mode) .

- Configuration Support B (**#9111**): [Mdls 21A, 21C, 31A, 31C, 31D, 51C] Provides support for all 3270 functions included in Configuration Support A (#9110) plus the ability to attach 3278 mdl 5s, and support for the following functions:

  – Pacing of inbound message traffic (mdls 21A, 21C/SNA, 31A, 31C/SNA and 51C/SNA).

  – Automatic Session recovery in both single and multidomain networks (mdl 21C/SNA, 31C, and 51C/SNA).

  – Host notification of changes in the power on/off status at attached terminals (mdls 21A, 21C/SNA, 31A, 31C, and 51C/SNA).

- Configuration Support C (**#9112**): [Mdls 31A, 31C, 31D, 51C] Provides support for all 3270 functions included in Configuration Support A, plus support for the following additional functions:

  – Ability to attach 3278 mdl 5s.

  – Pacing of inbound message traffic (mdls 31A, 31C/SNA, and 51C/SNA).

  – Host notification of changes in the power on/off status at attached terminals (mdls 21A, 21C/SNA, 31A, 31C/SNA, and 51C/SNA).

  – Structured Field and Attribute Processing (SFAP).[3]

  – Programmed Symbols (PS) on attached terminals.[3]

  – Extended Color on attached terminals. [3]

  – Extended Highlighting on attached terminals. [3]

  – Decompression of PS Load Data. [3]

  – BSC Text Blocking.

  – BSC Transparency.

  – Integrated Modems.

  – X.21 Switched Network Operation (SNA/SDLC mdl 51C only).

  – 3274 Entry Assist RPQ

  – 4250 Attachment

  – Alert Function (mdls 31A, 31C/SNA, 51C/SNA)

  – Response Time Monitor (mdls 31A, 31C, 31D, 51C)

  – System/3 support for 1200 bps Integrated Modem #5500 (mdl 51C only)

  Notes: (1) The APL/Text Control Function, which is a separate option in Configuration Support A, is included as a basic function of Configuration Support C.

  (2) Configuration Support C, unlike Configuration Support A or B, generates a program check (X PROG 470) whenever an EBCDIC data stream contains a device control code(s) that the 3274 does not support. To prevent the program check, users must purge the unsupported code(s) from the data stream.

  (3) The extended data stream functions (extended color, extended highlighting, and Programmed Symbols) that require the SFAP option in Configuration Support C will *NOT* operate with ASCII unless RPQ 8K1037 is installed.

  Alternately, order RPQ 8K0980.

  Prerequisites: [Mdl 51C] **#3631 or #3632** or **#1800** Specify: **#9112** for Configuration Support C.

- Configuration Support D (**#9124**): [Mdls 31A, 31C, 31D, 51C] Provides support for all 3270 functions included in Configuration Support C plus support for 3290s, attachment to X.25 data transmission services, and for 3274 Entry Assist on 3178/3278/3279s. **Limitations:** 1) When 3290s are attached, specify **#9301** is required to get two 3290 microcode load diskettes that must be used with Configuration Support D to enable the downstream load of a 3290 with its operational microcode. A Utility Diskette is provided to customize keyboard and keypad layouts. 2) Configuration Support D will support either Category B Terminals or 3290 or 3270 Personal Computer (Distributed Function Mode) , but not both together. 3) The extended data stream functions (extended color, extended highlighting, and Programmed Symbols) that require the SFAP option will *NOT* operate with ASCII unless RPQ 8K1160 is installed. **Prerequisites: #3650.** For X.25 support, 256K of control storage is required (Two **#3650** are required). **Specify: #9124** for Configuration Support D.

- Configuration Support P (**#9116**): [Mdls 31C, 51C] This Configuration Support provides functions equivalent to Configuration Support A, but is for X.25 operation only. **Prerequisites:** [1] **#6303.** [2] Mdl 51C (128K of control storage) , **#1800**, or **#1802** and **#3632** , or **#1802**, **#3630**, and **#3631.**

- Configuration Support T (**#9113**) : [Mdls 31A, 31C, 31D, 51C] Provides support for the 3290 or 3270 Personal Computer (Distributed Function Mode) in addition to the other 3270 functions and terminals except:

  Category B Terminals
  3279 "Extended Color" Models
  Structured Field and Attribute Processing
  Programmed Symbols
  Loop Adapter
  X.21 Adapter
  Encrypt/Decrypt
  Entry Assist
  4250 Attachment
  Alert Function
  Response Time Monitor
  X.25

  Two 3290 microcode load diskettes are automatically included with Configuration Support T (only one systems diskette is included with Configuration Support T). A Utility Diskette is provided to customize keyboard and keypad layouts. This Configuration Support option was developed for initial implementation of the 3290 or 3270 Personal Computer (Distributed Function Mode) on existing 3274s. Based on the intended use and inherent limitations, IBM has no intent to enhance Configuration Support T. For long-term use, use Configuration Support D. **Prerequisites:** [Mdl 51C] **#3631** or **#3632** or **#1800. Limitations:** Because Configuration Support T was developed as the configuration support for use in the initial implementation of the 3290 or 3270 Personal Computer (Distributed Function Mode) , it does not restrict having one of the other Configuration Support A, B, or C options although they cannot be used concurrently. **Specify:** For Configuration Support T, specify **#9113.**

- 3290 Information Panel Display Support (**#9301**) : [Mdls 31A, 31C, 31D, 51C] When 3290s are attached and Configuration Support D is to be used, **#9301** must be specified to get a 3290 microcode load diskette which must be used with Configuration Support D to enable the downstream loading of 3290 Information Panel Displays with operational microcode. **Field Installation:** Yes. **Customer Setup:** Yes. **Prerequisites: #9124.**

---

* This "Specify" feature is available for field installation until December 3, 1982, after which it will no longer be available.

3274 Control Unit Mdls 21, 31, 51C (cont'd)

CONTROL STORAGE REQUIREMENT TABLES [Mdls 21A, 21C, 21D, 51C]

After the desired "Special Features" have been selected, the control storage requirement must be determined by using the appropriate table below. Some combinations of functions and features may exceed the capacity of the control storage in the mdls 21A, 21C, 21D, and 51C w/o EFS. If the sum of the storage requirements is greater than 65,536, a mdl 31 or 51C with EFS Control Unit is required.

Step #1: Refer to the appropriate part of Table 1 and select the features desired:

3274 mdl 21A, refer to Table 1, Part 1
3274 mdl 21C/or 51C w/o EFS SNA, refer to Table 1, Part 2
3274 mdl 21C/or 51C w/o EFS BSC, refer to Table 1, Part 3
3274 mdl 21D, refer to Table 1, Part 4

Step #2: Determine the total storage requirements for the features selected in Step #1.

Step #3: If the total storage requirement calculated in Step #2 is equal to or less than 65,536, the mdl 21 or 51C w/o EFS can be used. However, if step #2 storage requirement is greater than 65,536, the mdl 21 Control Unit or mdl 51C w/o EFS cannot be used and a mdl 31 Control Unit or mdl 51C with EFS is required.

Notes For Table 1 - Parts 1, 2, 3 and 4

[1] Configuration Support A Consideration Only: If all three keyboard types (Typewriter, Data Entry, and Date Entry/Keypunch-like) are required on display stations attached to the 3274, add 1,000 to the storage requirements in addition to those listed in the table.

[2] There is no customizing option nor additional control storage required to support 10 Numeric-only Character Set for Operator Identification Card Reader (#4600) on 3277s (Category B terminals) which are attached to a 3274.

[3] If the total storage requirement calculated for Category A plus Category B Terminals exceeds the applicable maximum storage value below, use the applicable maximum storage:

Unit	Maximum Storage Value
3274 mdl 21C/BSC	11,544
3274 mdl 21D	13,144

[4] Add the indicated amount for each keyboard type to be used.

[5] A 6580 requires two terminal ports when it includes a printer.

Numeric and Alphanumeric Character Sets	1,436
3279 Color Convergence	5,494

Special Consideration - Mdl 31A, 31C, 51C/EFS: When using Configuration Support C (**#9112**) on a mdl 31A, 31C or a 51C with EFS, it is necessary to ensure that the desired combination of features and functions forms a valid configuration.

Notes For Table 2 - Parts 1, 2, 3

[1] Refer to the appropriate table of control storage requirements, and select the desired features and functions

a. For 3274 mdl 31A, use Table 2, Part 1

b. For 3274 mdl 31C or 51C with EFS using SNA protocol, use Table 2, Part 2.

c. For 3274 mdl 31C or 51C with EFS using BSC protocol, use Table 2, Part 3.

[2] Determine the total storage requirements for the features and functions selected in step 1.

[3] If the total storage requirement exceeds 71,680, one or more features must be forfeited in order to reduce the control storage requirements to 71,680 or less.

[4] SCS printer support is required for DCA-LV2 word processing applications. This support also required for 5210 mdls G01, G02 attached to 3274 mdls 1A and 1C SNA for applications that utilize the cut sheet feed attachment feature #7860, when operating with 2 drawers.

[5] Configuration Support C #9112 is required for 5210 mdls G01, G02 attached to 3274 mdls 1A and 1C SNA for support of word processing applications. This includes those applications which utilize the cut sheet feed attachment feature #7860, when operating with 2 drawers.

TABLE 2 - PART 1

3274 Model 31A	Storage Requirement
Configuration Support C	50,030
Category B Terminals	4,900
Host Loadable Printer Authorization Matrix	500
Between Bracket Printer Sharing	800
SCS Printer Support (*)	
(3287 - #9660/#9661) (**)	
(3262 and 3268 - basic function)(***)	
(3289 - basic function)	
(5210 mdl G1, G2 basic function - #4, #5)	1,600
(4250 - basic function) (****)	
Mag Rdr Control (3278/3279 - #4999), choose one:	
3275/3277 like 10 Character Set	600
Numeric/Alphameric Character Sets	1,630
Color Convergence (base or extended color)	4,296
Structured Field & Attribute Processing	
SFAP (Required for Extended Color, Extended Highlighting, and Programmed Symbols	4,950
Programmed Symbols (PS)	2,700
Decompression of PS Load Data	900
Alert Function	2,544
Response Time Monitor	4,488
IBM Personal Computer Attachment Support (3278/3279 - #5315, #5316/ #5325, #5326)	3,200

* SCS Printer support required for 4250 attachment.

** The SFAP function is also required when the SCS Support for SFAP (#9661) feature is to be used on 3287 mdls 1, 2, 1C or 2C.

*** The SFAP function is also required when the Query function is used with 3262 mdls 3 and 13, and 3268 mdl 2s. The Query function allows the application to interrogate the printer to determine what function is supported.

**** For 4250 attachment to 3274 mdl 31A, the SFAP function is also required.

TABLE 2 - PART 2

3274 Model 31C/SNA 3274 Model 51C/EFS/SNA	Storage Requirement
Configuration Support C	50,580
Category B Terminals	4,900
Host Loadable Printer Authorization Matrix	500
Between Bracket Printer Sharing	800
SCS Printer Support (*)	
(3287 - #9660/#9661) (*)	
(3289 and 3262 - basic function)	1,600
(5210 mdl G1, G2 basic function - #4, #5)	1,600
Mag Rdr Control (3278/3279 - #4999), choose one:	
3275/3277 like 10-Character Sets	600
Numeric and Alphameric Character Sets	1,630
Encrypt/Decrypt (#3680)	3,200
Color Convergence (base or extended color)	4,296
Structured Field & Attribute Processing (**)	
SFAP (EBCDIC only) (Required for Extended Color, Extended Highlighting, and Programmed Symbols)	4,950
Programmed Symbols (PS)	2,700
Decompression of PS Load Data	900
Alert Function	2,544
Response Time Monitor	4,488
High Performance Communications Adapter (#6303)	600
IBM Personal Computer Attachment Support (3278/3279 - #5315, #5316/ #5325, #5326)	3,200
X.21 Switched Network Operation (Mdl 51C)	6,500
Loop Attachment (EBCDIC only, mdl 51C)	3,200

* The SFAP function is also required when the SCS support for SFAP (#9661) feature is to be used on 3287 mdls 1, 2, 1C or 2C.

** Limitations: This function does *NOT* support ASCII unless RPQ 8K1037 is installed.

TABLE 2 - PART 3

3274 Model 31C/BSC 3274 Model 51C/EFS/BSC	Storage Requirement
Configuration Support C	47,150
Category B terminals	4,700
Host Loadable Printer Authorization Matrix	550
Copy (Print Key Function)	2,700

3274 Control Unit Mdls 21, 31, 51C (cont'd)

Magnetic Reader Control (3278-#4999) (Choose one)	
3275/3277-like 10-character set	600
Numeric & Alphanumeric character set	1,630
Color Convergence (Base or Extended Color)	4,296
Structured Field & Attribute Processing-(SFAP)(EBCDIC only)	4,950
Programmed Symbols (PS)	2,700
Decompression	900
Response Time Monitor	2,016
IBM Personal Computer Attachment Support (3278/3279-#5315, #5316/ #5325, #5326)	3,200
Any Canadian French Keyboard	500

- Alternate Mailing Address (**#9011**): For diskette only updates. Order this optional feature to specify that diskette only updates are to be mailed to an alternate site address supplied by Field Engineering using a Microcode Control Number (MCN) rather than to the address of the 3274 installation site. The alternate address selected is usually that of a central site location. Redistribution of the diskettes containing the diskette update is the responsibility of the customer. The user may decide to replace the existing diskette himself with the diskette containing the updates or, if requested, the IBM Field Engineer will replace the diskette. The purpose of this feature is to assist the customer with his network management. **Field Installation**: Yes.

  Note: The IBM CE enters the MCN by signing onto application 7 of IMS. The operator is prompted through options concerning the MCN diskette, and mailing address.

- An alternative to feature #9011 is RPQ 8K1071 and RPQ 8K1072. The purpose of these RPQ's is to assist the customer with network management by providing new procedures for altering, rapid copying, and means for sending customized 3274 System Diskettes between a customer's central site location and his remote locations. For a full description of these RPQ's, refer to the RPQ Description and Price Transmittal.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

Integrated Diskette Drive Enhancement (#3101): [Mdls 31A, 31C, 31D] Installs the enhanced file that is required to use Configuration Support D. **Field Installation**: Yes. Field Installation only. All parts removed from purchased machines remain customer property.

Encrypt/Decrypt (#3680): [Mdls 21C, 31C, 51C (SDLC)] Provides the Federal Data Encryption Standard algorithm to encrypt and decrypt data messages under a 56-bit key variable. When used in conjunction with the ACF/VTAM Encrypt/Decrypt feature (Feature #6010, Program #5735-RC2) or ACF/TCAM, Version 2 (Program #5735-RC3) and either the 3848 and the OS/VS1 and OS/VS2 MVS Cryptographic Unit Support Program Product (5740-XY6), or, the OS/VS1 and OS/VS2 MVS Programmed Cryptogranic Facility Program Product (#5740-XY5), data transmitted over unprotected communications lines can be safeguarded through cryptography. **Limitations**: [1] SNA/SDLC only. [2] Cannot be installed with #4850 on mdl 51C. [3] Encrypted data streams cannot be sent to a 3290 or 3270 Personal Computer (Distributed Function Mode) . [4] Mutually exclusive with X.25. The crypto feature cannot be used with X.25 operation. **Maximum**: One. **Field Installation**: Yes. **Note**: A mercury battery, P/N **1743456**, or equivalent, is needed. A battery is shipped with this feature. See "Accessories" for additional or replacement battery. Replacement of a discharged battery is the customer's responsibility. The discharged IBM battery should be returned to IBM.

Integrated Diskette Drive Enhancement (#5101): [Mdl 51C] Installs the enhanced file that is required to use Configuration Support D. **Field Installation**: Yes. Field Installation only. All parts removed from purchased machines remain customer property.

Power Expansion (#5550): [Mdl 51C] Provides the additional power required for #7801 or the 2400, 4800 and 9600 bps Integrated Modem features (#5640, #5740, #5840, #5842). **Maximum**: One. **Field Installation**: Yes.

Response Time Monitor (#6101): [Mdls 31A, 31C, 31D, 51C] Provides the capability for enhanced network management by measuring response times. The Response Time Monitor feature accurately measures and records the transaction time between an inbound host attention (AID) and a user-defined transaction end. **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: Configuration Support C #9112 release level 47 and above or Configuration Support D #9124 release level 61 and above.

Waterproof Power Connector (#8801): [Mdls 21A, 21B, 21D, 31A, 31D] Provides a special waterproof connector instead of the normal locking or non-locking plugs on the power cable. This connector is sometimes required to satisfy local ordinances which require this type of termination in specific locations within an installation. See *IBM information Display System Installation - Physical Planning,* (GA27-2787) for the mating receptacle which the customer must have installed. **Note**: This connector is provided for 208V unless 240V feature code #9894 is also specified.

COMMUNICATIONS ADAPTERS

Common Communications Adapter Without Business Machine Clock (#6302): [Mdls 21C, 31C, 51C] Required for communications at speeds up to 9600 bps (see "Limitation" below when a terminal Adapter(s) Type B (#7802-#7805) is installed). SNA/SDLC and BSC transmission control protocols are supported. Clocking must be provided by the modem or communications facility. **Limitations**: [1] **#6303** must be ordered/installed in lieu of this feature, if SNA/SDLC protocol is required with a line speed greater than 7200 bps and a Category B Terminal Adapter(s) (#7802-7805) is installed. [2] This feature cannot be ordered/installed with #6303 or CCA w/BMC (#6301). **Maximum**: One. **Field Installation**: Yes.

High Performance Communications Adapter Without Business Machine Clock (#6303): [Mdls 21C, 31C, 51C] Required for attachment to communications lines at 9600 bps (SNA/SDLC transmission control protocol) when a #7801 (mdl 31C, or 51C with EFS only) is installed, and communication is through either an IBM or non-IBM external modem that provides its own clocking, or other communication facility that provides clocking. It is also required for all attachments with speeds greater than 9600 bps, for 51C attachment to the loops of the 8100 System at speeds up to 38.4K bps, for attachment to X.21 Switched Network, or for attachment to X.25 data transmission services. **Limitations**: [1] With this feature installed, operation is restricted to SNA/SDLC protocol. IML for BSC protocol is no longer possible. [2] This feature cannot be ordered/ installed with #6301 or #6302. [3] When EMI (#3701) is installed, speed is limited to 9600 bps maximum. **Maximum**: One. **Field Installation**: Yes. **Specify**: If to be used for X.25 operation, specify **#9615**. (This specify provides the special X.25 keyboard labels used on 3178s, 3278s or 3279s for X.25).

COMMUNICATIONS INTERFACES

CCITT V.35 Interface (#1550): [Mdls 21C, 31C, 51C] Provides a cable and a CCITT interface for attachment to an external modem or other DCE complying with CCITT Recommendation (1976) V.35, ISO Standard 2593, other relevant CCITT Recommendations, and that provides clocking of up to 56K bps. Attachment to non-IBM DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 3705 at speeds up to 57.6K bps. See "Specify" section for communication cable length. **Limitations**: [1] Cannot be installed with any other Communications Interface feature [2] BSC is not supported at speeds greater than 9600 bps. **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: [1] **#6302 or #6303** for communications up to 9600 bps. [2] **#6303** for communications above 9600 bps, or for X.25 operation up to a maximum of 9600 bps. **Note**: Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

External Modem Interface (#3701): [Mdls 21C, 31C, 51C] Provides a cable and a RS-232C interface for attachment to an external IBM modem that provides clocking of up to 9600 bps. Attachment to non-IBM modem or other DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 3704, 3705, 4331, or 8100 Processor at speeds up to 9600 bps. See "Specify" section for communication cable length. **Limitations**: Cannot be installed with any other Communications Interface feature. **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: **#6301, #6302 or #6303. #6303** is required for X.25 operation.

Loop Adapter (#4850): [Mdl 51C w/EFS] Provides the ability to attach to a direct or data link attached loop of the 8100 System or a 4331 Processor. Direct loop attachment supports speeds up to 38.4K bps. Data link loop attachment supports 2400, 4800, and 9600 bps. A direct attached loop can use a 9.6K or 38.4K Hz carrier; a data link attached loop uses a 9.6K Hz carrier. **Limitations**: [1] Cannot be ordered with any other Communications Interface feature. [2] Cannot be ordered with #7801, if it will be used for 8100 attachment. [3] Cannot be ordered with #3680. **Maximum**: One. **Field Installation**: Yes. **Prerequisites**: **#6303 and #9112 or #9124. Specify**: On initial order or for change by service representative, one of the following must be specified: **#9825** for 9.6K Hz carrier or **#9829** for 38.4K Hz carrier. (All terminals on a loop must use the same carrier frequency.)

Digital Data Service (DDS) Adapter (#5650, #5651): [Mdls 21C, 31C, 51C] [#5650 For point-to-point operation; #5651, for multipoint operation] An adapter for BSC or SDLC data transmission at speeds of 2400, 4800 or 9600 bps or SDLC data transmission at 56K bps over the AT&T nonswitched Dataphone® Digital data service network. The DDS Adapter interfaces to a DDS Channel Service Unit, the customer site termination of the DDS network. See "Specify" section for communication cable length. **Specify**: **#9822** for 2400 bps, **#9823** for 4800 bps, **#9825** for 9600 bps, or **#9833** for 56K bps. **Limitations**: Cannot be

3274 Control Unit Mdls 21, 31, 51C (cont'd)

installed with any other Communications Interface feature. **Maximum:** One **#5650** or **#5651**. **Field Installation:** Yes. **Prerequisites:** [1] **#6302 or #6303** for communications up to 9600. [2] **#6303** for communications at 56K bps. **Notes:** [1] After installation of either feature #5650 or #5651, the operational mode can be changed to the other (Point-to-Point to Multipoint or vice versa) by simply re-customizing the System Diskette to select the desired operational mode. [2] Depending on the length and content of the data stream, an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

X.21 Adapter For Nonswitched Networks (#5655): [Mdls 21C, 31C, 51C] An interface adapter for SDLC data transmission at speeds of 2400, 4800, 9600 or 48K bps on nonswitched communication facilities via a DCE complying with CCITT Recommendation X.21. See "Specify" section for communication cable length. **Limitations:** [1] Cannot be ordered with any other Communications Interface feature. [2] Does not support BSC transmission control protocol. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] **#6302 or #6303** for communications up to 9600 bps. [2] **#6303** for communications at 48K bps, or for X.25 operation up to a maximum of 9600 bps. **Note:** Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

X.21 Adapter For Switched Networks (#5656): [Mdl 51C w/EFS] An interface adapter for attachment to an X.21 switched network via a DCE complying with CCITT Recommendation X.21. SDLC communications at speeds of 2400, 4800, 9600 and 48K bps are supported. Keyboard decals and display screen indicators are provided for operator reference during the calling, data exchange, and disconnecting phases. **Limitations:** [1] Cannot be ordered with any other Communications Interface feature. [2] Does not support BSC transmission control protocol. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] **#6303**. [2] Configuration Support C **(#9112) or D (#9124)**.

TERMINAL ADAPTERS

Terminal Adapter Type A1, A2, A3 (#6901, #6902, #6903): [Mdls 21A, 21B, 21C, 21D, 31A, 31C, 31D] One each of these adapters can be installed. Each adapter provides for the attachment of an additional eight Category A terminals. It should be noted that two terminal ports are required to attach a Displaywriter System when it includes a printer. The base control unit, which provides for attachment of eight Category A terminals, can be expanded with these three terminal adapters to a maximum configuration of 32 Category A terminals. These terminal adapters must be installed in sequence, making it important to order the correct adapter feature code(s).

Terminal Adapter Type A1 (Terminals 9-16) - #6901
Terminal Adapter Type A2 (Terminals 17-24) - #6902
Terminal Adapter Type A3 (Terminals 25-32) - #6903

Limitations: #6903 is mutually exclusive with #7804, #7805. **Maximum:** One of each type terminal adapter. **Field Installation:** Yes. **Prerequisites:** #6902 requires **#6901**; #6903 requires **#6902**. **Note:** To attach Category A Terminals via the 3299, refer to RPQs 8K1155 and 8K1156.

Terminal Adapter Type B (#7801): [Mdl 51C] Provides for the attachment of four Category B terminals, thus expanding the capability of the control unit up to 12 terminals. **Limitations:** [1] Cannot be installed with #4850 or any 2400, 4800, or 9600 bps Integrated Modem (#5640, #5740, #5840, #5842). [2] Requires EFS**#1800** when IML'd for SNA/SDLC operation. **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #5550**.

Terminal Adapter Type B1 (#7802): [Mdls 21B, 21C/BSC, 21D, 31A, 31C, 31D] Permits the attachment of four Category B terminals and provides for the installation of Terminal Adapter Types B2, B3 and B4 when additional Category B terminals are desired. **Maximum:** One. **Field Installation:** Yes.

Terminal Adapter Type B2, B3, B4 (#7803, #7804, #7805): [Mdls 21B, 21C/BSC, 21D, 31A, 31C, 31D] Each of these terminal adapters permits the attachment of four additional Category B terminals. A maximum of one each of these terminal adapters can be installed for a combined total of 12 additional or 16 total Category B terminals attached to a control unit. These terminal adapters must be installed in sequence, making it important to order the correct adapter feature code(s).

Terminal Adapter Type B2 (Terminals 5-8) - #7803
Terminal Adapter Type B3 (Terminals 9-12) - #7804
Terminal Adapter Type B4 (Terminals 13-16) - #7805

Limitations: #7804 and #7805 are mutually exclusive with #6903. **Maximum:** One of each type terminal adapter. **Field Installation:** Yes. **Prerequisites: #7802**.

EXTENDED FUNCTION STORE

Extended Function Store (EFS) - Type D4 (#1800): [Mdl 51C] Provides 65,536 positions of additional control storage. **Limitations:** Cannot be installed with EFS-Types D1, D2, or D3 (#3630, #3631, #3632) or #1802. **Maximum:** One. **Field Installation:** Yes.

EFS - Type D3 (#3631): [Mdl 51C] Provides 32,768 positions of additional control storage. **Maximum:** One. **Field Installation:** Yes. Field installation only. **Prerequisites: #3630**.

Extended Function Store (EFS) - Type C1 (#3650): [Mdls 31A 31C, 31D, 51C] Provides 65,536 positions of additional control storage. **Maximum:** Two. **Field Installation:** Yes.

Prerequisites:

Mdl 31A, 31C, 31D	#3101 Integrated Diskette Drive Enhancement
Mdl 51C	#5101 Integrated Diskette Drive Enhancement *OR* RPQ 8K1071 *AND* either #1800 Extended Function Store Type D4 *OR* #3632 Extended Function Store Type D2 *OR* #3631 Extended Function Store Type D3.

CONTROL STORAGE FUNCTIONS

APL/Text Control Function: This function, selectable during the customization of a 3274 mdl 21A, 21C, 21D, 31A, 31C, 31D, or 51C expands the character handling capability of the 3274 to accommodate the APL, Text, and graphic plot character sets on 3278s, 3262s (text only), 3268 mdl 2 and 2C, 3279s, and 3287 attached via Type A Terminal Adapters (#6901, #6902, #6903). **Note:** The 3274, with or without this APL/Text control function, does *NOT* support the 3270 Data Analysis/APL Feature (#1066) on attached 3277s or 3284s, 3286s or 3286s, *NOR* does it support the Text Print Feature (#7880) on attached 3288s.

3289 Text Print Control Function: This function, selectable during customization of a 3274 mdl 21A, 21C, 21D, 31A, 31C, 31D, or 51C extends the character handling capability of the 3274 to accommodate the text characters for the text print feature (#1130) on attached 3289s.

Copy Function: This function, selectable during the customization of a 3274 mdl 21C/BSC, 21D, 31C/BSC, 31D, or 51C enables the copying of the screen contents of an attached 3178, 3278, or 3279 to an attached 3268, 3287, or 3289 through use of the Local Print Key on the display keyboard. This function is provided as basic on the 3274 mdls 21A, 21B, 21C/SNA, 31A and 31C/SNA. The ability to perform host initiated local copies from a 3178, 3278, or 3279, to a 3268, 3287 or 3289 attached to a 3274 mdl 21A, 21C/SNA, 31A or 31C/SNA is also provided as basic. In addition, the 3274 mdl 21C/BSC and 31C/BSC supports the 3270 host Copy command as basic.

Local Copy Summary

3274 Mdl	Print Key	Host Initiated
21A, 31A	Basic	Basic
21B	Basic	Not Applicable
21C/BSC, 31C/BSC, or 51C/BSC	Cust. Option	Basic
21C/SNA, 31C/SNA, or 51C/SNA	Basic	Basic
21D, 31D	Cust. Option	Not Applicable

Host Loadable Print Authorization Matrix: This function, selectable during the 3274 customization process, provides the capability for the 3274, during subsequent IBM procedures, to receive, from a user-written application program at the host CPU, an updated Printer Authorization Matrix to override the matrix created by the customization operator or by system default.

Between Bracket Printer Sharing Function: This function, selectable during the customization of a 3274 mdl 21A, 21C/SNA, 31A, 31C/SNA, or 51C/SNA enables attached 3268s, 3287s, and 3289s to be used as Local Copy output devices for the screen contents of attached 3178s, 3278s, and 3279s, when the printers are Between Brackets with the host application program. Printers are available for Local Copy operations only when they are not in session with an application program if this option is not selected.

Color Convergence Function: This function, selectable during the customization of any mdl 3274, provides the mechanism through which the operator of a 3279 can perform color convergence for the 3279.

Programmed Symbols (PS) Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, enables the customer to define, store, and access up to six, 190-symbol sets on appropriately featured 3278s and 3279s, 3268 mdl 2C and 3287s. **Prerequisites:** SFAP.

3274 Control Unit Mdls 21, 31, 51C (cont'd)

Decompression Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, decompresses data streams containing compressed Programmed Symbols generated by the Graphical Data Display Manager (GDDM) program product. Its usage is recommended for all 3274 TP host attachments that use GDDM. **Prerequisites:** SFAP.

Extended Attribute Terminals: This function, selectable during the customization of any mdl 3274 except mdl 1B, establishes an internal control table for each terminal on which Extended Color, Extended highlighting, and Programmed Symbols will be used or when a 4250 will be attached. If more extended attribute terminals are attached to the 3274 than are specified during customization, the excess terminals will execute only base-level function. **Prerequisites:** SFAP.

Structured Field and Attribute Processing (SFAP) Function: This function, selectable during customization, provides a new 3270 command and several new orders that extend the functional capabilities of appropriately featured 3268 mdl 2Cs, 3278s, 3279s, and 3287s. Datastreams sent to these attached terminals can include extended color, extended highlighting or programmed symbols, in any combination. **Prerequisites:** BSC hosts that utilize this function must transmit in transparent-text mode. **Limitations:** This function does *NOT* support ASCII unless RPQ 8K1037 is installed.

X.21 Switched Network Operation: [Mdl 51C] This function, selectable during customization for SNA/SDLC operation, is required for attachment to the X.21 Switched network. It provides the controls necessary to support the CCITT X.21 switched network protocols.

X.25 Support: [Mdls 31C, 51C] This function, selectable during the customization of a 3274 mdl 31C or 51C, provides for attachment to X.25 data transmission services having an interface which complies with Recommendation X.25 (Geneva 1980) of the International Telegraph and Telephone Consultative Committee (CCITT). IBM conformance to this X.25 interface is defined in *IBM General Information Manual - The X.25 Interface for Attaching IBM SNA nodes to Packet - Switched Data Networks,* GA27-3345. Keyboard labels on attached 3178s, 3278s or 3279s keyboards and display screen indicators are provided for operator reference during the calling, data exchange, and disconnecting phases. See "X.25 Keyboard Labels" under "Accessories" for details on the labels required for selected keyboards on terminals connected to a 3274 attached to a X.25 communications facility. **Limitations:** Encrypt/Decrypt (#3680) is mutually exclusive with 3274 X.25 capability. The crypto feature cannot be used with X.25 operation. **Prerequisites:** [1] Configuration Support P or D at release level 62 or higher. [2] SNA/SDLC protocol. [3] Configuration Support P requires 128K, and Configuration Support D requires 256K of control storage (Two **#3650**) to support X.25. The Communications Interface feature required depends upon the X.25 physical interface provided by the network. [4] One of the following Communications Interfaces: **#3701, #5655 or #1550. Note:** The maximum line speed supported with any of these Communications Interface features is 9600 bps with X.25. The Communications Interface feature required depends upon the X.25 physical interface provided by the network. [5] **#6303.**

3274 Entry Assist: This function provides capabilities which facilitate entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs.

(On 3274's with Configuration Support C, 3274 Entry Assist is available via RPQ 8K1147).

Alert Function: This function, selectable during the customization of a 3274 mdl 31A, and on SNA mdls of the 31C and 51C, reports problem determination data to the host, for recording and display, when NPDA Version 3 is installed in the host.

Response Time Monitor: This function, selectable during the customization of 3274 mdls 31A, 31C, 31D, 51C, provides the capability for enhanced network management by accurately measuring transaction times. Response times are collected in up to four user-defined levels. Response time end-definition is defined by the user and can be one of the following: First Character, Keyboard Usable, or Change Direction/End Bracket (SNA only). The response time information can be displayed at a user-designated display station attached to the 3274. **Prerequisites: #6101.**

3270 Personal Computer (Control Unit Terminal Mode): This function allows the 3270 Personal Computer to appear as a single 3178, 3278 or 3279.

IBM Personal Computer Attachment Support: This function, selectable during the customization of any mdl 3274, except mdls 1B and 21X, provides support for attachment of an IBM Personal Computer to a 3278 or 3279. **Prerequisites:** SFAP.

MODEL CONVERSIONS

See table below for field installation of model changes:

	To Model:						
	1 A/B/D	1 C	21 A/B/D	21 C	31 A/D	31 C	51 C
From Model							
1A/B/D	Yes(1)	No	NR	No	Yes	No	No
1C	No	--	No	NR	No	Yes	No
21A/B/D	NR	No	Yes(1)	No	Yes(2)	No	No
21C	No	NR	No	--	No	Yes	No
31A/D	NR	No	NR	No	Yes	No	No
31C	No	NR	No	NR	No	--	No
51C	No	No	No	No	No	No	--

NR = Field Installation NOT recommended

Note 1: When making mdl changes, the applicable Control Storage Requirement Table must be used to determine if sufficient control storage is available. Also, when changing mdls, refer to FIVE3270 to evaluate expected performance.

Note 2: The 3274 mdls 21A/B/C/D contain the newer storage technology which facilitates upgrading to mdls 31A/C/D at a reduced cost.

ACCESSORIES

Battery, Mercury: To provide power to sustain the master key of the Encrypt/Decrypt feature **#3680** on the 3274 when normal power is not present. A 4.14 volt mercury battery (**P/N 1743456**). This supply item has a shelf life of one year under normal conditions, and can be expected to provide 3.5 years of normal service. Additional or replacement batteries can be ordered from IBM. Discharged batteries should be returned to IBM for disposal. Return information is printed on the label of the battery.

X.25 Keyboard Labels: Stick-on labels are used on the keyboards of 3178s, 3278s and 3279s attached to a 3274 mdl 31C or 51C using X.25 communications facilities. These labels are normally provided with the 3274 feature #6303 when Specify feature **#9615** is specified to indicate that X.25 will be used. If new or additional labels are required, they can be obtained by ordering Form Number GX23-0285. Each Form Number is a sheet containing 16 sets of stick-on labels, enough for 16 keyboards, and the installation procedure for installing the labels.

SUPPLIES (None)

3274 CONTROL UNIT MDLS 41, 61C

PURPOSE

Provides the capability of attaching 3270 Information Display System displays and printers to System/3, S/360, S/370, 4300, 303X, 3081 processors, and the 8100 Information System. The models 41A, and 41D are for local channel attachment. The models 41C, and 61C are used for communicating in data half-duplex mode via half-duplex or duplex communications facilities.

For System/3 attachment, each of the control units can communicate via Binary Synchronous Communications (BSC) in data half-duplex mode over half-duplex or full duplex communications facilities with a suitably equipped System/3 Model 4, 8, 10, 12, or 15 at speeds up to 9600 bps.

ATTACHABLE TERMINALS

Category A Terminals	
3178 mdl C1, C2	Display Station
3262 mdl 3 & 13	Line Printer
3268 mdl 2	Impact Matrix Printer
3268 mdl 2C	Color Impact Matrix Printer
3270 Personal Computer	
3278 mdl 1, 2, 3, 4, & 5	Display Station
3279 (except mdl 2C)	Color Display Station
3287 mdl 1, 2	Impact Matrix Printer
3287 mdl 1C, 2C	Color Impact Matrix Printer
3289 mdl 1 & 2	Line Printer
3290	Information Panel Display
4250 (See Notes 1 and 2)	APA Printer
5210 mdl G1, G2	Printwheel Printer
6580 mdl A04, A06, A08, A10, B04, B06, B08, B10; w/#8332 and L. P. 5608-SR9 (See Note 3)	Displaywriter System

Mdl 41A, 41C, 41D and 61C control units have 192K bytes of control storage and support all terminal features.

The basic mdl 41A, 41C and 41D control units allow attachment of 32 Category A terminals.

The basic mdl 61C control unit allows attachment of 16 Category A terminals.

Notes:

1. The 4250 cannot attach to the 3274 mdls 41C and 61C.
2. Because of the high data volumes possible with this printer, it it strongly recommended that the IBM Aid FIVE3270 be used to predict the effect the 4250 has on subsystem performance.
3. Two terminal ports are required to attach a 6580 which includes a printer.

MODELS

Model 41A A41

For local (SNA version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370 processor; or a 4300 Processor via a byte multiplexer or multiplexer channel.

Model 41C C41
Model 61C C61

For communicating in data half-duplex mode over half-duplex or duplex communications facilities with the following:

- A S/370 or 4300 processor via 3704, 3705, or 3725 (or via the Communications Adapter feature on the 4321 or 4331), using Synchronous Data Link Control (SDLC/SNA).
- A S/370 or 4300 processor via (where applicable) 2701, 2703, a 3704, 3705, or 3725, or a Communications Adapter feature on the 4321 or 4331, using Binary Synchronous Communications (BSC).
- S/370 mdls 115, 125, 135 and 138 via Integrated Communications Adapter (ICA) using BSC.
- S/360 mdls 30, 40, 50, 65, 75, and 195 via 2701, 2703, or a 3704 or 3705 using BSC.
- 4331/4361 Processor - The model 61C can also attach to a 4331 via a direct- or data link-attached loop using SDLC.
- 8100 Information System - The model 61C can attach using SDLC via a data link or a direct attached or data link attached loop.

Model 41D D41

For Local (3272 version) attachment, via a byte multiplexer, selector or *block multiplexer channel, to a virtual storage S/370 processor, or a 4300 processor via a byte multiplexer or block multiplexer channel.

* **Note:** Attachment to a non-DCC subchannel of a block multiplexer channel or to a selector channel is not recommended due to performance considerations which may yield less than maximum throughput.

STANDARD MODELS

For ease of configuration and simplification in ordering, some predefined configurations for 3274 models 41A, 41C, 41D, and 61C have been designated Standard Models. These Standard Models are based on commonly ordered configurations and should satisfy a majority of customer requirements. Refer to 3274 Control Unit Standard Model Selection Guide pages for Standard Model descriptions, selection and ordering details.

Prerequisites:

(1) One 3178, 3278, or 3279 with keyboard is needed on each 3274 as a diagnostic aid. It must be attached to the first terminal address on the control unit (Port 0). (This display station may be attached via a 3299.

(2) A 3274 mdl 41C requires a Communications Adapter and a Communication Interface for communications. An external Data Circuit-terminating Equipment (DCE) is required with the External Modem Interface (#3701) or the CCITT V.35 Interface (#1550) or CCITT X.21 Interface (#5655) unless the 3274 model 41C is to be direct connected. The Data Circuit-terminating Equipment or direct connected unit to which the 3274 mdl 41C is attached must provide clocking.

For use with System/3, the 3274 requires an External Modem Interface #3701, or DDS Adapter (#5650 or #5651) for host communications. An external modem is not required with the External Modem Interface #3701 when attached locally to System/3 via BSCA/EIA Local, BSCC/EIA Local, LCA, or ICA.

(3) The 3274 mdl 61C requires a Communications Adapter and a Communications Interface for host communications. An external DCE may be required with the External Modem Interface (#3701), and the CCITT V.35 Interface (#1550), and the CCITT X.21 Interface (#5655 and #5656).

Customer Setup (CSU): The 3274 mdl 41C, and 61C are Customer Setup thereby offering the customer early availability and terminal relocation flexibility. The customer is responsible for attaching CSU units to the 3274. For additional information on CSU, refer to IBM.

HIGHLIGHTS

These units can attach up to 32 (16 on the mdl 61C) displays, and/or printers, unless a 6580, which includes a printer, is to be attached. A 6580 without a printer requires one terminal port (the same as other terminals), but when a 6580 includes a printer, two terminal ports are required to attach. Category A terminals can be located up to a maximum of 1,500 meters (4,920 feet). Terminals attach to their respective Terminal Adapter by the same type coaxial cable and connectors which are used between a 3271 or 3272 and its display or printer terminals.

The 3274 can communicate with a S/360, S/370 or 4300 Processor by local channel attach or remotely via communications facilities. The channel attached Control Units are mdl 41A for SNA operation with extended data stream handling capabilities, and mdl 41D for 3272-like operation with extended data stream handling capabilities. The mdls 41C and 61C can operate with extended data stream handling capabilities using either BSC or SNA/SDLC.

The mdl 61C can also attach via a Data Link to the 8100 Information System or to the 8100 or 4331/4361 via a Direct or Data Link attached Loop.

The flexibility of 3274s enables the user to configure a display sub-system for initial requirements, and later change hardware and functions to meet future needs. Function configurability is attained through Configuration Support options, via feature and System Diskettes.

One Feature Diskette and two System Diskettes are shipped with each 3274. An Encrypt/Decrypt Feature Diskette is also shipped with the Encrypt/Decrypt feature (#3680) on a 3274 mdl 41C, or 61C. As part of the installation procedure, a customized System Diskette is generated. The generation process is accomplished by the customer keying in system configuration parameters. A unique configuration table is written on the System Diskette along with the necessary control

3274 Control Unit Mdls 41, 61C (cont'd)

code to accomplish the functions. For example, during subsequent control unit loading or initialization of a mdl 41C, or 61C, BSC or SNA/SDLC mode of operation is determined by the configuration recorded on the System Diskette used. It is possible to create two different System Diskettes; one to be used for BSC operation and the other to be used when operating SNA/SDLC.

The control unit is initialized with control code and configuration parameters as a result of Power On or by pressing the IML pushbutton. The load occurs from an integrated diskette drive using the previously customized System Diskette. The loading process starts with the execution of extended tests contained on the diskette.

The character set to be used on attached terminals is specified on the customized IML Diskette during installation procedure. All attached terminals must have the same character set.

Either EBCDIC or ASCII can be selected during 3274 mdl 41C, or 61C customization. ASCII support is provided to correspond with transmission code that is used by System/3. Both ASCII transmission codes and ASCII data codes are supported in BSC. Only ASCII alphameric data bytes of Function Management Request/Response Units are supported in SNA/SDLC. SCS, APL/Text, and the 3270 data stream extensions included in the Structured Field and Attribute Processing (SFAP) customization option are not supported in either BSC or SNA/SDLC when ASCII is used.

Detailed information for initial customizing, for customizing made necessary by changing configurations, and for optionally updating the diskettes, is contained in the *IBM 3274 Control Unit Customizing Guide,* GA23-0065.

COMMUNICATIONS

The 3274 mdls 41C and 61C communicate by BSC in data half-duplex mode with a System/3 over duplex or half-duplex communications facilities as follows:

System/3 mdl 4 via BSCA
System/3 mdl 8 via ICA or BSCA
System/3 mdl 10 via BSCA or LCA
System/3 mdl 12 via ICA or BSCA
System/3 mdl 15 via BSCA or LCA
System/3 mdl 15D via BSCA, BSCC, or LCA

The 3274 mdl 41C or 61C communicates with a S/370 or 4300 Processor using SDLC over duplex or half-duplex communications facilities to a 3704, 3705, or 3725 or via the Communications Adapter on the 4321/4331/4361 (SNA/SDLC), or by BSC to a S/360, S/370 or 4300 Processor, over duplex or half-duplex communications facilities via (where applicable) a 2701, 2703, or a 3704, 3705, 3725 (see note 1), or the Communications Adapter on a 4321 or 4331. Communications with a 4331 Processor is also provided via a direct or data link attached loop for the mdl 61C.

Communications with a S/370 mdl 115, 125, 135, or 138 can also be via the Integrated Communications Adapter (#4640) and appropriate BSC features on a 3115, 3125, 3135, or 3138.

The mdl 61C communicates with the 8100 Information System, using SDLC, via a data link, a direct or data link attached loop, or direct connection.

SDLC as used in the 3274 mdl 41C and 61C conforms to a subset (unbalanced normal mode) of both the ISO HDLC and ANSI ADCCP standards. For details of this conformance, see *General Information Manual, IBM Synchronous Data Link Control,* GA27-3093.

A 3274 mdl 41C or 61C can be used with X.25 communications facilities by customization with Configuration Support D (release level 62 or higher). Appropriate hardware features must be installed to support Configuration Support D operation with X.25. See "X.25 Support" under "Control Storage Functions" and Configuration Support D description for details.

Note 1: The 3725 is not connectable to the S/360.

Performance: For many 3274 mdl 41C, and 61C systems, response time is limited by transmission line speeds. For these cases, applicable line speed upgrades can be translated into immediate response time improvements. However, performance is also data stream dependent. Refer to IBM Aids for performance evaluation information.

Communications Facilities (System/3): The 3274 mdls 41C, or 61C operate over data half-duplex mode on point-to-point or multipoint half-duplex or duplex nonswitched facilities at transmission speeds of 1200 (51C only), 2000, 2400, 4800, 7200, and 9600 bps. See M2700 pages for facilities.

Communications Facilities: The 3274 mdl 41C, or 61C operate in half-duplex point-to-point or multipoint mode on half-duplex or duplex facilities, using SDLC or BSC, at transmission speeds of 1200 (61C only with a modem supplied clock), 2000, 2400/1200, 4800/2400, 7200/3600 and 9600/4800 bps on nonswitched facilities. In addition, the 3274 mdl 61C operates in half-duplex point-to-point mode using SDLC at transmission speeds of 1200 (with a modem supplied clock), 2400/1200, 4800/2400, and 9600/4800 bps on switched facilities. See M2700 pages for facilities .

The 3274 mdl 61C also operates in half-duplex mode at 9600 or 38,400 bps over a direct attached loop, and at 2400, 4800, or 9600 bps over a data link attached loop.

Multipoint and point-to-point communications at speeds up to 56K bps are also possible where facilities are available. In addition, communications through a 3705, or to the Local Attachment Interface #4801 on the 4331 or to an 8130/8140 Processor can be via direct connection without the need for communications facilities or modems. All communications at speeds greater than 9600 bps must use SDLC. See M3705, 4331, 8101, 8130 and 8140 pages for details.

Modems: Unless the 3274 mdls 41C, or 61C will be direct connected, an external Data Circuit-terminating Equipment (DCE) is required when the External Modem Interface (#3701) or CCITT V.35 Interface (#1550) or CCITT X.21 Interface (#5655 or #5656) is installed.

For use with the System/3, unless a Digital Data Service (DDS) Adapter #5650 or #5651 is installed, a 1200 bps integrated modem feature #5500 [51C only] or an external modem must be attached to the 3274 mdl 21C, 31C, or 51C. External modems require the External Modem Interface #3701. No external modem is required when attached locally to System/3 through BSCA/EIA Local, BSCC/EIA Local, LCA or ICA; however, External Modem Interface #3701 is required.

Modem	Speed (bps)
3863 mdl 1/2	2400/1200
3864 mdl 1/2	4800/2400
3865 mdl 1/2	9600/4800
3868 mdl 1	2400/1200
3868 mdl 2	4800/2400
3868 mdl 3/4	9600/4800
3872 mdl 1	2400/1200

Switched network backup (SNBU) operation with Manual Call and Manual or Auto Answer is available on the 3872 mdl 1. Four-wire SNBU operation with Manual Call and Auto Answer is available on the 3863 mdl 1, 3864 mdl 1, and 3865 mdls 1 and 2. For communications capabilities, product utilization and features, see M2700, 3863, 3864, 3865 and 3872 pages.

Direct Connection Attachment: In addition to host attachment via modems or other data circuit-terminating equipment (DCE), attachment can be made by direct connect, without the need for intervening DCE. The direct connect is made by using either the External Modem Interface (#3701) or the V.35 Interface (#1550), the corresponding host interface feature(s), and a connecting cable. Shown below are the hosts that provide direct connection attachment for the 3274. Only the basic features needed by the 3274 direct connect hosts are listed. These features may have prerequisites, therefore the machine pages for those hosts should also be reviewed. Physical planning manuals for the respective direct connect hosts can provide additional information on the connecting cables.

MODEL 41C

Unit Atch	Speeds(bps)	Host Feature Number	B S C	S D L C	Max Cable Length	3274 Feature Number

Communications Adapters: Mdls 41C and 61C Communications adapters handle the transmission control protocols (SDLC and BSC). One, and only one can be selected, but one is required on each 41C or 61C.

Communications Interfaces: Communications interfaces connect a mdl 41C or 61C to the host link. One and only one, can be selected, but one is required.

Control Storage Functions: Control storage functions are the non-"Specify", non-"Feature", non-"Machine" configuration options. For details on any of these functions refer to the following manuals:

IBM 3274 Control Unit - Description and Programmer's Guide, GA23-0061.

IBM 3274 Control Unit - Customizing Guide, GA23-0065.

Since information on recently announced function(s) may not yet be available in your manuals, a description of these function(s) is presented below:

X.25 Support: [Mdls 41C, 61C] This function, selectable during the customization of a 3274 mdl 41C or 61C, provides for attachment to X.25 data transmission services having an interface which complies with Recommendation X.25 (Geneva 1980) of the International Telegraph and Telephone Consultative Committee (CCITT). IBM conformance to this X.25 interface is defined in *IBM General Information Manual - The X.25 Interface for Attaching IBM SNA nodes to Packet - Switched Data Networks,* GA27-3345. Keyboard labels on attached 3178s, 3278s or 3279s keyboards and display screen indicators are provided for operator reference during the calling, data exchange, and disconnecting phases. Although a 3290 cannot be used to establish X.25 operations, a 3290 can be used normally on a 3274 using X.25. See "X.25 Keyboard Labels" under "Accessories" for details on the labels required for selected keyboards on terminals connected to a 3274 attached to a X.25 communications facility. **Limitations:** Encrypt/Decrypt (#3680) is mutually exclusive with 3274 X.25 capability. The crypto feature cannot be used with X.25 operation. **Prerequisites:** [1] Configuration Support D at release level 62 or higher. [2] SNA/SDLC protocol. [3] Configuration Support D requires 256K of control storage (#3660) to support X.25. [4] One of the following Communications Interfaces: #3701, #5655 or #1550. **Note:** The maximum line speed supported with any of these Communications Interface features is 9600 bps with X.25. The Communications Interface feature required depends upon the physical interface provided by the network. [5] #6303.

3274 Entry Assist: This function provides capabilities which facilitate entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs.

Alert Function: This function, selectable during the customization of 3274 mdls 41A, 41C/SNA, 61C/SNA, reports problem determination data to the host, for recording and display when NPDA Version 3 is installed in the host.

Response Time Monitor: This function, selectable during the customization of 3274 mdls 41A, 41C, 41D, 61C, provides the capability for enhanced network management by accurately measuring transaction times. Response times are collected in up to four user defined buckets. Response time end-definition is defined by the user and can be one of the following: First Character, Keyboard Usable, or Change Direction/End Bracket (SNA only). The response time information can be displayed at a user designated display station attached to the 3274. **Prerequisites:** #6101.

Problem Determination Procedure: Significant function has been designed into these units to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities".

The Network Problem Determination Application (NPDA), a program product, operates with VTAM and TCAM to assist in performing communication network problem determination/ isolation and enhances the availability and serviceability of the 3274 for the above environments in both BSC and SDLC attachment modes. See NPDA in the Program Products Section of the Sales Manual.

Display Exception Monitoring Facility (DEMF), a software tool for network problem determination/isolation, enhances the availability and serviceability of the 3274 in BSC mode. See DEMF in the SCP sections for OS/VS1 and OS/VS2.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Physical setup, connection of cables to communication lines/modems and IBM devices incorporating protected customer access areas, switch settings, and check out.
- Contact Field Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Receipt at the customer's receiving dock, unpacking, and placement of the 3274.
- Contacting IBM Field Engineering to accomplish the channel connection tasks for the 3274 mdls 41A and 41D.
- Connection of communication cable to the communications facility for the 3274 mdl 41C or 61C.
- Procurement, installation, and maintenance of the loop network when applicable on a 3274 mdl 61C.
- Performing 3274 customization in accordance with IBM-supplied procedures:
  a. For initial installation.
  b. When made necessary by changes in configuration.
  c. For updating of the control unit diskettes (at customer option).

Bibliography: See *KWIC Index,* G320-1621, or applicable system bibliography:

GC20-0360	S/360
GC20-0001	S/370
GC20-0001	4300
GC20-8100	8100

Note: Use the HONE configurator (CF3270) to assist in configuring the 3274 before entering an order .

BASIC CONFIGURATION

Except for mandatory specify codes, it is not necessary to select codes when ordering a 3274. If no specify codes are selected, other than mandatory specify codes, the machine is shipped as follows:

- Voltage: [Mdls 41A, 41D] 200-240V AC, 1-phase, 3-wire, 60 Hz, non-locking plug.
- Voltage: [Mdls 41C, 61C] 120V AC, 1-phase, 3-wire, 60 Hz, non-locking plug.
- Power Cable Length: 4.3 meters (14 feet).
- Communications Cable Length:
  - Mdl 41C or 61C without Loop Adapter #4850: 6.1 meters (20 feet)
  - Mdl 61C with Loop Adapter #4850: 1.8 meters (6 feet) Loop Station Connector (LSC) cable.
- Configuration Support D: Includes support for the following:
  - ASCII
  - All Category A Terminals and their functions/features
  - All Category A Terminal display keyboards
  - APL/Text Control
  - 3289 Text Print Control
  - Host Loadable Printer Authorization Matrix
  - Between Bracket Printer Sharing
  - SCS Printer Support
  - Magnetic Reader Control
  - Color Convergence
  - Structured Field and Attribute Processing
  - Programmed Symbols
  - Decompression of Programmed Symbols load data
  - Copy (Print Key Function)
  - Solicitation of summary maintenance statistics
  - Pacing of inbound message traffic
  - Automatic session recovery in both single and multidomain networks
  - Host notification of changes in attached terminal power on/off status

3274 Control Unit Mdls 41, 61C (cont'd)

- BSC Text Blocking
- BSC Transparency
- Entry Assist
- Alert Function (mdls 41A, 41C/SNA, 61C/SNA)
- Response Time Monitor
- All 3274 mdls 41A, 41C, 41D and 61C Specify and Special Features
- Unsupported Control Code Translate (similar to RPQ 8K0980)
- Dual Function Clear Key (similar to RPQ 8K0976/7/8)
- 4250 attachment (mdls 41A and 41D only)
- X.25 data transmission services (mdl 41C, 61C with 256K)

Notes:

(1) Some functions are either not applicable or available on all mdls. Refer to the following manuals for details:

IBM 3274 Control Unit - Description and Programmer's Guide, GA23-0061.

IBM 3274 Control Unit - Customizing Guide, GA23-0065.

(2) This configuration support is the same as that which is also available on the 3274 mdls 31A, 31D and/or 51C.

Limitations: [1] When 3290s are attached, specify **#9301** is required to get two 3290 microcode load diskettes that must be used with Configuration Support D to enable the downstream load of a 3290 with its operational microcode. [2] The extended data stream functions (extended color, extended highlighting, and Programmed Symbols) that require the Structured Field and Attribute Processing (SFAP) option in Configuration Support D will *NOT* operate with ASCII unless RPQ 8K1160 is installed. **Customer Setup:** Yes.

SPECIFY

- Terminal Support Interfaces: Provides for the method of attaching terminals. One and only one must be specified on each order.

  3299 Terminal Multiplexer Support (**#9901**): Enables the attachment of Category A Terminals via 3299 Terminal Multiplexers. Up to four multiplexers may be connected to a 41X, each multiplexer attaching up to eight terminals for a total of 32 terminals. One multiplexer may be connected to a 61C for eight terminals (Ports 8 through 15) while up to eight more terminals may be directly attached to Port 0 through 7 for a total of 16 terminals. **Limitations:** [1] Requires 3299s to attach terminals to the control unit (see M3299 pages). [2] Cannot have **#9908**. **Field Installation:** Yes.

  Category A Terminal Support (**#9908**): Provides for the direct attachment of Category A Terminals. Up to 32 terminals may be attached to a 41X. Up to 16 terminals may be attached to a 61C. **Limitations:** Cannot have **#9901**. **Field Installation:** Yes.

The remainder of the Specify section can be ignored unless the options described in the "Basic Configuration" section do not meet your needs.

- Power Cable Plug: Specify **#9890** if locking plug is desired.
- Power Cable Length: If standard 4.3 meter (14 feet) power cable is not desired, specify **#9511** for 1.8 meter (6 feet).
- 3290 Information Panel Display Support (**#9301**) : When 3290s are attached, **#9301** must be specified to get a 3290 microcode load diskette which must be used with Configuration Support D to enable the downstream loading of 3290s with operational microcode. A Utility Diskette is provided to customize keyboard and keypad layouts. **Field Installation:** Yes. **CSU:** Yes.
- Alternate Mailing Address (**#9011**): For diskette only updates. Order this optional feature to specify that diskette only updates are to be mailed to an alternate site address supplied by Field Engineering using a Microcode Control Number (MCN) rather than to the address of the 3274 installation site. The alternate address selected is usually that of a central site location. Redistribution of the diskettes containing the diskette update is the responsibility of the customer. The user may decide to replace the existing diskette himself with the diskette containing the updates or, if requested, the IBM Field Engineer will replace the diskette. The purpose of this feature is to assist the customer with his network management. **Field Installation:** Yes.

  Note: The IBM CE enters the MCN by signing onto application 7 of IMS. The operator is prompted through options concerning the MCN diskette, and mailing address.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

Extended Function Store (EFS) - Type D5 (#3660): [Mdl 41C, 61C] Provides 131,072 positions of additional control storage. This feature is required for support of X.25. **Maximum:** One. **Field Installation:** Yes.

Encrypt/Decrypt (#3680): [Mdls 41C, 61C (SDLC)] Provides the Federal Data Encryption Standard algorithm to encrypt and decrypt data messages under a 56-bit key variable. When used in conjunction with the ACF/VTAM Encrypt/Decrypt feature (Feature #6010, Program #5735-RC2) or ACF/TCAM, Version 2 (Program #5735-RC3) and either the 3848 and the OS/VS1 and OS/VS2 MVS Cryptographic Unit Support Program Product (5740-XY6), or, the OS/VS1 and OS/VS2 MVS Programmed Cryptographic Facility Program Product (#5740-XY5), data transmitted over unprotected communications lines can be safeguarded through cryptography. **Limitations:** [1] SNA/SDLC only. [2] Cannot be installed with #4850 on mdl 61C. [3] Encrypted data streams cannot be sent to a 3290 or 3270 Personal Computer (Distributed Function Mode) . (4) Mutually exclusive with X.25. The crypto feature cannot be used with X.25 operation. **Maximum:** One. **Field Installation:** Yes. **Note:** A mercury battery, P/N 1743456, or equivalent, is needed. A battery is shipped with this feature. See "Accessories" for additional or replacement battery. Replacement of a discharged battery is the customer's responsibility. The discharged IBM battery should be returned to IBM.

Response Time Monitor (#6101): [Mdls 41A, 41C, 41D, 61C] Provides the capability for enhanced network management by measuring response times. The Response Time Monitor feature accurately measures and records the transaction times between an inbound host attention (AID) and a user defined transaction end. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Configuration Support D at release level 61 and above.

Waterproof Power Connector (#8801): [Mdls 41A, 41D] Provides a special waterproof connector instead of the normal locking or non-locking plugs on the power cable. This connector is sometimes required to satisfy local ordinances which require this type of termination in specific locations within an installation. See *IBM information Display System Installation - Physical Planning,* (GA27-2787) for the mating receptacle which the customer must have installed.

COMMUNICATIONS FEATURES

CCITT V.35 Interface (#1550): [Mdls 41C, 61C] Provides a cable and a CCITT interface for attachment to an external modem or other DCE complying with CCITT Recommendation (1976) V.35, ISO Standard 2593, other relevant CCITT Recommendations, and that provides clocking of up to 56K bps. Attachment to non-IBM DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 3705 at speeds up to 57.6K bps. See "Specify" section for communication cable length. **Limitations:** [1] Cannot be installed with any other Communications Interface Feature [2] BSC is not supported at speeds greater than 9600 bps. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] **#6302 or #6303** for communications up to 9600 bps. [2] **#6303** for communications above 9600 bps, or for X.25 operation up to a maximum of 9600 bps. **Note:** Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

External Modem Interface (#3701): [Mdls 41C, 61C] Provides a cable and a RS-232C interface for attachment to an external IBM modem that provides clocking of up to 9600 bps. Attachment to non-IBM modem or other DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 3704, 3705, 4331, or 8100 Processor at speeds up to 9600 bps. **Limitations:** Cannot be installed with any other Communications Interface feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #6302 or #6303. #6303** is required for X.25 operation.

Loop Adapter (#4850): [Mdl 61C] Provides the ability to attach to a direct or data link attached loop of the 8100 System or a 4331 Processor. Direct loop attachment supports speeds up to 38.4K bps. Data link loop attachment supports 2400, 4800, and 9600 bps. A direct attached loop can use a 9.6K or 38.4K Hz carrier; a data link attached loop uses a 9.6K Hz carrier. **Limitations:** (1) Cannot be ordered with any other Communications Interface feature. (2) Cannot be ordered with #3680. **Maximum:** One. **Field Installation:** Yes. **Prerequisites: #6303. Specify:** On initial order or for change by service representative, one of the following must be specified: **#9825** for 9.6K Hz carrier or **#9829** for 38.4K Hz carrier. To change specify on an installed machine, contact Field Engineering Branch Office. MES number 999999 is to be used for Incident Report (IR) completion data. (All terminals on a loop must use the same carrier frequency.)

Digital Data Service (DDS) Adapter (#5650): [Mdls 41C, 61C] For point-to-point or multipoint operation. An adapter for BSC or SDLC data transmission at speeds of 2400, 4800 or 9600 bps or SDLC data transmission at 56K bps over the AT&T nonswitched Dataphone® Digital data service network. The DDS Adapter interfaces to a DDS Channel Service Unit, the customer site termination of the DDS network. **Limitations:** Cannot be installed with any other Communications Interface feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] **#6302 or #6303** for communications up to 9600. [2] **#6303** for communications at 56K bps. **Specify: #9822** for 2400 bps, **#9823** for 4800 bps, **#9825** for 9600 bps, or **#9833** for 56K bps.

3274 Control Unit Mdls 41, 61C (cont'd)

To change specify on an installed machine, contact Field Engineering Branch Office. MES number 999999 is to be used for Incident Report (IR) completion data.

Notes: [1] After installation, the operational mode can be changed to the other (point-to-point to multipoint or vice versa) by simply re-customizing the System Diskette to select the desired operational mode. [2] Depending on the length and content of the data stream, an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

X.21 Adapter For Nonswitched Networks (#5655): [Mdls 41C, 61C] An interface adapter for SDLC data transmission at speeds of 2400, 4800, 9600 or 48K bps on nonswitched communication facilities via a DCE complying with CCITT Recommendation X.21. **Limitations:** [1] Cannot be ordered with any other Communications Interface feature. [2] Does not support BSC transmission control protocol. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] **#6302 or #6303** for communications up to 9600 bps. [2] **#6303** for communications at 48K bps, or for X.25 operation up to a maximum of 9600 bps. **Note:** Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

X.21 Adapter For Switched Networks (#5656): [Mdl 61C] An interface adapter for attachment to an X.21 switched network via a DCE complying with CCITT Recommendation X.21. SDLC communications at speeds of 2400, 4800, 9600 and 48K bps are supported. Keyboard decals and display screen indicators are provided for operator reference during the calling, data exchange, and disconnecting phases. **Limitations:** [1] Cannot be ordered with any other Communications Interface feature. [2] Does not support BSC transmission control protocol. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] **#6303.**

Common Communications Adapter Without Business Machine Clock (#6302): [Mdls 41C, 61C]. Required for communications at speeds up to 9600 bps. SNA/SDLC and BSC transmission control protocols are supported. Clocking must be provided by the modem or communications facility. **Limitations:** This feature cannot be ordered/installed with #6303. **Maximum:** One. **Field Installation:** Yes.

High-Performance Communications Adapter Without Business Machine Clock (#6303): [Mdls 41C, 61C]. It is required for all attachments with speeds greater than 9600 bps, attachment to X.25 data transmission services, and for 61C attachment to the loops of the 8100 System at speeds up to 38.4K bps and for attachment to X.21 Switched Network. Clocking must be provided by the modem or communications facility. **Limitations:** [1] With this feature installed, operation is restricted to SNA/SDLC protocol. IML for BSC protocol is no longer possible. [2] This feature cannot be ordered/installed with **#6302. Maximum:** One. **Field Installation:** Yes. **Specify:** If to be used for X.25 operation, specify **#9615.** (This specify provides the special X.25 keyboard labels used on 3178s, 3278s or 3279s for X.25.)

MODEL CONVERSIONS

Model conversions of a model 41A to 41D or 41D to 41A are available. There are no other 41X or 61C model conversions. There are no model upgrades from a model 21X, 31X, or 51C to a model 41X or 61C, respectively. If making a model change, refer to FIVE3270 to evaluate expected performance.

ACCESSORIES

Battery, Mercury: To provide power to sustain the master key of the Encrypt/Decrypt feature **#3680** on the 3274 when normal power is not present. A 4.14 volt mercury battery (**P/N 1743456**). This supply item has a shelf life of one year under normal conditions, and can be expected to provide 3.5 years of normal service. Additional or replacement batteries can be ordered from IBM. Discharged batteries should be returned to IBM for disposal. Return information is printed on the label of the battery.

X.25 Keyboard Labels: Stick-on labels are used on the keyboards of 3178s, 3278s and 3279s attached to a 3274 mdl 41C or 51C using X.25 communications facilities. These labels are normally provided with the 3274 feature #6303 when Specify Feature **#9615** is specified to indicate that X.25 will be used. If new or additional labels are required, they can be obtained by ordering Form Number GX23-0285. Each Form Number is a sheet containing 16 sets of stick-on labels, enough for 16 keyboards, and the installation procedure for installing the labels.

SUPPLIES (None)

3275 DISPLAY STATION MDL 3

PURPOSE

A single remote cathode ray tube display station for use in the 3650 Programmable and Retail Store System. Provides controls and display of alphameric information from a 3651 Store Controller utilizing a 2400 bps Loop communications facility.

MODELS

Model 3 003

HIGHLIGHTS

Displays as many as 1,920 characters ... 24 lines of 80 characters each. Displays sixty-three 7 x 9 dot matrix characters ... 36 alphamerics, 27 special characters, including the space. Features Data Field Organization, which permits individual fields of data on the screen to be program-defined with various attributes such as protected or unprotected, alphameric or numeric, and normal intensity, non-displayed, or brightened intensity.

Editing Features: -- Typamatic cursor, tab, back-tab, protected-data, insert and delete, and extended-erase (erase to end-of-field, erase all keyboard input data, erase entire screen) are standard features.

Input Flexibility: -- The keyboard provides a set of three program action keys and five program function keys for input flexibility.

Security Enhancement Features: -- A special non-displayed keying mode (standard) provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock (optional) prevents modification of data on the display screen unless the key is turned to the "On" position.

Optional features allow the attachment of a 3284 mdl 3 dedicated printer, an audible alarm, and the Security Keylock ... see "Special Features" below.

Communications: The 3275 mdl 3 may be attached to the Loop facility of the 3650 Programmable and Retail Store System along with the other types of terminals supported in the system.

Communicates only with a 3651 Store Controller mdl 25, 50, or 75. The 3275 mdl 3 includes the mdl 50 Loop Adapter and a 15 foot cable for attachment to the Loop facility

Maximum: The maximum number of 3275 mdl 3s that can be attached to a 3651 mdl 25, 50, or 75 depends upon the number of positions available and the traffic volumes and response times required.

SPECIFY

- Voltage (115V, AC, 1-phase, 3-wire, 60 Hz): **#9880** for locking plug, or **#9881** for non-locking plug.

  Note: The Hospital Grade Plug, RPQ 8K0696 (no-charge), is required for Hospital General Patient Care Areas. Field Installation: No.

- **Keyboard:** A 66-key EBCDIC Data Entry Keyboard **#4631** must be installed on each 3275 mdl 3.
- Transmission Code: Specify **#9761** -- EBCDIC transmission code.
- Character Set: Specify **#9089** -- EBCDIC Character Set.
- Machine Nomenclature: [plant installation only]
- **Character Generator Language** (all Mono Case): See "Special Features". Select one of the following:
- **Keyboard Language:** For keyboard #4631, specify one of the following:

SPECIAL FEATURES

Audible Alarm (#1090): An alarm, activated under program control, to alert the operator to a special condition. This alarm, during keyboard operation, is sounded when a character is entered into the next to last position on the screen. **Maximum:** One. **Field Installation:** Yes.

Keyboard (#4631): 66 Key EBCDIC Data Entry Keyboard, key-punch like layout, movable, with 36 alphameric keys and 30 control keys. **Maximum:** One. **Field Installation:** Yes.

Keyboard Numeric Lock (#4690): Provides the ability to lock the keyboard if a non-numeric key [other than 0-9, minus (-), period (.), or DUP] is depressed in a predefined numeric-only field. **Maximum:** One. **Field Installation:** Yes. Contact local Field Engineering Branch Office for installation. MES number 999999 is to be used for I.R. (Incident Report) Completion Data.

Printer Adapter (#5550): To attach a 3284 Printer mdl 3. Provides the controls to print out the contents of the 3275 mdl 3 buffer. **Maximum:** One. **Field Installation:** Yes.

Security Keylock (#6340): A lock and key which prevents modification and display of data on the display when in the "off"position. For additional or replacement keys, see "Accessories " below. **Maximum:** One. **Field Installation:** Yes.

Transmission Speed, 9600 bps (#7825): Provides for transmission at 9600 bps over a local Loop on a 3651 Model A50, B50. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** 9600 bps Loop Adapter (#4890) on the 3651 mdl A50 or B50.

MODEL CHANGES

3275 model 3 cannot be changed in the field from or to model 1 or 2.

ACCESSORIES

Locks And Keys (P/N 2577741): The 3275 with Security Keylock (#6340) is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser). Order P/N 2577741via Allow two to three weeks for delivery.

3275 Display Station Keyboard Accessories: The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3275 Display Station keyboard. These accessories affect keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving and a keytop extractor.

These accessories may be ordered by P/N via a DP Supply Order from the Raleigh plant.

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key.)

Legendable Keytops	P/N
White	**5188775**
Charcoal Gray	**8627192**
Light Gray	**8542831**

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key.)

Blank Keytops	P/N
White	**1853775**
Charcoal Gray	**1853567**
Light Gray	**1853563**

Keytop Extractor (P/N 9900373): The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled of its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

SUPPLIES (None)

3276 CONTROL UNIT DISPLAY STATION

PURPOSE

A cathode-ray tube (CRT) display station used for displaying alphameric data, and for entering data into and receiving data from a S/370, a 4300 Processor, a 3790 Communication System, a S/360, or an 8100 System. The 3276 optionally provides control and multiplexing capabilities to support up to seven 3230 mdl 2s, or 3262 mdl 13s, or 3268 mdl 2s and 2Cs, or 3178, or 3278, or 3279s, or 3287s, or 3289s, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10, allowing a maximum cluster size of eight displays or printers including the 3276's own display. The 6580 Displaywriter System can connect to 1 or 2 terminal ports (display station, or display station and printer). A keyboard, or a selector light-pen, permit an operator to display and manipulate data on the screen in a flexible and efficient manner. The 3276 meets both general and unique display requirements with its set of basic and optional features.

The 3276 communicates with a S/370 or 4300 Processor, using Synchronous Data Link Control (SDLC) or Binary Synchronous Communications (BSC) over communications facilities; or with a S/360, S/370 or 4300 Processor, using BSC over communications facilities; or with a 3790 Communication System using SDLC over communications facilities; or with an 8100 System using SDLC via a communication link, or a direct or data link attached loop or with a 4331 using SDLC via a direct or data link attached loop.

MODELS

Models 1-4 : For use with BSC transmission control.

Model 1	001	Displays up to 960 characters ... 12 lines of 80 characters each.
Model 2	002	Displays up to 1,920 characters ... 24 lines of 80 characters each.
Model 3	003	Displays up to 2,560 characters ... 32 lines of 80 characters each.
Model 4	004	Displays up to 3,440 characters ... 43 lines of 80 characters each.

Models 11-14 : For use with SNA/SDLC transmission control.

Model 11	011	Displays up to 960 characters ... 12 lines of 80 characters each.
Model 12	012	Displays up to 1,920 characters ... 24 lines of 80 characters each.
Model 13	013	Displays up to 2,560 characters ... 32 lines of 80 characters each.
Model 14	014	Displays up to 3,440 characters ... 43 lines of 80 characters each.

Note: Models 1 and 11 have a 480-character mode for existing 480-character programs, and Models 3, 4, 13 and 14 have a 1,920-character mode to accommodate existing 1,920-character programs.

ATTACHABLE TERMINALS

3178 mdl C1, C2	Display Station
3262 mdl 13	Line Printer
3268 mdl 2 & 2C	Printer
3278 mdl 1, 2, 3, & 4*	Display Station
3279 mdl 2A, 2B, 3A & 3B*	Color Display Station
3287 mdl 1, 2, 1C & 2C	Printer
3289 mdl 1 & 2	Line Printer
5210 mdl G1, G2	Printwheel Printer
6580 mdl A04, A06, A08, A10	Displaywriter System (25-Line Display)
6580 mdl B04, B06, B08, B10	Displaywriter System (66-Line Display)

* For 3178, 3278 and 3279 model restrictions, see "ATTACHMENT MATRIX" under TERMINAL ADAPTERS in "Special Features".

The 3276 does not support Programmed Symbols, Extended Color, or Extended Highlighting on a 3268, 3278, 3279, 3287, or a 5210.

For use with 3790 Communication System: The 3791 Controller supports only selected models of the 3276 and the 1,920 character mode. See the *3791 Configurator,* GA27-2768, and M3791 pages for additional details.

For use with an 8100 System: See the *8100 System Configurator,* GA27-2876 and refer to the M8130/8140, 8101 pages and programming pages for possible support restrictions.

The 6580 Displaywriter System prerequisites for attachment include the 3270 Attached Workstation licensed program (5608-SR9) and the 3274/3276 Attached Workstation Adapter #8332.

Prerequisites: The 3276 requires an integrated, or external modem,or a DDS Adapter, or an X.21 Adapter for Switched Networks, or an X.21 Adapter for Nonswitched Networks for TP attachment, or a Loop Adapter for IBM 8100 System loop attachment. A keyboard is needed on each 3276 for diagnostic purposes.

Customer Setup (CSU): The 3276 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM. The CSU allowance is four days.

HIGHLIGHTS

Displays a character within a 7x14 character matrix in 960, 1,920 and 2,560-character mdls; within a 7x11 character matrix in the 3,440-character mdl. The basic 26-character upper case letters are presented in a 7x9 character matrix for the 960, 1920 and 2,560-character mdls, and in a 7x8 character matrix for the 3,440-character mdl. Displays a 94-character set: 62 alphameric and 32 special characters, not including the Space and Null characters. The display character set may be restricted to upper case characters by the monocase switch. Uses 3270 Field Formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/ unprotected, alphameric, normal/ highlighted intensity, displayable/ non-displayable, and selector light-pen detection allowed/ disallowed. All terminals attached to a 3276 can be driven at distances of up to 1,500 meters (4,920 feet).

The operator may initiate a local display-to-printer copy function (i.e., without host intervention) from the keyboard of a 3178, 3276, 3278, 3279, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10, attached to a 3276. [Order RPQ 8K0929 or 8K0991 on mdls 1, 2, 3 and 4 using BSC when all the following operating conditions are expected:

- Operator use of the print key for a local copy on a printer that is also used by the host.
- The host does not use General Poll.
- The host does not issue Specific Poll after a printer has completed a host printout.

Refer to the RPQ Description and Price Transmittal for details.] The printer designation is controlled by a configuration default matrix which is fixed by the relative port positions of displays and printers attached to the 3276. Other printers may be accessed using the IDENT key.

Devices attached to the 3276 are assigned port positions 1 through 8. Displays are authorized to print only to printers which are attached to higher numbered ports. If the IDENT key is not used, a PRINT operation from a given display will cause printing to take place at the first printer whose port position is higher than the display. The operator may use the IDENT key to print to any printer. (The host can perform copy in a manner compatible with existing 3271/3272 support).

Operator Factors: The 3276 has an anti-glare screen. Indicators are displayed on the bottom row of the screen, outside the data display area, and provide useful operator information. Host display of data on the screen is accomplished without refresh interrupt (i.e., no blinking). The keyboard, which is low in profile, provides a palm rest area, and has separators to help prevent accidental striking of control keys. The operator may select one of several cursor modes.

Cluster Capability: Up to seven 3262s, 3178s 3230s, 3262s, 3278s, 3279s, 3268s, 3287s, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10, 3289s or a 5210 may be attached. The basic 3276 provides a display and a port for one device, a 3178, a 3230, a 3262, a 3268, a 3278, a 3279, a 3287, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10, 3289 or a 5210. Up to three Terminal Adapters, each controlling up to two devices, can be attached to the 3276. The 3276 allows the attachment of seven additional displays and/or printers for a maximum cluster size of eight including its own display. The 6580 Displaywriter System can connect to one or two terminal ports (display station, or display station and printer). ... See "Special Features".

Editing Functions: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic. All alphameric, special symbol, and cursor move keys have typamatic capability. Double speed cursor typamatic is attained with a simultaneous depressing of the ALT key and a horizontal cursor positioning key. The cursor select function provides an alternative to the selector light-pen function. Fields of data may be selected by positioning the cursor and then using the cursor select key.

Input Flexibility: A choice of keyboards or the selector light-pen provide input flexibility ... see "Special Features" below. Fields of data can be selected by positioning the cursor and operating the cursor select key, instead of using the selector light-pen. 12 Program Function (PF) keys are basic with all typewriter keyboards.

Security Functions: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of data in the display buffer unless the key is turned to the "on" position. An Address Keylock (optional) controls access to the address switches. These capabilities and the terminal's ability to identify itself to the host program (SNA/SDLC operation only), allow customer-supplied security program routines to control access to data and audit of actions. A

3276 Control Unit Display Station (cont'd)

Magnetic Slot Reader is available to enter system user identification. An Encrypt/Decrypt feature (optional) protects data transmitted over unsecured communication lines from accidental or intentional disclosure and/or modification (mdls 11-14 in S/370 or 4300 Processor attachment only).

Audible Alarm: An alarm, sounded under program control, to alert the operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the next-to-last position on the screen. The operator may adjust the volume of the tone.

Communications: The 3276 mdls 11-14, and the 3276 mdls 1-4 with the SDLC/BSC Switch (#6315) communicate with a S/370 or 4300 processor using SDLC transmission over communications facilities (where applicable) to a 3704, 3705, or 3725, or a Communications Adapter (#1601) feature on the 4331. The 3276 mdls 1-4 communicate with a S/360, S/370 or 4300 Processor, using BSC transmission over communications facilities (where applicable) to a 2701, 2703, 3704, 3705, 3725 (see note), an Integrated Communications Adapter (3115, 3125, 3135 or 3138), or a Communications Adapter (#1601) feature on the 4331. See 3791 pages for specific models. All mdls of the 3276 can also communicate with a 3704, 3705, or 3725, or a Communications Adapter (#1601) feature on the 4331, at 1200 bps without need for communications facilities or a modem. The 3276 mdls 11-14 communicate with a 4331 Processor using SDLC transmission via a direct or data link attached loop. The 3276 mdls 11-14 communicate with an 8100 System using SDLC transmission via a data link, or a direct or data link attached loop. The 3276 mdls 1-4 with the SDLC/BSC switch (#6315) can communicate with the 8100 System using SDLC transmission via a data link. **Note:** The 3725 is not connectable to a S/360.

Communication Facilities: The 3276 operates in data-half-duplex point-to-point or multipoint mode on half-duplex or duplex non-switched communiction facilities at speeds of 1200, 2000, 2400, 4800, 7200 or 9600 (SNA/SDLC only) bps. In addition, the 3276 mdls 11-14 operate in data-half-duplex point-to-point mode on the public switched telephone network at speeds of 1200 and 4800 bps and on public switched data networks at speeds of 2400, 4800, and 9600 bps. See the M2700 pages for information on the communication facilities over which this operation can occur. The 3276 mdls 11-14 also operate in half-duplex mode at 9600 bps over a direct attached loop, and at 2400, 4800 or 9600 bps over a data link attached loop.

Modems: If a Loop Adapter (#4850) (mdls 11-14 only), or a Digital Data Service (DDS) Adapter (#5650 or #5651), or an X.21 Adapter For Switched Networks (#5656) (mdls 11-14 only), or an X.21 Adapter for Nonswitched Networks (#5655) (mdls 11-14) is not installed, a 1200 bps Integrated Modem feature or an external IBM modem may be attached to a 3276. External modems require the External Modem Interface (#3701).

Modem	Speed (bps)
3863 mdl 1/2	2400/1200
3864 mdl 1/2	4800/1200
3865 mdl 1/2	9600/4800
3868 mdl 1	2400/1200
3868 mdl 2	4800/2400
3868 mdl 3/4	9600/4800
3872 mdl 1	2400/1200

Four-wire Switched Network Back-up is available on 3863, 3864, or 3865 modems.

Switched network backup operation with Manual Call and Manual or Auto Answer is available on the 3872 mdl 1. For communications capabilities, product utilization and special features, see M2700, 3863, 3864, 3865, and 3872 pages.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities".

Network Problem Determination Application (NPDA), a program product, operates with VTAM and TCAM to assist in performing communication network problem determination/ isolation and enhances the availability and serviceability of the 3276 for the above environments in BSC (except when attached to the 4331 via direct or data link attached loop) and SDLC mode. See NPDA in the Program Products Section.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at customer's receiving dock, unpacking and placement of 3276.
- Physical setup, connection of cables to communication lines/modems and IBM devices incorporating protected customer access areas, switch settings, and check out.
- Contact Field Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.

Bibliography: See *KWIC Index,* G320-1621 or specific system bibliography.

SPECIFY

Specify Codes are not normally required to order a 3276. If codes are not specified, the machine is shipped with the following specifications:

- Voltage: 120V AC, 1-phase, 3-wire 60 Hz.
- Power Cable Plug: Non-locking.
- Power Cable Length: 2.8 meters (9 feet).
- Keyboard Cable Length: 0.9 meters (3 feet).
- Communication Cable Length: 6.1 meters (20 feet) for attachment to standalone modem, or to communications facility when a DDS Adapter or an integrated modem is used.
- Loop Station Connector (LSC) cable length: 1.8 meters (6 feet) for attachment to a direct attached or data link attached loop.

Keyboard Selection defines the 3276 Character Set of EBCDIC or ASCII. A 3178, a 3230, a 3262, a 3278, a 3279, a 3287, or a 3289 must use the same Character Set as the 3276 to which it is attached. The 6580 Displaywriter System supports the EBCDIC Typewriter Keyboard.

The remainder of this Specify Section can be ignored unless special circumstances require a deviation from the standard default values.

- Power Cable Plug: Specify **#9890** for a locking plug.
- Power Cable Length: If the standard 2.8 meter (9 foot) power cable is not desired, specify **#9513** for a 4.5 meter (15 foot) cable.
- Keyboard Cable Length: If the standard 0.9 meter (3 foot) cable is not desired, specify **#9399** for 1.8 meter (6 foot) cable.
- Communication Cable: If the standard 6.1 meter (20 foot) communication cable is not desired, specify **#9061** for 3.0 meter (10 foot) cable, **#9062** for 9.1 meter (30 foot) cable or **#9063** for 12.2 meter (40 foot) cable.
- Loop Station Connector (LSC) cable: If the standard 1.8 meter (6 foot) loop station connector cable is not desired, specify **#9405** for 4.3 meter (14 foot) cable.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

Address Keylock (#1009): Controls access to the unit address switches (and incidentally transmit level switches) which are located in the Operator Panel Drawer. **Maximum:** One. **Field Installation:** Yes.

APL/Text Control (#1067): Provides the control for 3230, 3262 (Text only), 3268, 3276, 3278, 3279, or 3287, with APL/Text feature, or 3289 with TEXT feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1068.

Extended Function Base (#1068): Allows the addition of APL/Text Control (#1067), or X.21 Adapter For Switched Networks (#5656) and/or Color Display Attachment (#1950) feature. **Limitations:** Cannot be installed with #6315. **Maximum:** One. **Field Installation:** RPQ 8K0900 is required.

Audible Alarm (#1090): An alarm, sounded under program control, to alert the operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the next-to-last position on the screen. The operator may adjust the volume of the tone. **Maximum:** One. **Field Installation:** Yes. **Note:** This feature is available for ordering for field installation until 12/3/82. Then is can no longer be ordered.

APL/Text (#1120): Provides the capability for display of 222 character APL 'Text set including the 94 character EBCDIC set. **Limitations:** This feature is only valid when installed with #1067. This feature is EBCDIC only and is NOT compatible with ASCII. Cannot be installed with #3620. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3610. **Corequisite:** (#4626) or (#4629). **Note:** This feature is available for ordering for field installation until 12/3/82. Then is can no longer be ordered.

Color Display Attachment (#1950): Provides the capability of attaching 3279 mdls 2A, 3A, 2B, 3B, S2A, S2B, S3G, 02X, and 03X. For the number of attached terminals, see Terminal Adapter features

3276 Control Unit Display Station (cont'd)

(#3255, #3256, #3257). **Limitations:** (1) This feature is not available for 3276 mdl 1. (2) The 3276 does not support Programmed Symbols, Extended Color, or Extended Highlighting. 3279 Models 2B and 3B are supported on the 3276 for base color and APL/Text operation. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** (1) #1068 (2) #1067 for use with 3279 mdls 2B, 3B for APL/Text Operation.

Extended Character Set Adapter (#3610): Provides the additional control and buffering necessary for the extended character set in #1120. **Limitations:** Cannot be installed with #3620. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1067. **Corequisite:** #1120. **Note:** This feature is available for ordering for field installation until 12/3/82. Then it can no longer be ordered.

Character Set Extension (#3620): Provides the capability for display of 222 character APL/Text including 94 character EBCDIC set, and the additional control and buffering necessary for the extended APL/Text character set. **Limitations:** (1) This feature is only valid when installed with #1067. This feature is EBCDIC only and is *NOT* compatible with ASCII. (2) Cannot be installed with #1120 or #3610. **Maximum:** One. **Field Installation:** Yes. **Corequisite:** #4626 or #4629.

Encrypt/Decrypt (#3680): Provides a hardware implementation of the Federal Data Encryption Standard algorithm to encrypt and decrypt data messages under a 56-bit key variable. When used in conjunction with the ACF/VTAM Encrypt/Decrypt Feature (Feature Number #6010, Program Number 5735-RC2) and the IBM Programmed Cryptographic Facility Program Product (5740-XY5), data transmitted over unprotected communication lines can be safeguarded through cryptography. **Limitations:** 3276 mdls 11-14 only. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6340.

Note: A mercury battery, P/N **1743456** or equivalent is needed. A battery is shipped with this feature. Replacement of the discharged battery is the customer's responsibility. Discharged battery should be returned to IBM.

Magnetic Reader Control (#4999): Provides the capability of attaching a Magnetic Slot Reader which reads encoded information (numeric only) from a magnetic stripe. **Maximum:** One. **Field Installation:** Yes.

SDLC/BSC Switch (#6315): [Mdls 1-4] Provides SNA/SDLC transmission control in addition to BSC. SDLC or BSC can be selected by the operator with a switch on the operator panel. **Limitations:** Cannot be installed with #1068. **Maximum:** One. **Field Installation:** Yes.

** **Security Keylock (#6340):** A lock and key which prevents modification or display of data in the display terminal when in the "off" position. When the Security Keylock feature is combined with #3680, a third position of the lock permits modification of the 56-bit Encrypt/Decrypt key variable. **Maximum:** One. **Field Installation:** Yes.

Selector Light-Pen (#6360): A hand-held, pen-like device which permits the operator to select fields of data from a display for input to the host system. The selector light-pen, while not being used, can be placed in a recess of the keyboard, which is used for user's incidental items. Selector light-pen (and cursor select) operations have been expanded to include a new designator character "&". When this designator is used, the Read Modified operation results in the return of both the addresses and the data of all modified fields on the screen. **Maximum:** One. **Field Installation:** Yes.

KEYBOARDS

One is needed on each 3276 for diagnostic testing. Refer to the Type Catalog section for keyboard layouts.

Limitations: Keyboards used on 3178s/3275s/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. **Maximum:** One of the below. **Field Installation:** Yes. The keyboard is set up by the customer.

#4621 - 75-key EBCDIC Typewriter Keyboard: Typewriter-like layout, movable, with 49 data keys and 26 control keys. 12 PF keys are included in the top row of data keys through use of an alternate shift key.

#4622 - 75-key EBCDIC Data Entry Keyboard: Movable, with 35 data keys, 10 PF keys and 30 control keys.

#4623 - 75-key EBCDIC Data Entry Keyboard: Keypunch layout, movable, with 35 data keys, 10 PF keys and 30 control keys. This is the recommended keyboard for high volume data entry.

#4624 - 75-key ASCII Typewriter Keyboard: ASCII typewriter-like layout, movable, with 49 data keys and 26 control keys. 12 PF keys are included in the top row of the data keys through use of an alternate shift key.

#4626 - 87-key EBCDIC Typewriter/APL Keyboard: An 87-key EBCDIC Typewriter Keyboard (see #4627) with modified keytops to allow entry of 81 APL specific characters in addition to the 94 character EBCDIC set. An APL On/Off key controls whether the keyboard is in EBCDIC typewriter or APL mode. In contrast to #4627, this keyboard has only 12 PF keys (PF1 through PF12) which are the group of 12 keys to the right of the main keyboard area. **Prerequisites:** #3620.

#4627 - 87-key EBCDIC Typewriter Keyboard: Typewriter-like layout, movable, with 49 alphameric data keys, 26 control keys, and 12 PF keys (24 total PF keys). 12 of the PF keys are included in the top row of data keys through the use of an alternate shift key.

#4628 - 87-key ASCII Typewriter Keyboard: ASCII typewriter-like layout, movable, with 49 alphameric data keys, 26 control keys, and 12 PF keys (24 total PF keys). 12 of the PF keys are included in the top row of data keys and are available through the use of an alternate shift key.

#4629 - 87-key EBCDIC Typewriter/Text Keyboard: An 87-key EBCDIC Typewriter Keyboard (see #4627) with modified keytops to allow entry of 65 Text specific characters in addition to the 94 character EBCDIC set. A Text On/Off key controls whether the keyboard is in EBCDIC typewriter or Text mode. In contrast to #4627, this keyboard has only 12 PF keys (PF 1 through PF 12) which are the group of 12 keys to the right of the main keyboard area. **Prerequisites:** #3620.

Keyboard Numeric Lock (#4690): Provides keyboards #4621, #4622, #4623,#4624, #4626, #4627, #4628, #4629 with the ability to lock the keyboard, if a non-numeric key [other than 0-9, minus, decimal sign, or dup] is operated in a pre-defined numeric-only field. **Maximum:** One. **Field Installation:** Yes. Contact Field Engineering Branch Office for installation. MES number 999999 is to be used for IR (Incident Report) completion data.

COMMUNICATIONS FEATURES

For TP attachment, each 3276 must be equipped with one of the communications features (#6301 or #6302) and either the External Modem Interface (#3701), an X.21 Adapter for Switched Networks (#5656), or an X.21 Adapter For Nonswitched Networks (#5655), a DDS Adapter (#5650 for point-to-point operation, #5651 for multipoint operation), or one of the 1200 bps Integrated Modem features (#5500, #5501, #5502, #5507 or #5508). In addition, #6315 may be selected on mdls 1-4 (see above).

For loop attachment (3276 mdls 11-14) each 3276 must be equipped with #6302 and #4850.

External Modem Interface (#3701): Provides an interface for attachment to an IBM or external modem. **Limitations:** Cannot be ordered with any other Communications Interface feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6301 or #6302. **Specify:** **#9490** for operation on the public switched network (mdls 11-14), or **#9491** for operation on nonswitched communications facilities.

Loop Adapter (#4850): [Mdls 11-14] Provides the capability to attach to either a direct or data link attached loop of the IBM 8100 System or a 4331/4361 Processor. **Limitations:** Cannot be ordered with any other Communications Interface feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6302.

1200 bps Integrated Modem, Nonswitched (#5500): Provides an integrated modem for operation over nonswitched communications facilities at speeds of 1200/600 bps. No external modem is required. **Limitations:** Cannot be ordered with any other Communications Interface feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6301. **Specify:** **#9651** for use with 4-wire facility or **#9652** for use with 2-wire facility .

1200 bps Integrated Modem, Switched, Auto Answer (#5501): [Mdls 11-14] Provides an integrated modem with auto/manual answer capabilities for operation over switched communications facilities at speeds of 1200/600 bps. No external modem is required. **Limitations:** Cannot be ordered with any other Communications Interface feature. **Field Installation:** Yes. **Prerequisite:** #6301.

Note: Attachment of this feature to the public switched telephone network requires that the customer provides an FCC registered protective circuit equivalent to the type CBS Data Access Arrangement.

1200 bps Integrated Modem, Manual Answer (#5502): [Mdls 11-14] Provides an integrated modem for communication with a remote processor at speeds of 1200/600 bps over the public switched telephone network. No external modem is required. **Limitations:** Cannot be ordered with any other Communications Interface featue. **Maximum:** One. **Field Installation:** Yes **Prerequisites:** [1] #6301. [2] **Note:** Attachment of this feature to the public switched telephone network requires that the customer provides an FCC registered protective circuit equivalent to the type CDT Data Coupler.

1200 bps Integrated Modem, Nonswitched With Switched Network Backup (#5507): Provides an integrated modem at speeds of 1200/600 bps for operation over nonswitched communication facilities, and also provides manual switched network backup capability. No external modem is required. **Limitations:** Cannot be ordered with any other Communications Interface feature. **Specify:**(**#9651**) for communication over 4-wire facility, or (**#9652**) for communication over 2-wire facility. **Maximum:** One. **Field Installation:** Yes.

3276 Control Unit Display Station (cont'd)

Prerequisites: [1] #6301. [2] Note: Attachment of this feature to the public switched telephone network requires that the customer provides an FCC registered protective circuit equivalent to the type CDT Data Coupler.

1200 bps Integrated Modem, Nonswitched With Switched Network Backup, Auto Answer (#5508): Provides an integrated modem for operation over nonswitched communications facilities at speeds of 1200/600 bps and also provides auto/manual answer switched network backup capabilities. No external modem is required. **Limitations:** Cannot be ordered with any other Communications Interface feature. **Field Installation:** Yes. **Prerequisites:** #6301. **Specify: #9651** for communications over 4-wire facility, or **#9652** for communications over 2-wire facility. Note: Attachment of this feature to the public switched telephone network requires that the customer provides an FCC registerd protective circuit equivalent to the type CBS Data Access Arrangement.

Digital Data Service (DDS) Adapter (#5650 for point-to-point operation, #5651 for multipoint operation:) An adapter for BSC and SDLC data transmission at speeds of 2400 bps, 4800 bps, and 9600 bps (mdls 11-14) over the AT&T nonswitched Dataphone® Digital data service network. The DDS Adapter interfaces to a DDS channel service unit, the customer site termination of the DDS network. **Limitations:** Cannot be ordered with any other Communications Interface feature. See "Communication Cable" of 3276 Specify section. **Maximum:** One #5650 or #5651. **Prerequisites: #6302. Specify: #9822** for 2400 bps, or **#9823** for 4800 bps, or **#9825** for 9600 bps (mdls 11-14).

X.21 Adapter For Non-Switched Networks (#5655): [Mdls 11-14] Provides an interface and cable for attachment to the X.21 Nonswitched data circuit-terminating equipment (DCE). See "Specify" for length of communication cable, which is supplied. SDLC data transmission at speeds of 2400 bps (#9822), 4800 bps (#9823), and 9600 bps (#9825) are supported. **Limitations:** Cannot be ordered with any other Communications Interface feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6302.

X.21 Adapter For Switched Networks (#5656): [Mdls 11-14] Provides an interface for attachment to the X.21 switched network to transmit data at speeds of 2400 bps, 4800 bps, and 9600 bps. The X.21 interface is a recommendation from the CCITT to standardize the interface between the DTE and DCE for synchronous operation, and will be used in place of the V.24/V.28 interface. A keyfront decal and a label on the keyboard will be provided for easy operator reference in using this feature. **Limitations:** Cannot be ordered with any other Communications Interface feature. **Maximum:** One **Field Installation:** Yes. **Prerequisites:** [1] #1068. [2] #6302.

Communications Feature With Business Machine Clock (#6301): Required for attachment to communications facilities through any 1200 bps Integrated Modem, or #3701 at 1200 bps, to any external modem that does not provide its own clocking. **Limitations:** Cannot be ordered with #6302. **Maximum:** One. **Field Installation:** Yes.

Communications Feature Without Business Machine Clock (#6302): Required for attachment to communications facilities, at speeds of up to 9600 bps using SDLC, or up to 7200 bps using BSC, through #3701 and any external modem that provides its own clocking, or through the DDS Adapter, or through #5656, or through #5655 and its data circuit-terminating equipment. It is also required for attachment of the 3276 mdls 11-14 to a direct or data link attached loop of the 8100 System, at a speed of 9600 or 2400 bps respectively. **Limitations:** Cannot be ordered with #6301. **Maximum:** One. **Field Installation:** Yes.

TERMINAL ADAPTERS

Terminal Adapter No. 1 (#3255): Enables attachment of two 3178s, 3230s, 3262s, 3268s, 3278s, 3279s, 3287s, or 3289s in any combination. **Limitations:** See "Attachment Matrix" below for 3278 and 3279 mdl restrictions. **Maximum:** One. **Field Installation:** Yes.

Terminal Adapter No. 2 (#3256): Enables attachment of two 3178s, 3230s, 3262s, 3268s, 3278s, 3279s, 3287s, or 3289s in any combination. **Limitations:** See "Attachment Matrix" below for 3278 and 3279 mdl restrictions. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3255.

Terminal Adapter No. 3 (#3257): Enables attachment of two 3178s, 3230s, 3262s, 3268s, 3278s, 3279s, 3287s or 3289s in any combination. **Limitations:** See "Attachment Matrix" below for 3278 and 3279 mdl restrictions. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3256.

Notes:

3276 mdls 1-3 with #6315 in SDLC mode, will support the same 3278 mdls as the 3276 mdls 11-13 respectively.

A 3276 with #6315 installed, does not support attachment of the 3279.

6580 mdls A04, A06, and A10 provide 3278-2 emulation support and 6580 mdls B04, B06, B08, and B10 provide 3278-4 emulation support. Find the appropriate 3278 mdl to determine the 3276 mdl requirements in the above matrix.

The 3276 provides a display and a port for attaching one terminal; a 3178, a 3230, a 3262, a 3268, a 3278, a 3279, a 3287, or a 3289. The 3276 with the three Terminal Adapters (#3255, #3256, #3257) thus allows a maximum cluster size of eight displays or printers.

MODEL CONVERSIONS

Model changes are field installable as follows:

From/To	002	003	004	011	012	013	014
001	x	x	x	x	x	x	x
002		x	x		x	x	x
003			x			x	x
004							x
011					x	x	x
012						x	x
013							x

ACCESSORIES

The following items are available on a purchase only basis. For shipment with machine, order the Feature Number as shown below.

Item	Feature Number	Max Qty
Magnetic Slot Reader	**#9441**	*
Magnetic Reader Extension Cable:		
6 meter (20 feet)	**#9106**	**
12 meter (40 feet)	**#9107**	**

* A maximum of one Magnetic Slot Reader may be ordered.
** A maximum of one extension cable may be ordered.

Magnetic Slot Reader (#9441; P/N 4123500): A free-standing Magnetic Slot Reader (MSR) that reads encoded information from a magnetic stripe. It attaches by a 1.5 meter cable through the Magnetic Reader Control (#4999). The MSR has three lights and a buzzer which provide feedback to the user on the status of the read data. The MSR accommodates a wide range (height and length) of magnetic striped plastic cards such as: ID badges, security operator identification cards, etc. Using the 3275/3277 like 10-numeric character set, the maximum number of data characters that can be read are 7 to 37 characters at 75 bpi or 210 bpi, and 7 to 118 characters at 127 bpi. A minimum of seven characters must be encoded between the start sentinel and end sentinel characters.

The following cable assemblies can be used to extend the Magnetic Slot Reader distance. **Limitations:** Extension Cables *cannot* be plugged into other extension cables.

Item	Feature Number	P/N
6 meter (20 feet)	**#9106**	**4832986**
12 meter (40 feet)	**#9107**	**4832987**

A variety of magnetic documents, tags, and labels the MSR can read, may be obtained from SSD, some of which, depending on length, can be encoded by devices such as the IBM 3642 Encoder Printer.

3276 Control Unit Display Station (cont'd)

For complete information on the availability of pre-encoded magnetic striped plastic cards, contact a SDD Representative.

An MSR Customer Service Manual, GA24-3663, should be ordered when ordering by MES for field installation.

Note: Magnetic cards coded with the Alternate End of Message character (hexadecimal "C") cannot be read by this reader. SSCP-LU communication for MSR is not supported, when the MSR is attached to a 3276 or a 3278 which is attached to a 3276. **Limitations:** Valid for numeric-only data encoded according to the American National Standard entitled "Magnetic Strip Encoding for Credit Cards, ANSI X4.16 - 1973" when the MSR is attached to a 3276 or to a 3278 which is attached to a 3276. **Field Installation:** Yes. **Prerequisites:** #4999.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance for the Magnetic Readers will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare readers which the customer may want to consider stocking ... for 50 readers, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5.

Warranty: The Magnetic Reader Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

IBM Corporation
Repair Center
321 Route 17
Paramus, NJ 07652

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Reader Extension Cables: These cable assemblies can be used to extend the Magnetic Slot Reader P/N 4123500 distances. Additional Extension Cable lengths other than those listed below are available. See RPQ Reference List. MSR Extension Cables are warranted free from defects of workmanship or materials for 90 days. **Limitations:** Extension cables cannot be plugged into other extension cables.

Item	Feature Number	P/N
6 meter (20 feet)	**#9106**	**4832986**
12 meter (40 feet)	**#9107**	**4832987**

Magnetic Reader Replacement Assemblies

Description	P/N
MHS Amplifier Card and Cable Assembly	**4832727**
MSR Arm and Sensor Head Assembly	**4832963**
MSR Base and Feedback Assembly	**4832973**
MSR Amplifier Card and Cable Assembly	**4832962**
MSR Cover	**4832964**

The following tables list the number of Magnetic Reader replacement assemblies which the customer may want to consider stocking.

	Magnetic Slot Reader			
Number of MSRs P/N 4123500	Arm & Sensor Head Assembly P/N 4832963	Base and Feedback Assembly P/N 4832973	Amplifier Card and Cord Assem P/N 4832962	Cover P/N 4832964
50	2	1	2	1
100	3	1	3	1
150	4	1	4	1
200	5	2	5	1

Warranty: Magnetic scanner replacement assemblies are warranted free from defects of workmanship or materials for 90 days.

Display Station Keyboard Accessories: The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3276 keyboards. These accessories supply keytops only and do not change any characters or functions of the display station./The accessories consist of legendable keytops, blank keytops for customer engraving and a keytop extractor.

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key.)

Legendable Keytops:	P/N
White	**5188775**
Charcoal Gray	**8627192**
Light Gray	**8542831**

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key.)

Blank Keytops:	P/N
White	**1853775**
Charcoal Gray	**1853567**
Light Gray	**1853563**

Keytop Extractor (P/N 9900373): The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled of its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

Battery, Mercury (P/N 1743456): To provide power to sustain the master key of Encrypt/Decrypt (#3680) when normal power is not present. A 4.14 volt non-rechargable mercury battery. This supply item has a shelf life of one year under normal conditions, and can be expected to provide 3.5 years of normal service. Additional or replacement batteries can be ordered through IBM.

Limitations: Can be installed on 3276 mdls 11-14 only. **Field Installation:** Yes. **Prerequisites:** #3680. Discharged batteries should be returned to IBM for disposal. Return information is printed on the label of the battery.

Keys (P/N 2577741): The 3276 with Security Keylock (#6340) special feature is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser).

SUPPLIES (None)

3277 DISPLAY STATION

The 3277 Model 1 is no longer available

PURPOSE

A high-performance, cathode-ray tube unit used in clusters with the 3271, 3272, or 3274 Control Unit, or Local Display Adapter (System/3 model 8 or 12), or Display Adapter (System/3 model 15), for displaying alphameric data, and for entering data into and retrieving data from a System/3, S/360, or S/370, 4300 Processor, 8100 System, or 3790 Communication System. A keyboard or light-pen or both permit an operator to display and manipulate data on the screen in a highly flexible and efficient manner. With its comprehensive and powerful set of standard and optional features, the 3277 Display Station meets both general purpose and unique display requirements.

MODELS

Model 2 002 — For use with the 3271 model 2 or 12, 3272 model 2, 3274 model 1A, 1B, 1C, 1D, 21B, 21C/BSC, 21D, 31A, 31C, 31D, or 51C, operator display on System/3 model 4, the Local Display Adapter (#4702 and #4705 on the System/3 Models 8 or 12) to display up to 1,920 characters ... 24 lines of 80 characters each. For use with 3790 or 8100, see below.

Maximum: Up to 32 3277s can be attached to a 3271 or 3272. Up to 16 3277s can be attached to a 3274 mdl 1A, 1B, 1C, 1D, 21B, 21C/BSC, 21D, 31A or 31D. Up to four 3277s can be attached to a 3274 mdl 51C. The maximum is reduced by one on a 3271 or 3272 for each 3284-1,2, or 3286-1,2 or 3287, or 3288-2 Printer attached. The maximum is reduced by one on a 3274 for each 3284-1,2 or 3286-1,2 or 3287 or 3288-2 or 3289 Printer attached. See M3271, 3272 or 3274 pages. Up to 24 3277 mdls 1 or 2 can be attached to the 8101 on a system. This maximum is reduced by one for each 3284, 3286, or 3288 attached to the 8101. See M8101 pages.

Prerequisitess: A 3271 mdl 2 or 12, 3272 mdl 2, 3274 with Type B Terminal Adapters, or an 8101 with #1505 or #1506. See M3271, 3272, 3274 or 8101 pages. 3277 Displays attached to the 3791 Controller must have keyboards.

HIGHLIGHTS

The 3277 displays 63 9X12 dot matrix high-quality characters (36 alphamerics, 27 special characters, including the space). The 3277 features Data-Field Organization which permits individual fields of data on the screen to be program-defined with various attributes, such as: protected or unprotected, alphameric or numeric-only, normal intensity, non-displayed, or brightened intensity, and selector light-pen detection - allowed or disallowed.

Editing Features: Typamatic cursor, tab, back-tab, protected data, insert and delete, and extended-erase (erase to end of field, erase all keyboard input data, erase entire screen) are standard features for displays equipped with a keyboard.

Input Flexibility: A choice of keyboards, a selector light-pen, a set of Program Function keys provide unmatched input flexibility. See "Special Features" below.

Output Flexibility: Information on the screen can be directed to another display or hard copy device under program control.

Security Enhancement Features: An Operator Identification Card Reader (optional) is provided to enter system user identification. This enhances the (programmed) control of the operator's access to data and audits his actions. It may also be used to enter any sequence of characters (pre-recorded on a card) for other purposes, such as transaction control and account identification.

A special Non-Displayed Keying Mode (standard): Provides for fields of data to be program-defined so they will accept security data entered from the keyboard without displaying the data on the screen. A Security Key lock (optional) provides a lock and key which prevents modification of data on the display if the key is in the "On" position. The data is not visible on the screen.

For Operator Display on System/3 Mdl 4: A 3277 mdl 1 (without keyboard) is required on the System/3 mdl 4. It functions as the operator display for the Communications Control Program (CCP). A 3271 or 3272 is not required. No cable order is required.

For Local Work Stations on System/3 Mdl 4: Up to five 3277s (mdls 1 and 2 intermixed) can be directly attached to the 5404 Processing Unit. A 3271 or 3272 Control Unit is not required. A cable is required. All 3277 "Special Features" apply. See "Specify" below for voltage and cable ordering information.

For Local Display Adapter on System/3 Mdls 8 or 12: Up to 12 3277s (mdls 1 and 2 intermixed) can be directly attached to the Local Display Adapter (#4702) with appropriate subfeatures on the 5408 or 5412. This maximum is reduced by one for each 3284 (mdl 1 or 2), 3286 (mdl 1 or 2), 3287 (mdl 1 or 2) or 3288 (mdl 2) Printer that is attached. A 3271 or 3272 Control Unit is not required. A cable is required. All 3277 "Special Features" apply with the exception of ASCII keyboards and character sets. Specify **#9089** for EBCDIC Character Set. See "Specify" for voltage and cable ordering information.

For Operator Console on System/3 Mdl 15: A 3277 mdl 1 is required on the System/3 mdl 15. It functions as an operator console and must be equipped with 78-key Operator Console Keyboard (#4632). For Character Generator Keyboard Language and nomenclature as well as complete ordering instructions for System/3 mdi 15 console, see M5415 pages "Console Ordering Instructions".

For Display Adapter on System/3 Mdl 15: Up to 30 3277s (mdls 1 and 2 intermixed) can be directly attached to the Display Adapter (#4601/#4602) on the 5415. The maximum is reduced by one for each 3284, 3286, 3287, or 3288 printer that is attached. A 3271 and 3272 is not required. A cable order is required. See "Specify" for voltage and cable ordering information. All 3277 special features apply.

For use with 3790 Communication System: For special features that are supported, see M3791 pages. A 3271 or 3272 or 3274 is not required when the 3277 mdl 2 is attached to the 3791. For character set, specify **#9089**. For power, see "Specify". For cables, see M3791 pages.

For use with 8100 System: For special features that are supported, see the M8100 pages. A 3271 or 3272 is not required when the 3277 mdl 2 is attached to the 8101 with feature #1505 or #1506. For Character Set, specify **#9089**. For power, see "Specify". For cables, see M8100 pages. Host programs written for the 3270 are not supported by the 8100 System.

Bibliography: See *KWIC Index,* G320-1621 or specific system bibliography.

SPECIFY

- Voltage (115V AC, 1 phase, 3 - wire, 60 Hz): Specify **#9880** for locking plug, **#9881** for non-locking plug. Note: The Hospital Grade Plug, RPQ #8K0696 (no-charge), is required for Hospital General Care Areas. **Field Installable.** No.

- Cables: See "Accessories" for cable ordering instructions. Refer to *3270 Installation Manual-Physical Planning,* GA27-2787.

- Character Set: Specify one of the following unless Data Analysis - APL Feature (#1066) is selected:

  #9089 -- for EBCDIC Character Set: Field Installation not recommended ... provides the 64 characters described on the EBCDIC keyboard. **Prerequisites:** If used with the 3271 mdl 1 or 2, EBCDIC Transmission Code (**#9761**) is a prerequisite on the 3271 mdl 1 or 2.

  #9091 -- for ASCII Character Set (A): Field Installation not recommended ... provides the 64 ASCII characters but substitutes the Logical OR and Logical NOT for the exclamation mark and circumflex. **Prerequisites:** If used with the 3271, ASCII Transmission Code (**#9762** or #1200) is a prerequisite on the 3271.

  #9092 -- for ASCII Character Set (B) Field Installation not recommended ... provides the standard 64 ASCII characters. **Prerequisites:** If used with the 3271 mdl 2, ASCII Transmission Code #9762 or #1200 is a prerequisite on the 3271 mdl 2. If used with the 3271 mdl 12, ASCII Transmission Code (#1200) is required on the 3271 mdl 12.

SPECIAL FEATURES

Data Analysis - APL Feature (#1066): [3272 mdl 2] Provides dual case EBCDIC, the APL set, and (for output only) 120 TN print train (see Type Catalog, S/370 Printers) characters. 93 TN characters are input and output both, 27 are output only. **Field Installation:** Yes. **Prerequisites:** #1066 on 3271 or 3272.

Audible Alarm (#1090): An alarm, sounded under program control, to alert the operator to a special condition during keyboard operation when a characterxis entered into the next-to-last position on the screen. **Maximum:** One. **Field Installation:** Yes.

Keyboards: [Maximum: One per 3277] Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

66-Key EBCDIC Typewriter Keyboard (#4630): Typewriter-like layout, movable, with 45 alphameric keys and 21 control keys. **Field Installation:** Yes. **Prerequisites:** Keyboard Language. See "Specify".

66-Key EBCDIC Data Entry Keyboard (#4631): Movable, with 36 alphameric keys and 30 control keys. **Field Installation:** Yes. **Prerequisites:** Keyboard Language. See "Specify".

78-Key Operator Console Keyboard (#4632): Operator-console layout, movable, with 45 alphameric keys, 21 control keys, and 12 program function keys. **Field Installation:** Yes. **Note:** Available only in English US except when used on a 5415 console. See M5415 pages.

3277 Display Station (cont'd)

78-Key EBCDIC Typewriter Keyboard (#4633): 66-key EBCDIC typewriter layout, movable, with 12 additional program function keys. **Field Installation:** Yes. **Prerequisites:** Keyboard Language. See "Specify".

66-Key ASCII Typewriter Keyboard (#4634): ASCII typewriter layout, movable, with 45 alphameric keys and 21 control keys. **Prerequisites: #9091** or **#9092.**

78-Key ASCII Typewriter Keyboard (#4635): 66 key ASCII typewriter layout with 12 additional function keys, movable. **Prerequisites: #9091** or **#9092.**

66-Key EBCDIC Data Entry Keyboard with Keypunch Layout (#4636): Movable with 36 alphameric keys and 30 control keys. **Field Installation:** Yes.

66-Key EBCDIC Typewriter/APL Keyboard (#4637): Movable, with 45 alphameric and 21 control keys. **Field Installation:** Yes. **Prerequisites:** #1066.

78-Key EBCDIC Typewriter/APL Keyboard (#4638): Movable with 45 alphameric keys, 21 control keys and 12 program keys. **Field Installation:** Yes. **Prerequisites:** #1066.

78-Key Text Keyboard (#4639): With 45 alphameric keys, 21 control keys and 12 program keys. **Prerequisites:** #1066 on 3277 mdl 2 as well as on a control unit (only 3271 mdl 2 or 12 or 3272 mdl 2).

Operator Identification Card Reader (#4600): Provides the capability of reading 53.9mm x 85.7mm (2-1/8 inches x 3-3/8 inches) plastic data processing card with an encoded magnetic stripe. Using the 10-numeric character set, the number of characters that can be read is 1-37 characters at 75 bpi (bits per inch).

#4600 provides 1) the ability to read an operator identification card to allow identification of the display operator, thus enhancing system data security capability and 2) the ability to read the magnetic stripe credit card (53.9mm x 85.7mm).

For complete information on the availability of pre-encoded magnetic striped plastic data processing cards, contact a SSD Representative. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Any keyboard.

Keyboard Numeric Lock (#4690): Provides the ability to lock the keyboard, if a non-numeric key, other than 0-9, minus , period, or DUP, is depressed in a predefined numeric-only field. **Field Installation:** Yes. Contact local Field Engineering Branch Office for installation.

Security Key Lock (#6340): A lock and key prevent modification of data on the display if the key is in the "Off" position. Data is not visible on the screen. **Maximum:** One. **Field Installation:** Yes.

Selector Light-Pen (#6350): A hand-held, pen-like device that permits the display operator to select fields of data from a display for computer input. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: Cables and or associated parts to attach the 3277 to the 3271/3272/3274 Control Units may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	**2577672**	Cable Assembly In-Door
Bulk	**0323921**	Coax Wire (Note 1)
P/N	**1836418**	Connector Kit (Note 1)
Assm	**1833108**	Cable Assembly Out-Door
Bulk	**5252750**	Coax Wire (Note 2)
P/N	**1836419**	Connector Kit (Note 2)
P/N	**2621414**	Modification Kit (Note 3)
P/N	**1833106**	Station Protector Attachment Kit (Note 5)
P/N	**5252643**	Adapter (Note 7)
P/N	**1830818**	Station Protection Kit, Gas (Note 4)
P/N	**5252899**	Station Protector Element, Gas (Note 6)

Specify P/N, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors **#1836446)** required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors **#1836447)** required for each outdoor cable assembly.
3. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two **#2577672** or two **#1833108** cable assemblies together.

Locks and Keys (P/N 2577741): The 3277 with Security Keylock **#6340** special feature is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser). Order Allow two to three weeks for delivery.

3277 Display Station Keyboard Accessories: The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3277 Display Station keyboards. These accessories supply keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving and a keytop extractor.

These accessories may be ordered by P/N via a DP Supply Order from the Raleigh plant.

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key)

Legendable Keytops:	P/N
White	**5188775**
Charcoal Gray	**8627192**
Light Gray	**8542831**

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key)

Blank Keytops:	P/N
White	**1853775**
Charcoal Gray	**1853567**
Light Gray	**1853563**

Keytop Extractor (P/N 9900373): The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled of its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

SUPPLIES (None)

3278 DISPLAY STATION

PURPOSE

A cathode-ray tube (CRT) display station used in clusters with the 3274 Control Unit or the 3276 Control Unit Display Station for displaying alphameric data, and for entering data into and retrieving data from a System/3, S/360, S/370, a 4300 Processor, a 3081 Processor, a 3790 Communication System, a 3814 Switching Management System, or 8100 System. A Keyboard, Selector Light-Pen, or both, permit an operator to display and manipulate data on the screen in a flexible and efficient manner. With its set of basic and optional features, the 3278 meets both general-purpose and unique display requirements.

MODELS

Model 1	001	For use with 3274 or 3276 to display up to 960 characters ... 12 lines of 80 characters each.
Model 2	002	For use with 3274 or 3276 or to attach directly to the 3082 Processor Controllers, or to attach to the 4321 Processor and the 4331 Processor, via the Standard Display/ Printer Adapter or optional Display/ Printer Adapter Expansion, or to attach to the 3814 model A Switching Management System with the Display/Printer Attachment Feature, or to attach to a 3601, 3602, or 4701 Finance Communication Controller via the Device Cluster Adapter. Displays up to 1920 characters ... 24 lines of 80 characters each.
Model 3	003	For use with 3274 or 3276 to display up to 2560 characters ... 32 lines of 80 characters each.
Model 4	004	For use with 3274 or 3276 to display up to 3440 characters ... 43 lines of 80 characters each.
Model 5	005	For use with 3274 mdls 1A, 1C, 1D, 31A, 31C, 31D, 41A, 41C, 41D, 51C, or 61C to display up to 3564 characters ... 27 lines of 132 characters each.

For use with a 3790 Communication System: The 3791 Controller only supports the 3278 Model 2. See the *3791 Configurator,* GA27-2768, for additional details.

For use with an 8100 System: see the *System Configurator,* GA27-2876.

STANDARD MODEL

The 3278 Model 2 with the basic configuration (see "Basic Configuration", below) and #9201 (Audible Alarm and Security Keylock) is designated as the standard model for this machine type. The Standard model is ordered by simply specifying the 3278 Model 2 and selecting a Standard Model Keyboard below.

STANDARD MODEL KEYBOARD CONFIGURATION

One of the following keyboard configurations must be selected when ordering a standard model.

- 75-key EBCDIC Typewriter Keyboard **#4621**
- 75-key EBCDIC Typewriter Keyboard with Keyboard Numeric Lock **#4631, #4690**
- 75-key EBCDIC Data Entry Keyboard **#4622**
- 75-key EBCDIC Data Entry Keyboard with Keyboard Numeric Lock **#4622, #4690**
- 87-key EBCDIC Typewriter Keyboard **#4627**
- 87-key EBCDIC Typewriter Keyboard with Keyboard Numeric Lock **#4627, #4690**

No accessories, additional features, RPQ's, or other alterations will be shipped with Standard Models.

HIGHLIGHTS

Displays a character within a 7 x 14 character matrix in 960, 1920 and 2560 character models; within a 7 x 12 character matrix in the 3440 and 3564 character model. The basic 26 character upper case letters are presented in a 7 x 9 character matrix for the 960, 1920 and 2560 character models, and in a 7 x 8 character matrix for the 3440 and 3564 character model. Displays a 94-character set: 26 upper case alphabetic, 26 lower case alphabetic, 10 numeric and 32 special characters. A monocase switch provides the capability of switching to uppercase alphameric mode for 3277 compatibility. Uses 3270 field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/ unprotected, alphameric, normal/ intensified, displayable/ non-displayable, and selector light-pen detection allowed/disallowed.

Extensions to the 3270 data stream supported by appropriate 3274 and 3278 features, provide the following field and character attributes:

- Extended highlighting - blink, reverse video or underscore.
- Programmed Symbols (PS) - user-defined symbols.

Special keyboards are provided to allow operator selection of these attributes.

The operator may initiate a local display-to-printer copy function (i.e., without host intervention) from the keyboard of a 3278. When the 3278 is attached to a 3274 Control Unit, the printer designation is controlled by operator use of the IDENT key and by:

a. a printer authorization matrix which is loaded into the 3274 Control Unit through a user written host application program, or,

b. a customer definable matrix loaded from the system diskette at IML time. For further details, see the *IBM 3270 Information Display System Planning and Setup Guide,* GA27-2827.

When the 3278 is attached to a 3276 Control Unit Display Station, the printer designation is controlled by operator use of the IDENT key and by a configuration default matrix. This matrix is determined by the relative positions of devices attached to the 3276. (The host can perform a copy in a manner compatible with existing 3271/3272 support.)

Operator Factors: The 3278 has an anti-glare screen. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Display of data on the screen is accomplished without refresh interrupt (i.e., no blinking, except that transient patterns are displayed when data is being loaded to the Programmed Symbols buffers). The keyboard, which is low in profile, provides a palm rest area and has separators to help prevent accidental striking of control keys. The operator may select one of several cursor modes.

Editing Functions: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphameric, special symbol, and cursor move keys have typamatic capability. Double speed cursor typamatic is attained with a simultaneous depressing of the ALT key and a horizontal cursor positioning key. The cursor select function provides an alternative to the Selector Light-Pen function. Fields of data may be selected by positioning the cursor and then using the Cursor Select key.

Input Flexibility: A choice of keyboards or the Selector Light-Pen provide input flexibility. A Magnetic Slot Reader (optional) and, for 3278's attached to a 3274 Control Unit, a Magnetic Hand Scanner (optional) provide for the input of magnetically encoded data ... see "Special Features" and "Accessories" below. Fields of data can be selected by positioning the cursor and operating the cursor select key, instead of using the Selector Light-Pen. Twelve Program Function (PF) keys are basic with all typewriter keyboards.

When attached to a 3274 Control Unit with Configuration Support C with Entry Assist RPQ or with Configuration Support D with Entry Assist and with a typewriter or APL keyboard, the display provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3274 Sales pages for languages supported.

Entry Assist is supported for Models 2, 3, 4 and Model 5 in Model 2 mode only.

See Accessories for 3274 Entry Assist keytop kits.

Security Functions: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of data in the display terminal unless the key is turned to the "on" position. These capabilities and the terminal's ability to identify itself to the host program allow customer-supplied security program routines to control access to data and audit of actions. A Magnetic Slot Reader (optional) and, for 3278s attached to a 3274 Control Unit, a Magnetic Hand Scanner (optional) are available to enter system user identification.

Audible Alarm: An alarm, sounded under program control, to alert the operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the next-to-last position on the screen. The operator may adjust the volume of the tone. **Maximum:** One. **Field Installation:** Yes.

When attached to a 4321 or 4331 Processor via the standard Display/ Printer Adapter or optional Display/ Printer Adapter Expansion, functional support varies from that of the 3278-2 attached to a 3274 or 3276. See M4321, M4331 for details of support.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This increased availability has been achieved through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided by the *Problem Determination Guide* manual that will be stored under the keyboard palm rest. Also, see "Customer Responsibilities".

3278 Display Station (cont'd)

Customer Setup (CSU): The 3278 is designated Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU refer to the General Information (GI) section.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3278.
- Physical setup, connection of cables in customer access areas, switch settings and check out.
- Contact Field Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.

Prerequisites: 3278 needs a 3274, 3276, or 4321, 4331 with appropriate Terminal Adapter, or a 3814 Switching Management System with the Display/Printer Attachment Feature. The 3278 mdl 5 requires Configuration Support B **#9111**, C C **#9112**, D **#9124**, or T **#9113** on the 3274 to which it is attached ... See M3274, M3276 M4321, or M4331 pages.

When attached to the 3790 Communication System or the 8100 System via the 3276 Control Unit, all 3278 Display Stations must have a keyboard. When the 3278 model 2 is attached to a 3814 model A, one of the following keyboards is required: #4627 (preferred), #4621, #4622, or #4623. The following features are optional: #1090, #1720, #4690, and #6340. All other 3278 model 2 special features are not supported.

Bibliography: See *KWIC Index,* G320-1621 or specific system bibliography.

BASIC CONFIGURATION

Specify codes are not normally required to order a 3278. If not specified otherwise, all models of the machine are shipped with the following:

- Voltage: 120V AC, 1-phase, 3-wire, 60 Hz.
- Power Cable Plug: Non-locking **#9891**.
- Power Cable Length: 2.8 meters (9 feet).
- Keyboard Cable Length: 0.9 meters (3 feet).

SPECIFY

- Power Plug: Specify **#9890** for a locking plug.
- Keyboard Cable Length: If the standard 0.9 meter (3 foot) Keyboard cable is not desired, specify **#9399** for a 1.8 meter (6 foot) cable. **Limitations:** This feature is not available for Keyboards #4640, #4651, or #4652.
- Power Cable Length: If the standard 2.8 meter (9 foot) power cable is not desired, specify **#9513** for a 4.5 meter (15 foot) cable.
- Terminal Cables: See Accessories for ordering instructions. For cable specifications, see *3270 Installation Manual - Physical Planning,* GA27-2787.
- RPQs: Specify **#9841** if machine has any associated RPQs.
- Keyboard: Specify **#9842** if no Keyboard is attached.
- 3814 Model A Attachment: Specify **#9615** to attach 3278 Model 2 to a 3814 Model A.

MODEL CHANGES

Field installable, except that field conversion of Model 5 with serial numbers A0000 to P0000, to any other model is not recommended.

SPECIAL FEATURES

Note: 3274-21 models, models 31A, 31C or 51C may not support all desired 3278 Special Features. Before ordering any of the following special features, check the 3274 to assure that adequate storage is available.

Not all of the following special features are supported by 3278-2s attached to the 4331 system via the standard Display/Printer Adapter or the Display/Printer Adapter Expansion. See M4331 pages for a list of supported special features.

CHARACTER SET EXTENSION (#3620): Provides the capability for display of 222-character APL/Text character set, including the 94-character EBCDIC set, and for extended character and highlighting capabilities - blink, reverse video or underscore, and the control and buffering necessary for the PS (#5790) feature. **Maximum:** One. **Field Installation:** Yes. **Corequisite:** To permit operator interaction with APL/Text or highlighting, one of the following keyboards may be used. See individual descriptions for details of function(s) provided and for limitation or restrictions. Keyboards with APL capability: #4626, or #4652. Keyboard with Text Capability: #4629. Keyboards with Highlighting Capability: #4640, #4651, or #4652. **Limitations:** [1] This feature is only valid on a 3278 Display Station attached to a 3276 with APL/Text Control feature #1067, or to a 3274 Model X1A, X1C, or X1D customized to include the APL/Text control function. This feature is EBCDIC only and is *NOT* compatible with ASCII. [2] Cannot be installed with ECSA #3610. [3] Cannot be installed with APL/Text #1120.

KEYBOARDS: Refer to Type Catalog, section 200 of this sales manual for a picture of the keyboard layouts.

Keyboards are provided with a standard 0.9 meter (3 foot) attachment cable. See "Specify" section for options.

#4621 -- 75-key EBCDIC Typewriter Keyboard, typewriter-like layout, movable, with 49 data keys and 26 control keys. Twelve program function keys are included in the top row of data keys through use of an alternate shift key.

#4622 -- 75-key EBCDIC Data Entry Keyboard, movable, with 35 data keys, 10 program function keys and 30 control keys.

#4623 -- 75-key EBCDIC Data Entry Keyboard, keypunch layout, movable, with 35 data keys, 10 program function keys and 30 control keys.

#4624 -- 75-key ASCII Typewriter Keyboard, ASCII typewriter-like layout, movable, with 49 data keys and 26 control keys. Twelve program function keys are included in the top row of the data keys through use of an alternate shift key.

#4626 -- 87-key EBCDIC Typewriter/APL Keyboard. An 87-key EBCDIC typewriter keyboard (ref #4627) with modified keytops to allow entry of 81 APL specific characters in addition to the 94-character EBCDIC set. An APL On/Off key controls whether the keyboard is in basic EBCDIC typewriter or APL mode. In contrast to the 87-key EBCDIC typewriter keyboard without APL (ref 4627), this keyboard has only twelve program function keys (PF1 through PF12) which are the group of twelve keys to the right of the main keyboard area. **Prerequisites:** APL/Text **#1120** or Character Set Extension **#3620.**

#4627 -- 87-key EBCDIC Typewriter Keyboard, typewriter-like layout, movable, with 49 alphameric data keys, 26 control keys, and twelve program function keys (24 total PF keys). Twelve of the program function keys are included in the top row of data keys through the use of an alternate shift key.

#4628 -- 87-key ASCII Typewriter Keyboard, ASCII typewriter-like layout, movable, with 49 alphameric data keys, 26 control keys, and twelve program function keys (24 total PF keys). Twelve of the program function keys are included in the top row of data keys and are available through the use of an alternate shift key.

#4629 -- 87-key EBCDIC Typewriter/Text Keyboard, an 87-key EBCDIC typewriter keyboard (ref FC #4627) with modified keytops to allow entry of 65 Text specific characters in addition to the 94-character EBCDIC set. A Text On/Off key controls whether the keyboard is in EBCDIC typewriter or Text mode.

In contrast to an 87-key EBCDIC typewriter keyboard without Text (ref FC #4627), this keyboard has only twelve program function keys

(PF1 through PF12) which are the group of twelve keys to the right of the main keyboard area. **Prerequisites:** APL/Text **#1120** or Character Set Extension **#3620.**

#4640 -- 87-key EBCDIC Typewriter Overlay Keyboard. This Keyboard, without the overlay, has the same layout and can be used in the same way as the 87-key EBCDIC Attribute Select Typewriter Keyboard (#4651) with the basic 94-character EBCDIC character set. This keyboard, however, has special narrow keytops which permit the use of customer annotated overlays. These overlays are used to show the special font symbols associated with the keys when one of the Programmed Symbols is selected. Six overlays are supplied with each Keyboard. Additional overlays can be obtained via MES. (See M10000 pages.) See Attribute Select typewriter Keyboard for additional details ... **Limitations:** Cannot be installed on a 3278 attached to a 3276 Control Unit Display Station.

#4651 -- 87-key EBCDIC Attribute Select Typewriter Keyboard. Overlay and Attribute Select Keyboards are equipped with PS, highlight and color select function Keys. They provide operator selection for data entry, under program control, of PS and

3278 Display Station (cont'd)

highlighting attributes when attached to 3278 Display Stations equipped with the appropriate features. The desired PS and highlights can be selected by the operator through use of the appropriate PF keys (13-24) in upper case and alternate shift on this Keyboard. **Limitations:** Cannot be installed on a 3278 attached to a 3276 Control Unit Display Station.

#4652 -- 87-key EBCDIC Attribute Select Typewriter/APL Keyboard. See Attribute Select typewriter keyboard for additional detail. **Limitations:** Cannot be installed on a 3278 attached to a 3276 Control Unit Display Station.

Limitations: Keyboards used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines. **Maximum:** One of the above. **Field Installation:** Yes. The keyboard is set up by the customer.

KEYBOARD NUMERIC LOCK (#4690): Provides keyboard #4621, #4622, #4623, #4624, #4626, #4627, #4628, #4629 with the ability to lock the keyboard if a non-numeric key [other than 0-9, minus (-), decimal sign, or dup] is operated in a pre-defined numeric-only field. **Maximum:** One. **Field Installation:** Yes. Contact Field Engineering Branch Office for installation. MES number 999999 is to be used for IR (Incident Report) completion data. *Note:* The numeric lock function is enabled on keyboards #4640, #4651, and #4652 as an option of 3274 customization, in which case these keyboards will either all have, or all not have, the numeric lock function.

MAGNETIC READER CONTROL (#4999): Provides the capability of attaching a Magnetic Hand Scanner (MHS) or Magnetic Slot Reader (MSR) which read encoded information from a magnetic stripe. The MSR can be used when the 3278 is connected to either a 3274 or 3276, but the MHS can only be used when the 3278 is connected to a 3274 Control Unit. **Limitations:** Cannot be installed with the IBM 3278 Personal Computer Adapter Feature Code 5315 or 5316. **Maximum:** One. **Field Installation:** Yes.

IBM 3278 PERSONAL COMPUTER ADAPTER (#5315, #5316): This entry is for information purposes only; see Product Announcement letter 283-HHH for ordering instructions. Provides the capability of attaching an IBM Personal Computer to the Display Station. If the 3278 model 1-4 serial number is in the range A0000-N9999 or is in the range 9V000-9W999, order Personal Computer Option, Item #5315. For the 3278 model 5 and all other serial numbers (e.g. PO123, 1A425, 71G65), order Personal Computer Option, Item #5316. **Maximum:** One. Field Installation only. **Prerequisites:** (a) IBM Personal Computer, 5150, model X14 or X64 or X74 with Color/ Graphics Monitor Adapter (for 3278 models 1, 2, 3, 4, 5), or the Monochrome Display and Printer Adapter (for 3278 models 1, 2, 3, 4) or (b) IBM Personal Computer System Unit, 5150 with Color/ Graphics Monitor Adapter (for 3278 models 1, 2, 3, 4, 5), or the Monochrome Display and Printer Adapter (for 3278 models 1, 2, 3, 4), Diskette Drive Adapter, one Diskette Drive, and at least 64K total memory; (c) 3274 or 3276 Control Unit. **Limitations:** Cannot be installed with Magnetic Reader Control, Feature Code 4999.

PROGRAMMED SYMBOLS (PS) #5790): This feature provides the storage and accessing of 6 (six) 190-symbol sets whose shapes and codes are customer definable. Symbol sets are loaded under program control and accessed for display through programming or by an operator from the display keyboard. The number of symbols in any one set that can be accessed from the display keyboard is 94. plus space.

Maximum: One **Field Installation:** Yes. **Limitations:** 1) Only available on Models 2, 3 and 4. 2) Can only be used with a 3274 Control Unit having the PS Control and Structured Field and Attribute Processing options of Configuration Support C or D. 3) If display operator access to PS is required, the 87-key EBCDIC Typewriter Overlay Keyboard (#4640). 67-key EBCDIC Attribute Select Typewriter Keyboard (#4651) or 87-key EBCDIC Attribute Select Typewriter/APL Keyboard (#4652) must be ordered. 4) Cannot be installed with PS-2 or PS-4 (#5781, #5782). **Prerequisites:** Character Set Extension #3620, or ECSA #3610 (if already installed. This feature is no longer available on new machines.)

SELECTOR LIGHT-PEN (#6360): A hand-held, pen-like device which permits the operator to select fields of data from a display for input to the host system. The Selector Light-Pen, while not being used, can be placed in a recess of the keyboard, which is provided for user's incidental items. Selector Light-Pen (and Cursor Select) operations have been expanded to include a new designator character "&". When this designator is used the Read Modified operation returns both the addresses and the data of all modified fields on the screen. The #6351 Selector Light Pen has a slightly wider field of view to facilitate operator ease-of-use. **Maximum:** One. **Field Installation:** Yes.

ACCESSORIES

The following items are available on a purchase only basis. For shipment with machine, order the Feature Number as shown below.

Item	Feature Number	Max Qty
Switch Control Unit	#9181	
Magnetic Hand Scanner	#9440	*
Magnetic Slot Reader	#9441	*
Magnetic Reader Extension Cable.... for use with Magnetic Hand Scanner or Magnetic Slot Reader		
6 meter (19.7 feet)	#9106	**
12 meter (39.4 feet)	#9107	**

* A maximum of one magnetic reader or scanner may be ordered.
** A maximum of one extension cable may be ordered.

CABLES

Cables and or associated parts to attach the subject machines to the 3271/3272/3274 Control Units and 3276 Control Unit Display Station, or Display/Printer Attachment feature (#1420) on the 3814 Switching Management System, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
ASSM	2577672	Cable Assembly In-Door
BULK	0323921	Coax Wire (Note 2)
P/N	1836418	Connector Kit (Note 2)
ASSM	1833108	Cable Assembly Out-Door
BULK	5252750	Coax Wire (Note 3)
P/N	1836419	Connector Kit (Note 3)
P/N	2621414	Modification Kit (Note 4)
P/N	1833106	Station Protector Attachment Kit (Note 6)
P/N	5252643	Adapter (Note 8)
P/N	1830818	Station Protection Kit, Gas (Note 5)
P/N	5252899	Station Protector Element, Gas (Note 7)

Notes:

1. Order via MSORDER (Category = Bulk Cable) on AAS. Specify Part Number, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.
2. Coax wire and one connector kit (includes two connectors #1836446) required for each indoor cable assembly.
3. Coax wire and one connector kit (includes two connectors #1836447) required for each outdoor cable assembly.
4. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
5. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
6. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
7. Replacement station protector elements.
8. Use to join two #2577672 or two #1833108 cable assemblies together.

KEYBOARD OVERLAY

A keyboard overlay is available on which customer-defined Programmed Symbols can be annotated. An annotated overlay can be placed over the narrow keytops of Overlay keyboards to associate specific keytops with specific symbols.

Keyboard Overlay **P/N 1742762**

LOCKS and KEYS

The 3278, with Security Keylock **#6340** special feature is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser). Order via MSORDER (Category = Supplies/Accessories; Group Code = DP Supply Order) on AAS. Allow two to three weeks for delivery.

Keys **P/N 2577741**

MAGNETIC HAND SCANNER

The Magnetic Hand Scanner (MHS) attaches by a 1.5 meter coiled cable to a number of data entry and reporting devices that have an appropriate magnetic adapter feature. It allows the user to read magnetic stripe labels that are attached to shelves, cartons, machines, etc. It can also be used to read magnetic stripe tags which are hand-held or placed on a flat surface. See appropriate unit for prerequisites and possible limitations.

The MHS has three lights and an audible buzzer which provide feedback to the user on the status of the scanned data. With proper

3278 Display Station (cont'd)

encoding the MHS can read a stripe in either direction. A magnetic reader attachment feature on the appropiate machine is required to use the Magnetic Hand Scanner.

Ordering Instructions:

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regurlarly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Scanners will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare scanners which the customer may want to consider stocking ... for 50 scanners, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5.

Warranty: The Magnetic Scanner Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

IBM Corporation
Repair Center
321 Route 17
Paramus, NJ 07652

There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance will be done by the customer, following the problem determination and parts replacement procedures.

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Hand Scanner **P/N 4123495**

MAGNETIC SLOT READER

The Magnetic Slot Reader (MSR) attaches by a 1.5 meter cable to a number of data entry and reporting devices that have an appropriate magnetic adapter feature. These slot readers accommodate a wide range (height and length) of magnetic striped card stock and plastic badges including: Magnetic striped 80-column cards, operator identification badges, large and small credit cards, etc.

The MSR has have three lights and an audible buzzer which provide feedback to the user on the status of scanned data. Holes in the bottom of the MSR allow optional attachment to an appropriate flat surface. The MSR has a wide opening on one end to facilitate reading of badges or documents. A magnetic reader attachment feature on the appropriate machine is required to use the MSR.

Ordering Instructions: For ordering for delivery with machine, see chart above. To order via MES, order via MSORDER (Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine Type 3278

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regurlarly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Readers will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare readers which the customer may want to consider stocking ... for 50 readers, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5

Warranty: The Magnetic Reader Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

IBM Corporation
Repair Center
321 Route 17
Paramus, NJ 07652

There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance will be done by the customer, following the problem determination and parts replacement procedures.

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

MAGNETIC READER EXTENSION CABLES:

These cable assemblies can be used to extend the Magnetic Slot Reader P/N 4123500 distances. Additional Extension Cable lengths other than those listed below are available. See RPQ Reference List.

MHS/MSR Extension Cables are warranted free from defects of workmanship or materials for 90 days.

Limitation: Extension cables cannot be plugged into other extension cables.

Ordering Instructions: For ordering for delivery with the machine, see appropriate machine page. To order via MES, order via MSORDER (Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine Type 3278.

Warranty: Magnetic scanner replacement assemblies are warranted free from defects of workmanship or materials for 90 days.

DISPLAY STATION KEYBOARD ACCESSORIES

The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3278 Display Station keyboards. These accessories supply keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving and a keytop extractor.

These accessories may be ordered by part number via a DP Supply Order from the Raleigh plant.

Legendable Keytop:

The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key)

Legendable Keytops:	Part No.
White	**5188775**
Charcoal Gray	**8627192**
Light Gray	**8542831**

Blank Keytop:

The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key)

Blank Keytops:	Part No.
White	**1853775**
Charcoal Gray	**1853567**
Light Gray	**1853563**

Keytop Extractor:

The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled of its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

	Part No.
Keytop Extractor	**9900373**

3278 Display Station (cont'd)

SWITCH CONTROL UNIT

Permits switching operational control of a 3278 between two different control units. Customer is responsible for Procurement and installation of this accessory, and also for the replacement of a defective unit.

Warranty: The Switch Control Unit is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled maintenance recommended by IBM, and IBM Maintenance Agreements are not available.

Ordering Instructions: This accessory is ordered by part number via MES for field installation only. For shipment with machine, by Feature Code number (see Accessories).

P/N 1743301 should be specified when ordering by MES for field installation. Enter one MES for multiple quantities of part number ordered, using serial number zero (00000) on the MES.

3278 DISPLAY CONSOLE MDL 2A

PURPOSE

A cathode-ray tube (CRT) display and accompanying keyboard that serves as the primary system console for 4300, 3081/3083/3084 processors.

4300 USAGE: The 3278-2A Display Console and its appropriate operator Control Keyboard provides for operator interaction with the processor for both normal operations and maintenance. It is used to effect the major control functions of Power On (4341 only), Power Off, Initial Microprogram Load (IML), and Start/Stop. It also serves as the primary console for all operator interaction with the System Control Program. For maintenance and service support, the console displays status of the processor complex and is used for interaction with the processor complex by service and support personnel. It is also used for controlling diagnostic tools.

3081/3083/3084 USAGE: The 3278-2A Display Console and its appropriate Operator Control Keyboard are used to effect the major control functions of Initial Microprogram Load (IML), Start/Stop, manual mode functions, configuration control, and/or activity monitoring of various elements within the processor complex. An additional device over and above the system console is required for operator dialogue with the System Control Program. The 3278-2A may be located up to 1500 meters from the 3081/3083/3084. An operator console keyboard (#4641) most be ordered for use with a 3081/3083/3084.

HIGHLIGHTS

Displays characters in a 7 x 14 matrix (uppercase alphabet is displayed in a 7 x 9 matrix), arranged in 24 rows of 80 characters each. Rows 1 through 20 are usable by the operator, rows 21 through 24 are used for system status information. A 96 character set is used, which consists of 26 upper case alphabetic, 26 lower case alphabetic, 10 numeric and 32 special characters, plus space and null.

The 3278-2A Display Console is used for manually effecting the stopped state functions of alteration and display of storage, address comparing, and full rate processing versus single instructing processing. The console indicates to the operator both proper operation and malfunctions, should they occur.

The 3278-2A Display Console is a prerequisite of and normally installed concurrently with the 4300 and 3081/3083/3084 processors.

Operator Factors: The 3278 has an anti-glare screen. Indicators are displayed in symbols and/or words outside the data area. The keyboard, which is low in profile, provides a palm rest area and has separators to help prevent accidental striking of control keys.

Editing: Cursor move, tab, home, back tab, insert, delete, erase to end-of-field, and erase all input keys are basic to the console keyboard. Alphameric, special symbol and cursor move keys have typamatic capability. Twelve (12) Program Function (PF) keys are basic.

Audible Alarm: An alarm sounded under program control to alert the operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the next-to-last position on the screen (except when attached to a 4321 or 4331 Processor). The operator may adjust the volume of the tone.

Problem Determination Procedures: Significant function has been designed into this unit to provide high availability to the customer. This high availability has been achieved through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided by the *Problem Determination Guide* manual that will be stored under keyboard palm rest.

PREREQUISITES: An available console position on any 4300 processor or 3082 Processor Controller ... see M4321, M4331, M4341, or M3082 pages.

The 3278 mdl 2A requires an Operator Console Keyboard. The 3278 mdl 2A that is used as the primary console on a 4300 Processor must have an Operator Console Keyboard with an operator control panel.

SPECIFY

If specify codes are not specified, the machine is shipped with the following specifications:

- RPQ's: Machine has no associated RPQ(s).
- Voltage: 120V AC, 1-phase, 3-wire, 60 Hz.
- Power Cable Plug: Non-locking.
- Power Cable length: 2.8 meters (9 feet).

- RPQs: Specify **#9841** if machine has any associated RPQs.
- Power Cable Length: If the standrd 2.8 meter (9 foot) power cable is not desired, specify **#9511** for 1.8 meter (6 foot) cable, or **#9513** for a 4.5 meter (15 foot) cable.
- Power Cable Plug:Specify **#9890** for a locking plug. See "Special Features" for Waterproof Connector.
- Limitation: All 3278 mdl 2A Display Consoles attached to a 4300 Processor must have the same keyboard language.

MODEL CHANGES

Not recommended for field installation.

SPECIAL FEATURES

KEYBOARD: Refer to Type Catalog, Section 200 of this sales manual for a picture of the keyboard layouts.

#4631 -- 75-Key Operator Console Keyboard with Channel to Channel (for use with 4341 only); typewriter-like layout, movable, with 12 PF keys available on the top row through use of the Alternate shift key. Provides 49 data keys and 26 control keys, and contains an operator control panel with 4 control keys (Power Off, Lamp Test, Power On/IML, Channel to Channel) and 6 LED indicators (Basic Check, System, Wait, Power in Process, Power Complete, I/O Interface Disabled). Channel to Channel is required for systems having a channel to channel adapter feature

#4632 -- 75-Key Operator Console Keyboard without Channel to Channel (for use with 4341 only); same as #4631 but the operator control panel does not have the Channel to Channel control key or the Channel to Channel Disabled Indicator

#4633 -- 75-Key Operator Console Keyboard - same as 4631 but with no operator control panel. For use with 4341 only

#4634 -- 75-Key Operator Console Keyboard without Channel to Channel or Power On (for use with 4321 or 4331 only). Same as #4631 but the operator control panel does not have the Channel to Channel control key, or the Channel to Channel Disabled Indicator, or the Power On key

#4641 -- 75-Key Operator Console Keyboard (for use with 3081/3083/ 3084 only). Typewriter - like layout, moveable with 12 PF keys available on the top row through the use of the Alternate Shift Key. Provides 49 data keys and 2 control keys, and contains an operator control panel with two (2) control keys (IML, LAMP TEST) and five LED indicators (PC Power in Process, PC Power Complete. PC Power Check, Remote Support Active, IML in Process).

Limitations: Keyboards used on 3278 Model 2A are not interchangeable with keyboards used on 3278 Models 1 through 5, nor with keyboards used on 3277 Models 1, 2. **Maximum:** One of the above. **Field Installation:** Yes.

SYSTEM CABLES: For 4300 series processors, refer to the *IBM 4300 Processor Installation Manual - Physical Planning,* GA24-3667. For 3081/3083/3084 Processors, refer to the *IBM System/370 Installation Manual - Physical Planning,* GC22-7004.

SECURITY KEYLOCK #6340: A lock and key which prevents modification or display of data in the display terminal when in the "off" position. **Maximum:** One. **Field Installation:** Yes. **Limitation:** For Display Console attaching to 4300 Processor only.

WATERPROOF POWER CONNECTOR #8802: Provides a waterproof connector on the power cable to satisfy local ordinances requiring this type termination in specific locations. **Limitations:** Available only for power cable lengths of 1.8 meters (6 feet) #9511, or 4.5 meters (15 feet) #9513. **Maximum:** One. **Field Installation:** Not recommended.

ACCESSORIES

Refer to Accessory section under 3278 Model 1. Refer to M4300 or M3081 pages for information pertaining to the 4300 Processors Console Table, or the 3081 Processor Console Table.

ACCESSORIES

CABLES: Cables and or associated parts to attach the subject machines to the 3271/3272/3274 Control Units and 3276 Control Unit Display Station, or Local Display Adapter (#4702) on the 3276 Display Station Control Unit, or Display/Printer Attachment feature (#1420) on the 3814 Switching Management System, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787, and *Coaxial Cable and Accessories Manual,* GA27-2805. The customer is

3278 Display Console Mdl 2A (cont'd)

responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
ASSM	2577672	Cable Assembly In-Door
BULK	0323921	Coax Wire (Note 2)

P/N	5252643	Adapter (Note 8)
P/N	1830818	Station Protection Kit, Gas (Note 5)
P/N	5252899	Station Protector Element, Gas (Note 7)

Notes:

1. Order the above items via MES from Poughkeepsie. Allow a lead time of 120 days.
2. Coax wire and one connector kit (includes two connectors #1836446) required for each indoor cable assembly.
3. Coax wire and one connector kit (includes two connectors #1836447) required for each outdoor cable assembly.
4. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
5. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
6. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
7. Replacement station protector elements.
8. Use to join two #2577672 or two #1833108 cable assemblies together.

KEYBOARD ACCESSORIES, DISPLAY STATION: The following keyboard accessories allow the customer to define and change the messages on the keytops of the 3278 display station keyboards. These accessories affect keytops only and do not change any characters or functions of the display station. The accessories consist of lgendable keytops, blank keytops for customer engraving and a keytop extractor.

These accessories are ordered by part number rather than by MES.

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base, and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only (for example, the Clear key).

Legendable keytop, white, **P/N 5188775** purchase only
Legendable keytop, charcoal gray, **P/N 8627192** purchase only
Legendable keytop, light gray, **P/N 8542831** purchase only

Blank Keytop: The blank keytop is for use as an unlabeled keytop or for customer engraved nomenclature. The keytop comes in three colors and is available with top keyboard row contour only (for example, the Clear key).

Blank keytop, white, **P/N 1853775**, purchase only
Blank keytop, charcoal gray, **P/N 1853567**, purchase only
Blank keytop, light gray, **P/N 1853563**, purchase only

Keytop Extractor: The keytop extractor is a small tweezer-like device which fits between keytops. With a firm squeezing grip on a keytop, it can be pulled off its stem. The customer should use the extractor whenever a keytop is to be removed from a keyboard.

Keytop Extractor, **P/N 9900373**, purchase only

KEYBOARD OVERLAY: A keyboard overlay is available on which customer-defined Programmed Symbols can be annotated. An annotated overlay can be placed over the narrow keytops of Overlay keyboards to associate specific keytops with specific symbols.

Keyboard Overlay **P/N 1742762**
88-Keyboard Overlay **P/N 1742781**

LOCKS and KEYS: The 3278 with Security Keylock **#6340** special feature is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser). Order via MES from Kingston. A letter of authorization, with key identification, must accompany each order. Allow two to three weeks for delivery.

Keys **P/N 2577741**

MAGNETIC HAND SCANNER: The Magnetic Hand Scanner (MHS) attaches by a 1.5 meter coiled cable to a number of data entry and reporting devices that have an appropriate magnetic adapter feature. It allows the user to read magnetic stripe labels that are attached to shelves, cartons, machines, etc. It can also be used to read magnetic stripe tags which are hand-held or placed on a flat surface. See appropriate unit for prerequisites and possible limitations.

The MHS has three lights and an audible buzzer which provide feedback to the user on the status of the scanned data. With proper encoding the MHS can read a stripe in either direction. A magnetic reader attachment feature on the appropiate machine is required to use the Magnetic Hand Scanner.

ORDERING INSTRUCTIONS: For delivery with machine, see "Machines" pages. When ordering via MES, order from Raleigh.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regurlarly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Scanners will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare scanners which the customer may want to consider stocking ... for 50 scanners, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5.

Warranty: The Magnetic Scanner Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service for the Magnetic Scanners will be preformed by the CE. The customer can obtain post-warranty maintenance on a Time and Material basis from CE. The customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Hand Scanner **P/N 4123495**

MAGNETIC SLOT READER: The Magnetic Slot Reader (MSR) attaches by a 1.5 meter cable to a number of data entry and reporting devices that have an appropriate magnetic adapter feature. These slot readers accommodate a wide range (height and length) of magnetic striped card stock and plastic badges including: Magnetic striped 80-column cards, operator identification badges, large and small credit cards, etc.

The MSR has three lights and an audible buzzer which provide feedback to the user on the status of scanned data. Holes in the bottom of the MSR allow optional attachment to an appropriate flat surface. The MSR has a wide opening on one end to facilitate reading of badges or documents. A magnetic reader attachment feature on the appropriate machine is required to use the MSR.

Ordering Instructions: For delivery with machine, see "Machines" pages. When ordering via MES, order from Raleigh.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regurlarly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Readers will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare readers which the customer may want to consider stocking ... for 50 readers, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5

Warranty: The Magnetic Reader Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service for the Magnetic Scanners will be preformed by the CE. Optionally, the customer can obtain post-warranty maintenance on a Time and Material basis from CE.

A Magnetic Reader attachment feature on the appropiate machine is required to use the Magnetic Slot Reader.

Magnetic Slot Reader, **P/N 4123500** or feature code **#9441**

MAGNETIC READER/SCANNER EXTENSION CABLES: These cable assemblies can be used to extend the Magnetic Hand Scanner **P/N 4123495** or Magnetic Slot Reader **P/N 4123500** distances. Additional Extension Cable lengths other than those listed below are available . See RPQ Reference List.

MHS/MSR Extension Cables are warranted free from defects of workmanship or materials for 90 days.

3278 Display Console Mdl 2A (cont'd)

Limitation: Extension cables cannot be plugged into other extension cables.

Cable 6 meters (19.7 feet), **P/N 4832986,**
Cable 12 meters (39.4 feet) **P/N 4832987,**

3279 COLOR DISPLAY STATION MDLS 2A-3B

NO LONGER AVAILABLE

The 3279 Models 2A, 2B, 3A and 3B are no longer available. MES orders for model changes, features, released RPQs, and accessories are not affected.

No new RPQs will be accepted.

See other M3279 Model pages.

PURPOSE

A high quality color cathode ray tube (CRT) display station used in clusters with the 3274, the 3276, or the 4321 Processor and 4331 Processor for displaying alphameric data, and for entering data into and receiving data from a S/360, S/370, 4300, 4700 Finance Communication System, or 8100 Information System. In base color mode on all models data fields may be displayed in a choice from four colors. A keyboard, selector light-pen, or both, permit an operator to display and manipulate data on the screen in a flexible and efficient manner.

On extended color models 2B and 3B of the 3279, attached to a 3274, data may be displayed at both character and field level in seven colors, with a choice of highlighting modes. APL is provided. Customer specified symbols and shapes may be displayed in any character position using Programmed Symbols. With its set of basic and optional features the 3279 meets both general purpose and unique display requirements.

MODELS

Base color

Model 2A A02 — Displays up to 1,920 characters in 24 lines of 80 characters each

Model 3A A03 — Displays up to 2,560 characters in 32 lines of 80 characters each

Extended color

Model 2B B02 — Displays up to 1,920 characters in 24 lines of 80 characters each

Model 3B B03 — Displays up to 2,560 characters in 32 lines of 80 characters each

For use with 8100 Information System, see the *8100 System Configurator,* GA27-2876. For use with 4700 System, refer to M4701 pages.

Prerequisites: 3279 requires a keyboard and a 3274 or 3276 with appropriate features, or a 4321 or 4331 - see M3274, 3276, 4321, or 4331 pages.

Customer Setup (CSU): The 3279 is designated Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

Characters are displayed within a 9x12 character matrix on all mdls. On all mdls the basic 26 character upper case letters are presented in 7x9 character matrix. A 94-character set is displayed consisting of 26 upper case alphabetic, 26 lower case alphabetic, 10 numeric and 32 special characters. A monocase switch provides the capability of switching to uppercase alphameric mode. The 3279 uses 3270 field formatting capability that permits individual fields of data on the screen to be program defined with various attributes, such as protected/ unprotected, normal/ intensified, displayable/ non-displayable and selector light-pen detection allowed/ disallowed. An audible alarm is provided.

All 3279 mdls use the 3270 formatting attributes of protect and intensify for the additional purpose of displaying individual fields in base colors according to the following table.

Protected and intensified	–	White
Unprotected and intensified	–	Red
Protected and normal intensity	–	Blue
Unprotected and normal intensity	–	Green

Extensions to 3270 data stream supported by appropriate 3274 features and by 3279 mdls 2B and 3B and the optional Programmed Symbols (PS) features provide the following field and character attributes.

- Extended Color (red, blue, green, white, yellow, turquoise and pink)
- Extended Highlighting (reverse video, blink, underscore)
- Programmed Symbols (six sets with 190 loadable positions each)

Each attribute can be specified independently of any other. Special keyboards are provided to allow operator control of these attributes.

Programmed Symbols can use the whole character matrix for symbol definition.

In addition, three of the sets of Programmed Symbols allow symbols and shapes to be displayed using multiple colors within a single character location.

3270 Personal Computer Attachment enables the IBM Personal Computer, 5150, to be attached to the 3279 mdls 2A, 3A, 2B, 3B. The display station and associated keyboard become common to both the host processor and to the IBM Personal Computer, thus expanding the use of the display station and the applications available at the display station.

3279 mdls 2B and 3B provide Extended Color, Extended Highlighting and APL/Text. 3279 mdls 2B and 3B are supported on 3274 mdls 1A, 1C, 1D, 31A, 31C, 31D, 41A, 41C, 41D, 51C, or 61C, and on the 3276 for APL/Text operation.

APL/Text capability provides for display of a 222-character APL/Text character set including the 94 character EBCDIC set. An appropriate keyboard is available. APL/Text requires a 3274 mdl X1A, X1C, or X1D, customized to include the APL/Text control function, or a 3276 with APL/Text control feature and its prerequisite, Extended Function Base feature. APL/Text operates in EBCDIC mode only and is NOT compatible with ASCII.

For Extended Color and Extended Highlighting on the 3279 mdls 2B and 3B, the structured field and Attribute Processing option of Configuration Support C or D is required on the 3274. The 3279 PS features require in addition the Programmed Symbols option of 3274 Configuration Support C or D. Extended Color, Extended Highlighting and PS function operate in EBCDIC mode only and are not compatible with ASCII. The 3279 mdl 2A will attach to the Display/ Printer Adapter of the 4331 Processor.

For base color mode of operation, all mdls of the 3279 will attach to all mdls of the 3274. Configuration support on the 3274 must be at the following level or higher:

Configuration A - Release 11.1
Configuration B - Release 22.0
Configuration C
Configuration D
Configuration T.

On the 3276, for base color mode, 3279 mdls 2A and 2B will attach to all 3276 mdls except mdl 1 and 3279 mdls 3A and 3B will attach to all 3276 mdls except mdls 1 and 2.

The operator may initiate a local display-to-printer (monochrome or color 3287) copy function (i.e., without host intervention) from the keyboard of a 3279 (except for graphics use of PS). When the 3279 is attached to a 3274, the printer designation is controlled by operator use of the IDENT key and by:

1. A printer authorization matrix which is loaded into the 3274 through a user written host application program, or,
2. A customer definable matrix loaded from the System Diskette at IML time. For further details, see the *IBM 3270 Information Display System Planning and Setup Guide,* GA27-2827.

When the 3279 is attached to 3276, the printer designation is controlled by operator use of the IDENT key and by a configuration default matrix. This matrix is determined by the relative positions of devices attached to the 3276.

Operator Factors: The 3279 has an anti-glare screen to improve contrast and readability. Indicators are displayed in symbols on the bottom row of the screen, outside the data area and provide useful operator information. These symbols, except those indicating color attributes will appear in blue. Display of data on the screen is accomplished without refresh interrupt (except that transient patterns are displayed when data is being loaded to the Programmed Symbols buffers). The keyboard, which is low in profile, provides a palm rest area and has separators to help prevent accidental striking of control keys. The operator may select one of several cursor modes. The cursor is displayed in white on the 3279.

A base color switch allows the 3279 mdls 2A and 3A to run in 'monochrome mode' for 3278 compatibility. In this mode fields are displayed in green for normal intensity and in white for high intensity. The switch has the same function on the 3279 mdls 2B and 3B if no extended color attributes are specified in the data stream. When extended color attributes are specified, the switch setting is ignored. Extended color will be displayed for those fields and characters for which it is specified. Other fields and characters will be displayed in green with white for high intensity.

For comfortable viewing the CRT face is inclined and may be adjusted to 15 degrees, 17.5 degrees, or 20 degrees from the vertical.

The operator may adjust the color convergence quickly and easily using a simple keyboard procedure with a special screen test pattern.

Editing Functions: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for 3279 displays. All alphameric, special symbol, and cursor move keys have repeat action capability. Double speed cursor repeat action is attained with simultaneous depressing of the ALT key and a horizontal cursor positioning key.

3279 Color Display Station Mdls 2A-3B (cont'd)

Input Flexibility: A choice of keyboards and/or the selector light-pen provide input flexibility. A Magnetic Slot Reader (optional) and for a 3279 attached to a 3274, a Magnetic Hand Scanner (optional) are available for the input of magnetically coded data ... see "Special Features" and "Accessories" below. Fields of data can be selected by positioning the cursor and operating the cursor select key, instead of using the selector light-pen. 12 Program Function (PF) keys are basic with all typewriter keyboards. When attached to a 3274 with Configuration Support C with Entry Assist RPQ or with Configuration Support D with Entry Assist and with a typewriter or APL keyboard, the display provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, workwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3274 Sales pages for languages supported. See "Accessories" for 3274 Entry Assist keytops kits.

Security Functions: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock (optional) prevents modification or display of data in the display terminal unless the key is turned to the 'on' position. These capabilities and the terminal's ability to identify itself to the host program allow customer-supplied security program routines to help control access to data and aid audit of actions. A Magnetic Slot Reader (optional), and for 3279 attached to a 3274, a Magnetic Hand Scanner (optional) are available to enter system user identification.

When attached to a 4321 or 4331 Processor via the Display/ Printer Adapter, functional support varies from that of the 3279-2A attached to a 3274 or 3276. See M4321 or M4331 Display/ Printer Adapter feature description for details of support.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This increased availability has been achieved through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided by the *Problem Determination Guide* manual that can be stored under the keyboard palm rest. Also, see "Customer Responsibilities".

Display Exception Monitoring Facility (DEMF), a software tool for network problem determination/isolation enhances the availability and serviceability of the 3274 and the 3276 in BSC mode. See "DEMF" in the SCP section for OS/VS1 and OS/VS2 (MVS).

Customer Responsibilities:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3279.
- Physical setup, connection of cables in customer access areas, switch setting and check out.
- Contacting Field Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
- Notifying IBM of intent to relocate and following IBM instructions for relocation.
- Using and following the problem determination procedures and filling out trouble report prior to calling for IBM service.
- Disconnection, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.

Note: 3279 attachment to 3274 may require increments of 3274 control storage. Refer to 3274 control storage requirement tables to ensure that adequate Extended Function Store is available if required.

Bibliography: See *KWIC Index*, G320-1621, or specific system bibliography.

SPECIFY

Specify codes may not be necessary to order a 3279. If codes are not specified, the machine is shipped with the following specifications:

- Voltage (120V AC, 1-phase, 3-wire, 60 Hz): Non-locking plug **#9891.**
- Power Cable Length: 2.8 meter (9 foot)
- Power Cable: If standard 2.8 meter (9 foot) power cable is not desired, specify **#9511** for 1.8 meter (6 foot) or **#9513** for 4.5 meter (15 foot).
- Keyboard Cable Length: 0.9 meter (3 feet).
- Terminal Cables - See "Accessories" for ordering instructions. For cable specifications, see *IBM 3270 Information Display System Installation Manual - Physical Planning*, GA27-2787.
- Power Cable Plug: If locking plug is required, specify **#9890.**

SPECIAL FEATURES

Not all of the following special features are supported for 3279-2As attached to a 4321 or 4331 processor via the Display/ Printer Adapter. See M4321, M4331 Display/ Printer Adapter feature description for details of support.

Switch Control Unit (#1720): This feature, when installed on a 3279, permits switching operational control of that display between two different control units. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes.

Keyboard Numeric Lock (#4690): Provides keyboards #4621, #4622, #4623, #4624, #4626, #4627, #4628, #4629 with the ability to lock the keyboard, if a non-numeric key [other than 0-9, minus, decimal sign, or dup] is operated in a pre-defined numeric-only field. **Maximum:** One. **Field Installation:** Yes. Contact local Field Engineering Branch Office for installation. MES No. 999999 is to be used for Incident Report (IR) completion data. Note: The Numeric Lock Function is enabled on Keyboards #4640, #4651, #4652 as an option of 3274 customization in which case these keyboards will either all have, or all not have, the numeric lock function.

Magnetic Reader Control (#4999): Provides the capability of attaching a Magnetic Slot Reader or a Magnetic Hand Scanner which read encoded information from a magnetic stripe. The MSR can be used when the 3279 is connected to either a 3274 or 3276, but the MHS can only be used when the 3279 is connected to a 3274. **Maximum:** One. **Field Installation:** Yes. **Limitations:** Cannot be installed with #5325.

IBM Personal Computer Adapter (#5322, #5325, #5327): This entry is for information purposes only ... see Product Announcement Letter 183-130 for ordering instructions and prices. Provides the capability of attaching an IBM Personal Computer, 5150, System Unit to the 3279. If only the IBM Personal Computer 5150 portion is required, order **#5322.** If only the 3279 portion is required, order **#5327.** The interconnection cables and user's guide with the Programming Diskette are included with the Personal Computer option **#5322.** A user's guide without the Programming Diskette may be ordered from Mechanicsburg, Pa. using Form # SA230169. **Maximum:** One. **Prerequisities:** (1) 3279 mdls 2A or 3A or 2B or 3B. (2a) IBM Personal Computer, 5150, mdl X14, X64, or X74 with Color/Graphics Monitor Adapter, or (2b) IBM Personal Computer System Unit with Color/Graphics Monitor Adapter, 5-1/4 inch Diskette Drive Adapter and one 5-1/4 inch Diskette Drive, and at least 64KB total user memory. (3) IBM Personal Computer DOS 1.1 or DOS 2.0. (4) a 3274 or 3276 control unit. **Limitations:** Cannot be installed with #4999, #6350 or #6351. **Field Installation:** Yes. ContactField Engineering Branch Office for installation.

Programmed Symbols (PS) (#5781 and #5782): These features provide storage and accessing for up to six 190-symbol sets whose shapes and codes are customer definable. Symbol sets are loaded under program control and accessed for display through programming or by an operator from the display keyboard.

The number of symbols in any one set that can accessed from the display keyboard is 94 plus space.

PS-2, (#5781) Provides PS control and storage for two 190-symbol sets. **Prerequisites:** 3279 mdl 3B.

PS-4, (#5782) Provides control and storage for four additional 190-symbol sets. Three of these symbol sets can be displayed using multiple colors within a character block. **Prerequisites: #5781.**

Limitations: Can be used only with a 3274 having the PS Control and Structured Field and Attribute Processing options of Configuration Support C or D. **Maximum:** One of each. **Field Installation:** Yes. **Corequisites:** If display operator access to PS is required, #4640, #4651 or #4652 must be ordered. **Note:** If the 3279 is to be used with the Presentation Graphics Feature (PGF) of the Graphical Data Display Manager (GDDM) Program Product 5748-XXH, then both #5781 and #5782 must be installed.

Security Key Lock (#6340): A lock and key which prevents modification or display of data in the display terminal when in the 'off' position. **Maximum:** One. **Field Installation:** Not recommended.

Selector Light-Pen (#6350 mdls 3A and 3B, #6351 mdls 2A and 2B): Hand-held, pen-like device which permits the operator to select fields of data from a display for input to the host system. The selector light-pen will detect on any color. The selector light-pen, while not being used, can be placed in a recess of the keyboard, which is provided for user's incidental items. Selector light-pen (and cursor select) operations have been expanded to include a designator character "&". When this designator is used, the Read Modified operation returns both the addresses and the data of all modified fields on the screen. The selector light-pen (#6351) has a slightly wider field of view to facilitate operator use. **Maximum:** One. **Field Installation:** Yes. **Limitations:** Cannot be installed with #5325.

3279 Color Display Station Mdls 2A-3B (cont'd)

Keyboards: Refer to Type Catalog for a picture of the keyboard layouts. **Limitations:** Each 3279 Color Display Station must be equipped with a keyboard. Keyboards used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines. **Maximum:** One of the below. **Field Installation:** Yes. The keyboard is set up by the customer. A 0.9 meter (3 foot) keyboard cable is provided as standard. Select one of the following:

#4621 - 75-Key EBCDIC Typewriter Keyboard: Typewriter-like layout, movable, with 49 data keys and 26 control keys. 12 PF keys are included in the top row of data keys through use of an alternate shift key.

#4622 - 75-Key EBCDIC Data Entry Keyboard: Movable, with 35 data keys, 10 PF keys and 30 control keys.

#4623 - 75-Key EBCDIC Data Entry Keyboard: Keypunch layout, movable, with 35 data keys, 10 PF keys and 30 control keys. This is the recommended keyboard for data entry.

#4624 - 75-Key ASCII Typewriter Keyboard: ASCII typewriter-like layout, movable, with 49 data keys and 26 control keys. 12 PF keys are included in the top row of the data keys through use of an alternate shift key.

#4626 - 87-Key EBCDIC Typewriter/APL Keyboard: An 87-key EBCDIC Typewriter Keyboard (#4627) with modified keytops to allow entry of 81 APL-specific characters in addition to the 94-character EBCDIC set. An APL On/Off key controls whether the keyboard is in EBCDIC typewriter or APL mode. In contrast to the 87-key EBCDIC Typewriter Keyboard without APL (see #4627), this keyboard has only 12 PF keys (PF1 thru PF12) which are the group of 12 keys to the right of the main keyboard area. **Prerequisites:** 3279 mdl 2B or 3B.

#4627 - 87-Key EBCDIC Typewriter Keyboard: Typewriter-like layout, movable, with 49 alphameric data keys, 26 control keys, and 12 PF keys (24 total PF keys). 12 of the PF keys are included in the top row of data keys through the use of the alternate shift key.

#4628 - 87-Key ASCII Typewriter Keyboard: ASCII typewriter-like layout, movable with 49 alphameric data keys, 26 control keys, and 12 PF keys (24 total PF Keys). 12 of the PF keys are included in the top row of the data keys and are available through the use of an alternate shift key.

#4629 - 87-Key EBCDIC Typewriter/Text Keyboard: An 87-key EBCDIC Typewriter Keyboard (see #4627) with modified keytops to allow entry of 65 Text-specific characters in addition to the 94-character EBCDIC set. A Text On/Off key controls whether the keyboard is in EBCDIC typewriter of Text mode. In contrast to an 87-key EBCDIC Typewriter Keyboard without Text (see #4627), this keyboard has only 12 PF keys (PF1 thru PF12) which are the group of 12 keys to the right of the main keyboard area. **Prerequisites:** 3279 mdl 2B or 3B.

#4640 - 87-Key EBCDIC Typewriter Overlay Keyboard: This keyboard, without overlay, has the same layout and can be used in the same way as the 87-key EBCDIC Typewriter Keyboard (see #4627) with the 94-character EBCDIC set. This keyboard however, has special narrow keytops that permit the use of customer annotated overlays. Six overlays are supplied with each keyboard. Additional overlays can be obtained via MES. See "Accessories". These overlays are used to show the symbols associated with the keys when one of the Programmed Symbols is selected. The desired PS can be selected by the operator through use of the appropriate PF keys (12 PF keys on the right hand side of the keyboard) in upper case and alternate shift of this keyboard. Enhanced functions are NOT supported on 3279 mdls 2A and 3A. **Limitations:** Cannot be installed on a 3279 that is attached to a 3276.

#4651 - 87-Key EBCDIC Attribute Select Typewriter Keyboard: A typewriter layout, movable, similar to the 87-key EBCDIC Typewriter Keyboard #4627. Attribute select functions are shown on the 12 PF keys at the right-hand side of the keyboard. **Prerequisite:** 3279 mdl 2B or 3B. **Limitations:** Cannot be installed on a 3279 attached to a 3276.

#4652 - 87-Key EBCDIC Attribute Select Typewriter/APL Keyboard: A typewriter layout, movable keyboard, similar to the 87-key EBCDIC Typewriter Keyboard #4626. Attribute select functions are shown on the 12 PF keys at the right hand side of the keyboard. **Prerequisite:** 3279 mdl 2B or 3B. **Limitation:** Cannot be installed on a 3279 attached to a 3276.

Overlay and Attribute Select keyboards: These keyboards are equipped with highlight, PS and color select function keys (12 PF keys on right-hand side of the keyboard). They provide operator selection under program control, of highlight, PS and color attributes. Except for the color marking and annotation on the 12 PF keys on the right-hand side of the keyboard, the Overlay and Attribute Select keyboards appear identical to the equivalent non-Overlay and non-Attribute Select keyboards. Use of keys to select a feature not on the display will cause an error indication in the operator guidance row on the display. The upper case and alternate shift of these 12 PF keys are used for attribute selection and are, therefore, not available for normal program function use. **Limitations:** Attribute selection is NOT supported for keyboards on a 3279 mdl 2B or 3B attached to a 3276, OR for keyboards attached to a 3279 mdl 2A or 3A.

MODEL CONVERSIONS

Model changes from 2A to 2B and 3A to 3B are field installable. Model changes from 2A to 3A or 3B or from 2B to 3A or 3B are not recommended for field installation.

ACCESSORIES

For shipment with machine, order the feature number as shown below. See detailed descriptions below for additional information and for ordering by MES for field installation.

Item	Feature Number	P/N	Max Qty
Magnetic Hand Scanner	**#9440**	**4123495**	*
Magnetic Slot Reader	**#9441**	**4123500**	*

* A maximum of one magnetic reader or scanner may be ordered.

Magnetic Reader Extension Cable for use with Magnetic Hand Scanner or Magnetic Slot Reader:

Item	Feature Number	P/N	Max Qty
6 meter (20 feet)	**#9106**	**4832986**	**
12 meter (40 feet)	**#9107**	**4832987**	**

** A maximum of one extension cable may be ordered.

Item	Feature Number	P/N
Tilt/rotate accessory	N/A	**4422265**
Control Unit Switch	MES only	
Battery	N/A	

The following cable assemblies can be used to extend the Magnetic Hand Scanner and Magnetic Slot Reader distances. **Limitations:** Extension cables cannot be plugged into other extension cables. **Prerequisites: #4999.**

Item	Feature Number	P/N
6 meter (20 feet)	**#9106**	**4832986**
12 meter (40 feet)	**#9107**	**4832987**

Both the MHS and the MSR read magnetically encoded information from an alphanumeric character set. The MSR also reads the same 10-character numeric only set as the 3277 Operator Identification Card Reader (#4600) which is not a subset of the alphanumeric character set. For a further description of both character sets, see *IBM 3270 Information Display System Character Set Reference,* GA27-2837. Either (not both) the alphanumeric or the 10 numeric only 3277-like character set may be selected for the 3274 at customization time for attached 3278s and 3279s. The 3276 Control Unit Display Station and attached 3278s and 3279s support only the MSR and the 10 character numeric only set as used by the 3277.

Numeric and alphanumeric character capabilities are as follows:

MSR/MHS	Minimum number of Hex Codes between start sentinel and end sentinel characters	Maximum number of characters between start sentinel and end sentinel characters	Bit Density: Bits per inch	Bit Density: Bits per mm
3277 Like 10-numeric character set*	7 7	37 118	75 127	3 5
Alphameric character set*	7 7 7 7 7	37 numerics 18 non-numerics 118 numerics 59 non-numerics 37 numerics	75 75 127 127 210**	3 3 5 5 8.3

* 1 Hex code = 1 numeric character
2 Hex codes = 1 non-numeric character

** MSR only

Full width encoding is recommended for the MSR and is required for the MHS.

Maximums shown are ALL numeric or ALL non-numeric characters. If a combination of numeric and non-numeric characters is recorded, the total number of hex CODES must not exceed the numeric character maximum. For example, at 127 bpi, a combination of 60 numeric and 20 non-numeric character is permissible.

Limitations: 3277-like 10 character set numerics only magnetic cards coded with Alternate End or Message character (hexadecimal 'C'), cannot be read by the MSR or MHS. The alphanumeric character set and the MHS are only supported on 3278s and 3279s which are attached to 3274s. IBM Host Programming Support is provided for alphanumeric character set non-protected, display data entry.

3279 Color Display Station Mdls 2A-3B (cont'd)

Protected, non-display data entry is supported by IMS and TSO. With this protected, non-display data entry support, all cards and documents which can be read by the 3630 Plant Data Communication System, up to 118 data characters, can be read by the 3270 System.

A variety of magnetic documents, tags and labels which the MSR and MHS can read, may be obtained from SSD, some of which, depending on length, can be encoded by devices such as the 3642 Encoder Printer.

Switch Control Unit: Permits switching operational control of a 3279 between two different control units. Customer is responsible for Procurement and installation of this accessory, and also for the replacement of a defective unit.

Warranty: The Switch Control Unit is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled maintenance recommended by IBM, and IBM Maintenance Agreements are not available.

Ordering Instructions: This accessory is ordered by P/N via MES for field installation only.

P/N **4419338** should be specified when ordering by MES for field installation. Enter one MES for multiple quantities of P/N ordered, using serial number zero (00000) on the MES.

Mercury Battery (P/N 1743456): Provides power to sustain the convergence parameters in a 3279 when normal power is not present. This supply item is a 4.14 volt non-rechargeable mercury battery. It has a shelf life of 18 months under normal conditions and can be expected to provide 3.5 years of normal operation. **Field installation:** Yes, by customer. Discharged battery should be returned to IBM.

Keyboard Overlay: A keyboard overlay is available on which customer-defined Programmed Symbols can be annotated. An annotated overlay can be placed over the narrow keytops of Overlay keyboards to associate specific keytops with specific symbols.

Keyboard Overlay **P/N 1742762**

Locks and Keys (P/N 2577741): The 3279 with Security Keylock #6340 is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser). A letter of authorization, with key identification, must accompany each order. Allow two to three weeks for delivery.

Magnetic Hand Scanner (#9440, P/N 4123495): The Magnetic Hand Scanner (MHS) attaches by a 1.5 meter (5 foot) coiled cable to a 3279 that has an appropriate magnetic adapter feature. It allows the user to read magnetic stripe labels that are attached to shelves, cartons, machines, etc. It can also be used to read magnetic stripe tags which are hand-held or placed on a flat surface. The MHS has three lights and an audible buzzer which provide feedback to the user on the status of the scanned data. It can read a stripe in either direction. **Field Installation:** Yes. **Prerequisites: #4999.** See Note 1.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Scanners will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare scanners which the customer may want to consider stocking ... for 50 scanners, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5.

Warranty: The Magnetic Scanner Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

IBM Corporation
Repair Center
321 Route 17
Paramus, NJ 07652

There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance will be done by the customer, following the problem determination and parts replacement procedures.

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Slot Reader (#9441, P/N 4123500): The Magnetic Slot Reader (MSR) attaches by a 1.5 meter (5 foot) cable to a 3279 that has an appropriate magnetic adapter feature. The slot reader accommodates a wide range (height and length) of magnetic striped card stock and plastic badges including job tickets, magnetic striped 80-column cards, operator identification badges, large and small credit cards, etc. The MSR has three lights and an audible buzzer which provide feedback to the user on the status of scanned data. Holes in the bottom of the MSR allow optional attachment to an appropriate flat surface. **Field Installation:** Yes. **Prerequisites: #4999.** See Note 1.

Ordering Instructions: For ordering for delivery with machine, see appropriate machine page. To order via MES, order via MSORDER (Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine Type 3279.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Readers will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare readers which the customer may want to consider stocking ... for 50 readers, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5

Warranty: The Magnetic Reader Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

IBM Corporation
Repair Center
321 Route 17
Paramus, NJ 07652

There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance will be done by the customer, following the problem determination and parts replacement procedures.

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Reader/Scanner Extension Cables: These cable assemblies can be used to extend the Magnetic Hand Scanner P/N 4123495 or Magnetic Slot Reader P/N 4123500 distances. Additional Extension Cable lengths other than those listed below are available. See RPQ Reference List.

MHS/MSR Extension Cables are warranted free from defects of workmanship or materials for 90 days.

Limitations: Extension cables cannot be plugged into other extension cables.

Ordering Instructions: For ordering for delivery with the machine, see appropriate machine page. To order via MES, order via MSORDER (Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine Type 3279

6 meter (20 foot) **P/N 4832986**
12 meter (40 foot) **P/N 4832987**

MAGNETIC READER/SCANNER REPLACEMENT ASSEMBLIES

Description	P/N
MHS Sensor Head Assembly	**4832721**
MHS Handle and Feedback Assembly	**4832701**
MHS Amplifier Card and Cable Assembly	**4832727**
MSR Arm and Sensor Head Assembly	**4832963**
MSR Base and Feedback Assembly	**4832973**
MSR Amplifier Card and Cable Assembly	**4832962**
MSR Cover	**4832964**

The following tables list the number of Magnetic Reader/Scanner replacement assemblies which the customer may want to consider stocking:

MAGNETIC HAND SCANNER

Number of MHSs P/N 4123495	Sensor Head Assemblies P/N 4832721	Handle and Feedback Assembly P/N 4832701	Amplifier Card and Cord Assembly P/N 4832727
50	2	1	2
100	3	1	3
150	4	1	4
200	5	2	5

MAGNETIC SLOT READER

Number of MSRs P/N 4123500	Arm & Sensor Head Assembly P/N 4832963	Base and Feedback Assembly P/N 4832973	Amplifier Card and Cord Assem P/N 4832962	Cover P/N 4832964
50	2	1	2	1
100	3	1	3	1
150	4	1	4	1
200	5	2	5	1

Ordering Instructions: Order using DP Supply Order form Z170-6173 from Mechanicsburg.

Warranty: Magnetic scanner replacement assemblies are warranted free from defects of workmanship or materials for 90 days.

3279 Color Display Station Mdls 2A-3B (cont'd)

Display Station Keyboard Accessories: The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3279 keyboards. These accessories supply keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving, a keytop extractor, and an Entry Assist Keytop Kit.

These accessories may be ordered by P/N via a DP Supply Order from the Raleigh plant.

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key.)

Legendable Keytops:	P/N
White	**5188775**
Charcoal Gray	**8627192**
Light Gray	**8542831**

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key.)

Blank Keytops:	P/N
White	**1853775**
Charcoal Gray	**1853567**
Light Gray	**1853563**

Keytop Extractor (P/N 9900373): The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled off its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

Entry Assist Keytop Kit: [Non-overlay keyboards only] This kit provides eight sets of five keytops appropriately labelled for use with the Entry Assist capability together with a keytop extractor and keytop replacement instruction. Not for use on 3178 keyboards or overlay keyboards.

Entry Assist Keytop Kit **P/N 1742774**

Display Station Tilt/Rotate Accessory (P/N 4422265): An accessory which fits under the display station and provides a ball and socket type movement to allow the angle of the screen face to be adjusted for comfort of viewing position. The screen angle is normally 20 degrees from the vertical but with this device it can be adjusted between 25 degrees to the vertical and the vertical position. A locking device is provided to maintain the selected position. This accessory also allows the display station to be rotated plus or minus 90 degrees from the central position and this movement is independent of the tilt movement.

See SSD catalog for details of this supply item. Interested customers may order from IBM directly. Call toll free at 800-631-5582; in Alaska and Hawaii, call 800-526-2484. For further information, contact an SSD sales representative.

Warranty: The Tilt Rotate accessory is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled preventive maintenance recommended by IBM, and IBM Maintenance Agreements are not available.

Customer Responsibility: The customer is responsible for mounting the Display Station on this accessory.

Cables: Cables and or associated parts to attach the 3279 to the 3274 and 3276, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	**2577672**	Cable Assembly In-Door
Bulk	**0323921**	Coax Wire (Note 1)
P/N	**1836418**	Connector Kit (Note 1)
Assm	**1833108**	Cable Assembly Out-Door
Bulk	**5252750**	Coax Wire (Note 2)
P/N	**1836419**	Connector Kit (Note 2)
P/N	**2621414**	Modification Kit (Note 3)
P/N	**1833106**	Station Protector Attachment Kit (Note 5)
P/N	**5252643**	Adapter (Note 7)
P/N	**1830818**	Station Protection Kit, Gas (Note 4)
P/N	**5252899**	Station Protector Element, Gas (Note 6)

Specify P/N, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N **1836446)** required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N **1836447)** required for each outdoor cable assembly.
3. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N **2577672** or two P/N **1833108** cable assemblies together.

SUPPLIES (None)

3279 COLOR DISPLAY STATION MDLS S2A-03X

PURPOSE

A high quality color cathode ray tube (CRT) display station used in clusters with the 3274, the 3276 , or the 4331 Processor for displaying alphanumeric data and presentation graphics data, and for entering data into and receiving data from a System/3, System/360, S/370, 30XX, 4300 or 8100 Information System, or 4700 Finance Communication System. In base color mode on all models, data fields can be displayed in four colors. A keyboard, selector light-pen, or both, permit an operator to display and manipulate data on the screen in a flexible and efficient manner.

On extended color models S2B and S3G, or models 02X or 03X with Extended Function feature, attached to a 3274, data may be displayed at both character and field level in seven colors with a choice of highlighting modes. APL/Text is provided. On extended color model S3G, or model 03X with the requisite optional features, customer specified symbols and shapes may be displayed in any character position using Programmed Symbols. With its set of basic and extended models, the 3279 meets both general purpose and unique display requirements.

MODELS

Model S2A	Base Color	Displays up to 1,920 characters in 24 lines of 80 characters each.
Model S2B	Extended Color	Displays up to 1,920 characters in 24 lines of 80 characters each. 7 colors, extended highlighting and APL.
Model S3G	Extended Color Programmed Symbols	Displays up to 2,560 characters in 32 lines of 80 characters each. 7 colors, extended highlighting and APL, and programmed symbols.
Model 02X	Custom Model	Displays up to 1,920 characters in 24 lines of 80 characters each.
Model 03X	Custom Model	Displays up to 2,560 characters in 32 lines of 80 characters each.

For use with 8100 Information System, see the 8100 System Configurator, GA27-2876. For use with 4700 System, refer to M4701 pages. **Note:** Models 2B, 3A, 3B, S2B, S3G, and 03X are not supported by System/3.

Prerequisites: 3279 requires a keyboard and a 3274, 3276, 4321 or 4331 - see M3274, 3276, 4321 or 4331 pages.

Customer Setup (CSU): The 3279 is designated Customer Setup, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

Characters are displayed within a 9x12 character matrix on all mdls. On all mdls the basic 26 character upper case letters are presented in 7x9 character matrix. A 94 character set is displayed, consisting of 26 uppercase alphabetic, 26 lowercase alphabetic, 10 numeric and 32 special characters. A monocase switch provides the capability of switching to uppercase alphanumeric mode. The 3279 uses 3270 field formatting capability that permits individual fields of data on the screen to be program defined with various attributes, such as protected/ unprotected, normal/ intensified, displayable/ non-displayable, and selector light pen detection allowed/ disallowed. An audible alarm is provided.

All 3279 mdls use the 3270 field attributes of protect and intensify for the additional purpose of displaying individual fields in base colors according to the following table:

Protected and intensified	White
Unprotected and intensified	Red
Protected and normal intensity	Blue
Unprotected and normal intensity	Green

Extensions to 3270 datastream supported by appropriate 3274 features and by 3279 mdls S2B, S3G, 02X and 03X provide the following field and character attributes:

- Extended Color (red, blue, green, white, yellow, turquoise and pink).
- Extended Highlighting (reverse video, blink, underscore).
- Programmed Symbols (six sets with 190 loadable positions each). (Mdls S3G or 03X with extended function feature #3850.)

Each attribute can be specified independently of any other. Special keyboards are provided to allow operator control of these attributes.

Programmed Symbols can use the whole character matrix for symbol definition. In addition, three of the sets of Programmed Symbols allow symbols and shapes to be displayed using multiple colors within a single character location.

3270 Personal Computer Attachment enables the IBM Personal Computer, 5150, to be attached to the 3279 mdls S2A, S2B, S3G, 02X, 03X. The 3279 and associated keyboard become common to both the host processor and to the IBM Personal Computer, thus expanding the use of the display station and the applications available at the display station - see "Special Features".

3279 mdls S2B and S3G, or mdls 02X or 03X with optional feature, provide Extended Color, Extended Highlighting and APL/Text. 3279 mdls S2B, S3G, 02X and 03X are supported on 3274 mdls 1A, 1C, 1D, 31A, 31C, 31D, 41A, 41C, 41D, 51C, or 61C and on the 3276 for APL/Text operation.

APL/Text capability provides for display of a 222-character APL/Text character set including the 94 character EBCDIC set. An appropriate keyboard is available.

APL/Text requires a 3274 mdl X1A, X1C, or X1D customized to include the APL/Text control function, or a 3276 with APL/Text control feature and its prerequisite, Extended Function Base feature. APL/Text operates in EBCDIC mode only and is NOT compatible with ASCII.

For Extended Color and Extended Highlighting on the 3279 mdls S2B, S3G, 02X and 03X, the Structured Field and Attribute Processing option of Configuration Support C or D is required on the 3274. The 3279 PS feature requires, in addition, the Programmed Symbols option of 3274 Configuration Support C or D. Extended Color, Extended Highlighting and PS function operate in EBCDIC mode only and are not compatible with ASCII. The 3279 mdl S2A, or mdl 02X without special features, will attach to the Display/Printer Adapter of the 4331 Processor.

For base color mode of operation, all mdls of the 3279 will attach to all models of the 3274. Configuration Support on the 3274 must be at the following level or higher:

Configuration Support A - Release 11.0
Configuration Support C
Configuration Support D
Configuration Support T

On the 3276 for base color mode, 3279 mdls S2A, S2B, 02X will attach to all 3276 mdls except mdl 1, and 3279 mdls S3G or 03X will attach to all 3276 mdls except mdls 1 and 2.

The operator may initiate a local display-to-printer (monochrome or color 3287) copy function (i.e. without host intervention) from the keyboard of a 3279 (except for graphics use of PS). When the 3279 is attached to a 3274, the printer designation is controlled by operator use of the IDENT key and by:

1. A printer authorization matrix which is loaded into the 3274 through a user-written host application program; or
2. A customer definable matrix loaded from the System Diskette at IML time. For further details, see the *IBM 3270 Information Display System Planning and Setup Guide,* GA27-2827.

When the 3279 is attached to 3276, the printer designation is controlled by operator use of the IDENT key and by a configuration default matrix. This matrix is determined by the relative positions of devices attached to the 3276.

Operator Factors: The 3279 has an anti-glare screen to improve contrast and readability. Indicators are displayed in symbols on the bottom row of the screen outside the data area, and provide useful operator information. These symbols, except those indicating color attributes, will appear in blue. Display of data on the screen is accomplished without refresh interrupt (except that transient patterns are displayed when data is being loaded to the Programmed Symbols buffers). The keyboard, provides a palm rest area and has separators to help prevent accidental striking of control keys. The operator may select one of several cursor modes. The cursor is displayed in white on the 3279.

A base color switch allows the 3279 to run in "monochrome mode". In this mode, fields are displayed in green for normal intensity and white for high intensity. When extended color attributes are specified, the switch setting is ignored. Extended color will be displayed for those fields and characters for which it is specified. Other fields and characters will be displayed in green with white for high intensity.

For comfortable viewing, the CRT face is inclined and may be adjusted to 15 degrees, 17.5 degrees or 20 degrees from the vertical. A tilt/rotate accessory (P/N 4422265) increases this range of adjustment.

The operator may adjust the color convergence quickly and easily using a simple keyboard procedure with a special screen test pattern.

Editing Functions: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for 3279 displays. All alphanumeric, special symbol and cursor move keys have repeat action capability. Double speed cursor repeat action is attained with simultaneous depressing of the ALT key and a horizontal cursor positioning key.

Input Flexibility: A choice of keyboards on all mdls, and/or the selector light-pen on the mdls 02X and 03X provide input flexibility - see "Special Features" and "Accessories" below. Fields of data can be selected by positioning the cursor and operating the cursor select key,

3279 Color Display Station Mdls S2A-03X (cont'd)

instead of using the selector light-pen. 12 Program Function (PF) keys are provided with all typewriter keyboards. When attached to a 3274 with Configuration Support C with Entry Assist RPQ or with Configuration Support D with Entry Assist and with a Typewriter or APL keyboard, the display provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3274 sales pages for languages supported. See "Accessories" for 3274 Entry Assist Keytop kits.

Security Functions: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of data in the display terminal unless the key is turned to the ON position. These capabilities, and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to help control access to data and aid audit of actions.

A Magnetic Slot Reader (optional on 3279 mdls 02X or 03X only.), or for a 3279 attached to a 3274 , a Magnetic Hand Scanner (optional on 3279 mdls 02X or 03X only), are available to enter system user identification data.

Audible Alarm: An alarm, sounded under program control, to alert the operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the next to last position on the screen. The operator may adjust the volume of the tone.

When attached to a 4331 Processor via the Display/Printer Adapter, functional support varies from that of the 3279 attached to a 3274 or 3276. See M4331 Display/Printer Adapter feature description for details of support.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This increased availability has been achieved through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided by the User Reference Summary. Also, see "Customer Responsibilities".

Display Exception Monitoring Facility (DEMF) and the Program Product, Network Problem Determination Application (NPDA), are software tools for network problem determination/isolation which can enhance the availability and serviceability of the terminals. See DEMF in the SCP section for OS/VS1 and OS/VS2 (MVS) and Program Number 5735-XX8, in the program products sections of the sales manual for NPDA.

Customer Responsibilities:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3279.
- Physical setup, connection of cables in customer access areas, switch setting and check out.
- Contacting Field Engineering to make cable connections of IBM CSU units to non CSU units where customer access areas are not provided.
- Notifying IBM of intent to relocate, and following IBM instructions for relocation.
- Using and following the problem determination procedures and filling out trouble report prior to calling for IBM service.
- Disconnection, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.

Refer to 3274 control storage requirement tables to ensure that adequate storage is available if required.

Bibliography: See *KWIC Index,* G320-1621, or specific system bibliography.

BASIC CONFIGURATION

The 3279 mdls S2A, S2B and S3G are only available with the following specifications. The 3279 mdls 02X and 03X will be shipped with these specifications unless alternative codes are specified.

Voltage: (120v AC 1-phase 3-wire 60Hz): non-locking plug.

Power cable length: 9 foot.

Terminal cables - see "Accessories" for ordering information. For cable specifications, see *IBM 3270 Information Display System Installation Manual - Physical Planning,* GA27-2787.

SPECIFY

- Power (AC 1-phase, 50/60 Hz).
- Power Cable: 3279 mdls 02X or 03X only, if the standard 2.8 meter (9 foot) power cable is not desired, specify: **#9511** for 1.8 metre (6 foot), or **#9513** for 4.5 metre (15 foot).
- Power cable plug: 3279 mdls 02X or 03X only, if locking plug required, specify **#9890**.

SPECIAL FEATURES

IBM Personal Computer Adapter (#5322, #5325, #5326, #5327, #5328): This entry is for information purposes only ... see Product Announcement Letter 183-130 for ordering instructions and prices. Provides the capability of attaching an IBM Personal Computer, 5150, System Unit to the 3279. For 3279 mdlsS2A, S2B, 02x with serial numbers below E0000, and for all mdls S3G, and 03X, order **#5325**. For mdls S2A, S2B, and 02X with serial numbers above E0000, order **#5326**. #5325 and #5326 contains material for both the 3279 and the IBM Personal Computer System Unit. If only the 3279 portion is required, then for the ranges of 3279 serial numbers quoted, order **#5327 or #5328** respectively. If only the IBM Personal Computer 5150 portion is required , order **#5322**. The interconnection cables and user's guide with the Programming Diskette are included with the Personal Computer option **#5322**. A user's guide without the Programming Diskette may be ordered from Mechanicsburg, Pa. using Form # SA230169. **Maximum:** One. **Prerequisities:** (1) 3279 mdls S2A or S2B or S3G or 02X or 03X. (2a) IBM Personal Computer, 5150, X14, X64, or X74 with Color/Graphics Monitor Adapter, or (2b) IBM Personal Computer System Unit, 5150 with Color/Graphics Monitor Adapter, 5-1/4 inch Diskette Drive Adapter and one 5-1/4 inch Diskette Drive, and at least 64KB total user memory. (3) IBM Personal Computer DOS 1.1 or DOS 2.0. (4) a 3274 or 3276 control unit. **Limitations:** Cannot be installed with #4999, #6360 or #8750 ... also see M3274 pages. **Field Installation:** Yes **Note:** This feature is not available for factory installation. Contact Field Engineering Branch office for installation. For installation of the feature on other 3279 mdls, refer to other M3279 pages.

Programmed Symbols (#5790): [Provided with 3279 mdl S3G]. This feature provides storage and accessing for up to six 190-symbol sets whose shapes and codes are customer definable. Symbol sets are loaded under program control and accessed for display through programming or by an operator from the display keyboard. The number of symbols in any one set that can be accessed from the display keyboard is 94 plus space. **Prerequisites:** 3279 mdl 03X with **#3850**. **Maximum:** One. **Field Installation:** Yes, on 3279 mdl 03X only. **Limitations:** Can be used only with a 3274 Control Unit having the PS Control and Structured Field and Attribute Processing options of Configuration Support C or D. Transient patterns are displayed when data is being loaded to the Programmed Symbols buffers. **Co-requisites:** If display operator access to PS is required, one of the following keyboards must be ordered:

- 87-key EBCDIC Typewriter Overlay Keyboard (#4640).
- 87-key EBCDIC Attribute Select Typewriter Keyboard (#4651) or 87-key EBCDIC Attribute Select Typewriter/APL Keyboard (#4652).

THE FOLLOWING SPECIAL FEATURES ARE ONLY AVAILABLE ON THE 3279 MODEL 02X OR 03X.

Inhibit Keyboard Numeric Lock (#4691): This feature prevents the action of the Keyboard Numeric Lock function which is described at the beginning of the keyboard section. **Prerequisites:** 3279 mdls 02X or 03X only, and at least one of the following keyboards: #4621, #4622, #4623, #4624, #4626, #4627, #4628, #4629, . **Maximum:** One. **Field Installation:** Yes. Contact Field Engineering Branch Office for Installation. MES Number 999999 is to be used for IR (incident report) completion data.

Extended Function (#3850): (provided with 3279 mdls S2B and S3G.) This feature provides Extended Color (red, blue, green, white, yellow, turquoise and pink) and Extended Highlighting (reverse video, blink, underscore). It also provides capability for display of 222 character APL/Text character set including the 94 character EBCDIC set. **Prerequisites:** 3279 mdls 02X or 03X. **Maximum:** One **Field Installation:** Yes, on 3279 mdls 02X and 03X only. **Limitations:** APL/Text requires a 3274 mdl X1A, X1C, or X1D, customized to include APL/Text control function, or a 3276 with APL/Text control feature and its prerequisite, Extended Function feature. Extended Color and Extended Highlighting require the Structured Field and Attribute Processing option of Configuration Support C or D on the 3274.

Magnetic Reader Control (#4999): Provides the capability of attaching a Magnetic Slot Reader or a Magnetic Hand Scanner which read encoded information from a magnetic stripe. The MSR can be used when the 3279 is connected to either a 3274 or 3276, but the MHS can only be used when the 3279 is connected to a 3274 Control Unit. **Prerequisites:** 3279 mdls 02X and 03X. **Maximum:** One. **Field Installation:** Yes, on 3279 mdls 02X and 03X only. **Limitations:** Cannot be installed with #5325 or #5326.

Selector Light-Pen (#6360): Hand-held, pen-like device which permits the operator to select fields of data from a display for input to the host system. The selector light-pen will detect on any color. The selector light-pen, while not being used, can be placed in a recess of the keyboard which is provided for user's incidental items. Selector light-pen (and cursor select) operations have been expanded to include

3279 Color Display Station Mdls S2A-03X (cont'd)

a designator character '&'. When this designator is used, the Read Modified operation returns both the addresses and the data of all modified fields on the screen. **Prerequisites:** 3279 mdls 02X and 03X. **Maximum:** One. **Field Installation:** Yes, on 3279 mdls 02X and 03X only. **Limitations:** Cannot be installed with #5325 or #5326.

Video Output (#8750): This feature provides separate RED, GREEN, BLUE and SYNC signals to drive non-IBM devices such as monitors, large screen projection systems and hard copy units. **Prerequisites:** 3279 mdl 03X. **Maximum:** One. **Field Installation:** Yes, on 3279 mdl 03X only. Customer should read *Feature Description Manual,* GA33-3079 before ordering this feature. **Limitations:** Cannot be installed with #5325 or #5326.

Keyboards:

Keyboards #4621, #4622, #4623 #4624, #4626, #4627 #4628, #4629 are supplied with Keyboard Numeric Lock function which provides the ability to lock the keyboard if a non-numeric key (other than 0-9, minus, decimal sign or dup) is operated in a pre-defined numeric only field. Numeric lock function is enabled on keyboards #4640, #4651, #4652 as an option of 3274 customization, in which case these keyboards will either all have, or all not have, the numeric lock function. **Limitations:** Each 3279 must be equipped with a keyboard. Keyboards used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines. **Field Installation:** Yes. The keyboard is set up by the customer. Some keyboards may require pre-requisites which are not customer installable. A 0.9 metre (3 foot) cable is provided as standard.

SELECT AT LEAST ONE OF THE FOLLOWING:

#4621 - 75-key EBCDIC Typewriter Keyboard: Typewriter-like layout, movable, with 49 data keys and 26 control keys. 12 PF keys are included in the top row of data keys through of an ALT shift key. **Prerequisites:** 3279 mdls S2A, S2B, 02X and 03X.

#4622 - 75-key EBCDIC Data Entry Keyboard: Movable, with 35 data keys, 10 PF keys and 30 control keys. **Prerequisites:** 3279 mdls S2A, 02X and 03X.

#4623 - 75-key EBCDIC Data Entry Keyboard: Keypunch layout, movable, with 35 data keys, 10 PF keys, and 30 control keys. **Prerequisites:** 3279 mdl 2A or 02X.

#4624 - 75-key ASCII Typewriter Keyboard: ASCII typewriter-like layout, movable, with 49 data keys and 26 control keys. 12 PF keys are included in the top row of the data keys and are available through the use of an alternate shift key. **Prerequisites:** 3279 mdl 2A or 02X.

#4626 - 87-key EBCDIC Typewriter/APL Keyboard: An 87-key EBCDIC Typewriter Keyboard (#4627) with modified keytops to allow entry of 81 APL-specific characters in addition to the 94character EBCDIC set. An APL ON/OFF key controls whether the keyboard is in EBCDIC typewriter or APL mode. In contrast to the 87-key EBCDIC Typewriter Keyboard without APL (see #4627), this keyboard has only 12 PF keys (PF1 through PF12) which are the group of 12 keys to the right of the main keyboard area. **Prerequisites:** 3279 mdl S2B or mdls 02X or 03X with #3850.

#4627 - 87-key EBCDIC Typewriter Keyboard: Typewriter-like layout, movable, with 49 alphanumeric data keys, 26 control keys and 12 PF keys (24 total PF keys). 12 of the PF keys are included in the top row of data keys through the use of the ALT shift key.

#4628 - 87-key ASCII Typewriter Keyboard: ASCII typewriter-like layout, movable, with 49 alphameric data keys, 26 control keys, and 12 PF keys (24 total PF keys). 12 of the PF keys are included in the top row of the data keys and are available through the use of an alternate shift key. **Prerequisites:** 3279 mdl 2A or 02X.

#4640 - 87-key EBCDIC Typewriter Overlay Keyboard: This keyboard, without overlay, has the same layout and can be used in the same way as the 87-key EBCDIC Typewriter Keyboard (see #4627) with the 94-character EBCDIC set. This keyboard, however, has special narrow keytops that permit the use of customer annotated overlays. Six overlays are supplied with each keyboard. Additional overlays can be obtained via MES (see "Accessories"). These overlays are used to show the symbols associated with the keys when one of the Programmed Symbols is selected. The desired PS can be selected by the operator through use of the appropriate PF keys (12 PF keys on the right-hand side of the keyboard) in uppercase and alternate shift of this keyboard. **Prerequisites:** 3279 mdls 02X and 03X. **Limitations:** Cannot be installed on a 3279 attached to a 3276.

#4651 - 87-key EBCDIC Attribute Select Typewriter Keyboard: A typewriter layout, movable, similar to the 87-key EBCDIC typewriter keyboard (#4627). Attribute select functions are shown on the 12 PF keys at the right-hand side of the keyboard. **Prerequisites:** 3279 mdls S3G or 02X or 03X with #3850. **Limitations:** Cannot be installed on a 3279 attached to a 3276.

#4652 - 87-key EBCDIC Attribute Select Typewriter/APL Keyboard: A typewriter layout, movable keyboard, similar to the 87-key EBCDIC typewriter/APL keyboard (#4626). Attribute select functions are shown on the 12 PF keys at the right-hand side of the keyboard. **Prerequisites:** 3279 mdls S3G or 02X or 03X with #3850. **Limitations:** Cannot be installed on a 3279 attached to a 3276.

#4623 - 75-key EBCDIC Data Entry Keyboard: Keypunch layout, with 35 data keys, 10 PF keys and 30 control keys. This is the recommended keyboard for high speed data entry. **Prerequisites:** 3279 mdl 02X or 03X.

#4624 - 75-key ASCII Typewriter Keyboard: ASCII typewriter-like layout, movable, with 49 data keys and 26 control keys. 12 PF keys are included in the top row of the data keys through use of an alternate shift key. **Prerequisites:** 3279 mdl 02X or 03X.

#4628 - 87-key ASCII Typewriter Keyboard: ASCII typewriter-like layout, movable with 49 alphanumeric data keys, 26 control keys and 12 PF keys (24 total PF keys). 12 of the PF keys are included in the top row of the data keys and are available through the use of an alternate shift key. **Prerequisites:** 3279 mdl 02X or 03X.

#4629 - 87-key EBCDIC Typewriter/Text Keyboard: An 87-key EBCDIC Typewriter Keyboard (see #4627) with modified keytops to allow entry of 65 text-specific characters in addition to the 94-character EBCDIC set. A Text ON/OFF key controls whether the keyboard is in EBCDIC typewriter or Text mode. In contrast to an 87-key EBCDIC Typewriter Keyboard without Text (see #4627), this keyboard has only 12 PF keys (PF1 through PF12) which are the group of 12 keys to the right of the main keyboard areas. **Prerequisites:** 3279 mdl 02X or 03X with **#3850**.

SUMMARY OF KEYBOARD AVAILABILITY:

		3279 Models				
Keyboard #	No	S2A	S2B	S3G	02X	03X
75-Key EBCDIC Tw	**#4621**	O	O	N	O	O
75-Key EBCDIC De	**#4622**	O	N	N	O	O
87-Key EBCDIC Tw/APL	**#4626**	N	O	N	O	O
87-Key EBCDIC Tw	**#4627**	O	O	O	O	O
87-Key EBCDIC Overlay	**#4640**	N	N	N	O	O
87-Key at Sel Tw	**#4651**	N	N	O	O	O
87-Key at Sel Tw/APL	**#4652**	N	N	O	O	O

87-Key ASCII Tpwr	**#4628**	N	N	N	O	O
75-Key EBCDIC De	**#4623**	N	N	N	O	O
87-Key Tpwr/Text	**#4629**	N	N	N	O	O

O = Optional
N = Not available

Overlay and Attribute Select Keyboards: These keyboards are equipped with highlight, PS and color select function keys (12 PF keys on right-hand side of keyboard). They provide operator selection under program control of highlight, PS and color attributes. Except for the color marking and annotation on the 12 PF keys on the right-hand side of the keyboard, the Overlay and Attribute Select keyboards appear identical to the equivalent non-Overlay and non-Attribute Select keyboards. Use of keys to select a feature not on the display will cause an error indication in the operator guidance row on the display. The uppercase and alternative shift of these 12 PF keys are used for attribute selection and are, therefore, not available for normal program function use. **Limitations:** Attribute Selection is not supported for keyboards on a 3279 attached to a 3276.

MODEL CONVERSIONS

MES orders to change models S2A or S2B to 02X and S3G to 03X will be accepted 90 days after installation.

From/To	S2A	S2B	S3G	02X	03X
S2A	--	No	No	Yes	No
S2B	No	--	No	Yes	No
S3G	No	No	--	No	Yes
02X	No	No	No	--	No
03X	No	No	No	No	--

Note: Models 2B, 3A, 3B, S2B, S3G, and 03X are not supported by System/3.

ACCESSORIES

For shipment with machine, order the feature number as shown below. See detailed description below for additional information and for

3279 Color Display Station Mdls S2A-03X (cont'd)

ordering by MES for field installation.

Item	Feature Number	P/N	Max Qty
Magnetic Hand Scanner	**#9440**	**4123495**	*
Magnetic Slot Reader	**#9441**	**4123500**	*

* A maximum of one magnetic reader or scanner may be ordered.

Magnetic Reader Extension Cable for use with Magnetic Hand Scanner or Magnetic Slot Reader:

Item	Feature Number	P/N	Max Qty
6 meter (20 feet)	**#9106**	**4832986**	**
12 meter (40 feet)	**#9107**	**4832987**	**

** A maximum of one extension cable may be ordered.

Item	Feature Number	P/N
Tilt/rotate accessory	N/A	**4422265**
Control Unit Switch	MES only	
Battery	N/A	

The following cable assemblies can be used to extend the Magnetic Hand Scanner and Magnetic Slot Reader distances. **Limitations:** Extension cables cannot be plugged into other extension cables. **Prerequisites: #4999.**

Item	Feature Number	P/N
6 meter (20 feet)	**#9106**	**4832986**
12 meter (40 feet)	**#9107**	**4832987**

Both the MHS and the MSR read magnetically encoded information from an alphameric character set. The MSR also reads the same 10-character numeric only set as the 3277 Operator Identification Card Reader (#4600) which is not a subset of the alphameric character set. For a further description of both character sets, see *IBM 3270 Information Display System Character Set Reference,* GA27-2837. Either (not both) the alphanumeric or the 10 numeric only 3277-like character set may be selected for the 3274 at customization time for attached 3278s and 3279s. The 3276 and attached 3278s and 3279s support only the MSR and the 10-character numeric only set as used by the 3277.

Numeric and alphanumeric character capabilities are as follows:

MSR/MHS	Minimum number of Hex Codes between start sentinel and end sentinel characters	Maximum number of characters between start sentinel and end sentinel characters	Bit Density: Bits per inch	Bit Density: Bits per mm
3277 Like 10-numeric character set*	7 7	37 118	75 127	3 5
Alphameric character set*	7 7 7 7 7	37 numerics 18 non-numerics 118 numerics 59 non-numerics 37 numerics	75 75 127 127 210**	3 3 5 5 8.3

* 1 Hex code = 1 numeric character
2 Hex codes = 1 non-numeric character

** MSR only

Full width encoding is recommended for the MSR and is required for the MHS.

Maximums shown are ALL numeric or ALL non-numeric characters. If a combination of numeric and non-numeric characters is recorded, the total number of hex CODES must not exceed the numeric character maximum. For example, at 127 bpi, a combination of 60 numeric and 20 non-numeric character is permissible.

Limitations: 3277-like 10 character set numerics only magnetic cards coded with Alternate End or Message character (hexadecimal 'C'), cannot be read by the MSR or MHS. The alphanumeric character set and the MHS are only supported on 3278s and 3279s which are attached to 3274s. IBM Host Programming Support is provided for alphanumeric character set non-protected, display data entry. Protected, non-display data entry is supported by IMS and TSO. With this protected, non-display data entry support, all cards and documents which can be read by the 3630 Plant Data Communication System, up to 118 data characters, can be read by the 3270 System.

A variety of magnetic documents, tags and labels which the MSR and MHS can read, may be obtained from SSD, some of which, depending on length, can be encoded by devices such as the 3642 Encoder Printer. Except UK: For complete information on the availability of pre-encoded magnetic striped plastic cards, contact an SSD Sales Representative.

Switch Control Unit: Permits switching operational control of a 3279 between two different control units. Customer is responsible for Procurement and installation of this accessory, and also for the replacement of a defective unit.

Warranty: The Switch Control Unit is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled maintenance recommended by IBM, and IBM Maintenance Agreements are not available.

Ordering Instructions: This accessory is ordered by P/N via MES for field installation only.

P/N 4419338 should be specified when ordering by MES for field installation. Enter one MES for multiple quantities of part number ordered, using serial number zero (00000) on the MES.

Mercury Battery (P/N 1743456): Provides power to sustain the convergence parameters in a 3279 when normal power is not present. This supply item is a 4.14 volt non-rechargeable mercury battery. It has a shelf life of 18 months under normal conditions and can be expected to provide 3.5 years of normal operation. **Field installation:** Yes, by customer. Discharged battery should be returned to IBM.

Keyboard Overlay: A keyboard overlay is available on which customer-defined Programmed Symbols can be annotated. An annotated overlay can be placed over the narrow keytops of Overlay keyboards to associate specific keytops with specific symbols.

Keyboard Overlay **P/N 1742762**

Locks and Keys (P/N 2577741): The 3279 with Security Keylock is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser). A letter of authorization, with key identification, must accompany each order. Allow two to three weeks for delivery.

Magnetic Hand Scanner (#9440, P/N 4123495): The Magnetic Hand Scanner (MHS) attaches by a 1.5 meter (5 foot) coiled cable to a 3279 that has an appropriate magnetic adapter feature. It allows the user to read magnetic stripe labels that are attached to shelves, cartons, machines, etc. It can also be used to read magnetic stripe tags which are hand-held or placed on a flat surface. The MHS has three lights and an audible buzzer which provide feedback to the user on the status of the scanned data. It can read a stripe in either direction. **Field Installation:** Yes. **Prerequisites: #4999.** See Note 1.

Ordering Instructions:

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Scanners will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare scanners which the customer may want to consider stocking ... for 50 scanners, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5.

Warranty: The Magnetic Scanner Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

IBM Corporation
Repair Center
321 Route 17
Paramus, NJ 07652

There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance will be done by the customer, following the problem determination and parts replacement procedures.

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Slot Reader (#9441, P/N 4123500): The Magnetic Slot Reader (MSR) attaches by a 1.5 meter (5 foot) cable to a 3279 that has an appropriate magnetic adapter feature. The slot reader accommodates a wide range (height and length) of magnetic striped card stock and plastic badges including job tickets, magnetic striped 80-column cards, operator identification badges, large and small credit cards, etc. The MSR has three lights and an audible buzzer which provide feedback to the user on the status of scanned data. Holes in the bottom of the MSR allow optional attachment to an appropriate flat surface. **Field Installation:** Yes. **Prerequisites: #4999.** See Note 1.

Ordering Instructions: For ordering for delivery with machine, see appropriate machine page. To order via MES, order via MSORDER (Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine Type 3279.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventative maintenance recommended by IBM. Primary maintenance

3279 Color Display Station Mdls S2A-03X (cont'd)

for the Magnetic Readers will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare readers which the customer may want to consider stocking ... for 50 readers, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5

Warranty: The Magnetic Reader Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

IBM Corporation
Repair Center
321 Route 17

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Reader/Scanner Extension Cables: These cable assemblies can be used to extend the Magnetic Hand Scanner P/N 4123495 or Magnetic Slot Reader P/N 4123500 distances. Additional Extension Cable lengths other than those listed below are available. See RPQ Reference List.

MHS/MSR Extension Cables are warranted free from defects of workmanship or materials for 90 days.

Limitations: Extension cables cannot be plugged into other extension cables.

Ordering Instructions: For ordering for delivery with the machine, see appropriate machine page. To order via MES, order via MSORDER (Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine Type 3279

6 meter (20 foot) **P/N 4832986**
12 meter (40 foot) **P/N 4832987**

MAGNETIC READER/SCANNER REPLACEMENT ASSEMBLIES

Description	P/N
MHS Sensor Head Assembly	**4832721**
MHS Handle and Feedback Assembly	**4832701**
MHS Amplifier Card and Cable Assembly	**4832727**
MSR Arm and Sensor Head Assembly	**4832963**
MSR Base and Feedback Assembly	**4832973**
MSR Amplifier Card and Cable Assembly	**4832962**
MSR Cover	**4832964**

The following tables list the number of Magnetic Reader/Scanner replacement assemblies which the customer may want to consider stocking:

MAGNETIC HAND SCANNER

Number of MHSs P/N 4123495	Sensor Head Assemblies P/N 4832721	Handle and Feedback Assembly P/N 4832701	Amplifier Card and Cord Assembly P/N 4832727
50	2	1	2
100	3	1	3
150	4	1	4
200	5	2	5

MAGNETIC SLOT READER

Number of MSRs P/N 4123500	Arm & Sensor Head Assembly P/N 4832963	Base and Feedback Assembly P/N 4832973	Amplifier Card and Cord Assem P/N 4832962	Cover P/N 4832964
50	2	1	2	1
100	3	1	3	1
150	4	1	4	1
200	5	2	5	1

Ordering Instructions: Order using DP Supply Order form Z170-6173 from Mechanicsburg.

Warranty: Magnetic scanner replacement assemblies are warranted free from defects of workmanship or materials for 90 days.

Display Station Keyboard Accessories: The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3279 keyboards. These accessories supply keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving, a keytop extractor, and an Entry Assist Keytop kit.

These accessories may be ordered by P/N via a DP Supply Order from the Raleigh plant.

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key.)

Legendable Keytops:	P/N
White	**5188775**
Charcoal Gray	**8627192**
Light Gray	**8542831**

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key.)

Blank Keytops:	P/N
White	**1853775**
Charcoal Gray	**1853567**
Light Gray	**1853563**

Keytop Extractor (P/N 9900373): The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled of its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

Entry Assist Keytop Kit: [Non-overlay keyboards only] This kit provides eight sets of five keytops appropriately labelled for use with the Entry Assist capability together with a keytop extractor and keytop replacement instruction. Not for use on 3178 keyboards or overlay keyboards.

Entry Assist Keytop Kit	P/N 1752774

Display Station Tilt/Rotate Accessory (P/N 4422265): An accessory which fits under the display station and provides a ball and socket type movement to allow the angle of the screen face to be adjusted for comfort of viewing position. The screen angle is normally 20 degrees from the vertical but with this device it can be adjusted between 25 degrees to the vertical and the vertical position. A locking device is provided to maintain the selected position. This accessory also allows the display station to be rotated plus or minus 90 degrees from the central position and this movement is independent of the tilt movement.

See SSD catalog for details of this supply item. Interested customers may order from IBM directly. Call toll free at 800-631-5582; in Alaska and Hawaii, call 800-526-2484. For further information, contact an SSD sales representative.

Warranty: The Tilt Rotate accessory is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled preventive maintenance recommended by IBM, and IBM Maintenance Agreements are not available.

Customer Responsibility: The customer is responsible for mounting the Display Station on this accessory.

Cables: Cables and or associated parts to attach the 3279 to the 3274 and 3276, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	**2577672**	Cable Assembly In-Door
Bulk	**0323921**	Coax Wire (Note 1)
P/N	**1836418**	Connector Kit (Note 1)
Assm	**1833108**	Cable Assembly Out-Door
Bulk	**5252750**	Coax Wire (Note 2)
P/N	**1836419**	Connector Kit (Note 2)
P/N	**2621414**	Modification Kit (Note 3)
P/N	**1833106**	Station Protector Attachment Kit (Note 5)
P/N	**5252643**	Adapter (Note 7)
P/N	**1830818**	Station Protection Kit, Gas (Note 4)
P/N	**5252899**	Station Protector Element, Gas (Note 6)

Specify P/N, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N **1836446)** required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N **1836447)** required for each outdoor cable assembly.

3279 Color Display Station Mdls S2A-03X (cont'd)

3. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N **2577672** or two P/N **1833108** cable assemblies together.

SUPPLIES (None)

3279 COLOR DISPLAY CONSOLE MDL 2C

PURPOSE

A cathode-ray tube (CRT) Color Display Console which attaches to the 4321, 4331/4341/4361/4381 Model Group 1, and 4331/4341 Model Group 2 and provides for operator interaction for both normal operations and maintenance. An Operator Console Keyboard with an operator control panel is available with the primary Display Console and is the means to Power On (4341 ... see Special Features) Power Off, Initial Microcode Load (IML), and Start or Stop processor operations.

MODELS

Model 2C 2C

Prerequisites: An available console position on any 4321/4331/4341 Mdl Group 1 or 4331/4341 Mdl Group 2 ... See 4321/4331/4341/4361/4381.

The 3279-2Cs require an Operator Console Keyboard. The 3279-2C that is used as the primary console on a 4321/4331/4341 Mdl Group 1/4341 Mdl Group 2 must have an Operator Console Keyboard with an operator control panel.

HIGHLIGHTS

Displays characters in a 9x12 character matrix (uppercase alphabet is displayed in a 7x9 matrix), arranged in 24 rows of 80 characters each. Rows 1 through 20 are usable by the operator, rows 21 through 24 are used for system status information. A 96-character set is used, which consists of 26 upper case alphabetic, 26 lower case alphabetic, 10 numeric and 32 special characters, plus space and null.

Console messages are displayed in four colors (white, red, blue, or green) according to the status of the protected and intensified attributes. This gives the operator better perception of the system status.

When the 4300 is under control of VM/SP, the screen input area is green and the output area is blue. Input data that is redisplayed in the output area may be made white with the CP TERMINAL HILIGHT ON command. In addition, messages from other users are displayed white.

In addition to Power On/Off, IML and Start/Stop, the console allows the operator to manually control such functions as storage display and operation, address comparing, and normal versus instruction step processing. The console indicates to the operator both proper operations and malfunctions, should they occur.

For maintenance and service support the console can display the status of the Processor complex and other valuable servicing information. It also provides a means for using diagnostic tools.

The 3279 mdl 2C that is used as the primary console is normally installed concurrent with the installation of the 4321/4331/4341/4361/4381 Processors.

Operator Factors: The 3279 has an anti-glare screen to improve contrast and readability. Indicators are displayed in symbols and/or words on the bottom row of the screen. These symbols, except those indicating color attributes, will appear in blue. The keyboard, which is low in profile, provides a palm rest area and has separators to help prevent accidental striking of control keys. The cursor is displayed in white on the 3279. A base color switch allows the 3279 mdl 2C to run in monochrome mode for 3278 compatibility. In this mode fields are displayed in green for normal intensity and in white for high intensity. For comfortable viewing the CRT face is inclined and may be adjusted to 15 degrees, 17.5 degrees or 20 degrees from the vertical. The operator may adjust the color convergence quickly and easily using a simple keyboard procedure with a special screen test pattern.

Editing: Cursor move, tab, home, back tab, insert, delete, erase to end-of-field and erase all input keys are basic to the console keyboard. Alphanumeric, special symbol and cursor move keys have typamatic capability. 12 Program Function (PF) keys are basic.

Audible Alarm: An alarm sounded under program control to alert the operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the next-to-last position on the screen. The operator may adjust the volume of the tone.

Security Function: The Security Keylock (optional) prevents modification or display of data in the display terminal unless the key is turned to the "on" position.

Problem Determination Procedures: Significant function has been designed into this unit to provide high availability to the customer. This high availability has been achieved through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided by the User Reference Summary.

Base Color Supported:

Protected and intensified	–	White
Unprotected and intensified	–	Red
Protected and normal intensity	–	Blue
Unprotected and normal intensity	–	Green

SPECIFY

BASIC CONFIGURATION

The 3279 mdl 2C will be shipped with these specifications unless alternative codes are specified:

Cabling: Fixed-length 7.6 meter (25 foot) cables from the Display Console to the Processor for Keyboards #4631, #4632 and #4634 will be furnished by IBM and shipped with the processor. For Keyboard #4633, up to 30.5 meters (100 feet) of signal cable is provided by IBM and ordered via normal procedures. Additional cable for this feature up to a maximum total cable length of 1,500 meters (4925 feet) must be provided by the customer as outlined in the 3279-2C specifications page in *IBM Input/Output Equipment Installation Manual - Physical Planning: System/360, System/370, 4300 Processors,* GC22-7064 and *Installation and Assembly of Coaxial Cable and Accessories for Attachment to IBM Products,* GA27-2805.

- Voltage (120V AC, 1-phase, 3 wire, 60 Hz): Non-locking plug.
- Power Cable Length: 2.8 meters (9 foot).
- Power Cable: If the standard 2.8 meter (9 foot) power cable is not desired, specify: **#9511** for 1.8 meter (6 foot) or **#9513** for 4.5 meter (15 foot)
- Power Cable Plug: If locking plug required, specify **#9890**.

SPECIAL FEATURES

Keyboards: Refer to Type Catalog for a picture of the Keyboard layouts.

Limitations: Keyboards used on 3279-2C are not interchangeable with keyboards used on 3279 mdls 2A, 2B, 3A and 3B. **Maximum:** One of the below. **Field Installation:** No.

#4631 - 75-Key Operator Console Keyboard with Channel-to-Channel: [4341 and 4381 only] Typewriter-like layout, movable, with 12 PF keys available on the top row through use of the Alternate Shift key. Provides 49 data keys and 26 control keys, and contains an operator control panel with 4 control keys (Power Off, Lamp Test, Power On/IML, Channel-to-Channel) and 6 LED indicators (Basic Check, System, Wait, Power in Process, Power Complete, Channel-to-Channel Disabled). Channel-to-Channel is required for systems having a channel-to-channel adapter feature.

#4632 - 75-Key Operator Console Keyboard, without Channel-to-Channel : [4341 and 4381 only] Same as #4631 but the operator control panel does not have the Channel-to-Channel control key or the Channel-to-Channel Disabled Indicator.

#4633 - 75-Key Operator Console Keyboard: [4341 and 4381 only] Same as #4631 but without an operator control panel.

#4634 - 75-Key Operator Console Keyboard, without Channel-toChannel or Power On: [4321 or 4331 or 4361 only] Same as #4631 but the operator control panel does not have the Channel-to-Channel control key, or the Channel-to-Channel Disabled Indicator or the Power On key.

Cabling: Cables will be furnished by IBM for Features #4631, #4632 and #4634.

For Feature #4633 the cables must be supplied by the customer as outlined for the 3279 mdl 2C in the *IBM 3270 Information Display System Installation Manual Physical Planning* GA27-2787.

Waterproof Power Connector (#8802): Provides a waterproof connector on the power cable to satisfy local ordinances requiring this type of termination in specific locations. **Limitations:** Available only for power cord lengths of 1.8 meters (6 feet) #9511, or 4.5 meters (15 feet) #9513. **Maximum:** One. **Field Installation:** No.

MODEL CONVERSIONS

Not recommended for field installation.

ACCESSORIES

Refer to M4300 pages of the Sales Manual for information pertaining to the 4300 Processors Console Table.

Mercury Battery (P/N 1743456): Provides power to sustain the convergence parameters in a 3279 when normal power is not present. A 4.14 volt non-rechargeable mercury battery. It has a shelf life of 18 months under normal conditions and can be expected to provide 3.5 years of normal operation. **Field Installation:** Yes, by customer. **Note:** Discharged battery should be returned to IBM.

Keyboard Overlay: A keyboard overlay is available on which customer-defined Programmed Symbols can be annotated. An annotated overlay can be placed over the narrow keytops of Overlay keyboards to associate specific keytops with specific symbols.

Keyboard Overlay **P/N 1742762**

3279 Color Display Console Mdl 2C (cont'd)

Locks and Keys (P/N 2577741): The 3279, with Security Keylock, is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser). A letter of authorization, with key identification, must accompany each order. Allow two to three weeks for delivery.

3279 Display Station Tilt/Rotate Accessory (P/N 4422265): An accessory which fits under the display station and provides a ball and socket type movement to allow the angle of the screen face to be adjusted for comfort of viewing position. The screen angle is normally 20 degrees from the vertical but with this device it can be adjusted between 25 degrees to the vertical and the vertical position. A locking device is provided to maintain the selected position. This accessory also allows the display station to be rotated plus or minus 90 degrees from the central position and this movement is independent of the tilt movement.

See SSD catalog for details of this supply item. Interested customers may order from IBM directly. Call toll free at 800-631-5582; in Alaska and Hawaii, call 800-526-2484. For further information, contact an SSD sales representative.

Warranty: The Tilt Rotate accessory is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled preventive maintenance recommended by IBM, and IBM Maintenance Agreements are not available.

Customer Responsibility: The customer is responsible for mounting the Display Station on this accessory.

SUPPLIES (None)

3284 PRINTER MDL 3

Models 1 and 2 have been withdrawn from marketing

PURPOSE

Provides hard copy output at a speed of 40 cps.

MODELS

Model 3 003 Attaches to and uses the storage buffer of a 3275 Display Station model 3. Also attaches to and uses the storage buffer of a 5275 Direct Numerical Control Station.

Prerequisites: A 3275 mdl 3 with Printer Adapter (#5550)or a 5275 with Printer Adapter (#5555).

HIGHLIGHTS

The 3284 printer provides hard copy output at a speed of 40 cps, using the EBCDIC character set. For ASCII character sets, see "Specify" below. Mdl 3 prints the contents of the buffer of the 3275 Display Station or the 5275 Direct Numerical Control Station, at a speed of 40 cps.

The unit has a pinfeed platen which permits the feeding of marginally punched continous forms paper. 120-, 126-, and 132-position print lines may be specified ... see "Specify". Line spacing is 6 lines/inch. Matrix characters are formed by 7 vertical wires printing dots in up to 4 of 7 possible horizontal positions. Use of the underscore in conjunction with another character will overprint the lowest dot in that character and is not recommended. Refer to GA24-3488 for forms design considerations and limitations. Up to 6-part forms can be printed with a maximum thickness of .018 inches. Forms lengths can be 3 inches to 14 inches in increments of 1/6 inch. Card stock continuous forms are not recommended.

Notes:

(1) For optimum feeding, stacking, and legibility, forms of no more than three parts should be used.

Bibliography: See *KWIC Index,* G320-1621, or specific system bibliography.

SPECIFY

- Voltage: 115V AC, 1-phase, 3-wire 60 Hz. Specify: **#9880** for locking plug, **#9881** for nonlocking plug.

  Note: The Hospital Grade Plug, RPQ #8K0696 (No-Charge), is required for Hospital General Patient Care Areas. Field Installation: No

- Character Set: Specify one of the following:

  #9089 -- for EBCDIC Character Set (available at time of manufacture only) ... provides the 64 characters described on the EBCDIC typewriter keyboard. **#9089** required if used with the 3275 Model 3.

  #9091 -- for ASCII Character Set (A) (available at time of manufacture only) ... provides the 64 ASCII characters but substitutes the Logical OR and Logical NOT in place of the exclamation mark and circumflex.

  #9092 -- for ASCII Character Set (B) (available at time of manufacture only) ... provides the standard 64 ASCII characters.

- Pinfeed Platen:

  #9167 for 120 print positions (12-1/2" hole-to-hole)
  #9162 for 126 print positions (13-1/8" hole-to-hole)
  #9168 for 132 print positions [uses non-standard paper] (13-7/8" hole-to-hole)

Note: Do not order **#9167** or **#9168** unless paper is available in your area.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Model 3 is field-installable on the 3275 or 5275.

ACCESSORIES

The following item is available on a purchase-only basis. For shipment with machine, order the feature number indicated below.

Forms Stand (#4450): Permits placement of continuous forms (out of carton) on stand above floor and provides for stacking after printing.

SUPPLIES

Ribbons: A black ribbon (P/N 1136970), or equivalent, must be used.

3287 PRINTER MDLS 1, 2

PURPOSE

Provides hard copy output. The 3287 mdls 1 and 2 attach to a 3271 mdl 1, 2, 11 or 12, or a 3272 mdl 1 or 2, or a 3791 Controller, or a 3274 (all mdls), or a 3276 mdl 1, 2, 3, 4, 11, 12, 13 or 14, or an 8775 or 3601, 3602, 3694, or 4701 mdl 1, or 2, the 8101 Storage and Input/Output Unit of the 8100 Information System, or the 3814 Switching Management System mdl A. The 3287 mdl 1 or 2 also attaches directly to the 4321 or 4341 Processor, to the 4331 or 4361 Processor via Display Print Adapter, to the 3081/3083/3084 Processor through the 3082 Processor Controller, and to the S/370 mdl 138 or 148 via the Integrated Console Printer Adapter.

MODELS

Model 1	001	80 cps maximum bidirectional printer
Model 2	002	120 cps maximum bidirectional printer

Note: Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration and line transmission speed, output format, and programming application processing must all be considered in determining actual throughput.

STANDARD MODELS

For simplified order processing, the 3287 mdl 1 and 2 with the basic configuration (see "Basic Configuration" below) are designated as "Standard Models" for this machine type. A standard mdl is ordered by simply specifying the 3287 and the mdl number (1 or 2).

Note: The operating environment temperature is 15° to 32.2°C (50° to 90°F).

Prerequisites:

Attachment	Attachment Feature Code on the 3287	Device Adapter on Control Unit
3271/3272	#8330	Available port or added #3250
3274	#8331	Type A or B Adapter or #8330 (see M3274 pages)
3276	#8331	Available port or added #3255, #3256, #3257
3791	#8330	Available port or #7911 or #7912 or added #7912
3138/3148	#8330	Integrated Console Printer Adapter
3081/3083/3084	#8331	Attaches through a 3082 Processor Controller
3601/3602/3694/4701	#8331	Dev Cluster Adpt #3101
3814	#8331	Attaches through 3814 Display/Printer Attachment #1420
4321	#8331	Available port on Display /Printer Adapter
4331/4361	#8331	Available port on Display /Printer Adapter
4341/4381	#8331	Available console position on 4341/4381
8101	#8330	Available port on Display Printer Attachment #3220 or added #1506
8775	#8331	#5580

Customer Setup (CSU): The 3287 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

The 3287 consists of control functions, printer and indicator lights in one integrally designed desk-top unit. Special features are available which permit tailoring of the printer to the user's requirements.

Where the 3287 replaces a 3284 or 3286, the Variable-Width Forms Tractor (special feature) is used in lieu of the Pinfeed Platen or Forms Tractor RPQ WD4031. In addition Friction-Feed Paper Handling is available as a special feature.

Control Functions: Provides the control for all online operations. This unit requires the 3271/3272 Attachment (#8330) for receiving data from a 3271/3272, or a 3790 Communications System, or a 3274 through Terminal Adapter B, or a S/370 mdl 138/148 (Integrated Console Printer Adapter), or the 3274/3276 Attachment (#8331) for receiving data from a 3274 through Terminal Adapter Type A, or through the 8101 Storage Input/Output Unit of the 8100 Information System, or the 3814 Switching Management System mdl A, or a 3276, or an 8775 or a 4361, 4321 or 4331 or 4361 Processor Display/Printer Adapter or a 4341 Processor, or a 3082 Processor Controller, or a 3601 or a 3602 Controller, or the 3694 Document Processor of the 3600 Finance Communication System, or a 4701 mdl 1 or 2 Controller of the 4700 Finance Communication System.

Printer: Maximum printer throughput is obtained with bidirectional serial matrix printing and indexing without unnecessary print head movement. The printer dot matrix is 4 of 7 wide by 8 high giving high legibility with character spacing at 10 to the inch. Line spacing is 6 and 8 lines to the inch. Up to 132 characters can be printed in a line. Up to 6-part forms with total thickness of 0.457mm (0.018 inches) may be used. For any multi-part or pre-printed continuous forms the Variable-Width Forms Tractor (#8700) is recommended. 5- and 6-part continuous forms should be tried on an individual basis for acceptable feeding, registration and print quality.

The Friction-Feed Paper Handling (#4110) is recommended for use with non-preprinted single part roll or fanfold paper, with a minimum width of 203mm (8 inches), when the Variable-Width Forms Tractor (#8700) is not used. Maximum overall forms width is 378mm (14-7/8 inches); card stock forms are not recommended. (See GA24-3488 for forms specifications and limitations.)

Audible Alarm, Mono/Dual case, Single/Double line spacing, 6 or 8 Lines Per Inch, Page Length Selector Control Switches, and Maximum Print Position are standard functions. Audible Alarm (activated under program control) and Dual Case are not supported by S/370 mdls 138/148 as a Console Printer, or when attached to any 4300 processor. Dual Case is not supported for ASCII-B when using 3271/3272 Attachment (#8330). Mono/Dual switch is inoperative when the 3287 is operating in SCS (SNA Character String) data stream mode or when copying from a display or when operating in APL or PS mode. Refer to GA27-2837, *IBM 3270 Information Display System Character Set Reference.*

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that can be understood and used by the operator. See "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3287.
- Physical setup, connection of cables, switch settings and checkout.
- Contact Field Engineering to make cable connections of IBM CSU units to IBM non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Providing a desk or table top to support the 3287.

Forms Handling: Variable-Width Forms Tractor (#8700) or Friction Feed Paper Handling (#4110) must be ordered for each 3287 mdl 1 or 2. VWFT is recommended for the System Console Printer.

Bibliography: See *KWIC Index,* GA20-1621, or specific system bibliography.

Basic Configuration

The standard machine is shipped with the following specifications:

- Voltage: 120V AC, 1-Phase, 3-Wire, 60 Hz.
- Power Cord Plug: non-locking **#9891**.
- Power Cord Length: 2.8 meter (9 foot).
- Cables: See "Accessories".
- Character Set: EBCDIC **#9082**
- Variable-Width Forms Tractor - Paper Handling: **#9185**
- SCS Support: **#9660**
- X-Print Error Indication: **#9488**
- 1920 Character Print Operation: **#9522**
- 3274/3276 Attachment: #8331
- Variable-Width Forms Tractor: #8700

3287 Printer Mdls 1, 2 (cont'd)

Note 1: Do not specify if Data Analysis-APL Feature (#1066) is selected for attachment to the 3271 or 3272.

Note 2: For Terminal Adapter Type B on the 3274, select from **#9520** and **9522** for Character Print Operations. Specify features **#9521**, **#9523**, **#9524**, **#9525** and **#9660** cannot be selected for Terminal Adapter Type B. For Terminal Adapter Type A, **#9520** is not available.

Note 3: Not valid when the 3287 is attached to a 3274 using Configuration Support A **#9110**.

Specify Descriptions:

- Plugs (120V AC, 1-phase, 3-wire, 60 Hz): **#9890** for locking plug (see "Limitations" and "Prerequisites") or **#9891** for non-locking plug. **Limitations: #9890** not available on machines with serial number N0000 and later. **Prerequisites: #9010**.

- Power Cord: If standard 2.8 meter (9 feet) power cord is not desired, specify: **#9511** for 1.8 meter (6 feet) power cord, **#9512** for 3.7 meter (12 feet) power cord or **#9513** for 4.5 meter (15 feet) power cord.

  Limitations: Only standard 2.8 meter power cord is available on machines with serial numbers N0000 and later. **Prerequisites: #9010** for power cords other than standard 2.8 meter. **Specify: #9010** as a prerequisite with any of the following: #1066; #1120, #3610; #5781; #5782; #8330; **#9030; #9511; #9512; #9513; #9520; 9661; #9890**.

- Cables: See "Accessories" for cable ordering instructions. See *Installation Manual - Physical Planning*, GA27-2787, for cable details. When attached as a console printer, refer to *Installation Manual - Physical Planning*, GA22-7004, for S/370 mdl 138/148 and GA24-3667 for 4300 processors, for cable details.

- Character Set: Specify one of the following: **#9082** for EBCDIC Character Set ... **#9084** for ASCII (B) Character Set.

  Note: The character set specified, EBCDIC or ASCII (B), must be the same as the transmission code/character set used on the control unit to which it is attached. Do not specify ASCII-B Character Set (**#9084**) when APL/Text (#1120) has been selected.

- Variable-Width Forms Tractor - Paper Handling (**#9185**): Specify if (#8700) is ordered and there is a requirement to handle forms with overall width from 76.2 to 203.2mm (3 to 8 inches). **Prerequisites:** #8700.

- SCS Support (**#9660**): [Required in an SNA environment/LU Type 1. This is a prerequisite for #8331, although inoperative in a non LU Type 1 Environment.] Provides the capability to receive SCS (SNA Character String) data stream from the host via a 3274 or a 3276 or a 3601/3602 Finance Communication System Controller or 3694 Document Processing System, or 4701 Finance Communication System Controller, or the 3814 Switching Management System mdl A. This feature allows the 3287 to perform such functions as:

  – Vertical forms skipping to a header or to a vertical tab position
  – Horizontal skipping to a horizontal tab stop position.

  Page length controls, vertical and horizontal tab positions are host-loaded through the 3274, 3276, 3601/3602/3694, or 4701 via application programming. Included in #9660 are Cancel and Program Attention 1/ Program Attention 2 (PA1/PA2) switches. The cancel switch allows operator termination of the current print operation. The PA1/PA2 switch allows an operator to request a specific action from the user written program in the host. Operator settings for page length control, 6 or 8 lines per inch, and Maximum Print Position are set by the host program when the 3287 has #8331 and #9660 and only when user is operating in SCS mode. SCS Mode always operates in Dual Case. **Limitations:** Cannot be installed with #8330. **Maximum:** One. **Field Installation:** Yes.

  Note: If the 3287 Page Length Control Selector Switches are required for field installation on a machine with serial number below 17000, order no-charge RPQ S30221.

- SCS Support for Structured Field and Attribute Processing (**#9661**): This is a prerequisite for #5781, although inoperative in a non-LU Type 1 environment. Required for SCS support of:

  - Extended Highlighting (underscore)
  - Programmed Symbols (PS-2 [#5781], PS-4 [#5782])
  - Decompression of PS Load Data
  - Read Partition (Query)

  Limitations: Not available on machines with serial number N0000 and later. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3610, #5781, **#9010**, **#9660**.

- X-Print Error Indication (**#9488**): To indicate an error an X is printed on the print line immediately below the last line normally printed. **Limitations:** Inactive when the 3287 is in SCS mode of operation.

- Character Print Operation:

  For 3271/3272 Attachment #8330, specify one of the following:

  – **#9520** (480-character print operation) for use with a 3271 mdl 1 or 11, or a 3272 mdl 1 or a 3274 mdl 1A, 1B, 1C, 1D, 21B, 21C/BSC, 21D, 31A, 31C, 31D, or 51C, or a 3791 Controller or to the 8101 of the 8100 System when attached via #8330. **Limitations:** Not available on machines with serial number N0000 and later. **Prerequisites: #9010**.

  – **#9522** (1,920-character print operation) for use with a 3271 mdl 2 or 12, a 3272 mdl 2, or a 3274 mdl 1A, 1B, 1C, 1D, 21B, 21C/BSC, 21D, 31A, 31C, 31D, or 51C, or a 3791 Controller, or to the 8101 of the 8100 System when attached via #8330, or a S/370 mdl 138/148 Integrated Console Printer Adapter. **Limitations:** Not available on machines with serial number N0000 and later. **Prerequisites: #9010**.

  For 3274/3276 Attachment #8331, specify one of the following:

  – **#9521** (960-character print operation) for use with a program which requires a printer buffer size of 960 bytes while using Erase/Write Alternate Command.

  – **#9522** (1,920-character print operation) for use with a program which requires a printer buffer size of 1,920 bytes while using Erase/Write Alternate Command. Required when attached to a 308X processor, 3814 Switching Management System mdl A or 4300 processor as a console printer.

  – **#9523** (2,560-character print operation) for use with a program which requires a printer buffer size of 2,560 bytes while using Erase/Write Alternate Command. **Prerequisites:** #3880.

  – **#9524** (3,440-character print operation) for use with a program which requires a printer buffer size of 3,440 bytes while using Erase/Write Alternate Command. **Prerequisites:** #3880.

3287 Printer Mdls 1, 2 (cont'd)

– **#9525** (3,564-character print operation) for use with a program which requires a print buffer size of 3,564 bytes while using Erase/Write Alternate command. **Limitations:** This specify code is not valid when the 3287 is attached to a 3274 using Configuration Support A **#9110**. **Prerequisites:** #3880.

Note: To provide compatibility with current application programs on the 3270 Information Display System, the customer can use an Erase/Write command for #9521 to provide 480-character print operation and Specify **#9522**, **#9523**, **#9524** and **#9525** to provide 1,920-character print operation. Copy operation from larger screen display to smaller printer buffer is not acceptable.

3287 PRINTER ATTACHMENT TABLE:

3276 Mdl	3287 Character Print Operation 480/960	1,920/1,920	1,920/2,560	1,920/3,440
1	Yes	No	No	No
11	Yes	Yes	Yes	Yes
2	Yes	Yes	No	No
12	Yes	Yes	Yes	Yes
3	Yes	Yes	Yes	No
13	Yes	Yes	Yes	Yes
4	Yes	Yes	Yes	Yes
14	Yes	Yes	Yes	Yes

Note: 3276 mdls 1, 2 and 3 with SDLC/BSC Switch feature installed and operating in SDLC mode will support all 3287 Character Print Operations, except 3,564-character print operation #9525. Also see Copy restrictions in Note above.

Blower (**#9030**): Must be specified for 3287 mdl 1 or 2 to be used in an environment above 32.3°C (90°F) ambient temperature [specification limits up to 40.5°C (104°F)]. **Field Installation:** Yes. **Limitations:** Not available/required on machines with serial number N0000 and later. **Prerequisites:** **#9010**.

	No.	AA	BB	CC	DD	EE	FF	GG	HH	II	JJ
• 3271/3272 Attach	#8330	x	x		x	x	x				
• 3274/3276 Attach	#8331		x	x				x	x	x	x
• Friction-Feed Paper Handling	#4110	x	x	x	x	x	x				
• Variable-Width Forms Tractor	#8700	x	x	x	x	x	x	x	x	x	x
• Data Analysis-APL Feature	#1066	x									
• Extended Print Buffer	#3880		x	x							
• Extended Character Set Adapter	#3610		x	x							
• APL/Text (Note 2)	#1120		x	x							
• PS-2	#5781		x								
• PS-4	#5782		x								

Note 2: Cannot be installed on a 3287 which is attached to an 8775.

Data Analysis-APL Feature (#1066): Provides dual case US EBCDIC, the APL set and support of TN characters as defined in the Type Catalog, S/370 Printers, under "TN Text Printing". **Limitations:** Not available on machines with serial number N0000 and later. Cannot be installed with **#9082** or **#9084**, or #8330 to a 3274, or #8331. When #1066 is installed, the Page Length Control Selector Switches are inoperative. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** **#9010**; **#9522**; #1066 on 3271 mdl 2 or 12, or 3272 mdl 2. **Customer Setup:** No.

APL/TEXT (#1120): Provides the capability for printing the 222-character APL/Text character set including the 94-character EBCDIC set. **Limitations:** Cannot be installed with #8330, or on the 3287 which is to attach to a 3276 without #1067 or 3274 mdl 1B or 21B, or to a 3274 customized without the APL/Text control functions or when attached to an 8775 or on a 3814 Switching Management System. Not supported when attached to any 308X processor or 4300 processor as a console printer. **#9084** cannot be specified with this feature. **Limitations:** Not available on machines with serial number N0000 and later. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3610, **#9010**, **#9082** . **Customer Setup:** No.

Extended Character Set Adapter (#3610): Provides the additional control and buffering necessary for the character and field attributes required for #1120 or #5781, #5782. Provides extended highlighting (underscore) when co-resident with PS-2, PS-4. **Limitations:** Cannot be installed with #8330 or or 3274 mdl 1B or 21B or when attached to an 8775. **Limitations:** Not available on machines with serial number N0000 and later. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** **#9010**. **Corequisites:** #1120 or #5781. **Customer Setup:** No.

Extended Print Buffer (#3880): Provides additional buffer storage which allows 2,560, 3,440 or 3,564-character print operation on the 3287. **Limitations:** Cannot be installed with #8330 or when attached to a 3814. Not supported when attached to any 308X processor or 4300 processor as a console printer. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** No.

Friction-Feed Paper Handling (#4110): For friction feeding of single part non-preprinted continuous and fanfold paper with a minimum width of 203mm (8 inches). Included in this feature is a paper tear bar for tearing continuous forms approximately 51mm (2 inches) above the print line. Feature #4110 is used interchangeable with the Variable-Width Forms Tractor and is attached and removed by the customer. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes. Note: If forms skipping is required, it is recommended that #8700 be used.

Programmed Symbols-2 (PS-2) (#5781): Provides the storage and accessing of two 190-symbol sets whose shapes and codes are customer-definable. **Maximum:** One. **Limitations:** Can only be used with 3274 Category A terminal port with PS Control and Structured Field and Attribute Processing (SFAP) options of Configuration Support C or D. Not available on machines with serial number N0000 and later. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3610, #3880, **#9010**, **#9661**. **Customer Setup:** No.

Programmed Symbols-4 (PS-4) (#5782): Provides the storage and accessing of four additional 190-symbol sets whose shapes and codes are customer-definable. **Limitations:** Not available on machines with serial number N0000 and later. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** **#9010**, #5781. **Customer Setup:** No.

3271/3272 Attachment (#8330): Provides one interface for attachment of a 3287 mdl 1, 2 to a 3271 mdl 1, 2, 11 or 12, a 3272 mdl 1 or 2, or a 3274 mdl 1A, 1B, 1C, 1D, 21B, 21C/BSC, 21D, 31A, 31C, 31D, or 51C, or a 3791 Controller, or an 8101 Storage and Input/Output Unit, or a 3287 mdl 1, 2 to a S/370 mdl 138 or 148 Integrated Console Printer Adapter. Provides the buffer storage required for print operation. **Limitations:** Cannot be installed with #8331 or with #1066 to a 3274. Not available on machines with serial number N0000 and later. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** **#9010**. For 3271/3272 -- available port or added #3250 on a 3271 mdl 1, 2, 11 or 12, or 3272 mdl 1 or 2 ... see M3271 or 3272 pages. For 3274 -- An available Type B port ... see M3274 pages. For 3791 Controller -- Device Attachment Type II (#7911/#7912) ... see M3791 pages. For 8101 Storage and Input/Output Unit -- Display and Printer Adapter (#3220) or Display and Printer add'l (#1506) ... see M8101 pages. For S/370 mdl 138 or 148 -- An Integrated Console Printer Adapter ... see M3138 or 3148 pages. **Customer Setup:** No.

3274/3276 Attachment (#8331): Provides one interface for attachment of a 3287 to a 3274 (all mdls), or to a 3276 mdl 1, 2, 3, 4, 11, 12, 13 or 14, or to an 8775 or to a 3601/3602 Finance Communication Controller, 3694 Document Processing System, 4700 Finance Communication Controller, or to the 3082 Processor Controller, or the 3814 Switching Management System mdl A, or to any 4300 processor. Provides buffer storage required for print operation. Included in this feature is Buffer Reprint support. **Limitations:** Cannot be installed with #8330 or #1066. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] #9660, [2] An available port or added #3255, #3256, #3257 on a 3276, or an available Type A port on a 3274, or an available port of a 3082 Processor Controller, or an available port on the 4321 or 4331 or 4361 Processor Display/Printer Adapter, or an available console position on a 4341 or 4381 Processor, or a Device Cluster Adapter (#3101) on a 3601/3602/3694/4701 or printer attachment (#5580) on an 8775. **Customer Setup:** No.

Variable-Width Forms Tractor (#8700): A forms feeding device for continuous margin punched forms. Overall forms width from 76.2 to 381.0mm (3 to 15 inches) can be fed. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #9185 where there is a requirement

3287 Printer Mdls 1, 2 (cont'd)

to handle forms with an overall width from 76.2 to 203.2mm (3 to 8 inches). **Customer Setup:** Yes. Note: If forms skipping is required, it is recommended that the Variable-Width Forms Tractor (#8700) be used.

MODEL CONVERSIONS

Model 1 to 2 is field installable.

ACCESSORIES

Available on a purchase-only basis. For shipment with machine, order number indicated below.

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order **#4450**. Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. **Customer Setup:** Yes.

For field installation:

Forms Stand P/N **8678375** or Feature **#4450**

Cables: Cables and or associated parts to attach the 3287 to 3271s/3272s/3274s and the 3276, or Display/Printer Attachment feature (#1420) on the 3814, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	**2577672**	Cable Assembly In-Door
Bulk	**0323921**	Coax Wire (Note 1)
P/N	**1836418**	Connector Kit (Note 1)
Assm	**1833108**	Cable Assembly Out-Door
Bulk	**5252750**	Coax Wire (Note 2)
P/N	**1836419**	Connector Kit (Note 2)
P/N	**2621414**	Modification Kit (Note 3)
P/N	**1833106**	Station Protector Attachment Kit (Note 5)
P/N	**5252643**	Adapter (Note 7)
P/N	**1830818**	Station Protection Kit, Gas (Note 4)
P/N	**5252899**	Station Protector Element, Gas (Note 6)

Specify P/N, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N **#1836446**) required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N **#1836447**) required for each outdoor cable assembly.
3. Customers replacing 2260s may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N **#2577672** or two P/N **#1833108** cable assemblies.

SUPPLIES

Ribbons: A black ribbon, P/N **1136653** or equivalent, is required. Also available is a black ribbon cartridge capability; order RPQ **8Q0199**. The replacement ribbon cartridge P/Ns are **7034535** and **7032757**.

3287 PRINTER MDLS 1C, 2C

PURPOSE

Provides hard copy in black or color by using replaceable ribbon cartridges when attached to the 3274, 3276 and the 8775. Also attaches directly to all models of the 4300 processor.

MODELS

Model 1C C01 — 80 cps maximum bidirectional printing for a single color on a line

Model 2C C02 — 120 cps maximum bidirectional printing for a single color on a line

Note: Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration and line transmission speed, output format, and programming application processing must all be considered in determining actual throughput.

Compared to black or monochrome printing, throughput will be reduced when printing in multi-color as a function of the number of color changes on the page due to a separate pass of the print head for each color on a line. In addition, when printing in other than the standard character format (4 of 7 horizontal x 8 vertical dots) and using the Programmed Symbols (PS) special feature (#5781, #5782, #5783), the machines will print at reduced speeds. Under these conditions, mdls 2 and 2C will print at the reduced speed of the mdls 1 and 1C. Dense printing when using the PS feature will also lessen printer throughput. The printer prints in one direction only, right to left when an all black print line exceeds 120 print positions.

STANDARD MODELS

For simplified order processing, the 3287 mdl 2C with the basic configuration (see "Basic Configuration" below) is designated as a "Standard Model" for this machine type. A standard mdl is ordered by simply specifying the 3287 mdl 2C.

Note: The operating environment temperature is 15° to 32.2°C (50° to 90°F)

Prerequisites:

Attachment	Device Adapter on Control Unit
3274	Available Category A terminal port
3276	Available port or added #3255, #3256, #3257
4321	Available port on the Display /Printer Adapter
4331/4361	Available port on the Display/ Printer Adapter
4341	Available console position on 4341
4381	Available console position on 4381
8775	Printer Attachment Feature

Customer Setup (CSU): The 3287 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

The 3287 consists of control functions, printer and indicator lights in one integrally designed desk-top unit. Special features are available which permit tailoring of the printer to the user's requirements.

Control Functions: Provides the control for all online operations. This unit requires receiving data from a 3274 through a Category A terminal port or a 3276 or an 8775.

Printer: Maximum printer throughput is obtained with bidirectional serial matrix printing and indexing without unnecessary print head movement. The standard printer dot matrix is 4 of 7 wide by 8 high giving high legibility with character spacing at 10 to the inch. Line spacing is 6 and 8 lines to the inch. With the replaceable black ribbon cartridge, up to 132 print positions can be printed in black on a line. Using the replaceable multi-color ribbon cartridge, up to 120 print positions can be printed in the colors black, blue, green or red with 121 - 132 print positions printed in black or the whole line printed in black. With the multi-color ribbon, the machine can print in base color. Base color refers to a given color being printed at the field level as a function of the protect, intensify bit positions in the 3270 Data Stream attribute byte. Specifically, the display to printer color mapping is as follows:

3270 Attribute Byte	Color Displayed	Color Printed
Protected and Intensified	White	Black or Green
Unprotected and Intensified	Red	Red
Protected but not Intensified	Blue	Blue
Neither Protected nor Intensified	Green	Green or Black

The printing of black or green as shown in the table depends upon the Base Color - Black (**#9135**) or Green (**#9136**) specify feature selected.

Extended color printing is the term used for supporting color at the character level in addition to the field level. For any character or field, this additional facility permits the user to select a given color (black, blue, green, red) for printing. The hardware required to support this capability is the Extended Character Set Adapter (#3610) on the printer. Not supported on the 4341 Mdl Group 1, 4341 Mdl Group 2, or on a 8775. The display to printer color mapping for extended color is:

Color Displayed	Color Printed
White	Black
Red	Red
Blue	Blue
Green	Green
Turquoise	Black
Pink	Black
Yellow	Black

Up to 6-part forms with total thickness of 0.457mm (0.018 inches) may be used. For any multi-part or pre-printed continuous forms, the Variable-Width Forms Tractor (#8700) is recommended. 5- and 6-part continuous forms should be tried on an individual basis for acceptable feeding, registration and print quality.

The Friction-Feed Paper Handling (#4110) is recommended for use with non-preprinted single part roll or fanfold paper, with a minimum width of 203mm (8 inches), when the Variable-Width Forms Tractor (#8700) is not used. Maximum overall forms width is 378mm (14-7/8 inches); card stock forms are not recommended. (See GA24-3488 for form specifications and limitations.)

Audible Alarm, Mono/Dual case, Single/Double line spacing, 6 or 8 Lines Per Inch and Maximum Print Position are standard functions. Mono/Dual switch is inoperative when the 3287 is operating in SCS (SNA Character String) data stream mode or when copying from a display or when operating in APL or PS mode.

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that can be understood and used by the operator. See "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3287.
- Physical setup, connection of cables, switch settings and checkout.
- Contact Field Engineering to make cable connections of IBM CSU units to IBM non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Providing a desk or table top to support the 3287.

Forms Handling: Variable-Width Forms Tractor (#8700) or Friction-Feed Paper Handling (#4110) must be ordered for each 3287 mdl 1C or 2C. VWFT is recommended for the System Console Printer.

Bibliography: See *KWIC Index,* GA20-1621, or specific system bibliography.

BASIC CONFIGURATION

The standard machine is shipped with the following specifications:

- Voltage: 120V AC, 1-Phase, 3-Wire, 60 Hz.
- Power Cord plug: Non-locking **#9891**
- Power Cord Length: 2.8 meter (9 foot).
- Cables: See "Accessories"
- Character Set: EBCDIC **#9082**
- Variable-Width Forms Tractor - Paper Handling: **#9185**
- SCS Support: **#9660**
- SCS Support for Structured Field and Attribute Processing: **#9661**
- X-Print Error Indication: **#9488**
- 2560 Character Print Operation: **#9523**
- Base Color - Black: **#9135**
- Extended Character Set Adapter: #3610
- Extended Print Buffer: #3880
- Programmed Symbols - 4A (PS-4A): #5783
- Variable-Width Forms Tractor: #8700

3287 Printer Mdls 1C & 2C (cont'd)

SPECIFY

- Plugs (120V AC, 1-phase, 3-wire, 60 Hz): **#9890** for locking plug or **#9891** for non-locking plug.
- Power Cord: If standard 2.8 meter (9 feet) power cord is not desired, specify: **#9511** for 1.8 meter (6 feet) power cord, **#9512** for 3.7 meter (12 feet) power cord or **#9513** for 4.5 meter (15 feet) power cord.
- Cables: See "Accessories" for 3287 mdls 1C and 2C cable ordering instructions. See *Installation Manual - Physical Planning,* GA27-2787 or GA24-3667, for cable details.
- Character Set: Specify one of the following: **#9082** for EBCDIC Character Set ... **#9084** for ASCII (B) Character Set. The character set specified, EBCDIC or ASCII (B), must be the same as the transmission code/character set used on the control unit to which it is attached. Do NOT specify ASCII-B Character Set **#9084** when APL/Text (#1120) has been selected.
- Variable-Width Forms Tractor - Paper Handling (**#9185**): Specify if #8700 is ordered and there is a requirement to handle forms with an overall width from 76.2mm to 203.2mm (3 to 8 inches). **Prerequisites:** #8700.
- SCS Support (**#9660**): *SCS Support #9660 must be ordered for all mdl 1Cs and 2Cs:* [Required in an SNA environment/LU Type 1, inoperative in a non LU Type 1 Environment.] Provides the capability to receive SCS (SNA Character String) data stream from the host via a 3274 or a 3276. This feature allows the 3287 to perform such functions as:

  – Vertical forms skipping to a header or to a vertical tab position
  – Horizontal skipping to a horizontal tab stop position.

  Page length controls, vertical and horizontal tab positions are host-loaded through the 3274 or 3276 via application programming. Included in **#9660** are Cancel and Program Attention 1/Program Attention 2 (PA1/PA2) switches. The cancel switch allows operator termination of the current print operation. The PA1/PA2 switch allows an operator to request a specific action from the user-written program in the host. Operator settings for page length control, 6 or 8 lines per inch, and Maximum Print Position are set by the host program when the 3287 has **#9660** and only when user is operating in SCS mode. SCS Mode always operates in Dual Case. **Maximum:** One. **Field Installation:** Yes. **Limitation:** Not supported on a 4300 processor.
- SCS Support for Structured Field and Attribute Processing (**#9661**): This is a prerequisite for #5781, or #5783, although inoperative in a non-LU Type 1 Environment. Required for SCS support of:
  - Extended Color
  - Extended Highlighting (underscore)
  - Programmed Symbols (PS-2 [#5781], PS-4 [#5782], PS-4A [#5783])
  - Decompression of PS Load Data
  - Read Partition (Query)

  Maximum: One. **Field Installation:** Yes. **Prerequisites:** #3610, **#9660.**
- X-Print Error Indication (**#9488**): To indicate an error an X is printed on the print line immediately below the last line normally printed. **Limitations:** Inactive when the 3287 is in SCS mode of operation.
- Character Print Operation: Specify one of the following:

  – **#9521** (960-character print operation) for use with a program which requires a printer buffer size of 960 bytes while using Erase/Write Alternate Command.

  – **#9522** (1,920-character print operation) for use with a program which requires a printer buffer size of 1,920 bytes while using Erase/Write Alternate Command. Required when attached to a 4300 processor as a console printer.

  – **#9523** (2,560-character print operation) for use with a program which requires a printer buffer size of 2,560 bytes while using Erase/Write Alternate Command. **Prerequisites:** #3880.

  – **#9524** (3,440-character print operation) for use with a program which requires a printer buffer size of 3,440 bytes while using Erase/Write Alternate Command. **Prerequisites:** #3880.

  – **#9525** (3,564-character print operation) for use with a program which requires a print buffer size of 3,564 bytes while using Erase/Write Alternate Command. **Prerequisites:** #3880. **Limitation:** This specify code is not valid when the 3287 is attached to a 3274 using Configuration Support A **#9110.**

  Note: To provide compatibility with current application programs on the 3270 Information Display System, the customer can use an Erase/Write command for **#9521** to provide 480-character print operation and **#9522, #9523, #9524** and **#9525** to provide 1,920-character print operation. Copy operation from larger screen display to smaller printer buffer is not acceptable.

3287 PRINTER ATTACHMENT TABLE:

3276 Mdl	3287 Character Print Operation 480/960	1,920/1,920	1,920/2,560	1,920/3,440
1	Yes	No	No	No
11	Yes	Yes	Yes	Yes
2	Yes	Yes	No	No
12	Yes	Yes	Yes	Yes
3	Yes	Yes	Yes	No
13	Yes	Yes	Yes	Yes
4	Yes	Yes	Yes	Yes
14	Yes	Yes	Yes	Yes

Note: 3276 mdls 1, 2 and 3 with SDLC/BSC Switch feature installed and operating in SDLC mode will support all 3287 Character Print Operations, except 3,564 character print operation **#9525.** (See also Copy restrictions in Note above.)

- Blower (**#9030**): Must be specified for 3287 mdl 1C or 2C to be used in an environment above 32.3°C (90°F) ambient temperature [specification limits up to 40.5°C (104°F)]. **Field Installation:** Yes.
- Base Color - Black **#9135**: Specified to print in black when the 3279 Display displays in green or the equivalent 3270 attribute byte code is received. The printer will print in green when the 3279s in white or the equivalent 3270 attribute byte code is received. **Limitations:** Cannot be installed with Base Color - Green (**#9136**). Applies only when printing in base color. Base color defined in the Highlights section.
- Base Color - Green **#9136**: Specified to print in green when the 3279s in green or the equivalent 3270 attribute byte code is received. The printer will print in black when the 3279 displays in white or the equivalent 3270 attribute byte code is received. **Limitations:** Cannot be installed with Base Color - Black (**#9135**). Applies only when printing in base color. Base color defined in the Highlights section.

SPECIAL FEATURES

APL/TEXT (#1120): Provides the capability for printing the 222-character APL/Text character set including the 94-character EBCDIC set. **Limitations:** Cannot be installed on the 3287 which is to attach to a 3276 without APL/Text Control Feature (#1067) or 3274 mdl 1B, or mdl 21B, or to a 3274 customized without the APL/Text control function or a 8775. **#9084** cannot be specified with this feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3610, **#9082. Customer Setup:** No.

Extended Character Set Adapter (#3610): Provides the additional control and buffering necessary for the character and field attributes required for extended color (user-selected color for a given character or field), extended highlighting (underscore), #1120 and #5781, #5782 or #5783 feature. **Limitations:** Cannot be installed on the 3287 which is to attach to a 3274 mdl 1B, or 21B, or to a 8775 , or to a 3276. Not supported when attached to any 4300 processor as a console printer. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** No.

Extended Print Buffer (#3880): Provides additional buffer storage which allows 2,560, 3,440 or 3,564-character print operation on the 3287. **Limitations:** Not supported when attached to any 4300 processor as a console printer. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** No.

Friction-Feed Paper Handling (#4110): For friction feeding of single part non-preprinted continuous and fanfold paper with a minimum width of 203mm (8 inches). Included in this feature is a paper tear bar for tearing continuous forms approximately 64mm (2-1/2 inches) above the print line. Feature #4110 is used interchangeable with #8700 and is attached and removed by the customer. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes. Note: If forms skipping is required, it is recommended that #8700 be used.

Programmed Symbols-2 (PS-2) (#5781): Provides the storage and accessing of two 190-symbol sets whose shapes and codes are customer-definable. Allows printing within a character location in a selected color (black, blue, green or red). **Limitations:** Can only be used with 3274 Category A terminal port with PS Control and Structured Field and Attribute Processing (SFAP) option of Configuration Support C or D. Cannot be installed with #5783. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** No. **Prerequisites:** #3610, #3880, and **#9661.**

Programmed Symbols-4 (PS-4) (#5782): Provides the storage and accessing of four additional 190-symbol sets whose shapes and codes are customer-definable. Allows printing within a character location in a selected color (black, blue, green *or* red). **Limitations:** Cannot be installed with #5783. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5781. **Customer Setup:** No.

3287 Printer Mdls 1C & 2C (cont'd)

Programmed Symbols-4A (PS-4A) (#5783): Provides the storage and accessing of four 190-symbol sets whose shapes and codes are customer-definable. Three of the symbol sets allow printing within a character location in a selected color (black, blue, green *or* red) and the remaining set allows printing up to four colors (black, blue, green *and* red) within a given character location. Recommended for presentation graphics, reference *3270 Information Display System Color and Programmed Symbols,* GA33-3056. **Limitations:** Can only be used with 3274 Category A terminal port with PS Control and SFAP options of Configuration Support C or D. Cannot be installed with #5781 or #5782. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3610, #3880, and **#9661**. **Customer Setup:** No.

Variable-Width Forms Tractor (#8700): A forms feeding device for continuous margin-punched forms. Overall forms width from 76.2 to 381.0mm (3 to 15 inches) can be fed. **Maximum:** One. **Field Installation:** Yes. **Prerequisite: #9185** where there is a requirement to handle forms with an overall width from 76.2 to 203.2mm (3 to 8 inches). **Customer Setup:** Yes.

MODEL CONVERSIONS

Model 1C to 2C is field installable. Model changes from models 1 and 2 to models 1C and 2C are not recommended for field installation.

ACCESSORIES

Available on a purchase-only basis. For shipment with machine, order number indicated below.

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order **#4450**. Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. **Customer Setup:** Yes.

For field installation:

Forms Stand P/N **8678375** or Feature **#4450**

Cables: Cables and or associated parts to attach the subject machines to the 3274 and 3276, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	**2577672**	Cable Assembly In-Door
Bulk	**0323921**	Coax Wire (Note 1)
P/N	**1836418**	Connector Kit (Note 1)
Assm	**1833108**	Cable Assembly Out-Door
Bulk	**5252750**	Coax Wire (Note 2)
P/N	**1836419**	Connector Kit (Note 2)
P/N	**2621414**	Modification Kit (Note 3)
P/N	**1833106**	Station Protector Attachment Kit (Note 5)
P/N	**5252643**	Adapter (Note 7)
P/N	**1830818**	Station Protection Kit, Gas (Note 4)
P/N	**5252899**	Station Protector Element, Gas (Note 6)

Specify P/N, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N **#1836446**) required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N **#1836447**) required for each outdoor cable assembly.
3. Customers replacing 2260s may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N **#2577672** or two P/N **#1833108** cable assemblies.

SUPPLIES

Ribbons: A black ribbon cartridge, P/N **7032482** or equivalent is required for printing only black. A multi-colored ribbon cartridge, P/N **7032483** or equivalent, is required for color printing.

3287 PRINTER MDLS 11, 12

PURPOSE

Provides hard copy output for the 8100 Information System or a 4331 Processor via Loop Attachment.

MODELS

Model 11 011 — 80 cps maximum bidirectional print.

Model 12 012 — 120 cps maximum bidirectional print

Note: Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration and line transmission speed, output format, and programming application processing must all be considered in determining actual throughput.

Prerequisites: For direct attached Loop operation – #4830 or #4835 on the 8100 System, - #4830 or #4831 on the 4331 Processor. For data link attached Loop operation – #3842 or #3843 Loop Control Unit.

Customer Setup (CSU): The 3287 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

The 3287 mdls 11-12 consist of LOOP communication functions, printer and indicator lights in one integrally designed desk-top unit. EBCDIC Dual Case Operation, Audible Alarm and Cancel Print are provided as standard functions. Variable-Width Forms Tractor and Friction-Feed Paper Handling are available as special features.

The printer operates in SCS mode, which provides for customer program-definable horizontal and vertical formatting, including line density (3, 4, 6 or 8 lines per inch).

Operator capability to set the page length, page depth and the line density from the operator panel is available via RPQ 8Q0070. To order an RPQ, contact IBM.

Printer: Maximum printer throughput is obtained with bidirectional serial matrix printing and indexing without unnecessary print head movement. The printer dot matrix is 4 of 7 wide by 8 high giving high legibility with character spacing at 10 to the inch. Line spacing is 3, 4, 6 or 8 lines to the inch. Up to 132 characters can be printed in a line. Up to 6-part forms with total thickness of 0.457mm (0.018 inches) may be used. For any multi-part or preprinted continuous forms, #8700 is recommended. 5- and 6-part continuous forms should be tried on an individual basis for acceptable feeding, registration and print quality. Maximum width is 381mm (15 inches); card stock forms are not recommended. (See GA24-3488 for forms specifications and limitations.)

#4110 is recommended for use with non-preprinted single part roll or fanfold paper, with a minimum width of 203mm (8 inches), when #8700 is not used. Maximum overall forms width is 378mm (14-7/8 inches); card stock forms are not recommended. (See GA24-3488 for forms specifications and limitations.)

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that can be understood and used by the operator. See "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3287.
- Physical setup, connection of cables, switch settings and checkout.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Providing a desk or table top to support the 3287.
- Procurement, installation and maintenance of the loop network.

Communication Cable: A communication cable (Loop Station Connector (LSC) cable) is provided as standard for attachment to a direct attached or data link attached loop. Standard cable is 3.7 meters (12 feet) in length.

Forms Handling: #8700 or #4110 must be ordered for each 3287 mdl 11 or 12.

Bibliography: See *KWIC Index,* GA20-1621, or specific system bibliography.

SPECIFY

- Plugs (120V AC, 1-phase, 3-wire, 60 Hz): **#9890** for locking plug or **#9891** for non-locking plug.
- Power Cord: If standard 2.8 meter (9 feet) power cord is not desired, specify: **#9511** for 1.8 meter (6 feet) power cord, **#9512** for 3.7 meter (12 feet) power cord or **#9513** for 4.5 meter (15 feet) power cord.
- Carrier Rate: One of the following must be specified: **#9825** for up to 9600 bps ... **#9829** for up to 38,400 bps.
- Variable-Width Forms Tractor Paper Handling **#9185**: Specify if #8700 is ordered and there is a requirement to handle forms with an overall width from 76.2 to 203.2mm (3 to 8 inches). **Prerequisites:** #8700.
- Blower (**#9030**): Must be specified for 3287 mdl 11 or 12 to be used in an environment above 32.3°C (90°F) ambient temperature [specification limits up to 40.5°C (104°F)]. **Field Installation:** Yes.
- Direct-Attach or Data Link-Attach: Identify Direct-Attach or Data Link-Attach by specifying one of the following:

  Direct-Attached Loop Operation **#9607**
  Data Link-Attached Loop Operation **#9608**
- Hyphenation of Control Characters: To permit hyphenation of control characters upon receipt of individual control codes, specify **#9424.**

SPECIAL FEATURES

One of the following two must be ordered, or both features may be ordered:

Friction-Feed Paper Handling (#4110): For friction feeding of a single part non-preprinted continuous and fanfold paper with a minimum width of 203mm (8 inches). Included in this feature is a paper tear bar for tearing continuous forms approximately 51mm (2 inches) above the print line. Feature #4110 is used interchangeably with the Variable-Width Forms Tractor and is attached and removed by the customer. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes. **Note:** For applications that require forms skipping, #8700 is recommended.

Variable-Width Forms Tractor (#8700): A forms feeding device for continuous margin punched forms. Overall forms width from 76.2 to 381.0mm (3 to 15 inches) can be fed. **Maximum:** One. **Field Installation:** Yes. **Prerequisite: #9185** where there is a requirement to handle forms with an overall width from 76.2 to 203.2mm (3 to 8 inches). **Customer Setup:** Yes.

MODEL CONVERSIONS

Model 11 to 12 is field installable. Changes from models 1 and 2 to models 11 and 12 are not recommended for field installation.

ACCESSORIES

Available on a purchase-only basis. For shipment with machine, order number indicated below.

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order **#4450.** Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. **Customer Setup:** Yes.

For field installation:

Forms Stand P/N **8678375** or feature **#4450**

SUPPLIES

Ribbons: P/N **1136653**, or equivalent, is required. Also available is a black ribbon cartridge capability, order RPQ **8Q0199.** The replacement ribbon cartridge P/Ns are **7034535** and **7032757.**

3289 LINE PRINTER Models 1, 2 and 3

PURPOSE

A series of line printers for attachment to a 3274 Control Unit, a 3276 Control Unit Display Station, a 3601 Finance Communication Controller via the Device Cluster Adapter (#3101), or an 8100 Information System via the Loop, at carrier speed and data rate of 9600 bps maximum.

MODELS

Model 1 001

Model 2 002

Model 3 003

Prerequisites:

For Mdls 1 and 2 - a 3274 Control Unit with appropriate adapter, a 3276 Control Unit Display Station, or a 3601 Finance Communication Controller. See M3274, 3276 or 3601 for details.

For Mdl 3 - an 8100 Loop. See M8101, 8130 or 8140 for details.

Limitations: Refer to *Forms Design Printer Reference Guide* GA24-3488 for forms design considerations. Printed output is not supported for optical character reading.

Customer Setup (CSU): The 3289 mdls 1 and 2 are designated as Customer Setup, thereby offering the customer early availability and relocation flexibility. Pre-installation Planning responsibilities are covered in *3270 Setup Planning Guide,* GA27-2827. For additional information on CSU, contact IBM.

HIGHLIGHTS

Line printing is from characters engraved on a revolving metal belt. The 3289 mdls 1, 2, and 3 operate at the following speeds:

		Maximum Lines Per Minute*	Character Set
Model 1	(001)	155	48
		120	64
		80	94
		40	125 Text
Mdls 2 & 3	(002,003)	400	48
		300	64
		230	94
		160	125 Text

* Actual printer throughput is dependent on operational and system characteristics. Maximum print speed may be degraded by such factors as communication line speed, control unit load, application program, loop speed, print line length, and multiple device operation.

Included is one interchangeable print belt (48, 64, 94 character set)–see "Specify". A variable-width forms tractor for feeding of marginally punched continuous forms (one to six parts) up to 33.1cm (15 inches) overall width is provided. The following functions are basic: paper jam detection; front forms loading; vertical forms control, Systems Printer Communications (SCS mode on mdls 1 and 2 only); end of forms detection; single/double vertical spacing on mdls 1 and 2; 132 print positions; character spacing of 10 per inch; line spacing of 6 or 8 lines per inch; 4016 byte buffer on mdls 1 and 2; 256 byte alternating buffers on mdl 3; and SNA Character String (EBCDIC only) data stream handling. Standard color accent panel will be pebble gray, any other colors are via RPQ only.

Concurrent printer (mdl 3) and card read/punch operation is possible. See "Special Features."

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibility" below.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customers receiving dock, unpacking and placement of the 3289.
- Physical setup, connection of cables, switch settings and check out (mdls 1 and 2).
- Notify IBM of intent to relocate and follow IBM instructions for relocation (mdls 1 and 2).
- Use and follow the problem determination procedures and fill out trouble report prior to calling IBM for service.
- Disconnecting, packing and removal to the customers shipping dock at the time of discontinuance. Appropriate instruction will be provided by IBM (mdls 1 and 2).
- Procurement, installation and maintenance of the loop network.

Bibliography: See *KWIC Index,* G320-1621, or specific system bibliography.

SPECIFY

- Plugs (120V AC, 1-phase, 3-wire, 60Hz): **#9890** for locking plug or **#9891** for non-locking plug.
- Power Cord: If standard 2.8 meter (9 feet) power cord is not desired, specify: **#9511** for 1.8 meter (6 feet) power cord, **#9512** for 3.7 meter (12 feet) power cord or **#9513** for 4.6 meter (15 feet) Power Cord.
- Print Belt Character Set:

  Specify one. Available at time of manufacture only. See *Print Belt, Additional,* in Accessory section if more than one belt is required.

  #9490 – 48-Character Set EBCDIC
  #9491 – 64-Character Set EBCDIC
  #9492 – 94-Character Set EBCDIC
  #9493 – 48-Character Set ASCII (B) *
  #9494 – 64-Character Set ASCII (B) *
  #9495 – 94-Character Set ASCII (B) *
  #9496 – 125-Character Text Print EBCDIC

  * SNA Character String Mode of Operation is not available with ASCII. ASCII Belts available for mdls 1 and 2 only.

  Note: The Character Set specified (EBCDIC or ASCII) must be the same as the Transmission Code/Character Set used on the Control unit to which it is attached.

- Cables: For mdls 1 and 2, customer is responsible for procurement, maintenance and installation of co-axial signal cable. See "Accessories". See *3270 Installation Manual-Physical Planning,* GA27-2787, for cable details.

  For mdl 3, a communication cable (Loop Station Connector (LSC) cable) is provided as standard for attachment to direct attached or data link attached loop. (Standard cable is 3.4 meters [11 feet] in length.)

- Print Error Indication: An error graphic, X, is printed on line immediately below the last print line for that data buffer when the printer is used in 3270 data stream mode. Specify **#9488.** **Limitation:** mdls 1 and 2 only.
- Character Print Operation: To specify the printer buffer size when the printer is used in 3270 data stream mode. **Limitation:** mdls 1 and 2 only.
  - **#9521** (960 character print operation). For use with a program which assumes the buffer size is 960 bytes while using Erase/Write Alternate Command.
  - **#9522** (1920 character print operation). For use with a program which assumes the buffer size is 1,920 bytes while using Erase/Write Alternate Command.
  - **#9523** (2560 character print operation). For use with a program which assumes the buffer size is 2,560 bytes while using Erase/Write Alternate Command.
  - **#9524** (3440 character print operation). For use with a program which assumes the buffer size is 3,440 bytes while using Erase/Write Alternate Command.
  - **#9525** (3564 character print operation). For use with a program which assumes the buffer size is 3,564 bytes while using Erase/Write Alternate Command. **Limitation:** This specify code is not valid when the 3289 is attached to a 3274 using Configuration Support A #9110.

  Note: To provide compatibility with programs written for 3271/3272 using Erase/Write Command, **#9521** provides 480 character print operation and **#9522, #9523, #9524** and **#9525** provide 1920 character print operation. Allowable usage in SNA Character String of the full buffer varies according to the control unit (3274 or 3276) to which the printer is attached and to programming considerations. See *IBM Information Display Component Description,* GA27-2749. Copy operation from larger screen size display to smaller printer buffer is not accepted.

  System Attachment: Identify the attaching control unit by specifying the following codes:

Control Unit	Code
3274 Mdl 1A,21A,31A	**#9549**
3274 Mdl 1B,21B	**#9550**
3274 Mdl 1C,21C,31C	**#9551**
3274 Mdl 1D,21D,31D	**#9261**
3274 Mdl 51C	**#9609**
3276 Mdl 1-4	**#9552**
3276 Mdl 11-14	**#9553**
3601	**#9555**
8100	**#9606**

SPECIAL FEATURES

3289 Line Printer Models 1, 2 and 3 (cont'd)

Audible Alarm (#1090): Sounds an alarm that alerts the operator of conditions that require manual intervention. The operator can set the loudness level and, on mdls 1 and 2 only, the duration (short or continuous). **Field Installation:** Yes. **Customer Setup:** No.

Text Print Feature (#1130): For mdls 1 and 2 attached to a 3274 or 3276 Control Unit. Provides the capability to print 32 text characters in addition to 93 characters of the 94-character EBCDIC set. 3289 Line Printers with and without this feature may be mixed on the 3276 Control Unit Display with APL/Text Control feature (#1067) or on the same appropriately configured 3274 Control Unit along with 3278 Display Stations and 3287 Printers with and without the APL/Text Feature (#1120) and on the 3274 only, may be mixed with 3277 Display Stations and 3284, 3286, 3287 and 3288 Printers without the Data Analysis-APL Feature (#1066). **Limitations:** The Text Print Belt used with this feature is only interchangeable with the 48/64/94-character set EBCDIC print belt. This feature is only valid on a 3289 Line Printer attached to a 3274 mdl X1A, X1C or X1D customized to include the 3289 Text Print Control Function or to a 3276 with APL/Text Control Feature (#1067). **Maximum:** One. **Field Installation:** Yes. **Prerequisitess:** For new orders, use Print Belt Character Set specify code **#9496**. For field installation, an order for a Text Print Belt, Additional, (#5824) must accompany the MES order for feature #1130. **Customer Setup:** No.

Keylock (#4650): (mdl 3 only) Provides a mechanical keylock to activate controls that disable all operator activity related to input, output, or control of data at the printer. Two identical keys are supplied with the feature. See "Accessories" for information on additional or replacement keys. **Field Installation:** Yes. **Customer Setup:** No.

Card Control Feature (#8010): (mdl 3 only) Provides additional storage and control for specific card I/O attachment. Required once only for any card attachment feature(s). **Field Installation:** Yes. **Customer Setup:** No.

3501 Card Reader Attachment (#8050): (mdl 3 only) To attach a 3501 Card Reader. **Limitation:** Cannot be installed with #8149. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #8010. **Customer Setup:** No.

3782/2502 Card Reader Attachment (#8149): (mdl 3 only) To attach a 3782 Card Attachment Unit mdl 2 and a 2502 Card Reader mdl A1. The 2502 can be equipped with special features for 51/80 or 66/80 column cards. **Limitation:** Cannot be installed with 3501 Card Reader Attachment (#8050). Optical Mark Read Feature (#5450) on 2502 is not supported. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #8010. **Customer Setup:** No.

3782/3521 Card Punch Attachment (#8150): (mdl 3 only) To attach a 3782 Card Attachment Unit mdl 1 and a 3521 Card Punch. The 3521 can be equipped with special features for Card Read/Punch Check and/or Card Print. **Limitations:** If a 2502 or 3501 Card Reader is also attached (#8050 or #8149), the Card Read/Punch Check special feature on the 3521 is limited to the punch checking function only. Simultaneous operation of a 3521 equipped with Card Print Feature (#1501) with a Card Reader (3501 or 2502) is not permitted. Simultaneous operation of printer, reader, and punch without Card Print is permitted. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #8010. **Customer Setup:** No.

MODEL CONVERSIONS

Field changes of Model 2 to/from Model 4 are not recommended. All other 3289 model changes are not field installable.

ACCESSORIES

The following items are available on a purchase-only basis. For shipment with machine, order the feature number indicated below. Order by MES only.

Cables: Cables and or associated parts to attach the subject machines to the 3274 Control Unit and the 3276 Control Unit Display Station, or Display/Printer Attachment feature (#1420) on the 3814 Switching Management System, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning*, GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	**2577672**	Cable Assembly In-Door
Bulk	**0323921**	Coax Wire (Note 1)
P/N	**1836418**	Connector Kit (Note 1)
Assm	**1833108**	Cable Assembly Out-Door
Bulk	**5252750**	Coax Wire (Note 2)
P/N	**1836419**	Connector Kit (Note 2)
P/N	**2621414**	Modification Kit (Note 3)
P/N	**1833106**	Station Protector Attachment Kit (Note 5)
P/N	**5252643**	Adapter (Note 7)
P/N	**1830818**	Station Protection Kit, Gas (Note 4)
P/N	**5252899**	Station Protector Element, Gas (Note 6)

Specify Part Number, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors **#1836446**) required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors **#1836447**) required for each outdoor cable assembly.
3. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two **#2577672** or two **#1833108** cable assemblies together.

Locks and Keys [3289-3]: The Keylock **#4650** special feature is shipped with two identical keys. Additional or replacement keys may be obtained only from IBM (purchase only). Order via DP Supply Order (Raleigh Plant). A customer letter of authorization with key identification number must accompany each order. Allow 6 to 7 weeks for shipment.

Print Belt, Additional: Permits customer to obtain more than one character set print belt for various applications.

A metal belt with engraved font. See appropriate "Machines" page for restrictions and limitations. The belt can be used interchangeably with the one provided on the machine.

155 LPM Max - 3289-1
400 LPM Max - 3289-2, 3, 4

Available in EBCDIC and ASCII character arrangements.

	Feature
48-character ASCII*	**#5811****
64-character ASCII*	**#5812****
94-character ASCII*	**#5813****
48-character EBCDIC	**#5821**
64-character EBCDIC	**#5822**
94-character EBCDIC	**#5823**
125-char Text Print EBCDIC*	**#5824**

* 3289 mdls 1 and 2 only.

** For 3289, SCS Operation is not available with ASCII.

SUPPLIES

Black Ribbons: Black ribbons, P/N **1136634** or equivalent for mdl 1 or P/N **1136670** or equivalent for mdls 2 and 3, are required.

3289 LINE PRINTER MODEL 4

PURPOSE

A line printer for attachment to a 4321 or 4331 System.

MODELS

Model 4 004

Prerequisites: A 4321 or 4331 Processor. See M4321, M4331 for details.

Limitations: Refer to GA24-3488 for forms design considerations. Printed output is not supported for optical character reading.

Customer Setup (CSU): The 3289 mdl 4 is designated as Customer Setup, thereby offering the customer early availability and relocation flexibility. Pre-installation Planning responsibilities are covered in the *3289 Model 4 Site Preparation Guide,* GA27-3198. For additional information on CSU, contact IBM.

HIGHLIGHTS

Line printing is from characters engraved on a revolving metal belt. The 3289 mdl 4 operates at the following speeds:

		Maximum Lines Per Minute*	Character Set
Mdl 4	004	400	48
		300	64
		230	94

* Actual printer throughput is dependent on operational and system characteristics. Maximum print speed may be degraded by such factors as control unit load and application program.

Included is one interchangeable print belt (48, 64, 94 character set)–see "Specify". A variable width forms tractor for feeding of marginally punched continuous forms (one to six parts) up to 33.1 cm (15 inches) overall width is provided. The following functions are basic: paper jam detection; front forms loading; Universal Character Set Buffer; end of forms detection; 132 print positions; character spacing of 10 per inch; line spacing of 6 or 8 lines per inch and Vertical Channel select (under 4321 or 4331 Processor control). Standard color accent panel will be pebble gray, any other colors are via RPQ only.

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibility" below.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customers receiving dock, unpacking and placement of the 3289.
- Physical setup, connection of cables, switch settings and check out.
- Contact Field Engineering to make cable connections of IBM CSU units to the non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling IBM for service.
- Disconnecting, packing and removal to the customers shipping dock at the time of discontinuance. Appropriate instruction will be provided by IBM.

Bibliography: See *KWIC Index,* G320-1621, or specific system bibliography.

SPECIFY

- Plugs (120V AC, 1-phase, 3-wire, 60Hz): **#9890** for locking plug or **#9891** for non-locking plug.
- Power Cord: If standard 2.8 meter (9 feet) power cord is not desired, specify: **#9511** for 1.8 meter (6 feet) power cord, **#9512** for 3.7 meter (12 feet) power cord or **#9513** for 4.6 meter (15 feet) Power Cord.
- Print Belt Characters Set: Specify one. Available at time of manufacture only. See Print Belt, Additional, in "Accessories" if more than one belt is required.

  #9490 – 48-Character Set EBCDIC
  #9491 – 64-Character Set EBCDIC
  #9492 – 94-Character Set EBCDIC

- Cables: Customer is responsible for procurement, maintenance and installation of coaxial signal cable. See *3270 Installation Manual-Physical Planning,* GA27-2787, for cable details.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Field changes of Model 2 to/from Model 4 are not recommended. All other 3289 model changes are not field installable.

ACCESSORIES

The following items are available on a purchase-only basis. For shipment with machine, order the feature number indicated below

Print Belt, Additional: Permits customer to obtain more than one character set print belt for various applications.

A metal belt with engraved font. See appropriate "Machines" page for restrictions and limitations. The belt can be used interchangeably with the one provided on the machine.

155 LPM Max - 3289-1
400 LPM Max - 3289-2, 3, 4

Available in EBCDIC and ASCII character arrangements.

	Feature
48-character EBCDIC	**#5821**
64-character EBCDIC	**#5822**
94-character EBCDIC	**#5823**
125-char Text Print EBCDIC*	**#5824**

SUPPLIES

Black Ribbons: P/N **1136670** or equivalent are required.

3290 INFORMATION PANEL DISPLAY STATION

PURPOSE

A high-function, large capacity, plasma-panel display station that attaches to a 3274 Control Unit. A member of the 3270 Display System family, the 3290 provides for the display of up to 9920-alphanumeric characters in multiple-screen format options for use in entering data into and retrieving data from S/370 Processors, 4300 Processors, and 8100 Information Systems.

MODELS

Model 1 001 — For use with a 3274 Mdl 1A, 1C, 1D, 31A, 31C, 31D, 41A, 41C, 41D, 51C and 61C. Comprised of a Display Panel, Power Logic Unit, and a Keyboard. Also optionally available are a PF Keypad and a Numeric Keypad which can be used in conjunction with either of the two available keyboards.

Prerequisites:

1) A 3274 mdl 1A, 1C, 1D, 31A, 31C, 31D, 41A, 41C, 41D, 51C or 61C.

2) IBM 3274 Configuration Support Requirements:

IBM 3274 Control Unit Models

FUNCTION	1A	1C	1D	31A	31C	31D	51C	41A	41C	41D	61C
3290 Base	*T	*T	*T	*T/D	*T/D	*T/D	*T/D	*D	*D	*D	*D
Cust Mod Kybd	T	T	T	T/D	T/D	T/D	T/D	D	D	D	D
Highlight Att	T	T	T	T/D	T/D	T/D	T/D	D	D	D	D
160 Column Prt	T	T	T	T/D	T/D	T/D	T/D	D	D	D	D
String/Blk Copy				D	D	D	D	D	D	D	D
Entry Assist				D	D	D	D	D	D	D	D
RTM				D	D	D	D	D	D	D	D
Alert				D	**D		**D	D	**D		**D

D = Configuration Support D (#9124) at release level 61 or higher.
T = Configuration Support T (#9113) at release level 31 or higher.
* = Configuration Support T (#9113) or D (#9124) at any release level.
** = SNA only.

3) Specify **#9301** on 3274 when Configuration Support D is used.

4) A 3178, 3278, or 3279 Display Station with keyboard must be attached to Port 0 of Control Unit as a diagnostic unit.

5) Except when ordering a 3290 Standard Model, one Display Panel (#3210), one Keyboard (#4730 or #4731) and a Keyboard Cable (#1503) or (#1506) must be selected (see "Special Features") to complete a 3290 order. Unless the 3290 unit is being ordered for use as a spare and then the specify for the Power Logic Unit only **(#9490)** must be indicated (see "Specify").

Customer Setup (CSU): The 3290 Information Panel Display Station is designed to be set up by the user, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

STANDARD MODEL

The Standard Model for this machine type consists of a 3290-1 Power Logic Unit, a Display Panel #3210, a Data/Typewriter Keyboard #4730, 0.9 meter (3 foot) Keyboard Cable #1503, 120V AC/1-phase/3-wire/60HZ power, and a 1.8 meter (6 feet) power cable with a non-locking plug.

The Standard Model is ordered by simply specifying 3290. No other features, RPQ's or other alterations will be shipped with Standard Models. Any deviations require ordering by the detailed procedures that follow.

HIGHLIGHTS

The 3290 Information Panel Display Station provides a new level of visual display function for the IBM 3270 user. A member of the 3270 family, the 3290 incorporates a flat plasma-panel as its display medium to provide a large capacity display for alphanumeric data and graphic images. The image displayed is orange on a black background and is uniform at every point of the viewing area. The 3290 utilizes microcode, loaded from the 3274 Control Unit, to provide screen-management facilities for improved operator usability. The 3290 is data-stream compatible with all models of today's 3270 displays in alphanumeric application environments and complements the 3270 product family by extending 3270 capability to include large-screen and multiple-screen application usage. Its flat panel allows compact packaging and provides a versatile display station.

- Large flat-panel viewing area in small-footprint package
  - Displays up to 9,920 characters.... 62 lines of 160 characters each. Characters are displayed within a 5x8 character matrix.
  - Alternate display of up to 5,300 characters.... 50 lines of 106 characters each. Larger characters displayed within a 7x9 character matrix.
  - Variable character spacing
  - Multiple partitions (up to 16)
- Advanced Screen Management Facilities
- Multiple display capability
- Vertical Scrolling
- 24K Character buffer
- Ruling, Row/Column Indicator, Zoom Operator Controls
- Entry Assist.

- Screen tilt
- String and Block Copy of data

- Local copy
- Response Time Monitor
- Alert
- Ability to print 160 columns of data
- 3278 function
- Audible Alarm
- Security Keylock
- Programmed Symbols (6 character sets)
- APL

Note: The Entry Assist, Response Time Monitor, Alert, String and Block Copy functions are available on a 3290 Information Panel attached at a 3274 Control Unit only with Configuration Support D at release level 61 or higher. See item 2 (3274 Configuration Support Requirements) in "Prerequisities". RTM historical data stored in the 3274 Control Unit cannot be viewed with a 3290 Information Panel but can be viewed by other authorized terminals attached to the Control Unit.

- Two keyboards with modifiable layouts.
  - Data/Typewriter
  - APL
- Optionally available keypads
  - Numeric keypad
  - P.F. keypad
- ASCII-8 Information Interchange RPQ

The 3290 Information Panel attaches to a 3274 Control Unit utilizing one physical port and up to five addresses, depending on the application. Up to 31 3290s can be attached to a 3274, depending on the application and 3274 mdl being used. The 3290 Information Panel attaches on the same coax cable that is used with other Category A terminals to attach to a 3274 Control Unit.

Customer Responsibilities: The customer is responsible for:

- Assuring that use of the equipment complies with all Federal, State and local laws, regulations and ordinance.
- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement.
- Performing checkout in accordance with supplied procedures for initial installation or relocation.
- Physical setup, connection of cables.
- Performing customer problem analysis and resolution (CPAR) before taking action to get the failing unit repaired or exchanged.
- Determining any required spares.
- Notifying IBM of intent to relocate and following IBM instructions for relocation.

Maintenance: 3290 Information Panel Display Stations utilize IBM Service Center Maintenance either under "Maintenance" or "Replacement" with the option of IBM On-Site Exchange (IOE). See General Information, FE Services section (71) for description, locations and procedures associated with Service Center maintenance. **Note:** If a keyboard has been modified with unique keytops and the maintenance procedure requires the keyboard to be exchanged, it is the customer's responsibility to remove the unique keytops and to reinstall them on the new keyboard.

If maintenance coverage is not contracted for immediately following expiration of any service and parts warranty and the customer subsequently wants IBM Maintenance Agreement coverage, he may have the unit(s) inspected. If the unit(s) require repair and the repair is requested, all time and parts will be billed at IBM's then current rates and terms. The machine is then eligible for IBM Maintenance Agreement Coverage.

Warranty Service: The warranty period is three months. Maintenance is provided during the warranty period under the terms and conditions of the Agreement for Purchase of IBM Machines and IBM On-Site Exchange. The 3290 Information Panel Display Station is eligible for

3290 Information Panel Display Station (cont'd)

IBM Maintenance Agreement coverage immediately following expiration of the warranty for an annual charge. If maintenance agreement coverage is not contracted for immediately following expiration of the warranty and the customer subsequently wants maintenance coverage, the machine(s) must be inspected by IBM. Refer to IBM Service Center Maintenance in Field Engineering Services subsection of the General Information section of the sales manual

Customer Carry-In Repair (CCR): It is the customer's responsibility to setup the equipment and to determine when maintenance is required. The customer may wish to replace a failing element with a spare element and should be advised to purchase sufficient spare elements if such use is planned. Under Service Center Maintenance, it is the customer's responsibility to disconnect the element(s), transport them to a designated IBM location and pick them up when repair is completed. Alternately, the customer may ship them prepaid to a mail-in service location. IBM will repair the units and return them to the customer. Resetup of the element(s) is the customer's responsibility. This service is available for an annual contract charge per machine, or for customers not covered by an IBM Maintenance Agreement they may have their units repaired, if repairable, for a time and material charge. Alternately, upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling inspection, cleaning, testing, estimating charges, and return shipping charges.

Customer Carry-In Exchange (CCE): Under Customer Carry-In Exchange it is the customer's responsibility to disconnect the unit(s) transport them to a designated IBM location and exchange the defective unit(s) with IBM for an equivalent unit in good working order. The defective unit becomes the property of IBM. This Service is available on a yearly contract.

IBM On-Site Exchange (IOE): A customer desiring replacement service for a defective Element may call the local IBM Service/Exchange Center to have IBM bring a replacement spare to the customer site. IBM will remove the defective element and install and test the replacement element. The defective element becomes the property of IBM. During warranty, maintenance is performed by IOE under the Agreement for Purchase of IBM Machines. After warranty IOE is available under an IBM Maintenance Agreement for an annual charge.

Customer On-Site Exchange (COE): A customer desiring this exchange service for a defective Element(s) may call a designated number and have a replacement element(s) delivered to the customer site where they will be exchanged (without testing) for the customer's defective unit(s). The defective elements become the property of IBM. This service is available for an annual contract charge per machine.

On-Site Assistance: If the customer desires assistance to perform Customer Problem Analysis and Resolution (CPAR), the local IBM Service branch office may be called for IBM assistance. IBM will respond to the customer site to aid the customer in performing CPAR procedures using the same documentation available to the customer. Customer-owned spare elements will be installed by IBM upon customer request. Repair or Exchange of defective element(s) is a customer responsibility. IBM assistance is billable at the current CE rates and terms.

Bibliography: See KWIC Index, G320-1621 or specific system bibliography.

BASIC CONFIGURATION

Specify codes are not normally required to order a 3290. If not specified otherwise, the 3290 will be shipped with the following:

Power Logic Unit

- Voltage: 120V AC, 1-phase, 3-wire, 60 Hz.
- Power Cable: 1.8 meters (6 feet) with non-locking plug.

To complete the order for a 3290, a Display Panel #3210, a Keyboard (#4730 or #4731), and a Keyboard Cable (#1503) or (#1506) must be ordered. See "Special Features".

SPECIFY

The specify section can be ignored unless the options provided in the "Basic Configuration" above do not meet your needs.

- Power Logic Unit: To order a Power Logic Unit only (without a Display Panel, Keyboard, and Keyboard Cable) specify **#9490** must be used.
- Terminals Cables: See "Accessories" for ordering instructions. For cable specifications, see *3270 Installation Manual - Physical Planning,* GA27-2787.

SPECIAL FEATURES

Keyboard Cables (#1503, #1506): The 3290 keyboards (#4730 and #4731) require a separate attachment cable.

Order one of the following:

#1503 - 0.9 meter (3 foot)
#1506 - 1.8 meters (6 feet)

Display Panel (#3210): A flat plasma-panel unit which provides the visual display medium. It connects to a Power Logic Unit along with a keyboard to provide a 3290 Information Panel Display Station. **Maximum:** One can be attached at a time. **Field Installation:** Yes (CSU).

Data/Typewriter Keyboard (#4730): A low profile, customer modifiable, cable attached, EBCDIC typewriter-like keyboard with keyboard slope adjustable to operator preference. There are 24 Program Function (PF) keys located in two rows across the top of the keyboard. Overlays are provided for the PF keys to permit users to identify functions assigned to PF keys. Additional overlays are available, see "Accessories". Refer to the Type Catalog for a pictorial view of the keyboard layout. **Corequisite:** A Keyboard Cable #1503 or #1506 is required to attach a keyboard. **Maximum:** One keyboard can be attached at a time. **Field Installation:** Yes (CSU). **Limitations:** Cannot be installed with #4731.

APL Keyboard (#4731): A Data/Typewriter Keyboard (Ref. #4730) allows entry of 81 APL-specific characters. An APL On/Off key controls whether the keyboard is in basic EBCDIC typewriter or APL mode. Overlays are provided for the 24 PF keys to allow user to identify functions assigned to the PF keys. Additional overlays are available via "Accessories" pages. Refer to the Type Catalog for a pictorial view of the keyboard layout. **Corequisite:** A Keyboard Cable (#1503 or #1506) is required to attach a keyboard. **Maximum:** One keyboard can be attached at a time. **Field Installation:** Yes (CSU). **Limitations:** Cannot be installed with #4730.

Customer Modifiable Keyboards: The keyboard layouts may be changed by using the keyboard utility diskette supplied with the IBM 3274 Control Unit. Keyboards may be labelled with keyboard "write-on, stick-on" labels ... see "Keyboard Accessories" for other keytop label kits. The keyboard modification function is explained in the *IBM 3290 Description and Reference Manual,* GA23-0021, and the *IBM 3290 Operators Guide,* GA23-0143.

Numeric Keypad (#4830): A keypad with the key layout in a calculator format. It is a low profile, customer modifiable keypad, with a 760mm (2.5 foot) cable which attaches to a #4730 or #4731 keyboard. Refer to the Type Catalog for a pictorial view of the keypad layout. **Corequisite:** #4730 or #4731 keyboard. **Maximum:** One keypad can be attached at a time. **Field Installation:** Yes (CSU). **Limitations:** Cannot be installed with #4831.

Program Function (PF) Keypad (#4831): A low profile, customer modifiable, keypad with 24 program function keys. It has a 760mm (2.5 foot) cable which attaches to a #4730 or #4731 keyboard. The 24 PF keys on the keypad directly correspond to the 24 PF keys on the associated keyboard (e.g., PF1 on the keypad performs the identical function of PF1 on the keyboard). Refer to the Type Catalog for a pictorial view of the keypad layout. **Corequisite:** #4730 or #4731 keyboard. **Maximum:** One keypad can be attached at a time. **Field Installation:** Yes (CSU). **Limitations:** Cannot be installed with #4830.

MODEL CONVERSIONS (None)

ACCESSORIES

Keyboard Cable: The 3290 keyboards (Data/Typewriter and APL) have a separate attachment cable. When a 3290 is ordered, a 0.9 meter (3-foot) cable is included. If a spare cable is required order the following:

Keyboard Cable - 0.9 meter (3 foot) - P/N **4804280**

Keyboard Cable - 1.8 meter (6 feet) - P/N **4804310**

Field Packaging Materials: Field packaging materials are for shipping a 3290 or individual workstation elements to and from an IBM Repair Center.

	P/N
Power/Logic Element	**2656204**
Display Element	**2656205**
Keyboard Element	**6430398**
Keypad Element	**8665739**
Master container to hold above four containers	**8665738**

Keyboard Accessories: The following accessories are available to redesignate the nomenclature on the keytops of the keyboards and keypads. Contact IBM for ordering information.

P/N	Description
1351700	Blank light colored keytops; 15 per package plus keytop removal tool.
1351701	Blank dark colored keytops; 15 per package plus keytop removal tool.
1351702	Clear keytops that will use "Write-on" labels; 15 per package plus keytop removal tool.

3290 Information Panel Display Station (cont'd)

1351709 Keytop removal tool.
4804350 White Labels to "Write-On" and "Stick-On" keytops; 100 per sheet.
6016733 PF key Overlay for use with Entry Assist, String/Block Copy and RTM (English US language).
6016734 PF key Overlay standard "Write-on".
8248324 White labels for clear keytops; 60 per sheet.

1351704 3278 Control key set: 7 keycaps: (Cursr Sel on top of keycap, Clear on front face) (Cursr Blink on top, AltCr on front) (Clicker symbol on top, Test on front) (PF21 on top, blank front) (PF22 on top, blank front) (PF23 on top, blank front) (blank on the top and front face). 2 sets per package plus keytop removal tool.
1351705 3278 Top Cursor area key set: 5 keycaps: (Dup on top of keycap, PA1 front) (Field Mark on top, PA2 front) (Jump Screen symbol on top, PA3 front) (Backtab symbol on top, Jump Partition symbol on front) (Delete symbol on top, Change screen symbol on the front). 3 sets per package plus keytop removal tool.
1351706 Lower case $ for JES2 etc: two keycaps; (SYS $ on top of keycap, front face blank) (SYS $ on top of keycap , Erlnp on front face) ... 7 sets per package plus keytop removal tool.
1351707 Numeric set: 0 thru 9 plus Backspace symbol, Front tab, Back Tab, Space, Period, Comma and Minus on top of keycaps, Front face of keycaps blank. Also 5 light and 8 dark colored blank keytops, 1 set per package plus keytop removal tool.
1351708 PF set: PF1 thru PF24 on top of keycaps, front face of keycaps blank, 1 set per package plus keytop removal tool.

SUPPLIES (None)

3299 TERMINAL MULTIPLEXER

PURPOSE

A terminal multiplexer unit which can be used when connecting Category A Terminals to a 3274 Control Unit, except for the 3274 Model 51C. Using a 3299 reduces the coax cable requirements which provides for lower subsystem coax cabling costs and improved cabling flexibility. Also the distance that a terminal may be located away from its 3274 Control Unit is increased up to a maximum of 3000 meters (9840 feet). Each 3299 Terminal Multiplexer attaches up to eight Category A Terminals; therefore, four 3299's are required when attaching 32 terminals to a 3274.

MODELS

One model is available and it is used with the 3299 Terminal Multiplexer Support specify option #9901 on 3274 Models 41A, 41C, 41D and 61C or with 3299 Terminal Multiplexer Support RPQ's 8K1155 and 8K1156 on a 3274 Model 1A, 1B, 1C, 1D, 21A, 21B, 21C, 21D, 31A, 31C or 31D.

HIGHLIGHTS

Using a 3299 Terminal Multiplexer eliminates the requirement for individual coax cables from a 3274 Control Unit to each attached terminal. Only one coax cable is required between the 3274 and a 3299 which can be located up to 1500 meters (4920 feet) from a 3274. The 3299 can then attach up to eight (8) Category A Terminals, each with its own coax cable. Each of these coax cables between the 3299 and a terminal can also be 1500 meters (4920 feet) in length. This permits terminals to be located up to a maximum of 3000 meters (9840 feet) from a 3274 Control Unit or double the distance that is allowed when a terminal is attached directly to a 3274.

CUSTOMER SETUP (CSU): The 3299 is designated a customer setup unit. Setup instructions are included with each unit.

CUSTOMER RESPONSIBILITIES: The customer is responsible for:

- Adequate site preparation.
- Receipt at customer's receiving dock, unpacking and placement of unit.
- Setup of unit and connection of coax cables.
- Performing customer problem analysis and resolution (CPAR).
- Isolating a defective unit, replacement of unit, and delivering the defective unit with failure analysis report to an IBM Service/Exchange Center for exchange.
- Determination of the required number of spares.

5-YEAR WARRANTY

Under the terms of the warranty, if a 3299 unit fails or is defective during the period of five (5) years from the date of purchase, it can be exchanged at an IBM Service/Exchange Center for a unit in good working order. The defective unit becomes the property of IBM. It is the customer's responsibility to install and disconnect a 3299 unit, and to determine when replacement is required and to transport it to an IBM Service/Exchange Center for exchange .

Following the expiration of the warranty coverage, maintenance service will be available through the IBM Service/Exchange Center.

SPARES

It is recommended that the customer replace a failing 3299 unit with a spare unit and that the customer be advised to purchase sufficient spare 3299 units for such use. The number of spare units recommended is dependent upon the number of 3299 units the customer has installed, the application requirements, and the physical locations. Determination of the required number of spares is a customer responsibility, however, the minimum number of spare units recommended is shown in the table below:

Recommended Minimum Number of Spare 3299's

Number of 3299's Installed	Spare 3299's
1 - 100	1
101 - 200	2
201 - 600	3
601 - 1000	5

The customer should be advised to test spares for correct operation before storing them.

Prerequisites: 1) #9901 Multiplexer Support on a 3274 Model 41A, 41C, 41D or 61C. 2) RPQ 8K1155 and/or 8K1156 on a 3274 Model 1A, 1B, 1C, 1D, 21A, 21B, 21C, 21D, 31A, 31C, or 31D. 3) One 3299 is required for each group of eight Category A Terminals to be attached to a 3274.

BASIC CONFIGURATION

Specify codes are not normally required to order a 3299. If not specified otherwise, the 3299 will be shipped with the following:

- Voltage: 120 VAC, 1-phase, 3-wire, 60HZ
- Power Cable: 1.8 meters (6 feet) with non-locking plug

SPECIFY

No Specify Codes are necessary

SPECIAL FEATURES

No Special Features are available.

3310 DIRECT ACCESS STORAGE DEVICE

PURPOSE

Direct access storage for attachment to a 4321, 4331or 4361 Processor.

MODELS

Model A1 A01 — Single-drive disk storage unit and associated control for attachment to a 4321 Processor via its standard DASD Adapter or to a 4331 4321, 4331 or 4361 Processor via its DASD Adapter (#3201).

Model A2 A02 — Two disk storage drives and associated control for attachment to a 4321 Processor via its standard DASD Adapter or to a 4331 4321, 4331 or 4361 Processor via its DASD Adapter (#3201). It also provides the logic required to support the attachment of up to two additional drives for a maximum string of four.

Model B1 B01 — Single-drive storage unit which attaches to a model A2 to provide for configurations requiring three drives.

Model B2 B02 — Two disk storage drives which attach to a model A2 to provide for configurations requiring a full string of four drives.

Maximum: See 4321, 4331 or 4361 pages.

Prerequisites: A 3310 Direct Access Storage Drive requires a 3310 mdl A1 or A2 and a position on the DASD Adapter of a 4321, 4331 or 4361 Processor. A mdl A2 is required to attach a mdl B1 or B2.

HIGHLIGHTS

The 3310 employs a fixed storage medium and features high data rate, fast access, modularity and a high degree of reliability.

Capacity: Each drive has a capacity of 64,520,192 bytes.

Format: The 3310 uses Fixed Block data structure and the cylinder concept providing the following:

Bytes per Sector	512
Sectors per Cylinder	352
Bytes per Cylinder	180,224
Cylinders per Drive	358

Access Time:

Seek Time (ms):

Minimum	9
Average	27

Rotational Delay (ms):

Average	9.6

Data Rate: 1,031,000 bytes per second.

Rotational Positioning Sensing: Permits the disk storage device to disconnect during rotational delay, thereby increasing DASD Adapter availability for other operations.

Error Correction: Provides capability of correcting single data error bursts of up to 3 bits span as well as detecting all single error bursts of up to 14 bits span.

Data Recovery: (Plant only) Should data in the field prove unrecoverable, data recovery assistance at the plant of manufacture will be provided.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage:

  (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V, **#9914** for 240V.

- Color (A mdls only): **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, or **#9065** for pebble gray. **Note:** One accent panel from the mdl A unit is exchanged with the outer side panel of the mdl B.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Model changes between 3310 model A1 and A2 or between model B1 and B2 are field installable. Model changes between 3310 model A and model B units cannot be done.

ACCESSORIES (None)

SUPPLIES (None)

3330 DISK STORAGE

[NO LONGER AVAILABLE: Models, Model Changes, Specify Features, Special Features or Accessories. RPQs have not been withdrawn.]

PURPOSE

Large capacity fast access, high data rate. Up to three 3330 modules attach to a 3333 Storage and Control to form a facility for general purpose data storage and programming system residence.

MODELS

Model 1	001	Contains two disk storage drives ... available on S/360 mdl 195, any S/370 processor except 3115, the 4331 Model Group 2 and the 4341, 4361 or 4381 Processor.
Model 2	002	Contains one disk storage drive ... available on S/360 mdl 195, all S/370 processors except 3115, the 4331 Model Group 2 and the 4341, 4361 or 4381 Processor.
Model 11	011	Contains two disk storage drives ... available on all virtual storage S/370 processors except 3115 and 3125, the 4331 Model Group 2 and the 4341, 4361 or 4381 Processor.

Maximum: Up to four 3330 modules, in any combination of mdls 1 and 2, can be attached to the 3830 mdl 1. Up to three 3330 modules, in any combination of mdls 1, 2 or 11, can be attached to the 3333 mdl 1 or 11 ... see system availability above. On the 3125, only one 3330 module, either mdl 1 or 2, can be attached to the 3333 mdl 1. For combinations allowed on a storage director of a 3880 Storage Control, see "Maximum" in M3880 pages.

Prerequisites: The 3330 mdls 1 and 2 are designed for interconnected operation with the 3333 mdl 1, 3333 mdl 11, or the 3830 mdl 1. The 3330 mdl 11 is designed for interconnected operation with the 3333 mdl 1 or mdl 11. Customers who wish to order a 3330 for stand-alone or individual use should submit an RPQ to provide the necessary safety elements (covers, cable connectors, etc.) to complete the unit for a non-standard (i.e., not installed as part of a 3330 facility) environment. In lieu of the RPQ, the customer may provide safety elements equivalent to the standard configuration or that provided by the above RPQ. If not provided, the unit will be offered on a purchase-only basis. See "Specify". See appropriate DASD storage control feature or machine to determine prerequisite specify and/or special features to attach 3333/3330s.

Agreement for IBM to install and maintain the 3330 in any non-standard configuration must be reviewed with IBM.

Each disk storage drive requires a 3336 Disk Pack. These must be ordered separately. Contact IBM.

HIGHLIGHTS

Each drive uses an electromagnetic actuator to move and control the head assembly.

Cylinder Concept: 404 data cylinders per pack for mdls 1 and 2 ... 808 data cylinders per pack for mdl 11. Each cylinder has 19 data tracks ... up to 13,030 bytes per track ... up to 247,570 bytes available per cylinder.

Data Rate: 806,000 bytes per second.

Access Time: Average access time is 30ms with a minimum of 10ms and a maximum of 55ms.

Power Drawers: Each disk drive is mounted in a drawer ... opened or closed by a switch on the operator control panel.

Write Inhibit Switch: A toggle switch for each drive, mounted on the operator's panel, provides the means to protect packs mounted within the facility from being written upon. The switch is manually set by the system operator under instructions from the customer operating procedure. Programming Support then protects the user's data by terminating a program which attempts to write to a protected drive.

Write Format Release: Standard feature on the mdl 11, which frees the subsystem while the drive erases from the end of a "formatted" write record to the end of the track.

Rotational Position Sensing: Enables a "seek" to an explicit position on a track ... permits channel disconnect during most of the rotational latency period and thus contributes to increased channel availability ... requires one unshared subchannel on a block multiplexer channel for each drive.

Multiple Requesting: Allows multiple channel command sequences to be active, up to one sequence per drive ... permits better utilization of control unit, devices, channel and processor ... requires one unshared subchannel on a block multiplexer channel for each drive.

Disk Pack: Each drive requires a 3336 Disk Pack. The 3336 mdl 1 provides up to 100 million bytes of storage per pack. The 3336 mdl 11 provides up to 200 million bytes of storage per pack. The 3336 mdl 1 is interchangeable on all 3330 mdls 1 and 2 and 3333 mdl 1 drives; it cannot be used with the 3330 mdl 11. The 3336 mdl 11 is interchangeable on all 3330 mdl 11 and 3333 mdl 11 drives; it cannot be used with the 3330 mdl 1 or 2.

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V or **#9905** for 230V ... voltage must be consistent with that of the unit to which the 3330 is to be attached.
- Non-Standard Environment: **#9485** must be specified if the 3330 is not to be installed as part of a 3330 facility ... also see "Prerequisites" above.
- Position Designator: For cable definition and drive identification (Ready Indicator and Logical Address Plug), one position designator code must be specified for each 3330, indicating its relative position as shown in the diagram below:

3830 mdl 1	**#9491**	**#9492**	**#9493**	**#9494**
3333		**#9492**	**#9493**	**#9494**

Note: If any configuration change (increase or decrease) results in a position change of installed units, their position designator codes must be changed by MES for rental machines. For purchased machines, an RPQ must be submitted.

If an installed 3830 mdl 1/3330 configuration is being changed to a 3830 mdl 2/3330 series configuration and the 3330 with position designator code **#9493** has serial number 12490 or below, B/M 2276789 (60 Hz) must be ordered via an MES for rental machines. For purchase machines, an RPQ must be submitted.

3333 DISK STORAGE AND CONTROL

[NO LONGER AVAILABLE: Models, Model Changes, Specify Features, Special Features or Accessories. RPQs have not been withdrawn.]

PURPOSE

Large capacity, fast access, high data rate storage for general purpose data storage and programming system residence with additional control for the attachment of up to three 3330 Disk Storage modules.

Two disk storage drives and associated control for attachment to the 3135, 3135-3, 3138 via the 3330 Series IFA (#4655), to the 3145, 3145-3, 3148 models H2, HG2, I2, IH2, and J2 via the ISC (#4660), to the 3145, 3145-3, 3148 models FED, GE, GFD, H, HG, and I via the 3345 models 3, 4, and 5, to the 3158, 3158-3, 3168, 3168-3 via the ISC (#4650), to the 3830 model 2 and to the 3880 mdl 1, 2 or 11. It provides logic and power for the attachment of up to six spindles of 3330 disk storage drives of any models.

MODELS

Model 1 001 — Contains two disk storage drives ... available on S/360 mdl 195, any S/370 processor except 3115, the 4331 Model Group 2 and the 4341, 4361 or 4381 Processor.

Model 11 011 — Contains two disk storage drives ... available on any virtual storage S/370 processor except 3115 or 3125, the 4331 Model Group 2 and the 4341, 4361 or 4381 Processor.

Maximum: 3125: one 3333 mdl 1 (with associated 3330s) ... For other systems, see M3135, 3135-3, 3138, 3145, 3145-3, 3148, 3158, 3158-3, 3168, 3168-3, 3031, 3032, 3033, 4341, 4361, 4381, 3345, 3830-2, 3830-3 or 3880 pages.

Prerequisites: Each disk storage drive requires a 3336 Disk Pack. These must be ordered separately ... contact IBM.

See appropriate DASD storage control feature or machine to determine prerequisite specify and/or special features to attach 3333/3330s.

Each system attachment requires a specify code ... see "Specify" below.

Note: If a 3333/3330 configuration is replacing a 3830 mdl 1/3330 configuration (or any configuration change is made where installed 3330s are repositioned with respect to a 3333), the position designator specify codes of the 3330s must be changed via MES ... see M3330 pages.

HIGHLIGHTS

Each drive uses an electromagnetic actuator to move and control the head assembly.

Cylinder Concept: 404 data cylinders per pack for mdl 1 ... 808 data cylinders per pack for mdl 11. Each cylinder has 19 data tracks ... up to 13,030 bytes per track ... up to 247,570 bytes available per cylinder.

Data Rate: 806,000 bytes per second.

Access Time: Average access time is 30ms with a minimum of 10ms and a maximum of 55ms.

Power Drawers: Each disk drive is mounted in a drawer ... opened or closed by a switch on the operator control panel.

Write Inhibit Switch: A toggle switch for each drive, mounted on the operator's panel, provides the means to protect packs mounted within the facility from being written upon. The switch is manually set by the system operator under instructions from the customer operating procedure. Programming Support then protects the user's data by terminating a program which attempts to write to a protected drive.

Write Format Release: Standard feature on the mdl 11, which frees the subsystem while the drive erases from the end of a "formatted" write record to the end of the track.

Rotational Position Sensing: Enables a "seek" to an explicit position on a track ... permits channel disconnect during most of the rotational latency period and thus contributes to increased channel availability ... requires one unshared subchannel on a block multiplexer channel for each drive.

Multiple Requesting: Allows multiple channel command sequences to be active, up to one sequence per drive ... permits better utilization of control units, devices, channel, and processor ... requires one unshared subchannel on a block multiplexer channel for each drive.

Disk Pack: Each drive requires a 3336 Disk Pack. The 3336 mdl 1 provides up to 100 million bytes of storage per pack. The 3336 mdl 11 provides up to 200 million bytes of storage per pack. The 3336 mdl 1 is interchangeable on all 3333 mdl 1 and 3330 mdl 1 and 2 drives; it cannot be used with the 3333 mdl 11. The 3336 mdl 11 is interchangeable on all 3333 mdl 11 and 3330 mdl 11 drives; it cannot be used with 3333 mdl 1.

Maintenance: Agreement for IBM to install and maintain the 3333 in any non-standard configuration must be reviewed with FE Management prior to making a commitment to the customer.

Publications: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V or **#9905** for 230V.

  Note: The 3333 requires a 60 amp AC power cord ... consult *Physical Planning Manual.*

- System Attachment: One of the following must be specified:

Attachment	Specify	Attachment	Specify
3125 *	**#9586**	3168 ISC	**#9585**
3135, 3135-3 IFA	**#9582**	3168 ISC w #7220	**#9588**
3138 IFA	**#9579**	3345 mdls 3, 4, 5	**#9583**
3145, 3145-3 ISC	**#9583**	3830 mdl 2	**#9581**
3148 ISC	**#9580**	3830 mdl 3	**#9589**
3158 ISC	**#9584**	3880 mdl 1, 2, 11	**#9604**
3158 ISC w #7220	**#9587**		

* The 3125 is not valid for the String Switch (#8150).

SPECIAL FEATURES

Remote Switch Attachment (#6148): To attach the String Switch (#8150) to a configuration control panel. **Field Installation:** Yes. **Prerequisites:** #8150.

String Switch (#8150): To attach the 3333 to a second attachment. The two attachments may be on the same processor or different processors and may be any two of the following: 3830 Storage Control mdl 2, 3135, 3135-3, 3138 3330/3340 Series IFA (#4655), the 3345 Storage and Control Frame mdls 3, 4 and 5 or the ISC (#4660) for attachment to 3145, 3145-3, 3148, and the 3158 and 3168 ISCs (#4650) ... see appropriate machines for additional requirements. The String Switch may also be installed on a 3333 within a 3850 Mass Storage System with attachment to a 3830 mdl 3 or 3158/3168 ISC (#4650) with Staging Adapter (#7220). Installation is not recommended in a mixed 3850 MSS/non-MSS environment. If a 3333 is shared between any two ISC paths and/or 3830 mdl 3s, then any other 3333s attached to the same ISC paths and/or 3830 mdl 3s must also be shared identically. In all of the above cases, switching between the two attachments is under program control. The 3333s may also be dedicated to a single attachment with an enable/disable switch. **Field Installation:** Yes. **Specify:** To indicate the second attachment to which this feature will be made, specify one of the following:

3135, 3135-3 IFA	**#9592**	3168 ISC	**#9595**
3138 IFA	**#9601**	3168 ISC w (#7220)	**#9598**
3145, 3145-3 ISC	**#9593**	3345 mdls 3,4,5	**#9593**
3148 ISC	**#9602**	3830 mdl 2	**#9591**
3158 ISC	**#9594**	3830 mdl 3	**#9599**
3158 ISC w (#7720)	**#9597**	3880 mdl 1,2, or 11	**#9605**

NOTE: Installed 3333s retained for use with 3850 Mass Storage System:

System Attachment Specify Features must be changed on presently installed 3333s attached to a 3830 mdl 2 or 3158/3168 ISC (#4650), if the 3333s will be retained for use with a 3850 MSS when a 3830 mdl 2 is field upgraded to mdl 3 or Staging Adapter for ISC (#7220) is field installed on the 3158/3168 ISC. Submit MES(s) to effect the following:

Specify Feature Changes

Remove	Install
#9581	**#9589**
#9584	**#9587**
#9585	**#9588**

If the installed 3333s are equipped with String Switch (#8150), the Specify Features indicative of String Switch attachment are also to be changed by MES:

Specify Feature Changes

Remove	Install
#9591	**#9599**
#9594	**#9597**
#9595	**#9598**

MODEL CONVERSIONS

Model 1 to model 11 is field installable.

3340 DIRECT ACCESS STORAGE FACILITY

PURPOSE

Multiple capacity, high-speed, direct access storage for attachment to a System/3 model 12 or System/3 model 15 with B, C or D model Processing Unit, System/7 with E model Processing Unit, any virtual storage S/370 or 4300 processor.

MODELS

Model A2 A02 — Two disk storage drives and associated control. For attachment to a System/3 model 15, with B, C, or D model Processing Unit via native attachment, or a System/7 equipped with a 5988-T01, 3340 Attachment Module. It provides logic and power for the attachment of up to three 3340 model B units. Also for attachment to a 3115 or 3125 via their native attachments, to the 3135, 3135-3, 3138 via the IFA (#4655), to 3145 models GE, GFD, H, HG or I via the 3345 model 3, 4 or 5, to 3145 model H2, HG2, I2, IH2, J2, JI2 or K2, 3145-3, 3148 via the ISC (#4660), to the 4321 or 4331 via the 3340/3344 Direct Attach feature (#7851), to the 3158, 3158-3, 3168 or 3168-3 via the ISC (#4650), to the 3830 model 2, and to the 3880 model 1 or 2. It provides logic and power for the attachment of up to three 3340 model B units and/or 3344 units.

Model B1 B01 — Contains one disk storage drive.

System/7, S/370 or 4300 processor: Up to three can be attached to a 3340 model A2 to provide 3-, 5- or 7-drive configurations. Can be combined with 3340 model A2, B2s and/or 3344 units for a 5-, 6- or 7-drive configuration.

System/3 model 15 with B, C, or D model processor: One can be attached to a 3340 model A2 to provide a 3-drive configuration.

Model B2 B02 — Contains two disk storage drives.

System/7, S/370 or 4300 processor: Up to three 3340 model B2s can be attached to a 3340 model A2 for a 4-, 6- or 8-drive configuration. Can be combined with 3340 model A2, B1s and/or 3344 units for a 5-, 6- or 7-drive configuration.

System/3 Model 15 with B, C, or D Model Processor: One can be attached to a 3340 Model A2 to provide a 4-drive configuration.

Model C2 C02 — Contains two disk storage drives.

System/3 Model 12: One can be attached directly to the 5412 to provide a 2-drive configuration.

Maximum:
3115-0 – four 3340 drives
3115-2 – eight 3340 drives
3125-0 – eight 3340 drives
3125-2 – sixteen 3340 drives
Other S/370s, or 4300 processors – see M3135, 3135-3, 3138, 3145, 3145-3, 3148, 3158, 3158-3, 3168, 3168-3, 3031, 3032, 3033, 3345, 3830-2 or 3880-1,2 pages.

Maximum: System/3 mdl 12 – two 3340 drives (C2) System/3 mdl 15B, 15C, or 15D – four 3340 drives System/7 mdl E – eight 3340 drives.

Prerequisites: A 3340 facility requires: a 3340 mdl A2 (except System/3 mdl 12, which supports only 3340 mdl C2) ... a System/3 Mdl 15 with a B, C, or D mdl processor, System/7 with a 5998-T01 Module ... a S/370 or 4300 processor with appropriate attachment and features ... each 3340 drive requires a 3348 Data Module. A 3145 requires Word Buffer (#8810) to attach 3340s.

System/3: For conversion of a 5415A mdl CPU to a 5415B, 5415C, or 5415D mdl CPU, the MES must indicate deletion of **#9400**, and if a second 5444 is installed, deletion of **#9401** or **#9402**.

See appropriate DASD storage control feature or machine to determine additional prerequisite specify and/or special features to attach 3340s.

HIGHLIGHTS

Each 3340 contains an air filtration system and the load/unload mechanism for the 3348 Data Module. Features low cost, multiple capacity, fast access and high data rate ... two drives (C2 only) attach to a System/3 mdl 12 ... up to 4 drives attach to a System/3 mdl 15 B, C or D, or a 3115-0 ... up to 8 drives attach to a System/7, to a 3115-2 or a 3125-0 ... up to 16 drives to a 3125-2 with 16 Drive Expansion (**#9315**), and up to 16 drives to a 4331. See M3135, 3135-3, 3138, 3145, 3145-3, 3148, 3158, 3158-3, 3168, 3168-3, 3031, 3032, 3033, 3345, 4321, 4331, 4341, 3830 or 3880 pages for other S/370 or 4300 processor attachment capabilities.

The 3340 introduces a new design in which a sealed cartridge (3348 Data Module) contains the disks, access arms, read/write heads and spindle. Multiple capacity options on each drive become possible due to the modularity provided by this unique design. In addition, the 3348 mdl 70F contains fixed heads which provide low cost, fixed head capability for the 3340 user. Users may place selected components of IBM software as well as his own programs in the fixed head area to increase device performance. The 3348 mdl 70F requires the Fixed Head Feature (#4301) on the 3340. The 3348 mdl 70F is not available on the System/3 mdl 12 or mdl 15.

The 3340 supports the command set of the 3330. This is essentially the same as the 2314 command set with minor modifications.

Cylinder Concept:

	3348 mdl 35 (34.9 MB) (Note 1)	3348 mdl 70 or 70F (69.8 MB) (Note 1)	3348 mdl 70 (41.0 MB) (Note 2)
Bytes per Track	8,368	8,368	12,288
Tracks per Cylinder	12	12	20
Cylinders per Data Module	348	696	210*
Bytes per Cylinder	100,416	100,416	245,760

Note 1: Mdl 35, 70 or 70F for System/7, S/370 or 4300 processors.

Note 2: Mdl 70 on System/3 mdl 12 or mdl 15.

***Note:** For the mdl 12 or 15, these are "logical" cylinders rather than physical cylinders. For capacities on the System/7, see System/7 under 3348.

Data Rate: 885,000 bytes per second. See GA09-1004 for Data Rate on System/7.

Access Time: For the 3348 mdl 35 and 70, the average seek time is 25 ms with a minimum of 10 ms and a maximum of 50 ms. For the mdl 70F, the average seek time is 0 ms for cylinders 1 through 5 while all other cylinders retain the above seek timing. Rotation time is 20.2 ms and latency is 10.1 ms, the same as for the 3348 mdls 35 and 70.

Autoloading: Data modules are automatically loaded after the Data Module is placed in the drive, the drive cover is closed and a switch is turned on. The Data Module is a sealed unit and requires no cover removal. Start up time is less than 20 seconds.

Read-Only: A switch is provided on every 3340 drive. This switch is activated by inserting a latch in the Data Module. When the latch is *NOT* inserted, the Data Module is protected from being written upon or erased.

Data Modules: Each drive requires a Data Module to operate. These must be ordered separately ... see M3348 pages.

3348 Data Module mdl 35 provides 34,944,768 bytes of storage for the S/370 and 4300 processors.
3348 Data Module mdl 70 provides 69,889,536 bytes of storage for the S/370 and 4300 processors. For System/3 mdl 12 and mdl 15, it provides 41,041,920 bytes of main data storage plus 9,830,400 bytes for program support. **Note:** System/3 mdl 12 and mdl 15 can only utilize the 3348 Data Module mdl 70.
3348 Data Module mdl 70F provides 69,889,536 bytes of storage of which 502,080 are accessible by fixed heads.

Either the mdl 35 or 70 may operate on any drive and they are interchangeable between drives, including drives with the Fixed Head Feature (#4301, 4302) installed. The mdl 70F, however, requires the Fixed Head Feature on the drive.

Data written on a Data Module by S/3 cannot be retrieved by S/370, and vice versa. Data written on a Data Module by a System 3 Mdl 12 or 15 may be used by a 4331 using the S/3 Data Import feature (#6305).

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): [must be consistent with system voltage] **#9903** for 208V or **#9905** for 230V.
- Color: Blue **#9043** ... Gray **#9045** ... Red **#9041** ... White **#9046** ... Yellow **#9042**.
- System Attachment: One of the following must be specified on each 3340 mdl A2:

Attachment	Specify	Attachment	Specify
System/3 mdl 15*	**#9589**	3168 ISC	**#9585**
System/7 mdl E	**#9590**	3125 DDA	**#9586**
3830 mdl 2	**#9581**	3115 DDA	**#9587**
3135 IFA	**#9582**	3145 ISC	**#9588**
3135 mdl 3 IFA	**#9582**	3145 mdl 3 ISC	**#9588**
3138 IFA	**#9579**	3148 ISC	**#9580**
3345 mdls 3, 4, 5	**#9583**	4321,	
3158 ISC	**#9584**	4331 3340 Direct Attach	**#9606**
3880 mdl 1 or 2	**#9607**		

* **Note:** Specify **#9589** must also be used for a mdl B1 or B2 attached to the 3340 A2 to provide a 3 or 4-drive system.

3340 Direct Access Storage Facility (cont'd)

The following must be specified for a 3340 Mdl C2:

Attachment	Specify
System/3 mdl 12	**#9600**

- If String Switch (#8150) is ordered or installed on 3340 mdl A2, String Switch (**#9570**) must be specified on each 3340 mdl B1 or B2 in the string.

SPECIAL FEATURES

Fixed Head Feature (#4301,#4302): #4301 – for mdl A2 or B2 ... #4302 – for mdl B1. To operate the 3348 mdl 70F on the 3340. The Fixed Head Feature is available on System/7, S/370 VS systems from the 115 and up, and 4300 processors. Attachment is via the following: On System/7, via the 5998-TO1. On the 3115 and 3125 via their native attachment, the 3830 Storage Control mdl 2, the 3880 Control Unit, the 3330/3340 Series IFA (#4655) on the 3135, 3135-3, 3138, the 3345 Storage Control Frame mdl 3, 4 or 5, the ISC (#4660) on the 3145, 3145-3, 3148, the ISC (#4650) on the 3158 and 3168, and the4321 or 4331 via the 3340/3344 Direct Attach feature (#7851). See appropriate machines for additional requirements. **Limitations:** Not available on 3340s attached to System/3 mdl 12 or mdl 15. Cannot be installed with either the 2311 mdl 1/3340 Series Compatibility (#8060) or the 2314/3340 Series Compatibility (#8070) on 3115 and 3125. Cannot be installed with Two-Channel Switch, Add'l (#8171) on the 3830 mdl 2 unless specify **#9317** or **#9310** is installed on the 3830. **Field Installation:** Yes.

Remote Switch Attachment (#6148): [Mdl A2] To attach the String Switch (#8150) to the configuration control panel of a 3158MP or 3168MP. **Field Installation:** Yes.

Rotational Position Sensing (#6201,#6202): #6201 – for mdl B1 ... #6202 – for mdl A2 or B2. Permits channel disconnect during most of the rotational latency period and thus contributes to increased channel availability. If required, it should be installed on every 3340 mdl A2, B2 or B1 in a string. **Limitation:** This feature may be installed but is not supported by the4321 or 4331 processor 3340/3344 Direct Attachment Feature (#7851). **Field Installation:** Yes. **Prerequisites:** A block multiplexer channel on the system.

String Switch (#8150): [Mdl A2] To attach the 3340 mdl A2 to a second attachment. The two attachments may be on the same processor or different processors and may be any two of the following: 3830 Storage Control mdl 2, the 3880 Control Unit, the 3340 Direct Disk Attachment (DDA) on the 3115-2 or 3125-2, the 3330/3340 Series IFA (#4655) on the 3135, 3135-3, 3138, the 3345 Storage and Control Frame mdl 3, 4 or 5, the ISC (#4660) for attachment to the 3145, 3145-3, 3148, the ISC (#4650) for 3158 and 3168, and the 3340/3344 Direct Attachment Feature (#7851) on the 4321 or 4331. See appropriate machines for additional requirements. Switching between two attachments is under program control. The 3340 may also be dedicated to a single attachment with an enable/disable switch. **Field Installation:** Yes. **Specify:** To indicate the attachment to which this feature will be made, specify one of the following:

Attachment	Specify	Attachment	Specify
3880 mdl 1 or 2	**#9707**	4331	**#9608**
3830 mdl 2	**#9591**	3148 ISC	**#9602**
3135, 3135-3 IFA	**#9592**	3158 ISC	**#9594**
3138 IFA	**#9601**	3168 ISC	**#9595**
3345 mdls 3, 4, 5	**#9593**	3115-2 DDA	**#9596**
3145, 3145-3 ISC	**#9593**	3125-2 DDA	**#9597**

In addition, String Switch **(#9570)** must be ordered on each 3340 mdl B1 or B2 which will be attached to the 3340 mdl A2 with String Switch (#8150).

SUPPLIES (None)

3344 DIRECT ACCESS STORAGE

PURPOSE

Dual drive, large capacity, direct access storage for attachment via a 3340 model A2 to a System/3 model 15D, to any virtual storage S/370 or 4300 processor.

MODELS

Model B2 B02 2-drive disk storage unit which attaches to a 3340 model A2. It may be intermixed with 3340 model B units and/or 3344 model B2F units in any combination up to three B units per 3340 model A2. On System/3 model 15D, one 3344 B2 can be attached to a 3340 A2 to make a 4-drive system.

Model B2F B2F 2-drive disk storage unit with the same attachment capabilities as the 3344 model B2. It features Fixed Heads which provide 1,004,160 bytes of zero seek time storage on each drive.

Limitations: A 3340 string containing the 3344 may not be intermixed with a 3330 string on a 3135, 3135-3, 3138 IFA or 3880 mdl 1 or 2. 3340 strings containing the 3344 cannot be intermixed with 3330 or 3350 strings on a 3145, 3145-3, 3148, 3345, 3158, 3168 ISC or 3830 mdl 2.

Data written by System/3 cannot be retrieved by S/370, 4341 or 4381 processors, and vice versa. For the 4321, 4331 or 4361, see System/3 Data Import Feature (#6305).

Maximum: One 3340 string on a 3115-2/3125-2 DDA or on a 3135, 3135-3, 3138 IFA may contain 3344s.

Up to two 3340 strings on a 3830 mdl 2, 3880 mdl 2, 3145, 3145-3, 3148 or 3345 ISC, on each path of a 3158 or 3168 ISC, on each DASD adapter of the 4321 or4331 or on each director of of 3880 mdl 1, 3880 mdl 1, may contain 3344s.

Prerequisites: A 3344 requires a 3340 mdl A2 and any virtual storage S/370 or 4300 processor with appropriate attachment and features. Control Store Extension (#2150) and Register Expansion (#6111) are prerequisite features on the 3830 mdl 2 and 3145, 3145-3, 3148, 3345, 3158, 3168 ISCs to attach 3344. On the 3115-2 and the 3125-2, 4K DASF Control Storage Extension (#4210) is required. On 3880, 3340/3344 Attachment feature is required.

For use with System/3 mdl 15D, a 5415D with specify **#9781** and **#9784** and a 3340 mdl A2 are required.

IMPORTANT: See the appropriate DASD storage control feature or machine to determine any additional prerequisite specify and/or special features to attach 3344.

HIGHLIGHTS

The 3344 features a large capacity, fixed storage medium. Each drive is equivalent in capacity and format to four logical 3348 mdl 70s. Each 3344 has two drives and requires eight logical device addresses. The Fixed Head storage capacity on the 3344 mdl B2F is associated with the first of the four logical volumes on each drive.

On S/3 mdl 15D, each drive is approximately equivalent to four logical 3348 mdl 70s - each logical volume features a larger main data area, and a smaller area reserved for simulation, than on a 3348 data module.

Cylinder concept: Except for System/3, each drive has 2,784 logical cylinders with 12 tracks per cylinder. Maximum track capacity is 8,368 bytes providing up to 100,416 bytes per logical cylinder.

For the System/3 mdl 15D, each drive has 828 logical cylinders with 20 tracks per cylinder. Maximum track capacity is 12,288 bytes providing up to 245,760 bytes per logical cylinder.

Maximum drive capacity is 203,489,280 bytes. Data Rate - 885,000 bytes per second.

The 3344 mdl B2 provides 279,558,144 bytes of storage per drive.

The 3344 mdl B2F provides 279,558,144 bytes of storage per drive of which 1,004,160 bytes are accessible by fixed heads.

Data Rate: 885,000 bytes per second.

Access Time: Average seek time is 25ms with a minimum of 10ms and a maximum of 50ms. Rotation time is 20.2ms and latency is 10.1ms. For the 3344 mdl B2F, logical cylinders 1 through 10 of the first logical volume on each drive have a seek time of zero ms while all other cylinders retain the above seek timing.

Read-Only: A 2-position switch is provided for each drive. When the switch is in the "read only" position, the drive is protected from being written upon or erased.

Rotational Position Sensing (RPS): A standard feature on the 3344 which permits channel disconnect during most of the rotational latency period and thus contributes to increased channel availability. Requires a block multiplexer channel on the system. If RPS is used, it is advisable for efficient operation to also have it on every 3340 in a string.

Data Recovery: [Plant only] Should data in the field prove unrecoverable, data recovery assistance at the plant of manufacture will be provided. The customer is required to provide a sufficient number of appropriate media (tapes, disk modules, etc.) to contain recovered data when returning the head and disk assembly to the plant for data recovery.

Alternate Tracks: Except for System/3, there are 96 alternate tracks per drive. The 3344 will be shipped from the plant with not more than five flagged tracks per drive. Therefore, a minimum of 91 alternate tracks per drive are available for customer use.

For the System/3 mdl 15D, there are 160 alternate tracks per drive (40 per logical volume). The 3344 will be shipped from the plant with not more than five flagged tracks per drive. Therefore, a minimum of 155 alternate tracks per drive are available for customer use.

Bibliography: S/370 and 4300 processors -- GC20-0001 ... System/3 -- GC20-8080

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): [must be consistent with that of the unit to which the 3344 is attached] **#9903** for 208V or **#9905** for 230V.
- Color: Blue **#9043** ... Gray **#9045** ... Red **#9041** ... White **#9046** ... Yellow **#9042**.
- System Attachment: One of the following must be specified on each 3344 mdl B2/B2F.

Attachment	Specify	Attachment	Specify
3830 mdl 2	**#9581**	3168 ISC	**#9585**
3135 IFA	**#9582**	3125 DDA	**#9586**
3135 mdl 3 IFA	**#9582**	3115 DDA	**#9587**
3138 IFA	**#9579**	3145 ISC	**#9588**
3345 mdls 3, 4, 5	**#9583**	3145 mdl 3 ISC	**#9588**
3158 ISC	**#9584**	3148 ISC	**#9580**
4331/4361	**#9606**	3880 mdl 1 or 2	**#9607**
System/3	**#9589**		

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Changes from model B2 to model B2F are field installable. **Note:** Customer price quotations and customer acknowledgement letters for purchase MESs must state: "Installation of this model change involves removal of parts which become the property of IBM."

ACCESSORIES (None)

SUPPLIES (None)

3345 STORAGE AND CONTROL FRAME

[NO LONGER AVAILABLE]

PURPOSE

Additional processor storage and I/O control in a S/370 model 145.

MODELS

Model 1	001	Used with the 3145 model HG to provide 393,216 bytes of processor storage.
Model 2	002	Used with the 3145 model I to provide 524,288 bytes of processor storage.
Model 3	003	Used with the 3145 models H and below to provide for the attachment of 3330, 3340, 3344 or 3350 series disk storage via its standard Integrated Storage Control ... see M3330, 3333, 3340, 3344, 3350 pages.
Model 4	004	Used with the 3145 model HG to provide 393,216 bytes of processor storage and to provide for the attachment of 3330, 3340, 3344 or 3350 series disk storage via its standard Integrated Storage Control ... see M3330, 3333, 3340, 3344, 3350 pages.
Model 5	005	Used with the 3145 model I to provide 524,288 bytes of processor storage and to provide for the attachment of 3330, 3340, 3344 or 3350 series disk storage via its standard Integrated Storage Control ... see M3330, 3333, 3340, 3344, 3350 pages.

Maximum: Only one 3345 can be attached to a 3145. For 3345 mdl 3, 4 or 5, see DASD Designation under "Specify" for maximum number of 3333/3340/3344/3350s which can be attached to the standard Integrated Storage Control.

Prerequisites: [1] Mdls 1 and 4 require a 3145 mdl HG ... mdls 2 and 5 require a 3145 mdl I ... mdl 3 is used with 3145 mdls H and below ... when 3345 mdl 3, 4 or 5 is to be installed with a 3145, **#9851** is required on the 3145 ... for mdls 1, 2, 4 and 5, a 3046 Power Unit is required. [2] For mdls 3, 4 and 5, the standard Integrated Storage Control requires an available control unit position on a system channel. A block multiplexer channel and one unshared subchannel per logical device are required for support of block multiplexing and rotational position sensing. If this support is not required, attachment to a system selector channel is permitted. Word Buffer (#8810) is prerequisite on 3145 to support 3340, or if Selector Channel, 3rd (#6983) is installed on the 3145 ... seeZM3145 pages.

HIGHLIGHTS

- 607.5 nanosecond "store" cycle with 0-4 byte capability
- 540 nanosecond "fetch" cycle with 8-byte parallel access
- Error checking with correction is an integral part of mdls 1, 2, 4, 5
- Store and Fetch Protect are provided by the 3145.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V ... must be the same as 3145 voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Cabling: **#9080** for below floor, **#9081** for on the floor.
- DASD Configuration [Mdls 3, 4, 5]: The available combinations of storage devices which can be attached are shown in the table below. One, two or three Xs in a vertical column indicate the type of machine(s) listed under DASD Configuration which can be attached when the "Required DASD Specify Features" are installed.

  Based on the DASD, and the Special Features listed below being ordered for them, order the Required DASD Specify Feature(s). (Note that **#9190** is 3340 Fixed Head Attachment for **#9314** and **#9315** and is *not* specified for **#9317** or **#9318**.)

SPECIAL FEATURES

Control Store Extension (#2150): [Mdls 3, 4, 5] Provides additional control store for microprogram use ... see DASD Configuration under "Specify" to determine when required. **Limitations:** Cannot be installed with Expanded Control Store (#2152). **Maximum:** One. **Field Installation:** Yes.

Expanded Control Store (#2152): [Mdls 3, 4, 5] Provides additional control store for microprogram use on the ISC ... see DASD Configuration under "Specify" to determine when required. **Limitations:** Cannot be installed with Control Store Extension (#2150). **Maximum:** One. **Field Installation:** Yes.

Register Expansion (#6111): [Mdls 3, 4, 5] Provides additional registers for microprogram use on the ISC ... see DASD Configuration under "Specify" to determine when required. **Maximum:** One. **Field Installation:** Yes.

Two-Channel Switch (#8100): [Mdls 3, 4, 5] To attach the standard Integrated Storage Control to a second channel ... the two channels may be on the same CPU or different CPUs. An available control unit position is required on each channel. Switching is under program control. The ISC can be dedicated to a single channel by means of an Enable/Disable switch. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See item [2] under "Prerequisites".

MODEL CONVERSIONS

The following 3345 model upgrades are field installable: Model 1 to model 2, 4 or 5 ... model 2 to model 5 ... model 4 to model 5. Model changes involving model 3 are not recommended for field installation.

ACCESSORIES (None)

SUPPLIES

Contact IBM.

3345 Storage and Control Frame (cont'd)

3345 MDL 3, 4 or 5 WITH ONE CHANNEL OR WITH TWO-CHANNEL SWITCH (#8100)

DASD Configuration		Required DASD Specify Features*															
		† 9313		† 9314		† 9314 9190	** † 9315			** † 9315 9190			+ † 9317		++ † 9318

	Up to four 3333s with associated 3330s						x	x									
	String Switch (#8150) on any 3333		x				x										
3340 Only	One or two 3340 mdl A2s with associated mdl B1/B2s			x	x	x				x							
	Up to four 3340 mdl A2s with associated mdl B1/B2s						x	x			x	x					
	String Switch (#8150) on any 3340 mdl A2				x			x		x		x					
	Fixed Head feature (#4301/4302) on any 3340					x				x	x	x					
3340 3344	Up to four 3340 mdl A2s of which up to two may attach 3344s													x	x		
	String Switch (#8150) on any 3340 mdl A2 and/or Fixed Head feature (#4301/4302) on any 3340														x		
3333 3340 -not 3344	3333s and 3340 mdl A2s (any combination of 2, 3, or 4) each with associated drives								x	x			x	x			
	String Switch (#8150) on any 3333 or 3340 mdl A2								x				x				
	Fixed Head feature (#4301/4302) on any 3340												x	x			
3350 Only	Up to four 3350 mdl A2/A2Fs with associated mdl B2/B2Fs, C2/C2F														x	x	
	String Switch (#8150) on any 3350 mdl A2/A2F, C2/C2F														x		
3333 3340 3350 -not 3344	3333s, 3340 mdl A2s and 3350 mdl A2/A2Fs (any combination of 2, 3, or 4) with associated drives															x	x
	String Switch (#8150) on any 3333, 3340 mdl A2, or 3350 mdl A2/ A2F, C2/C2F and/ or Fixed Head feature (#4301/ 4302) on any 3340																x

† ISC diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

* Any change to an installed DASD configuration requires an MES *ONLY* if the new configuration indicates that a different Specify and/or Special Feature(s) is required. The MES must include addition of any new Specify and/or Special Features not previously installed *AND* removal of any not listed as required for the new configuration.

** Control Store Extension (#2150) is prerequisite. With **#9315**, the ISC of the 3345 requires 32 contiguous device addresses regardless of the number of drives attached.

\+ Control Store Extension (#2150) and Register Expansion (#6111) are prerequisites. For configurations in this group the ISC uses 64 contiguous device addresses irrespective of the number of drives attached. The 3340 mdl A2s on the first and third strings may attach up to three 3340 mdl B1s, B2s, and/or 3344s in any combination. The 3340 mdl A2 on the second string may attach up to three 3340 mdl B1/B2s. The 3340 mdl A2 on the fourth string may attach one 3340 mdl B1 or B2.

++ Expanded Control Store (#2152) and Register Expansion (#6111) are prerequisites. For configurations in this group the ISC uses 8 or 16 or 32 or 64 device addresses depending upon the DASD configuration installed and whether any 3350 drive is in 3330-1 compatibility mode.

Note: Customers who may elect to purchase Control Store Extension (#2150) and later upgrade to Expanded Control Store (#2152) should consider the purchase of Expanded Control Store (#2152) initially because this field upgrade requires replacement of Control Store Extension (#2150) and installation of Expanded Control Store (#2152). The prerequisite of Control Store Extension (#2150) for **#9315** or **#9317** can be satisfied by Expanded Control Store (#2152).

3348 DATA MODULE

SSD Product

PURPOSE

A removable and interchangeable Data Module for the 3340 Disk Drive family.

MODELS

Model 35	035	34,944,768 bytes
Model 70	070	69,889,536 bytes on system/370 and 41,041,920 bytes of main data storage plus 9,830,400 bytes for program support on System/3 model 12 and model 15.
Model 70F	70F	69,889,536 bytes of which 502,080 are accessible by fixed heads.

System/7 Capacities	Capacity by Model (MB)		
Mode of Recording	**35**	**70**	**70F**
5022 Emulation	29.4	48.9	58.9
Native Max Record Length 7,294 bytes	30.4	60.9	60.9
Native Optimum Record Length 4,100 bytes	34.2	68.4	68.4

Limitations: System/3 model 12 and model 15 use only the 3348 model 70.

HIGHLIGHTS

Data Module Concept: -- the 3348 Data Module within a sealed cartridge, contains the disks, the spindle, the read/write heads and the access arms. The access arms and heads are not part of the drive as in previous disk pack/disk drive interfaces. The sealed module design protects the disk surfaces by reducing outside contamination. Multiple capacity options on each drive become possible due to the modularity provided by this unique design. In addition, the mdl 70F contains fixed heads which provide low cost, fixed head capability for the 3340 user. The user may place selected components of IBM software as well as his own programs in the fixed head area to increase device performance. The 3348 mdl 70F requires that the Fixed Head Feature be installed on the 3340 ... see M3340 pages.

Removable: -- can be installed and removed from the 3340 by the operator.

Interchangeable: -- the mdl 35 or the mdl 70 may operate on any drive and are interchangeable between drives, including those with the Fixed Head Feature installed. The mdl 70F, however, requires that #4301 or #4302 be installed on the drive. System/3 mdl 12 and mdl 15 use only the 3348 mdl 70.

Auto-loading: -- Data Modules are automatically loaded after the Data Module is placed in the drive, cover is closed and a switch is turned on. Start-up time is less that 20 seconds.

Flag-Free: -- Data Modules are shipped from the plant flag-free. If within 90 days after receipt the customer is required to assign an alternate track (using DOS/VS System utilities), he may return the Data Module to IBM and it will be repaired at no cost to the customer.

Capacity Upgrade: -- [Plant only] -- the customer-owned mdl 35 may be capacity upgraded to a mdl 70. Data Modules must be returned to the plant of manufacture for the upgrade service. Downgrading is not available. Recorded data will not be recoverable. Upgrade of either the mdl 35 or 70 to the mdl 70F is not available.

Dimensions:	**Mdl 35**	**Mdl 70**	**Mdl 70F**
Height (inches)	8	8	8
Width (inches)	16	16	16
Maximum Length (inches)	18	18	18
Shipping Weight (lbs)	21	23	24

Covers are sealed at the plant and are unbreakable and nonflammable. A large handle is provided for ease of installation, removal and transportation. The Data Module has an aperture that is opened (or closed) automatically by the drive during loading (or unloading). The Data Module is then connected to the drive for power and communications.

A CE cylinder is assigned to facilitate maintenance of the 3340.

Data Recovery: [Plant only] -- should data in the field, for any reason, prove unrecoverable, a method for data recovery assistance at the plant of manufacture will be provided. The customer is required to provide a sufficient number of appropriate media (tapes, disk modules, etc.) to contain recovered data when returning the head and disk assembly to the plant for data recovery.

Initialization: -- the Data Module will be initialized at the plant. Home addresses and record zero will be written for each track.

3348 Data Module Repair Service: (Plant only)

	Mdl 35	**Mdl 70**	**Mdl 70F**
Replace one or more damaged disks (including servo disk) and heads, clean and lubricate, and retest to new data module performance specifications. (Does not include covers.)	**	**	**
Replace one or more damaged heads (including fixed head assembly on the 70F), clean and lubricate, and retest to new data module performance specifications.	**	**	**
Clean and lubricate and retest only. (This price will be charged if no disk/heads require replacement.)	**	**	**

Refer to IBM for all prices.

SUPPLIES (None)

3350 DIRECT ACCESS STORAGE

PURPOSE

High-speed, large capacity, direct access storage for attachment to any virtual storage S/370 Processor (except 3115 or 3125), 4331 (Model Group 2), 4341, 4361 or 4381 Processor.

MODELS

Model A2	A02	2-drive disk storage and associated control for attachment to 3145 models GE, GFD, H, HG or I via the 3345 model 3, 4 or 5, to the 3145 models H2, HG2, I2, IH2, J2, JI2 or K2 via the ISC (#4660), to the 3145-3 or 3148 via the ISC (#4660), to the 3158 or 3168 via the ISC (#4650), to the 3830 model 2 or 3, to the 3880 model 1, 2 or 11. It provides logic and power for the attachment of up to three 3350 model B2/B2F units or up to two model B2/B2F units and one C2/C2F unit.
Model A2F	A2F	2-drive disk storage and associated control with the same attachment capabilities as the model A2. It features Fixed Heads which provide up to 1,144,140 bytes of zero seek time storage on each drive in lieu of the same capacity under the moving heads.
Model B2	B02	2-drive disk storage unit. Up to three 3350 model B2/B2Fs can be attached to a 3350 model A2/A2F.
Model B2F	B2F	2-drive disk storage unit with the same attachment capabilities as the model B2. It features Fixed Heads which provide up to 1,144,140 bytes of zero seek time storage in each drive in lieu of the same capacity under the moving heads.
Model C2	C02	2-drive disk storage and associated control. Provides an alternate controller function within a 3350 string. The model C2 functions as a model A2 or B2 depending upon the setting of a manual switch on the unit. A 3350 string containing a model C unit requires a model A unit with Primary Controller Adapter (#1320) and may include 0, 1 or 2 model B2/B2F units.
Model C2F	C2F	2-drive disk storage and associated control with the same attachment capabilities as the model C2. It features Fixed Heads which provide up to 1,144,140 bytes of zero seek time storage in each drive in lieu of the same capacity under the moving heads.

Maximum: See M3145, 3145-3, 3148, 3158, 3168, 3345 ISCs, 3830 model 2 or 3, 3880 pages.

Prerequisites: A 3350 DAS requires -- a 3350 model A2 or A2F; any virtual storage 4331 (Mdl Group 2), 4341, 4361 or 4381 processor or S/370 processor (except 3115 or 3125) with appropriate attachment and features. A 3145 requires Word Buffer (#8810) to attach 3350s. Expanded Control Store (#2151), Control Store Extension (#2150), and Register Expansion (#6111) are required on the 3830 mdl 2 or 3158, 3168 ISCs to attach 3350. Expanded Control Store (#2152) and Register Expansion (#6111) are required on the 3145, 3145-3, 3148 or 3345 ISCs, or 3830 mdl 3 to attach 3350.

IMPORTANT: See the appropriate DASD storage control feature or machine to determine any additional prerequisite Specify and/or Special Features to attach a 3350.

HIGHLIGHTS

The 3350 features high data rate, fast access, multiple formats and low cost per byte. It employs a fixed storage medium.

Selective Format: Drive format may be 3330 model 1 or 3330 model 11 compatibility mode or 3350 native mode. Format is specified at time of order by individual drive. Format changes may be made by CE in the field. In 3330 model 1 or model 11 compatibility mode the Fixed Head storage capacity on the models A2F, B2F and C2F is 742,710 bytes per drive. In 3330 model 1 compatibility mode this Fixed Head storage capacity is associated with the first of the two logical 3330 model 1 volumes on each 3350 drive. In 3350 native mode Fixed Head storage capacity on the models A2F, B2F and C2F is 1,144,140 bytes per drive.

Cylinder Concept:	**3330 model 1 Mode**	**3330 model 11 Mode**	**3350 Native Mode**
Bytes per Track	13,030	13,030	19,069
Tracks per Logical Cylinder	19	19	30
Logical Cylinders per Drive	2x404	808	555
Approx. capacity/drive (MB)	2x100	200	317.5

Data Rate: 1,198,000 bytes per second.

Access Time: Average seek time is 25ms with a minimum of 10ms and a maximum of 50ms. Average rotational delay is 8.4ms. For 3350 models A2F, B2F and C2F cylinders 1 and 2 (3350 Native Mode), or cylinders 1 through 3 (3330 model 11 compatibility mode), or cylinders 1 through 3 of the first of the two logical volumes on a drive (3330 model 1 compatibility mode), have a seek time of zero ms. All other cylinders retain the above seek timing.

Error Correction: Provides capability of correcting single data error bursts of up to four bits span as well as detecting all single error bursts of up to ten bits span.

Write Format Release: Frees the subsystem while the drive erases from the end of a formatted write record to the end of the track.

Rotational Position Sensing: Permits channel disconnect during period of rotational latency, thereby providing greater channel availability ... requires one unshared subchannel on a block multiplexer channel for each logical device.

Command Retry: Enables the storage control to recover from certain subsystem errors without recourse to system error recovery procedures.

Read Only: A two position switch is provided for each drive. When the switch is in the "read only" position, the drive is protected from being written upon or erased.

Data Recovery [Plant Only]: Should data in the field prove unrecoverable, data recovery assistance at the plant of manufacture will be provided. The customer is required to provide a sufficient number of appropriate media (tapes, disk modules, etc.) to contain recovered data when returning the head and disk assembly to the plant for data recovery.

Flag Free: The 3350 will be shipped flag free.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V ... must be consistent with system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Format:

	First Drive	Second Drive
3330 model 1 Compatibility Mode	**#9731**	**#9732**
3330 model 11 Compatibility Mode	**#9741**	**#9742**
3350 Native Mode	**#9751**	**#9752**

- **#9608** must be specified for attachment to a 3880 model 1 or 11 Storage Control Unit.

  Note: In addition to the standard control attachment **(#9608)** for a 3880 model 1 or 11 Storage Control Unit, models A2/A2F with string switch **(#8150)** attaching to another 3880 model 1 or 11 Storage Control Unit must specify **(#9608)** a total of twice. Mdls C2/C2F with string switch **(#8150)** attaching to a 3880 model 1 Storage Control must specify **(#9608)** only once.

SPECIAL FEATURES

Primary Controller Adapter (#1320): [Mdls A2, A2F] Permits selection/deselection of the controller of the A2/A2F unit as the online controller via a manual switch on the C2/C2F unit in the string. **Maximum:** One per A2/A2F unit. **Field Installation:** Yes. **Corequisite:** One C2 or C2F unit in the string.

Remote Switch Attachment (#6148): [Mdls A2, A2F, C2, C2F] To attach the String Switch (#8150) to the configuration control panel of a S/370 mdl 158MP or 168MP. **Field Installation:** Yes.

String Switch (#8150): [Mdls A2, A2F, C2, C2F] To link the 3350 to a second attachment. The two attachments may be on the same CPU or different CPUs and may be any two of the following: 3830 Storage Control mdl 2 or 3, 3880 Storage Control mdl 1, 2 or 11, the 3345 Storage and Control Frame mdl 3, 4 or 5, or the ISC (#4660) for attachment to S/370 mdl 145, 145-3 or 148, or the ISC (#4650) for attachment to S/370 mdl 158 or 168 ... see appropriate machines for additional requirements. Switching between the two attachments is under program control. The 3350 may also be dedicated to a single attachment with an enable/disable switch. **Limitations:** See 3880 mdl D11 for restriction on use of #8150 when attached to the paging storage director. **Field Installation:** Yes. **Specify:** The attachment to which this feature will be made must be indicated ... see "Specify" for System Attachment.

3350 Direct Access Storage (cont'd)

MODEL CONVERSIONS

Model changes between 3350 mdl A and mdl B units, or mdl C and mdl B units are available at time of manufacture only. Model changes between 3350 mdl A and mdl C units are not recommended for field installation. Model changes between A2 and A2F units, or B2 and B2F units, or C2 and C2F units are field installable. **Note:** Customer price quotations and customer order acknowledgement letters for purchase MESs must state: "Installation of this mdl change involves the removal of parts which become the property of IBM."

ACCESSORIES (None)

SUPPLIES (None)

3370 DIRECT ACCESS STORAGE

PURPOSE

High-speed, large-capacity, fixed-media, direct access storage for attachment to a 4321, 4331, 4341, 4361 or 4381 Processor or System/38 5381 System Unit.

MODELS

Model A1 A01 Single drive disk storage with two actuators and associated control for attachment to the 4321, 4331, 4341, 4361 or 4381 Processors. It provides logic for the attachment of up to three 3370 model B1 units on the 4321 and 4331, and for the attachment of up to three model B1 and/or B2 units intermixed in any combination to the 4341, 4361, or 4381 processors.

Model A2 A02 Single drive disk storage with two actuators and associated control for attachment to 4341, 4361, and 4381 Processors. The model A2 provides logic for attachment of up to three 3370 model B1 or B2 units intermixed in any combination.

Model B1 B01 Single drive disk storage with two actuators. Up to three 3370 model B1 units may be attached to a 3370 model A1 or model A2.

Model B2 B02 Single drive disk storage with two actuators. Up to three 3370 model B2 units may be attached to a 3370 model A1, when attached to a 4341, 4361, or 4381; or 3370 model A2.

Model A11 A11 Single drive disk storage with two actuators and associated control for attachment to System/38 5381 System Unit (models 4, 5, 7 and 8 only) with a 3370 Attachment Adapter. The model A11 provides logic and power for the attachment of up to three 3370 model B11 units or B12 units intermixed in any combination.

Model A12 A12 Single drive disk storage with two actuators and associated control for attachment to System/38 5381 System Unit (models 4, 5, 7, and 8) with a 3370 attachment adapter. The model A12 provides logic and power for the attachment of up to three 3370 model B11 or B12 units intermixed in any combination.

Model B11 B11 Single drive disk storage with two actuators. Up to three 3370 model B11 units may be attached to a 3370 Model A11 or model A12.

Model B12 B12 Single drive disk storage with two actuators. Up to three 3370 model B12 units may be attached to a 3370 model A11 or A12.

Maximum: See M3880, 4331, 4341, 4361, 4381 or System/38 5381 pages.

Prerequisites: A 3370 mdl B1 or B2 requires a 3370 mdl A1 or A2, and a 3370 mdl B11 or B12 requires a 3370 mdl A11 or A12.

For a 4321 Processor -- a 3370 mdl A1 attached via a DASD Adapter base is standard on the 4321.

For a 4331 Processor Mdl Group 1 -- a 3370 mdl A1 requires a DASD Adapter (#3201) on the 4331.

For a 4331 Processor Mdl Group 2 or 4361 Processor -- a 3370 mdl A1 requires a DASD Adapter (#3201 or #3202) on the 4331 or 4361, or a 3880 Storage Control mdl 1, 2 or 4 attached to the High-Speed Block Multiplexer Channel (#143X) on the 4331 or 4361.

For a 4331 Processor Mdl Group 11 -- a 3370 mdl A1 attaches via a DASD Adapter which is standard on the 4331 Mdl Group 11.

For a 4361 -- a 3370 mdl A1 or A2 requires a DASD/8809 Adapter on the 4361, or a 3880 Storage Control mdl 1, 2 or 4 attached to a High-Speed Block Multiplexer Channel on the 4361.

For a 4341 or 4381 Processor -- a 3370 mdl A1 or A2 requires a 3880 Storage Control mdl 1, 2 or 4 connected to a 2.0 megabyte block multiplexer channel on the 4341 or 4381.

For a System/38 -- A 3370 mdl A11 or A12 requires attachment feature #1130 on the 5381 System Unit (mdls 4, 5, 6, 7, and 8), and a second 3370 mdl A11 or A12 on the 5381 System Unit mdl 8 requires attachment feature #1132. A specify code is also required on the 5381 System Unit to designate the 3370 units to be attached. An additional feature code #3000 is required when the first 3370 mdl A12 or B12 is added to an installed 5381 System Unit. See "Specify" in M5381 pages.

A cable order is required for each A mdl ordered.

For a System/38 -- attachment feature (#1130) on the 5381 System Unit (mdls 4XX, 5XX and 7XX only), for the attachment of the first A11 and up to three B11s. On the 5381 mdl 8XX only, for an additional string of one A11 and up to three B11s, the System/38 requires a second attachment feature (#1132). A specify code is also required on the 5381 System unit to designate the 3370 units to be attached. See "Specify" in M5381 pages.

HIGHLIGHTS

The 3370 features high data rate, fast access, fixed block format, and low cost per byte. It employs a fixed, sealed Head/Disk Assembly (HDA) as the storage medium. The HDA is a field replaceable unit. Two access arms per spindle, each separately addressable with overlapped operation -- locate-locate/read/write. Each arm accesses one-half the data. Reduced power and space requirements. Fixed block architecture allows the specification of DASD space in groups of blocks, making space definition independent of tracks and cylinders.

	Mdl Series	
Fixed Block Format	**01/11**	**02/12**
Data bytes per block	512	512
Blocks per actuator	558,000	712,752
Megabytes per actuator	285.6	364.9
Megabytes per spindle	571.3	729.8

Blocks are separately addressable and jointly form a contiguous address space.

	Mdl Series	
Performance Factors	**01/11**	**02/12**
Ave. Seek (arm motion)	20 ms	19 ms
Latency	10.1ms	10.1ms
Data Rate (+ or - 3%)	1.859 MB/sec.	1.859 MB/sec.

Error Correction: Error detection codes correct error bursts occurring in nine bits or less, and detect errors that span three bytes or less.

Automatic Position Sensing: Fixed Block Architecture provides for relative block addressing, each block separately addressable. When attached to the 4321, 4331, 4341, 4361, or 4381 Processor, the channel automatically disconnects during period of rotational latency providing greater channel availability. Requires one unshared subchannel on a 4321, 4331, 4341, 4361 or 4381 block multiplexer channel for each logical address.

Command Retry: [Not available with the System/38] Enables the storage control to recover from certain subsystem errors without recourse to system error recovery procedures.

Write Protect Function: A switch is provided for each Drive Address to select a Write Protect function. On the 3370 mdls A01, B01, A02, B02, this function provides the means to protect data from being rewritten or erased. When the read/write switch is in the read-only position, any write command is rejected. The switch state can be changed only when the device is not selected. On the 3370 mdls A11, B11, A12, B12 (System/38), when a write operation is called for with the switch in the read-only position, the system will halt with an operator prompt to return the switch to its read/write position.

HDA Data Recovery: [Plant only] Should data in the field prove unrecoverable, data recovery assistance at the plant of manufacture will be provided. The customer is required to provide a sufficient number of appropriate media (tapes, disk modules, etc.) to contain recovered data when returning the head and disk assembly to the plant for data recovery.

Bibliography: GA26-1657

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **Note:** 240V is compatible with a 230V system. Specify **#9903** for 208V, **#9915** for 240V. Specify **#9986** for power cable 6 ft., 60 Hz, Chicago only.

- Color: The color for the base enclosure is pearl white. For accent panel color (mdls A1, A2, A11 and A12) specify **#9060** for willow green, **#9061** for garnet rose, **9062** for sunrise yellow, **9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray.

SPECIAL FEATURES

String Switch (#8150): [Mdl A1, A2] To attach the 3370 to a second Storage Director or DASD Adapter. The two Storage Directors may be on the same processor or different processors. Switching between the two Storage Directors or DASD Adapter is under program control. The 3370 may also be dedicated to a single attachment with an enable/disable switch. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3375 DIRECT ACCESS STORAGE

PURPOSE

High-speed, large-capacity, direct access disk storage for attachment to a 145, 148, 155-II, 158, 165-II, 168 or 3031, 3032, 3033, 3042 Attached Processor Model 2, 3081, 3083, 3084, 4341, 4331 Mdl Group 2, 4361 or 4381 Processor.

MODELS

Model A1 A01 — A disk storage unit with one head and disk assembly (HDA), two actuators and associated control for attachment to a 3880 Storage Control model 1 or 2. It provides logic and power for attachment of up to three 3375 3375 model B1 units.

Model B1 B01 — A disk storage unit with one HDA and two actuators. Up to three 3375 model B1s can be attached to a 3375 model A1.

Model D1 D01 — A disk storage unit with one HDA, two actuators, and associated control. In a 3375 string, the model D1 provides a dual controller function with a second data path to each HDA. It may be attached to the same system as the model A1, or to a different system. A 3375 string containing a model D1 requires model A1 and two B1 units.

Limitations: 3375 units may attach only to 3880 Storage Control mdls 1, 2, or 4. For systems attachment, see 3031, 3032, 3033, 3081, 3083, 3084 or 4300 pages.

The mdl A1 and mdl D1 in the same string cannot be attached to the same storage director on the 3880, nor through the same channel on the processor.

Maximum: Up to three 3375 mdl B1 storage units may be attached to one 3375 mdl A1. In a dual controller string, two mdl B1 storage units and one 3375 mdl D1 storage unit may be attached to one mdl A1. Up to four mdl A1 or mdl D1 storage units may be attached to a 3880 storage director for a maximum of 32 addresses (actuators).

Prerequisites: A 3375 mdl A1 is required to attach 3375 mdl B1s. A 3880 Storage Control mdl 1, 2, or 4 required to attach a 3375 to a processor. Attachment of 3880 to a 4341, 4331 Mdl Group 2, 4361 or 4381 processor requires a block multiplexer channel with a data rate of at least 1.86MB. Attachment to 3031, 3032 or 3033 Processors or to a 3042 Attached Processor mdl 2 requires Data Streaming (#4850) installed on processor channel groups or Speed Matching Buffer feature (#6560) installed on the 3880. Attachment to a 3081, 3083 or 3084 processor is via any block multiplexer channel. Attachment to 145, 148, 155-II, 158, 165-II or 168 Processors require a Speed Matching Buffer (#6560) installed on the 3880.

A 3375 string containing a mdl D1 requires a mdl A1 and two mdl B1s. Each mdl A1 and B1 must have a mdl D1 attachment feature installed.

Write Protect Function: A switch for each drive address provides the means to protect data from being rewritten or erased. When the read/write switch is in the read-only position, any write command is rejected. The switch state can be changed only when the device is not selected.

HIGHLIGHTS

The 3375 features high data rate, fast access and low cost per byte of storage. Each 3375 unit contains one 819.7MB sealed and permanently mounted head and disk assembly. There are two actuators per HDA, each is separately addressable and accesses one-half of the HDA storage (409.8MB). Each seeking and rotational position sensing of any actuator can be overlapped with seeking, rotational position sensing, and data transfer of the other actuators.

With a mdl D1 installed, a data transfer operation from an actuator in any unit in the string may be overlapped with another data transfer operation from an actuator in any other unit in the string.

Characteristics:

General –		
Actuators per HDA	2	
HDAs per unit	1	
Capacity –		
per actuator	409.8	MB
per HDA	819.7	MB
per max string	3.27	GB
Access Time –		
Average seek (actuator motion)	19	ms
Average latency	10.1	ms
Data Rate –	1.859	MB/ sec.

Data Format: Count-key-data.

Error Correction: Capability is provided to correct as well as detect single data error bursts of up to sixteen bits if the burst spans no more than two contiguous bytes.

Rotational Position Sensing: Permits channel and storage director disconnect during period of rotational latency, thereby providing for improved channel utilization and system performance potential ... requires one unshared subchannel on a block multiplexer channel for each logical device address (each actuator).

Head and Disk Assembly Data Recovery: [plant only] Should data in the field prove unrecoverable, data recovery assistance will be provided at the plant of manufacture. Branch Office Field Engineering will initiate the recovery procedure. The customer is required to provide a sufficient number of appropriate media (tapes, disk modules, etc.) to contain recovered data when returning the head and disk assembly to the plant for data recovery.

Flag Free: The 3375 will be shipped Flag Free.

Bibliography: GC20-0001

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9915** for 240V.
- Color: [mdl A1] **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray.

SPECIAL FEATURES

Model D1 Attachment For Model A1 (#4951): This feature must be included on all mdl A1 boxes that are installed in a string that includes a mdl D1. **Field installation:** Yes.

NOTE: A mdl A1 with this feature installed will not operate in a string without a mdl D1.

Model D1 Attachment Feature For Model B1 (#4952): This feature must be included on all mdl B1 boxes that are installed in a string that includes a mdl D1. **Field Installation:** Yes.

NOTE: A mdl B1 with this feature installed will not operate in a string without a mdl D1.

String Switch (#8150): [mdl A1 and D1] - For use with 3880 Storage Controls mdls 1, 2 or 4 only. #8150 is used to attach the 3375 mdl A1 or mdl D1 to a second storage director. The two storage directors may be on the same processor or different processors. Switching between the two storage directors is under program control. The 3375 may also be dedicated to a single attachment through enable/disable switches. **Maximum:** One each on mdl A1 and mdl D1. **Field Installation:** Yes.

MODEL CONVERSIONS

Model changes between models A1 and B1 or between models A1 and D1 are available at time of manufacture only. A model change from a B1 to a D1 is permitted in the field. A model change from a D1 to a B1 is not recommended for field installation.

ACCESSORIES (None)

SUPPLIES (None)

3380 DIRECT ACCESS STORAGE

PURPOSE

High-speed, large-capacity, direct access disk storage for attachment to 4341, 4361, 4381, 3031, 3032, 3033, 3081, 3083, 3084 Processors, 3042 Attached Processor model 2 and S/370 models 158, 158-3, 168 and 168-3.

MODELS

Model A4 A04 — A disk storage unit with two head and disk assemblies (HDAs), four actuators and associated control for attachment to a 3880 model 2 or 3 storage director. It provides logic and power for attachment of up to three 3380 model B units.

Model AA4 AA4 — A disk storage unit with two HDAs, four actuators and associated controls for attachment to two 3880 model 2, 3 or 13 storage directors. 3380 actuators are arranged on multiple internal paths within a string, with up to four actuators sharing a path. Dynamic path selection controls access to the actuators. It provides access by both storage directors to all actuators in a 3380 string and enables concurrent data transfer operations, via each storage director, to actuators not sharing an internal data path. The logic and power are provided for attachment of up to three 3380 mdl B units.

Model B4 B04 — A disk storage unit with two HDAs and four actuators. Up to three 3380 model Bs can be attached to a 3380 model A.

Prerequisites: A 3380 mdl A is required to attach 3380 mdl Bs. A 3880 Storage Control mdl 2, 3 or 13 is required to attach a 3380 to a processor block multiplexer channel ... a 3380 mdl AA4 requires one storage director in a 3880 mdl 2 or 3 ... a 3380 mdl AA4 requires two storage directors that can be within the same 3880 mdl 3 or within two different 3880 mdl 2s or 3s. When attached to a 3880 mdl 13, the 3380 mdl AA4 must be attached to storage directors within the same 3880 mdl 13. Attachment of 3380 through 3880 mdl 2, 3 or 13 to 3031, 3032, 3033 Processors, and 3042 Attached Processor mdl 2 on 3.0MB/sec. block multiplexer channels requires Data Streaming (#4850) on those processor units. Operation at a 3.0MB/sec. data rate on the 4341, 4361 and 4381 Processor requires attachment to a 3.0MB/sec. channel. Attachment to 3031, 3032, 3033 Processors and 3042 Attached Processor mdl 2 without Data Streaming feature, to S/370 mdls 158, 158-3, 168 and 168-3, on 1.5MB/sec. block multiplexer channels, and to a 2.0MB/sec. block multiplexer channel on the 4341, requires Speed Matching Buffer for 3380 (#6550) on each 3880 mdl 2 or 3 storage director attaching the 3380 to a channel. Attachment to a 3081 Processor is via any block multiplexer channel for operation at 3.0MB/sec. Attachment to 4381 Processors via speed matching buffer (3380 #6550) in shared DASD environments requires attachment to a 3.0MB/sec. channel on the 4381.

Maximum: Up to three 3380 mdl B storage units may be attached to one 3380 mdl A. Two 3380 mdl A4s or two 3380 mdl AA4s can be attached to one 3880 storage director, allowing up to eight 3380 units per storage director. **Limitations:** Mdl A4 cannot be attached to same storage director as mdl AA4s ... If two mdl AA4s are attached to one storage director, they must both be attached to the same second storage director. For systems attachment, see S370 or M3880 pages.

HIGHLIGHTS

The 3380 features high data rate, fast access and low cost per byte of storage. Each 3380 unit contains two 1.26 billion byte (1.26 gigabytes) sealed and permanently mounted head and disk assemblies. There are two actuators per HDA -- each accessing one-half of the HDA storage (630 megabytes), each separately addressable. Seeking and rotational position sensing of any actuator can be overlapped with seeking, rotational position sensing, and data transfer of the other actuators. Mdl AA4 enables attachment of a 3380 string to a second storage director with dynamic path selection controlling access to the actuators, providing access via both storage directors to all data and storage control status in a string.

Characteristics:

General –		
Actuators per HDA	2	
HDAs per unit	2	
Capacities –		
per actuator	630	MB
per HDA (two actuators)	1.26	GB
per unit (four actuators)	2.52	GB
per max string (sixteen actuators)	10.08	GB
Access Times –		
Average seek (actuator motion)	16	ms
Average latency	8.3	ms
Data Rate –	3.0	MB/sec.

Processor Attachment Data Rate: The data transfer rate of the 3380 is 3.0MB/sec. This 3.0MB/sec. data rate can be attained on 3031, 3032 and 3033 Processors and 3042 Attached Processor mdl 2 that have the Data Streaming feature (#4850) installed or on a 3.0MB/sec. block multiplexer channel on a 3081/3083/3084 Processor, a 4341/4361/4381 Processor.

Attachment of the 3380 to 1.5MB/sec. block multiplexer channels on 3031, 3032 and 3033 Processors and 3042 Attached Processor mdl 2 that do not have the Data Streaming feature installed, to S/370 mdls 158, 158-3, 168 & 168-3 and to a 2.0MB/sec. block multiplexer channel on the 4341 is supported with installation of the Speed Matching Buffer for 3380 feature (#6550) on the 3880 mdls 2 and 3. Attachment of the 3380 to 4381 Processors in shared DASD environments via speed matching buffer (#6550) is supported only on 4381 3.0MB/sec. channel.

The Speed Matching Buffer for 3380 feature supports two speeds: 1.5MB/sec. and 3.0MB/sec, and may be installed on each 3880 storage director that attaches to a 3380. The Speed Matching Buffer for 3380 feature may be used for 3380 attachment to the processors having 1.5MB/sec. channel capability while also providing (using the optional switch features on the 3880 mdls 2 and 3) for 3380 attachment to the processors having 3.0MB/sec. channel capability. Establishment of either the 1.5 or 3.0MB/sec. data rate with the block multiplexer channel is done in the 3880. This dual-speed capability of the speed matching buffer retains the advantages of higher speed channels while sharing 3380 by processors having different channel speeds.

See 3880 mdls 2 and 3 with Speed Matching Buffer for 3380 feature for additional details and system performance considerations.

Data Format: Count-key-data provides format continuity with current IBM large systems direct access storage products.

Dynamic Path Selection: Incorporated in model AA4, which attaches to two 3880 storage directors. Dynamic path selection controls access to the actuators, providing paths via both storage directors to all actuators in a 3380 string ... designed to allow concurrent data transfer operations to actuators on different internal data paths in a 3380 string. When Dynamic Path Selection is used with the 370-XA channel subsystem, the 3380 can dynamically reconnect to the first available channel path identified by the originating processor. This has the potential of increasing effective throughput or improving response time.

Error Correction: Capability is provided to correct single data error bursts contained within three bytes as well as detecting all single data error bursts contained within five bytes.

Rotational Position Sensing: Permits channel and storage director disconnect during period of rotational latency, thereby providing for improved channel utilization and system performance potential ... requires one unshared subchannel on a block multiplexer channel for each logical device address (each actuator).

Format Write Release: Enables channel and storage director to disconnect while the remainder of a track is being erased following the end of a format written record.

Separate Actuator Maintenance: Enables the associated logic and controls of each actuator to be serviced independent of and concurrent with customer operation of the other actuators within the same HDA and string.

Head and Disk Assembly Data Recovery: [plant only] Should data in the field prove unrecoverable, data recovery assistance will be provided at the plant of manufacture. The customer is required to provide a sufficient number of appropriate media (tapes, disk modules, etc.) to contain recovered data when returning Head and Disk assembly to the plant for data recovery.

Flag Free: The 3380 will be shipped with all tracks flag free.

Bibliography: GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9915** for 240V.
- Color: **#9060** for willow green, **#9061** for garnet rose, **#9062** for sunrise yellow, **#9063** for classic blue, **#9064** for charcoal brown, **#9065** for pebble gray.
- Tool Kit: Required for CE maintenance. Contact the account Field Manager for requirements.

  For Rental Customer: Specify **#9750** for first 3380 A04 or AA4 ordered for a customer. If required for a multiple machine installation, because of physical machine locations, an additional Tool Kit(s) is available on no-charge MES.

  For Purchase Customer: Specify **#9750** on each 3380 A04 and AA4 machine order. When installed 3380 A04s or AA4s are purchased, a Tool Kit is to be ordered on no-charge MES for each machine.

SPECIAL FEATURES (None)

3380 Direct Access Storage (cont'd)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3410 MAGNETIC TAPE UNIT
3411 MAGNETIC TAPE UNIT and CONTROL

PURPOSE

Magnetic tape units and controls for a System/3 models 8/10/12/15, System/38 or 3790 Communication System, S/370 models 115 through 158, a 3031 Processor, or a 4331, 4341 or 4361 Processor ... the 3410 model 1 can be used with a 3881 Optical Mark Reader model 2 or a 3886 Optical Character Reader model 2 ... the 3411 and 3410 model 3s can be used with a 3800 Printing Subsystem ... the 3411 model 1 can be used with a 3776 Communication Terminal model 3 or 4, or a 3777 Communication Terminal model 3 or 4.

MODELS

Model 1	001	20,000 8-bit bytes per second (1600 bpi)
Model 2	002	40,000 8-bit bytes per second (1600 bpi)
Model 3	003	80,000 8-bit bytes per second (1600 bpi)

Maximums: Interconnected 3410s and 3411s must be of the same mdl ... mdls cannot be intermixed. The maximum number of tape units (3410s) per 3411 are:

Mdl 1 - up to three 3410 mdl 1s ... a total of 4 drives.*
Mdl 2 - up to five 3410 mdl 2s ... a total of 6 drives.*
Mdl 3 - up to five 3410 mdl 3s ... a total of 6 drives.*

* For System/3 mdls 8/10/12/15 or S/38: Maximums for mdls 2 and 3 are the same as mdl1.

Limitations: A maximum of one 3410 mdl 1 can be attached to a 3881 or 3886; no 3411 is required. A maximum of 4 tape drives (any mdl) can be attached to a System/3 mdl 8/10/12/15 or System/38.

Prerequisites: Each 3411 requires the following:

For System/3 mdl 10/15: A 3411 Magnetic Tape attachment (#7951) on the 5410 or 5415 and System/3 mdl 8/10/12/15, System/38 Attachment (#7003) on the 3411... see "Special Features".

For System/3 mdl 8: A 3411 Magnetic Tape Attachment (#7960) on the 5408 and System/3 mdl 8/10/12/15, System/38 Attachment (#7003) on the 3411... see "Special Features".

For System/3 mdl 12: A Basic Attachment Feature (#4701) and a 3411 Magnetic Tape Attachment (#7960) on the 5412 and System/3 mdl 8/10/12/15, System/38 attachment (#7003) on the 3411 ... see "Special Features".

For System/38: A 3411 Magnetic Tape Adapter (#7960) on the System/38 and System/3 mdl 8/10/12/15, System/38 attachment (#7003) on the 3411 ... see "Special Features". Each 3410 requires and appropriate model of the 3411, except when a 3410 mdl 1 is attached to a 3881 or 3886.

For S/370 mdl 115, 125: A 3411 Magnetic Tape Adapter (#4675) on the 3115 or 3125 and S/370 mdl 115/125 Attachment (#7361) on the 3411 except with 3115 mdl HG2, 3125 mdl HG2 and I2. When attached to 3115 mdl HG2, or 3125 mdl HG2 or I2, RPQ 870061 is required on the 3411 ... see "Special Features".

For S/370 mdl 135 and up, and all 4300 processors: A control unit position on a system channel, plus S/370 Attachment (#7360) on the 3411 ... see "Special Features".

S/370 mdl 135: Multiplexer channel (standard), selector or block multiplexer channels (special features) ... see M3135 pages. *NOT* supported on byte multiplexer channel for concurrent operation with Integrated File Adapter, Integrated Communications Adapter or Selector Channel.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages. *NOT* supported on byte multiplexer channel for concurrent operation of Integrated File Adapter, Integrated Communications Adapter or Block Multiplexer Channel.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages. *NOT* supported on byte multiplexer channel for concurrent operation of Integrated File Adapter, Integrated Communications Adapter, or Block Multiplexer Channel.

S/370 mdl 145: Multiplexer channel (standard), selector channels (one is standard), or block multiplexer channel (special feature) ... see M3145 pages.

S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158: Block multiplexer channel (first two are standard) ... see M3155, 3158 pages.

3031 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031 pages.

4300 Processors: Byte multiplexer channel ... block multiplexer channel ... see M4331, 4341, 4361, 4381 pages.

3776 Communication Terminal mdl 3 or 4, or 3777 Communication Terminal mdl 3 or 4: 3411 Magnetic Tape Unit and Control mdl 1 Attachment feature (#7801) on the terminal ... see "Special Features" in M3776 or 3777 pages. The 3411 requires System/3-3770/3790 Communication System Attachment feature (#7003).

3790 Communication System: A Magnetic Tape Attachment feature (#7840) on the 3791 Controller. The 3411 requires a 3790 Attachment feature (#7003).

3800 Printing Subsystem: Tape-to-Printing Subsystem Feature (#7810) on the 3800 ... see "Special Features" in M3800 pages. **Note:** A control unit position is not required. 3410 and 3411 mdl 3s only may be attached. Up to eight tape control units may be attached provided that power sequencing and control connection for all other than one are provided by a system.

3881 Optical Mark Reader: A 3881 mdl 2. One 3410 mdl 1 only may be attached.

3886 Optical Character Reader: A 3886 mdl 2. One 3410 mdl 1 only may be attached.

Magnetic Tape: IBM Multi-System Tape (MST) or equivalent, is recommended for optimum performance. The minimum properties required for satisfactory performance are described in *Tape Requirements for One-Half Inch Tape Units,* GA32-0006-5.

HIGHLIGHTS

The 3410 is a single tape unit controlled by a 3411. The 3411 is a single channel control unit with one tape drive.

- Efficient, compact, space-saving design.
- Dual Density feature ... allows processing of data recorded at 1600 bpi PE or 800 bpi NRZI.
- 7-Track feature ... tape written in 7-track format compatible with tapes written at 200, 556, 800 bpi by 729/7330/7335 and 2401/2402/2403/2404/2415/3420 tape drives equipped with 7-track read/write heads. **Note:** 7-track tapes cannot be read with a 3776 mdl 3 or 4, or a 3777 mdl 3.
- Radial attachment of tape unit permits limited off-line servicing.
- Simplified tape threading path.

Checking: During write operations, both parity and signal amplitude are checked. (When utilized with a 3881 Optical Mark Reader and the 3886 Optical Character Reader, both are checked in 800 bpi NRZI ... signal amplitude only in 1600 bpi.) During read operation, parity is checked.

Error Correction: In 1600 bpi PE recording format, single-track error correction in flight takes place. For 9-track 800 bpi NRZI, track in error (T.I.E.) is provided (not applicable when utilized with 3881 Optical Mark Reader and the 3886 Optical Character Reader).

Functions: The following table indicates feature numbers for corresponding functions:

Subsystem Function	Feature Name	3411 Control Unit	3410* Tape Unit (includes tape unit on 3411)
1600 bpi 9-track only	Single Density	Standard	#3211
1600 bpi PE/800 bpi NRZI 9-track	Dual Density	**#9150**	#3211 or #3221
1600 bpi PE/200-556-800 bpi NRZI 7-track	7-track	**#9160****	#3211 or #6550

* Tape units must all be same mdl as 3411.
** Feature #9160 not available on System/38.

Characteristics	Mdl 1	Mdl 2	Mdl 3
Data rate (kb/sec)			
at 1600 bpi (PE)	20	40	80
at 800 bpi (NRZI)	10	20	40
at 556 bpi (7-track)	6.9	13.9	27.8
at 200 bpi (7-track)	2.5	5.0	10.0
Recording Density (bpi)	1600/800/556/200 (all mdls)		
Tape Speed (ips)	12.5	25	50
Nominal IBG (inch) -- 9-track	0.6	0.6	0.6
Nominal IBG (inch) -- 7-track	0.75	0.75	0.75
Nominal IBG Time (ms) -- 9-track	48	24	12
Nominal IBG Time (ms) -- 7-track	60	30	15
Nominal Rd/Wr Access Time (ms)	15	12	6
Rewind Time 2400 ft. Reel (min.)	3	3	2

3410/11 (cont'd)

Publications: S/370 -- GC20-0001, 3881 -- GA21-9127 and GA21-9143, System/3 -- GC20-8080, System/34 -- GC21-5754. Also, *IBM 3410/3411 Component Summary,* GA32-0015, GA32-0022.

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V, or **#9904** for 230V. If used with a 3881 Optical Mark Reader, a 3886 Optical Character Reader, or a 3800 Printing Subsystem, voltage must be consistent.
- Dual Density, Control (3411 only) - **#9150**: Permits attachment of 3410s equipped with Dual Density, Tape Unit (#3221) and installation of Dual Density, Tape Unit (#3221) on the 3411 itself. 3410s equipped with Single Density, Tape Unit (#3211) can also be attached. **Limitations:** Cannot be installed on same 3411 with **#9160**. **Field Installation:** Yes.
- 7-Track, Control (3411 only) - **#9160**: Permits attachment of 3410s equipped with 7-Track, Tape Unit (#6550) and installation of 7-Track, Tape Unit (#6550) on the 3411 itself. 3410s equipped with Single Density, Tape Unit (#3211) can also be attached. **#9160** includes the translator function which, when used, causes 8-bit bytes from the I/O interface to be written on tape as 6-bit BCD characters and 6-bit characters read from tape to be translated into their EBCDIC equivalents. The Data Conversion function, also included, allows reading and writing of 8-bit bytes on 7-track tape by converting four tape characters to three storage bytes and vice versa. **Limitations:** Cannot be installed with **#9150**. Cannot be used with a 3776 mdl 3 or 4, or a 3777 mdl 3 or 4, not available on System/38. **Field Installation:** Yes.
- Additional Tape Units (3411 only) - **#9001**: Required if the number of tape drives is to exceed four (one 3411 plus three 3410s). **Field Installation:** Yes.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Density Formats: The 3410/3411 subsystem can operate in three density formats - 1600 bpi PE, single density ... or 1600/800 bpi, dual density ... or 200/556/800 bpi, 7-track. With the exception of single density, which is standard on the control unit of the 3411, a feature number for the format desired must be specified for each tape unit and the control unit ... see "Special Features" for limitations. Dual Density, Control (**#9150**) is required on the 3411 for Dual Density, Tape Unit (#3221) on the 3411 and attached 3410s ... see Specify **#9150** above. 7-Track, Control (**#9160**) is required on the 3411 for 7-Track, Tape Unit (#6550) on the 3411 and attached 3410s ... see Specify **#9160** above.
- System Attachments: #7003 is required on all System/3 mdls 8/10/12/15, and S/38 Attachment S/370 Mdl 115/125 (#7361) is required for attachment to a 3115 (except mdl HG2) or 3125 (except mdl HG2 and I2). When attached to 3115 mdl HG2, 3125 mdl HG2 or I2, RPQ 870061 is required on the 3411 ... see "Special Features". S/370 Attachment (#7360) is required for attachment to a S/370 mdls 135, 135-3, 138, 145, 145-3, 148, 155, 158, a 3031 Processor, or any 4300 processor, and for attachment to a 3800 mdl 3. System/3-3770/3790 Communication System Attachment (#7003) is required for attachment to a 3776 mdl 3 or 4, or a 3777 mdl 3, or a 3790 system.

  Note: Not available without specifying one of the system attachments listed above.

SPECIAL FEATURES

Single Density, Tape Unit (#3211): [3410, 3411 any mdl] Permits the 3410 or the tape unit on the 3411 to operate at 1600 bpi PE only. **Limitations:** Cannot be installed with #3221 or #6550. **Field Installation:** Yes. **Prerequisites:** If installed on the 3886 Optical Character Reader, #6490 on the 3886.

Dual Density, Tape Unit (#3221): [3410, 3411 any mdl] Permits the 3410 or the tape unit on the 3411 mdl 1,2, or 3 to operate at 800 bpi NRZI as well as 1600 bpi PE. **Limitations:** Cannot be installed with #3211 or #6550. **Field Installation:** Yes. **Prerequisites:** **#9150** on the 3411 (see "Specify") or #3550 on the 3881 or #6485 on the 3886.

7-Track, Tape Unit (#6550): [3410, 3411 any mdl] Permits the 3410 or the tape unit on the 3411 to operate at 200, 556 or 800 bpi NRZI in the 7-track format compatible with 729, 7330, 7335 and 2401, 2402, 2403, 2404, 2415, 3420 tape units equipped with 7-track read/write heads. Tape units with this feature will only read or write 7-track tape. **Limitations:** Cannot be installed with #3211 or #3221, or on System/38. Cannot be used with a 3776 mdl 3 or 4 or a 3777 mdl 3. **Field Installation:** Yes. **Prerequisites:** **#9160** (see "Specify") on the 3411.

System/3 mdls 8/10/12/15/ and System/38 - 3770/3790 Communication System Attachment (#7003): [3411 mdl 1, 2, 3] To attach a 3411 with up to three 3410s to a System/3 mdl 8, 10, 12, 15 or System/38, or to a 3791 Controller, or to attach one 3411 mdl 1 to a 3776 Communication Terminal mdl 3 or 4, or a 3777 Communication Terminal mdl 3 or 4. **Prerequisites:** 3411 (#7960) on 5408 and 5412, or 3411 (#7951) on the 5410 and 5415, or 3411 (#7960) on System/38, or #7801 on the 3776 mdl 3, or 4 or 3777 mdl 3. **Maximum:** One. **Field Installation:** Yes. **Limitations:** Cannot be installed with #7360 or #7361.

S/370 - 3800 Attachment (#7360): [3411 mdl 1, 2, 3] To attach the 3411 to a S/370 mdl 135, 135-3, 138, 145, 145-3, 148, 155, 158, a 3031 Processor, or any 4300 processor.
[3411 mdl 3] To attach the 3411 mdl 3 to a 3800 Printing Subsystem. Up to eight control units may be attached to the 3800 provided that power sequencing and control connection for all other than one are provided by the system. **Limitations:** Cannot be installed with #7003 or #7361 or RPQ 870061. **Field Installation:** Yes. **Prerequisites:** A control unit position on a system channel of the 3135, 3135-3, 3138, 3145, 3145-3, 3148, 3155 or 3158.

S/370 Mdl 115/125 Attachment (#7361): [3411 mdl 1, 2, 3] To attach the 3411 to a S/370 mdl 115 (except mdl HG2) or 125 (except mdl HG2 or I2). When attached to 3115 mdl HG2 or 3125 mdl HG2 or I2, RPQ 870061 is required. **Limitations:** Cannot be installed with #7003, #7360 or RPQ 870061. **Field Installation:** Yes. **Prerequisites:** #4675 on 3115 or 3125.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3420 MAGNETIC TAPE UNIT MDLS 3, 5, 7

PURPOSE

Magnetic tape unit for S/360, S/370 or 4300 processors.

MODELS

Model 3	003	120,000 8-bit bytes/second; for use with any S/370 Processor, with all 4300 processors or 3800 Printing Subsystem.
Model 5	005	200,000 8-bit bytes/second; for use with any S/370 Processor, with all 4300 processors or 3800 Printing Subsystem.
Model 7	007	320,000 8-bit bytes/second; for use with any S/370 Processors except 3115 and 3125, with all 4300 Processors or 3800 Printing Subsystem.

Prerequisites: A 3803 Tape Control.

Limitations: 3420 mdl 7 cannot be attached to the S/370 mdl 115 or 125.

If the 3420 mdl 5 is to be ordered for attachment to a selector subchannel feature of the 2870, consult IBM.

Programming support for the extended diagnostic capabilities of the 3420 requires a minimum system size of 32K.

HIGHLIGHTS

Radial attachment of tape drives to the control unit via a switch located in the control unit, permitting offline service of individual tape units without disturbing the subsystem. 24-line multiplex interface provides advanced diagnostic capability. MST circuitry reduces card count while increasing functions: Expanded sense data, better diagnostic capability, unique device identification, EC level and feature identification.

Limitations: IBM Multi-System Tape (MST) or equivalent is recommended for optimum performance. The minimum properties required for satisfactory performance are described in *Tape Requirements for One-Half Inch Tape Units,* GA32-0006.

Automatic Threading and Cartridge Loading: Threading is automatic with or without the wraparound cartridge; automatic retry (with cartridge only) in case of load failure, stopping on the leader to prevent damage to the recorded surface. With the wraparound cartridge, tape is not exposed to contamination or damage.

9-track 1600 bpi Phase-encoding Operation: Data is recorded parallel by bit, serial by byte, at 1600 bytes/inch, phase-encoded, in nine tracks across the width of the tape. The data format uses eight of the nine bits for data; the ninth bit is a parity bit. Data is recorded in odd parity. The eight bits of one byte can represent an alphabetic character, zoned decimal digit, two decimal digits (packed), a special character, or eight binary bits. The recording format is compatible with the 1600 bpi PE recording of tape units 2401, 2402, 2403, 2404, 2415 mdls 4, 5 and 6, and 2420 mdls 5 and 7. For 9-track 1600 bpi PE operation only, specify Single Density, #6631. See "Special Features". **Prerequisites:** One of the following must be specified on the 3803 Tape Control: **#9570** ... #3551 ... #6407.

9-track 800 bpi NRZI Operation: Tape is written at 800 bpi in the 9-track NRZI format as well as in the 1600 bpi PE format. Data representation is the same as for 1600 bpi PE operation. For 9-track 800 bpi NRZI capability, Dual Density (#3550) is required on the tape unit. See "Special Features".

7-track Operation: Tape is written in the 7-track format compatible with tapes written at either 556 or 800 bpi by 729/7330/7335 and 2401/2402/2403/2404/2415 tape drives equipped with 7-track read/write heads. For 7-track operation, Seven-Track (#6407) is required on the tape unit. See "Special Features".

Checking: Each byte is parity-checked while tape is being read. Data written on tape is read back instantly and checked as in reading, with full parity check.

Error Correction: Single track drop-out errors are corrected "in flight" during 1600 bpi read operations.

Read Backward: All tapes (9- or 7-track) written on a 2401/2402/2403/2404/2415/2420 can be read by the 3420 in a forward or backward direction. The Data Conversion function is inoperative during backward read of 7-track tapes.

Characteristics	Mdl 3	Mdl 5	Mdl 7
Nominal Data Rate (Kb/sec)			
At 1600 bpi PE	120	200	320
At 800 bpi NRZI	60	100	160
At 556 bpi (7-tr.)	41.7	69.5	111.2
(Bytes/Inch) (1600/800/556)	Yes	Yes	Yes
Tape Speed (Inches/Sec.)	75	125	200
Nominal IBG (Inches)			
9-track	0.6	0.6	0.6
7-track	0.75	0.75	0.75
Nominal IBG Time (ms)			
9-track	8.0	4.8	3.0
7-track	10.0	6.0	3.8
Rewind Time (2400 ft. Reel, Seconds)	60	60	45
Rewind-Unload Time (2400 ft. Reel, Sec.)	66	66	51
Auto Threading Time* (Seconds)	10	10	7
Nominal Read/Write Access** Time (ms)	4.0	2.9	2.0

* From initiation (using mounted supply reel) to "Tape Drive Ready".

** Access time is the interval from initiation of a write or forward read command until the first data byte is read or written when tape is brought up to speed from a stopped status.

Publications: GC20-0001

SPECIFY

- Tape Density: One, and only one, of the following must be specified for each tape unit. This applies to MES orders (for field changes) as well. See "Special Features".
  - Single Density **#6631** for 9-track 1600 bpi PE operation only.
  - Dual Density **#3550** for 9-track 800 bpi NRZI operation as well as 1600 bpi PE.
  - Seven-Track **#6407** for 7-track 556 or 800 bpi NRZI operation.

  Note: MES orders for these features to effect field changes should consider that one of these three features **must** be installed on the 3420 or it is incomplete.
- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V ... must be consistent with system voltage.
- Altitude: If 3420 tape drives are to be installed or pneumatics replaced at high altitude (4,001 to 8,000 feet), **#9830** must be specified.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.

SPECIAL FEATURES

Dual Density (#3550): Permits the tape unit to operate at 800 bpi NRZI 9-track as well as at 1600 bpi PE. **Limitations:** Cannot be installed with either Single Density (#6631) or Seven-Track (#6407). **Field Installation:** Yes, except for machines with serial #9XXXX. **Prerequisites:** #3551 on the 3803 Tape Control.

Seven-track (#6407): Permits the tape unit to operate at either 556 or 800 bpi NRZI in the 7-track format compatible with 729, 7330, 7335, and 2401, 2402, 2403, 2404, 2415 tape units equipped with 7-track heads. **Field Installation:** Yes, only to replace Dual Density (#3550) ... otherwise available at time of manufacture only. **Limitations:** Cannot be installed with either Single Density (#6631) or Dual Density (#3550). **Prerequisites:** #6408 on the 3803.

Single Density (#6631): Permits the tape drive to read or write tapes at 1600 bpi PE. **Prerequisites:** One of the following features must be specified for the 3803 Tape Control Unit: **#9570**, #3551 or #6408. **Field Installation:** Yes. **Limitations:** Cannot be installed with either Dual Density (#3550) or Seven-Track (#6407).

One standard 10-1/2" reel of magnetic tape in a wraparound cartridge is shipped with each tape unit. For additional reels of tape and cartridges, see IBM.

3420 MAGNETIC TAPE UNIT MDLS 4, 6, 8

PURPOSE

Magnetic tape unit for S/370 and 4300 processors.

MODELS

Model 4	004	470,000 8-bit bytes/second for use with any S/370 Processor except 3115 and 3125, any 4300 Processor and with a 3800 Printing Subsystem.
Model 6	006	780,000 8-bit bytes/second for use with any S/370 Processor except 3115 and 3125, 4331 Model Group 2 and 11, 4341, 4361, 4381 Processor and with a 3800 Printing Subsystem.
Model 8	008	1,250,000 8-bit bytes/second for use with any S/370 Processor except 3115 and 3125, 4331 Model Group 2 and 11, 4341, 4361, 4381 Processor and with a 3800 Printing Subsystem.

Limitations: 3420 mdls 4, 6 and 8 via a 3803 Control Unit mdl 2 are not supported on byte multiplexer, multiplexer or 2870 selector subchannels at either 1600 bpi or 6250 bpi.

3420 Models 6 or 8 cannot be attached to a S/360 mdl 50. When contemplating the attachment of 3420 mdls 6 or 8 to S/370 mdls 135, 135-3, 145 or 145-3, consult *System/370 Model 135 Channel Characteristics,* (GA33-3010), *System/370 Model 138 Channel Characteristics, System/370 Model 145 Channel Characteristics,* GA24-3573, or *System/370 Model 148 Channel Characteristics, IBM 4331 Channel Characteristics,* GA33-1527 (Mdl Group 1), GA33-1535 (Mdl Group 2) or GA33-1550 (Mdl Group 11).

Prerequisites: A 3803 Tape Control mdl 2.

HIGHLIGHTS

Nominal recording density of 6250 user bytes per inch with a 0.3-inch inter-block gap.

Radial Attachment: Attachment of tape drives to the control unit via a switch located in the control unit, permitting offline service of individual tape units without disturbing the subsystem. 24-line multiplex interface provides advanced diagnostic capability.

Cleaning Mechanism: A new cleaning mechanism is engaged during auto-threading, rewinding, and unloading operations to remove loose contaminants from the tape surface and to protect the recording head. This new cleaning mechanism makes tape cleaning a byproduct of tape processing. The cleaning mechanism does not, however, replace drive cleaning performed by the operator, nor does it replace the need for normal library maintenance.

Automatic Threading and Cartridge Loading: Threading is automatic with or without the wraparound cartridge; automatic retry (with cartridge only) in case of load failure, stopping on the leader to prevent damage to the recorded surface. With the wraparound cartridge, tape is not exposed to contamination or damage.

Automatic Read Amplification: Automatically adjusts the amplifier gain in the tape drive to each individual reel of tape when operating at 6250 bpi.

Checking: Data written on tape is read back instantly to ensure later readability.

Read Backward: Tapes written at 6250 bpi mode can be read in a forward or backward direction. Tapes written at 1600 bpi (phase-encoded) mode can be read in a forward or backward mode if the 3420 mdl 4, 5 or 8 is equipped with the 6250/1600 optional feature.

6250/1600: Optional feature allows the 3420 mdls 4, 6 or 8 to read and record at 1600 bpi (phase-encoded) density as well as 6250 bpi density.

Tape Media: IBM Multi-System Tape (MST) or equivalent is recommended for optimum performance. The minimum properties required for satisfactory performance are described in *Tape Requirements for One-Half Inch Tape Units,* GA32-0006.

Characteristics	Mdl 4	Mdl 6	Mdl 8
Tape Speed (ips)	75	125	200
Recording Density 6250/1600	Yes	Yes	Yes
Nominal Data Rate			
at 6250 Kb/sec.	470	780	1250
at 1600 Kb/sec.	120	200	320
Nominal IBG (in)			
at 6250	0.3	0.3	0.3
at 1600	0.6	0.6	0.6
Nominal Read/Write Access (ms)*			
at 6250	2.3/ 2.1	1.6/ 1.5	1.1/ .95
at 1600	4.0/ 3.0	2.6/ 2.0	1.7/ 1.3
Maximum Rewind Time (seconds)	70	60	45
Maximum Rewind-unload (seconds)	76	66	51
Maximum Auto Thread (seconds)**	10	10	7

* Access time is the time required to read or write the first byte of data in a block after a read/write instruction has been initiated from a stopped position (read/write head positioned in the IBG).

** From initiation (using mounted supply reel) to "Tape Drive Ready".

SPECIFY

- Tape Density: One and only one of the following must be specified for each tape unit (see "Special Features"):

  #6420 for 6250 bpi density only.

  #6425 for 1600 bpi density (phase-encoded) as well as 6250 bpi density.

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, **#9905** for 230V ... must be consistent with system voltage.
- Altitude: If 3420 tape drives are to be installed or pneumatics replaced at high altitude (4,001 to 8,000 feet), **#9830** must be specified.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.

SPECIAL FEATURES

6250 Density (#6420): Permits the tape unit to operate at 9-track 6250 bpi. **Limitations:** Cannot be installed with 6250/1600 density (#6425).

6250/1600 Density (#6425): Permits the tape unit to operate at 6250 bpi density as well as 1600 (phase-encoded) density either this feature or #6420 must be specified. **Limitations:** Cannot be installed with 6250 Density (#6420).

MODEL CONVERSIONS

Model 4	X	X
Model 6		X

ACCESSORIES (None)

SUPPLIES

One standard 10-1/2 inch reel of magnetic tape tested for 6250 bpi in an easy-load cartridge is shipped with each tape unit. For additional reels of tape and cartridges, see IBM.

3430 MAGNETIC TAPE SUBSYSTEM

PURPOSE

Magnetic tape Subsystem for System/38 models 4, 5, 7, and 8, Virtual Storage S/370 models 135 - 168, 4321, 4331, 4341, 4361, 4381, 3031, 3032, and 3033.

MODELS

Model A01	Tape control and a single tape unit.
Model B01	Second, third, or fourth tape units which attach to the model A01.

Maximum Configuration: Up to three 3430 mdl B01s may be attached to a 3430 mdl A01 for a total of four drives.

Prerequisites:

- A 3430 mdl A01 must be the first drive of the string.
- 4321,4331 Mdl Group 1 and 2, 4361 - Block Multiplexer Channel (#1421).
- System/38 - 3430 Attachment (#7970).

The 3430 Tape Subsystem attaches via the selector, or the block multiplexer channels of 370 mdls 135 - 168, 4321, 4331, 4341, 4361, 3031, 3032 or 3033.

HIGHLIGHTS

- Dual-density 246/63 bytes per mm (6250/1600 bytes per inch).
- LSI components for improved reliability.
- Instantaneous data rate of 312,500 bytes per second at 246 bytes per mm (6250 bytes per inch).
- Radial attachment of tape drives for ease of service.
- Space saving as a result of compact packaging and control unit housed in first drive.
- Microdiagnostic package for offline diagnosis and repair verification.

Checking: During a write operation, both parity and signal amplitude are checked. During a read operation, parity is checked.

Error Correction: Reading at 246 bytes per mm (6250 bytes per inch), double-track errors are corrected automatically "in flight". Reading at 63 bytes per mm (1600 bytes per inch) single-track errors are corrected automatically "in flight".

Characteristics:

Data Rate, Instantaneous	
63 B/mm (1600 Bpi)	80 kb/sec
246 B/mm (6250 Bpi)	312.5 kb/sec
Recording Density	246/63 B/mm (6250/1600 Bpi)
Tape Speed	127 cm/s (50 ips)
Nominal IBG	
63 B/mm (1600 Bpi)	15 mm (0.6 in.)
246 B/mm (6250 Bpi)	
Write	11 mm (0.45 in.)
Read	8/11 mm (0.3/0.45 in.)
Nominal Read/Write Access Time *	
63 B/mm (1600 Bpi)	6.0 ms
246 B/mm (6250 Bpi)	6.0 ms
Rewind Time per Reel	
610 meters (2,400 feet)	2.7 minutes

* Access time is the time required to read or write the first byte of data in the block after a read/write instruction has been initiated from a stopped position in the IBG.

Magnetic Tape: IBM Multi-System Tape (MST), or equivalent, is recommended for optimum performance. The minimum properties required for satisfactory performance are described in *Tape Requirements for One-Half Inch Tape Units* (GA32-0006).

Publications:

IBM 3430 Magnetic Tape Subsystem Introduction (GA32-0069),
IBM I/O Equipment Installation Manual, Physical Planning for System/360 and System/370 (TNL to GC22-7064),

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V, **#9914** for 240V.
- Color: **#9065** for Pebble Gray, **#9061** for Garnet Rose, **#9063** for Classic Blue, **#9060** for Willow Green, **#9064** for Charcoal Brown, **#9062** for Sunrise Yellow.

SPECIAL FEATURES

Multiple Drive Attachment Feature (#4991): If the number of tape units in the string exceeds two tape units (i.e., the second mdl B01 is to be attached), the multiple drive attachment feature must be specified to be installed in mdl A01, one feature per mdl A01. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3501 CARD READER

PURPOSE

Punched card input unit for the 3770 Data Communication System or 8100 Information System via 3289 Printer model 3.

MODELS

		Rated 80-column Card Speed
Model 1	001	50 cards/minute

Prerequisites: 3501 Card Reader Attachment (#8050) on the 3289 mdl 3, 3771, 3774, 3775 or 3776.

Limitations: Cannot be installed on a machine with a 2502 Card Reader.

HIGHLIGHTS

Used for automatic entry of punched card data. The 3289 Printer mdl 3 or 3770 System performs all format control and analysis.

Cards are read serially by a sensing mechanism which is checked for proper functioning in every card cycle. EBCDIC or ASCII (3770 System only) code can be read. Hopper and stacker capacity is approximately 400 cards.

The 3501 is packaged as a table-top device.

Card Limitationa: Generally, special feature cards require careful handling and a favorable environment. Use of the following has been approved:

External Scores (after separation): Column 1 edge: M-3, M-4, M-5. Column 80 edge: M-7. All edges: CF-11.

Corner Cuts: Any corner: C5. Upper left and upper right corners: C1, C2, C3.

Verified Cards: Approved cards with verify notch between rows 0 and 1, column 80 edge; or verify punch 2 and 3 in column 81 area.

Card Stock: Regular, edge-coated and heavy duty.

All other special feature cards may result in unsatisfactory performance.

Bibliography: GC20-0001

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9901**.
- Documentation: One must be specified. **#9101** for use with a 3771 ... **#9102** for use with a 3289 mdl 3, 3774 or 3775 ... **#9103** for use with a 3776.
- Cabling: Fixed-length cables are supplied as standard. Refer to *Installation Manual - Physical Planning,* GA27-3006.

3505 CARD READER

PURPOSE

Punched card input unit for a S/360 model 195, or all S/370, 4300 processors.

MODELS

	Rated 80-Column Card Speed
Model B1 B01	800/minute
Model B2 B02	1200/minute

HIGHLIGHTS

The 3505 is a high-speed, fully buffered, card reader, containing its own control unit. With appropriate adapter and control features installed (see "Special Features"), the 3505 provides the power and logic to control one 3525 Card Punch.

All mdls have a 3,000-card capacity file feed and two 1,750-card capacity non-programmable stackers, which operate in an alternating mode. Feeding from the file feed hopper is by means of friction feed rolls with vacuum assist. Failure to feed a card from the hopper is followed automatically by up to three retries before the machine stops.

All mdls have read-column-eliminate capability, which provides the user with the ability, under program control, to suppress the reading of selected card columns. It is recommended to prevent reading in columns that could cause validity and read checks due to invalid codes or open-punched card scores.

Holes in the card are read by a light-sensing mechanism, which is checked for correct operation in every card cycle. Cards punched in either the Extended BCD Interchange Code (Data Mode 1) or Card Image (Data Mode 2) can be read. Machine checks are made for invalid codes (Data Mode 1 punching only), off-punching, and mispositioned cards.

Maximum: The number of 3505 mdls B1 and/or B2 that can be attached depends upon the number of system channel control unit positions available.

Prerequisites: Each 3505 requires an available control unit position on a system channel.

S/360 and S/370 mdl 195: Selector channel of 2860, basic multiplexer channel of 2870, block multiplexer channel of 2880 ... see M2860, 2870, 2880 pages.

S/370 mdl 115, 125: Byte multiplexer channel (special feature) ... see M3115, 3125 pages.

S/370 mdl 135: Byte multiplexer channel (standard), selector channels (special features), block multiplexer channels (special features) ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), or block multiplexer channels (special feature) ... see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Byte multiplexer channel (standard), selector channels (first one is standard), block multiplexer channels (special features) ... see M3145 pages.

S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), or block multiplexer channels (standard) ... see M3148 pages.

S/370 mdls 155, 158: Byte multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155 and 3158 pages.

S/370 mdls 165, 168: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870, block multiplexer channel of 2880 ... see M2860, 2870, 2880 pages.

3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031, 3032 pages.

3033 Processor: Byte multiplexer channel (two are standard), block multiplexer channels (ten are standard) ... see M3033 pages.

3081, 3083, 3084 Processor: Byte multiplexer channels, block multiplexer channels ... see M3081, 3083, 3084 pages.

4300 Processor: Byte multiplexer channel, block multiplexer channel. See M4331, 4341, 4361, 4381 pages.

Card Limitations: Generally, special feature cards require careful handling and a favorable environment. Use of the following card features has been approved:

Internal Scores (before separation): M-4, M-5, OM-2, OM-3, ID-1, ID-2, ID-3 and S-1. **Note:** When using OM-2 or OM-3, either reading must be terminated prior to the column that is scored, or, reading of the scored column and the two adjacent columns must be suppressed by means of the program-controlled Read Column Eliminate feature (see "Special Features"). S-2 may be used prior to folding, and after folding if the card is properly flattened.

External Scores (after separation): Column 1 and 80 end: M-3, M-4, M-5, M-6, M-7, M-11, OM-2, CF-4 and CF-11. Column 1 end only: OM-3. 12 and 9 edge: CF-1/9A. When using CF-1/9A scores on 51-column cards, consult IBM.

Corner Cuts: Any corner: C1, C2, C3, and C5.

Card Stock: Regular, edge-coated, and heavy duty.

Port-A-Punch®: Can be processed.

All other special feature cards may result in unsatisfactory performance and should be tested in an actual application prior to being recommended.

Publications: S/360 -- GC20-0360, S/370 -- GC20-0001

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V or **#9905** for 230V ... must be consistent with system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- High Altitude Group: **#9220** is to be specified when card reader is to be installed at an altitude exceeding 4,300 feet.

SPECIAL FEATURES

Interchangeable Read Feed, 51/80-Column (#3921): [mdl B2] For feeding and reading 51-column cards. The 51 columns of data appear in positions 1 through 51 of the 80-position buffer. A special card weight, file feed, hopper liners and stacker guide assemblies are provided so that the operator can adjust for 80- or 51-column operations. Intermixed cards on the same operation are not supported. Reading speed of the 3505 is maintained. With this feature installed, the capacity of each stacker is permanently reduced to 1,500 cards. Can be used with all other 3505 features. **Field Installation:** Not recommended.

Optical Mark Read (#5450): For reading up to 40 columns of marked data. Marked and/or punched-hole data can be read from a card. Columns in which marks are unacceptable are transmitted as Hex '3F' characters. Same validity checking applies as for holes. Can be used in Card Image Mode, in which case the validity check is suspended. **Note:** See GA21-9124 for card and format specifications. It is recommended that Selective Stacker (#6555) be installed for program-selecting poorly marked cards. **Limitations:** Cannot be used simultaneously with the Read Column Eliminate function. **Field Installation:** Yes.

Selective Stacker (#6555): Provides a third stacker (second logical stacker), which permits time-independent card selection under program control. Card capacity is 1,750 cards. When actually using this feature under DOS, the maximum speed of mdl B2 on the 3115 or 3125 is approximately 1,150 cards/minute. **Field Installation:** Yes.

3525 Card Print Control (#8100): Provides control for Basic Card Print (#1421) installed on a 3525 Card Punch. **Specify:** Either **#9791** for two-line, or **#9792** for multiline. **Prerequisites:** Either #8103 or #8105. **Field Installation:** Yes.

3525 Punch Adapter (#8103): Permits attachment of the 3525 Card Punch without Card Read (#1533). **Limitations:** Cannot be installed with #8105. **Field Installation:** Yes.

3525 Read Punch Adapter (#8105): Permits attachment of the 3525 Card Punch equipped with Card Read (#1533). **Limitations:** Cannot be installed with #8103. **Field Installation:** Yes.

MODEL CONVERSIONS

Field installable.

ACCESSORIES (None)

SUPPLIES (None)

3521 CARD PUNCH

PURPOSE

Punched card output for the 3770 Data Communication System or 8100 Information System (via 3289 Printer Model 3).

MODELS

Model 1 001

Prerequisites: A 3783 Card Attachment Unit mdl 1 for attachment to a 3289 mdl 3, 3771, 3774, 3775, 3776 or 3777 mdl 2, 3 or 4 equipped with 3782/3521 Card Punch Attachment (#8150).

HIGHLIGHTS

Used primarily for punched card output on the 3770 System or 8100 System, but can, when equipped with appropriate optional features, be used alternatively as a card reader and/or to print information on a card. The 3289 mdl 3, 3771, 3774, 3775, 3776 or 3777 mdl 2, 3 or 4 performs all format control and analysis.

Rated 80-column card speed is 50 cards per minute. Hopper and stacker capacity is approximately 400 cards. The 3521 is a table-top unit that is placed on top of the 3782 Card Attachment Unit mdl 1.

Card Limitations: Generally, special feature cards require careful handling and a favorable environment. Use of the following has been approved:

External Scores (after separation): Column 80 ends only: M-4 and M-6.

Internal Scores (before separation): M-4, M-5, OM-2, OM-3, ID-1, ID-2, ID-3, S-1, S-2 may be used prior to folding. **Note:** Also see limitations that apply for Card Read/Punch Check (#1521).

Corner Cuts (any corner): C1, C2, C3 and C5. **Note:** The use of corner cuts C1, C2, C3 in the lower left and lower right corners of the card is not recommended since these cards cannot be read by the 3501 Card Reader.

Card Stock: Regular, edge-coated, and heavy duty.

Verified Cards: Approved cards with verify notch between rows 0 and 1, column 80 edge; or verify punch 2 and 3 in column 81 area.

Color: Brown, red, blue, white, yellow, salmon, green and natural. With Card Print (#1501), print contrast will be reduced on brown, red, blue, salmon and green cards.

All other specify feature cards may result in unsatisfactory performance.

Publications: GC20-0001

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9901**.
- Documentation [One must be specified]: **#9101** for use with a 3771, or **#9102** for use with a 3289 mdl 3, 3774, 3775, 3776 or 3777 mdl 2 or 3.
- Cabling: Fixed length cables are supplied as standard. Refer to *Installation Manual - Physical Planning,* GA27-3006.

SPECIAL FEATURES

Card Print (#1501): For printing up to 80 positions along the top edge of the card. A 64-character set (including blank) is provided. Orders must specify **#9491** for EBCDIC or **#9494** for ASCII (3770 System only). Uses a black ink roll replaceable by the customer. See IBM. **Field Installation:** Yes.

Card Read/Punch Check (#1521): Allows the 3521 to be used alternatively as either a card punch or card reader. Read speed is the same as punch speed (50 cpm). This feature also provides for detection of punching errors by comparing the data read from the card with the punch data for each column. When an error is detected, the machines stops and an error indicator is lit. **Field Installation:** Yes. **Limitations:** [1] Punch checking must be inhibited using 3770 or 8100 job control when punching cards with internal scores or cards that have been prepunched ... [2] This feature is limited to the Punch Checking function only if the host 3289 mdl 3, 3774, 3775, 3776 mdl 1 or 2 is also equipped with a 2502 or 3501 Card Reader ... [3] This feature is limited to the Punch Checking function only when the 3521 is attached to a 3776 mdl 3 or 4, or a 3777 mdl 2, 3 or 4.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3525 CARD PUNCH

PURPOSE

Punched card output unit for a S/360 mdl 195, any S/370 processor, 4331 or 4341 Processor.

MODELS

		Rated 80-column Card Speed
Model P1	P01	100/minute
Model P2	P02	200/minute
Model P3	P02	300/minute

Maximum: S/360 mdl 195 and any S/370 (except mdl 125), 4300 processor: One 3525 can be attached via each 3505 Card Reader mdl B1 or B2. **S/370 mdl 125:** One 3525 can be natively attached via the appropriate adapter on the 3125 ... see M3125 pages.

Prerequisites: S/360 mdl 195 and any S/370, 4331 or 4341 processor: A 3505 Card Reader mdl B1 or B2 with a 3525 Punch Adapter (#8103), or 3525 Read Punch Adapter (#8105). **S/370 mdl 125:** Native attachment via the Integrated 3525 Card Punch Attachment (#4685) on the 3125.

HIGHLIGHTS

The 3525 is a full-function card punch which, when equipped with the appropriate special features, can read and/or print as well as punch 80-column cards in a single pass through the machine. The 3525 attaches natively to a S/370 mdl 125, or via (and within 20 feet of) a channel-attached 3505 Card Reader mdl B1 or B2 to a S/360 mdl 195, or any S/370, 4300 processor ... see "Prerequisites" above.

The basic unit has a 1,200 card capacity hopper and two 1,200 card capacity stackers. Either the EBCDIC (256 codes) or Card Image (Data Mode 2) can be punched. Punches parallel, row by row. Cards go to stacker 1 unless program directed to stacker 2.

Card punching is checked by monitoring the movement of all 80 punches. A card in which a punching error is detected is automatically directed to a dedicated 200-card capacity error stacker and followed by two automatic punching retries ... the first prepunched card is directed to the error stacker for analysis purposes ... the second prepunched card is directed to the stacker originally selected for the error card. Note: Because of automatic punch retry, it is recommended that prepunched or serially numbered preprinted cards not be used in a punch-only mode. When operating in a read/punch mode ... see Card Read in "Special Features" ... detected punching errors do not result in an automatic punching retry and prepunched or serially numbered preprinted cards can be used. In a read/punch mode, a detected punching error causes the machine to stop and manual error recovery procedures are required.

Card Limitations: Generally, special feature cards require careful handling and a favorable environment. Use of the following has been approved:

Internal Scores (before separation): M-4, M-5, OM-2, OM-3, ID-1, ID-2, ID-3 and S-1. When reading cards with internal OM-2 or OM-3 scores (Card Read feature installed), either reading must be terminated prior to the column that is scored, or reading of the scored column and the two adjacent columns must be suppressed by means of the program-controlled read-column-eliminate feature function provided standard with Card Read. S-2 may be used prior to folding, and after folding if the card is properly flattened.

External Scores (after separation): Column 1 and 80 end: M-3, M-4, M-5, M-6, M-7, M-11, OM-2, CF-4 and CF-11. Column 1 end only: OM-3. 12 and 9 edge: CF-1/9A.

Corner Cuts (any corner): C1, C2, C3 and C5.

Card Stock: Regular, edge-coated, and heavy duty.

Port-A-Punch®: Can be punched in unscored fields of the card. Scored columns of these cards cannot be read. If reading capability is required, contact IBM.

All other special feature cards may result in unsatisfactory performance and should be tested in an actual application prior to being recommended.

Publications: S/360 -- GC20-0360, S/370, 4300 -- GC20-0001

SPECIFY

- Voltage (AC, 60 Hz power provided by the 3125 for native attachment or by the 3505 mdl B1 or B2 for channel attachment): **#9903** for 208V or **#9905** for 230V ... must be consistent with 3505 or system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- S/370 mdl 125 Adapter (**#9690**): Required if the 3525 is to be attached via an Integrated 3525 Punch Attachment (#4685) on a 3125. **Field Installation:** Yes.

Print Character Set: Required when Multiline Card Print (#5273) or two-line Card Print (#8339) is ordered. **#9677** -- for EBCDIC or **#9671** -- for ASCII. **Field Installation:** Yes.

SPECIAL FEATURES

Basic Card Print (#1421): Provides a print station following the punch station. Print mechanism consists of a print chain, 64 hammers, and a card stepping device. **Field Installation:** Not recommended. **Prerequisites:** #8100 on 3505 or #4693 on 3125. Also requires #8339 or #5273 on 3525.

Card Read (#1533): Provides an optical hole-sensing station ahead of the punch station. Permits cards to be read in EBCDIC (Data Mode 1) or Card Image (Data Mode 2). Cards are read in parallel fashion (row by row) while the previous card is being punched. Data read is fully buffered and can be used to control later operations on the same card such as punching, printing, and stacker selection.

Read-column-eliminate is standard with the feature. Provides the ability, under program control, to suppress the reading of selected card columns. May be used to prevent reading in columns that could cause validity and read checks due to invalid codes or open-punched card scores. See Port-A-Punch under "Card Limitations" for restrictions. **Field Installation:** Yes. **Prerequisites:** #8105 on the 3505 mdl B1 or B2, or **#9794** on the 3125.

Multiline Card Print (#5273): Provides the ability to print, under program control, on any or all of 25 printing lines on the card. Each print line is 64 characters long and print locations are identical to that of the 2560 MFCM. Maximum speed, in cards/minute, when printing, is dependent upon the machine mdl, the average number of lines printed and the location of the printed lines. Typical speeds are as follows:

	P1	P2	P3
1 Line	100 cpm	200 cpm	300 cpm
2 Lines	100 cpm	200 cpm	240 cpm
3 Lines	67 cpm	133 cpm	150 cpm
4 Lines	67 cpm	114 cpm	133 cpm
6 lines	57 cpm	89 cpm	100 cpm
10 Lines	44 cpm	62 cpm	67 cpm
25 Lines	24 cpm	29 cpm	30 cpm

Limitations: Cannot be installed with #8339. **Field Installation:** Yes. **Prerequisites:** #1421. Also see "Specify" above for specifying the desired character set.

Two-Line Card Print (#8339): Identical in function to Multiline Card Print (#5273) with the exception that printing is limited to lines 1 and 3 (above the 12 punching row and between rows 12 and 11). Maximum speed in cards/minute, when printing, depends upon the machine mdl only. Speeds are as follows:

	P1	P2	P3
1 line	100 cpm	200 cpm	300 cpm
2 lines	100 cpm	200 cpm	300 cpm

Limitations: Cannot be installed with #5273. **Field Installation:** Yes. **Prerequisites:** #1421. Also see "Specify" above for specifying the desired character set.

MODEL CONVERSIONS

Field installable.

ACCESSORIES (None)

SUPPLIES (None)

3602 Finance Communication Controller (cont'd)

tions Adapter (#1601) feature on the 4331 Processor or for communications to an 8100 Information System or for local attachment to the 3704, 3705, 3725 or the Communications Adapter (#1601) feature on the 4331 Processor without requiring modems ... see M3704, 3705, 3725 or 4331 pages, feature #4716. Non-IBM modems may be attached subject to the IBM Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with a 1200 bps Integrated Modem (#5500) . **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6301 or #4501 ... #6302 or #4502.

SDLC Communications With Business Machine Clocking (#4501): Required for attachment to communication lines through the 1200 bps Integrated Modem (#5500) or any 1200 bps external modem which does not have internal clocking or for local attachment to a 3704, 3705, or 3725 at 1200 or 2400 bps (#4716). The SDLC link speed of this feature need not be included when calculating the sum of the loop speeds not to exceed the controller aggregrate bps rate of 12,000 bps. **Limitations:** Cannot be installed with #6301, #6302 or #4502 (unless #4502 has **#9551** for controller attachment). **Maximum:** One. **Field Installation:** Yes.

SDLC Communications Without Business Machine Clocking (#4502): Required for attachment to communication lines through an external modem which does have internal clocking at speeds up to 9600 bps or for local attachment to a 4331 Processor (#4801) at 1200, 2400, 4800 or 9600 bps. The SDLC link speed of this feature need not be included when calculating the sum of the loop speeds not to exceed the controller aggregate bps rate of 12,000 bps. **Limitations:** For host connection without **#9551**. Cannot be installed with #6301, #6302 or #4501. **Maximum:** One for host connection (without **#9551**) plus two with **#9551** for controller attachment. **Field Installation:** Yes. **Prerequisites:** #3701 when ordered without **#9551** and Fan-Out Communication Adapter #1551 when order with **#9551**. **Specify:** When used in conjunction with #1551 for attachment of 3601s, specify **#9551**.

1200 bps Integrated Modem (#5500): An integrated modem for operation at 1200 bps over nonswitched half-duplex or duplex voice grade lines for communication to a host processor through the 3704, 3705, 3725 or the Communications Adapter (#1601) feature on the 4331 Processor or for communications to an 8100 Information System. This integrated modem must communicate with another IBM 1200 bps Integrated Modem. **Limitations:** Cannot be installed with EIA Interface (#3701) . **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6301 or #4501. **Specify:** **#9651** for 4-wire strapping, or **#9652** for 2-wire strapping.

SDLC Communications With Business Machine Clocking (#6301): Required for attachment to communication lines through the 1200 bps Integrated Modem (#5500) or any 1200 bps external modem which does not have internal clocking, or for local attachment to the 3704, 3705, or 3725 at 1200 or 2400 bps (#4716) or for communications to an 8100 Information System. **Limitations:** Cannot be installed with #6302, #4501 or #4502 (unless #4502 has **#9551** for controller attachment). **Maximum:** One. **Field Installation:** Yes.

SDLC Communications Without Business Machine Clocking (#6302): Required for attachment to communication lines through an external modem which does have internal clocking at speeds up to 4800 bps or for local attachment to a 4331 a Processor (#4801) at 1200, 2400, 4800 or 9600 bps. **Limitations:** Cannot be installed with #6301, #4501 or #4502 unless #4502 has **#9551** for controller attachment. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3701 .

1200 bps Loop Integrated Modem (#8001): An integrated modem for transmission to remotely located 3600 Finance Communication System Terminals. Operates at 1200 bps over nonswitched normal quality voice-grade lines. **Note:** Several remote loop configuration variations can be realized; e.g., see the *IBM 3600 FCS Configurator,* GA19-0063. However, facilities are always point-to-point circuits, either 2-wire half-duplex or 4-wire duplex. The common carrier does not tariff 3600 "remote loops". The customer should be referred to the configurator or information in the M2700 pages for definition of the tariffed elements of the remote loop. **Maximum:** One per Add'l Loop (#4735). **Field Installation:** Yes. **Prerequisites:** #4735. Each remote location must have either a 3604 Keyboard Display mdl 2, 3 or 4 equipped with a 1200 bps Loop Integrated Modem (#8001 or #8002), a 3614 or 3624 Consumer Transaction Facility with a 1200 bps Loop Integrated Modem (#8001) or a 3603 as the first attached remote unit in each physical (geographic) location.

MODEL CONVERSIONS

Model 1A can be changed to model 1B. This upgrade requires replacement of the disk storage (not diskette) device. Adequate provision must be made for retaining data contained on disk storage and elimination of user proprietary information. **Limitations:** If model 1A does not have Add'l Disk Heads (#1010) installed, field installation of the Add'l Disk Heads - for model 1B (#1011) concurrently with a model change from model 1A to model 1B requires the submission of an RPQ.

Attachment Factor Functions

Data Sequencing: Allows user applications to sequence, in storage, a block of data items or to collate, in storage, data items from two separate blocks into a third block, according to a parameter list.

Set Diskette: Allows user applications to reset the temporary files, to specify the type of start-up (i.e., warm or cold) to be performed on the next load, and/or to initiate a load of the controller.

Instruction Enhancements: Provides the user application with the following new instructions:

- Bit Manipulation - Test and Branch (LIFON, LIFOFF) - provide a test, set, and branch function in a single instruction. This reduces the 3600 AP processing and memory requirements when processing single bits.
- Logical Compare Data Immediate (CCDI) - compares immediate data to data in a specified field.
- Move Data Immediate (MVDI) - moves immediate data to a specified field.
- Load Data Immediate (LDDI) - loads immediate data into specified register.
- SCALE- formats an input string of characters into a conveniently processable numerical format. When used in processing monetary input, functions such as the removal of the monetary symbol, commas, and periods from the input data are automatically done. In the event that cents were not in the input data, zero padding is optionally provided. SCALE should significantly reduce the number of instructions required to process monetary input.
- Segment Indexing (SETX, TESTX, SETXREG) - provides an alternate method of referencing data within a segment. Only fixed operands of 3600 instructions may be indexed. This function can be used to reduce the number of SETFPL instructions executed by the AP, thereby enhancing performance and reducing AP size. This function also provides a pseudo DSECT facility, thereby enabling an AP to more readily reference (1) variable displaced data within segments and/or (2) data beyond 4K bytes from the beginning of a segment.
- Branch on Index (BRANX) - provides an index increment, compare and branch function in a single instruction. This instruction is used to control the number of times a series of AP instructions will be executed. Since the instruction algebraically increments a register, BRANX can be used in conjunction with the Segment Indexing facility to simplify the processing of tables.
- Execute (LEXEC) - provides a function similar to the S/370 EXECUTE instruction. The amount of data logically ORed into the target instruction may be 2, 4 or 6 bytes.

Priority Dispatching: Provides the ability to specify the order in which 3601/2 workstations are dispatched. This function consists of the LCHAP instruction which activates or deactivates the dispatching priority specified in the table(s) generated by the PRIDSP macro.

Translate: The LTRT instruction processes an input data stream against user specifiable translate tables(s) to generate a translated output data stream. The LTRTBEG, LTRTENT and LTRTGEN instructions assist the user application programmer in specifying the translate table(s).

Extended Statistical Counter Recording: Provides the option to enhance statistical counter recording facilities to assist in fault isolation of degraded loop segments. This facility is particularly useful when a loop consist of multiple remote locations.

Multiple Block I/O - Diskette: Permits multiple blocks to be accessed with a single execution of the LREAD and REPLACE instruction for permanent file and absolute addressing accesses. This may also result in enhanced performance when more than three blocks are read or four blocks are written.

3602 Dynamic Sector Relocate: This facility provides a means of recovery when a Write Sector CRC check occurs. This facility, in most cases, replaces the offline manual procedure which requires a special test diskette to reassign failing sectors.

3270/3600 Datastream Mapping: Provides, via four 3600 assembler language instructions, 3600 controller assistance in converting 3270 output display datastreams into an output datastream processable by 3600 attached devices, and 3604 input datastreams into 3270 input datastreams. Additionally, these instructions can aid in converting 3604 output display datastreams into 3270 output display datastreams.

Extended 3270/3604 Keyboard Mapping: Provides simulation of the 3270 Insert, Delete, Erase To End Of Field and Erase Input keyboard functions.

LSEEKP Instruction: Locates a table entry which is "equal to" "greater than or equal to" or "less than or equal to" a search argument using a binary search algorithm. Tables may be included in the instruction section of the controller application program, thereby permitting the tables to reside in expanded user programmable storage.

3540 DISKETTE INPUT/OUTPUT UNIT

PURPOSE

Input/output device for use with any virtual storage S/370 processor except a 3081, 3083 or 3084 Processor.

MODELS

Model B1 B01 Has one drive.

Model B2 B02 Has two drives.

Limitations: The use of a 3540 on a S/370 and the 4300 processors does not eliminate the minimum configuration requirements for a card reader, except in a S/370 mdl 115 or 125 cardless configuration.

Maximum: The number of 3540 mdls B1 and/or B2 that can be attached depends upon the number of system channel control unit positions available.

Prerequisites: Each 3540 requires an available control unit position on a channel.

HIGHLIGHTS

The 3540 provides the ability to read or write IBM Diskettes on S/370 systems, 4300 processors. The diskette is the same recording medium used by the 3740 Data Entry System, and, as such, the 3540 provides a facility for entering data recorded by the 3740 directly into a S/370, 4300 processors. The IBM Diskette is organized into 75 tracks, 26 sectors per track, 128 bytes per sector. 73 tracks are used for data. The data capacity of the diskette is, therefore, 1,898 sectors, or 242,944 bytes.

The mdls provide a choice of one or two diskette drives. Each drive uses a stepping motor to control the positioning of its associated read/write head assembly. Each drive also has an associated diskette hopper and stacker. Diskettes are fed, one at a time, from the hopper and automatically mounted on a drive spindle for read/write operations. Following completion of reading or writing, the diskette is automatically removed from the spindle and stacked. Hopper and stacker capacities are 20 diskettes each. Disk speed is 360 revolutions/minute.

The 3540 has a self-contained control unit and provides double 128-byte buffers associated with each drive. The control unit operates the drives in a now-shared mode and thus each drive requires a separate subchannel when attached to a byte multiplexer channel. Effective speed depends upon the number of sectors read or written per revolution and upon the average number of sectors recorded on the diskettes. Maximum speeds per drive, including program Open Time (2 seconds/disk for Read; 10 seconds/disk for Write), and including time to feed and stock diskettes, are shown below for several combinations. For simultaneous processing on both drives, the realizable speed per drive is a function of the type of channel, speed of the channel, type of operating system, and the application programs.

Sectors/ Revolution	Sectors/Minute (read)			Sectors/Minute (write)		
	Full Disk	1/2 Disk	1/5 Disk	Full Disk	1/2 Disk	1/5 Disk
1	600	575	520	170	165	155
2	600	575	520	310	295	265
13	2620	2255	1595	1500	1250	835
26	3635	2970	1925	2210	1710	1020

The 3540 is supported as a sequential DASD device only.

Publications: S/370--GC20-0001

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V or **#9904** for 230V ... must be consistent with system voltage.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray.

MODEL CONVERSIONS

All model changes are field installable.

ACCESSORIES (None)

SUPPLIES

IBM Diskettes: Contact IBM. Refer to DMC.

3601 FINANCE COMMUNICATION CONTROLLER

THE 3601 IS NO LONGER AVAILABLE ... FEATURES AND ACCESSORIES MAY BE ORDERED.

PURPOSE

A programmable controller for attachment of 3600 Finance Communication System terminals to System/34 or System/36 (using the appropriate licensed programs), System/3 model 15 processors or to S/370, 303X, 308X or 4300 processors using appropriate virtual storage system control programs; or for attachment of certain 4700 Finance Communication System terminals to S/370, 303X, 308X, or 4300 processors using appropriate virtual storage system control programs, a 3602 Finance Communication Controller, System/34 or System/36 (using the appropriate licensed programs, or an 8100 Information System using DPPX licensed programs.

Attachment to System/34 is via SDLC transmission over various common carrier- or user-owned facilities.

Attachment to System/3 model 15 is via Binary Synchronous Communications (BSC) – see 3601/3602 RPQ 8K0598 and 8K0623 and 5415 RPQ S40156.

S/370, 303X, 308X, 4331, 4341, 4361 or 4381 processor attachment is via a 3704, 3705, or 3725 Communications Controller using synchronous data link control (SDLC) transmission over various common carrier or user-owned transmission facilities. Attachment is also possible via the Communications Adapter feature on a 4321, 4331 or 4361. See M4321, 4331 or 4361 pages for details. **Note:** See "Programming" and "SCP" pages for attachment capability.

8100 Information System attachment is via the 8130, 8140 or 8101 units using SDLC transmission protocols over various common carrier or nonswitched transmission facilities. Attachment to a System/34 or System/36 is via communication adapter using SDLC transmission protocol over various common carrier facilities. Attachment to a 3602 is via the Fan-Out Communication Feature. See M3602 pages for details.

MODELS

[NO LONGER AVAILABLE]

Model 1 001 — A programmable controller with a diskette drive which accommodates 1-sided removable diskettes, a maximum of six loops and a maximum of 56K bytes of user programmable storage.

Remote terminal attachments* are available.

Note: Mdl 1 not for System/34 or System/3.

Model 2A A02 — A programmable controller with a diskette drive which accommodates 1-sided removable diskettes, a maximum of three loops, and a maximum of 120K bytes of user programmable storage.

Remote terminal attachments* are available.

Model 2B B02 — A programmable controller with a diskette drive which accommodates 1- or 2-sided removable diskettes, a maximum of three loops, and a maximum of 120K bytes of user programmable storage.

Remote terminal attachments* are available.

Model 3A A03 — A programmable controller with a maximum of two diskette drives which accommodates 1-sided removable diskettes, a maximum of six loops, and a maximum of 120K bytes of user programmable storage.

Remote terminal attachments* and a Local device cluster attachment are available.

Model 3B B03 — A programmable controller with a maximum of two diskette drive which accommodates 1- or 2-sided removable diskettes, a maximum of six loops and a maximum of 120K bytes of user programmable storage.

Remote terminal attachments* and a Local cluster attachment are available.

* Remote terminal attachments can be achieved on total number of loops indicated by one or a combination of the following as applicable:

Device or Feature	Device or Feat. #	1	3601 2A	3601 2B	3601 3A	3601 3B
1200 bps Loop Int Modem	#8001	5	–	–	5	5
Terminal Attach Unit	3603-1,2	6	3	3	6	6
EIA Interface	RPQ	5	2	2	5	5

Prerequisites: Communications Controller equipped with appropriate features (see M3704, 3705, 3725 or 4331 for Communications Adapter feature #1601 on the 4331 Processor), or via an 8100 Information System equipped with appropriate features (see M8130, 8140 and 8101 pages) , or via System/34 or System/36 with appropriate features (see M5340 or 5360 pages).

HIGHLIGHTS

Controls all the functions of 3600 Finance Communication System terminals. Controls data transmission between those terminals and the central processing site. Four SDLC Communications features are available, one of which is required for transmission to and from the Host. An SDLC Communications feature at speeds from 1200 bps to 4800 bps or an SDLC Communications (mdl 3A or 3B for System/34 or System/3) feature at speeds from 1200 bps to 9600 bps can be selected. Besides host link speed differences, the SDLC feature to 9600 bps allows a maximum controller aggregate bps rate of 12,000 bps for the loops independent of the host link speed. See "Communications Features". For System/34 and System/3, for Binary Synchronous Communications (BSC) – see 3601/3602 RPQs 8K0598 and 8K0623.

Mdl 1 -- Contains approximately 24K bytes of programmable storage. Four additional increments of 8K bytes of programmable storage (for a total of 56K) are available. The amount of programmable storage available for application programming depends upon the attached terminal configuration and user environment. See Add'l Storage Feature (#1005).

Mdls 2A, 2B, 3A and 3B -- Contain approximately 24K bytes of programmable storage. Six additional increments of 16K bytes or three increments of 32 bytes of programmable storage (for a total of 120K) are available. The amount of programmable storage available for application programming depends upon the attached terminal configuration and user environment. (See Add'l Storage Feature, #1006 or #1007.) For System/34 or System/3, specify **#9591** for Control Storage, specify **#9592** for User-Programmable Storage.

Mdls 1, 2A and 3A -- House a direct access diskette drive with a 1-sided removable diskette which provides permanent storage for control and user programs, plus temporary and permanent storage for user data (sequential logging, random retrieval of data records, etc.). The mdl 3A allows the attachment of two 1-sided diskette drives.

Mdls 2B and 3B -- House a direct access diskette drive with a 2-sided removable diskette which provides permanent storage for control and user programs, plus temporary and permanent storage for user date (sequential logging, random retrieval of data records, etc.). The mdl 3B allows the attachment of two 2-sided diskette drives.

All 3600 system terminals are attached by loops which operate at speeds of 1200, 2400 or 4800 bps for locally attached terminals and at 1200 and 2400 bps for remotely attached terminals The base unit provides one loop. Two additional loops are available on mdls 2A and 2B while five additional loops are available on mdls 3A and 3B. 1200 bps loop integrated modems are available on mdls 1, 3A and 3B only. See "Special Features". **Note:** Either one or two 4800 loops per 3601 may be specified.

The device cluster adapter feature may be attached to the 3601 mdls 3A and 3B.

For the System/34 and System/3:

Communication between the controller and the host may be through an external modem with Interface (#3701), or 1200 bps Integrated Modem (#5500). See "Modems" and "Special Features" below. Each 3601 operates in half-duplex mode. Duplex communication line operations are possible with multiple 3601s attached to the line (one 3601 transmitting while the other receives).

For attachment to System/3 mdl 15 – see 3601/3602 RPQs 8K0598 and 8K0623 and 5415 RPQ S40156.

Can be programmed to operate independently when the CPU is unavailable. Capable of controlling all terminal functions, executing arithmetic, and capturing data from the terminals for later transmission to the CPU. A keylock is provided for the removable diskette. One key is provided.

For the 3600 or 4700:

Communication between the 3601 and the 3704, 3705, 3725, or the Communications Adapter (#1601) feature on the 4331 Processor or 8130, 8140, 8101 may be either through the 1200 bps Integrated Modem (#5500) on the 3601

or through an external modem using the Interface (#3701) on the 3601 at speeds up to 9600 bps. Local attachment can be made to a 3704, 3705, or 3725 via its local attachment feature using #3701 on the 3601 at 1200 or 2400 bps. Local attachment can be made to a 4331 via its local attachment feature using #3701 on the 3601 at 1200, 2400, 4800 or 9600 bps. See "Modems" and "Special Features" below. Local attachment to a controlling 3602 at 9600 bps is via its Fan Out Communication Adapter Feature (#1551). Each 3601 operates in half-duplex mode. Duplex communication line operations are possible with multiple 3601s attached to the line, one 3601 transmitting while the other receives.

Can be programmed to operate independently when the S/370, 303X, 308X, 4300 Processor, controlling 3602, or 8100 Information System is unavailable. Capable of controlling all terminal functions,

3601 Finance Communication Controller (cont'd)

executing arithmetic, and capturing data from the terminals for later transmission to the S/370, 303X, 308X, or 4300 Processor, controlling 3602, or 8100 Information System.

A keylock is provided for the removable diskette. One key is provided.

Transmission: The 3601 operates over common carrier-provided or equivalent customer-owned communications facilities. For information concerning these facilities, see M2700 pages.

Modems: External modems operating at speeds up to 9600 bps may be used with SDLC features.

Modem	Speed (bps)	Facility
3863	2400	Switched or nonswitched voice-grade lines
3868-1	2400	Nonswitched voice-grade line
3864	4800	Switched or nonswitched voice-grade lines
3868-2	4800	Nonswitched voice-grade line
3865	9600	Nonswitched voice-grade line
3868-3,4	9600	Nonswitched voice-grade line
3872	2400	Switched or nonswitched voice-grade lines
*	9600	Nonswitched digital data service

* See RPQ for IBM DDSA.

Non-IBM modems may be attached subject to the IBM Multiple Supplier Systems Policy. See M2700 pages for further information.

Note: Switched line operation is not supported by the 3601/3602 integrated 1200 bps modem.

Publications: GC20-0370 -- *IBM S/370 Bibliography* and GC27-0001 -- *IBM 3600 Finance Communication System, System Summary.*

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9880** for locking plug, or **#9881** for non-locking plug. **Field Installation:** Not recommended.
- Controller Designation: Media distribution of Controller Data. Specify **#9491** to identify the initial 3601 or 3602 ordered for use with a host system location, or specify **#9492** to identify additional 3601s per host system.

  If **#9491** is specified for the 3601, specify: **#9494** if there is no 3614/3624 with a first position designator attached to any 3601 on the same host system, or ... **#9493** if there is a 3614, with a first position designator and **#9002**, attached to any 3601 on the same host system, and/or ... **#9495** if there is a 3614 with a first position designation and **#9001** or a 3624 with a first position designator attached to any 3600 Controller on the same host system or if encryption capability via the Data Encryption Standard (DES), is desired on any 3600 Controller in the system. See 3614 Host Attachment Designation under "Specify" for the 3614, or Controller-Data Designation under "Specify" for the 3624.

  If **#9491** is specified, select the specify number of the desired media.

  #9412 9/800 Magnetic Tape
  #9413 9/1600 Magnetic Tape
  #9414 9/6250 Magnetic Tape

  If magnetic tape is not available on designated CPU, then select one of the following media. [DOS/VS users only]

  #9431 80-Column Cards
  #9432 96-Column Cards

  If card or tape inputs are not available at the host location, contact IBM.

  When feature **#9491** is specified, additional shipping information is required.

  Supplementary Specifications (via AAS MES entry) are to be entered exactly as follows to indicate shipping address of the HOST SYSTEM LOCATION.

  Line 1 -- IBM Programming Support Representative (PSR)
  Line 2 -- C/O (Name of customer)
  Line 3 -- Street Address (or P.O. Box)
  Line 4 -- City, State, Zip Code

  This is the address to which the first controller data tape will be automatically shipped for the first controller ordered with **#9491**. Whenever controller data is updated by an EC, it will be shipped to the most current TPC address.

  Caution: Specify code **#9491** is used to provide Controller Data Media for only the initial 3601 or 3602 attached to a host system location. Do not specify **#9491** for more than one 3601 or 3602 per host system as this will result in the unnecessary shipment of multiple DTR tapes or cards to the host system location.
- Cables: See Accessories for ordering instructions. Also see *Installation Manual - Physical Planning,* GA27-2766.
- If ordering a 3614 or 3624 with 1st position designator (see Host Attachment Designation under "Specify" for the 3614, or Controller-Data Designator under "Specify" for the 3624) to be added to any existing 3601, an MES order transaction should be used against the initial controller (3601 or 3602 with **#9491** and **#9494**) requesting to delete **#9494** and add **#9493** and/or **#9495** for the initial controller.

  Refer to IBM for further explanation of these specify codes and their use when (1) ordering a loop-attached 3614 in a network where no 3614s are previously attached, and (2) field installation of **#9001** on a loop-attached system.

  If all installed or on order 3614s or 3624s for loop attachment to the 3601 are removed or cancelled, an AAS order transaction should be used against the initial controller (3601 or 3602 with **#9491** and **#9493** and/or **#9495** requesting to delete **#9493** and/or **#9495** and add **#9494** for the initial controller.
- Note: The following specify features are field installable: **#9412, #9413, #9414, #9431, #9432, #9491, #9492, #9493, #9494, #9495.**

SPECIAL FEATURES

Non-Communications Features

Add'l Storage Feature (#1005): [Mdl 1] Provides an additional 8,192 bytes of control storage for device attachment or an additional 8,192 bytes of user-programmable storage. Specify: **#9581** for Control Storage for Device Attachment. Any combination of device types: 3603, 3604, 3606, 3608, 3610, 3611, 3612, 3614, 3615, 3616, 3618, 4704 mdl 1, 4710, 4720, and/or 3624 may be attached. Some combinations will require an optional 8,192 bytes of control storage provided by the use of feature #1005. To determine if #1005 is required, refer to the "Device Attachment Table - A" below. Calculate the sum of the attachment factors for the combination of devices to be attached. Add the attachment factor one time only for each device type. If the attachment factor sum is 3 or less, feature #1005 and **#9581** are not required. If the attachment factor sum is greater than 3 but does not exceed 11, #1005 and **#9581** are required. If the sum is greater than 11, but does not exceed 14, two #1005s and two **#9581**s are required. An attachment factor of greater than 14 is not allowed.

Note: Device Attachment table A is applicable to Controller data EC levels prior to EC749167.

Device Attachment Table - A

Device Type/Feature/Function	Attachment Factor
3604, 4704 mdl 1	0
Mag. Stripe Encoder-Reader (#4905/#4906)	0.6
3606	3.0
3608	5.8
3610, 3611 and/or 3612	2.4
3614 [with AET only]	2.2
3618	3.0

If additional function is required, or Controller data EC749167 or later is installed, utilize Device Attachment Table - B to determine if #1005 is required. Calculate the sum of the attachment factors for the combination of devices or function required. Add the attachment factor one time only for each device type. If the attachment factor sum is 2 or less, neither #1005 nor **#9581** is required. If the attachment factor sum is greater than two but does not exceed 10, #1005 and **#9581** are required. If the sum is greater than 10, but does not exceed 14, two #1005s and two **#9581**s are required. An attachment factor of greater than 14 is not allowed.

Device Attachment Table - B

A description of attachment factor functions not associated with a specify, machine or feature is given later in this section (See "Attachment Factor Functions".)

Device Type/Feature/Function	Attachment Factor
3603 or 3604 mdls 1-6, 4704 mdl 1	0
SDLC (#4501 or #4502)	0.7
Multiple Block I/O - Diskette	3.0
3614 or 3624 [Note 1]	1.2
3616, 4710, 4720 Part 1 [Note 5,6]	0.5
Optional Instruction Locator	0.3
Instruction Enhancements	1.7
Address Sharing [Note 5,8,9]	0.6
Secondary Logical Unit (LU) Assignment	0.5
3606 [Note 8,9]	2.4
LSEEKP [Note 2]	1.8
Translate Instruction (LTRT) [Note 2]	1.2
3270/3600 Datastream Mapping	8.0
Extended 3270/3600 Keyboard Mapping (Note 7)	1.5
Data Decompression/Decompression [Note 2]	1.2
Data Compression/Compaction [Note 2]	1.6
SCRPAD Instruction [Note 2]	1.7
Extended LLOAD Instruction	0.3
INTMR Instruction [Note 2]	1.0

3601 Finance Communication Controller (cont'd)

Alternate Encryption Technique (AET) [Note 1]	1.0
Priority Dispatching (LCHAP) [Note 2]	0.3
Data Sequencing	1.6
Extended Statistical Counter Recording [Note 2]	1.3
3618	3.0
3615	3.2
3616, 4710, 4720 Part 2 [Note 5,6]	3.0
3610, 3611 and/or 3612 [Note 3]	2.6
3608 Printer [Note 9]	2.8
Mag Stripe Encoder-Reader (#4905/#4906) [Note 4]	0.7
Set Diskette	0.9
3604 mdl 7	0.5

Notes

[1] Although both DES and AET may be included, a single 3614 may have either DES or AET but not both. A 3624 may have only DES.

[2] The optional instruction locator must be included if this function is used. If more than one function requiring the optional instruction locator is used, the attachment factor for the locator need be included only once.

[3] Any 3610, 3611 and 3612 combination constitutes one device type.

[4] The Magnetic Stripe Reader (#4901 or #4902) need not be considered in computing the attachment factor.

[5] Address sharing must be included if a 3616, 4704 mdl 1, 4710, or 4720 is used. If more than one device/RPQ requiring address sharing is used, the attachment factor for address sharing need be included only once.

[6] Both 3616, 4710, 4720 Part 1 and 3616, 4710, 4720 Part 2 must be included when any one of these devices is used. Any 3616, 4710, 4720 combination constitutes one device type. The Part 1 and Part 2 attachment factors need only be included once if more than one device or device type is used.

[7] 3270/3600 Datastream Mapping must be included if the Extended 3270/3600 Keyboard Mapping is used.

[8] Address sharing must be included if a 3606 is used.

[9] Address sharing must be included if a 3608 is used. The 3606 must also be included only once to utilize both the 3608 Printer and keyboard/display.

Maximum: For #1005 with **#9581** -- Two. **Field Installation:** Yes. **Specify: #9581** for user-programmable storage Add'l Storage Feature (#1005) provides an additional 8,192 bytes of user-programmable storage. **Maximum:** For #1005 with **#9582** -- Four. **Field Installation:** Yes.

Add'l Storage (#1006): Provides an additional 16,384 bytes of control storage for device attachment (mdls 2A, 2B, 3A and 3B only); or an additional 16,384 bytes of user-programmable storage (mdls 2A, 2B, 3A and 3B only).

This additional storage can be used for the following four purposes: (1) User-Programmable Storage, (2) User-Programmable Storage Expansion, (3) Control Storage, or (4) Control Storage Expansion. See below for description and limitations: **Specify: #9591** for Control Storage, or **#9592** for user-programmable storage.

Add'l Storage (#1007): [Mdls 2, 2B, 3A, 3B] Provides an additional 32,768 bytes of user-programmable storage. This additional storage can be used for (1) User-programmable storage, or (2) User-programmable storage expansion. See below for description and limitations. **Specify: #9602.**

[1] User-Programmable Storage: Used for configuration data and application programs.

Feature #1006, Specify **#9592** - Provides an additional 16,384 bytes of user-programmable storage. **Maximum:** For #1006 with **#9592** - Two. **Field Installation:** Yes.

Feature #1007, Specify **#9602** - Provides an additional 32,768 bytes of user-programmable storage. **Maximum:** For #1007 with **#9602** - One. **Field Installation:** Yes. **Prerequisites:** On controllers shipped prior to EC 745887, #6501 is required.

[2] User Programmable Storage Expansion: [Mdls 2A, 2B, 3A, 3B] Used in addition to two #1006 and two **#9592** increments or one #1007 and one **#9602** increment of user-programmable storage, described above, for the instruction sections of application programs and a limited amount of configuration data and application program constants. Most configuration data and application program constants cannot reside in expanded user-programmable storage.

Feature #1006, Specify **#9592** - Provides an additional 16,384 bytes of user-programmable storage. **Maximum:** (For user-programmable storage plus user-programmable storage Expansion): For #1006 with **#9592** specified and with Storage Expansion Features (#6501) - six. **Prerequisites:** If more than two Add'l Storage Features (#1006) with **#9592** are ordered, #6501 is required. **Field Installation:** Yes.

Feature #1007, Specify **#9602** - Provides an additional 32,768 bytes of User Programmable Storage. **Maximum:** (for user-programmable storage plus user-programmable storage expansion) For #1007 with **#9602** with Storage Expansion Feature (#6501) - three. **Field Installation:** Yes. **Prerequisites:** If more than one Add'l Storage Feature (#1007 with **#9602**) are ordered, or if in conjunction with any Add'l Storage Feature (#1006 with **#9592**), then #6501 is required.

[3] Control Storage: Used for attachment of any combination of device types/functions/features which have associated attachment factors. See "Device Attachment Table - C" below. Some combinations of device types can be accommodated with no further increments of control storage, while other combinations require additional increments of control storage.

Feature #1006, Specify **#9591** [Mdls 2A, 2B, 3A, 3B] - Provides one increment of 16,384 bytes of Control Storage for device attachment.

Two additional increments, for a total of 3 are available with Control Storage Expansion (see below). To determine whether and how many control storage increments (#1006 with **#9591**) are required, refer to "Device Attachment Table - C" below. Calculate the sum of the attachment factors for the combination of devices and/or functions required. Add the attachment factor one time only for each device type, feature or function. If the attachment factor sum is 10 or less, feature (#1006 with **#9591**) is not required. If the attachment factor sum is greater than 10, feature (#1006 with **#9591**) is required. An attachment sum greater than 22 is not allowed in this base attachment factor calculation. **Maximum** (for control storage): For #1006 with **#9591** -- One. **Field Installation:** Yes.

[4] Control Storage Expansion (CSE): [Mdls 2A, 2B, 3A, 3B] Feature #1006 with **#9591**. - Provides a greater attachment factor capability for certain features or devices which require an attachment factor. CSE supplements the base attachment factor limit of 22 by providing second and third increments of additional storage. An additional attachment factor capability of 12 can be obtained by utilizing the second increment of #1006 with **#9591** or 28 by utilizing the second and third increments of #1006 with **#9591**. Only the attachment factors associated with certain device types, features, or functions can be applied against this expanded attachment factor capability. (See "Device Attachment Table - C" below.)

While Control Storage Expansion provides additional attachment factor capability, the CSE attachment factor must be considered separately from the base attachment factor calculation. Specifically, the attachment factor for a given device or feature must be allocated against either the base or the expanded attachment factor but not both. **Maximum** (for Control Storage plus Control Storage Expansion): For #1006 with **#9591** specified and with Storage Expansion Feature (#6501) -- Three. **Field Installation:** Yes. **Prerequisites:** If more than one #1006 with **#9591** is ordered, then #6501 is required.

Limitations: The maximum number of #1006s (whatever the combination of **#9591** and **#9592**), is nine for controllers with serial numbers of 13100 or higher, or if the controller is a reconditioned unit incorporating EC 745887. For units with lower serial numbers, without EC 745887, the maximum number of #1006s is seven. The maximum number of #1006s commencing with units with EC 745887 is nine.

The maximum number of #1007s is three.

The maximum number of #1007 plus #1006 (whatever the combination of **#9602, #9591, or #9592**) for controllers shipped prior to 13100 without EC 745887 is:

	Feature Code #1007		Feature Code #1006
Qty	3	+	1
Qty	2	+	3
Qty	1	+	5
Qty	0	+	7

The maximum number of #1007 plus #1006 for controllers with serial numbers 13100 or higher, or reconditioned units with EC 745887 is:

Qty	3	+	3
Qty	2	+	5
Qty	1	+	7
Qty	0	+	9

Device Attachment Table - C

In the following table, attachment factors in the column labeled "Base" are applicable to the base attachment factor calculation only. Attachment factors in the column labeled "Base or Expanded" are applicable to either the base or expanded attachment factor calculation.

The 3600 controller loads support for devices/features into control storage in the sequence indicated by the following table. Those RPQs with an attachment factor are also loaded in a prescribed sequence, as indicated in the *IBM 3600 Finance Communication System Configura-*

3601 Finance Communication Controller (cont'd)

tor (GA27-2762). The controller will always attempt to load each device, feature or RPQ into base control storage. If a device, feature or RPQ is encountered that will not fit into base control storage and it is applicable to extend control storage, the controller will attempt to load it into expanded control storage. The above algorithm must be used to determine control storage requirements.

Refer to the *3600 Finance Communication System Configurator,* GA27-2762 for a comprehensive list of attachment factors and additional information regarding calculation of base and expanded attachment factors.

A description of attachment factor functions not associated with a specify, machine or feature is given later in this section: See "Attachment Factor Functions".

Device Type/Feature/Function	Attachment Factor	
	Base	Base Or Expanded

EDAM Temporary File Support [Note 11]		1.5
3616, 4710, 4720 Part 2, 3262/3287/3289 Part 1 [Note 5,6,8]		3.0
3262/3287/3289 Part 2 [Note 8]		1.5
3618		3.0
3615		3.2
3610,3611 and/or 3612 [Note 3]		2.6
3608 Printer [Note 12]		2.8
Mag Stripe Encoder-Reader (#4905/#4906) [Note 4]		0.7
Set Diskette		0.9
3604 mdl 7		0.5

Notes

[1] Although both DES and AET may be included, a single 3614 may have either DES or AET but not both. A 3624 may have only DES.

[2] The optional instruction locator must be included if this function is used. If more than one function requiring the optional instruction locator is used, the attachment factor for the locator need be included only once.

[3] Any 3610, 3611 and 3612 combination constitutes one device type.

[4] The Magnetic Stripe Reader (#4901 or #4902) need not be considered in computing the attachment factor.

[5] Address sharing must be included if a 3616, 4704 mdl 1, 4710, or 4720 is used. If more than one device/RPQ requiring address sharing is used, the attachment factor for address sharing need be included only once.

[6] Both 3616, 4710, 4720 Part 1 and 3616, 4710, 4720 Part 2 must be included if one of these devices is used. Any 3616, 4710, 4720 combination constitutes one device type. The Part 1 and Part 2 attachment factors need only be included once if more than one device or device type is used.

[7] 3270/3600 Datastream Mapping must be concluded if extended 3270/3600 Keyboard Mapping is used.

[8] The Device Cluster Adapter, 3262/3287/3289 Part 1, and 3287/3289 Part 2 must be included if a 3262, 3287 or a 3289 is used.

The attachment factor for the Device Cluster Adapter need be included only once if any combination of 3262, 3278-2, 3287 and 3289 is used.

The attachment factor for 3616, 4710, 4720 Part 2 and 3262/3287/3289 Part 1 need be included only once if more than one of these device types is used.

[9] Both the Device Cluster Adapter and 3278-2 Attachment must be included if a 3278-2 is used.

The attachment factor for the Device Cluster Adapter need be included only once if any combination of 3262, 3278-2, 3287 and 3289 is used.

[10] The EDAM Base must be included if the Allocate/Deallocate function is used.

[11] The EDAM Base must be included if EDAM Temporary File Support is used.

[12] Address sharing must be included if a 3606 is used.

[13] Address sharing must be included if a 3608 is used. The 3606 must also be included only once to utilize both the 3608 Printer and keyboard/display.

Auxiliary Diskette Drive .25 Megabyte (#1025): [Mdl 3A] Provides approximately 280,000 bytes of additional diskette storage via two diskette drives. No area of the diskette to be mounted in the auxiliary (or secondary) drive will be reserved for the control program. **Maximum:** One. **Field Installation:** Yes.

Auxiliary Diskette Drive .5 Megabyte (#1035): [Mdl 3B] Provides approximately 560,000 bytes of additional diskette storage via two diskette drives. No area of the diskette to be mounted in the auxiliary (or secondary) drive will be reserved for the control program. **Maximum:** One. **Field Installation:** Yes.

Note: Support for #1025 and #1035 is provided by Extended Diskette Access Method (EDAM) Base, EDAM Allocate/Deallocate (LDKT instruction) and EDAM Temporary File Support. Refer to "Device Attachment Table - C" and "Attachment Factor Functions" section.

This feature requires replacement of the diskette storage device. Adequate provision must be made for retaining data contained on the diskette by having the user remove it prior to the installation of this feature.

Device Cluster Adapter (#3101): [Mdls 3A, 3B] Provides for the local attachment of a mix of 3278-2 display stations, 3287 printers, 3262-3, 13 Printers and 3289-1, 2 printers up to a maximum of eight devices. When attaching the 3278-2 display station to the device cluster adapter, no-charge 3278 RPQ 8K0880 is required. **Limitations:** Maximum distance from controller to terminal is 1.5 KM (4,920 ft). When the device cluster adapter is installed, Loop number four is no longer available. The maximum number of loops available on the 3601-3 is therefore reduced to five. **Maximum:** One. **Field Installation:** Yes.

Loop Feature, Add'l (#4735): Provides the ability to attach additional 3600 Finance Communication System terminals. **Limitations:** A maximum of two loops (including the provided local loop) operating at 4800 bps per 3601 are allowed when one of the SDLC communication features (#4501 or #4502) are specified. Otherwise, the maximum is one loop operating at 4800 bps (including the provided local loop). Loop Integrated Modem (#8001) cannot be installed on mdls 2A and 2B. **Note:** The sum of the speeds of all loops in bits per second (bps) plus the speed of the SDLC link (#6301 or #6302) in bps cannot exceed 12,000 bps. When SDLC feature (#4501 or #4502) is installed, the sum of all loops cannot exceed 12,000 bps (do not use the host link speed). **Maximum:** Two per mdls 2A and 2B. Five per mdls 1, 3A and 3B. **Field Installation:** Yes. **Prerequisites:** For each loop with any remotely attached terminals, 1200 bps Loop Integrated Modem (#8001) on a terminal or a 3603 is required.

Storage Expansion Feature (#6501): [Mdls 2A, 2B, 3A, 3B] Provides capability of (1) expanding user-programmable storage (#1006) with **#9592** or #1007 with **#9602** beyond 56K bytes, and/or (2) adding add'l increments of #1006 with **#9591**, beyond 16K bytes. **Limitations:** If IR 4 and Controller Data ECs 745122 and 745123 are utilized, the controller will work properly with the Storage Expansion Feature (#6501) installed, but Control Storage Expansion cannot be utilized. If releases earlier than IR 4 and Controller Data ECs 745122 and 745123 are utilized, neither the Storage Expansion Feature (#6501) nor more than one Add'l Storage Feature (#1006) with **#9591** should be installed. **Maximum:** One. **Field Installation:** Yes. **Note:** #6501 is required when more than one Add'l Storage Features (#1006) with **#9592** and/or when more than one Add'l Storage Feature (#1006) with **#9591** are ordered. #6501 is required when more than one Add'l Storage Feature (#1006 with **#9591**), or more than two Add'l User-Programmable Storage Features (#1006 with **#9592**), or more than one Add'l Storage Feature or Add'l Storage Feature (#1007 with **#9602**) with User-Programmable Storage Feature (#1006 with **#9592**).

3601 Finance Communication Controller (cont'd)

Prerequisites: #6501 is a prerequisite for any #1007 on mdls 2A, 2B, 3A and 3B shipped prior to EC 745887.

Communications Features

Each 3601 must be equipped with one of the following SDLC features and either the EIA Interface (#3701) or the 1200 bps Integrated Modem (#5500) for communication with the host processor.

EIA Interface (#3701) : Provides the appropriate cables and interface logic necessary to attach an external IBM modem for communications to the host processor through the 3704, 3705, 3725, or the communications Adapter (#1601) feature on the 4331 Processor, or for communications to an 8100 Information System or for local attachment to the controlling 3602, 3704, 3705, 3725, or 4331 without requiring modems. See M3602, 3704, 3705, 3725, or 4331 pages for details. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with a 1200 bps Integrated Modem (#5500) . **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6301 or #4501 ... or #6302 or #4502.

SDLC Communications Feature With Business Machine Clocking (#4501): Required for attachment to communication lines through the 1200 bps Integrated Modem (#5500), oran EIA Interface (#3701) with any external modem which does not have internal clocking at 1200 bps or for local attachment to a 3704, 3705, or 3725 Communications Controller (#4716) at 1200 or 2400 bps. The SDLC link speed of this feature need not be included when calculating the sum of the speeds not to exceed the aggregate bps rate of 12,000 bps. **Limitations:** Cannot be installed with #6301, #6302 or #4502. **Maximum:** One. **Field Installation:** Yes.

SDLC Communications Feature Without Business Machine Clocking (#4502): Required for attachment to communication lines through an external modem which does have internal clocking at speeds up to 9600 bps. Also required for attachment to a controlling 3602 or for local attachment to a 4331 Processor (#4801) at 1200, 2400, 4800, or 9600 bps. The SDLC link speed of this feature need not be included when calculating the sum of the loop speeds not to exceed the controller aggregate bps rate of 12,000 bps. **Limitations:** Cannot be installed with #6301, #6302 or #4501. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3701 .

1200 bps Integrated Modem (#5500): An integrated modem for operation at 1200 bps over nonswitched half-duplex or duplex voice grade lines for communication to the processor through the 3704, 3705, 3725, or the Communications Adapter (#1601) feature on the 4331 Processor, or for communications to an 8100 Information System. **Limitations:** Cannot be installed with Interface (#3701) . **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4501 or #6301. **Specify: #9651** for 4-wire strapping, or **#9652** for 2-wire strapping.

SDLC Communications Feature With Business Machine Clocking (#6301): Required for attachment to communication lines through the 1200 bps Integrated Modem (#5500), oran EIA Interface (#3701) with any external modem which does not have clocking at 1200 bps, or for local attachment to a 3704, 3705, or 3725 Communications Controller (#4716) at 1200 or 2400 bps, or for communications to an 8100 Information System. **Limitations:** Cannot be installed with #6302, #4501 or #4502. **Maximum:** One. **Field Installation:** Yes.

SDLC Communications Without Business Machine Clocking (#6302): Required for attachment to communications lines through an external modem which does have internal clocking at speeds up to 4800 bps or for local attachment to a 4331 Processor (#4801) at 1200, 2400 or 4800 bps. **Limitations:** Cannot be installed with #6301, #4501 or #4502. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3701 .

1200 bps Loop Integrated Modem (#8001): [Mdls 1, 3A, 3B] An integrated modem for transmission to remotely located 3600 Finance Communication System terminals. Operates at 1200 bps over nonswitched normal quality voice grade lines. **Note:** Several remote loop configuration variations can be realized; e.g., see the *IBM 3600 FCS Configurator,* GA27-2762. However regardless of configuration, the interconnecting common carrier facilities are always point-to-point circuits; either 2-wire half-duplex or 4-wire duplex. The common carrier does not tariff 3600 "remote loops". The customer should be referred to the configurator or information in the M2700 pages for definition of the tariffed elements of the remote loop. **Maximum:** One per Add'l Loop Feature (#4735). **Field Installation:** Yes. **Prerequisites:** #4735. Each remote location must have either a 3604 Keyboard Display mdl 2, 3 or 4 equipped with #8001 or #8002, a 3606 mdl 2, a 3608 mdl 2, a 3614 consumer Transaction Facility with #8001 or a 3603 as the first attached remote unit in each physical (geographic) location.

MODEL CONVERSIONS

The following model changes are field installable:

From \ To	2B	3A	3B
2A	x*	x	x*
2B			x
3A			x*

* Requires replacement of the diskette storage device. Adequate provision must be made for retaining data contained on the diskette by having the user remove it prior to the start of any conversion. **Field Installation:** Yes.

Attachment Factor Functions

Data Sequencing -- Allows user application to sequence, in storage, a block of data items or to collate, in storage, data items from two separate blocks into a third block, according to a parameter list.

Set Diskette -- Allows user applications to reset the temporary files, to specify the type of start-up (i.e., warm or cold) to be performed on the next load, and/or to initiate a load of the controller.

Instruction Enhancements -- Provides the user application with the following new instructions:

Bit Manipulating - Test and Branch (LIFON, LIFOFF) - Provides a test set, and branch function in a single instruction. This reduces the 3600 AP processing and memory requirements when processing single bits.

Logical Compare Data Immediate (CCDI) - Compares immediate data to data in a specified field.

Move Data Immediate (MVDI) - Moves immediate data to a specified field.

Load Data Immediate (LDDI) - Loads immediate data into specified register.

SCALE - Formats an input string of characters into a conveniently processable numerical format. When used in processing monetary input, functions such as the removal of the monetary symbol, commas, and periods from the input data are automatically done. In the event that cents were not in the input data, zero padding is optionally provided. SCALE should significantly reduce the number of instruction required to process monetary input.

Segment Indexing (SETX, TESTX, SETXREG) - Provides an alternate method of referencing data within a segment. Only fixed operands of 3600 instruction may be indexed. This function can be used to reduce the number of SETFPL instructions executed by the AP, thereby enhancing performance and reducing AP size. This function also provides a pseudo DSECT facility, thereby enabling an AP to more readily reference (1) variably displaced data within segments and/or (2) data beyond 4K bytes from the beginning of a segment.

Branch on Index (BRANX) - Provides an index increment, compare and branch function in a single instruction. This instruction is used to control the number of times a series of AP instructions will be executed. Since the instruction algebraically increments a register, BRANX can be used in conjunction with the Segment Indexing facility to simplify the processing of tables.

Execute (LEXEC) - Provides a function similar to the S/370 EXECUTE instruction. The amount of data logically ORed into the target instruction may be 2, 4 or 6 bytes.

Priority Dispatching - Provides the ability to specify the order in which 3601/3602 workstations are dispatched. This function consists of the LCHAP instruction which activates or deactivates the dispatching priority specified in the table(s) generated by the PRIDSP macro.

Translate - The LTRT instruction processes an input data stream against user specifiable translate table(s) to generate a translated output data stream. The LTRTBEG, LTRTENT and LTRTGEN instructions assist the user application programmer in specifying the translate table(s).

Extended Statistical Counter Recording - Provides the option to enhance statistical counter recording facilities to assist in fault isolation of degraded loop segments. This facility is particularly useful when a loop consists of multiple remote locations.

Multiple Block I/O - Diskette - Permits multiple blocks to be accessed with a single execution of the LREAD and REPLACE instruction for permanent file and absolute addressing accesses. This may also result in enhanced performance when more than 3 blocks are read or 4 blocks are written.

3270/3600 Datastream Mapping - Provides, via four new 3600 assembler language instructions, 3600 controlier assistance in converting 3270 output display datastreams into an output datastream processable by 3600 attached devices, and 3604 input datastreams into 3270 input datastreams. Input and output screen sizes are suported as specified by the application programmer. The 3270 Tab, Clear, PA and PF keys are simulated.

Extended 3270/3600 Keyboard Mapping - Provides simulation of the 3270 Insert, Delete, Erase To End Of Field and Erase Input keyboard functions.

LSEEKP Instruction - Locates a table entry which is "equal to" "greater than or equal to" or "less than or equal to" a search argument using a binary search algorithm. Table may be included in the

3601 Finance Communication Controller (cont'd)

instruction section of the controller application program, thereby permitting the tables to reside in expanded user programmable storage.

SCRPAD Instruction - Provides access to optional global work areas distant from segment storage which may reside in base or expanded user programmable storage.

Data Compression/Compaction - This function allows a controller application program to condense a data stream by compressing repeated characters and compacting frequently occurring characters according to a user defined table. This can reduce the amount of data actually transmitted over a host link or stored in the controller.

Data Decompression/Decompaction - This function allows a controller application program to decompress and/or decompact a data stream which had previously been compressed and/or compacted by a host or a controller application program.

Extended Diskette Access Method (EDAM) Base - Provides the capability to open, access (via the LREAD, LWRITE or REPLACE instructions) and close data sets on the primary or auxiliary diskette drive.

EDAM Allocate/Deallocate (LDKT Instructions) - Provides the capability to allocate and deallocate data sets in either the primary or auxiliary diskette drive.

EDAM Temporary File Support - Permits processing of a data set defined with a temporary file structure on the auxiliary diskette drive.

INTMR Instruction - Permits the collection of elapsed time for events initiated and terminated by a controller application program.

Extended LLOAD Instruction - Allows a controller application program to load data overlays into segments other than segment 14.

Secondary Logical Unit (LU) Assignment - Allows a controller application program to change the logical unit address associated with a given workstation.

ACCESSORIES

Cables (3600): Cables to attach 3600 units may be purchased from IBM or a customer-selected source. (See *Physical Planning Manual,* GA27-2766 for cable and connector specifications.) The customer is responsible for installation and maintenance of these cables. Assembled cables may be purchased from IBM. Specify bulk number, cable assembly number or part number as appropriate. Allow a lead time of six weeks 120 days.

Item No.	Description	Maximum Length
1563155	Loop Cable Assembly	609.6m (2,000')
4474809	Cable Assy (3609-2 to Modem)	2.08m (82 in)
1745372	Cable Assy (Loop Repeater to Loop Terminal Box)	7.62m (25 ft)
1745350	Cable Assy (3603 to Leased Lines)	7.62m (25 ft)
1745349	Cable Assy (DDA to 3603)	7.62m (25 ft)
1741656	Cable Assy (joining 2 telephone lines)	N/A
1142961	Bulk Cable (12 Conduct.)	N/A
5252781	Bulk Cable (4 Conductor)	N/A
5252920	Bulk Cable (2 Conductor)	N/A
765294	Connector Assy (EIA)	N/A
5252769	Bulk Cable (2 Conductor)	N/A
5252913	Bulk Cable (4 Conductor)	N/A
1561344	Strain Relief	
1745363	Conductor Assembly (3603)	
5252763	Male Plug	
5252765	Female Plug	
5420242	Mini-Ty (used with 1745363)	

Locks and Keys: The 3601 is shipped with two keys. Additional keys may be purchased from IBM. Indicate serial number of lock.

Loop Repeater (P/N 4400002): Plugs into the Loop cable and redrives all signals being transmitted in a 3600 Finance Communication System. Each Loop Repeater contains Loop redriving capabilities which allow for the extension of the Loop cable length by 2,000 feet. Loop Repeaters may be employed on a Loop to extend its overall length to a maximum of 20,000 cable-feet. The unit can be physically mounted on a wall in an out-of-the-way location. Prerequisites: An operating 3600 System Local Loop or Remote Subloop. Publications: GC22-0005.

Customer Responsibilities: The customer may be advised that: (1) The customer is responsible for making certain that the use of the equipment complies with all Federal, State, and Local Laws, Regulations, and Ordinances; (2) The customer is responsible for price quotations, installation and cost (initial and recurring) of common carrier equipment and service; (3) The customer is responsible for the set-up of the unit; (4) The customer will determine the failing unit (see "Maintenance" below); (5) The customer is responsible for determining the required number of spares.

Physical Planning and Setup: Physical planning and setup is the responsibility of the customer. Attachment to the Loop cable is provided by ordering External Signal Cable Assembly (P/N 174372), or equivalent. (See *IBM 3600 Finance Communication System Installation Manual - Physical Planning,* GA27-2766.)

Spares: The customer may wish to replace a failing unit with a spare and must be advised to purchase sufficient spare units for such use. The number of spare units recommended is dependent upon the number of units the customer has installed, application requirements, physical locations and layouts. However, the minimum number of spare units recommended is shown in the following table:

# of Loop Repeaters Installed	Minimum # Spares Recommended
100	2

Warranty: Service is available at the designated IBM Repair Center during the 90 day warranty period, which commences 30 days following date of shipment from the plant of manufacture (Raleigh). It shall be the customer's responsibility to set up the equipment. It shall be the customer's responsibility to determine the failing unit and remove it from the Loop, and if the unit is still under warranty, to pack it in the designated shipping container and ship it prepaid to the designated IBM Repair Center. IBM will return the serviced unit, shipping charges prepaid. There is no regularly scheduled preventative maintenance recommended by IBM on these units. Maintenance agreements are not available. FE on-site service will not be provided.

Ordering: Order P/N **4400002** .

Diskettes: The following diskettes may be obtained by contacting IBM.

Diskette 1 (single-sided) 3601/3602
256 byte format **P/N 2305845**
128 byte format **P/N 2305830**

Diskette 2 (double-sided) 3601-2B/3B, 3602-1A/2A
256 byte format **P/N 2736700**
128 byte format **P/N 1766870**

SUPPLIES (None)

3602 FINANCE COMMUNICATION CONTROLLER

PURPOSE

A programmable controller for attachment of 3600 Finance Communication System terminals to System/34 and System/3 model 15 processors and for attachment of 3600 Finance Communication System terminals or certain 4700 Finance Communication Systemterminals and to S/370, 303X, 308X, or 4300 processors using appropriate virtual storage system control programs or an 8100 Information System using DPPX licensed programs.

Attachment to System/34 is via SDLC transmission over various common carrier or user-owned facilities.

Attachment to System/3 model 15 is via Binary Synchronous Communications (BSC) - see 3601/3602 RPQs 8K0598 and 8K0623 and 5415 RPQ S40156.

S/370, 303X, 308X, or 4300 Processor attachment is via a 3704, 3705, or 3725 Communications Controller or the Communications Adapter (#1601) feature on the 4331 Processor using Synchronous Data Link Control (SDLC) transmission over various common carrier or user-owned transmission facilities. 8100 Information System attachment is via the 8130, 8140 and 8101 units using SDLC transmission protocols over various common carrier or nonswitched transmission facilities.

Note: See "Programming" and "SCP" pages for attachment capability.

MODELS

Model 1A A01 — A large-file programmable controller with a 5.2 meg (floating head) disk, a drive which accommodates 1- or 2-sided removable diskettes, 16K or 32K increments of storage, and a maximum loop capability of eight, of which seven can be remote.

Model 1B B01 — A large-file programmable controller with a 9.3 meg (floating head) disk, a drive which accommodates 1- or 2-sided removable diskettes, 16K or 32K increments of storage, and a maximum loop capability of eight, of which seven can be remote.

Prerequisites: Communications with a S/370, 303X, 308X, or 4300 processor with virtual storage capability via 3704, 3705, or 3725 Communications Controller equipped with appropriate features or the Communications Adapter (#1601) feature on the 4331 Processor (see M3704, 3705, 3725, or 4331 pages) or via an 8100 Information System equipped with appropriate features (see M8130, 8140 and 8101 pages).

HIGHLIGHTS

Controls all the functions of the 3600 Finance Communication System or certain 4700 Finance Communication System terminals. Controls data transmission between those terminals and the central processing site. Four SDLC Communication features are available, one of which is required for transmission to the host. An SDLC Communications feature at speeds of from 1200 bps to 4800 bps or an SDLC Communications feature at speeds of from 1200 bps to 9600 bps can be selected. Besides host link speed differences, the SDLC feature that is used at 9600 bps allows a maximum controller aggregate bps rate of 12,000 bps for the loops independent of the host link speed ... see "Communication Features". For Binary Synchronous Communications (BSC), see RPQs 8K0598 and 8K0623.

Contains approximately 24K bytes of programmable storage. Six additional increments of 16K bytes or three increments of 32K bytes of programmable storage (for a total of 120K) are available. The amount of programmable storage available for application programming depends upon the attached terminal configuration and user environment ... see Add'l Storage (#1006 or #1007) under "Special Features".

Houses a direct access diskette (contact head) drive with 2-sided removable diskette which provides permanent storage for control and user programs, plus temporary and permanent storage for user data (sequential logging, random retrieval of data records, etc.). With Auxiliary Diskette Drive .5MB (#1015), the 3602 permits attachment of two 2-sided diskette drives.

Houses a floating head disk storage device for storage of user data. This storage device is not removable except by service personnel. Includes a fixed head feature which will provide eight additional heads with access to disk data on eight tracks ... see Add'l Disk Heads (#1010, #1011) under "Special Features".

All 3600/4700 (except 4704-2) system terminals are attached by loops which operate at speeds of 1200, 2400 or 4800 bps for locally attached terminals and at 1200 or 2400 bps for remotely attached terminals. The base unit provides one loop. Seven additional loops are available. Integrated modems are available on both mdls ... see "Special Features". Note: Either one or two 4800 bps loops per 3602 may be specified. Note: Only one 4800 bps loop per 3602 may be specified for System/3 Host attachment.

Can serve as a cluster controller for attachment of the 3600 Controllers, attachment of 3662 or 3287 Printers for full-page high-speed printing or attachment of 3278 mdl 2 Display Stations.

Communication between the controller and the 3704, 3705, or 3725 or the Communications Adapter (#1601) feature on the 4331 Processor or 8130, 8140, 8101 may be either through an integrated 1200 bps modem or through an external modem using Interface (#3701) on the 3602. Local attachment can be made to a 3704, 3705, 3725 or the Communications Adapter (#1601) feature on the 4331 Processor via its local attachment feature using #3701 on the 3602 at 1200 or 2400 bps. Local attachment can be made to a 4331 via its local attachment feature using #3701 on the 3602 at 1200, 2400, 4800 or 9600 bps. See "Modems" and "Special Features" below. Each 3602 operates in half-duplex mode. Duplex communication line operations are possible with multiple 3601/3602s attached to the line ... 3602 transmitting while the other receives. For attachment to System/3 mdl 15, see 3601/3602 RPQ 8K0598 and 5415 RPQ S40156.

Can be programmed to operate independently when the processor is unavailable. Capable of controlling all terminal functions, executing arithmetic, and capturing data from the terminals for later transmission to the S/370, 303X, 308X, or 4300 processor or 8100 Information System.

Transmission: The 3602 operates over common carrier-provided or equivalent customer-owned communication facilities. For information concerning these facilities, see M2700 pages.

Modems: External modems operating speeds up to 9600 bps may be achieved with SDLC feature. External modems operating at up to 4800 bps may be attached when used with SDLC Feature #6301 or #6302. Speeds up to 9600 bps may be achieved with SDLC Feature #4501 or #4502.

Modem	Speed bps	Facility
3863	2400	Switched or nonswitched voice grade lines
3864	4800	Switched or nonswitched voice grade lines
3865	9600	Nonswitched voice grade lines
3872	2400	Switched or nonswitched voice grade lines
*	9600 bps	Nonswitched digital data service

* See RPQ for IBM DDSA.

See M2700 pages for further information. Non-IBM modems may be attached subject to the IBM Multiple Supplier Systems Policy.

Note: Switched line operation is not supported by the 3601/3602 integrated 1200 bps modem.

Bibliography: *IBM System/370 Bibliography,* GC20-0370, and *IBM 3600 Finance Communication System, System Summary,* GC27-0001.

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): Locking plug -- **#9880** for 115V, **#9884** for 208V, **#9886** for 230V. Non-locking plug -- **#9881** for 115V, **#9885** for 208V, **#9887** for 230V. **Field Installation:** Not recommended.
- Controller Designation: Media distribution of Controller Data. Specify **#9491** to identify the initial 3601 or 3602 ordered for use with a host system location, or specify **#9492** to identify additional 3602s per host system.

  If **#9491** is specified for the 3602, specify:

  a. **#9494** if there is no 3614 or 3624 with a first position designator attached to any 3602 on the same host system, or

  b. **#9493** if there is a 3614 with a first position designator and **#9002** attached to any 3602 on the same host system, and/or

  c. **#9495** if there is a 3614 with a first position designator and **#9001** or a 3624 with a first position designator attached to any 3602 on the same host system; or if encryption capability, via the Data Encryption Standard (DES), is desired in the 3600 Controller.

  See 3614 Host Attachment Designation under "Specify" for the 3614.

  If **#9491** is specified, select the specify number of the desired media.

  9/800 Magnetic Tape (**#9412**)
  9/1600 Magnetic Tape (**#9413**)
  9/6250 Magnetic Tape (**#9414**)

  If magnetic tape is not available on designated processor, then select one of the following media (DOS/VS users only):

  80-Column Cards (**#9431**)
  96-Column Cards (**#9432**)

  If card or tape inputs are not available at the host location, contactIBMfor guidance. When feature **#9491** is specified, additional shipping information is required. Supplementary specifications are to be stated exactly as follows to indicate shipping address of the host system location:

3602 Finance Communication Controller (cont'd)

Line 1 -- IBM Programming Support Representative (PSR)
Line 2 -- C/O (Name of customer)
Line 3 -- Street Address (or P.O. Box)
Line 4 -- City,State, Zip Code

This is the address to which the first controller data tape will be automatically shipped for the first controller ordered with specify **#9491**. Whenever controller data is updated by an EC, it will be shipped to the most current TPC address.

Caution: **#9491** is used to provide Controller Data Media for only the initial 3601 or 3602 attached to a host system location. Do not specify **#9491** for more than one 3601 or 3602 per host system as this will result in the unnecessary shipment of multiple DTR tapes or cards to the host system location.

- Cables: See "Accessories" for ordering instructions. Also see *Installation Manual-Physical Planning,* GA27-2766.
- If ordering a 3614 or 3624 with first position designator (see Host Attachment Designation under "Specify" for the 3614, or Controller - Data Designation under "Specify" for the 3624) to be added to any existing 3602, an order transaction should be used against the initial Controller (3601 or 3602 with **#9491** and **#9494** requesting to delete **#9494** and add **#9493** and/or **#9495** for the initial Controller.

  If all installed or on order 3614s or 3624s for loop attachment to the 3602 are removed or cancelled, an AAS

  order transaction should be used against the initial Controller (3601 or 3602 with **#9491** and **#9493** and/or **#9495** requesting to delete **#9493** and/or **#9495** and add **#9494** for the initial controller).

  Refer to DP Letter 275-43 and 276-102

  for further explanation of these specify codes and their use when (1) ordering a loop-attached 3614 in a network where no 3614s are previously attached, and (2) field installation of feature **#9001** on a loop-attached 3614.
- The following specify codes are field installable: **#9412, #9413, #9414, #9431, #9432, #9491, #9492, #9493, #9494, #9495.**

SPECIAL FEATURES

Non-Communications Features

Add'l Storage (#1006): Provides an additional 16,384 bytes of control storage for device attachment or an additional 16,384 bytes of user-programmable storage. Additional storage can be utilized for the following purposes: (1) User-Programmable Storage, (2) User-Programmable Storage Expansion, (3) Control Storage and (4) Control Storage Expansion (see below for description and limitations). **Specify:** **#9591** for Control Storage -- **#9592** for User-Programmable Storage.

Add'l Storage (#1007): Provides an additional 32,768 bytes of User-Programmable Storage. Additional storage can be used for (1) User-Programmable Storage or (2) User-Programmable Storage expansion (see below for description and limitations). Specify **#9602.**

[1] User-Programmable Storage: Used for configuration data and application programs.

Feature #1006, specify **#9592** - Provides an additional 16,384 bytes of User-Programmable Storage. **Maximum:** for #1006 with **#9592** - two. **Field Installation:** Yes.

Feature #1007, specify **#9602** - Provides an additional 32,768 bytes of User-Programmable Storage. **Maximum:** for #1007 with **#9602** - one. **Field Installation:** Yes.

[2] User-Programmable Storage Expansion: - Used in addition to two #1006 and two **#9592** increments or one #1007 with one **#9602** increment of User-Programmable Storage described above, for the instruction sections of application programs, and a limited amount of configuration data and application program constants. Most configuration data and application program constants *CANNOT* reside in expanded user-programmable storage.

Feature #1006, specify **#9592** - Provides an additional 16,384 bytes of User-Programmable Storage. **Maximum:** (for User-Programmable Storage plus User-Programmable Storage Expansion): For #1006 with **#9592** and with Storage Expansion Feature (#6501) - six. **Prerequisites:** If more than two additional Storage Features (#1006 with **#9592**) are ordered, #6501 is required. **Field Installation:** Yes.

Feature #1007, specify **#9602** - Provides an additional 32,768 bytes of User-Programmable Storage. **Maximum:** (for User-Programmable Storage plus User-Programmable Storage Expansion): For #1007 with **#9602** and with Storage Expansion Feature (#6501) - three. **Prerequisites:** If more than one Add'l Storage Feature (#1007 with **#9602**) is ordered, or if in conjunction with any Add'l Storage Feature (#1006 with **#9592**), then #6501 is required. **Field Installation:** Yes.

[3] Control Storage: Feature #1006, specify **#9591.** Used for the attachment of any combination of device types/functions/features, which have associated attachment factors (see "Device Attachment Table"). Some combination of device types can be accommodated with no further increments of control storage, while other combinations require additional increments of control storage provided by the use of feature #1006 with **#9591.** One additional increment of control storage is available without utilizing Control Storage Expansion. Three additional increments, for a total of four, are available with Control Storage Expansion. To determine whether and how many control storage increments (#1006 with **#9591**), refer to the "Device Attachment Table" (below). Calculate the sum of the attachment factors for the combination of devices or function required. Add the attachment factor one time only for each device type, feature, or function. If the attachment factor sum is 10 or less, feature #1006 or **#9591** is not required. If the attachment factor sum is greater than 10, features #1006 and **#9591** are required. An attachment factor greater than 22 is not allowed in this base attachment factor calculation.

[4] Control Storage Expansion (CSE): Feature #1006, specify **#9591.** Used to provide a greater attachment factor capability for those features or devices which require an attachment factor. CSE supplements the base attachment factor limit of 22 by providing second, third and fourth increments of Add'l Storage (#1006 with **#9591**). An additional attachment factor capability of 12 can be obtained by utilizing the second increment of Add'l Storage, or 28 by utilizing the second and third increments, or 44 by utilizing the second, third and fourth increments of Add'l Control Storage. Only the attachment factors associated with certain device types, features, or functions can be applied against this expanded attachment factor capability (see "Device Attachment Table" below). While Control Storage Expansion provides additional attachment factor capability, the CSE attachment factor must be considered separately from the base attachment factor calculation. Specifically, the Attachment Factor for a given device or feature must be allocated against either the base or the expanded attachment factor but not both. Maximum (for Control Storage plus Control Storage Expansion): For #1006 with **#9591** and without #6501 ... one. For #1006 with **#9591** and with #6501 ... four . **Limitations:** The maximum number of #1006s (with any combination of **#9591** and **#9592**) is ten . The maximum number of #1007s is three. **Field Installation:** Yes. **Prerequisites:** If more than one Control Storage Feature (#1006 with **#9591**) is ordered, the Storage Expansion Feature (#6501) is required.

The maxiumum number of #1007s plus #1006s, whatever the combination of **#9602, #9591** or **#9592**, is:

	Feature Code #1007		Feature Code #1006
Qty	3	+	4
Qty	2	+	6
Qty	1	+	8
Qty	0	+	10

In the following table, attachment factors in the column labeled 'Base' are applicable to the base attachment factor calculation only. Attachment factors in the column labeled 'Base or Expanded' are applicable to either the base or expanded attachment factor calculation.

The 3600 controller loads support for devices/features into control storage in the sequence indicated by the following table. Those RPQs with an attachment factor are also loaded in a prescribed sequence, as indicated in the *IBM 3600 Finance Communication System Configurator* (GA27-2762). The controller will always attempt to load each device, feature or RPQ into base control storage. If a device, feature or RPQ is encountered that will not fit into base control storage and it is applicable to expanded control storage, the controller will attempt to load it into expanded control storage. The above algorithm must be used to determine control storage requirements.

Refer to the *3600 Finance Communication System Configurator* (GA27-2762) for a comprehensive list of attachment factors and additional information regarding calculation of base and expanded attachment factors.

A description of attachment factor functions not associated with a specify, machine or feature is given later in this section: See "Attachment Factor Functions".

Device Attachment Table

Device Type/Feature/Function	Attachment Factor	
	Base	Base or Expanded
SDLC (#4501 or #4502)	.7	–
Multiple Block I/O Diskette	3.0	–
3614 or 3624 [Note 1]	1.2	–
3616, 4710, 4720 [Note 5,6]	3.5	–
Optional Instruction Locator	.3	–
Instruction Enhancements	1.7	–
Address Sharing [Note 5,14,15]	–	.6
Secondary Logical Unit (LU) Assignment	–	.5
3606 [Note 14,15]	2.4	–
Alternative Line Attachment Base [Note 8]	–	5.4
Dynamic Control [Note 9]	–	1.5
SDLC Link Diagnostics [Note 8]	–	0.8

3602 Finance Communication Controller (cont'd)

SDLC/SNA Attachment Part 1 [Note 8]	–	8.0
SDLC/SNA Attachment Part 2 [Note 8]	–	5.8
Device Cluster Adapter [Notes 10,11]	–	5.0
3278 Mld 2 Attachment [Note 11]	–	4.5
LSEEKP [Note 2]	–	1.8
Translate Instruction (LTRT) [Note 2]	–	1.2
3270/3600 Datastream Mapping	–	8.0
Extended 3270/3600 Keyboard Mapping [Note 7]	–	1.5
Data Decompress/Decompaction [Note 2]	–	1.2
Data Compression/Compaction [Note 2]	–	1.6
SCRPAD Instruction [Note 2]	–	1.7
Extended LLOAD Instruction	–	.3
INTMR Instruction [Note 2]	–	1.0
Data Encryption Standard (DES) [Note 1]	–	1.5
Alternate Encryption Technique (AET) [Note 1]	–	1.0
Priority Dispatching (LCHAP) [Note 2]	–	.3
Data Sequencing	–	1.6
Extended Statistical Counter Recording [Note 2]	–	1.3
Disk File (5.2 or 9.3 meg)	–	10.0
Extended Diskette Access Method (EDAM) Base	–	5.5
EDAM Allocate/Deallocate (LDKT Instruction) [Note 12]	–	1.7
EDAM Temporary File Support [Note 13]	–	1.5
3616, 4710, 4720 Part 2, 3262/3287 Part 1 [Note 5,6,10]	–	3.0
3262/3287 Part 2 [Note 10]	–	1.5
3618	–	3.0
3615	–	3.2
3610, 3611 and/or 3612 [Note 3]	–	2.6
3608 Printer [Note 15]	–	2.8
Mag Stripe Encoder-Reader (#4905/#4906) [Note 4]	–	.7
Set Diskette	–	.9
3604 mdl 7	–	.5

Notes:

[1] Although both DES and AET may be included, a single 3614 may have either DES or AET but not both. A 3624 may have only DES.

[2] The optional instruction locator must be included if this function is used. If more than one function requiring the optional instruction locator is used, the attachment factor for the locator need be included only once.

[3] Any 3610, 3611 and 3612 combination constitutes one device type.

[4] The Magnetic Stripe Reader (#4901 or #4902) need not be considered in computing the attachment factor.

[5] Address Sharing must be included if a 3616, 4710, 4720 or 4704 mdl 1 is used. If more than one device/RPQ requiring address sharing is used, the attachment factor for address sharing need be included only once.

[6] Both 3616, 4710, 4720 Part 1 and 3616, 4710, 4720 Part 2 must be included when any of these devices is used. Any 3616, 4710, 4720 combination constitutes one device type. The Part 1 and Part 2 attachment factors need only be included once if more than one device or device type is used.

[7] 3270/3600 Datastream Mapping must be included if the extended 3270/3600 Keyboard Mapping is used.

[8] The Alternative Line Attachment Base, SDLC Link Diagnostics, SDLC/SNA Attachment Part 1, and SDLC/SNA Attachment Part 2 together comprise the SNA Primary Interface support required in the controlling 3602 for controller to controller (3600 to 3602) communication via an SNA/SDLC interface. When used, these functions must all be loaded into the same controller storage (i.e., Base or Expanded). This SNA primary function is used in conjunction with the Fan-Out Communication Adapter (#1551) and the SDLC Communications Feature Without Business Machines Clocking (#4502) with specify **#9551** for Controller Attachment.

[9] The Alternative Line Attachment Base must be included and loaded into the same controller storage (i.e., Base or Expanded) if Dynamic Control is used.

[10] The Device Cluster Adapter, 3262/3287 Part 1, and 3262/3287 Part 2 must be included if a 3262 and/or 3287 is used.

The attachment factor for the Device Cluster Adapter need be included only once if any combination of the 3278 mdl 2, or 3262/3287 is used. The attachment factor for 3616, 4710, 4720 Part 2 and 3262/3287 Part 1 need be included only once if more than one of these device types is used.

[11] Both the Device Cluster Adapter and 3278 mdl 2 Attachment must be included if a 3278 mdl 2 is used. The attachment factor for the Device Cluster Adapter need be included only once if any combination of 3278 mdl 2, 3262 or 3287 is used.

[12] The EDAM Base must be included if the Allocate/Deallocate function is used.

[13] The EDAM Base must be included if EDAM Temporary File Support is used.

[14] Address sharing must be included if a 3606 is used.

[15] Address sharing must be included if a 3608 is used. The 3606 must also be included to use the 3608 Keyboard/Display. Address sharing need be included only once to utilize both the 3608 Printer and Keyboard/Display.

Add'l Disk Heads (#1010, #1011): (#1010 for mdl 1A ... #1011 for mdl 1B.) Provides eight additional disk heads for the disk file as specified by mdl type selected. **Maximum:** One. **Field Installation:** Not recommended.

Auxiliary Diskette Drive (#1015): Provides approximately 560,000 bytes of additional diskette storage capacity via a second diskette drive. No area on the auxiliary (or secondary) drive will be reserved for the control program. **Maximum:** One. **Field Installation:** No **Note:** Support for feature #1015 is provided by Extended Diskette Access Method (EDAM) Base, EDAM Allocate/Deallocate (LDET) instruction), and EDAM Temporary File Support. Refer to Device Attachment Table and Attachment Factor Functions section. The EDAM function is not required to use the Auxiliary Diskette Drive feature. The level of support provided without EDAM is limited to direct (absolute) addressing at the track and sector level.

Fan-Out Communication Adapter (#1551): Required to attach 3600 System Controllers (3601/3602) to a controlling 3602. Up to nine controllers may be attached per feature. (See M3601 pages for features required on the attaching 3601s.) **Limitations:** (1) Can only be installed on 3602s with B/M 4406687 installed. (2) Attached controllers must be within 30.4m (100 cable-feet) of the 3602. **Maximum:** Two. **Field Installation:** Yes. **Prerequisites:** Each Fan-Out Communications feature #1551 requires special feature SDLC Communications Without Business Machines Clocking (#4502) with specify #9551 for controller attachment. **Note:** Support for feature #1551 is provided by Alternative Line Attachment Base, SDLC Link Diagnostics, SDLC/SNA Attachment Part 1 and SDLC/SNA Attachment Part 2. Refer to "Device Attachment Table", above.

Device Cluster Adapter - DCA (#3101): Provides for local attachment of a mix of up to eight 3262 or 3287 printers and 3278-2 display stations on a 3602. The number operable in a given application is dependent upon the user application program. When attaching the 3278 mdl 2 to the Device Cluster Adapter, no-charge RPQ 8K0880 is required. **Limitations:** (1) Maximum distance from controller to terminal is 1,500m (4,920 ft.). (2) When the Device Cluster Adapter feature is installed, loops number 4 and 8 are no longer available. **Maximum:** One. **Field Installation:** Yes.

Add'l Loop (#4735): Provides the ability to attach additional 3600 Finance Communication System terminals. **Limitations:** A maximum of two loops (including the provided local loop) operating at 4800 bps per 3602 are allowed when one of the SDLC communication features (#4501 or #4502) are specified and Fan-Out Communications Adapter (#1551) is not specified. Otherwise the maximum is one 4800 bps loop. **Maximum:** Seven without #3101, five with #3101. **Field Installation:** Yes. **Prerequisites:** For each loop with any remotely attached terminals, #8001 or #8002 on a terminal, or a 3603 is required. **Note:** The sum of the speeds of all loops in bits per second (bps) plus the speed of the SDLC link (#6301 or #6302) in bps cannot exceed 12,000 bps (each Fan-Out Communications Adapter (#1551) reduces the 12,000 bps limit by 1200 bps). When SDLC feature #4501 or #4502 (without **#9551**) is installed, the sum of all loops cannot exceed 12,000 bps.

Storage Expansion (#6501): Provides capability of (1) expanding user-programmable storage (#1006 with **#9592** or #1007 with **#9602**) beyond 56K bytes; and/or (2) adding additional increments of #1006 with **#9591**, beyond 16K bytes. **Limitations:** If IR 4 and Controller Data ECs 745122 and 745123 are utilized, the Controller will work properly with #6501 installed, but Control Storage Expansion cannot be utilized. If releases earlier than IR 4 and Controller Data ECs 745122 and 745123 are utilized, neither the Storage Expansion Feature (#6501) nor more than one Add'l Storage feature (#6501 with **#9591**) should be installed. **Maximum:** One. **Field Installation:** Yes. **Note:** #6501 is required when more than 16K of additional control storage, Add'l Storage Feature (#1006 with **#9591**) or more than 32K of additional user-programmable storage, Add'l Storage Feature (#1006 with **#9592**) or Add'l Storage Feature (#1007 with **#9602**) are ordered.

Communications Features

Each 3602 must be equipped with one of the following SDLC features and either the EIA Interface (#3701) or the 1200 bps Integrated Modem (#5500) for communication with the host processor.

EIA Interface (#3701): Provides the appropriate cables and interface logic necessary to attach an external IBM modem for communications to the host processor through the 3704, 3705, 3725 or the Communica-

3602 Finance Communication Controller (cont'd)

SCRPAD Instruction: Provides access to optional global work areas distinct from segment storage which may reside in base or expanded user programmable storage.

Data Compression/Compaction: This function allows a controller application program to condense a data stream by compressing repeated characters and compacting frequently occurring characters according to a user defined table. This can reduce the amount of data actually transmitted over a host link or stored in the controller.

Data Decompression/Decompaction: This function allows a controller application program to decompress and/or decompact a data stream which had previously been compressed and/or compacted by a host or a controller application program.

INTMR Instruction: Permits the collection of elapsed time for events initiated and terminated by controller application program.

Extended Diskette Access Method (EDAM) Base: Provides the capability to open, access and close data sets on the primary or auxiliary diskette drive.

EDAM Allocate/Deallocate (LDKT Instruction): Provides, via the LDKT Instruction, capability to allocate and deallocate data sets in either the primary or auxiliary diskette drive.

EDAM Temporary File Support: Permits processing of a data set defined with a temporary file structure on the auxiliary diskette drive.

Dynamic Control: Provides additional LCNTRL instruction functions to assist in controlling access to devices attached to the 3602 through the SNA Primary interface.

Extended LLOAD Instruction: Allows a controller application program to load data overlay into segments other than segment 14.

Secondary Logical Unit (LU) Assignment: Allows a controller application program to change the logical unit address associated with a given workstation.

ACCESSORIES

Cables: Cables to attach 3600 units may be purchased from IBM or a customer-selected source ... see *Physical Planning Manual,* GA27-2766 for cable and connector specifications. The customer is responsible for installation and maintenance of these cables. Assembled cables may be purchased from IBM. Specify bulk number, cable assembly number or part number as appropriate. Allow a lead time of six weeks .

Item No.	Description	Maximum Length
1563155	Loop Cable Assembly	609.6m (2,000')
4474809	Cable Assy (3609-2 to Modem)	2.08m (82 in)
1745372	Cable Assy (Loop Repeater to Loop Terminal Box)	7.62m (25 ft)
1745350	Cable Assy (3603 to Leased Lines)	7.62m (25 ft)
1745349	Cable Assy (DDA to 3603)	7.62m (25 ft)
1741656	Cable Assy (joining 2 telephone lines)	N/A
1142961	Bulk Cable (12 Conduct.)	N/A
5252781	Bulk Cable (4 Conductor)	N/A
5252920	Bulk Cable (2 Conductor)	N/A
765294	Connector Assy (EIA)	N/A
5252769	Bulk Cable (2 Conductor)	N/A
5252913	Bulk Cable (4 Conductor)	N/A
1561344	Strain Relief	
1745363	Conductor Assembly (3603)	
5252763	Male Plug	
5252765	Female Plug	
5420242	Mini-Ty (used with 1745363)	

For attachment of a 3262 or 3287 to a 3694 or a 3602:

2577672 or	Cable Assy Indoor	1,500m(4,920ft)
323921 and	Coax Wire	1,500m(4,920ft)
1836418	Connector Kit	N/A

Loop Repeater (P/N 4400002): Plugs into the Loop cable and redrives all signals being transmitted in a 3600 Finance Communication System. Each Loop Repeater contains Loop redriving capabilities which allow for the extension of the Loop cable length by 2,000 feet. Loop Repeaters may be employed on a Loop to extend its overall length to a maximum of 20,000 cable-feet. The unit can be physically mounted on a wall in an out-of-the-way location. **Prerequisites:** An operating 3600 System Local Loop or Remote Subloop. **Publications:** GC22-0005.

Customer Responsibilities: The customer may be advised that: (1) The customer is responsible for making certain that the use of the equipment complies with all Federal, State, and Local Laws, Regulations, and Ordinances ... (2) The customer is responsible for price quotations, installation and cost (initial and recurring) of common carrier equipment and service ... (3) The customer is responsible for the set-up of the unit ... (4) The customer will determine the failing unit (see "Maintenance" below) ... (5) The customer is responsible for determining the required number of spares.

Physical Planning and Setup: Physical planning and setup is the responsibility of the customer. Attachment to the Loop cable is provided by ordering External Signal Cable Assembly (P/N 174372), or equivalent ... see *IBM 3600 Finance Communication System Installation Manual - Physical Planning,* GA27-2766.

Spares: The customer may wish to replace a failing unit with a spare and must be advised to purchase sufficient spare units for such use. The number of spare units recommended is dependent upon the number of units the customer has installed, application requirements, physical locations and layouts. However, the minimum number of spare units recommended is shown in the following table:

# of Loop Repeaters Installed	Minimum # Spares Recommended
100	2
200	2
300	3
500	4
1000	6
1500	9
2000	10
2500	12
3000	14
3500	16
4000	18
4500	19
5000	21

Warranty: Service is available at the designated IBM Repair Center during the 90 day warranty period, which commences 30 days following date of shipment from the plant of manufacture (Raleigh). It shall be the customer's responsibility to set up the equipment. It shall be the customer's responsibility to determine the failing unit and remove it from the Loop, and if the unit is still under warranty, to pack it in the designated shipping container and ship it prepaid to the designated IBM Repair Center. IBM will return the serviced unit, shipping charges prepaid. There is no regularly scheduled preventative maintenance recommended by IBM on these units. Maintenance agreements are not available. CE on-site service will not be provided.

Ordering: Order P/N 4400002 .

Diskettes: The following diskettes may be obtained by contacting IBM.

Diskette 1 (single-sided) 3601/3602
256 byte format **P/N 2305845**
128 byte format **P/N 2305830**

Diskette 2 (double-sided) 3601-2B/3B, 3602-1A/2A
256 byte format **P/N 2736700**
128 byte format **P/N 1766870**

SUPPLIES (None)

3603 TERMINAL ATTACHMENT UNIT

PURPOSE

Attaches all 3600 System Controllers or 4700 Systems and terminals to the communication facilities. The 3603 enables remote subloop operation by connecting the controller loop feature to the communication facilities which connect to a remote 3603 with the subloop of terminals.

MODELS

Model 1	001	Provides 1200 bps integrated circuitry for attachment to communication facilities and has switched network backup capability for use if the nonswitched communication line fails.
Model 2	002	Provides an EIA RS232C interface to an external asynchronous modem (1200, 2400 bps), or with clocking feature (#6352) to an external synchronous modem (1200, 2400 bps).

Prerequisites: A 3601 or 3602 with an Add'l Loop Feature (#4735) or a 4701 with or without Add'l Loop (#4745) is required for each remote loop that is attached with a 3603.

The 3602 mdl 2 without clocking requires an asynchronous modem. The 3603 mdl 2 with Clocking (#6352) requires a synchronous modem that accepts Transmit Signal Element Timing from the 3600 System or 4700 System equipment. Before ordering the 3603 mdl 2, customer must check with modem manufacturer to determine their mode of operation. As an alternate to a 3603, a 1200 bps Loop Integrated Modem (#8001) in the 3601 or 3602 may be used.

Note: The loop is unidirectional. Therefore, if there is only one 3603 attached, there must be a 4-wire duplex communication channel interconnecting the 3601/3602/4701 and the 3603. If there is more than one 3603 location attached to a single loop, there must be a 2-wire line linking all the 3603s in the loop, plus a 2-wire line from the 3601/3602/4701 to the first 3603 and from the last 3603 to the 3601/3602/4701. The 3603 attaches to normal quality voice grade lines. When using a 3603 on a loop, it is recommended that a 3603 be used at the 3601/3602/4701 to maximize backup capabilities.

HIGHLIGHTS

- Can be physically installed on a wall.
- Has self-test facilities to establish valid operation of the 3603 on a remote/local loop exclusive of the nonswitched network.

Publications: GC20-0370

Customer Responsibilities: The customer must be advised that:

(1) He is responsible to make certain that the use of the equipment complies with all Federal, State,

and local laws, regulations, and ordinances.
(2) He is responsible for price quotations, installation and cost (initial and recurring) of common carrier equipment and service.
(3) He is responsible for setup of the unit.
(4) The customer will determine the failing unit (see "Maintenance" below).
(5) He is responsible for ascertaining the number of spares required.
(6) The purchaser agrees that IBM is relieved of responsibility for all claims including, but not limited to, loss of funds contained in, dispensed by or associated with the 3603.

The customer is also responsible for the provision of a telephone local loop conditioned for data above 300 bps, for FCC registered protective circuitry of the CDT type (or equivalent) in order to use the Switched Network Backup function and, with the 3603 mdl 2, an appropriate modem. A cable is available from IBM for a fee, for the protective circuitry attachment. A similar cable is available, also for a fee, to connect the 3603 to the nonswitched line connector. Installation of the cable is also a customer responsibility.

The *IBM 3600 Finance Communication System Installation Manual - Physical Planning,* GA27-2766, and the *IBM 3600 Finance Communication System Services Terminal - Terminal Installation Guide,* GA27-2796, should be ordered for each customer installation.IBM Financial Services Terminals: Complementing the *IBM 3600 Finance Communication System Summary* GC27-0001.

Spares: The customer may wish to replace a failing 3603 with a spare and must be advised to purchase sufficient spare units for such use. The number of spare units recommended is dependent upon the number of units the customer has installed, his application requirements, physical locations, and layouts. However, the minimum number of spare units recommended is shown in the following table:

Number of 3603s Installed	Minimum Number of Spares Recommended	
	Mdl 1	Mdl 2
100	2	3
200	3	4
300	4	6
500	6	8
1000	10	14
1500	14	19
2000	17	24
2500	20	28
3000	23	33
3500	27	38
4000	30	42
4500	33	47
5000	36	51

Maintenance: Maintenance of the 3603 will normally be at a designated IBM Repair Center. All maintenance, parts replacement, adjustments, and repair shall normally be performed at the designated IBM Repair Center. It shall be the customer's responsibility to set up the equipment and to determine when remedial maintenance is required. When remedial maintenance is required, it shall be the customer's responsibility to determine the failing unit, pack the unit in the designated shipping container and ship it prepaid to the designated IBM Repair Center. IBM will pay the transportation charges for return of the repaired unit. There is no regularly scheduled preventive maintenance recommended by IBM on these units.

The repair service is available under an IBM Repair Center Maintenance Supplement to the IBM Maintenance Agreement or on a time and material basis.

IBM Repair Center Service: The 3603 is eligible for maintenance coverage immediately following expiration of the service and parts warranty at the monthly charge shown under MMMC in Price List.

If maintenance coverage is not contracted for immediately following expiration of any service and parts warranty and the customer now wants maintenance coverage, he may ship the machine(s) to the designated IBM Repair Center for an inspection.

If, on the basis of an inspection, the repair center concludes that a machine is not repairable, no further work will be performed and the machine will be returned to the customer without charge.

In all other cases, a minimum charge per machine to cover handling, inspection, cleaning, adjustments, and testing will be applied. In addition, all aprts needed will be billed at IBM's prevailing parts prices and the additional time required for repairs will be billed at IBM's applicable service rates. The machine will then be eligible for maintenance coverage. Maintenance of the 3603 will normally be at a designated IBM Repair Center.

Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center for repair under the IBM Machine Repair Authorization Form, GX27-2981, in which case repair will be made (if the machine is repairable). Alternatively, upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling, inspection, cleaning, adjustments, testing, and estimating of repair charges.

IBM Repair Center Service: The repair service is available under an IBM Repair Center Maintenance Supplement to the IBM Maintenance Parts Agreement at the applicable MMMC, or on a time and material basis.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9901. Field Installation:** Not recommended.
- Cables: See M3601 and 3602 pages for prices and ordering instructions. See also *3600 Installation Manual, Physical Planning,* GA27-2766.

SPECIAL FEATURES

Clocking (#6352): [Mdl 2] Provides Transmit Signal Element Timing to synchronous modems (1200, 2400 bps). This feature is required for all synchronous modems (including Western 201C and equivalent modems). **Field Installation:** Not recommended.

MODEL CONVERSIONS (None)

ACCESSORIES

Accessories for the 3603 may be purchased from IBM or a customer selected source. Allow a lead time of 120 days.

P/N	Description
78999	Fuse (0.5 Slow Blow)
1745353	Jumper Assembly (Signal Attenuation or Loop Speed)
5929886	Loop Plate (Loop Connector Assy)

SUPPLIES (None)

3604 KEYBOARD DISPLAY MDL 6

PURPOSE

A combination keyboard and gas-panel display terminal for input and output in interactive banking application.

MODELS

Model 6 006 — Displays 240 characters - six rows of 40 characters. The same 45-key keyboard is available as described above on the model 5. (Model 6 is also used as a Control Terminal on a 3631/3632 Plant Communications Controller and 3630 System and the 3814 Switching Management System.)

Limitations: When used as a control station terminal with a 3631 or 3632 Plant Communication Controller, the use of the keyboard, indicators and the optional Audible Alarm (#1050) are modified.

Maximum: Two on the 3814 Switching Management System.

Prerequisites: For 3600 or 4700 System, an available position on a local or remote loop of a 3601, 3602 or 4701 Controller. If located remotely from the Controller, the remote location must have either a 3603 Terminal Attachment Unit, a 3614 or 3624 Consumer Transaction Facility equipped with a Terminal Loop Feature (#7820) and an appropriate modem, or a 3604 mdl 3, 4 equipped with a Line Feature Base (#4751 or #4752) and appropriate modem. If both a 3614 or 3624 and a 3604 mdl 2, 3 or 4 are installed in the same remote location, it is recommended that the loop modem be located with the 3614 or 3624 since the 3614 or 3624 will often be operating when the 3604 mdls 2, 3 or 4 is not.

For 3814 Switching Management System, an available position on the loop of the 3814 Controller mdl A. The 3814 does not support the Magnetic Stripe Reader (#4903) or the Magnetic Stripe Encoder-Reader (#1501).

HIGHLIGHTS

The 3604 Keyboard Display mdl 6 displays characters using a 7x9 dot matrix.

A 45-key keyboard is standard. Can be equipped to read a magnetic stripe on either a plastic card or a passbook. Can be equipped to encode magnetic stripe on a passbook. Can be equipped with an audible alarm which is activated under program control. Dimensions are: 247.67mm (9.75 in.) high x 457.2mm (18.0 in.) wide x 190.5mm (7.5 in.) deep. May be either locally or remotely (see "Prerequisites") attached to the 3601, 3602, or 4701.

Keyboard: The 45-key keyboard contains three clusters of 15 keys. The layout of each cluster is a matrix of five rows, with three keys in each row. The keyboard includes a blank overlay which may be designated with any notation the customer desires. A second overlay identifies the ten numeric keys in a blue field, which may be placed in any of the three 15-key clusters the customer desires. Covering these overlays is a clear plastic, protective overlay. See M10000 pages, 3600 Accessory Group, for pricing and ordering instructions for additional overlays.

Indicator Lights: Five indicator lights are provided, three of which can be lighted under program control.

Magnetic Stripe Read Capability: The 3604 mdl 6 can be equipped with a Magnetic-Stripe Reader which is located in front of the display panel, to the left of the keyboard, or with a Magnetic Stripe Encoder-Reader attached by a 30-inch cable. To use these features, an operator manually passes a magnetic striped plastic identification card or credit card (for reading), or a passbook with a magnetic stripe label attached (for reading or encoding), through a slot. The 3604 encoding is in a unique format at 210 bits per inch. Standard ABA encoding is at 75 bits per inch; therefore, credit cards cannot be encoded to ABA specifications, and thus must be used as "read-only" documents. The 3604 is capable of reading either the standard ABA format or the 3604 passbook format. Encoding requires low coercivity magnetic stripe material. IBM self-adhesive magnetic stripe labels are available . These mylar base labels are approximately 12.7mm (0.50") by 91.4mm (3.6") and are easily applied by hand to passbooks.

Customer Setup (CSU): The mdl 6 is designated Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, refer to the GI section.

Customer Responsiblities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3604.
- Physical setup, connection of cables in protected customer access areas, switch settings, and checkout.
- Contact Field Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.

Limitations: The customer should complete the setup and check out of the 3604 mdl 6 prior to calling the CE to adjust the audible alarm feature (#1050). #1050 requires tools and special skills for initial installation.

Publications: GC20-0370

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9880** for locking plug, or **#9881** for nonlocking plug. **Field Installation:** Not recommended.
- Color: The standard color for this unit is pearl white. The accent color must be specified, either **#9065** for pebble gray or **#9068** for raven black.
  Field Installation: Not recommended.
- 3630 Control Station: **#9701** for 3604 mdl 6 attachment to 3631 or 3632 Plant Communication Controller.
- When attaching to a 3814 Switching Management System, if 4.2m (14 ft) power cord is required, order RPQ 8P0898 which is factory only.
- Cables: See "Accessories" section in M3601 pages for ordering instructions. See also *3600 Installation Manual-Physical Planning,* GA27-2766.
- Specify **#9701** for 3604 mdl 6 attachment to 3631 or 3632.
- Specify **#9711** for 3604 mdl 6 attachment to 3814 (for scheduling purposed).

SPECIAL FEATURES

Audible Alarm (#1050): Provides an audible alarm which can be enabled or disabled under program control. The audible alarm can be programmed to work with any of the programmable indicator lights. **Limitations:** Cannot be used in a 3630 System. **Maximum:** One. **Field Installation:** Yes.

Magnetic Stripe Encoder-Reader (#1501): Has encode and read capability. **Limitations:** Cannot be installed with Magnetic Stripe Reader (#4903). Cannot be used in a 3630 System. Not available with the 3814. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Depending upon the configuration, #1005, (#1006 or #1007on the 3601 (#1006 or #1007) on the 3602, on (#1008) on the 4701 may be required on the 3600 or #1008 on 4700 ... see M3600 or 4700 pages.

Magnetic Stripe Reader (#4903): Has read capability only. **Limitations:** Cannot be installed with Magnetic Stripe Encoder-Reader (#1501). Cannot be used in a 3630 system. Not available with the 3814. **Maximum:** One. Cannot be used in a 3630 System. **Field Installation:** Yes.

MODEL CONVERSIONS: None

Repair Center Maintenance

For the 3604 mdl 6, an alternative maintenance plan is offered at a repair center. Under this plan, maintenance, parts replacement, adjustments, and repair of the applicable keyboard displays will be performed at a designated IBM Repair Center.

Mdl 6 is CSU. During the warranty period for purchased machines, IBM will provide on-site maintenance or, at the customers' option, repair center maintenance under the terms and conditions of the repair center offering. For lease customers repair center maintenance is available immediately following execution of the repair center amendment to the agreement for lease or rental of IBM machines. The customer utilizing repair center maintenance is responsible for:

1. Determining when remedial maintenance is required:

   To verify that remedial maintenance is required, the customer should replace a suspected 3604 with one known to be operational. The customer may wish to replace a failing machine with a spare unit; sufficient spare units must be on hand for such use. The number of spare units recommended is dependent upon the number of machines installed, application requirements, physical locations and layouts. The minimum number of spare units recommended is:

Number of Machines	3604-6
50	2
100	2
200	2
300	3
500	3
1000	5

3604 Keyboard Display Mdl 6 (cont'd)

2. Removing and replacing machines in the operational environment.
3. Checking machine performance while machines are installed in the operational environment.
4. Shipping machines prepaid to the IBM Repair Center and utilizing designated containers available from IBM for such shipment.

IBM will prepay return shipping charges from the IBM Repair Center to locations within the United States and Puerto Rico. IBM will not be responsible for loss or damage to customer-owned machines during the period the machines are in transit to and from an IBM Repair Center or in IBM's possession at an IBM Repair Center, except for loss or damage caused by IBM's negligence. Replaced parts become the property of IBM.

The 3604 Repair Center Maintenance Plan applies to the base machine and, except for the Limitations noted below, features and RPQs installed on the base machine. Under this plan, charges for the base machine have been reduced; charges for features and RPQs remain unchanged. Should a customer operating under this plan desire repair service on the customer's site, IBM will provide this service at a charge for the time required. No additional charge, however, will be made for parts.

Field installable features and RPQs will be installed by IBM at the standard field install prices.

Installation of field installable features will normally be done by IBM on the customer's site. Should a customer operating under this plan desire installation of the featureat the repair center, IBM must be notified that this has been selected. The customer must coordinate the shipment of machines and feature packages with the IBM Repair Center.

Repair Center maintenance for the 3604 mdl 6 is available under the following agreements:

Deferred Central Facility Maintenance Service (DCFM):

The 3604 mdl 6 qualifies for DCFM. The customer will provide a facility at which the machines will be serviced.

The customer is responsible for determining when remedial maintenance is required and for transporting the machines to and from the facility.

A specified minimum number of machines must require remedial maintenance before the customer places a call for maintenance service. For the minimum numbers, refer to the Machines pages under "Terms and Conditions" of the machine type and mdl in question. If the customer places a call for remedial maintenance involving fewer than the specified number of machines, the customer will be charged an additional service charge which is determined by multiplying the additional service charge period (currently one-half hour) specified on the machine list, by IBM's applicable per-call rate then in effect. IBM may increase the additional service charge period upon prior written notice to the customer.

IBM will normally respond to requests for service on the IBM business day following the day on which the call was placed.

Purchased machines: IBM Maintenance Service Option Amendment to IBM Maintenance Agreement.

Rented or leased machines: Amendment to the Agreement for Lease or Rental or Rental of IBM Machines.

Limitations

1. Machines under the Pilot Test Plan (PTP) will not be accepted for repair center maintenance.
2. The 3604 mdl 2 with Line Feature Base (#4751 or #4752) will not be accepted for repair center maintenance.
3. Each RPQ installed on the base machine must be evaluated individually to determine acceptability for repair center maintenance. Contact FE Services Planning, Charlotte, North Carolina, to determine acceptability.

The following RPQs have been reviewed and are acceptable for repair center maintenance:

RPQ 8K0648 Keyboard
RPQ MG1586 Address Sharing
RPQ 8K0567 Audible Alarm
RPQ 8K0596 Audible Alarm mdl A02
RPQ 8K0597 Pin Pad 3604 mdl 6
RPQ S25148 3790 Support
RPQ S25150 Series 1 Support

The following RPQs have been reviewed and are not acceptable for repair center maintenance:

RPQ 8K0552 Loop EIA Interface with Clock
RPQ 8K0595 Loop EIA Interface with Clock
RPQ 7B0184 Optical Scanner
RPQ 8K0903 Optical Scanner
RPQ EJ3715 Power 50 Hz 220V
RPQ X47766 Keyboard w/o Keytops
RPQ YA2300 Keyboard w/o Keytops

Designated Repair Centers: The 3604 Repair Center Maintenance Plan is available at the Paramus, Chicago, or Los Angeles Repair Centers.

ACCESSORIES

See M3601 pages.

SUPPLIES (None)

3606 FINANCIAL SERVICES TERMINAL

PURPOSE

A keyboard display terminal for use with the 3600 Finance Communication System in point of sale or other applications.

MODELS

Model 1 001 — Attaches to the 3601 or 3602 Finance Communication Controller local or remote loop. If located remotely from the 3601 or 3602, the remote location must have either a 3603 Terminal Attachment Unit, a 3614 or 3624 Consumer Transaction Facility equipped with a Terminal Loop Feature (#7820) and an appropriate modem, or a 3604 model 2, 3 or 4 equipped with a Line Feature Base (#4751 or #4752) and appropriate modem.

Model 2 002 — Attaches to the 3601 or 3602 Finance Communication Controller remote loop.

Prerequisites

Model 1: If located remotely from a 3601 or 3602, the remote location must have either a 3603 Terminal Attachment Unit, a 3614 or 3624 Consumer Facility equipped with a Terminal Loop Feature (#7820) and an appropriate modem, or a 3604 mdl 2, 3 or 4 equipped with a Line Feature Base (#4751 or #4752) and appropriate modem. If both a 3614 or 3624 and a 3604 mdl 2, 3 or 4 are installed in the same remote location, it is recommended that the loop modem be located with the 3614 or 3624 since the 3614 or 3624 will often be operating when the 3604 mdl 2, 3 and 4 is not.

Model 2: Common carrier termination at location of installation.

HIGHLIGHTS

Has 8-position numeric display, nine message indicators, a numeric keyboard, six function keys and a magnetic stripe reader capable of reading either standard ABA format (75 bpi) or the 3604 passbook format (210 bpi).

The 3606 is used as an interactive terminal in point of sale and other applications (credit authorization, data capture, check verification, funds transfer(s).)

Publications: GC20-0370

Customer Responsibilities: The customer must be advised that: (1) He is responsible to make certain that the use of the equipment complies with all Federal, State, and Local Laws, Regulations, and Ordinances ... (2) He is responsible for price quotations, installation and cost (initial and recurring) of common carrier equipment and service ... (3) He is responsible for the installation of the unit ... (4) He will determine the failing unit (see "Maintenance" below) ... (5) He is responsible to determine required spares ... (6) Purchaser agrees that IBM is relieved of responsibility for all claims including, but not limited to, loss of funds contained in, dispensed by, or associated with the 3606.

Spares: The customer may wish to replace a failing 3606 with a spare and must be advised to purchase sufficient spare units for such use. The number of spare units recommended is dependent upon the number of units the customer has installed, his application requirements, physical locations, and layouts. However, the minimum number of spare units recommended is shown in the following table:

Number of 3606s Installed	Minimum Number of Spares Recommended Mdl 1	Mdl 2
100	2	2
200	3	4
300	4	5
500	5	6
1,000	8	10
1,500	11	14
2,000	14	18
2,500	16	21
3,000	19	25
3,500	21	28
4,000	24	31
4,500	26	34
5,000	29	37

Maintenance: All maintenance of the 3606, parts replacement, and repair shall normally be performed at the designated IBM Repair Center.

Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center for repair under the IBM Machine Repair Authorization Form, GX27-2981, in which case repair will be made (if the machine is repairable). Alternatively, upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling, inspection, cleaning, adjustments, testing, and estimating of repair charges.

IBM Repair Center Service: The repair service is available under an IBM Repair Center Maintenance Supplement to the IBM Maintenance Agreement at the MMMC shown, or on a time and material basis. Refer to Repair Center Service/Maintenance Program in the FE Services subsection of the GI section.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9901. Field Installation:** Not recommended.
- Cables: See M3601 or 3602 pages for pricing and ordering instructions. Also see *Installation Manual - Physical Planning,* GA27-2766.
- Terminals are shipped with standard keyboard and indicator light nomenclature. See *Financial Services Terminals Complementing Manual,* GC27-0002, unless specified as follows: **#9031** for a black filter panel, or **#9481** for a numerics only keyboard overlay. The customer may choose the nomenclature to suit an application. All keyboard overlays and filter panels are available for a fee. See "Accessories" for pricing and ordering instructions.
- Keyboard Arrangement: Specify **#9390** for a reverse or calculator formatted keyboard (top row -- 7,8,9; second row -- 4,5,6; third row -- 1,2,3; bottom row -- 0). **Field Installation:** Not recommended. **Note:** If **#9390** is not specified, the standard keyboard arrangement will be shipped (top row -- 1,2,3; second row -- 4,5,6; third row -- 7,8,9; bottom row -- 0).

MODEL CONVERSIONS

Available at time of manufacture only.

ACCESSORIES

Accessories for the 3606 may be purchased from IBM or a customer selected source. Allow a lead time of 120 days.

3608 PRINTING FINANCIAL SERVICES TERMINAL

PURPOSE

A keyboard display terminal, with printer, for use with the 3600 Finance Communication System in point of sale or other applications.

MODELS

Model 1 001 — Attaches to the 3601 or 3602 Finance Communication Controller local or remote loop. If located remotely from the 3601 or 3602, the remote location must have either a 3603 Terminal Attachment Unit, a 3614 or 3624 Consumer Transaction Facility equipped with a Terminal Loop Feature (#7820) and an appropriate modem, or a 3604 model 2, 3 or 4 equipped with a Line Feature (#4751 or 4752) and appropriate modem.

Model 2 002 — Attaches to the 3601 or 3602 Finance Communication Controller remote loop.

Prerequisites:

Mdl 1 - if located remotely from the 3601 or 3602, the remote location must have either a 3603 Terminal Attachment Unit, a 3614 or 3624 Consumer Transaction Facility equipped with a Terminal Loop Feature (#7820) and an appropriate modem, or a 3604 mdl 3 or 4 equipped with a Line Feature Base (#4751 or #4752) and appropriate modem. If both a 3614 or 3624 and a 3604 mdl 2, 3 or 4 are installed in the same remote location, it is recommended that the loop modem be located with the 3614 or 3624 since the 3614 or 3624 will often be operating when the 3604 mdl 3 or 4 is not.

Mdl 2 - common carrier termination at location of installation.

HIGHLIGHTS

- Can print three lines of alphameric data on sales slips, charge receipts, or other documents used in point of sale applications. Line positions must be specified. See "Specify".
- Has 45-character set. Optional 10-character numeric OCR 7B font for upper-most print row is available as a special feature. See "Special Features".
- Document to be printed is inserted into the chute at the right of the terminal, is fed past print wheels, printed, and ejected at the left side of the terminal.
- Has 8-position numeric display, nine message indicators, a numeric keyboard, six function keys, and a magnetic stripe reader capable of reading either standard ABA format (75 bpi) or the 3604 passbook format (210 bpi).
- Used as interactive terminal in point of sale applications (e.g., credit authorization, data capture, check verification, funds transfers).

Publications: GC20-0370

Customer Responsibilities: The customer must be advised that: [1] He is responsible to make certain that the use of the equipment complies with all Local Laws, Federal, State Regulations, and Ordinances. [2] He is responsible for price quotations, installation and cost (initial and recurring) of common carrier equipment and service. [3] He is responsible for the installation of the unit. [4] The customer will determine the failing unit (see "Maintenance" below). [5] He is responsible for determining required spares. [6] Purchaser agrees that IBM is relieved of responsibility for all claims including, but not limited to, loss of funds contained in, dispensed by or associated with the 3608.

Spares: The customer may wish to replace a failing 3608 with a spare and must be advised to purchase sufficient spare units for such use. The number of spare units recommended is dependent upon the number of units the customer has installed, his application requirements, physical locations and layouts. However, the minimum number of spare units recommended is shown in the following table:

Number of 3608s Installed	Minimum Number of Spares Recommended	
	Mdl 1	Mdl 2
100	5	5
200	8	9
300	11	12
500	16	17
1000	27	30
1500	38	43
2000	49	55
2500	59	67
3000	70	78
3500	80	90
4000	90	102
4500	100	113
5000	110	124

Maintenance: All maintenance of 3608s, parts replacement, adjustments, and repair shall normally be performed at the designated IBM Repair Center.

Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center for repair under the *IBM Machine Repair Authorization Form* (974-02A), in which case repair will be made (if the machine is repairable). Alternatively, upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling, inspection, cleaning, adjustments, testing, and estimating of repair charges.

IBM Repair Center Service: The repair service is available under an IBM Repair Center Maintenance Supplement to the IBM Maintenance Agreement at the MMMC shown, or on a time and material basis. Refer to "Repair Center Service/Maintenance Program" in the Field Engineering Services subsection of the GI section.

Forms Characteristics: Printing on the standard 3608 is possible on single part forms of the following dimensions: From 69.9mm (2.75") up to 82.6mm (3.25") high by 147.3mm (5.8") to 215.9mm (8.5") wide by 0.10mm (.004") to 0.28mm (.011") thick. In addition, the following dimensions apply to multi-part charge forms: 82.6mm (3.25") high by 121.9mm (4.8") wide by 0.2mm (.008") to 0.43mm (.017") thick. Refer to the *IBM Forms Design Reference Guide for Printers* (GA24-3488) for additional information. OCR 7B (not inked) printing is intended for two and three part charge forms. Due to variations in card, paper, and carbon stock, the customer should evaluate his printed forms to determine if they meet his performance objectives. An optional feature to allow printing of documents up to 88.9mm (3.5") in height is available.

Character Sets:

OCR 7B is 0-9.

10-pitch is 0-9, A-Z, and special characters number sign (#), at sign (@), comma (,), minus (-), dollar ($), period (.), ampersand (&), slash (/), and percent sign (%).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9901. Field Installation:** Not recommended
- Cables: See M10000 pages forpricing and ordering instructions. Also see *Installation Manual - Physical Planning,* (GA27-2766).
- Terminals are shipped with standard keyboard and indicator light nomenclature unless specified as follows: Specify **#9031** for blank filter panel or **#9481** for a numerics-only keyboard overlay. The customer may choose the nomenclature to suit an application. See *Financial Services Terminals Complementing Manual,* (GC27-0002). Additional quantities of all keyboard overlays and filter panels are available for a fee. See "3600 Accessories" in M10000 pages for pricing and ordering instructions.
- Print Line Positions [at time of manufacture only]: The following are standard combinations. See "Line Position Chart".

  #9540 for 1, 4, 10
  #9541 for 1, 5, 10
  #9542 for 1, 3, 6
  #9543 for 1, 7, 10
  #9544 for 4, 7, 10

- Keyboard Arrangement: Specify **#9390** for a reverse or calculator formatted keyboard (top row -- 7,8,9; second row -- 4,5,6; third row -- 1,2,3; bottom row -- 0). **Note:** If **#9390** is not specified, the standard keyboard arrangment will be shipped (top row -- 1,2,3; second row -- 4,5,6; third row -- 7,8,9; bottom row -- 0). **Field Installation** not recommended.
- Document Chute **(#9701)**: ... for a document chute capable of handling documents up to 88.9mm (3.5") in height. This feature shifts the print line positions up so that the distance from the bottom of the form to the nominal center location of the print line is increased by 3.5mm (.125"). It is only available with 4, 7, 10 print line positions **(#9544)**. See Line Position Chart B. It is not available with OCR 7B Font (#5454). **Field Installation:** Available at time of manufacture only.

3608 Printing Financial Services Terminal (cont'd)

Line Position Chart A [Standard 82.6mm (3.25") Chute]

Line Pos.	Font	Nominal Center Line Location, distance from bottom edge of document	Note
OCR	OCR 7B	77.0mm(3.031")[5.56mm, .219" from top edge] 82.6mm (3.25") doc	Available as Special Feature (#5454) only
1	10-pitch	77.0mm (3.031")	Not with #5454
2	10-pitch	71.9mm (2.831")	Not with #5454
3	10-pitch	66.8mm (2.631")	
4	10-pitch	61.7mm (2.431")	
5	10-pitch	56.7mm (2.231")	
6	10-pitch	51.6mm (2.031")	
7	10-pitch	46.5mm (1.831")	
8	10-pitch	41.4mm (1.631")	
9	10-pitch	36.3mm (1.431")	
10	10-pitch	31.3mm (1.231")	
11	10-pitch	26.2mm (1.031")	Only with #5454
12	10-pitch	21.1mm (0.831")	Only with #5454

If a customer desires three print lines positioned in locations other than the five feature combinations shown, an RPQ may be submitted at order time. PRQs to change print line positions or to add the OCR print feature will not be accepted after manufacture and shipment to the customer.

Line Position Chart B [88.9mm (3.5") Chute only]: See **#9701** above.

Line Pos.	Font	Nominal Center Line Location, distance from bottom edge of document
4	10-pitch	64.9mm (2.556")
7	10-pitch	49.7mm (1.956")
10	10-pitch	34.4mm (1.356")

SPECIAL FEATURES

OCR 7B Font (#5454): The 10-character OCR 7B font can be substituted for the standard font in the uppermost print row. The three print line positions, when this feature is installed, are OCR, 3 and 5. The OCR 7B characters impact printed when #5454 is used can be read on a 1287 Optical Character Reader equipped with the OCR 7B special feature (#3945). **Field Installation:** No.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3610 DOCUMENT PRINTER MDL 4

PURPOSE

A printer for use with the 3600 or 4700 Finance Communications System to provide a hardcopy output of banking transactions.

MODELS

Model 4 004 Prints on a cut form and on a journal roll/audit roll.

Prerequisites: [1] An available position on a local or remote loop of a 3601, 3602 or 4701 Controller. If located remotely from the 3601 or 3602, the remote location must have either a 3603 Terminal Attachment Unit, a 3614 or 3624 Consumer Transaction Facility equipped with a Terminal Loop Feature (#7820) and an appropriate modem, or a 3604 mdl 2, 3 or 4 equipped with a Line Feature Base (#4751 or #4752) and appropriate modem. If both a 3614 or 3624 and 3604 mdl 2, 3 or 4 are installed in the same remote location, it is recommended that the loop modem be located with the 3614 or 3624, since the 3614 or 3624 will often be operating when the 3604 mdl 2, 3 or 4 is not. [2] Depending upon the configuration, an Add'l Storage feature (#1005, #1006 or #1007 on the 3601, #1006 or #1007 on the 3602, or #1008 on the 4701 Controller). See M3601, 3602 or 4701 pages.

HIGHLIGHTS

The 3610 Document Printer mdl 4 provides a hardcopy output on a variety of cut forms and paper stock to meet the customer's printing requirements in banking applications. In addition, the 3610 mdl 4 has the capability of printing single or multiple lines as well as being able to print on a 1- or 2-part journal roll. When a single line document is used, a lever is provided to engage a document stop which positions the bottom of the printed line 19.4mm ± 1.65mm (0.765 in. ± 0.065 in.) from the bottom of the document. A cut form can be positioned in front of the journal roll so that printing can occur simultaneously on the cut form and journal roll, provided that appropriate carbon or impact paper is used.

Printing occurs at 10 characters per inch, and 5 or 6 lines per inch. At time of installation the customer engineer will set the line spacing at 5 or 6 lines per inch as requested by the customer. The 3610 mdl 4 prints at speeds up to 30 characters/second. Forms control capabilities include a right-hand forms-advance knob, and a forms tear bar located 66.675mm ± 6.35mm (2.625 in. ± 0.25 in.) above the print line.When one part of the journal paper is attached to the take-up roll, the forms-advance knob may be used to advance the paper. Otherwise, the paper must be advanced manually.

The size of the 3610 mdl 4 is 266.7mm (10.5 in.) high x 457.2mm (18.0 in.) wide x 266.7mm (10.5 in.) deep. When used with the 3604 Keyboard Display mdl 5 or 6 it provides a teller with a workstation which fits within a work area with dimensions of 266.7mm (10.5 in.) high x 457.2mm (18.0 in.) wide x 457.2mm (18.0 in.) deep.

Journal Take-up With Locked Cover: Provides a journal take-up roll for accumulating one part of a two-part journal after it is printed. (The other part of the journal exists from the printer past a tear bar.) A locked cover is also provided to prevent unauthorized access to the take-up roll. Two keys are provided for the lock. When a single-part journal is used, it must exit from the printer past the tear bar (cannot be accumulated on the take-up roll). The journal take-up roll can accommodate up to a maximum of 15.24m (50 ft) of paper.

48-Character Set: Provides a 48-character set consisting of 47 printable graphics and a space (blank).

Publications: GC20-0370

Forms Specifications: Refer to *Forms Design Reference Guide for Printers* (GA24-3488).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9880** for locking plug, **#9881** for non-locking plug. **Field Installation:** Not recommended.
- Color: The standard color for this unit is pearl white. The accent color must be specified, either **#9065** for pebble gray or **#9068** for raven black.

  Field Installation: Not recommended.
- Cables: See M3601 pages for ordering instructions. Also see *3600 Installation Manual - Physical Planning* (GA27-2766).

SPECIAL FEATURES

Shared Terminal (#6350): Provides two pushbuttons for teller identification to the 3601, 3602 or 4701 Controller when two tellers are sharing one printer. **Limitations:** Cannot be installed with the Address Sharing RPQ (MG 1586). **Maximum:** One. **Field Installation:** Yes.

Deferred Central Facility Maintenance (DCFM): The 3610 mdl 4 qualifies for DCFM. See M3600 pages for details.

MODEL CONVERSIONS (None)

ACCESSORIES

Forms Stand (#4450): A 1-shelf forms stand that permits placement and feed of continuous forms from the carton and provides for forms stacking after printing.

Locks and Keys: [Mdl 4] The 3610 with the Journal Takeup with Locked Cover **#4651** special feature is shipped with two keys. Additional keys may be purchased from IBM. Indicate serial number of lock.

SUPPLIES (None)

3614 CONSUMER TRANSACTION FACILITY

[*The 3614 is no longer available ... special features are on an "as available" basis for field installation.*]

PURPOSE

An unattended self-service banking terminal that issues variable amounts of money, accepts deposits, and performs other transactions, and attaches to a 3601 or 3602 Finance Communications Controller or directly to any virtual storage S/370 or 4300 processor via a 3704, 3705 or 3725 Communication Controller or the Communications Adapter on a 4321 or 4331. See M3704, 3705, 3725, 4321 or 4331 pages.

MODELS

Model 1	001	Consumer Transaction Facility Lobby. Designed for use inside a building. Consists of the basic unit with protective covers, a protective front panel, and a bezel around the front panel. The protective cover contains provision for customer insertion of two keylock cylinders.
Model 2	002	Consumer Transaction Facility, Through the Wall. Designed for use through the wall of a building. Has a motorized protective door over the keyboard/guidance area for outdoor environmental protection. Can be attached to a heavy duty enclosure, through-the-wall bezel, and mounted on a 4", 7" or 10" high mounting stand. The heavy duty enclosure contains a combination lock and provision for customer insertion of bank examiner's type keylock for locking the combination dial.
Model 11	011	Same as model 1 with a capability of issuing two denominations during one transaction. Can also be loaded with a single denomination, doubling the bill capacity currently available in the 3614 model 1.
Model 12	012	Same as model 2 with a capability of issuing two denominations during one transaction. Also can be loaded with a single denomination, doubling the bill capacity currently available in the 3614 model 2.

Prerequisites: Each 3614 must have loop attachment to a 3601/3602, or SDLC attachment to a S/370, 4331, 4341, 4361 or 4381 via a 3704, 3705 or 3725 or a Communications Adapter on a 4321 or 4331.

For Attachment to a 3601/3602: There must be an available position on a local or remote loop of a 3601/3602. The 3614 must have Terminal Loop Feature (#7820). If located remotely from the 3601/3602, the remote location must have a 3614/3624 with Loop Integrated Modem (#8001), a 3604 mdl 2, 3 or 4 with Line Feature Base (#4751 or #4752) and appropriate modem, or a 3603 Terminal Attachment Unit. If a 3603 is at the remote location, the 3614 or 3624 does not require Loop Integrated Modem (#8001). If both a 3614 or 3624 and a 3604 mdl 2, 3 or 4 are installed in the same remote location without a 3603, it is recommended that the loop modem be located with the 3614 or 3624 since the 3614 or 3624 might often be operating when the 3604 is not, e.g., weekends, holidays.

For Attachment to a S/370 or 4300 Processor: With virtual storage capability via a 3704, 3705 or 3725 Communications Controller equipped with the appropriate features or the Communications Adapter on a 4321 or 4331, see M3704, 3705, 3725, 4321 or 4331. The 3614 must have SDLC Communications Feature With Clocking (#6301) or SDLC Communications Feature Without Clocking (#6302).

Depending upon the configuration, the Add'l Storage Feature (#1005, #1006 or #1007) may be required on the 3601, or the Add'l Storage Feature (#1006 or #1007) may be required on the 3602. See M3601 or 3602 pages.

Logo Panel (**#9401** or **#9402**). See "Specify". Purchase only.

The 3614 mdl 2 and 12 require mdl 2/12 Accessory Group **#9571**. See "Specify". Purchase only.

HIGHLIGHTS

Issues Cash: Withdrawal transaction issues single (mdl 1 or 2) or dual denominations (mdl 11 or 12) denomination up to a maximum of 20 bills from a single account. Withdrawal is from a choice of four accounts.

Accepts Deposits: Deposit transaction and depository with controlled access slot allows users to deposit to checking or savings accounts.

Accepts Payments: Allows user to make various payments by depositing cash or check. User may also deposit payment coupon and have financial institution deduct funds from his account.

Cash Check: A single transaction that allows cash to be issued to a user following deposit of a check drawn on another institution.

Additional Transactions: The 3614 also provides a general purpose special transaction, and account inquiry transaction, and a funds transfer transaction.

Transaction Chaining: A series of multiple transactions can be performed with a single insertion of magnetic stripe card and single keyed entry of personal identification number.

Issues Statements: Can print and issue a statement or message to user.

Journaling: Transaction documents can be printed and retained in the 3614, as an aid in machine balancing.

3704/3705 Attachment: Can attach via communications link directly to a 3704 or 3705 Communications Controller.

Communications Adapter Attachment: Can attach via Communications link directly to a 4331 Processor with Communications Adapter feature.

Keyboard/Guidance: Guidance display steps user through a transaction. Customer can specify messages to be displayed.

Encrypt/Decrypt Features: Encryption/decryption of sensitive data during communication line transmission ... provision for one of two encryption algorithms; the proposed U.S. Federal Information Processing Data Encryption Standard (DES) or the original 3614 Alternate Encryption Technique (AET) ... see "Specify".

Multi-Institution Usage: Provision to accept magnetic stripe cards for 50 different card issuer identifiers with Data Encryption Standard (DES) technique.

Off-Host Operation: Offline operation via 3601 or 3602 controller possible. Transactions limited to cash issue and special transactions (input of special transaction codes with resultant customer preprogrammed response).

Customizing Capability: Customer can customize terminal operation (within limits) and change guidance messages.

Identification: The user is identified through the reading of his ABA-standard magnetic stripe card. As a second check, the user is verified by a comparison of a keyed personal identification number.

Installation: Can be installed for use inside the building or through-the-wall for outside use.

Bill Issue: Issued bills directly. No packets or cartridges are used.

Heavy Duty Enclosure: A strong steel protective enclosure to protect bills that is available for purchase on mdls 2 or 12. See "Accessories".
Logo Panel: A personalization panel on front of the 3614 for financial institution advertising that is available for purchase on mdls 1 or 2. See "Accessories".

Publications: GC20-0370

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): **#9901** for 115V.
- Cables: See M3601 or 3602 pages for ordering instructions. Also see *Installation Manual - Physical Planning*, GA27-2766.
- Currency Denomination: **#9091** for $5, $10, $20.
- Keyboard: Specify one of the following. All are field installable.

3614 Consumer Transaction Facility (cont'd)

#9464		0	0	0	0		0			0					0	0	

* Does not have any transaction select or 'from Account' keys.

Note 1: Two currency denominations must be specified.

- Logo Panel (purchase only): **#9401**, if ordered with the machine, or **#9402** if ordered for shipment prior to machine
- Mdl 2/12 Accessory Group (purchase only): **#9571**
- 3614 Host Attachment Designation: 1st and 2nd position designation is required to control distribution of 3614 controller-data media to host system location.

  1st Position Designator: Identifies first 3614 of each different Controller Data Version attached to a host system ... used to limit distribution of controller-data media to one copy of each version per host system location.

  2nd Position Designator: Identifies additional 3614s of each version ... controller-data media is not distributed to host system location for 2nd position designated 3614s.

  The following matrix identifies individual Controller Data Versions and their corresponding 1st and 2nd position specify codes. **Limitations:** Each 3614 must have either 1st or 2nd position specified ... one 1st position must be specified for each version ... only one 1st position may be specified for each version.

Specify either 1st or 2nd Pos Code below: 1st	2nd	Version	Host Attachment: Loop-3601/2 Direct-SDLC	Encryption Technique DES (#9001) AET (#9002)
#9701	#9702	3	Loop	Alternate
#9703	#9704	3	Direct	Alternate
#9801	#9802	5	Loop	DES
#9803	#9804	5	Direct	DES

When 1st position (**#9701, #9703, #9801** or **#9803**) is specified, also specify one of the following to indicate magnetic tape density (media) used at the host system location:

#9412 9-track 800 bpi
#9413 9-track 1600 bpi
#9414 9-track 6250 bpi

If magnetic tape is not used at the host system location, select one of the following media (DOS/VS users only):

#9431 80-column cards
#9432 96-column cards

In order to apply 3601, 3602 or 3614 controller-date code from cards, it is necessary to have applied an Independent Component Release (ICR) to Subsystem Support Services (SSS) in DOS/VS Release 31. Contact IBM for ordering instructions.

If card or tape inputs are not available at the host location, contact IBM.

When 1st position (**#9701, #9703, #9801** or **#9803**) is specified, additional information is required. Supplemental Specifications are to be entered exactly as follows to indicate shipping address of host system location:

Line 1 – IBM Programming Support Representative (PSR)
Line 2 – c/o (Name of Customer)
Line 3 – Street Address (or P.O. Box Number)
Line 4 (etc.) – City, State, Zip code.

- Specify one of the following:

  DES **#9001** – provides the data encryption technique (DES) proposed as a U.S. Federal Information Processing Data Processing Standard by the U.S. National Bureau of Standards. DES facilitates multi-institution usage by providing for personal identification number (PIN) validation based on individual issuer PIN encryption keys for 50 different card issuer identifiers ... PIN offset value may be recorded on magnetic stripe to be used to validate PINs in 3614 which were not based originally on DES technique ... accepts 4- to 16-digit fixed or variable length PINs ... option to load PIN encryption keys via communication line from host. **Fieid Installation:** Yes. **Limitations:** Cannot be specified if **#9002** is specified.

  AET **#9002** – provides the Alternate Encryption Technique (AET) which is the original 3614 encryption technique. **Limitations:** May not be specified if **#9001** is specified.

  Prerequisites: DES and/or AET encryption capability required on the 3601 or 3602 and in host system ... see M3601 and 3602 pages. DES and AET are used to determine 3614 Host 1st and 2nd Position Host Attachment designation ... see "Host Attachment Designation" above.

Customer Responsibilities: Because the 3614 mdl 2 and 12 is attached to a customer premise, installation of cables, base plate, mounting stand, enclosure and bezel are a customer's responsibility. The customer is also responsible for site preparation, such as cutting a hole in the wall for mounting of the 3614 mdl 2 or 12. Installation of cables and site preparation is also a customer responsibility for the 3614 mdl 1 and 11. IBM is not responsible for any loss of money incurred through the use of the 3614.

Sub host operation under control of the 3601 or 3602 Finance Communication Controller requires special customer systems design and support. Maintenance of system integrity in the sub host mode is a customer responsibility.

IBM is not responsible for intentional damage to the 3614 mdls 1, 2, 11 or 12. Repair of such damage is not covered under the IBM Rental Agreement of Maintenance Contract. Repair of such damage at cost of time and materials will be made to rental machines and can be provided for purchased machines.

Customer Responsibilities - Currency Sorting: The general condition of used currency may vary. To achieve satisfactory operation, the customer must ensure that only *GOOD QUALITY* used currency is loaded into the 3614. Used or recirculated currency must be inspected to remove excessively worn, damaged or torn notes. The 3614 *Operator's Guide*, GA66-0001, included with each 3614, contains procedures for preparation of new currencies and inspection of used currencies for loading the 3614. For the 3614 mdl 11 and 12 the customer must ensure that each hopper is loaded with the proper denomination currency.

SPECIAL FEATURES

3614 Consumer Transaction Facility (cont'd)

Depository (#3322): Provides a controlled access slot in the front of the 3614 leading to an internal deposit receptacle for the collection of deposit documents. In addition to the controlled access slot, the chute is designed to discourage tampering with previously inserted deposits. **Field Installation:** Yes. **Prerequisites:** One of the following keyboards -- **#9357, #9358, #9360, #9457, #9458** or **#9460.**

EIA Interface #3701: Provides an interface for external modems. **Limitations:** Not available on Terminal Loop feature (#7820). **Field Installation:** Yes. **Prerequisites:** SDLC Communications feature.

Expanded Function Feature (#3895): Provides the options of transactions chaining, journal printing and cash check transactions. **Limitations:** May not be ordered with **#9002.** Equivalent capability is available via RPQ MG3758 for customers ordering 3614s with **#9002.** **Field Installation:** Yes ... any of the individual functions may be field installed. **Prerequisites: #9001. Specify:** Any combination of the following functions may be specified with #3895. Specify at least one:

- Transaction Chaining (**#9721**) - allows a series of multiple transactions with single insertion of magnetic stripe card and single keyed entry of PIN.
- Journal Printing (**#9722**) - print statement documents and retain in 3614 ... can be used as an aid in machine balancing and settlements. **Prerequisites:** #7900.
- Cash Check (**#9723**) - in single transaction, cash is issued to user following deposit of check drawn on other institution. **Prerequisites:** #3322 and one of the following keyboards ... **#9362, #9363, #9364, #9462, #9463** or **#9464.**

IBM 1200 bps Integrated Modem (#5500): Provides an integrated 1200 bps modem for use with leased half-duplex or duplex normal quality voice grade lines for communication to processor through the 3704/3705 ... see M2700 pages. This integrated modem must communicate with another 1200 bps integrated modem. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6301. **Specify: #9651** for 4-wire strapping or **#9652** for 2-wire strapping.

SDLC Communications Feature With Clocking (#6301): Provides communications capability to communicate with the same S/370 mdls listed below for #6302. Required for attachment to communication lines through the 1200 bps Integrated Modem (#5500) or any external modem which does not have internal clocking. **Limitations:** Cannot be installed with Terminal Loop Feature (#7820) or SDLC Communications Feature without Clocking (#6302) . **Field Installation:** Yes. **Transmission:** This feature operates over common carrier-provided or equivalent customer-owned communication facilities. For information concerning these facilities, see M2700 pages.

SDLC Communications Feature Without Clocking (#6302): Provides communication capability to communicate with any Virtual Storage S/370 or 4300 processor (except 3115) via a 3704/3705 ... see M3704, 3705 pages. Attachment is also possible via the Communications Adapter feature on the 4321 or 4331. See M4321 or M4331 pages for details. Required for attachment to communications lines through an external modem which does have internal clocking. **Limitations:** Cannot be installed with Terminal Loop Feature (#7820) or SDLC Communications Feature with Clocking (#6301) **Field Installation:** Yes. **Prerequisites:** #3701. **Transmission:** This feature operates over common carrier-provided or equivalent customer-owned facilities. For information concerning these facilities, see M2700 pages. **Modems:** External modems operating at up to 4800 bps may be attached: ... 3863 Modem ... 3864 Modem ... 3872 Modem ... 3874 Modem.

Terminal Loop Feature (#7820): Provides the capability to attach either to a local or remote 3601/3602 Finance Communication Controller loop directly; or to a remote 3601/3602 loop via a 3603 or 3604 mdl 2, 3 or 4, or a 3624 with 1200 bps Loop Integrated Modem (#8001). **Limitations:** (1) Cannot be ordered with SDLC Communications with Clocking (#6301) or SDLC Communications without Clocking (#3602) ... (2) Remote loop speed is 1200 bps. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** (1) Available positions on the loop ... (2) Depending on the configuration, the Add'l Storage Feature (#1005 or #1006) may be required on the 3601/3602 ... see M3601 or 3602 pages ... (3) Attachment to remote 3601/3602 loop directly requires a Loop Integrated Modem - #8001 for 1200 bps. **Specify:** If loop attachment is without Loop Integrated Modem (#8001), specify one of the following loop speeds: (1) For local loop attachment to 3601/3602, specify local loop speed: **#9062** for 1200 bps, **#9063** for 2400 bps or **#9064** for 4800 bps ... (2) For remote loop attachment via a 3603 or 3604 mdl 2, 3 or 4 or 3624, specify loop speed: **#9062** for 1200 bps.

Transaction Statement Printer (#7900): Prints a statement showing the record of the transaction and passes the printed statement to the customer through the cash issue slot. Data is printed on 96-column card stock (2-5/8" by 3-1/4"). A 57-character set is provided consisting of 56 printable graphics and a space (blank). Four lines, one character per line, are printed simultaneously, for up to 34 characters per lines ... a total of 136 characters on each statement. The data to be printed is determined by the host application program and by the data stored in the 3614. Printing is overlapped with the cash issue cycle and the user deposit cycle. **Limitations:** the 96-column card stock used in the transaction statement printer must not have the optional 60 degree corner cuts. Detailed disclosure specifications describing the 96-column card stock are available from IBM Corporation, Commercial Development Office, Armonk, N. Y. Card configurations or card stocks which do not conform to these specifications may result in unsatisfactory machine performance. Contact IBM for available configurations. **Field Installation:** Yes. **Prerequisites:** If a statement is to be issued for any transaction on a given keyboard, then the Transaction Statement Printer is required.

1200 bps Loop Integrated Modem (#8001): Provides an integrated 1200 bps modem for use over leased normal quality voice grade lines. **Limitations:** If a 3604 mdl 2, 3 or 4 and a 3614 or 3624 are located at the same remote loop location, it is recommended that the loop modem be located on the 3614 or 3624 because the 3614 or 3624 will often be operating when the 3604 mdl 2, 3 or 4 is not (e.g., weekends). **Field Installation:** Yes. **Prerequisites:** #7820.

MODEL CONVERSIONS (None)

ACCESSORIES

Mdls 2 and 12 Accessory Group (#9571): (Purchase only) The Mdl 2 and 12 Accessory Group consists of a heavy duty enclosure, a through-the-wall bezel, and a mounting stand. **Note:** These items are provided as accessories to the 3614 mdls 2 and 12 to facilitate their installation through-the-wall. Installation, checkout, and maintenance of these items will not be provided by IBM. All responsibility and expenses involved must be borne by the customer.

Heavy Duty Enclosure: Provides a strong steel enclosure for the through-the-wall configuration. This enclosure has a rear access door with a resettable combination lock and a provision for a keylock. The combination for the combination lock is set by the customer. The customer must provide the actual keylock cylinder and the key.

Through-the-Wall Bezel: Provides a frame around the through-the-wall portion of the 3614 mdls 2 and 12 and provides a casement for the hole in the wall.

Mounting Stand: Provides a support stand for the 3614 mdls 2 and 12, that comes in three different heights. Order one per order by height: 4 inches **(#9572),** 7 inches **(#9573)** or 10 inches **(#9574).**

Warranty: For 90 days commencing on the date of installation or thirty (30) days after shipment, whichever comes first, these accessories are warranteed free from defects in material and workmanship. IBM's obligation is limited to providing replacement parts on an exchange basis.

Delivery Instructions: Supplemental Specs for the Accessory Group must be submitted at least 90 days prior to the 3614 DP Friday schedule date. Because of installation requirements, the Accessory Group will generally be shipped three weeks prior to the 3614. Supplemental Specs (via Terminal Entry) are to be entered exactly as follows to indicate shipping destination of these items:

Line 1 - c/o (Name of Customer)
Line 2 - Customer Designated Delivery Point (Note special considerations described below)
Line 3 - Street Address
Line 4 (etc.) - City, State, Zip

The "Heavy Duty Enclosure" included in this Accessory Group is, in effect, a steel safe with dimensions of approximately 43" x 28" x 63" and weighing approximately 2,800 lbs. It does not have casters and will be transported on a skid. The item will be shipped via common carrier to the delivery point designated by the customer and will probably require special handling or rigging at destination. The customer should be advised that it is suggested this item be delivered directly to a local drayman that has the facilities to move an item of these dimensions and weight. The customer should then make local provisions to have the Accessory Group delivered for physical installation at the selected site. The plant will notify the DP Branch, via ITPS message, of shipment to destination indicated in the Supplemental Specs. Close coordination should be maintained with the customer, the appropriate physical planning groups, and Field Engineering.

Logo Panel (P/N 2750814): This is a purchase-only accessory. The personalization panel provides an area on the top half of the front of the 3614 that can be personalized by the customer (silk-screened, painted, etc.). The area is provided for customer name and/or advertising purposes. Additional logo panels may be ordered. If **#9401** is specified, logo panel will be shipped with 3614. If **#9402** is specified, logo panel will be shipped prior to 3614.

SUPPLIES (None)

3615 ADMINISTRATIVE PRINTER

PURPOSE

A printer for use with the 3601, 3602 or 4701 Finance Communication System to provide a hard-copy output of banking transactions.

MODELS

Model 1	001	Prints at 60 cps (local or remote loops)
Model 2	002	Prints at 120 cps (local loops only)

Prerequisites

1) An available position on a local or remote loop of a 3601, 3602 or 4701 Controller. If located remotely from the Controller, the remote location needs either a 3603 Terminal Attachment unit, a 3614/3624 Consumer Transaction Facility equipped with a terminal loop feature (#7820) and an appropriate modem, or a 3604 mdl 2, 3, or 4 equipped with a Line Feature Base (#4751 or #4752) and appropriate modem. If both a 3614/3624 and a 3604 mdl 2, 3, or 4 are installed in the same remote location, it is recommended that the loop modem be located with the 3614/3624 since the 3614/3624 will often be operating when the 3604 mdl 2, 3, or 4 are not. (The 3615 mdl 1 will attach to local or remote loops. The 3615 mdl 2 will attach to local loops only).

2) Depending upon the configuration, the Add'l Storage Feature (#1005, #1006 or #1007) may be required on the 3601, 3602 Controller or #1008 on the 4701 Controller. See M3601, 3602 or 4701 pages.

HIGHLIGHTS

The 3615 printer provides a hard-copy output on a variety of cut forms and fan-fold continuous forms to meet the customer's printing requirement in banking applications. When combined with a 3604 Keyboard Display or 4704 Display Terminal, the 3615 provides a bank teller or officer with a workstation to use in performing banking administrative transactions. The 3615 printer can also be used alone for administrative printing of required reports. The forms can be those usually used for printing of one line or a number of lines. Speed ranges from 60 cps for the mdl 1 to 120 cps for the mdl 2. This microprocessor controlled printer is a bidirectional matrix printer with high-speed tabulation (mdl 1 only) and indexing capability to avoid unnecessary print head movement. The printer dot matrix is 4 to 7 wide by 8 high. The 3615 prints up to 132 print positions with character spacing at 10 to the inch. Line Spacing is 6 lines to the inch. Up to 6-part forms (total thickness -- 0.18") may be used. 5- and 6-part forms should be tried on an individual basis for acceptable feeding registration and print quality. For continuous fan-fold forms, the Variable-Width Forms Tractor (#8700) is required. Maximum overall width is 381mm (15") for continuous forms and 355.6mm (14") for cut forms. Card stock forms are not recommended.

Forms Specification: Refer to *Form Design Reference Guide for Printers,* GA24-3488.

Publications: GC20-0370

SPECIFY

- Voltage (115V, 1-phase, 60 Hz): **#9880** for locking plug **#9881** for non-locking plug. **Field Installation:** Not recommended.
- Cables: See M3601 or 3602 pages for ordering instructions. Also see *Installation Manual - Physical Planning,* GA27-2766.

SPECIAL FEATURES

Variable-Width Form Tractor (#8700): A forms feeding device for continuous edge-punched fan-fold forms. Overall forms width from 3 to 15 inches can be fed. This feature is required for use of continuous forms. Friction fed cut forms may also be used without removing the forms tractor. In this case, printing is limited in 127 print positions. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

The following item is available on a purchase-only basis. For shipment with the machine, order the feature number indicated below.

FORMS STAND (#4450): Permits feed of continuous forms from the carton and provides for forms stacking after printing. This accessory is a one-shelf forms stand.

SUPPLIES

Ribbons: P/N 1136653, or equivalent, is required.

3616 PASSBOOK AND DOCUMENT PRINTER

PURPOSE

A matrix printer used on the 3601, 3602 or 4701 Finance Communication System to print on passbooks, journal, and a variety of forms and documents.

MODELS

Model 1 001 Maximum print speed of 120 cps

Prerequisites:

1. An available position on a local or remote loop of a 3601, 3602 or 4701 Controller. If located remotely from the Controller, the remote location must have either a 3603 Terminal Attachment Unit, a 3614/3624 Consumer Transaction Facility equipped with a Terminal Loop Feature (#7820) and an appropriate modem, or a 3604 Keyboard Display mdl 2, 3 or 4 equipped with a Line feature Base (#4751 or 4752) and appropriate modem . If both a 3614/3624 and a 3604 mdl 2, 3 or 4 are installed in the same remote location, it is recommended that the loop modem be located with the 3614/3624 since the Consumer Transaction Facility may be operating when the 3604 mdl 2, 3 or 4 is not.
2. Depending upon the configuration, an Additional Storage Feature #1005, 1006 or #1007 on the 3601, #1006 or #1007 on the 3602, or #1008 on the 4701 Controller may be required ... see M3601, 3602 or 4701 pages.

HIGHLIGHTS

The 3616 printer provides the ability to print on a variety of forms and passbooks to meet printing requirements of financial applications. The printer, when combined with a 3604 Keyboard Display or 4704 Display provides a teller or other operator with a full function workstation capable of handling a wide range of financial transactions. The printer is a bi-directional matrix printer. The printer dot matrix is 4 of 7 wide by 8 high.

The printer has two separate print stations serviced by one print head. The passbook print station can print up to 100 characters on passbooks or single or multipart cutforms requiring single or multi-line printing. The basic machine accepts horizontal fold passbooks of a variety of sizes. Print spacing and line indexing are both program selectable, spacing at 10 or 12 characters per inch, indexing at 5 or 6 lines per inch. (**Note**: For Vertical Fold Passbook Feature (#8701) limitations. see *Forms Design Reference Guide,* GA24-3488.)

The journal print station prints up to 57 characters on a 1-part or 2-part journal paper, with a locked internal take-up roll. Journal entries are visible after the entire line is printed, and remain visible for several entries thereafter. The journal may be manually advanced, but not reversed. Cutforms may be inserted in front of the journal for validation type printing of one line of print in a fixed location on the lower left-hand corner of the document. Print spacing is program selectable at 10 or 12 characters per inch. Journal indexing is nominally 6 lines per inch.

In either station, wide bold characters may be printed at 5 or 6 characters per inch. The customer may define and use up to 16 special characters, addressable separately from the basic character set, by defining their matrix character patterns via CPGEN.

The printer has eight operator status lights, including three user programmable. The machine has two separated Start pushbuttons which may be used to identify individual tellers to the 3601, 3602 or 4701 controller when two tellers are sharing the printer.

The 3616 provides address sharing between like and unlike devices. That is, two 3616s or a 3616 with a 3604 (that has RPQ MG1586) or a 3616 with a 4704.

Forms Specifications: Refer to *Forms Design Reference Guide for Printers,* GA24-3488.

Publications: GC20-0370

SPECIFY

- Voltage (120V AC, 1-phase, 60 Hz): **#9890** for locking plug or **#9891** for nonlocking plug. **Field Installation:** Not recommended.
- Color: The standard color for this unit is pearl white. The accent color must be specified, either **#9065** for pebble gray or **#9068** for raven black.

  Field Installation: Not recommended.
- Cables: See M10000 pages for ordering instructions. Also see *Installation Manual - Physical Planning,* GA27-2766.
- Journal Security Feature: Provides a change in the covers so that a cutform cannot be inserted in front of the journal. Specify **#9351. Limitations:** Not compatible with Two Part Journal. **Field Installation:** Not recommended.

SPECIAL FEATURES

Vertical Fold Passbook (#8701): Provides modifications to basic machine to enable it to accept a single size of vertical fold passbook in the passbook station. The size is adjustable by CE at initial installation. (For details and limitations, see *Forms Design Reference Guide,* GA24-3488). **Maximum:** One. **Field Installation:** No.

TERMS and CONDITIONS

Plan Offering: Plan D
Purchase Option: 55%
Base Term: 60 months
Machine Group: D
Warranty: B
Per Call: 1
Termination Charge Percent: 20%
Termination Charge Months: 6
Upper Limit Percent: 5%
Initial Period of Maintenance Service: 3 months
Educational Allowance: None
Customer Setup: No
Pre-Installation Test Allowance: None
Non-field Installable Feature/Model Conversions: Yes
Repair Center Service: No
Central Facility Maintenance Service: No
Deferred Central Facility Maintenance Service: No
Pilot Test Plan: Yes

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Ribbon: A black ribbon, P/N 7034635 or equivalent, is required.

Paper: 100 foot single journal roll action paper P/N 7034705 or 50 foot 2-part journal roll action paper P/N 7034707. **Note:** A journal roll installed in place is required at all times.

3624 CONSUMER TRANSACTION FACILITY

PURPOSE

An unattended self-service banking terminal that issues variable amounts of money, accepts deposits, and performs other financial transactions . Other documents, such as travelers checks, may be dispensed if they complete a document issue qualification test successfully . Attaches to a 3601 or 3602 or 4701 Finance Communication Controller via loop or to a virtual storage S/370 or 4331 or 4341 processor via SDLC through a 3704, 3705 or 3725 Communications Controller. Communication is also possible via a Communications Adapter feature on a 4321 or 4331 Processor. A virtual storage S/370 attachment is also available via BSC through a 3704, 3705 or 3725.

MODELS

Model 1 001 — Lobby - Single Document Feed Mechanism. For use inside a building in a secure attended location. The basic model includes a single cartridge feed station, card reader, user guidance keyboard and display unit and is suitable for counter-top or free-standing mounting Also includes covers and front trim paneling. The covers contain locking handle, with a standard key, and provision for customer insertion of an additional keylock cylinder. A backlighted logo panel, required for installation of lobby mdl, is available as a purchase accessory. A pedestal is available as a purchase accessory to mount the basic lobby model. A pedestal base is included as part of the depository special feature when the depository is added to the basic mdl.

Model 2 002 — Through the Wall - Single Document Feed Mechanism. For outdoor, vestibule, drive-up, and otherwise less secure, unattended locations to provide availability on a 24-hour basis. The basic mdl includes a single cartridge feed station, card reader, user guidance keyboard, and display unit and has provision for mounting the currency dispensing and depository mechanisms inside a heavy-duty security enclosure. Covers are provided for the components not contained within the heavy-duty enclosure. A heavy-duty enclosure, pedestal base for mounting the enclosure, through-the-wall bezel, front trim paneling, and logo panel, for through-the-wall installation are available as purchase accessories.

Model 11 011 — Same as model 1 but with dual document feed mechanism. Provides capability to issue the same or two different denominations in a single transaction; to load the same denomination in both dispensers, effectively doubling the bill capacity of a single denomination model 1 3624; or to issue currency and other documents as separate transactions (e.g., cash and travelers checks).

Model 12 012 — Same as model 2 but with dual document feed mechanism. Provides capability to issue the same or two different denominations in a single transaction; to load the same denomination in both dispensers, effectively doubling the bill capacity of a single denomination model 2 3624; or to issue currency and other documents as separate transactions (e.g., cash and travelers checks).

Prerequisites: Each 3624 must be either loop-attached to a 3600/4700 or direct-attached to a S/370 or 4300 processor via SDLC communications through a 3704, 3705 or 3725 or to a S/370 via BSC Communication through a 3704, 3705 or 3725. Also attaches via a Communications Adapter feature on the 4331 Processor.

For Loop Attachment to a 3600/4700 -- there must be an available position on a local or remote loop of a Controller. The 3624 must have Terminal Loop Feature (#7820). If located remotely from the Controller, the 3624 can be attached to a remote loop via any of the following: [1] Directly, using 1200 bps Loop Integrated Modem (#8001). [2] Via subloop through a 3603 mdl 1 or 2 Terminal Attachment Unit for 1200 bps or 3603 mdl 2 for 2400 bps. [3] Via subloop through a 3604 mdl 2, 3, or 4 that is equipped with Line Feature Base (#4751 or #4752) and an appropriate modem. [4] (3600 Controller only) Via subloop through a 3614 that is equipped with Terminal Loop Feature (#7820) and 1200 bps Loop Integrated Modem (#8001). [5] Via subloop through another 3624 that is equipped with Terminal Loop Feature (#7820) and 1200 bps Loop Integrated Modem (#8001). **Note:** The 3624 does not require the 1200 bps Loop Integrated Modem (#8001) if the 3624 is attached to a remote loop via subloop through a 3603, 3604, 3614, 3624 or if the 3624 is attached to a local loop. It is recommended that the 3624 not be attached through a 3604, as the 3624 might often be operating while the 3604 is not, e.g., weekends and holidays.

For Direct Attachment to a S/370 or 4300 Processor -- S/370 or 4300 Processor requires a virtual storage processor and a 3704, 3705 or 3725 Communications Controller or via the Communications Adapter feature on the 4331 that is equipped with appropriate features to communicate with 3624 via SDLC (see M3704, 3705, 3725 or 4331 pages). The 3624 must have SDLC Communications feature (#6301 or #6302) for S/370 or 4300 Processor attachment or BSC Communications feature (#1421 or #1422) for S/370 attachment.

Encryption modules BQKDES is required with 3600 or 4700 Host Support Independent Release program. See HONE for the feature numbers used to order these modules on the 3600 or 4700 Host Support IR. Source listings are not orderable for, nor supplied with, these modules. Customers should be informed of this fact before the 3624 is ordered.

Depending on the configuration, Add'l Storage Feature (#1005, #1006 or #1007) may be required on the 3601; or Add'l Storage Feature (#1006 or #1007) may be required on the 3602 or Add'l Storage (#1008) may be required on the 4701. See M3601 or 4700 pages.

For 3624 mdls 1 and 11: Pedestal, Lobby (#5510) is available as an option for free-standing lobby configuration without depository feature (see "Accessories"). Purchase only. **Note:** A pedestal is included with the Depository special feature.

For 3624 mdls 2 and 12: The following units are required for through-the-wall installation: [1] Heavy-Duty Enclosure, Single Function (#3901) or Dual Function (#3902). **Note:** Single function enclosure cannot be field-modified to a dual function enclosure. [2] Bezel, Through-the-Wall, recessed or non-recessed. Recessed Bezel (#1490) is recommended for walk-up configuration. Non-recessed Bezel (#1491) is recommended for drive-up configuration, [3] Front Dress Panel (#3951). Front Trim Border, With Envelope Holder (#3961) or Without Envelope Holder (#3962). [4] Pedestal for single function heavy-duty enclosure (#4901) or dual function heavy-duty enclosure (#4902) is optional for mounting heavy-duty enclosure at appropriate height for walk-up or drive-up use. Storage Cabinet (#4903) is optional when mounting dual function heavy-duty enclosure without pedestal. **Note:** Storage cabinet is included with Pedestals (#4901 and #4902). (See "Accessories" for descriptions and ordering information.) Purchase only.

Logo Panel -- Required on all 3624 mdls. Shipment of logo panel is determined by the following specify codes: [1] Specify **#9401** if panel is to be shipped with the 3624. [2] Specify **#9403** if panel is not to be ordered with the 3624 as it will either be ordered separately by P/N through an MES or ordered under specify code **#9402** on another 3624. [3] Specify **#9402** if panel(s) to be shipped prior to the 3624. **Note:** Specify code **#9402** can be used to order more than one panel if customer desires to have several panels delivered before the 3624 (e.g., for customization at one time). See "Specify" and "Accessories". Purchase only.

Currency Cartridge -- For 3624 mdls 1 and 2: One is required. For 3624 mdls 11 and 12: Two are required. Currency cartridges are not included with basic 3624 and must be ordered separately. Spare cartridges are recommended for convenience of operation; a minimum of one spare cartridge for mdls 1 and 2 and two spare cartridges for mdls 11 and 12 must be made available by the customer to the CE for normal 3624 maintenance. Purchase only. See Customer Responsibilities in "Accessories" for installation and maintenance requirements.

HIGHLIGHTS

Cartridge Loading -- currency cartridge provides for quick, easy loading and convenient, tamper-resistant transportation of the currency.

Issues Cash -- issues one (mdls 1 and 2) or two (mdls 11 and 12) denominations up to a maximum of 20 bills from a choice of accounts. Issues all bills at one time in a single stack; no pre-packaging or packets are used.

Individual Document-Feed Control -- allows each cartridge drive station on dual-feed mdls 11 and 12 to be associated with separate transactions (e.g., cash or travelers checks).

Accepts Deposits -- allows user to make a deposit to choice of accounts. Built-in depository envelope holder available as an accessory on mdls 2 and 12. Envelope holder included with depository on mdls 1 and 11.

Cash-Check -- a single transaction that allows cash to be issued to user, following deposit of a check.

Accepts Payments -- allows user to make various payments by depositing cash or check or by having funds deducted from user's account.

Depository Cartridge Locking System -- depository cartridge and locking mechanism prevents removal of cartridge from machine unless cartridge is closed and locked; reduces need for dual-custody depository servicing.

Depository Envelope Printer -- prints unit and sequence number on envelope as it is deposited.

3624 Consumer Transaction Facility (cont'd)

Additional Transactions -- provides account balance inquiry, funds transfer transaction, and special transactions.

Keyboard/Guidance -- comprehensive set of function keys and customized display messages step a user through a transaction. Keyboard and transaction functions can be modified through programming. Option for either numeric or alphameric keypad.

Multiline Display -- special feature provides 240-character, 6-line display. Includes additional display-related user response capability for expanded interaction between user and machine.

Transaction Chaining -- allows user to perform a series of transactions with a single insertion of a magnetic stripe card.

Transaction Statements -- can print and issue individual statements or messages to user.

Journaling -- can print and retain documents within the 3624.

Backlighted Logo -- backlighted logo panel that can be customized, extending across full width of the front panel.

Host/Subhost Attachment -- allows attachment to host CPU either directly via SDLC/BSC or through subhost 3600 or 4700 Controller via loop communications. Offhost operation at 3600 or 4700 is possible.

Encrypt/Decrypt -- encryption of sensitive data for communication line transmission. Uses the U.S. Federal Information Processing Data Encryption Standard (DES) algorithm.

Multi-institution Usage -- provision to accept magnetic stripe cards of many different card issuers. Base capacity of issuer identifier table within 3624 can be expanded by table overflow request message to host or with Add'l Storage special feature in 3624.

Personal Identification -- user account is identified through reading magnetic stripe card. To validate the identity of the person using the card, a personal identification number (PIN) is used. Validation of PIN (up to 16 digits) may be performed in the 3624 and/or host/subhost support system.

Installation Configurations -- can be installed inside a building, for lobby use; or through-the-wall of a building, for walk-up or drive-up use.

Multiple Languages -- capability to display different languages based on identifier code recorded on magnetic stripe card.

Third Track -- special feature provides reading and writing third track data recorded on magnetic stripe card.

Add'l Storage -- special feature provides additional memory for expanding the number of custom messages and Financial Institution Table entries.

Modular Packaging -- for mdl 2 or 12 through-the-wall installation; currency dispenser and depository mechanisms are housed in a heavy-duty enclosure independent of other functional modules.

Compatibility -- 3614 family compatibility, designed to minimize transition requirements.

Security -- Mdls 2 and 12 installed with heavy-duty enclosure and through-the-wall installation accessories meet security requirements of UL291 and comply with the intent of U.S. Federal Regulation P for unattended automated paying and receiving machines used when banking offices are closed.

Installation Units and Accessories: Heavy-duty enclosure, through-the-wall bezel, optional pedestal base, front dress panel and front trim border are required for installation of through-the-wall mdls 2 and 12 and are available as purchase-only accessories.

Walk-up Configuration: Recessed through-the-wall bezel, designed to provide a shelf surface for the user, is recommended for walk-up use.

Drive-up Configuration: Non-recessed through-the-wall bezel, designed to position the user area nearer the outer wall surface, is recommended for drive-up use.

Pedestal for mounting lobby mdls 1 and 11 is available as an optional purchase-only accessory.

Logo panel and cartridges are required for installation of all mdls and are available as purchase accessories.

Customer Responsibilities, Installation Facilities -- Because the 3624 mdl 2 or 12 attaches to customer premises, installation of cables, pedestal, heavy-duty enclosure, through-the-wall bezel, front dress panel, front trim border, and logo panel are customer responsibilities; the customer is also responsible for site preparation, such as cutting a hole in the wall. Installation of cables and site preparation are customer responsibilities also, for 3624 lobby mdls 1 and 11.

Keylocks -- Covers included with lobby mdls 1 and 11 have a locking handle, with a standard key, and provide for customer insertion of an additional keylock cylinder. Covers included with through-the-wall mdls 2 and 12 have a keylock cylinder, with a standard key. Cabinet doors, included in all pedestals, have a keylock cylinder, with a standard key. The Dial Keylock available for the combination lock on the heavy-duty enclosure includes standard key. Currency cartridges provide for customer insertion of a keylock. Depository cartridge used with depository cartridge locking feature requires customer insertion of the depository keylock. Depository locking mechanism in 3624 requires customer installation of the depository cartridge locking key. If the customer desires to change the locks and/or keys included with these units or to install additional keylock cylinders where provided for, he is responsible for their procurement and installation.

Machine Maintenance -- IBM will not provide warranty or maintenance service on a 3624 containing money. The customer will be responsible for removing, controlling, and reloading all money in the 3624 so that IBM can fulfill its warranty and maintenance obligations.

Accessories Maintenance -- The customer is responsible for maintenance and parts procurement on all accessories.

If requested by the customer, FE will provide on-site service (on a per call billable basis) for the door mechanism (excluding lock) in the heavy-duty Enclosure. The FE can also perform (on a per call billable basis) the replacement of the following accessories: front dress panel, bezel and trim border, logo lamps, logo lamp ballast assembly, currency area lockoff panel, currency area lockout panel lock assembly, storage cabinet, storage cabinet lock assembly, storage cabinet door hinges, logo panel, envelope holder lock and heavy-duty enclosure combination lock (lock replacement available only where licensing and bonding requirements permit). IBM services for repair or replacement of the above accessories will be on a per call billable basis. During the warranty period, parts for all accessories will be provided (when required), by IBM at no cost to the customer. For the post-warranty period, all accessory parts can be purchased by the customer through IBM. Currency and depository cartridge servicing can also be provided by FE on a per call billable basis.

> **Notes:** (1) Customer must arrange for DFM removal prior to CE replacement of DFM Slides. (2) Replacement of the heavy-duty enclosure door or door hinges remains a customer responsibility.
