Publications: *IBM Series/1 4954 Model A and B Processor and Processor Features Description* (GA34-0099), *IBM Series/1 4954 Model C Processor and Processor Features Description* (GA34-0154), and *IBM Series/1 4954 Model 30D Processor and Processor Feature Description* (GA34-0252).

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture. Specify codes **#2XXX**, **#8XXX**, and **#9XXX** apply to plant orders only ... do not use on MES orders.

- Voltage: All options are 60 Hz, single phase, AC with a 1.8 meter (6 foot) cord.

  115V **#9901** 230V **#9904**
  120V **#9911** 240V **#9914**
  208V **#9902**

- Type of Distribution Channel: (Specify Only One)

  #9001 Sales to Third Party Participants (TPPs): Sales to Value Added Remarketer, systems integrators, programming houses, other equipment manufacturers (OEMs), who, in turn, resell to end-users. Includes sales to business concerns who resell to their independent franchises or distributors.

  #9002 End-user Sales: Sales directly to the business concern which will use the system for the intended application.

- Primary Application: (Specify Only One)

  - Industry Terminal Systems

  #9010 Plant Floor System: Collection or dissemination of data using plant floor terminals requiring human intervention. Time and attendance, job reporting, etc.

  #9011 Banking: System with banking terminal(s) attached.

  #9012 Point of Sale: System with point of sale terminal(s) attached.

  #9019 Other Industry Terminal System: Hospital systems or any other industry terminal systems.

  - Industrial Automation

  #9020 Electrical Test and Inspection: Monitoring or control of equipment that measures material or products to ensure conformance with specifications.

  #9021 Process Control: Monitoring and control of production operations, primarily in the fluid and non-fluid process industries.

4954 Processor (cont'd)

#9022 Laboratory Automation Systems: Includes instrument automation, experiment monitoring, and general laboratory automation.

#9023 Power Management - FC/PM: Power Management Systems which will use the Facilities Control/Power Management Program Product (FC/PM).

#9024 Power Management - Non-FC/PM: Power Management Systems which will not use the FC/PM Program Product.

#9025 Facilities Management and Security: All other facilities management and security systems (except Controlled Access System [CAS]).

#9029 Other Industrial Automation: Controlled Access System (CAS), production monitoring, testing, and inspection (other than electronic test), discrete piece manufacturing, N. C. tape control, materials handling, environmental monitoring, maritime, railroad, auto traffic control, air traffic control, simulators, other industrial automation.

- Communications

#9030 Concentrators/Multiplexers: Consolidation of input from terminals for transmission over high speed lines to a remote computer.

#9031 Front End Processors: Large systems.

#9032 Front End Processors: Small and medium sized systems.

#9033 Message Switching: Message routing and dispatching in a data communications network.

#9034 Telephone Switching: Switching (PABX Control), call routing, and central office switching.

#9035 Audio Store and Forward.

#9039 Other Communications Applications: All other communications applications.

- Scientific Computation

#9050 Problem Solving: Engineering/Scientific Calculations. May be timesharing.

#9051 Instructional: Standalone or timeshared systems for computer-assisted instruction and related functions.

- Business Data Processing

#9070 Remote Job Entry: RJE or Remote Batch Terminal.

#9071 Distributed Host Support - Data Entry: Single or clustered workstation terminal controller with limited peripherals and batch communication to a host. Primarily for dedicated intelligent data entry, but may be combined with remote Job Entry/Batch functions.

#9072 Distributed Processing - Host Dependent: Combinations of terminal control, file management, communications, peripheral control, data entry, and local processing with heavy dependency on a host processor for continuous operation.

#9073 Distributed Business Processing - Standalone, Large Account: Standalone batch or interactive system for business applications in an enterprise with DP Systems. Offline communications to a host system is optional.

#9074 Business System: Same as **#9073** but in new accounts or in enterprises with small or medium sized systems only.

#9075 Business Problem Solving: Series/1 installed for the primary purpose of providing non-DP professional business problem solving support.

#9076 Office Automation: Series/1 installed primarily for text processing, electronic mail, audio distribution, etc., with or without some commercial applications.

#9079 Other Business Applications: All other business data processing applications.

- Other Applications

#9090 Applications not classified in any category above: For example, graphic arts (typesetting, etc.), design and drafting, undefined government, and any other.

- Application Unknown

#9095 Applications temporarily unknown: Specify within 15 days of order entry.

- Multiple Processors:

  #92AA Number of Processors
  #93BB Sequence Number

  For multiple processor configurations, specify **#92AA** where AA is the number of processors in the configuration, and **#93BB** where BB is the sequence number of this processor.

  Note: In AAS, for processors which are part of a multiprocessor system, use a suffix X as the low-order digit in the three-digit AAS mdl code. For example, in a two-processor system using mdl B processors, the first will be B00 and the second will be B0X. Use the multiple processor specify codes given above to define the number of processors and the sequence number for each processor in a multiprocessor system. Processors in a multiprocessor system need not be of the same type or mdl.

- Diskette IPL:

  Mdl C:

  #9138 First Diskette Primary IPL, Second Diskette not used.
  #9139 First Diskette Alternate IPL, Second Diskette not used.
  #9140 Second Diskette Primary IPL, First Diskette not used.
  #9141 Second Diskette Alternate IPL, First Diskette not used.
  #9142 First Diskette Primary IPL, Second Diskette Alternate IPL.
  #9143 Second Diskette Primary IPL, First Diskette Alternate IPL.
  #9144 No IPL.

  Mdl 30D:

  #9148 Disk primary IPL, Optional diskette not IPL device
  #9149 Disk alternate IPL, Optional diskette not IPL device
  #9150 Diskette primary IPL, Disk not IPL device
  #9151 Diskette alternate IPL, Disk not IPL device
  #9152 Disk primary IPL, Diskette alternate
  #9153 Diskette primary IPL, Disk alternate
  #9144 No IPL

- When diskette function is included in a Series/1 configuration, IPL from such a device is required for loading diagnostics.

Code: SIU = 4954 ID = P80

SPECIAL FEATURES

All channel features which may use a feature position in this unit are presented in the "Specification Table" below. To simplify, shorten and improve the usability of these pages, the description of all those features which are available in all processors, the 4965 I/O Expansion Unit and the 4959 Input/Output Expansion Unit are presented in the M4959 pages. Storage addition and features unique to this unit or for which there are mdl-dependent considerations are presented below.

Channel Repower (#1565): Provides channel repower for 4959 Input/Output Expansion Unit, and 4965 I/O Expansion Unit. Required for 4959 and 4965 connected to 4954 mdls A, B, C, and 30D. **Field Installation:** Yes.

Communications Indicator Panel (#2000): Provides visual display of various states and conditions of a single selectable communication line as well as providing a means of manually controlling certain modem functions. The panel attaches to any single or multiline control by a connector on the feature. Line selection and information to be displayed is selected by eight switches on the panel. Eight lights are used for the display. Coded information is displayed showing status information and modem control line settings such as Data Set Ready, Clear-to-Send, Transmit and Receive Data Lines. Mounts under front cover of a mdl B or 30D Processor only. Does not require a feature position. **Limitation:** Cannot be installed on a mdl A or C Processor. **Field Installation:** Yes.

Floating Point (#3925): Provides floating point instruction set. Includes single (32 bit) and double (64 bit) precision arithmetic olus conversion between binary and floating point data. Does not require a feature position. **Maximum:** One. **Field Installation:** Yes.

Diskette Drive (#4100): Provides for a second diskette drive on the mdl C and a single diskette drive on the mdl 30D. Does not require a feature position. **Field Installation:** Yes.

Stand-Alone Enclosure (#4520): For the 4952 mdls C and 30D. Consists of a 3-sided wraparound cover with decorative, removable, front and rear covers. When connecting a mdl C or 30D to a 4965 both in the Stand-Alone Enclosure, specify Stand-Alone Enclosure Cable (#4525). **Limitations:** Features and devices that interconnect using flat or internal cabling are not supported in the Stand-Alone Enclosure. See Note 3 at the end of the "Specification Table". **Field Installation:** Yes.

Stand-Alone Enclosure Cable (#4525): Provides a 3.1 meter (10 foot) external shielded cable between a 4965 in a Stand-Alone Enclosure (#4520) and a 4952 also in a (#4520). **Field Installation:** Yes. **Prerequisites:** #1565.

Programmer Console (#5655): Provides data entry/data display console. New function includes segmentation register display/store and

4954 Processor (cont'd)

console lock. Includes hexadecimal key pad and display lights, ability to stop on error or on address. In addition to Basic Console provided with base processor. Does not require a feature position. **Field Installation:** Yes.

Storage Addition Increment - 65,536 Bytes (#6307): Provides additional processor main storage in 65,536 byte increments. Mounts on storage card. **Maximum:** Three. **Field Installation:** Yes.

Cache (#6400): Provides a means of reducing the effective access time of the disk, which can result in a substantial system level performance improvement (mdl 30D). The cache option does not require a feature position. **Field Installation:** No.

Specification Table: The table below is provided to determine if 4965 I/O Expansion Units or 4959 Input/Output Expansion Units are required to mount the desired features. Available feature positions within the processor unit are mdl dependent and are expressed as a negative number for availability. A positive number is used for feature requirement. The test of a viable configuration is that the sum of the availability and requirements numbers cannot exceed zero. All features (#1XXX through #7XXX) may be field installed. *Note:* Storage Addition Increments mount on storage card and do not occupy any feature positions.

Notes:

(1) Must be contiguous I/O feature positions.

(2) Must be in contiguous I/O feature position with its associated controller.

(3) Not supported in the Standalone Enclosure due to flat or internal cabling.

(4) Branch level systems assurance is required before ordering this feature.

(5) Supported in Stand-Alone Enclosure only with Stand-Alone Enclosure Cable (#4525).

Auxiliary Features/Cables/Connector Kits: Certain devices, cables, etc., involved in system installations are available and may be ordered with this unit. For details, see section following "Specification Table" in M4959 pages.

AAS Ordering Instructions: The 4954 is a Computer System.

MODEL CONVERSIONS (None)

ACCESSORIES

Frame Stand (P/N 6841365): Provides an attractive, steel stand capable of supporting a 4954 mdl C or 30D (within a Stand-Alone Enclosure #4520) and a 4975 Printer. The stand rests on glides and comes in a pebble gray color only.

SUPPLIES

Diskette: The 4954 mdls C and 30D use the 2-sided Diskette 2 or Diskette 2D or the 1-sided Diskette 1. Diskette 1 is prepared in 128, 256, or 512 bytes per sector. The Diskette 2 is prepared in 128, or 256 bytes per sector and must be re-initialized for other formats. The Diskette 2D is prepared in 256, 512, or 1,024 bytes per sector. The 4954 mdl C or 30D may be used to reformat the diskette. Single diskettes are packaged ten to a box. Minimum order is one box.

4955 PROCESSOR

PURPOSE

Provides arithmetic, logic, and control functions for Series/1.

MODELS

Mdl A	**A00**	[NO LONGER AVAILABLE] 64KB maximum, eight I/O feature locations, full width unit. 16KB basic storage provided.
Mdl B	**B00**	[NO LONGER AVAILABLE] 128KB maximum, three I/O feature locations, full width unit. 16KB basic storage provided.
Mdl C	**C00**	64KB maximum, ten I/O feature locations, full width unit. 32KB basic storage provided.
Mdl D	**D00**	128KB maximum, seven I/O feature locations, full width unit. 32KB basic storage provided.
Mdl E	**E00**	256KB maximum, seven I/O feature locations, full width unit. Includes communications power (function similar to #2010) and storage address translation function (eight 64KB address spaces).
Mdl F	**F00**	512KB maximum, seven I/O feature locations, full width unit. Includes communications power (function similar to #2010) and storage address translation function (eight 64KB address spaces).

All models are designed for mounting on support rails in a 4997 (see M4997 pages) or in an EIA standard 19-inch enclosure.

Limitations: Mdl E and mdl F are not supported by the 4999 Battery Backup Unit where primary power consumption exceeds 800VA (corrected for power factor). Contact IBM for further information.

HIGHLIGHTS

Processor Unit in Series/1 family. Internal performance approximately 3.0 to 3.5 times that of 4952. Provides CPU, up to 524,288 bytes of main storage, enclosure, and power. Number of feature locations is mdl dependent. See Specifications Table at end of section. Standard features include rich instruction set, four interrupt levels, storage protect, power failure detect/auto restart. Eight general purpose registers per level. Byte addressable storage.

Environmental Restriction: Certain atmospheric contaminants can destroy miniaturized electronic circuitry. These contaminants may be found in certain industrial and general urban environments. This machine and its features should be protected from hostile, ambient conditions. See *Customer Site Preparation Manual* (GA34-0050) for details.

Publications: *IBM Series/1 4955 Processor and Processor Features Description* (GA34-0021).

SPECIFY

Unless otherwise indicated these specify features are available only at time of manufacture. Specify codes, **#2XXX**, **8XXX**, and **9XXX**, apply to plant orders only ... do not use on MES orders.

- Voltage: All options are 60 Hz, 1-phase, AC with a 1.8m (6 foot) cord.

  115V **#9901** 230V **#9904**
  208V **#9902**

- Type of Distribution Channel: (Specify only one)

  #9001 Sales to Third Party Participants (TPPs): Sales to Value Added Remarketers,systems integrators, programming houses, other equipment manufacturers (OEMs), who, in turn, resell to end-users. Includes sales to business concerns who resell to their independent franchises or distributors.

  #9002 End-user Sales: Sales directly to the business concern which will use the system for the intended application.

- Primary Application: (Specify only one)

  – Industry Terminal Systems

  #9010 Plant Floor System: Collection or dissemination of data using plant floor terminals requiring human intervention. Time and attendance, job reporting, etc.

  #9011 Banking: System with banking terminal(s) attached.

  #9012 Point of Sale: System with point of sale terminal(s) attached.

  #9019 Other Industry Terminal System: Hospital systems or any other industry terminal systems.

  – Industrial Automation

  #9020 Electrical Test and Inspection: Monitoring or control of equipment that measures material or products to ensure conformance with specifications.

  #9021 Process Control: Monitoring and control of production operations, primarily in the fluid and non-fluid process industries.

  #9022 Laboratory Automation Systems: Includes instrument automation, experiment monitoring, and general laboratory automation.

  #9023 Power Management - FC/PM: Power Management Systems which will use the Facilities Control/Power Management (FC/PM) licensed program.

  #9024 Power Management - Non-FC/PM: Power Management Systems which will not; use the FC/PM licensed program.

  #9025 Facilities Management and Security: All other facilities management and security systems [except Controlled Access System (CAS)].

  #9029 Other Industrial Automation: Controlled Access System (CAS) production monitoring, testing, and inspection (other than electronic test), discrete piece manufacturing, numerical control tape control, materials handling, environmental monitoring, maritime, railroad, auto traffic control, air traffic control, simulators.

  – Communications

  #9030 Concentrators/Multiplexers: Consolidation of input from terminals for transmission over high-speed lines to a remote computer.

  #9031 Front End Processors - Large systems.

  #9032 Front End Processors - Small and medium-sized systems.

  #9033 Message Switching: Message routing and dispatching in a data communications network.

  #9034 Telephone Switching: Switching (PABX Control), call routing, and central office switching.

  #9035 Audio Store and Forward.

  #9039 Other Communications Applications: All other communications applications.

  – Scientific Computation

  #9050 Problem Solving: Engineering/Scientific Calculations. May be timesharing.

  #9051 Instructional: Stand-alone or timeshared systems for computer-assisted instruction and related functions.

  – Business Data Processing

  #9070 Remote Job Entry: RJE or Remote Batch Terminal.

  #9071 Distributed Host Support - Data Entry: Single or clustered workstation terminal controller with limited peripherals and batch communication to a host. Primarily for dedicated intelligent data entry, but may be combined with remote job entry/batch functions.

  #9072 Distributed Processing - Host Dependent: Combinations of terminal control, file management, communications, peripheral control, data entry, and local processing with heavy dependency on a host processor for continuous operation.

  #9073 Distributed Business Processing - Stand-alone, Large Account: Stand-alone batch or interactive system for business applications in an enterprise with large systems. Offline communications to a host system is optional.

  #9074 Business System - Small account: Same as **#9073** but in new accounts or in enterprises with small or medium-sized systems only.

  #9075 Business Problem Solving: Series/1 installed for the primary purpose of providing non-DP professional business problem solving support.

  #9076 Office Automation: Series/1 installed primarily for text processing, electronic mail, audio distribution, etc., with or without some commercial applications.

  #9079 Other Business Applications: All other business data processing applications.

  – Other Applications

  #9090 Applications not classified in any category above: For example, graphic arts (typesetting, etc.), design and drafting, undefined government, and any other.

4955 Processor (cont'd)

– Application Unknown

#9095 Applications temporarily unknown: Specify within 15 days of order entry.

- Multiple Processors:

#92AA Number of Processors
#93BB Sequence Number

For multiple processor configurations, specify **#92AA** where AA is the number of processors in the configuration, and **#93BB** where BB is the sequence number of this processor.

Note: In AAS, for processors which are part of a multiprocessor system, use a suffix X as the low-order digit in the 3-digit AAS mdl code. For example, in a 2-processor system using mdl B processors, the first will be B00 and the second will be B0X. Use the multiple processor specify codes given above to define the number of processors and the sequence numbers for each processor in a multiprocessor system. Processors in a multiprocessor system need not be of the same type or mdl. For complex multiple processor systems, contact IBM for more information.

SPECIAL FEATURES

All channel features which may use a feature position in this unit are presented in the Specification Table below. To simplify, shorten and improve the usability of these pages, the descriptions of all those features which are available in all processors, the 4965 Diskette Drive and I/O Expansion Unit and the 4959 Storage and I/O Expansion Unit are presented in the M4959 pages. Storage addition and features unique to this unit or for which there are mdl-dependent considerations are presented below.

Channel Repower (#1565): Provides channel repower for a 4959 I/O Expansion Unit, and 4965 Storage and I/O Expansion Unit. Required in the processor for a 4959 or 4965 connected to 4955, all mdls. **Field Installation:** Yes.

Communications Indicator Panel (#2000): Provides visual display of various states and conditions of a single selectable communication line as well as providing a means of manually controlling certain modem functions. The panel attaches to any single or multiline control by a connector on the feature. Line selection and information to be displayed is selected by eight switches on the panel. Eight lights are used for the display. Coded information is displayed to show status information and modem control line settings such as Data Set Ready, Clear-to-Send, Transmit and Receive Data lines. Mounts under front cover of 4955. Does not require a feature position. **Field Installation:** Yes.

Communications Power (#2010): Not required for mdl E or F. Provides +/-12 volts regulated power. Required for a processor containing one or more communications features #1310, #1610, #2074, #2075, #2090, #2091, #2092, #2093, #2094, #2095, #2096 and #7881. Also required for Teletypewriter Adapter (#7850) configured for EIA voltage interface or for current loop where Series/1 supplies the power, and for #2080 when V.35 interface is used. This feature is installed in the power supply section and does not occupy a feature position. **Field Installation:** Yes.

Floating Point (#3920): Provides floating point instruction set. Includes single (32-bit) and double (64-bit) precision arithmetic plus conversion between binary and floating point data. **Prerequisites:** I/O feature position adjacent to processor cards. **Maximum:** One. **Field Installation:** Yes.

Programmer Console (#5650): Provides data entry/data display console. Includes hexadecimal key pad and display lights, ability to stop on error or on address. In addition to Basic Console provided with base processor. Does not require a feature position. **Field Installation:** Yes.

Storage Addition - 16,384 Bytes (#6325): Provides additional processor main storage in 16,384 byte increments. Mounts in storage addition position. **Maximum:** Three in mdl A, seven in mdl B. May be used as last storage card in mdls C and D. **Field Installation:** Yes.

Storage Addition - 32,768 Bytes (#6326): [Mdls C, D, and E] Provides additional processor main storage in 32,768 byte increments. Mounts in storage addition position. **Maximum:** One in mdl C, three in mdl D. May be used as last storage card in mdl E. **Field Installation:** Yes.

Storage Addition - 65,536 Bytes (#6327): [Mdl E] Provides additional processor main storage in 65,536 byte increments. Mounts in storage addition position. **Maximum:** Three. **Field Installation:** Yes.

Storage Addition - 131,072 Bytes (#6328): [Mdl F] Provides additional processor main storage in 131,072 byte increments. Mounts in storage addition position. **Maximum:** Three **Field Installation:** Yes.

Storage Address Relocation Translator (#6335): [Mdls B, D] Provides capability to address up to 131,072 bytes. Required for storage sizes greater than 65,536 bytes. Does not require I/O feature position. Not required in mdl E or F. **Field Installation:** Yes.

Specification Table: The table below is provided to determine if the 4965 Storage and I/O Expansion Units or the 4959 Input/Output Expansion Units are required to mount the desired features. Available feature positions within the processor unit are mdl dependent and are expressed as a negative number for availability. A positive number is used for feature requirement. The test of a viable configuration is that the sum of the availability and requirements numbers cannot exceed zero.

4955 Processor (cont'd)

Notes:

(1) This feature may be placed in 4955 feature position A (leftmost). Other features may not be located in this position.

(2) Requires feature #2010 to provide +/-12 volts when used in mdls A, B, C, or D.

(3) Requires I/O feature position immediately adjacent to processor cards.

(4) Requires feature #2010 (except in mdl E or F) to provide +/-12 volts if the system is to provide power for the current loop or if the EIA voltage compatibility option is selected.

(5) Must be contiguous I/O feature positions.

(6) Must be in contiguous I/O feature position with its associated controller.

(7) Contact IBM when considering the use of this feature.

(8) Requires feature #2010 if the CCITT V.35 interface is used (except in mdls E or F).

MODEL CONVERSIONS (None)

ACCESSORIES

Auxiliary Features/Cables/Connector Kits: Certain devices, cables, etc., involved in system installations are available and may be ordered with this unit. For details, see section following "Specification Table" in M4959 pages.

SUPPLIES (None)

4956 PROCESSOR

PURPOSE

Provides arithmetic, logic, and control functions for Series/1.

MODELS

Model B	B00	1,024KB maximum, 13 I/O feature locations, full-width unit. 256KB basic storage provided.
Model C	C00	1,024KB maximum, three I/O feature locations, full-width unit. 256KB basic error checking and correcting storage and one built-in diskette drive provided. Second diskette drive optional.
Model 30D	30D	1,024KB maximum, six I/O feature locations, full-width unit. 256K basic storage, with a 30MB disk, optional cache and an optional 1.2MB diskette.

All models are designed for mounting on support rails in a 4997 (see M4997 pages) or in an EIA standard 19-inch enclosure. Models C and 30D can also be mounted in the Stand-Alone Enclosure (#4520).

Limitations: 4999 Battery Backup Unit may not be used with mdl C or 30D. Mdl B is not supported by 4999 when primary power consumption exceeds 800 VA (corrected for power factor).

HIGHLIGHTS

Processor Unit in Series/1 family. Internal performance approximately twice that of 4954. Provides CPU, 262,144 bytes of error checking and correcting main storage, enclosure, and power. Error checking and correction (ECC) corrects all single-bit errors and detects double-bit errors, thus providing improved availability compared to a processor using parity checking. Includes storage address translation function (eight 64KB address spaces), and communications power. Storage addition cards are available with either 256KB or 512KB of ECC storage. Three additional 256KB storage additional cards may be mounted in I/O feature positions (two additional in mdl C). Basic Storage Upgrade to 512KB (#6332) is available via a 512KB storage addition card, making one additional I/O feature position available at the 512KB storage size. Mdls C can also be mounted in the Stand-Alone Enclosure (#4520). Number of additional 256KB storage increments and I/O feature locations is mdl-dependent. See "Specifications Table" at end of section. Standard features include rich instruction set, four interrupt levels, power failure detect/auto restart. Eight general purpose registers per level. Byte-addressable storage. Includes clock/comparator which has a single 32-bit register which is incremented on 1 millisecond intervals and runs continuously when power is on. A 32-bit comparator generates a class interrupt if the clock is greater than or equal to the comparator. One clock/comparator is provided on the processor card. Timers (#7840) are also available. Mdl C provides one or two diskette drives and three I/O feature positions. The diskettes, one standard and the second an optional feature, provide the multiple functions of diskette media including input of data and programs generated offline, as well as output of programs and data for personal or offline storage, journaling, recording of audit trail, checkpoints, system errors, etc. Data exchange media is compatible with other systems using the diskette types and formats shown below.

Diskette Types: Either the 2-sided Diskette 2, Diskette 2D, or the 1-sided Diskette 1 may be used.

Diskette Formats: Diskette Type 1 or 2 may be initialized for 128-, 256-, or 512-byte sectors. Diskette Type 2D may be initialized for 256-, 512-, or 1,024-byte sectors.

Diskette Capacity: Capacity of diskette is dependent upon type and format.

Note: Actual useful capacity depends on the system software used and may be less than capacities shown here.

Bytes/ Sector	Sectors/ Track*	Diskette Type	Capacity (bytes)
128	26	1	246,272
256	15	1	284,160
512	8	1	303,104
128	26	2	492,544
256	15	2	568,320
512	8	2	606,208
256	26	2D	985,088
512	15	2D	1,136,640
1,024	8	2D	1,212,416

*74 Data tracks per surface, Diskette-2 and 2D have two surfaces.

Diskette Drive: Access time includes 5 milliseconds per track crossed plus 35 milliseconds for head settling. Diskette rotates at 360 rpm, yielding a data rate of 62,500 bytes per second and average latency of 83.8 milliseconds. The use of Flexible Diskette Storage provides significant advantages such as low cost, compact size, multiple system functions, ease of media handling and storage, etc. It should be recognized, however, that during recording and reading, the read/write head is in contact with the media causing diskette wear over time. Variations in the rate of wear will depend upon the particular operating environment and application characteristics. Care in the storage, use, and handling can also affect diskette life ... see guidelines in *IBM Diskette General Information Manual* (GA21-9182). Excessive wear, handling, or contamination can cause possible failures in recording and/or reading. Ultimate wear is to some extent dependent upon total usage of individual tracks. Care taken to distribute data, so that accessing occurs over the entire recording surface with about the same frequency, can extend the useful life of the diskette. Actual experience with individual applications and environments will allow development of guidelines as to when the media should be replaced. Unpredictable circumstances, such as contamination or severe handling, can shorten useful life. For all the above reasons, consideration should be given to providing an adequate recovery plan.

Disk Drive Mdl 30D: Provides a capacity of 30 megabytes per disk drive. This mdl has an average access time of 40 milliseconds. Average rotational latency is 9.5 milliseconds. The disk rotates at 3,151 rpm yielding an instantaneous data rate of 1,250,000 bytes per second. A high level of data integrity is maintained by Error Checking and Correcting (ECC) which corrects any error of nine bits or less and any error of 16 bits or less within a 2-byte boundary. Also, ECC will detect up to two 2-byte errors within any 256-byte block.

Cache Mdl 30D: The 64 kilobyte cache is microprocessor controlled and has the potential to significantly improve system performance. Selected data sectors, determined by the cache control algorithm to be probable candidates for system read request, are pre-fetched and stored in cache. The microprocessor monitors its own "hit-ratio" and adjusts to optimize performance. Least-recently-used algorithm eliminates inactive data from cache, as space for new data is required. This allows the disk to dynamically adapt to changes in the jobstream. Performance improvements are application-dependent -- test cases from a variety of applications thought to be typical have shown improvements in disk throughput ranging from 50% to above 200%. No guarantee of result can be made. Applications which are truly random (test cases found none) or which are heavily write-oriented may experience little or no improvement from a cache function.

Environmental Restriction: Certain atmospheric contaminants can destroy miniaturized electronic circuitry. These may be found in certain industrial and general urban environments. This machine and its features should be protected from hostile, ambient conditions. See *Customer Site Preparation Manual* (GA34-0050), for details.

Publications: *4956 Model B Processor and Processor Features Description* (GA34-0229), *4956 Model C Processor and Processor Features Description* (GA34-0230), and *IBM Series/1 4956 Model 30D Processor and Processor Feature Description* (GA34-0253).

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture. Specify codes (**#2XXX, #8XXX** and **#9XXX**) apply to plant orders only ... do not use on MES orders.

- Voltage (AC, 1-phase, 60 Hz): With 1.8 meter (6 foot) cord.

  115V **#9901** 230V **#9904**
  120V **#9911** 240V **#9914**
  208V **#9902**

- Type of Distribution Channel: (Specify Only One)

  #9001 Sales to Third Party Participants (TPPs): Sales to Value Added Remarketer, systems integrators, programming houses, other equipment manufacturers (OEMs), who, in turn, resell to end-users. Includes sales to business concerns who resell to their independent franchises or distributors.

  #9002 End-user Sales: Sales directly to the business concern which will use the system for the intended application. Buying quantity less than five (no discount).

  #9003 Same as #9002 but buying quantity/discount quantity less than 200.

  #9004 Same as #9002 but buying quantity/discount quantity greater than 200.

- Primary Application: (Specify only one)

  - Industry Terminal Systems

  #9010 Plant Floor System: Collection or dissemination of data using plant floor terminals requiring human intervention. Time and attendance, job reporting, etc.

  #9011 Banking: System with banking terminal(s) attached.

  #9012 Point of Sale: System with point of sale terminal(s) attached.

  #9019 Other Industry Terminal System: Hospital systems or any other industry terminal systems.

4956 Processor (cont'd)

- Industrial Automation

#9020 Electrical Test and Inspection: Monitoring or control of equipment that measures material or products to ensure conformance with specifications.

#9021 Process Control: Monitoring and control of production operations, primarily in the fluid and non-fluid process industries.

#9022 Laboratory Automation Systems: Includes instrument automation, experiment monitoring, and general laboratory automation.

#9023 Power Management - FC/PM: Power Management Systems which will use the Facilities Control/Power Management Program Product (FC/PM).

#9024 Power Management - Non-FC/PM: Power Management Systems which will not use the FC/PM Program Product.

#9025 Facilities Management and Security: All other facilities management and security systems (except Controlled Access System [CAS]).

#9029 Other Industrial Automation: Controlled Access System (CAS), production monitoring, testing, and inspection (other than electronic test), discrete piece manufacturing, N. C. tape control, materials handling, environmental monitoring, maritime, railroad, auto traffic control, air traffic control, simulators, other industrial automation.

- Communications

#9030 Concentrators/Multiplexers: Consolidation of input from terminals for transmission over high-speed lines to a remote computer.

#9031 Front End Processors: For large systems.

#9032 Front End Processors: For small and medium sized systems.

#9033 Message Switching: Message routing and dispatching in a data communications network.

#9034 Telephone Switching: Switching (PABX Control), call routing, and central office switching.

#9035 Audio Store and Forward.

#9039 Other Communications Applications: All other communications applications.

- Scientific Computation

#9050 Problem Solving: Engineering/Scientific Calculations. May be timesharing.

#9051 Instructional: Stand-alone or timeshared systems for computer-assisted instruction and related functions.

- Business Data Processing

#9070 Remote Job Entry: RJE or Remote Batch Terminal.

#9071 Distributed Host Support - Data Entry: Single or clustered workstation terminal controller with limited peripherals and batch communication to a host. Primarily for dedicated intelligent data entry, but may be combined with remote Job Entry/Batch functions.

#9072 Distributed Processing - Host Dependent: Combinations of terminal control, file management, communications, peripheral control, data entry, and local processing with heavy dependency on a host processor for continuous operation.

#9073 Distributed Business Processing - Stand-alone, Large Account: Stand-alone batch or interactive system for business applications in an enterprise with DSD Systems. Offline communications to a host system is optional.

#9074 Business System - Small account: Same as **#9073** but in enterprises with SPD Systems as the largest system or in new accounts.

#9075 Business Problem Solving: Series/1 installed for the primary purpose of providing non-DP professional business problem solving support.

#9076 Office Automation: Series/1 installed primarily for text processing, electronic mail, audio distribution, etc., with or without some commercial applications.

#9079 Other Business Applications: All other business data processing applications.

- Other Applications

#9090 Applications not classified in any category above: For example, graphic arts (typesetting, etc.), design and drafting, undefined government, and any other.

- Application Unknown

#9095 Applications temporarily unknown: Specify within 15 days of order entry.

- Multiple Processors:

#92AA Number of Processors
#93BB Sequence Number

For multiple processor configurations, specify **#92AA** where AA is the number of processors in the configuration, and **#93BB** where BB is the sequence number of this processor.

Note: In AAS, for processors which are part of a multiprocessor system, use a suffix X as the low-order digit in the three-digit AAS mdl code. For example, in a two-processor system using mdl B processors, the first will be B00 and the second will be B0X. Use the multiple processor specify codes given above to define the number of processors and the sequence number for each processor in a multiprocessor system. Processors in a multiprocessor system need not be of the same type or mdl.

- Diskette IPL:

Mdl C:

#9138 First diskette primary IPL, optional diskette not IPL device.
#9139 First diskette alternate IPL, optional diskette not IPL device.
#9140 Second diskette primary IPL, first diskette not IPL device.
#9141 Second diskette alternate IPL, first diskette not IPL device.
#9142 First diskette primary IPL, second diskette alternate.
#9143 Second diskette primary IPL, first diskette alternate.
#9144 No IPL.

Mdl 30D:

#9148 Disk primary IPL, Optional diskette not IPL device
#9149 Disk alternate IPL, Optional diskette not IPL device
#9150 Diskette primary IPL, Disk not IPL device
#9151 Diskette alternate IPL, Disk not IPL device
#9152 Disk primary IPL, Diskette alternate
#9153 Diskette primary IPL, Disk alternate
#9144 No IPL

- When diskette function is included in a Series/1 configuration, IPL from such a device is required for loading diagnostics.

SPECIAL FEATURES

All channel features which may use a feature position in this unit are presented in the Specification Table below. To simplify, shorten and improve the usability of these pages, the description of all those features which are available in all processors, the 4965 Diskette Drive and I/O Expansion Unit and the 4959 Input/Output Expansion Unit are presented in the M4959 pages. Storage addition and features unique to this unit or for which there are mdl-dependent considerations are presented below.

Channel Repower (#1565): Provides channel repower for 4959 Input/Output Expansion Unit, and 4965 Storage and I/O Expansion Unit. Required for 4959 and 4965 connected to 4956 mdls B, C, and 30D. **Field Installation:** Yes.

Communications Indicator Panel (#2000): Provides visual display of various states and conditions of a single selectable communication line as well as providing a means of manually controlling certain modem functions. The panel attaches to any single or multiline control by a connector on the feature. Line selection and information to be displayed is selected by eight switches on the panel. Eight lights are used for the display. Coded information is displayed showing status information and modem control line settings such as Data Set Ready, Clear-to-Send, Transmit and Receive Data Line. Mounts under front cover of the processor. Does not require a feature position. **Limitation:** Cannot be installed on a mdl C Processor.

Floating Point (#3925): Provides floating point instruction set. Includes single (32-bit) and double (64-bit) precision arithmetic plus conversion between binary and floating point data. Does not require a feature position. **Maximum:** One. **Field Installation:** Yes.

Second Diskette Drive (#4100): Provides for a second diskette drive on the mdl C and a single diskette drive on the mdl 30D. Does not require a feature position. **Field Installation:** Yes.

Stand-Alone Enclosure (#4520): For the 4952 mdls C and 30D. Consists of a 3-sided wraparound cover with decorative, removable, front and rear covers. When connecting a mdl C or 30D to a 4965 both in the Stand-Alone Enclosure, specify Stand-Alone Enclosure Cable (#4525). **Limitations:** Features and devices that interconnect using flat or internal cabling are not supported in the Stand-Alone Enclosure. See

4956 Processor (cont'd)

Note 3 at the end of the "Specification Table". **Field Installation:** Yes.

Stand-Alone Enclosure Cable (#4525): Provides a 3.1 meter (10 foot) external shielded cable between a 4965 in a Stand-Alone Enclosure (#4520) and a 4952 also in a (#4520). **Field Installation:** Yes. **Prerequisites:** #1565.

Programmer Console (#5655): Provides data entry/data display console. New function includes segmentation register display/store and console lock. Includes hexadecimal key pad and display lights, ability to stop on error or on address. In addition to Basic Console provided with base processor. Does not require a feature position. **Field Installation:** Yes.

Storage Addition Card - 262,144 Bytes (#6330): Provides additional processor main storage in 262,144 byte increments. Requires one feature position. **Maximum:** Three in mdl B, two in mdl C. **Field Installation:** Yes.

Storage Addition Card, 512KB (#6331): Provides additional processor main storage in 524,288-byte increments. Requires one feature position. **Limitations:** Total processor main storage in any mdl cannot exceed 1024KB. **Maximum:** One. **Field Installation:** Yes.

Basic Storage Upgrade to 512KB (#6332): Provides 524,288 bytes of processor main storage instead of 262,144 bytes. Does not require a feature position. **Limitations:** Total processor main storage cannot exceed 1024KB. **Maximum:** One. **Field Installation:** No.

Cache (#6400): Provides a means of reducing the effective access time of the disk, which can result in a substantial system level performance improvement (mdl 30D). The cache option does not require a feature position. **Field Installation:** No.

Specification Table: The table below is provided to determine if 4965 Diskette Drive and I/O Expansion Units or 4959 Input/Output Expansion Units are required to mount the desired features. Available feature positions within the processor unit are mdl-dependent and are expressed as a negative number for availability. A positive number is used for feature requirement. The test of a viable configuration is that the sum of the availability and requirements numbers cannot exceed zero. All features (#1XXX through #7XXX) may be field installed. **Note:** Storage Addition Card (#6330) occupies a feature position.

Machine/ Feature Number		Feature Positions	Notes
4956-B Processor		-13	
4956-C Processor		-3	
4956-30D Processor		-6	
#1200	4993 Series/1 - System370 Channel Attachment Feature	+1	(3)
#1205	4966 Diskette Magazine Unit Attachment	+1	(3)
#1210	5250 Information Display System Attachment	+2	(1)
#1215	4969 Magnetic Tape Subsystem Attachment	+1	(3)

#6305	4982 Sensor Input/Output Unit Attachment	+1	(3)
#6330	Storage Addition Card, 256KB	+1	
#6331	Storage Addition Card, 512KB	+1	
#6332	Basic Storage Upgrade to 512KB	+0	
#7840	Timers	+1	
#7850	Teletypewriter Adapter	+1	
#7880	Telephone Communications Controller	+1	
#7881	Telephone Communications Adapter	+1	(2)
RPQ D02038	4978 Display Station Attachment	+1	
RPQ D02118	GPIB Adapter	+1	

Notes:

(1) Must be contiguous I/O feature positions.

(2) Must be in contiguous I/O feature position with its associated controllers.

(3) Not supported in the Stand-Alone Enclosure due to flat or internal cabling.

(4) Branch level systems assurance is required before ordering this feature.

(5) Supported in Stand-Alone Enclosure only with Stand-Alone Enclosure Cable (#4525).

Auxiliary Features/Cables/Connector Kits: Certain devices, cables, etc., involved in system installations are available and may be ordered with this unit. For details, see section following Specification Table in M4959 pages.

MODEL CONVERSIONS (None)

ACCESSORIES

Frame Stand (P/N 6841365): Provides an attractive, steel stand capable of supporting a 4956 mdl C or 30D, within Stand-Alone Enclosure (#4520), and a 4975 Printer. The stand rests on glides and comes in a pebble gray color only.

SUPPLIES

Diskette: The 4956 mdl C or 30D uses the 2-sided Diskette 2, Diskette 2D, or the 1-sided Diskette 1. Diskette 1 is prepared in 128, 256, or 512 bytes per sector. Diskette 2 is prepared in 128, or 256 bytes per sector and must be re-initialized for other formats. Diskette 2D is prepared in 256, 512, or 1,024 bytes per sector. The 4956 mdl C or 30D may be used to reformat the diskette. Single diskettes are packaged ten to a box. Minimum order is one box.

4959 INPUT/OUTPUT EXPANSION UNIT

PURPOSE

Provides enclosure and power for additional Series/1 features.

MODELS

Model A A00 — 14 I/O feature locations, a full-width unit. Designed for mounting on support rails (fixed) in a 4997 or EIA standard 19-inch rack enclosure.

Limitations: A maximum of 24 data set and/or asynchronous local cables, or 40 of (smaller diameter) RS-422, current loop, and/or TTY cables. A proportional mix is acceptable, such as 12 data set cables and 20 RS-422 cables.

Prerequisites: Processor Unit 4952, 4953 (discontinued), 4954, 4955, 4956. For 4952, 4953 (discontinued) 4954, 4955 and 4956, Channel Repower (#1565) is always required in the processor to attach a 4959. All 4959s attached to another 4959 or 4965 require #1565 in the preceding 4959 or 4965. All integrated communications features (except #2080 when using local connection) require Communications Power (#2010) if mounted in a 4953 B or D, 4955 A, B, C, or D, or 4959 (serial numbers below 22499).

HIGHLIGHTS

Provides space for up to 14 I/O attachment features. See "Specification Table". Two-Channel Switch (#7900) enables switching of all features in this unit (and in 4959s connected to this unit) between two processors.

Publications: *IBM Series/1 4959 Input/Output Expansion Unit Description* (GA34-0056).

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture. Specify codes **#2XXX**, **#8XXX** and **#9XXX**, apply to plant orders only ... do not use on MES orders.

- Voltage (AC, 1-phase, 60 Hz): With a 1.8 meter (6 foot) cord.

  115V **#9901** 230V **#9904**
  120V **#9911** 240V **#9914**
  208V **#9902**

- Extended I/O Channel Cable:

  #9195 Extended Attachment Cable - Two-Channel Switch Only
  #9199 Extended Attachment Cable - Basic Channel or Two-Channel Switch

  For initial system orders including 4997 Rack Enclosures, IBM will locate machines and supply cables as required. For additions to existing systems or for machines located in customer racks, extended cables must be specified where needed. A 4959 Input/Output Expansion Unit must be located immediately above, below or alongside the previous machine on the channel. When located alongside the preceding unit, specify **#9199** (Extended Attachment Cable). A 4959 containing a Two-Channel Switch (#7900) may be located as above or located vertically once removed from the preceding unit. When located vertically once removed, specify **#9195** (Extended Attachment Cable).

- Sequence Numbers:

  For multiple processor configurations, each processor has been assigned a sequence number, **#93BB**. In a system where a 4959 may be connected only to a single processor (private I/O), the 4959 will have the same sequence number **#93BB** as the processor to which it is connected. Alternatively, a 4959 may be attached to two processors through a Two-Channel Switch (#7900). When a 4959 is connected in this manner (a "Y" configuration) the I/O devices are shared between the two processors. Specify both processor sequence numbers for 4959s connected this way.

  In the special case where there are two #7900s interconnecting four machines, only one **#93BB** is specified for each 4959 containing the shared I/O. This is the **#93BB** associated with the processor for which primary or normal attachment is desired. In addition, for each 4959 containing shared I/O and not containing a Two-Channel Switch, specify **#9450** (Extension of Switched I/O Channel).

SPECIAL FEATURES

Non-Communications Features

4993 Series/1 - S/370 Channel Attachment (#1200): In conjunction with the 4993 Termination Enclosure, this attachment provides a high-speed data transfer capability between a Series/1 and the S/370 (mdls 135 through 168), 3031, 3032, 3033, 3081, or 4331, 4341 processors. It occupies 32 device addresses on the S/370 channel and a single device address on the Series/1. Capable of transferring data under joint consent between the S/370 and the Series/1 using a subset of the 3272 control unit commands. The attachment may operate with a selector or block multiplexer channel. Allows IPL of the Series/1 from the host S/370. **Field Installation:** Yes. **Prerequisites:** One 4993 mdl 1 Series/1 - S/370 Termination Enclosure. See M4993 pages for further details.

Specify:

#9520 Remote IPL
#953X To specify the S/370 Control Unit channel code, take the second hex digit of the 370 Control Unit Channel Address and determine X as follows:

2nd Digit S/370 Address	
0	X = 1
2	X = 2
4	X = 3
6	X = 4
8	X = 5
A	X = 6
C	X = 7
E	X = 8

Note: The second digit of the S/370 address must be even and the third digit must be zero. See description of 4993 Terminal Enclosure for further details.

4966 Diskette Magazine Unit Attachment (#1205): Provides for the attachment to Series/1 of one 4966 Diskette Magazine Unit. **Specify: #9521** for Primary IPL ... **#9522** for Alternate IPL. **Note:** When diskette function is included in a Series/1 configuration, IPL from such a device is required for loading diagnostics. **Field Installation:** Yes.

5250 Information Display System Attachment (#1210): A 2-card feature requiring contiguous I/O feature positions. Provides for the attachment to Series/1 of the following machines and features. See M5251, 5256, and 5291 pages for details.

- 5251 mdl 11 Display Stations with options Keylock (#4655), Magnetic Stripe Reader (#4910), Cable-Thru (#2680), and Display Screen Filter (#3225, #3226). Keyboard (#4600) must be selected.
- 5256 mdl 1, 2, and 3 Printers with options Forms Stand (#4450), Audible Alarm (#1470), Cable-Thru (#2680) .
- 5291 mdl 1 Display Station.

#1210 provides four ports for attachment of the 5250 Information Display System Attachment Cable (#5760), which provides for connection of customer-supplied twinaxial cable. A maximum of seven workstations in any combination may be attached to a single port by using the Cable-Thru (#2680) on the 5251 or 5256s involved. Cable-Thru (#2680) must be provided on all but the last unit attached to any single port. Cable-Thru is a standard feature on the 5291 Display Station. A total of eight workstations may be attached to a single #1210. 5251, 5256 and 5291s each count as one workstation. The maximum length of twinaxial cable to each #1210 port is 1,524 meters (5,000 feet). See #5760 in "Accessories" below ... also *IBM Series/1 Customer Site Preparation Manual* (GA34-0050) for additional cabling information. **Field Installation:** Yes.

Magnetic Tape Subsystem Attachment (#1215): Provides for the attachment of one primary 4969 Magnetic Tape Unit and up to three 4969 expansion units, to Series/1. Expansion units are connected to the primary unit in a serial cable arrangement. The subsystem sequence number **#926X** is used to associate the attachment feature with the 4969 tape units making up the subsystem. **Field Installation:** Yes.

Specify:

Subsystem Sequence Number:
#926X (Where X = 1 through 9)

IPL:
#9523 Primary IPL first drive
#9524 Alternate IPL first drive
#9525 Primary IPL second drive
#9526 Alternate IPL second drive

4968 Autoload Streaming Magnetic Tape Unit Attachment (#1220): Provides for the attachment of one 4968 to Series/1. **Specify: #9157** for Alternate IPL only.

Multidrop Workstation Attachment (#1250): Provides for attachment of up to eight 4980 Display Stations. For cabling flexibility, four ports are available to which zero to eight displays may be attached (not to exceed a total of eight displays on each attachment) using twinaxial cabling and the cable-thru feature of the 4980. Maximum total cable length of each port is 1,219 meters (4,000 feet). Outdoor cabling is not supported. A 6 meter (20 foot) Attachment Cable (#5780), may be used to attach to the first display on each port (one #5780 used per port) or, along with twinaxial cable-to-cable connector (B/M **7362230**) to attach to cabling with twinaxial connectors. Berg Connector Kit (B/M **6095524**) may be used for direct attachment of twinaxial cabling.

Multifunction Attachment (#1310): The Multifunction Attachment (#1310) available on all mdls of the Series/1 processor family provides for the attachment of four devices utilizing only one Series/1 I/O feature location. All four of the attachment addresses provide for local

4959 Input/Output Expansion Unit (cont'd)

attachment up to 1,219 meters (4,000 feet) of the 3101 Display Terminal or the 4975 Printer (cable #5770 or equivalent). The first address can be configured to provide for a local attachment or a remote (via common carrier communications facilities) attachment of the IBM 3101 Display Terminal or a 4975 Printer, or a system/terminal utilizing Binary Synchronous Communications (BSC). The remaining addresses are direct connect only. **Limitations:** The Multifunction Attachment aggregate capacity is sensitive to the type of devices attached as well as application utilization of the devices. See *Multifunction Attachment Feature Description* (GA34-0144), for specific configuration information. The customer is responsible for establishing equivalency when utilizing machines other than a 3101 or 4975. It should be recognized that the 3101 and 4975 are customer setup devices, while the Multifunction Attachment is installed by IBM. No more than 24 communication cables (four per #1310), of any mixture can terminate in a Series/1 Processor, 4965 Storage and I/O Expansion Unit, or a 4959 Input/Output Expansion Unit. For information on prerequisites and specify codes see "Integrated Communication Feature Function Specify Codes, Limitations, and Prerequisites". **Field Installation:** Yes.

Specify: The Multifunction Attachment requires a minimum of one and a maximum of six specify codes for each attachment card ordered. These codes provide information for the jumper selection at time of manufacture as well as information for installation by the CE.

1. Specification of Device Attachment (up to four specifications):

   Where X = 0 First Address (RS-232-C/RS-422-A)
   1 Second Address (RS-422-A)
   2 Third Address (RS-422-A)
   3 Fourth Address (RS-422-A)

	Specify Code			
Description	**First #1310**	**Second #1310**	**Third #1310**	**Fourth #1310**
3101 Display Terminal Att'd	**#972X**	**#973X**	**#974X**	**#975X**

3. Specification of First Address - IPL Capability (one specify required):

	Specify Code			
Description	**First #1310**	**Second #1310**	**Third #1310**	**Fourth #1310**
IPL - Requires BSC capability	**#9122**	**#9124**	**#9126**	**#9128**
No IPL capability required	**#9123**	**#9125**	**#9127**	**#9129**

Description	**Fifth #1310**	**Sixth #1310**	**Seventh #1310**	**Eighth #1310**
IPL - Requires BSC capability	**#9462**	**#9464**	**#9466**	**#9468**
No IPL capability required	**#9463**	**#9465**	**#9467**	**#9469**

Example: A Series/1 with one Multifunction Attachment that will support two 3101 Displays both mdl 13 and two 4975 mdl 02L. The specify codes for this adapter would be:

#9720	3101 on Address 0
#9721	3101 on Address 1
#9762	4975 on Address 2
#9763	4975 on Address 3
#9841	Local Interface used on Address 0
#9123	No IPL capability

Integrated Digital Input/Output Non-Isolated (#1560): Provides 32 points of digital input or process interrupt and 32 points of digital output. Non-isolated, TTL compatible, and high level. Direct program control using four device addresses. Each 16 point group has one external sync and one ready line. See "Accessories" for optional Customer Access Panel (#1590). **Field Installation:** Yes.

Channel Repower (#1565): Resides in preceding unit and provides channel repower for 4959 and 4965 I/O Expansion Units. **Field Installation:** Yes. **Prerequisites:** Required for first and all subsequent 4959s attached to 4952, 4953, 4954, 4955, or 4956 processors. A 4965 attached to a 4959 requires #1565 in the 4959.

Channel Socket Adapter (#1595): Converts IBM card socket-to-socket suitable for commercially available circuit card stock. See "Accessories" for optional Customer Access Panel (#1590) and *IBM Series/1 User's Attachment Manual* (GA34-0033). **Field Installation:** Yes.

4962 Disk Storage Unit Attachment (#3580): Provides for Series/1 attachment to the 4962-1, 1F, or 3 Disk Storage Unit or the disk portion of a 4962-2, 2F, or 4 Disk Storage Unit. **Field Installation:** Yes. **Prerequisites:** #3851 also required for attachment of diskette portion of 4962-2, 2F, or 4 Disk Storage Unit.

Specify:

IPL:

#9133	Primary IPL device
#9134	Alternate IPL device

Mdls:

#9110	Mdl 1 or 2, 4962 attached
#9111	Mdl 1F or 2F 4962 attached
#9112	Mdl 3 or 4, 4962 attached

4964 Diskette Unit Attachment (#3581): Provides for the attachment to Series/1 of 4964 Diskette Unit or a diskette within a 4962-2, 2F, or 4 Disk Storage Unit. **Field Installation:** Yes. **Specify: #9136** for Primary IPL device, **#9137** for Alternate IPL device. **Note:** When diskette function is included in a Series/1 configuration, IPL from such a device is required for loading diagnostics.

4979 Display Station Attachment (#3585): Provides for attachment of the 4979 Display Station to Series/1.

4963 Disk Subsystem Attachment (#3590): Each #3590 provides for attachment of one 4963 mdl 23A, 29A, 58A, or 64A primary disk drive, and any mix of up to three 4963 mdl 23B, 29B, 58B, and 64B

4959 Input/Output Expansion Unit (cont'd)

expansion drives, to Series/1. Multiple subsystems may be attached. Each subsystem requires one #3590. For complex subsystems or systems with more than eight 4963 disk storage units contact IBM. **Field Installation:** Yes.

Specify:

Subsystem Number: One subsystem number, in sequence, for each #3590.

#925X Where X is 1 through 8

IPL:
- **#9160** Primary IPL - first drive
- **#9161** Alternate IPL - first drive
- **#9162** Primary IPL - second drive
- **#9163** Alternate IPL - second drive

Number of Drives Attached:
- **#9180** 1 or 2 drives attached
- **#9181** 3 or 4 drives attached

4967 High Performance Disk Subsystem Attachment (#3595): Provides for the attachment of one primary 4967 mdl 2CA disk drive and up to three 4967 mdl 2CB expansion drives, to Series/1. Multiple subsystems may be attached. Each subsystem requires one #3595. For complex subsystems or systems with more than eight 4967 disk units attached contact IBM.

Specify:

Subsystem Number: One subsystem number, in sequence, for each #3595.

#924X Where X is 1 through 8

Number of Drives Attached to this **#924X** Subsystem:
- **#9182** 1 or 2 drives attached
- **#9183** 3 or 4 drives attached

IPL:
- **#9164** Primary IPL first drive
- **#9165** Alternate IPL first drive
- **#9166** Primary IPL second drive
- **#9167** Alternate IPL second drive

Customer Direct Program Control Adapter (#5430): Provides direct program control adapter for up to 16 directly-addressable devices for customer use. See "Accessories" for optional Customer Access Panel (**#1590**). **Field Installation:** Yes.

4974 Printer Attachment (#5620): Provides for Series/1 attachment to the 4974 Printer. Supports program selection of six or eight lines per inch. **Field Installation:** Yes.

4973 Line Printer Attachment (#5630): Provides for attachment of the 4973 Printer to Series/1. **Field Installation:** Yes.

Printer Attachment - 5200 Series (#5640): Provides two ports for the attachment of the following printers to the Series/1:

- Any mix of 5219s mdl D01/D02 and 5224s up to eight printers or,
- One 5225 and a mix, up to seven printers, of 5219s mdl D01/D02 and 5224s, or
- Two 5225s and a mix, up to five printers, of 5219s mdl D01/D02 and 5224s, or
- Three 5225s and a mix, up to three printers, of 5219s mdl D01/D02 and 5224s, or
- Four 5225s and one 5219 mdl D01/D02 or 5224 printer.

Feature #5640 is capable of driving three printer mixes at their rated speed. Actual printer performance, however, will be a function of the operating system. The 5219 mdls D01 and D02, 5224 mdls 1 and 2, and the 5225 mdls 1, 2, 3, and 4 may be attached. Up to seven printers may be attached to a single port on #5640. Printers located within 30.5 meters (100 feet) (actual distance ... not cable length) of #5640 must be of the same machine type. Maximum cable length is 1,524 meters (5,000 feet) using twinaxial cable. See "Accessories" for Attachment Cable (#5780).

4982 Sensor Input/Output Unit Attachment (#6305): Provides for attachment of the 4982 Sensor Input/Output Unit to Series/1. **Field Installation:** Yes.

Specify: Functions included in the attached 4982.

- **#9100** Analog Input
- **#9101** Digital Output
- **#9102** Digital Input Isolated
- **#9103** Digital Input Non-Isolated
- **#9104** Analog Output

Timers (#7840): Two timers per feature. Provides five time-interval options per timer (1, 5, 25, and 50 microseconds internal and one external). May be externally clocked and used as a pulse width or pulse frequency counter. See "Accessories" for optional "Customer Access Panel (**#1590**)". **Field Installation:** Yes.

Teletypewriter Adapter (#7850): Provides for Series/1 attachment to a standard Teletype ASR33, 35, or equivalent device operating full-duplex 20/60 mA current loop. Twelve bit rates (50, 75, 100, 110, 150, 200, 300, 600, 1200, 2400, 4800, 9600 bps). Supports IPL. Provides TTL level compatible capability. An external power supply may be used to provide power to the current loop. Has EIA voltage level capability. Cables #2064 and #2065 are available for EIA full-duplex operation. Cable #2066 is available for current loop connection to the 3101 Display Terminal. For other associated cables ... see "Cables" under "Accessories" below ... also for optional Customer Access Panel (**#1590**). **Limitations:** The EIA voltage level capability is intended for direct connect only. The interface, an EIA RS-232-C subset, is not intended for use with a modem. **Field Installation:** Yes. **Prerequisites:** May require Communications Power (#2010). See #2010 feature description above. **Specify: #9146** for Primary IPL device, **#9147** for Alternate IPL device.

Two-Channel Switch (#7900): Provides ability to switch the Series/1 I/O channel between two processors. Allows a secondary or alternate processor to take control of all I/O devices on the channel beyond the #7900 in the event of failure of the primary or normal processor to which the devices are attached. #7900 can be operated in two modes, manual or backup. In backup mode, the Initial Period Timer is set to a time period selected by the user. If the primary processor fails to reset this timer within the selected time period, #7900 attempts to interrupt the primary processor. The primary processor then has an additional specified warning period in which to issue the Reset Timer command. If at the end of this interval #7900 has not received the Reset Timer command, an interrupt will be issued to both processors. The secondary processor can then issue a Reset and Connect command, which will attach all common I/O to that secondary processor. If #7900 is in manual mode, the common I/O is connected to the processor selected by the position of the manual select switch. A special console is added to a 4959 or 4965 when #7900 is installed. This includes a mode switch (manual or backup), manual select switch, indicator lights, and isolated alarm contacts to allow extend attachment of some alarm device if desired. This console is located adjacent to the 4959 or 4965 power switch and indicator. **Note:** #7900 mounts in either 4959 or 4965 unit. It occupies the I/O channel cable position, not an available I/O feature position.

When the configuration is a simple "Y", one 4959 or 4965 with #7900 and two processors, or a simple "quad", two 4959s or 4965s, each with a #7900 and two processors, no special considerations are required. For more complex configurations contact IBM. System orders which contain a 4959 or 4965 with a Two-Channel Switch (#7900) must include at least two processors in any combination. Independent orders for 4959 or 4965 with #7900, or MES orders for #7900, must be placed against a system including at least two processors. Installed systems to be combined using the Two-Channel Switch must exist under one system number. **Field Installation:** Yes.

Specify:

TCS Timer Period - Initial Period:
- **#9701** 0.125 seconds
- **#9702** 1.0 seconds
- **#9703** 8.0 seconds
- **#9704** 16.0 seconds

TCS Timer Period - Warning Period:
- **#9710** 0.0 seconds
- **#9711** 0.125 seconds
- **#9712** 1.0 seconds

IPL Block:
- **#9120** First processor blocked from IPL by any common I/O device.
- **#9121** Second processor blocked from IPL by any common I/O device.

Communications Features

4987 Programmable Communications Subsystem Controller (#1300): Provides for the attachment of one 4987 Programmable Communications Subsystem. A 2-card feature requiring contiguous I/O feature positions. This feature controls one scanner (included with the 4987) and a maximum of 16 features (up to 32 lines) in the attached 4987. A second #1300 controller may be used with the 4987 Expansion Scanner (#3600 located in 4987) to increase 4987 throughput. In this case, each #1300 serves one scanner and up to eight features (up to 16 lines) in the 4987. **Field Installation:** Yes. **Specify:** Function Code (**#89XY**). For each controller, a function code must be provided of the form **#89XY**, where X, the tens digit, is a sequence number; 1, 2, 3, ... etc., as defined for each 4987 in the configuration, and Y, the units digit, is selected as follows:

4959 Input/Output Expansion Unit (cont'd)

Y	Associated Scanner	Number of 47XX Features Served by Controller
1	Basic	1-2
2	Basic	3-4
3	Basic	5-8
4	Basic	9-16
6	Expansion	1-2
7	Expansion	3-4
8	Expansion	5-8

Series/1 Local Communications Controller (#1400): This feature provides for the interconnection of up to 16 Series/1 processors. The ring is clocked at 2,000,000 bps. A micro-controller and associated circuitry provide for cycle-stealing, control buffers and error handling. A peer-to-peer ring topology is provided through twinaxial cable termination/connection. Maximum cable length between active processors is 1,524 meters (5,000 feet). Refer to "Cables" and connectors under "Accessories" for customer options. The feature includes a bypass relay and 2.44 meter (8 foot) connecting cables. It allows data to flow through a powered-down unit when total twinaxial cable length between active units is less than 1,524 meters (5,000 feet). Two cards are provided, one for the local communications controller and one for the controller cable attachment that plugs into the controller card. Therefore only one feature slot is required. **Field Installation:** Yes.

Asynchronous Communications Single Line Control (#1610): Provides a cycle-steal attachment and control for a single communications line via an EIA RS-232-C/CCITT V.24 interface. Supports half-duplex start/stop operation only. Data rates are program-selectable within two jumperable ranges (37.5 to 1200 and 300 to 9600 bps). Local attachment via the Asynchronous Local Attachment Cable (#2056) or connection to a modem via EIA Data Set Cable (#2057). #1610 provides two modes of operation: PTTC mode for use with the 2740/2741, and 8-bit Data Interchange mode (8 data-bits, 2 stop-bits) for use with the Teletype ASR 33/35. #1610 provides support for point-to-point (switched and nonswitched) and multipoint control operations. Auto-answer facility is provided. See "Integrated Communications Feature Function Specify Codes" below. For associated cables, see "Accessories" below. **Field Installation:** Yes.

Specify: A function specify code is required for each #1610 ordered. This code is used to set jumper-selectable options of line speed, network attachment and common carrier facility at time of manufacture. They may be reset as required in the field.

Function Specify Code	Compatible IBM Cable(s)	Description
#8100	#2056	Low-speed, direct connect, HD
#8101	#2056	Low-speed, direct connect, FD
#8102	#2057	Low-speed, switched network, HD
#8103	#2057	Low-speed, switched network, FD
#8104	#2057	Low-speed, switched network, HD, carrier-detect provided
#8105	#2057	Low-speed, switched network, FD, carrier-detect provided
#8106	#2057	Low-speed, nonswitched line, HD
#8107	#2057	Low-speed, nonswitched line, FD
#8108	#2057	Low-speed, nonswitched line, HD, carrier-detect provided
#8109	#2057	Low-speed, nonswitched line, FD, carrier-detect provided
#8110	#2056	Medium-speed, direct connect, HD
#8111	#2056	Medium-speed, direct connect, FD
#8112	#2057	Medium-speed, switched network, HD
#8113	#2057	Medium-speed, switched network, FD
#8114	#2057	Medium-speed, switched network, HD, carrier-detect provided
#8115	#2057	Medium-speed, switched network, FD, FD carrier-detect provided
#8116	#2057	Medium-speed, nonswitched line, HD
#8117	#2057	Medium-speed, nonswitched line, FD
#8118	#2057	Medium-speed, nonswitched line, HD, carrier-detect provided
#8119	#2057	Medium-speed, nonswitched line, HD, carrier-detect provided

Communications Indicator Panel (#2000): Provides visual display of various states and conditions of a single selectable communication line as well as providing a means of manually controlling certain modem functions. The panel attaches to any single or multiline control by a connector on the feature. Line selection and information to be displayed is selected by eight switches on the panel. Eight lights are used for the display. Coded information is displayed showing status information and modem control line settings such as Data Set Ready, Clear-to-Send, Transmit and Receive Data Lines. Mounts under front cover of machine. Does not require a feature position. **Limitations:** Cannot be mounted in half-width units 4952A, 4953A, 4953C, 4954A or full-width units 4952C, 4954C, 4965C, 4965 mdl 001. **Field Installation:** Yes.

Communications Power (#2010): Provides + and - 12 volts DC regulated power. Required in 4953B or D, 4955A, B, C, D or 4959 (up to serial number 22499) containing one or more integrated communications features #1310, #1610, #2074, #2075, #2080, #2090, #2091, #2092, #2093, #2094, #2095, and #2096. Required in above machines containing Teletypewriter Adapters (#7850) configured for EIA voltage interface or for current loop where Series/1 supplies the power. This feature is installed in the power supply section, and does not occupy a feature position. **Field Installation:** Yes.

Binary Synchronous Communication Single Line Control (#2074): Provides a half-duplex single BSC Communications line capability, with an EIA RS-232-C/CCITT V.24 compatible line interface via a cycle-steal channel attachment. Data rates up to 9600 bps are supported. Internal clocking of 1200 bps or 600 bps is provided for those modems which do not provide clocking. Provides support for EBCDIC and ASCII codes, and supports transparency (unrestricted binary data) when using EBCDIC code. #2074 provides support for point-to-point (switched and nonswitched) and multipoint (control and tributary station) operation. Auto-answer facility is provided. IPL from another system is supported by this feature when remote IPL is specified. See "Integrated Communications Feature Function Specify Codes" below. For associated cables, see "Cables" under "Accessories" below. **Field Installation:** Yes.

Specify: #9154 for Remote IPL. A function specify code is required for each #2074 ordered. This code is used to set jumper-selectable options of line speed, network attachment and common carrier facility at time of manufacture. They may be reset as required in the field.

Function Specify Code	Compatible IBM Cable(s)	Description
#8120	#2057	Multipoint tributary, HD
#8121	#2057	Multipoint tributary, internal clocking, HD
#8122	#2057	Switched network, HD
#8123	#2057	Switched network, ring indicator provided, HD
#8124	#2057	Switched network, internal clocking, HD
#8125	#2057	Switched network, internal clocking, ring indicate provided, HD
#8126	#2057	Nonswitched line, HD
#8127	#2057	Nonswitched line, FD
#8128	#2057	Nonswitched line, internal clocking, HD
#8129	#2057	Nonswitched line, internal clocking, FD

Binary Synchronous Communications Single Line Control/High-Speed (#2075): Provides a half-duplex single BSC communications line capability, with interfaces for a Western Electric 303 Data Set or equivalent (via cable #2058) and for CCITT V.35 compatible Data Sets (via cable #2060), and a cycle-steal channel attachment. Data rates up to 56K bps are supported. Provides support for EBCDIC and ASCII codes and supports transparency (unrestricted binary data) when using EBCDIC code, all under program control. IPL from another system is supported by this adapter when remote IPL is specified. **Limitations:** Maximum of eight in any single machine. See "Integrated Communications Feature Function Specify Codes" below. For associated cables, see "Cables" under "Accessories" below. **Field Installation:** Yes.

Specify: #9155 for Remote IPL. A function specify code is required for each #2075 ordered. This code is used to set jumper-selectable options of line speed, network attachment and common carrier facility at time of manufacture. They may be reset as required in the field.

Function Specify Code	Compatible IBM Cable(s)	Description
#8161	#2060	CCITT V.35, nonswitched line, HD
#8162	#2060	CCITT V.35, nonswitched line, FD
#8163	#2060	CCITT V.35, multipoint tributary
#8164	#2058	WE303, nonswitched line, HD
#8165	#2058	WE303, nonswitched line, FD
#8166	#2058	WE303, multipoint tributary

Synchronous Communications Single Line Control/High-Speed (#2080): Provides a cycle-stealing attachment and control for a single communications line operating under either a Binary Synchronous Communication (BSC), Synchronous Data Link Control (SDLC), or High Level Data Link Control (HDLC) protocol via a leased CCITT V.35 interface or a local connect interface RS-422-A, or with leased/switched circuit operation of CCITT Recommendation X.21. Can communicate using any 8-bit data code including EBCDIC and ASCII. Zero bit insertion/deletion and block check character generation/checking is automatically performed. NRZ or NRZI coding is available. The attachment provides remote IPL capability using both the BSC and SDLC/HDLC protocols.

Local 1 operation allows for connection using RS-422-A interface without clocking supplied through the cable [1,219 meters (4,000 feet)

4959 Input/Output Expansion Unit (cont'd)

maximum] at 9600 bps (10 multipoint stations allowed). Each station must derive clocking from the data stream. SDLC/HDLC half-duplex (HDX) operation is provided by a local 1 connection.

09Local 2 operation allows for connection using RS-422-A interface with clocking supplied through the cable [300 meters (1,000 feet) maximum] at 48K bps (10 multipoint stations allowed). Both BSC HDX and SDLC/HDLC half or full-duplex (FDX) operation is provided by a local 2 operation.

High-Level Data Link Control (HDLC) is supported for half and full-duplex operation (ABM and NRM mode as described by CCITT Recommendation X.25) at speeds up to 56K bps via a DCE conforming to CCITT V.35 or at speeds up to 48K bps via a CCITT X.21 leased circuit interface. Programming support is provided by X.25/HDLC Communications Support which consists of two programmable interfaces: Frame level interface and packet level interface. These interfaces correspond, respectively, to level 2 and level 3 of CCITT X.25. Remote IPL capability is supported.

Using SNA, HDX operation is supported up to 9600 bps via a CCITT Recommendation X.21 leased/switched circuit interface.

To assist in future migration to SDLC/HDLC protocols, BSC capabilites are provided for HDX up to 56K bps with the V.35 interface and up to 48K bps with the X.21 interface. Provides support for EBCDIC and ASCII codes and supports transparency (unrestricted binary data) when using EBCDIC code. The sustained throughput when using Binary Synchronous Communications at speeds of 48K and 56K bps will be considerably less than clocking rate dependent upon message size to a maximum throughput of 15K bps.

See "Integrated Communications Feature Function Specify Codes" below. Cable #2060 provides connection to a CCITT V.35 compatible modem. Cable #2067 provides connection to a CCITT X.21 interface. The customer is responsible for providing a cable for local connection. For associated cables, see "Cables" under "Accessories" below. **Field Installation:** Yes.

Specify: A function specify code is required for each #2080 ordered. This code is used to set jumper-selectable options of line speed, network attachment and common carrier facility at time of manufacture. They may be reset as required in the field.

#8183	#2067	SDLC/HDLC, IPL, switched X.21

SDLC Single Line Control (#2090): Provides a cycle-stealing attachment and control for a single communications line operating under Synchronous Data Link Control (SDLC) or High Level Data Link Control (HLDC) protocol via an EIA RS-232-C/CCITT V.24 interface. The feature card may be connected to switched or nonswitched communication lines. One feature card may be used as a half-duplex communications port or two feature cards may be used as a pair to handle a full-duplex operation at EC level 467013 and above. Data rates up to 19.2K bps using external clocking are supported. Internal (business machine) clocking at 600 or 1200 bps provides for use when the modem does not provide clocking. NRZI coding is used with internal clocking. With external clocking, either NRZ or NRZI coding may be used. Can communicate using any 8-bit data code including EBCDIC and ASCII. Zero-bit insertion/deletion and block check character generation/checking automatically performed.

High Level Data Link Control (HDLC) is supported for half and full-duplex operation (ABM and NRM mode as described by CCITT Recommendation X.25) at speeds up to 19.2K bps via a RS-232-C interface on leased or switched lines. Programming support is provided by X.25/HDLC Communications Support which consists of two programmable interfaces, frame level and packet level. These interfaces correspond respectively, to level 2 and level 3 of CCITT Recommendation X.25.

Using SNA, HDX operation is supported up to 19.2K bps with RS-232-C on leased or switched lines.

See "Integrated Communications Feature Function Specify Codes" below. For associated cables, see "Cables" under "Accessories" below. **Field Installation:** Yes.

Specify: A function specify code is required for each #2090 ordered. This code is used to set jumper-selectable options of line speed, network attachment and common carrier facility at time of manufacture. They may be reset as required in the field.

Function Specify Code	Compatible IBM Cable(s)	Description
#8130	#2057	Switched network, HD
#8131	#2057	Switched network, ring indicator provided, HD
#8132	#2057	Switched network, internal clocking, ring indicator provided, HD
#8134	#2057	Nonswitched line, HD
#8135	#2057	Nonswitched line, FD
#8136	#2057	Nonswitched line, internal clocking, HD
#8137	#2057	Nonswitched line, internal clocking, FD
#8138	#2062	Switched network, FD
#8139	#2062	Switched network, FD Ring Indicate provided
#8140	#2062	Non-switched line, FD

Asynchronous Communications 8-Line Control (#2091): Provides cycle-stealing control function for one or two Asynchronous Communications 4-Line Adapters (#2092). Provides support for a maximum of eight lines, each operating at a maximum of 2400 bps. See "Integrated Communications Feature Function Specify Codes" below. **Field Installation:** Yes.

Specify: Sequence of controller within processor 4959 or 4965.

#8141 First Controller
#8142 Second Controller
#8143 Third Controller
#8144 Fourth Controller
#8145 Fifth Controller
#8146 Sixth Controller

Asynchronous Communications 4-Line Adapter (#2092): Provides for attachment of up to four half-duplex communications lines. Attachment to the communications lines is via EIA RS-232-C/CCITT V.24 interface. Data rates are program-selectable within two jumper-selectable ranges (37.5 to 1200 and 300 to 2400 bps). The jumper sets the rate range for all four lines. Local attachment of a terminal is via the Asynchronous Local Attachment Cable (#2056) or connection to a modem via EIA Data Set Cable (#2057). This feature in conjunction with the Asynchronous 8-Line Communications Control (#2091) provides functional capability similar to the Asynchronous Communications Single Line Control (#1610) with the exception that no IPL facility is provided and the data rate per line is limited to a maximum of 2400 bps. **Limitations:** No more than two Asynchronous Communications 4-Line Adapters may be controlled by a single Asynchronous Communications 8-Line Control (#2091). #2092 must be located in same machine as its associated controller, and installed in a feature position immediately adjacent to the controller. See "Integrated Communications Feature Function Specify Codes" below. For associated cables, see "Cables" under "Accessories" below. **Field Installation:** Yes. **Prerequisites:** #2091.

Specify: A function specify code is required for each of #2092, ordered. This code is used to set jumper-selectable options of line speed, network attachment and common carrier facility at time of manufacture. They may be reset as required in the field.

Function Specify Code	Compatible IBM Cable(s)	Description
X = Controller Number

#821X	#2056	Low-speed, direct connect, FD
#822X	#2057	Low-speed, switched network, HD
#823X	#2057	Low-speed, switched network, FD
#824X	#2057	Low-speed, switched network, HD, carrier-detect provided
#825X	#2057	Low-speed, switched network, FD, carrier-detect provided
#826X	#2057	Low-speed, nonswitched line, HD
#827X	#2057	Low-speed, nonswitched line, FD
#828X	#2057	Low-speed, nonswitched line, HD, carrier-detect provided
#829X	#2057	Low-speed, nonswitched line, FD, carrier-detect provided
#830X	#2056	Medium-speed, direct connect, HD
#831X	#2056	Medium-speed, direct connect, FD
#832X	#2057	Medium-speed, switched network, HD
#833X	#2057	Medium-speed, switched network, FD
#834X	#2057	Medium-speed, switched network, HD, carrier-detect provided
#835X	#2057	Medium-speed, switched network, FD, carrier-detect provided
#836X	#2057	Medium-speed, nonswitched line, HD
#837X	#2057	Medium-speed, nonswitched line, FD
#838X	#2057	Medium-speed, nonswitched line, FD, carrier-detect provided
#839X	#2057	Medium-speed, nonswitched line, FD

4959 Input/Output Expansion Unit (cont'd)

Binary Synchronous Communications 8-Line Control (#2093): Provides cycle-stealing control function for one or two Binary Synchronous Communications 4-Line Adapters (#2094). Data rates up to 9600 bps per line are supported with the following limitations:

- Only lines 0 and 1 can operate at 9600 bps.
- With lines 0 and 1 operating at 9600 bps, up to six additional lines at rates up to 2400 bps may be attached.
- When only four lines are attached, each can operate at rates up to 4800 bps.

Internal clocking of 600 to 1200 bps is provided for those modems which do not provide clocking. Features #2093 and #2094 provide functional capability similar to the Binary Synchronous Communications Single Line Control (#2074) with the exception that IPL capability is not provided. See "Integrated Communications Feature Function Specify Codes, Limitations and Prerequisite" below. **Field Installation:** Yes.

Specify: Controller Sequence within a processor, 4959 or 4965.

#8151 First Controller
#8152 Second Controller
#8153 Third Controller

Binary Synchronous Communication 4-Line Adapter (#2094): Provides for attachment of up to four half-duplex BSC communications lines via EIS RS-232-C/CCITT V.24 compatible line interfaces. **Limitations:** No more than two Binary Synchronous Communications 4-Line Adapters may be controlled by one Binary Synchronous Communications 8-Line Controller (#2093). Must be located in the same machine as its associated controller, and must be installed in a feature position immediately adjacent to the controller. See "Integrated Communications Feature Function Specify Codes, Limitations and Prerequisites" below. For associated cables, see "Cables" under "Accessories" below. **Field Installation:** Yes. **Prerequisites:** #2093.

Specify: A function specify code is required for each #2094 ordered. This code is used to set jumper-selectable options of line speed, network attachment and common carrier facility at time of manufacture. They may be reset as required in the field.

Function Specify Code	Compatible IBM Cable(s)	Description
X = Controller Number		
#840X	#2057	Multipoint tributary, HD
#841X	#2057	Multipoint tributary, internal clocking, HD
#842X	#2057	Switched network, HD
#843X	#2057	Switched network, ring indicator provided, HD
#844X	#2057	Switched network, internal clocking, HD
#845X	#2057	Switched network, internal clocking, ring indicator provided, HD
#846X	#2057	Nonswitched line, HD
#847X	#2057	Nonswitched line, FD
#848X	#2057	Nonswitched line, internal clocking, HD
#849X	#2057	Nonswitched line, internal clocking, FD

Feature-Programmable 8-Line Communications Control (#2095): Provides cycle-stealing control function for one or two Feature-Programmable 4-Line Communications Adapters (#2096). Supports the command set (8-bit Data Interchange mode only) provided by the Asynchronous 8-line Communications Control (#2091). Also provides flexibility in the attachment of asynchronous and synchronous protocol devices. Provides support for operator-driven full-duplex terminals as well as support for right-shifted character codes (e.g., ASCII). The aggregate controller throughput is 64,000 bps (when using 12-bit characters). **Note:** The feature-programmable controlling provides character-synchronous operation and accommodates Airline Control protocol but does not support IBM binary synchronous protocol. For Airline Control protocol, two ports of the adapter and EIA Full-Duplex Cable (RPQ D02063) are required. **Field Installation:** Yes.

Feature-Programmable 4-Line Communication Adapter (#2096): Provides for attachment of up to four half-duplex communications lines. Attachment to the communications line is via EIA RS-232-C/CCITT V.24 interface. In addition, each line has the jumper-selectable option to provide local attachment using a 20 mA current loop connection. Data rates for asynchronous operation are program selectable within two jumper selectable ranges (37.5 to 1200 and 300 to 19,200 bps). For synchronous operations, external clocking is required. Modem connection for a line is EIA Data Set Cable (#2057). For current loop operation, connection is provided by the Current Loop Cable (#2061), and by the 3101 Display Terminal Current Loop Cable (#2066) for use with the 3101. Local attachment of an asynchronous terminal to a line is provided, via the Asynchronous Local Attachment Cable (#2056). **Limitations:** No more than two Feature-Programmable 4-Line Communications Adapters may be controlled by a single Feature-Programmable 8-Line Communications Control (#2095). The adapter must be located in the same machine as its associated controller and installed in a feature position immediately adjacent to the controller. A maximum of 20 current loop lines per processor or I/O expansion unit may be configured. **Field Installation:** Yes. **Prerequisites:** #2095.

Telephone Communications Controller (#7880): Provides the control and data transfer function for one to four Telephone Communications Adapters (#7881). **Field Installation:** Yes.

Telephone Communications Adapter (#7881): Provides for attachment to one line of a public or private switched telephone exchange. The adapter will answer and originate calls, generate and detect standard push-button phone signals and digitally encode and decode voice signals. **Limitations:** Adapters must be assigned feature positions immediately adjacent to the attached controller. **Maximum:** Four adapters per controller. **Note:** When used in conjunction with the IBM Audio Distribution System (5719-U20) licensed program, the maximum is three adapters per controller. **Field Installation:** Yes. **Prerequisites:** #7880.

Integrated Communication Feature Function Specify Codes: The units digit of the specify code for each line of a multiline adapter (X in the table) must be the same as the units digit of its associated controller sequence code (1, 2, or 3). Table A shows optional cables and a default function specify code if selection criteria are unavailable. See also special feature sections for valid specify codes.

(1) Synchronous mode only.
(2) Binary synchronous mode.

SPECIFICATION TABLE

This table is provided to determine how many 4959 Input/Output Expansion Units are required to contain the desired features. Locations are expressed as a negative number for availability. A positive number is used for feature requirement. The sum of the availability and requirements number cannot exceed zero.

Machine/ Feature Number		Feature Positions	Notes
4959	Input/Output Expansion Unit	-14	
#1200	Series/1 - S/370 Channel Attachment Feature	+1	
#1205	4966 Diskette Magazine Unit Attachment	+1

Notes:
(1) Requires #2010 to provide + and - 12 volts. Required in 4959 up to serial number 22499.

(2) Must be contiguous I/O feature positions.

(3) Must be in contiguous I/O feature position with its associated controller.

MODEL CONVERSIONS (None)

ACCESSORIES

Customer Access Panel (#1590): Assembly to provide an interface to the surface of rack with quick disconnect type connection for Integrated Digital Input/Output (#1560) or Customer Direct Program Control Adapter (#5430) features (up to four in any mix), plus one Timer (#7840) with external sources and one Teletypewriter Adapter (#7850) can be accommodated by the panel. Connecting cables from panel for Timer and Teletypewriter Adapter are included. Cables for connected Integrated Digital Input/Output and Customer Direct Program Control Adapter are obtained separately. See **#1593** and **#1594** below. **Restrictions:** May not be mounted behind the following units: 4952A without EC375810, any mdl 30D or any unit in a Stand-Alone Enclosure (#4520). **Field Installation:** Yes.

Customer Access Panel - Integrated DI/DO Cable (#1593): Internal cable which connects Integrated Digital Input/Output (#1560) with Customer Access Panel (**#1590**). Provides both plug and receptacle at Customer Access Panel and connectors at Integrated Digital Input/Output feature. Up to a total of six **#1593** and **#1594** may be accommodated in each full-width machine. Half-width machines are limited by available feature positions.

Customer Access Panel-Customer DPC Adapter Cable (#1594): Internal cable which connects Customer Direct Program Control Adapter (#5430) with Customer Access Panel (**#1590**). Provides both plug and receptacle at Customer Access Panel and connectors at Customer Direct Program Control Adapter. Up to a total of six **#1593** and **#1594** may be accommodated in each full-width machine. Half-width machines are limited by available feature positions. **Field Installation:** Yes.

Specify:

#2055 Teletypewriter Cable.
#2059 Teletypewriter, Customer Access Panel Cable.
#2064 Teletypewriter Cable EIA Male ... required for EIA full-duplex operation.
#2065 Teletypewriter Cable EIA Female ... required for EIA full-duplex operation.
#2066 3101 Display Terminal Current-Loop Cable ... required for current-loop connection to the 3101 and with the #7850 adapter in current-loop mode.

Rack Mounting Fixture (#4540): Mounting assembly for half-rack-width units. One rack mounting fixture required to mount one or two half-width units in a 4997 or an EIA standard 19-inch rack enclosure. If only one unit is mounted in #4540, the empty space will be covered with a decorative panel similar to the front covers of Series/1 machines. **Field Installation:** Yes.

5250 Information Display System Attachment Cable (#5760): Provides termination for up to four customer cables (one for each port) to a 5250 Information Display System Attachment Feature (#1210). Cable is 3 meters (10 feet) long. See M5251, and 5256 pages for connectors for customer cable. **Field Installation:** Yes.

Attachment Cable (#5780): Provides a twinaxial cable, 6.1 meters (20 feet) in length, with a Berg connector on one end and a male twinaxial connector on the opposite end. May be used to attach the 5224 or 5225 Printers to Printer Attachment - 5200 Series (#5640). See M5224, 5225 pages for additional cable information.

Cables: Listed Series/1 cables and/or associated parts to attach devices to Series/1 may be purchased from IBM or from a customer-chosen source. For the proper identification of the required connectors, see *IBM Series/1 Customer Site Preparation Manual* (GA34-0050). The customer is responsible for the installation and maintenance of the cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the feature(s).

4959 Input/Output Expansion Unit (cont'd)

Cables For Series/1 Local Communications Controller (#1400):

Part Name	IBM No. for Twinax Cable Indoor/Outdoor	IBM No. for Coax Cable Indoor	Outdoor
Cable Assembly (1)	4498426	2577672 (5)	1833108 (5)
Bulk Cable (2)	7362211	0323921 (5)	5252750 (5)
Connector Kit	4498427 (3)	1836418 (4)	1836419 (4)

Notes:
(1) Cable in specified length with connectors at both ends up to a maximum of 610 meters (2,000 feet). Multiple assemblies are required for total twinaxial cable lengths of 610 meters (2,000 feet) to 1,524 meters (5,000 feet).

(2) Cable in specified length without connectors up to a maximum of 610 meters (2,000 feet). Multiple assemblies are required for total twinaxial cable lengths of 610 meters (2,000 feet) to 1,524 meters (5,000 feet).

(3) Two connectors (one male and one female).

(4) Two connectors (both male).

(5) Coax wire is limited to lengths of 610 meters (2000 feet) between active Series/1 processors and cannot be intermixed with Twinaxial wire in the same segment.

Order specifying P/N and desired length of cable.

3101 Display Station - Cable/Attachment Matrix:

Machine	Feat.	3101-All RS-232 Local	3101-All RS-232 Remote (Modem)	3101-12/22 Current Loop	3101-13/23 RS-422

	#4731		#2130 (2)		
	#4734			#2066 (1)	
	#4739	#2132 (2)			

Notes:
(1) Requires field modification of pin plug-wiring
(2) Prerequisite is 3101 Modem Cable P/N 5640736

Cable For Communications and other Features:

Cable Code	Cable Description	Feature(s) Used With
#2055	Teletypewriter Cable	#7850
#2056	Asynchronous Local Attachment Comm. Cable	#1310, #1610, #2092, #2096
#2057	EIA Data Set Cable	#1310, #1610, #2074, #2090, #2092, #2094, #2096
#2058	Binary Synchronous Comm/HS Cable (for WE 303 interface)	#2075
#2059	Teletypewriter-Cust. Access Panel Cable	#7850
#2060	Binary Synchronous V.35 HS DDN Cable (for CCITT V.35 Interface)	#2075, #2080
#2061	Feature-Programmable Multiline Current Loop Cable	#2096
#2064	Teletypewriter Adapter Cable with EIA male connector	#7850
#2065	Teletypewriter Adapter Cable with EIA female connector	#7850
#2066	3101 Display Terminal Current Loop Cable 15 meters (50 feet)	#2096, #7850
#2067	X.21 Attachment Cable 10 meters (32.5 feet)	#2080
#2070	DAA Attachment Cable 6.1 Meters (20 feet)	#7881
#2071	VCA Attachment Cable 6.1 Meters (20 feet)	#7881
#5770	Multifunction Attachment Cable 15 meters (50 feet)	#1310, D02350
#5780	Attachment Cable 6.1 meters (20 feet)	#5640

Connectors and Tools:

Connector	B/M Number
2 x 4 Berg Connector Kit	6843689
2 x 4 Berg Connector Kit	6095524
2 x 8 Berg Connector Kit	8327397
2 x 12 Berg Connector Kit	8327398
2 x 20 Berg Connector Kit	8327399
Berg Crimp Tool (1)	8327400
Amphenol 4-Position Connector Plug	8327401
AMP 26-Position Connector Kit	8327402
AMP 160-Position Connector Kit	8327403
AMP Crimp Tool and AMP extractor Tool	8327404
Continental 56-Position Connector Kit	8327405
Connector Kit for Feature #1210	6838819
Berg Crimp Tool for Feature #1210 (2)	6838818

Notes:
(1) Use only with #24 AWG or #26 AWG wire (0.511mm or 0.40mm)

(2) Use only with #18 AWG wire (1.024mm)

Connectors for Feature #1400:

Connectors	IBM Number
Twinax Cable-to-Cable	7362230
Coax Indoor Cable-to-Cable	5252643
Coax Outdoor Cable-to-Cable	5252643
Twinax Connector Kit (1)	4498427
Coax Indoor Connector Kit (2)	1836418
Coax Outdoor Connector Kit (2)	1836419
Twinax Connector (3)	6838959
Twinax Connector (4)	7362229
Coax Indoor Connector (4)	1836444
Coax Outdoor Connector (4)	1836447
Twinax-Coax Adapter (one) (5)	7363102
Twinax Station Protector Kit (6)	7362426

Notes:
(1) One male and one female connector.
(2) Two male connectors.
(3) One female connector.
(4) One male connector.
(5) Required when coaxial cable is used to interconnect feature #1400.
(6) Two protectors. Required when cable is installed outdoors. One at exit from building and one at entrance to building.

Refer to *Order Guide* (Z120-2665).

RPQs

The list of RPQs below has been previously bid to IBM customers and prospects. Their inclusion here in no way guarantees future availability.

4952, 4953, 4954, 4955, 4956 and 4965:

Auto Call Originate Attachment Card (RPQ D02013): Provides a direct program control EIA RS-366 interface suitable to control auto call data sets.

Auto Call Originate Attachment Cable (RPQ D02014): Provides a cable to connect the Auto Call Originate Attachment Card to one or two auto call data sets.

Auto Call Originate DI/DO Cable (RPQ D02031): Provides a cable to attach to the 16 Digital Input and 16 Digital Output points provided on the Auto Call Originate Attachment Card.

Data Collection Interactive-Series/1 (RPQs D02312, D02313, D02314): Provides for the direct attachment of up to 31 5230 Entry Stations for the Series/1. Associates PRPQ (P82600) offers user the opportunity to interact with entry stations on realtime basis.

Data Collection Loop Attachment Panel and Cable (RPQs D02355, D02356): Assemble and cable to provide surface of rack adapter with quick disconnect type connection for Series/1 data entry loops.

EIA Full Duplex Data Set Cable (RPQ D02063): Provides a cable to attach a full-duplex RS-232-C or CCITT V.24 data set to two BSC or two SDLC communications lines.

GPIB Adapter (RPQ D02118): Provides a cycle-stealing General Purpose Interface Bus adhering generally to the IEEE Standard 488-1975 and 1978.

GPIB Adapter Cable (RPQ D02119): Provides a 4 meter (13 foot) cable to attach RPQ D02118 to an IEEE 488 device.

Series/1-to-Series/1 (RPQs D02241, D02242): Provides a direct cycle-steal channel attachment between two Series/1 at a maximum data rate of 65K bytes per second. (D02241 - Primary, D02242 - Secondary).

4959 Input/Output Expansion Unit (cont'd)

Single Line Asynch Single Stop-Bit (RPQ D02236): Provides a single line asynchronous communications adapter with one or two stop-bit capability.

System/3 BSC Attachment (RPQ D02120): Authorizes local or remote attachment of the System/3 Processor to a BSC communication line.

Video Monitor Attach (RPQ D02224): Enables a customer provided video monitor to be attached to the 4979 attachment feature, without the 4979.

3601 BSC Attachment (RPQ D02100): Authorizes local or remote attachment of the 3601-C Finance Communication Controller to a BSC communication line.

3601 SDLC Attachment (RPQ D02122): Authorizes local or remote attachment of the 3601-C Finance Communication Controller to a SDLC communication line.

3684 BSC Attachment (RPQ D02319): Authorizes local or remote attachment of the 3684 Point-Of-Sale Control Unit to a BSC communications line.

3741/5231 BSC Attachment (RPQ D02123): Authorizes remote attachment of the 3741 mdl 2 Data Station, 3741 mdl 4 Programmable Workstation, and 5231 mdl 2 Controller to a BSC communications line.

3777 BSC Attachment (RPQ D02321): Authorizes remote attachment of the 3777 Communications Terminal to a BSC communications line. This allows the attachment of the 3203 Line Printer, 2502 Card Reader, and 3521 Card Punch.

4978 Display Station Attachment (RPQ D02038): Provides for Series/1 attachment to the 4978 Display Station.

5935-LO3 Start/Stop Attachment (RPQ 8T1040): Provides authorization to attached the 4935-LO3 Banking Terminal via start/stop.

5935-LO3 SDLC Attachment (RPQ 8T1051): Provides authorization to attach the 5935-LO3 via SDLC. There is a SOTC prerequisite for this RPQ.

4955 Processor:

Mdl Change A/B (D02300): Provides for field change of the 4955 from mdl A to mdl B.

Mdl Change C/D (D02301): Provides for field change of the 4955 from mdl C to mdl D.

4973 Line Printer:

OCR-A Print Belt (D02099): Provides a print belt for the 4973 containing certain OCR-A characters.

4974 Printer:

Forms Cutter Bar (D02018): Provides a manually operated cutter bar which facilitates tearing single or multipart perforated forms within five inches of the first print line.

Tractor/Cutter (D02078): Provides a variable-width forms tractor with a mechanical cutter to separate a single or multipart perforated form within 1.5 inches of the first print line. A field installable version is also available.

Rear Document Insertion (D02331): Provides a removable document insertion device which facilitates use of cut forms in the 4974. A field installable version is also available.

4979 Display Station:

Video Monitor Attachment (D02223): Enables the customer to connect one or more video monitors to duplicate the display image.

4982 Sensor Input/Output Unit:

Analog Input-14 Bits (D02071): Provides a differential analog input with resolution of 13 bits plus sign or 14 bits unipolar.

4987 Programmable Communication Subsystem:

3780 BSC Attachment (D02227): Authorizes local and remote point-to-point attachment of the 3780 Communications Terminal and 3781 Card punch, providing 350 lpm printer, 600 cpm card reader, and 160 cps card punch.

Audio First Line (D02337): Provides the first feature card whereby Touchtone® telephones may be used for input to the Series/1. The output of the system is audio messages constructed from a digitized vocabulary.

Audio I/O Additional Line (D02338): Provides additional audio lines as described under D02337, up to a maximum of 16 per PCS.

® Trademark of Western Electric Company

4997 Rack Enclosure:

Noise Reduction (D02162, D02163): Provides audible noise reduction packaging suitable for office environment. Related RPQs are available for most Series/1 rack-mounted units.

Series/1 Noise Reduction:

Noise Reduction (D02162 - D02165, D02168, D02169): Provide noise reduction packaging suitable for office environment. Available on Series/1 units except printers.

4962 DISK STORAGE UNIT

PURPOSE

The 4962 is a disk storage unit for Series/1.

MODELS

Model 1	001	9.3MB disk unit
Model 1F	01F	9.3MB disk unit with fixed heads and 123KB capacity
Model 2	002	9.3MB disk unit with diskette unit
Model 2F	02F	9.3MB disk unit with fixed heads, 123KB capacity, and diskette unit
Model 3	003	13.9MB disk unit
Model 4	004	13.9MB disk unit with diskette unit

Limitations: One 4962 per 4997 mdl 1, two per 4997 mdl 2.

Prerequisites: #3580 for each 4962 and also #3581 required for 4962 mdls 2, 2F, and 4 on a processor unit, 4959, or 4965.

HIGHLIGHTS

The 4962 is designed for mounting on a 4997 or an EIA standard 19-inch rack enclosure. It is a full-width unit, 19 inches high.

Mdls 1, 1F, 2, and 2F have two data heads and a capacity of 9,308,160 bytes. Mdls 3 and 4 have three data heads and a capacity of 13,962,240 bytes. There are 303 data tracks per head, 60 sectors per track, and 256 bytes per sector. Access times are 10 milliseconds minimum, 40 milliseconds average, and 70 milliseconds maximum. Average rotational latency is 10.1 milliseconds. The disk rotates at 2,964 rpm, yielding an instantaneous data rate of 889,000 bytes per second. Mdls 1F and 2F have eight fixed heads with a data capacity of 122,880 bytes.

Mdl 2 is similar to mdl 1, mdl 2F is similar to mdl 1F, and mdl 4 is similar to mdl 3, except that mdls 2, 2F, and 4 include diskette units identical in function to the 4964.

Publications: *4962 Disk Storage Unit and 4964 Diskette Unit Description* (GA34-0024).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 1-phase, 60 Hz): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Diskettes: Mdls 2, 2F, and 4 use a 2-sided diskette, P/N 2736700. This diskette is initialized for 256 bytes per sector and must be re-initialized for another format. Mdls 2, 2F, and 4 may be used to reformat the diskette. Diskettes are packaged 10 per box. Minimum order is one box.

4963 DISK SUBSYSTEM

PURPOSE

The 4963 is a medium capacity, disk subsystem for Series/1.

MODELS

Model 23A	23MB primary disk unit with fixed heads
Model 23B	23MB expansion disk unit with fixed heads
Model 29A	29MB primary disk unit
Model 29B	29MB expansion disk unit
Model 58A	58MB primary disk unit with fixed heads
Model 58B	58MB expansion disk unit with fixed heads
Model 64A	64MB primary disk unit
Model 64B	64MB expansion disk unit

Limitations: The subsystem primary drive must mount in lowest rack position. First expansion unit placed directly above. Third and fourth units in lowest positions of adjacent rack.

Prerequisites: #3590 (see M4959 pages) for each 4963 mdl 23A, 29A, 58A, or 64A plus an available I/O slot in a processor, 4959 I/O expansion unit, or a 4965 I/O expansion unit.

HIGHLIGHTS

High performance disk subsystem featuring multiple microprocessors to both offload the Series/1 processor and optimize disk performance. Each subsystem has one primary drive and may have up to three expansion drives ... mdls may be intermixed. Designed for mounting in a 4997 or an EIA standard 19-inch rack enclosure. Full-width unit 14 inches high. Automatic retries on soft error, automatic seek to alternate sector (one alternate sector per track plus use of spare sectors on tracks in same or adjacent cylinder eliminates seeks to alternate track), automatic seek overlap with read or write, and automatic error handling under subsystem microprocessor control. The microprocessor executes self-test diagnostics on power-up, reset command, and during quiscient periods. A 3-sector speed matching buffer reduces extra revolutions often encountered on multiple sector read or write operations. Multiple subsystems may be attached ... one 4963 Disk Subsystem Attachment (#3590) required for each.

Standard 4963 drives have 64,520,192-byte or 29,327,360-byte capacities. Substitution of eight fixed heads on one data recording surface for one moving head lowers capacity under moving heads to 58,654,720 or 23,461,888 bytes and adds 131,072 bytes under fixed heads. Fixed heads allow faster access to data by eliminating the access arm movement.

Publications: *4963 Disk Subsystem Description* (GA34-0051).

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture. Specify codes **#2XXX**, **#8XXX**, and **#9XXX** apply to plant orders only ... do not use for MES order.

- Voltage (AC, 1-phase, 60 Hz): Specify **#9901** for 115V, **#9902** for 208V, **#9904** for 230V.
- Power Cord: 1.8 meters (6 feet) long, no specify required.
- Unit Sequence for B Mdl Expansion Drives: Specify **#9150** for second unit, **#9151** for third unit, **#9152** for fourth unit.
- Subsystem Number: Specify **#925X**. The subsystem number is the same as the subsystem number used with attachment feature #3590 (see M4959 pages). It must be used with each unit in the subsystem.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

4964 DISKETTE UNIT

PURPOSE

The 4964 provides removable magnetic storage media for Series/1.

MODELS

Model 1 001

Prerequisites: #3581 on a processor unit, 4959, or 4965. Space in Rack Mounting Fixture (#4540). See "Accessories" in the M4959 pages.

HIGHLIGHTS

The 4964 is a half-width unit designed for mounting on a 4997 or EIA standard 19-inch rack enclosure using the Rack Mounting Fixture (#4540).

The 4964 provides multiple functions of diskette writing and reading including input of data and programs generated offline, output of programs, output of data for personal use or offline storage, journaling, recording of an audit trail, checkpoints, system errors, etc. Data exchange media is compatible with other systems.

Diskette Types: Either the 1-sided Diskette 1 or the 2-sided Diskette 2 may be used.

Formats: Diskettes may be initialized for 128-, 256-, or 512-byte sectors. Diskette 1 is prepared in 128, 256, or 512 bytes per sector. Diskette 2 is prepared in 128 or 256 bytes per sector. The 4964 may be used to reformat the diskette.

Diskette Capacity: Capacity is dependent upon type and format.

Bytes/ Sector	Sectors/ Track *	Diskette Type	Capacity (bytes)
128	26	1	246,272
256	15	1	284,160
512	8	1	303,104
128	26	2	492,544
256	15	2	568,320
512	8	2	606,208

* 74 tracks per surface; Diskette 2 has two surfaces.

Diskette drive access time includes 5 milliseconds per track crossed plus 35 milliseconds for head settling. Diskettes rotate at 360 rpm, yielding a data rate of 31,250 bytes per second and an average latency of 83.8 milliseconds.

Note: During recording and reading, the head is in contact with the diskette, causing wear over time. Variation in the rate of wear will depend on the particular operating environment and application characteristics. Care in the storage, use, and handling can also affect diskette life. See guidelines in the *IBM Diskette General Information Manual* (GA21-9182). Excessive wear, handling, or contamination can cause possible failures in recording and/or reading. Ultimate wear is to some extent dependent upon total usage of individual tracks. Care taken to distribute data so that accessing occurs over the entire recording surface with about the same frequency can extend the useful life of the diskette. Unpredictable circumstances such as contamination or severe handling can cause an early error to occur. For all of the above reasons, consideration should be given to providing an adequate recovery plan.

Publications: *4962 Disk Storage Unit and 4964 Diskette Unit Description* (GA34-0024).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 1-phase, 60 Hz): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Diskettes: The 4964 uses either Diskette 1 or Diskette 2. Diskettes are packaged 10 per box. Minimum order is one box.

4965 STORAGE and I/O EXPANSION UNIT

PURPOSE

Provides storage and additional I/O feature locations for Series/1.

MODELS

Model 1	001	1.2MB of diskette storage and four available I/O feature locations with provisions for an optional second 1.2MB diskette drive.
Model 30D	30D	30MB of disk storage, seven available I/O feature locations with provisions for an optional 1.2MB diskette drive and cache storage.

Limitations: The 4999 Battery Backup may not be used with the 4965.

Prerequisites: All models are full-width units designed for mounting on support rails (fixed) in a 4997 (see M4997 pages), or EIA standard 19-inch enclosure. Models 001 and 30D can also be mounted in Stand-Alone Enclosure (#4520). #1565 is required in the preceeding unit when attaching a 4965 to a 4952, 4953, 4954, 4955, 4959, or 4956 Processor or 4959 I/O Expansion Unit or another 4965.

HIGHLIGHTS

Provides multiple functions by combining the I/O expansion capability with a 30MB fixed disk with an optional 1.2MB diskette, or a single 1.2MB diskette with a optional second 1.2MB diskette. Data exchange media is compatible with other systems.

Disk Drive Mdl 30D: Provides a capacity of 30 megabytes per disk drive. This mdl has an average access time of 40 milliseconds. Average rotational latency is 9.5 milliseconds. The disk rotates at 3,151 rpm yielding an instantaneous data rate of 1,250,000 bytes per second. A high level of data integrity is maintained by Error Checking and Correcting (ECC) which corrects any error of nine bits or less and any error of 16 bits or less within a 2-byte boundry. Also, ECC will detect up to two 2-byte errors within any 256-byte block.

Cache Mdl 30D: The 64 kilobyte cache is microprocessor-controlled and has the potential to significantly improve system performance. Selected data sectors, determined by the cache control algorithm to be probable candidates for system read request, are pre-fetched and stored in cache. The microprocessor monitors its own "hit-ratio" and adjusts to optimize performance. Least-recently-used algorithm eliminates inactive data from cache, as space for new data is required. This allows the disk to dynamically adapt to changes in the jobstream. Performance improvements are application-dependent -- test cases from a variety of applications thought to be typical have shown improvements in disk throughput ranging from 50% to above 200%. No guarantee of result can be made. Applications which are truly random (test cases found none) or which are heavily write-oriented may experience little or no improvement from the cache function.

Diskette Drive: Diskette drive access time includes 5 milliseconds per track crossed plus 35 milliseconds for head settling. Diskettes rotate at 360 rpm, yielding a data rate of 62,500 bytes per second and an average latency of 83.8 milliseconds. The use of flexible diskette storage provides significant advantages such as low cost, compact size, multiple system functions, ease of media handling and storage, etc. It should be recognized, however, that during recording and reading the read/write head is in contact with the diskette, causing wear over time. Variations in the rate of wear will depend upon the particular operating environment and application characteristics. Care in storage, use, and handling can also affect diskette life. See guidelines in the *IBM Diskette General Information Manual* (GA21-9182). Excessive wear, handling, or contamination can cause possible failures in recording and/or reading. Ultimate wear is to some extent dependent upon total usage of individual tracks. Care taken to distribute data, so that accessing occurs over the entire recording surface with about the same frequency, can extend the useful life of the diskette. Actual experience with individual applications and environments will allow development of guidelines as to when the media should be replaced. Unpredictable circumstances, such as contamination or severe handling, can dramatically shorten useful life. For all of the above reasons, consideration should be given to providing an adequate recovery plan.

Diskette Types: Either the 1-sided Diskette 1 or the 2-sided Diskette 2 or Diskette 2D may be used.

Formats: Diskettes 1 or 2 may be initialized for 128-, 256-, or 512-byte sectors. Diskette 2D may be initialized for 256-, 512-, or 1,024-byte sectors.

Diskette Capacity: Capacity is dependent upon type and format. Actual usable capacity is dependent upon programming support and may be less than the amount shown.

Bytes/ Sector	Sectors/ Track *	Diskette Type	Capacity (bytes)
128	26	1	246,272
256	15	1	284,160
512	8	1	303,104
128	26	2	492,544
256	15	2	568,320
512	8	2	606,208
256	26	2D	985,088
512	15	2D	1,136,640
1,024	8	2D	1,212,416

* 74 data tracks per surface; Diskettes 2 and 2D have two surfaces.

Mdl 001:

4965 Storage and I/O Expansion Unit Description (GA34-0155), *4965 Storage and I/O Expansion Unit Maintenance Information* (SY34-0228), and *4965 Storage and I/O Expansion Unit Parts Catalog* (S134-0059).

Mdl 30D:

4965 Storage and I/O Expansion Unit Description, Model 30D (GA34-0254), *4965 Storage and I/O Expansion Unit Maintenance Information, Model 30D* (SY34-0313), and *4965 Storage and I/O Expansion Unit Parts Catalog, Model 30D* (S134-0104).

SPECIFY

Unless otherwise indicated these specify features are only available at time of manufacture. Specify codes **#2XXX, #8XXX, and #9XXX** apply only to plant orders ... do not use for MES orders.

- Voltage (AC, 60 Hz, 1-phase): With 1.8 meter (6 foot) cord. Specify **#9901** for 115V, **#9911** for 120V, **#9902** for 208V, **#9904** for 230V, **#9914** for 240V.

- Extended I/O Channel Cable: Specify **#9195** for Extended Attachment Cable - Two-Channel Switch (#7900) only, or **#9199** for Extended Attachment Cable - Basic Channel or Two-Channel Switch (#7900) only.

  For initial system orders including 4997 Rack Enclosures, IBM will locate machines and supply cables as required. For additions to existing rack mounted systems or for machines located in customer racks, extended cables must be specified where needed. A 4959 Input/Output Expansion Unit or 4965 Storage and I/O Expansion Unit must be located immediately above, below, or alongside the previous machine on the channel. When located alongside the preceding unit, specify **#9199**. A 4959 or 4965 containing a Two-Channel Switch (#7900) may be located as above or located vertically once removed from the preceding unit. When located vertically once removed, specify **#9195**. See *IBM Series/1 Configurator* (GA34-0042) for details.

- Processor Sequence: Specify **#93BB** for sequence number(s) and **#9450** for extension of switched I/O channel.

  For multiple processor configurations, each processor has been assigned a sequence number, **#93BB**. In such a system, a 4959 or 4965 may be connected only to a single processor (private I/O). Alternatively, a 4959 or 4965 may contain, or be down a chain of 4959s or 4965s from, a Two-Channel Switch (#7900), and is then connected to two processors (shared I/O). Where a 4959 or 4965 contains private I/O, specify the same **#93BB** as the processor to which it is connected. Where a single #7900 connects one or a chain of 4959 or 4965 machines to two processors (a "Y" configuration), specify both associated **#93BBs** for each 4959 or 4965 containing shared I/O.

  In the special case where there are two #7900s interconnecting four machines, only one **#93BB** is specified for each 4959 or 4965 containing the shared I/O. This is the **#93BB** associated with the processor for which primary or normal attachment is desired.

  In addition, for each 4959 or 4965 containing shared I/O and not containing a Two-Channel Switch, specify **#9450** for extension of switched I/O channel.

- Diskette IPL:

  Mdl 001:

#9138	Diskette primary IPL, Optional diskette not IPL device
#9139	Diskette alternate IPL, Optional diskette not IPL device

SPECIAL FEATURES

All channel features which may use a feature position in the 4965 are presented in the "Specification Table" below. To simplify, shorten, and improve the usability of these pages, descriptions of those features which are available on all processors, the 4959, and the 4965 are presented in the M4959 pages. Features unique to this unit or for which there are mdl-dependent considerations are presented below.

Channel Repower (#1565): Located on the preceding unit, and provides channel repower for the 4965 and for the 4959. Required to connect a 4965 to a 4952, 4954, 4955 and a 4956. A 4965 attached to a 4959 or another 4965 requires #1565 on the preceding 4959 or 4965. **Field Installation:** Yes.

2nd Diskette Drive (#4100): Provides for a second diskette drive on mdl 001 or a single diskette drive on mdl 30D. Does not require a feature position. **Field Installation:** Yes.

Stand-Alone Enclosure (#4520): For the 4952 mdls C and 30D. Consists of a 3-sided wraparound cover with decorative, removable, front and rear covers. When connecting a mdl C or 30D to a 4965 both in the Stand-Alone Enclosure, specify Stand-Alone Enclosure Cable (#4525). **Limitations:** Features and devices that interconnect using flat or internal cabling are not supported in the Stand-Alone Enclosure. See Note 4 at the end of the "Specification Table". **Field Installation:** Yes.

Stand-Alone Enclosure Cable (#4525): Provides a 3.1 meter (10 foot) external shielded cable group (four cables) between a 4965 in a Stand-Alone Enclosure (#4520) and another 4965 Processor, 4952, 4954, or 4956. **Field Installation:** Yes. **Prerequisites:** #1565.

Cache (#6400): Provides a means of reducing the effective access time of the disk, which can result in a substantial system level performance improvement (mdl 30D). The cache option does not require a feature position. **Field Installation:** No.

Two-Channel Switch (#7900): Provides capability to switch the Series/1 I/O channel between two processors. Allows a secondary or alternate processor to take control of all I/O devices on the channel beyond the #7900 in the event of failure of the primary or normal processor to which the devices are attached. #7900 can be operated in two modes, manual or backup.

In backup mode, the Initial Period Timer is set to a time period selected by the user. If the primary processor fails to reset this timer within the selected time period, #7900 attempts to interrupt the primary processor. The primary processor then has an additional specified warning period in which to issue the Reset Timer command. If at the end of this interval, #7900 has not received the Reset Timer command, an interrupt will be issued to both processors. The secondary processor can then issue a Reset and Connect command, which will attach all common I/O to that secondary processor. If #7900 is in manual mode, the common I/O is connected to the processor selected by the position of the manual select switch.

A special console is added to a 4959 or 4965 when #7900 is installed. This includes a mode switch (manual or backup), manual select switch, indicator lights, and isolated alarm contacts to allow extend attachment of some alarm device if desired. This console is located adjacent to the 4959 or 4965 power switch and indicator.

Note: #7900 mounts on either 4959 or 4965 units. It occupies the I/O channel cable position, not an available I/O feature position.

When the configuration is a simple "Y", one 4959 or 4965 with #7900 and two processors, or a simple "quad", two 4959s or 4965s, each with a #7900 and two processors, no special considerations are required. For more complex configurations, contact IBM.

System orders which contain a 4959 or 4965 with a Two-Channel Switch must include at least two processors in any combination. Independent orders for 4959 or 4965 with #7900, or MES orders for #7900, must be placed against a system including at least two processors. Installed systems to be combined using the Two-Channel Switch must exist under one system number. For more complex configurations, consult IBM. **Note:** See "Processor Sequence" in "Specify". **Field Installation:** Yes.

Specify:

TCS Timer Period - Initial Period

0.125 seconds	**#9701**
1 second	**#9702**
8 seconds	**#9703**
16 seconds	**#9704**

TCS Timer Period - Warning Period

0 seconds	**#9710**
0.125 seconds	**#9711**
1 second	**#9712**

IPL Block

First processor blocked from IPL by any common I/O device	**#9120**
Second processor blocked from IPL by any common I/O device	**#9121**

Specification Table: This table is provided to determine those features that may be desired on the 4965. Locations are expressed as a negative number for availability. A positive number is used for feature requirement. The sum of the availability and requirements numbers must not exceed zero. **Field Installation:** Yes.

Machine/ Feature Number		Feature Positions	Notes

Notes:

(1) Must be contiguous I/O feature positions.

(2) Must be contiguous I/O feature position with its associated controller.

(3) Not supported in the Stand-Alone Enclosure due to flat or internal cabling.

Auxilliary Features, Cables, Connector Kits: Certain devices, cables, etc., involved in system installation are available and may be ordered with this unit. For details see "Accessories" in M4959 pages.

MODEL CONVERSIONS (None)

ACCESSORIES

Frame Stand (P/N 6841365): Provides a steel stand capable of supporting a 4965 mdl 001 or 30D, and a 4975 Printer. The stand rests on glides and comes in a pebble gray color only.

SUPPLIES

Diskettes: The 4965 uses either the 2-sided Diskette 2, or the 1-sided Diskette 1. Diskette 1 is prepared in 128, 256, or 512 bytes per sector. Diskette 2 is prepared in 128 or 256 bytes per sector formats. The

4965 Storage and I/O Expansion Unit (cont'd)

4965 may be used to reformat the diskettes. Diskettes are packaged 10 per box. Minimum order is one box.

4966 DISKETTE MAGAZINE UNIT

PURPOSE

The 4966 provides random access to 23 diskettes contained in two diskette magazines (10 diskettes each) and three individual diskette slots.

MODELS

Model 1 001

Prerequisites: #1205 on a processor unit, 4959, or 4965.

HIGHLIGHTS

The 4966 is designed for mounting on a 4997 or an EIA standard 19-inch rack enclosure. It is a full-width unit.

The 4966 enhances and expands the multiple functions of diskette writing and reading by providing randomly accessible multiple diskettes conveniently packaged for efficient operation. Data exchange media is compatible with other IBM systems.

Autoloader: Carriage mechanism accommodates three single diskettes and two diskette magazines (10 diskettes each). Random access autoload mechanism moves left or right to align program-selected diskette with diskette drive unit. Average access time to adjacent diskettes is three seconds, and to furthest diskette is five seconds.

Diskette drive access time includes five milliseconds per track crossed plus 35 milliseconds for head settling. It has a maximum instantaneous data rate of 125K bytes per second with Diskette 2D. Rotational speed is 720 rpm.

Diskette Types: Either the 1-sided Diskette 1 or the 2-sided Diskette 2 or Diskette 2D may be used.

Formats: Diskettes 1 or 2 may be initialized for 128-, 256-, or 512-byte sectors. Diskette 2D may be initialized for 256-, 512-, or 1,024-byte sectors.

Diskette Capacity: Capacity is dependent upon type and format.

Bytes/ Sector	Sectors/ Track *	Diskette Type	Capacity (bytes)
128	26	1	246,272
256	15	1	284,160
512	8	1	303,104
128	26	2	492,544
256	15	2	568,320
512	8	2	606,208
256	26	2D	985,088
512	15	2D	1,136,640
1,024	8	2D	1,212,416

* 74 tracks per surface; Diskettes 2 and 2D have two surfaces.

Note: During recording and reading, the head is in contact with the diskette, causing wear over time. Variation in the rate of wear will depend on the particular operating environment and application characteristics. Care in the storage, use, and handling can also affect diskette life. See guidelines in the *IBM Diskette General Information Manual* (GA21-9182). Excessive wear, handling, or contamination can cause possible failures in recording and/or reading. Ultimate wear is to some extent dependent upon total usage of individual tracks. Care taken to distribute data over the entire recording surface, so that accessing occurs with about the same frequency at all locations, can extend the useful life of the diskette. Unpredictable circumstances such as contamination or severe handling can cause an early error to occur. For all of the above reasons, consideration should be given to providing an adequate recovery plan.

Publications: *4966 Diskette Magazine Unit Description* (GA34-0052).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 60 Hz, 1-phase): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Diskettes: The 4966 uses Diskettes 1, 2, and 2D. Single diskettes are packaged 10 per box. Minimum order is one box.

Magazines: The 4966 uses the diskette magazine. Magazines are shipped without diskettes and are available in increments of five.

4967 HIGH PERFORMANCE DISK SUBSYSTEM

PURPOSE

High performance, cached, large capacity, fast access, high data rate, general purpose, disk subsystem for Series/1.

MODELS

Model 2CA 200MB primary disk unit
Model 2CB 200MB expansion disk unit

Prerequisites: #3595 for each subsystem in a processor unit, a 4959 Input/Output Expansion Unit, or a 4965 Input/Output Expansion Unit.

Limitations: One 4967 mdl 2CA and up to three 4967 mdl 2CB drives may be attached via one 4967 High Performance Disk Subsystem Attachment (#3595) ... see M4959 pages. Two I/O addresses are required if one or two drives are attached, four addresses if three or four drives are attached. The first 4967 drive must mount 5-1/4 inches from the bottom of the rack. The second 4967 drive is installed directly above the first. Third and fourth units mount in the same positions of the adjacent rack. Feature #3595 may not be installed in a 4952 mdl A or 4954 mdl A. See *Customer Site Preparation Manual* (GA34-0050) for positioning requirements.

HIGHLIGHTS

High performance disk subsystem featuring multiple microprocessors to offload the Series/1 processor and optimize disk performance. Each subsystem has one primary drive and may have up to three expansion drives. The 384 kilobyte cache is microprocessor controlled and has the potential to significantly improve system performance. Selected data sectors, determined by the cache control algorithm to be probable candidates for system read request, are pre-fetched and stored in the cache. The microprocessor monitors it's own "hit-ratio" and adjusts to optimize performance. Least-recently-used algorithm eliminates inactive data from cache, as space for new data is required. This allows the 4967 to dynamically adapt to changes in the jobstream. Performance improvements are application dependent. Test cases from a variety of applications thought to be typical have shown improvements in disk throughput ranging from 50% to above 200%. However, no guarantee of result can be made. Applications which are truly random (test cases found none) or which are heavily write-oriented may experience little or no improvement from the cache function. In such cases, the standard performance parameters of 25 milliseconds average access time and 10.1 milliseconds latency are seen. Cache functions are transparent to programming. During a write operation data is placed in cache after being written to the disk.

Further 4967 features include automatic retries on soft error, automatic seek to alternate sector (always in same cylinder ... eliminates seek to alternate track), automatic seek overlap with read or write. Error correction code (ECC) mechanism corrects the most common form of disk read errors and detects all uncorrectable forms. Up to four drives (800 megabytes) capacity per subsystem. Multiple subsystems may be attached ... one per 4967 High Performance Disk Subsystem Attachment (#3595). Each subsystem has cache (384KB). Designed for mounting in a 4997 or an EIA standard 19-inch rack enclosure. Full-width unit.

Publications: *IBM Series/1 4967 High Performance Disk Subsystem - Attachment Feature Description* (GA34-0227).

SPECIFY

Unless indicated otherwise, these specify features are available only at the time of manufacture. Specify codes **#2XXX**, **#8XXX** and **#9XXX** apply to plant orders only ... do not use on MES orders.

- Voltage (AC, 60 Hz, 1-phase): With a 1.8 meter (6 foot) cord. Specify **#9901** for 115V, **#9911** for 120V, **#9902** for 208V, **#9904** for 230V, **#9914** for 240V.
- Subsystem Number: One subsystem number, in sequence, for each #3595 ... see M4959 pages.

  #924X, where X is 1 through 8.

  - Number of drives in this (**#924X**) subsystem:

    #9182 One or two drives attached.
    #9183 Three or four drives attached.

  - Unit sequence for expansion drives in this (**#924X**) subsystem:

    #9185 First expansion drive.
    #9186 Second expansion drive.
    #9187 Third expansion drive.

  - IPL (not applicable if specified in another subsystem):

    #9164 Primary IPL - first drive.
    #9165 Alternate IPL - first drive.
    #9166 Primary IPL - second drive.
    #9167 Alternate IPL - second drive.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

4968 AUTOLOAD STREAMING MAGNETIC TAPE UNIT

PURPOSE

Provides fast, convenient save/restore for medium to large Series/1 DASD as well as limited performance magnetic tape processing capabilities.

MODELS

Model 1AS Automatic loading, writes 160K bytes per second in streaming mode at 50 ips. Writes ANSI compatible phase encoded 1600 Bpi at 25 and 100 ips and noncompatible 3200 Bpi at 50 ips. Up to 25 ips read/write operation at 1600 Bpi in limited performance start/stop mode. Capacity per 2,400 foot tape reel exceeds 70 megabytes (at 3200 Bpi).

Prerequisites: #1220 in a processor, 4959 I/O Expansion Unit or 4965 I/O Expansion Unit. See M4959 pages for description of #1220 special feature. 128KB storage to ensure streaming on quiescent system under EDX. 4968 Diagnostic Package requires 32KB or larger processor storage capacity.

Limitations: Each #1220 attaches only one tape drive.

HIGHLIGHTS

Key parameters of save/restore are speed, capacity, and convenience ... 4968 has these attributes:

Speed: In streaming write mode at 50 ips data rate is 160KB per second. 4968 will save 70MB in approximately 10 minutes, 200MB in approximately 30 minutes, exclusive of tape handling. Software is designed to ensure streaming on a quiescent system in a save operation.

Capacity: In the 3200 Bpi mode each 2,400 foot tape reel has a capacity of approximately 70MB. Saves 40% of 200MB on a single reel, full 200MB on three reels.

Convenience: Autoload eliminates tape threading by the operator. Autoload plus large per reel tape capacity make operator convenience a key 4968 highlight. The autoload mechanism features self-seating, self-locking tape hub and tape reel upside-down detect. Software support for save/restore operations minimizes operator intervention on single or multiple reel operations. Designed for mounting in a 4997-2 or an EIA standard 19-inch rack enclosure. Full-width unit , 8.5 inches high.

Publications: *IBM Series/1 4968 Autoload Streaming Magnetic Tape Unit Description Manual* (GA34-0263).

SPECIFY

- Voltage (AC, 60 Hz, 1-phase): With a 1.8 meter (6 foot) cord. Specify **#9901** for 115V, **#9911** for 120V, **#9902** for 208V, **#9904** for 230V, **#9914** for 240V.

ACCESSORIES (None)

SUPPLIES (None)

4969 MAGNETIC TAPE SUBSYSTEM

PURPOSE

The 4969 provides magnetic tape units and controller for Series/1.

MODELS

Model 4D	04D	36 or 72KB/second, 45 ips, dual density 800 bpi NRZI or 1600 bpi PE
Model 4N	04N	36KB/second, 45 ips, 800 bpi NRZI
Model 4P	04P	72KB/second, 45 ips, 1600 bpi PE
Model 7D	07D	60 or 120KB/second, 75 ips, dual density 800 bpi NRZI or 1600 bpi PE
Model 7N	07N	60KB/second, 75 ips, 800 bpi NRZI
Model 7P	07P	120KB/second, 75 ips, 1600 bpi PE

Subsystem Configurations:

Primary Unit	Features Required	Additional Units
4D	#1550	4D, 4N, or 4P (1, 2, or 3 units - any mix)
4N	#1540 or #1550	4N (1, 2, or 3 units)
4P	#1545 or #1550	4P (1, 2, or 3 units)
7D	#1550	7D, 7N, or 7P (1, 2, or 3 units - any mix)
7N	#1540 or #1550	7N (1, 2, or 3 units)
7P	#1545 or #1550	7P (1, 2, or 3 units)

Limitations: Controller features (#15XX) are not field installable. Recommended for field installation only when factory mounted on 4997 mdl 2. For installation on existing customer-owned 4997 mdl 2 or EIA standard enclosures, see *IBM Series/1 Customer Site Preparation Manual* (GA34-0050). A maximum of four tape units per 4969 Magnetic Tape Subsystem Attachment (#1215) is allowed. All units within a subsystem must be the same speed. Each unit in the subsystem must be mounted immediately alongside, above, or below the previous unit due to cabling restrictions. Air conditioned with year-round humidity control. Mdls 7D, 7N, and 7P (vacuum column) have an altitude limit of 1,524 meters (5,000 feet). The 4969 may not be installed on a 4997 mdl 1.

Prerequisites: One 4969 Magnetic Tape Subsystem Attachment (#1215) on a processor unit, 4959, or 4965 for each 4969. For primary unit (first in a subsystem), a controller #1540, #1545, or #1550 must be included. Requires 28 inches of available rack space on 4997 mdl 2 enclosure or customer-owned EIA standard 19-inch enclosure. Requires additional 5-1/4 inches of air space above the unit when mounted on top of the 4997. See *Customer Site Preparation Manual* (GA34-0050) for details.

HIGHLIGHTS

The 4969 is designed for mounting on a 4997 mdl 2 or an EIA standard 19-inch rack enclosure. It is a full-width unit, 28 inches high.

Tape speeds of 45 and 75 ips, NRZI (800 bpi) and PE (1600 bpi), and dual density units are available. Program-selectable density on dual density mdls. Single density add-on units may be attached to a dual density primary unit of the same speed. Provision for marginal data recovery. Simplified tape threading path. Subsystem consists of one primary unit and up to three additional units of the same speed.

Tape Buffer	Mdls 4D, 4N, 4P - Tension Arm	Mdls 7D, 7N, 7P - Vacuum Column
Nominal read/write access time	8.3ms	5.3ms
Nominal IBG	0.6 inches	0.6 inches
Nominal rewind time	3.2 minutes	2.4 minutes
Nominal tape speed	45 ips	75 ips

Publications: *4969 Magnetic Tape Subsystem Description* (GA34-0087).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 1-phase, 60 Hz): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.
- Subsystem Number: Specify **#926X** for subsystem (group) number, where X is a number 1 through 9.
- Unit Sequence for B Mdl Expansion Drives: Specify **#9101** for the first magnetic tape in a subsystem, **#9102** for the second, **#9103** for the third, or **#9104** for the fourth.
- Additional Units: For second, third, or fourth unit, specify **#9271** if preceding unit is NRZI or dual, or **#9272** if preceding unit is PE.
- Unit Mounting: Specify **#9273** for unit to be factory-mounted on a 4997 mdl 2, or **#9274** for unit to be in a shipping frame, pallet-mounted. **Field Installation:** Not recommended.

SPECIAL FEATURES

Controller for 800 bpi, NRZI Unit Mdls 4N and 7N (#1540): Mounts on primary drive and supplies formatting and control function for primary and up to three additional 800 bpi NRZI units of the same speed.

Controller for 1600 bpi, PE Unit Mdls 4P and 7P (#1545): Mounts on primary drive and supplies formatting and control functions for primary and up to three additional 1600 bpi PE units of the same speed.

Controller for Dual Density Units, All Mdls (#1550): Mounts on primary unit and supplies formatting and control functions for primary and up to three additional units of the same speed and either of the supported formats.

SUPPLIES

Tapes and Reels: The following tapes and reels may be used: IBM Series 500, IBM Heavy Duty, IBM Dynexcel, or formulations which meet the tape and reel criteria in *Tape Specifications* (GA32-0006). **Note:** IBM tapes other than those above do not provide adequate reliability and should not be used.

4973 LINE PRINTER

PURPOSE

The 4973 is a line printer for Series/1.

MODELS

Model 1 001 150 lpm (nominal speed)

Model 2 002 400 lpm (nominal speed)

Prerequisites: #5630 on a processor unit, 4959, or 4965.

HIGHLIGHTS

The 4973 is a free-standing impact printer complete with base. Mdl 1 prints 155 lpm maximum speed with 48-character set, 120 lpm with 64-character set, or 80 lpm with 96-character set. Mdl 2 prints 414 lpm maximum speed with 48-character set, 300 lpm with 64-character set, or 235 lpm with 96-character set. Included as standard is one interchangeable print belt (48-, 64-, or 96-character sets). See "Specify". A variable-width forms tractor for feeding continuous forms up to 15 inches overall width, printer forms control, forms stand, and paper jam detection are provided. Character spacing is 10 per inch with 132 print positions per line. Line spacing is six or eight lines per inch. Note: Print overlap may occur at eight lpi. May be attached up to 45 meters (150 feet).

Publications: *4973 Line Printer Description* (GA34-0044).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (115V AC, 1-phase, 60 Hz): Specify **#9901**.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.
- Print Belt Character Set: Choose one.

#9490 48-character EBCDIC
#9491 64-character EBCDIC
#9492 96-character EBCDIC

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Forms Stand (#4450): Permits feeding of continuous forms from the carton and provides for forms stacking after printing. #4450 is recommended for handling of continuous forms for mdl 1 only (mdl 2 has a built-in forms stand).

Cables (#5700, 5701): Basic cable 6 meters (20 feet) long is included with the 4973 to connect it to its attachment feature. For longer cables between 9 meters (30 feet) and 45 meters (150 feet) obtained in 3 meter (10 foot) increments, order **#5700** in quantities between 1 and 13.

Replacement cable to attach the 4973 to Series/1 may be purchased from IBM or from a customer-selected source. See *IBM Series/1 Customer Site Preparation Manual* (GA34-0050) for cable and connector details.

To order replacement cable by MES, use two feature codes. The first code, **#5701**, provides connectors and 6 meters (20 feet) of cable. The second code, **#5700**, is used to order 3 meter (10 foot) increments (minimum order of one). 6 meter (20 foot) replacement cable is not available by MES. Cables must be ordered by part number.

Print Belt, Add'l: Permits customer to obtain more than one character set print belt for various applications. Order **#5821** for 48-character EBCDIC, **#5822** for 64-character EBCDIC, or **#5823** for 96-character EBCDIC.

SUPPLIES

Ribbons: A black ribbon, P/N 1136634 or equivalent, is required for mdl 1, and P/N 1136670 or equivalent is required for mdl 2. Contact IBM.

4974 PRINTER

PURPOSE

The 4974 is a serial printer for Series/1.

MODELS

Model 1 001

Prerequisites: #5620 on a processor unit, 4959, or 4965.

HIGHLIGHTS

The 4974 is a 120 cps serial printer with a 64-character set and bidirectional printing. It prints 10 characters per inch and either six or eight lines per inch selectable under program control. It has vertical forms control. The 4974 is a table-top device, and may be attached up to 45 meters (150 feet).

The unit has a pressure feed platen that permits feeding of forms in a range of 3 to 15 inches overall width. Continuous forms fold-to-fold length may range from 3 to 14 inches. Edge-punched continuous forms are fed using the adjustable forms tractor, which is standard.

Matrix characters are formed by eight vertical wires printing dots in up to 4 of 7 possible horizontal positions. Refer to *Form-Design Printers Reference Guide* (GA24-3488) for forms design considerations and limitations. Up to 6-part forms can be printed with a maximum thickness of 4.6mm (.018 inches). 5- and 6-part forms should be tried for satisfactory feeding, registrations, and print quality. Card stock continuous forms are not recommended. For optimum handling of continuous forms, the Forms Stand (**#4450**) is recommended.

Publications: *4974 Printer Description* (GA34-0025).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 1-phase, 60 Hz): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Forms Stand (#4450): Permits feeding of continuous forms from the carton and provides for forms stacking after printing. It is recommended for optimum handling of continuous forms.

Cables: A basic 6 meter (20 foot) cable is included with the 4974 to connect it to its attachment feature. For longer cables between 9 meters (30 feet) and 45 meters (150 feet), obtained in 3 meter (10 foot) increments, order **#5720** in quantities between 1 and 13.

Replacement cable to attach the 4974 to Series/1 may be purchased from IBM or from a customer-selected source. See *IBM Series/1 Customer Site Preparation Manual* (GA34-0050) for cable and connector details.

To order replacement cable by MES, use two feature codes. The first code, **#5721**, provides connectors and 6 meters (20 feet) of cable. The second code, **#5720**, is used to order 3 meter (10 foot) increments (minimum order of one). 6 meter (20 foot) replacement cable is not available by MES. Cables must be ordered by part number.

Tractor/Separator (RPQ D02078): Provides variable-width forms tractor with a mechanical cutter to separate single or multi-part perforated forms within 1.5 inches of the first print line. **Field Installation:** No.

Tractor/Separator-FI (RPQ D02079): Provides a field installable version of RPQ D02078. **Limitations:** Available for field installation (MES) only.

SUPPLIES

Ribbons: A black ribbon, P/N 1136653 or equivalent, is required for machines shipped prior to August 29, 1980 or on machines not modified to accept the cartridge ribbon. A black cartridge ribbon, P/N 7034535 or equivalent, is required for all machines shipped on or after August 29, 1980 or on machines modified to accept the cartridge ribbon. Installed printers may be thus modified by ordering RPQ D09005. Contact IBM.

4975 PRINTER

PURPOSE

Serial Printer for Series/1.

MODELS

Model 01L	80 cps*
Model 01R	80 cps**
Model 02L	160/40 cps*
Model 02R	160/40 cps**

* Local to 1,219 meters (4,000 feet)
** Remote

Prerequisites: A Multifunction Attachment feature (#1310) with an appropriate attachment address (local or remote) available in a Processor or I/O Expansion Unit. For local attachment a Multifunction Attachment cable (#5770) or equivalent is required for each 4975.

Customer Setup: All mdls of the 4975 are designated as customer setup machines (CSU) thus offering the customer availability and relocation flexibility. Customer responsibilities are set forth in *Information Bulletin for Customer - Customer Setup* (G120-2743).

HIGHLIGHTS

The 4975 is a family of wire matrix table-top printers providing bidirectional printing at a maximum of 80 (mdl 01L and 01R) or 160 (mdl 02L and 02R) characters per second. All mdls of the 4975 printer have the following program-selectable functions:

- Vertical spacing of six or eight lines per inch.
- Horizontal print density of 10 or 15 characters per inch.
- Maximum line length of 13.2 inches.
- Incremental horizontal spacing commands .
- Incremental spacing at 1/96 inch.
- Multipart forms up to four-part maximum.

All mdls of the 4975 include a cartridge ribbon and a variable-width forms tractor which provides a forms feeding device for continuous marginally punched forms. A Rear Document Insertion Device (#6100) may be ordered for the 4975.

Two mdls of the 4975 (mdl 01L and 02L) provide for local attachment to the Series/1 using four-wire cabling at distances up to 1,219 meters (4,000 feet). Two other mdls of the 4975 (mdl 01R and 02R) provide for attachment to the Series/1 via leased line common carrier communication facilities. The Series/1 Multifunction Attachment feature (#1310) is used for both local and remote attachment of the 4975 to the Series/1.

The 4975 mdls 02L and 02R have a quality print capability in addition to the normal print capability. This quality print facility is provided through a quality print cartridge (provided with the printer). When operating in quality print mode the 4975 is limited to a maximum rate of 40 cps.

In quality print mode, the 4975 prints at half-normal speed and prints each line in two passes, resulting in high density, proportionally spaced printing at a rated speed of 40 cps. Quality printing is best suited to cut-forms and cut-form sets. Quality printing on continous forms should be tested for satisfactory results.

Publications: *IBM Series/1 4975 Printer and Multifunction Attachment Feature Description* (GA34-0144).

AAS Ordering Instructions: The 4975 is a System Component.

SPECIFY

Specify codes apply to Plant Orders only, do not use on MES orders.

- Voltage (115V AC, 1-phase, 60 Hz): **#9901** with 2.4m (8 foot) cord.

SPECIAL FEATURES

Special Printing Cartridge (#1601): Provides an operator-installable cartridge on installed mdls 02L and 02R only, which under program control, enhances printing capability. Expanded characters (2-, 4-, or 8-times single line height), bar codes (Code 39®, MSI Plessy, UPC and EAN), and OCR-A printing can be produced in addition to quality print capability. The cartridge will produce a reasonable facsimile of bar codes and OCR-A printing as specified by national standards, industry standards and manufacturer's specifications for wanding and scanning mechanisms. Code 39 bar code printed by the 4975 meets MIL-STD-1189. The 4975, prints a subset of OCR-A for human-readable interpretation of Code 39 characters. See *IBM 4975 Printer Special Printing Cartridge Feature Description* (GA34-0250) for the OCR-A characters provided. Customers should test all bar code and OCR characters printed by the 4975 to ensure that their wanding and scanning devices will adequately read the printed information. Bar code and OCR-A printing have been tested with commercially available wanding mechanisms. See *IBM 4975 Printer Special Printing Cartridge Feature Description* (GA34-0250) for examples of OCR-A subsets provided. When printing bar code or expended characters, more ink will be used requiring more frequent ribbon changes. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes. **Prerequisites:** #1310 at or later than EC 466759 (see M4959 pages) and a CE Diskette Initializer at or later than EC 331653.

® Registered Trademark of Interface Mechanisms, Inc.

Special Printing Cartridge (#1610): Provides an operator-installable cartridge on plant orders of mdls 02L and 02R only, which under program control, enhances printing capability. Expanded characters (2-, 4-, or 8-times single line height), bar codes (Code 39, MSI Plessy, UPC and EAN) and OCR-A printing can be produced in addition to quality print capability. The cartridge will produce a reasonable facsimile of bar codes and OCR-A printing as specified by national standards, industry standards and manufacturer's specifications for wanding and scanning mechanisms. Code 39 bar code printed by the 4975 meets MIL-STD-1189. The 4975, prints a subset of OCR-A for human-readable interpretation of Code 39 characters. See *IBM 4975 Printer Special Printing Cartridge Feature Description* (GA34-0250) for the OCR-A characters provided. Customers should test all bar code and OCR characters printed by the 4975 to ensure that their wanding and scanning devices will adequately read the printed information. Bar code and OCR-A printing have been tested with commercially available wanding mechanisms. See *IBM 4975 Printer Special Printing Cartridge Feature Description* (GA34-0250) for examples of OCR-A subsets provided. When printing bar code or expended characters, more ink will be used requiring more frequent ribbon changes. **Maximum:** One. **Field Installation:** No. **Prerequisites:** #1310 at or later than EC 466759 (see M4959 pages) and a CE Diskette Initializer at or later than EC 331653.

Rear Document Insertion Device (#6100): Provides the capability for manually inserting individual cut forms or cut forms sets. The forms tractor is removed by the operator and the Rear Document Insertion Device is installed. Adjustable guides permit forms from 14.6cm (5 3/4 inches) to 30.5cm (12 inches) wide to be used. Form length can be from 7.6cm (3 inches) to 35.6cm (14 inches). Up to four-part forms may be used. Forms should always be tested to ensure customer acceptance. The leading edge (top edge) of form sets must be glued. Scribed lines on the forms guide assist in form alignment. **Maximum:** One. **Field Installation** Yes. **Customer Setup:** Yes.

MODEL CONVERSIONS

Model changes are not available.

ACCESSORIES

Forms Stand (#4450): A one-shelf, floor standing forms stand provides for stacking of continuous forms after printing. **Field Installation:** Yes.

SUPPLIES

Ribbons: A black ribbon in cartridge form; P/N 7034535 or equivalent (mdl 01L/R), or P/N 7032550 (mdl 02L/R). Contact IBM.

4978 DISPLAY STATION

PURPOSE

The 4978 (RPQ D02055) is an advanced function display station for entering, editing, and displaying alphameric data. A movable keyboard permits the operator to manipulate data on the screen in a flexible and efficient manner.

MODELS

Model 1 001

Model 2 002

Prerequisites: RPQ D02038 on a processor unit, 4959, or 4965. Corequisite is RPQ D02055 along with the 4978.

HIGHLIGHTS

The 4978 is an interactive CRT display station capable of displaying 1,920 characters, 24 lines of 80 characters each. Multiple keyboard types and an extensive set of local functions are available. Display graphics and keybutton roles (i.e., data entry, local function, program function) are user-definable. The 4978 may be attached at up to 150 meters (500 feet).

Mdl 1 measures 533mm (21 inches) wide, 394mm (15.5 inches) high, and 394mm (15.5 inches) deep. Mdl 2 is functionally identical to mdl 1, but offers a 37 percent (volumetric) size reduction. Mdl 2 is available with either a 25mm (1 inch) or an 83mm (3.25 inch) base. The larger base is recommended when display and keyboard are to be mounted on the same horizontal surface. Mdl 2 measures 476mm (18.75 inches) wide, 298mm (11.75 inches) high with the smaller base and 356mm (14 inches) high with the larger base, and 325mm (12.8 inches) deep.

Publications: *IBM Series/1 4978 Display Station (RPQ D02055) and Attachment (RPQ D02038) General Information* (GA34-1550).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 1-phase, 60 Hz): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.
- Base Size (mdl 2 only):

  #6513 25mm (1 inch) base
  #6514 83mm (3.25 inch) base

SPECIAL FEATURES

Multiple keyboards are available to permit a variety of display station configurations. Key arrangements are fixed for a given keyboard. The role of each key may be user-modified through the use of user-accessible tables on the 4978 Display Station Attachment. Most keys identified as program function keys are fitted with a plastic cap to facilitate user-prepared and installed key identification. With the exception of RPQ D02064 (DAS/C Keyboard), a 1 meter (3 foot) cable is provided, which allows approximately 0.7 meters (2.5 feet) of machine separation to allow attachment to the 4978 keyboard, maximum of one keyboard per 4978.

Extended Keyboard (RPQ D02056): A general purpose keyboard suitable for a wide variety of data entry and operator console applications. Contains a 122-key typewriter-like keyboard, including a 13-key control keypad, a 14-key numeric keypad, and 35 program function keys. Four cursor control keys (up, down, left, right) and the space key are typamatic. All other keys have momentary action. All keys other than the fixed function keys may be typamatic by simultaneous depression of a repeat key. **Field Installation:** Yes.

Basic Keyboard (RPQ D02057): An 81-key typewriter-like keyboard, including a separate 11-key adding machine type numeric keypad. The space bar is typamatic. Other keys have momentary action. Suitable for a variety of data entry applications. **Field Installation:** Yes.

Audible Tone Alarm (RPQ D02060): An audible alarm to alert the operator to a special condition. The alarm may be sounded when a character is entered into a program-defined position on the screen, when an operator attempts to perform certain non-permissible operations, or under program control. **Field Installation:** Yes.

DAS/C Keyboard (RPQs D02064 and D02065): These keyboards are intended primarily for use in telephone directory assistance applications. Keytop legends are designed for this application. All keys are interrupt keys, irrespective of legend. Features include typewriter-like key arrangement, extended program function key capability, and replaceable legend keytops. RPQ D02064 provides a 2 meter (6 foot) cable and RPQ D02065 provides a 1 meter (3 foot) cable between the keyboard and the display station. The keyboards are identical in all other respects. **Field Installation:** Yes.

Video Monitor Attach (RPQ D02222): Permits attachment of an OEM video monitor to the 4978 for use in duplicating the display image being presented at the 4978. **Field Installation:** Yes.

Keyboard - Data Entry Large (RPQ D02275): Keyboard consists of 122 keys arranged in four groups. These groups are a typewriter-like arrangement of data entry keys, local function keypad, numeric data entry keypad, and interrupt request keys. Program function key capability and replaceable legend keys are provided. Keyboard is intended for use with the Intelligent Data Entry FDP (5798-NPY and 5798-NXQ). **Field Installation:** Yes.

Keyboard - Data Entry Small (RPQ D02276): Keyboard consists of 82 keys featuring typewriter-like key arrangement, EBCDIC character set, uppercase and lowercase alphabetics, 11-key numeric keypad, program function key capability, 13 replaceable legend keytops, expanded line and screen editing functions, and redefining key capability. Keyboard is intended for use with the Intelligent Data Entry FDP (5798-NPY and 5798-NXQ). **Field Installation:** Yes.

Keyboard - Text Entry and Edit (RPQ D02375): Intended for use with the Text Entry and Edit FDP (5798-RAR). Combination provides an input and editing device for authors, editors, and typographers. Keyboard consists of 122 keys featuring a typewriter layout, replaceable legend keybuttons, and special keys relating to FDP (5798-RAR). **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: The cables and/or associated parts to attach the 4978 to the Series/1 processor may be purchased from IBM or from a customer-selected source. The customer is responsible for laying, routing, maintenance, and availability of attachment cables for display installation by IBM. For IBM attachment cables, see RPQs D02032, D02033, and D02034 and below for delivery scheduling independent of machine type.

Cable Increments (RPQ D02032): Provides 3 meter (10 foot) cable increments for extending the basic 6 meter (20 foot) 4978 attachment cable to a maximum length of 150 meters (500 feet). Must be ordered concurrently with either RPQ D02033 or D02034 and in quantity corresponding to desired length defined in the following table.

Total Cable Length Desired		Number of Cable
Meters	Feet	Increments Required
9	30	1
12	40	2
15	50	3
18	60	4
21	70	5
24	80	6
27	90	7
30	100	8
33	110	9
36	120	10
39	130	11
42	140	12
45	150	13
60	200	18
75	250	23
90	300	28
105	350	33
120	400	38
135	450	43
150	500	48

Cable Basic - 4978 Mdl 1 (RPQ D02033): Provides a basic 6 meter (20 foot) 4978 mdl 1 attachment cable. May be used with Cable Increments (RPQ D02032) to obtain a cable length up to a maximum of 150 meters (500 feet). **Maximum:** One.

Cable Basic - 4978 Mdl 2 (RPQ D02034): Provides a basic 6 meter (20 foot) 4978 mdl 2 attachment cable. May be used with Cable Increments (RPQ D02032) to obtain a cable length up to a maximum of 150 meters (500 feet). **Maximum:** One.

4978 Attachment Cables:

Attachment cables may be ordered as accessory bills of material for independent scheduling. Allow 60 days for delivery.

Keyboard Accessories: Keyboard accessories are available which allow the customer to change the inscriptions and messages on most of the keybuttons of the 4978 keyboards. These accessories consist of replaceable legend and blank keybuttons. Replaceable legend keybuttons consist of two parts, a molded base and a removable clear plastic cover. Blank keybuttons are available for customer engraving. Refer to the specific keyboard product description manual for a description of key sizes and positions. Contact IBM for ordering assistance.

The following terms are used in the keybutton descriptions:

B	Blank keybutton available for customer engraving
RL-L	Large replaceable legend keybutton, stem slot on left
RL-R	Large replaceable legend keybutton, stem slot on right
RL	Small replaceable legend keybutton, stem slot in center

The following is a list of keybuttons available for keyboards D02056, D02275, and D02375:

Type	Size	Color	Part No.	Fits Key Positions
B	1x1	Light Gray	1853563	68-80, 82, 83, 85
B	1x1	Dark Gray	1853567	86, 87, 104, 105, 107, 108, 109
RL	1x1	White	5188775	125-130

B	1x2	Light Gray	5192811	169
B	1x1-1/2	Dark Gray	5192801	124

Keybutton Extractor (P/N 9900373): The keybutton extractor is a small plier-like device which fits between rows of keybuttons. By squeezing on the handles, a firm grip is made on a keybutton and it may be pulled off its stem. The customer may find this helpful when replacing keybuttons or in doing any rearranging of the keyboard.

Labels (P/N 6842611): A die-cut 8-1/2 x 11 inch sheet containing 72 white self-stick blank labels for the 1x1-1/2 replaceable legend keybuttons and 48 self-stick blank labels for the 1x1 replaceable legend keybuttons.

Connectors: The listed connector kits and tools may be used with bulk 4978 attachment cable. Contact IBM for ordering assistance.

2 x 12 Berg Connector Kit	B/M 6841320
Berg Crimp Tool *	B/M 8327400
AMP 25-Position Connector Kit	B/M 6841321
AMP Crimp Tool and AMP Extractor Tool	B/M 8327404

* Use only with #24 AWG or #26 AWG wire (0.511mm or 0.40mm).

SUPPLIES (None)

4979 DISPLAY STATION

PURPOSE

The 4979 is a data entry station and operator console for Series/1.

MODELS

Model 1 001

Prerequisites: #3585 on a processor unit, 4959, or 4965.

HIGHLIGHTS

The 4979 displays 24 lines of 80 characters on a 12-inch CRT and has a 66-key data entry keyboard. It interacts with central processing unit on a line basis. The 4979 is a table-top device, and may be attached at up to 45 meters (150 feet).

Publications: *4979 Display Station Description* (GA34-0026).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 60 Hz, 1-phase): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: A basic cable 6 meters (20 feet) long is included with the 4979 to connect it to its attachment feature. For longer cables, between 9 meters (30 feet) and 45 meters (150 feet) obtained in 3 meter (10 foot) increments, order **#5740** in quantities between 1 and 13.

Replacement cables to attach the 4979 to Series/1 may be purchased from IBM or from a customer-selected source. See *IBM Series/1 Customer Site Preparation Manual* (GA34-0050) for cable and connector details.

To order replacement cables by MES, use two feature codes. The first code, **#5741**, provides a connector and 6 meters (20 feet) of cable. The second code, **#5740**, is used to order 3 meter (10 foot) increments (minimum order of one). 6 meter (20 foot) replacement cable is not available by MES. It must be ordered by part number.

SUPPLIES (None)

4980 DISPLAY STATION MDL 1

PURPOSE

The 4980 Display Station can be used with Series/1 for entering, editing and displaying alphameric data. A movable keyboard permits the operator to enter, display, and manipulate data on the screen in a highly flexible and efficient manner. This display station performs the same basic functions as the 4978 in a compact package with a low-profile keyboard and a tiltable display screen. Displays up to 1,920 characters with 24 lines of 80 characters each. The display station status, including cursor location (row/column), is shown on the 25th line.

MODELS

Model 1 001

Prerequisites: A Series/1 processor with #1250. A storage load is required for the 4980 and is provided by a diskette that is shipped with feature #1250, or may be ordered by P/N **6114487**. The storage load is also provided by EDX V4.0.

Customer Setup (CSU): The 4980 is designated as a customer setup device, thereby offering the customer early availability and relocation flexibility. The Marketing Representative must advise the customer of his responsibilities before receipt of the machine.

HIGHLIGHTS

The programmable character set includes 256 characters. The character set, definition of keyboard keys, function of the 24 command keys and the eight replaceable legend keys and additional microcode are down-loaded from the Series/1 at initialization. See "Type Catalog" for keyboard layout. Cable-Thru is a standard capability. A display screen glare-reduction treatment is provided. Displayed characters may be protected (displayed with normal intensity) or unprotected (displayed with high-intensity). The operator can reverse the image of the entire screen. Operator selection of a block or underscore cursor is also available. An adjustable audible alarm, is provided to alert the operator to special conditions. The low-profile keyboard has an adjustable slope. It has 127 total keys including 24 program-assigned command function keys to provide input and control flexibility.

Cabling: The cable attachment between the 4980(s) and/or Multidrop Workstation Attachment (#1250) must be made with twinaxial cable. Up to eight workstations may be installed up to 1,219 meters (4,000 feet) from Series/1 via the cable-thru capability of the 4980. A 6 meter (20 foot) Attachment Cable (#5780), is available on the Series/1 to attach the first 4980 to the Multidrop Workstation Attachment (#1250). Outdoor use of cabling is not supported.

Data transmission rates to the Series/1 can be up to 500K bps depending on twinaxial cable length. Transmission rates may be selected consistent with the following table.

Total Length of Twinaxial Cable/Port	Speed
Up to 244 meters (800 feet)	500K bps
Up to 488 meters (1,600 feet)	250K bps
Up to 1,219 meters (4,000 feet)	100K bps

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided in the *IBM 4980 Display Station Problem Determination Procedures* (GX21-9299). Also, see "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking and placement of the 4980.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting and checkout in accordance with instructions supplied by IBM. Details of these conditions are described in the Customer Setup instructions.
- Relocation of the 4980, if required, to allow IBM service access.
- Using and following the problem determination procedures for the 4980 prior to calling for IBM service.
- Providing a desk or table to support the 4980.
- Installation and maintenance of signal cables and associated parts for interconnecting the 4980s and the Multidrop Workstation Attachment (#1250).
- When adding additional display stations to Series/1, the customer may have to modify the system configuration specifications. See *IBM Series/1 Attachment Feature Storage Load User's Guide* (GA34-0133.

Publications: *IBM Series/1 Display Station Description and Reference Manual* (GX21-9296), *IBM 4980 Display Station Problem Determination Procedures* (GX21-9299), shipped with the product; *IBM 4980 Series/1 Display Station Setup Procedures* (GA21-9297), shipped with the product; *IBM 4980 Keyboard Template* (GX21-9298), one will be shipped with the product.

AAS Ordering Instructions: The 4980 is a system component.

SPECIFY

Default Order Entry: Specify Codes are not required when ordering a 4980.

- Power Default (100-127V AC, 1-Phase, 60 Hz): A standard nonlocking plug (uses customer standard type receptacle) will be furnished. Standard Power cord is 2.4 meters (8 feet), no specify is required.
- Color: Pearl white only. No specify code required.
- Cables: See "Accessories" for 4980 mdl 1 twinaxial cable and associated components ordering instructions. For cable specifications, see the *IBM Series/1 Site Preparation Manual* (GA34-0050).

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Power Cable: A 1.8 meter (6 foot) power cable with standard nonlocking plug is available. The power cable is pluggable at the machine.

Signal Cables: The twinaxial cables and/or associated parts to interconnect the 4980 Display Station(s) and attached system may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *IBM Series/1 Site Preparation Manual* (GA34-0050). Twixaxial cables are available with either vinyl or Teflon® covering. Teflon-covered cable complies with the National Electrical Code Requirements for low smoke-producing, plenum-installed cables.

The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the machine. Order as follows:

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one Twinaxial Connector Kit are required for each attachment cable. Individual connectors are available for replacement. Order as follows:

P/N **7362268**	Connector Kit for vinyl-covered cables
P/N **7362063**	Connector Kit for Teflon-covered cables
P/N **7362229**	Individual connector (replacement) for vinylor Teflon-covered cables

Twinaxial Wire: Order must specify the desired length. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. Order as follows:

P/N **7362211**	For vinyl-covered cable
P/N **7362061**	For Teflon-covered cable

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order as follows:

P/N **7362267**	Cable assembly with vinly-coated wire
P/N **7362062**	Cable assembly with Teflon-coated wire

Twinax Adapter (P/N **3762230**): Permits two Twinax Cable Assemblies to be joined together.

Order cables via part number. Allow a lead time of 120 days.

Keytop Protective Cap: Clear plastic caps that cover replaceable-legend keytops to protect the label from normal wear. A full compliment of keytop caps is provided with the machine. For replacement/spares order:

P/N **4585103** Keytop Cap (Qty: 1 each)

Keytop Label Sheets: Labels that provide the user with keytop blanks for labeling of replaceable legend keys. One sheet with 30 blank labels is provided with the machine. For replacement/spares order:

P/N **6019429** Labels, Blank (Qty: 1 sheet = 30 labels)

Storage Load Diskette: A storage load is required for the 4980 and is provided with a Multidrop Workstation Attachment (#1250), EDX V4.0 and Realtime Programming System 6.2 or higher. For those customers not utilizing one of the above listed sources, a 4980 storage load diskette may be ordered by P/N **6114487**.

SUPPLIES (None)

4982 SENSOR INPUT/OUTPUT UNIT

PURPOSE

The 4982 provides sensor I/O subsystem for Series/1.

MODELS

Model 1 001

Prerequisites: #6305 on a processor unit, 4959, or 4965. Space in Rack Mounting Fixture (**#4540**). See "Accessories" in the M4959 pages.

HIGHLIGHTS

The 4982 is a half-width unit designed for mounting on a 4997 or EIA standard 19-inch rack enclosure using the Rack Mounting Fixture (**#4540**). It provides power and feature positions for a set of sensor I/O features. Space for up to eight features is provided on each unit.

Publications: *4982 Sensor Input/Output Unit Description* (GA34-0027).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 1-phase, 60 Hz): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.

SPECIAL FEATURES

Analog Input Control (#1060): Provides analog to digital conversion function. Resolution 11 bits plus sign. **Maximum:** One per 4982. **Field Installation:** Yes.

Analog Output (#1065): Two points per card. Resolution 10 bits. **Field Installation:** Yes.

Specify:

First point:

#9174	-10V	to	+10V	DC
#9175	-5V	to	+5V	DC
#9176	0V	to	+10V	DC

Second point:

#9177	-10V	to	+10V	DC
#9178	-5V	to	+5V	DC
#9179	0V	to	+10V	DC

Amplifier Multirange (#1070): Has seven program-controlled gain ranges. **Maximum:** One per 4982. **Field Installation:** Yes. **Prerequisites:** #1060.

Digital Input/Process Interrupt Non-Isolated (#3525): Provides 16 points of non-isolated digital input or 16 process interrupt lines. **Field Installation:** Yes.

Digital Input/Process Interrupt Isolated (#3532): Provides 16 points of optically isolated digital input or 16 process interrupt lines. **Field Installation:** Yes.

Digital Output Non-Isolated (#3535): Provides 16 points of digital output. **Field Installation:** Yes.

Multiplexer/Reed Relay (#4940): Reed relay, eight points per card. 200V common mode voltage if Amplifier Multirange (#1070) installed. Located in contiguous group adjacent to Analog Input Control (#1060) or Amplifier Multirange (#1070) if used. May be mixed with #4950. **Maximum:** Seven per 4982. **Field Installation:** Yes. **Prerequisites:** #1060.

Multiplexer/Solid State (#4950): Solid state, 16 points per card. 10V common mode voltage. Located in contiguous group adjacent to Analog Input Control (#1060) or Amplifier Multirange (#1070), if used. May be mixed with #4940. **Maximum:** Seven per 4982. **Field Installation:** Yes. **Prerequisites:** #1060.

Specification Table: This table is provided to determine how many 4982s are required to contain the desired features. The feature locations are expressed as a negative number for availability. A positive number is used for feature requirement. The sum of the availability and requirements cannot exceed zero.

Machine/ Feature Number		Feature Positions	Notes
4982	Sensor Input/Output Unit	-8	
#1060	Analog Input Control	+1	
#1065	Analog Output	+1	
#1070	Amplifier Multirange	+1	(1)
#3525	Digital Input/Process Interrupt Non-Isolated	+1	
#3532	Digital Input/Process Interrupt Isolated	+1	
#3535	Digital Output Non-Isolated	+1	
#4940	Multiplexer/Reed Relay	+1	(2)
#4950	Multiplexer/Solid State	+1	(2)

Notes:

(1) Must be contiguous to #1060.

(2) Must be contiguous to #1060 or to the #1070 if the #1070 is installed.

MODEL CONVERSIONS (None)

ACCESSORIES

Connectors: Listed Series/1 cables and/or associated parts to attach devices to Series/1 may be purchased from IBM or from a customer-chosen source. For the proper identification of the required connectors, see *IBM Series/1 Customer Site Preparation Manual* (GA34-0050). The customer is responsible for the installation and maintenance of cables and associated parts.

Connectors	B/M Number
2 x 4 Berg Connector Kit	6843689
2 x 8 Berg Connector Kit	8327397
2 x 12 Berg Connector Kit	8327398
2 x 20 Berg Connector Kit	8327399
Berg Crimp Tool *	8327400
Amphenol 4-Position Connector Plug Kit	8327401
AMP 26-Position Connector Kit	8327402
AMP 160-Position Connector Kit	8327403
AMP Crimp Tool and AMP Extractor Tool	8327404
Continental 56-Position Connector Kit	8327405
Connector Kit for #1210	6838819
Berg Crimp Tool for #1210 **	6838818

* Use only with #24 AWG or #26 AWG wire (0.511 mm or 0.404 mm).

** Use only with #18 AWG wire (1.024 mm).

Contact IBM for assistance in ordering accessories.

SUPPLIES (None)

4987 PROGRAMMABLE COMMUNICATION SUBSYSTEM

PURPOSE

The 4987 provides programmable communications multiplexing facility for Series/1.

MODELS

Model 1 001

Designed for mounting in a 4997 or EIA standard 19-inch rack enclosure. Full width unit.

HIGHLIGHTS

The 4987 provides the ability to handle requirements of a wide variety of both standard and special terminals. It may be used in a wide range of applications involving large numbers of terminals and lines with speeds in the 45 to 9600 bits per second range. Asynchronous and synchronous terminals and system tapes can be connected to the same Series/1 system. The subsystem can be programmed to accommodate both standard and nonstandard line speeds, codes, line protocols, error checking, polling, and clocking.

The 4987 can accommodate up to 32 lines of point-to-point leased, point-to-point switched, or multipoint. In addition to programmability, the subsystem provides several communications features including auto-call, integrated modems, Data-Phone® digital service adapters, current interface, and modemless attachments. The 4987 includes a basic scanner. It attaches to Series/1 through one or two Programmable Communications Subsystem Controllers (#1300). The optional second controller (#1300) and associated Expansion Scanner (#3600) provide improved throughput for the 4987.

Prerequisites: Programmable Communications Subsystem Controller (#1300) in a Processor Unit or 4959 Input/Output Expansion Unit. A second controller is optional.

Publications: *4987 Programmable Communications Subsystem and 4990 Model 1 Communications Console Description* (GA34-0049).

SPECIFY

Specify codes **#8XXX** and **#9XXX** apply to plant orders only; do not use on MES orders.

- Voltage (AC, 1-phase, 60 Hz): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 220V.
- Power Cord: A 1.8 meter (6 foot) cord is supplied as standard.
- Subsystem Number: For each 4987 included in a system, a functional sequence number must be specified. The number is the tens digit in the specify code **#89X0**. The first 4987 is designated **#8910**, the second **#8920**, etc.

SPECIAL FEATURES

All features except cables and the Expansion Scanner (#3600) require function specify codes. See "Attachment Feature Function Codes".

Note: #47XX features require two device addresses.

Expansion Scanner (#3600): The 16 feature locations in the 4987 can be divided into two 8-feature groups of up to 16 lines in each by adding one #3600. **Field Installation:** Yes. **Prerequisites:** A second Programmable Communications Subsystem Controller (#1300) in a Processor Unit or 4959 Input/Output Expansion Unit.

Half-Duplex Attachment (#4730): For digital communications equipment. Provides for attachment of two independent switched or nonswitched, synchronous or asynchronous external data sets. If synchronous, it will use external clocking at speeds from 600 to 9600 bps. If asynchronous, it will use internal clocking at speeds from 45 to 1200 bps or 2400, 4800, or 9600 bps. Can accommodate two Data Set Attachment Cables (**#2130**) or customer-supplied equivalents. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

Full-Duplex Attachment (#4731): For digital communications equipment. Identical to #4730 except provides one full-duplex line instead of two half-duplex lines. Accommodates one Data Set Attachment Cable (**#2130**) or customer-supplied equivalent. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

TTY Current Attachment (#4734): Provides two DC current loop attachments for teletypewriters or equivalent devices. Supports 2- or 4-wire half-duplex operation. A programmable local copy option is also supported in 4-wire operation. Can accommodate two TTY Current Attachment Cables (**#2131**) and/or 3101 Current Loop Cable (**#2066**) or customer-supplied equivalents. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

Data-Phone® Adapter (#4736): [Effective February 1, 1984, NO LONGER AVAILABLE.] Provides Data-Phone Digital Service (DDS) attachment to a nonswitched network via a channel service unit at line speeds of 2400, 4800, and 9600 bps for non-SDLC synchronous disciplines. Can accommodate one DDS Attachment Cable (**#2136**) (Effective February 1, 1984, NO LONGER AVAILABLE) or customer-supplied equivalent. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

Asynchronous Local Attachment (#4739): Provides two interfaces for asynchronous transmission to systems or terminals without the use of modems. Operates at speeds from 45 to 1200 bps and 2400, 4800, and 9600 bps. Operates in half-duplex mode only. Can accommodate two Local Attachment Cables (**#2132**) or customer-supplied equivalents. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

Synchronous Local Attachment (#4740): Provides two interfaces for synchronous transmission to terminals and other systems without the use of modems. Operates in half-duplex mode only with speeds of 600, 1200, 2400, 4800, or 9600 bps. Can accommodate two Local Attachment Cables (**#2132**) or customer-supplied equivalents. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

Auto-Call Attachment (#4743): Provides one half-duplex digital communications equipment attachment and one EIA RS-366 auto-call attachment. Operation of the half-duplex attachment is the same as the #4730 half-duplex attachment. Compatible with a Western Electric 801C or equivalent units. Can accommodate one Data Set Attachment Cable (**#2130**) and one Auto-Call Attachment Cable (**#2133**) or customer-supplied equivalents. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

1200 bps Integrated Modem (#4746): [Effective February 1, 1984, NO LONGER AVAILABLE.] For asynchronous switched network. Provides a complete switched network modem; auto-answer function, auto-answer test, and wrap test. May be used as manual answer. Operates at speeds of 45 to 1200 bps. Can accommodate one Integrated Modem Switched Network Cable (**#2134**) (Effective February 1, 1984, NO LONGER AVAILABLE) or customer-supplied equivalent. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

1200 bps Integrated Modem (#4747): [Effective February 1, 1984, NO LONGER AVAILABLE.] For asynchronous leased line with switched network backup. Provides a complete leased line modem with switched network backup auto-answer. Provides auto-answer function, auto-answer test, and wrap test. Operates at speeds of 45 to 1200 bps. Can accommodate one Integrated Modem Switched Network Cable (**#2134**) (Effective February 1, 1984, NO LONGER AVAILABLE) and one Integrated Modem Leased Line Cable (**#2135**) (Effective February 1, 1984, NO LONGER AVAILABLE) or customer-supplied equivalents. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

1200 bps Integrated Modem (#4748): [Effective February 1, 1984, NO LONGER AVAILABLE.] For asynchronous leased line. Provides a complete leased line modem with wrap test. Operates at speeds of 45 to 1200 bps. Can accommodate one Integrated Modem Leased Line cable (**#2135**) (Effective February 1, 1984, NO LONGER AVAILABLE) or customer-supplied equivalent. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

1200 bps Integrated Modem (#4751): [Effective February 1, 1984, NO LONGER AVAILABLE.] With clock for synchronous switched network. Provides a complete switched network modem for synchronous operation at 600 or 1200 bps (program-selectable). Provides auto-answer function, auto-answer test, and wrap test. Can accommodate one Integrated Modem Switched Network Cable (**#2134**) (Effective February 1, 1984, NO LONGER AVAILABLE) or customer-supplied equivalent. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

1200 bps Integrated Modem (#4752): [Effective February 1, 1984, NO LONGER AVAILABLE.] With clock for synchronous leased line and switched network backup. Provides a complete leased line modem with switched network backup for synchronous operation at 600 or 1200 bps (program-selectable). Includes wrap test. Can accommodate one Integrated Modem Switched Network Cable (**#2134**) (Effective February 1, 1984, NO LONGER AVAILABLE) and one Integrated Modem Leased Line Cable (**#2135**) (Effective February 1, 1984, NO LONGER AVAILABLE) or customer-supplied equivalents. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

1200 bps Integrated Modem (#4753): With clock for synchronous leased line. Provides a complete leased line modem for synchronous operation at 600 or 1200 bps (program-selectable). Can accommodate one Integrated Modem Leased Line Cable (**#2135**) (Effective February 1, 1984, NO LONGER AVAILABLE) or customer-supplied equivalent. **Field Installation:** Yes. **Specify:** Function (see "Attachment Feature Function Codes").

4987 Programmable Communication Subsystem (cont'd)

Attachment Feature Function Codes: A unique function code must be specified for each attachment feature used on the 4987. Determine if the feature is attached to the basic scanner or to the Expansion Scanner (#3600). For each feature, determine specify code **#8XXX** from appropriate column and table.

Feature Number	Description	Basic Scanner	Expansion Scanner
#4730	Half-Duplex DCE Attachment	**#85XX** See Table 1	**#86XX** See Table 1
#4731	Full-Duplex DCE Attachment	**#858X** See Table 2	**#868X** See Table 2
#4734	TTY Current Attachment	**#853X** See Table 3	**#863X** See Table 3
#4736	Data-Phone Digital Service Adapter [Effective February 1, 1984, NO LONGER AVAILABLE.]	**#854X** See Table 4	**#864X** See Table 4
#4739	Asynchronous Local Attachment	**#8550**	**#8650**
#4740	Synchronous Local Attachment	**#8560**	**#8660**
#4743	Auto-Call Attachment	**#857X** See Table 5	**#867X** See Table 5
#4746	1200 bps Integrated Modem for Asynchronous SN [Effective February 1, 1984, NO LONGER AVAILABLE.]	**#8590**	**#8690**
#4747	1200 bps Integrated Modem for Asynchronous LL-SNBU [Effective February 1, 1984, NO LONGER AVAILABLE.]	**#8591**	**#8691**
#4748	1200 bps Integrated Modem for Asynchronous LL [Effective February 1, 1984, NO LONGER AVAILABLE.]	**#8592**	**#8692**
#4751	1200 bps Integrated Modem with Clock for Synchronous SN [Effective February 1, 1984, NO LONGER AVAILABLE.]	**#8594**	**#8694**
#4752	1200 bps Integrated Modem with Clock for Synchronous LL-SNBU [Effective February 1, 1984, NO LONGER AVAILABLE.]	**#8595**	**#8695**
#4753	1200 bps Integrated Modem with Clock for Synchronous LL	**#8596**	**#8696**

SUPPLIES (None)

4990 COMMUNICATIONS CONSOLE

PURPOSE

The 4990 provides a debug and problem determination tool for the 4987 Programmable Communication Subsystem.

MODELS

Model 1 001

HIGHLIGHTS

The 4990 provides a portable function keyboard and set of displays for debugging programs and for problem determination in the feature and interfaces of the 4987. When the 4987 is equipped with two scanners, the console may be interchanged between them. A single console may be used on multiple 4987 subsystems by plugging into the appropriate unit. Power is supplied by the 4987.

Publications: *4987 Programmable Subsystem and Attachments and 4990-1 Communications Console Description* (GA34-0049).

4993 SERIES/1-IBM S/370 CHANNEL TERMINATION ENCLOSURE

PURPOSE

The 4993 provides physical support, mechanical connection, and electrical termination for IBM S/370 channel interface cables. It is used in conjunction with the Series/1-IBM S/370 Channel Attachment (#1200) for connection to IBM S/370 (models 135-168), 3031, 3032, 3033, 4331, and 4341.

MODELS

Model 1 001

Limitations: One 4993 per 4997 rack. On a 4997, this unit will be mounted at the bottom of the rack. It may not be installed with 4962 on 4997 mdl 1, or with two 4962s on 4997 mdl 2. Field installation may require Series/1 system reconfiguration.

Prerequisites: #1200 on a processor unit, 4959, or 4965.

HIGHLIGHTS

The 4993 is designed for mounting on a 4997 or an EIA standard 19-inch rack enclosure. It is a full-width unit 5.25 inches high.

The 4993 contains channel drive and receive terminators, power source, power on/off control, control unit enable/disable control, disable indicator lamp, and mechanical assembly. It provides capability for select-out bypass. The function occupies one control unit position on the S/370 channel interface, requiring 32 channel addresses. Up to eight Series/1s with 4993s may be connected to an S/370 system channel.

Publications: *System/370 Channel Attachment Feature and 4993 Termination Enclosure Description* (GA34-0057).

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 60 Hz, 1-phase): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.
- Power Cord: 1.8 meter (6 foot) cord, no specify required.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: S/370 channel cables are not provided with the 4993. These cables (cable group 1806) should be identified and ordered when the S/370, 303X, or 43XX installation planning associated with the Series/1 is accomplished. See *IBM Series/1 Customer Site Preparation Manual* (GA34-0050) for details. Contact IBM for assistance.

SUPPLIES (None)

4994 ASCII DEVICE CONTROL UNIT

PURPOSE

Provides an ASCII Device Control Unit that can accommodate a variety of ASCII terminals including the 3101 model 1.

MODELS

Model A00 16 RS-232-C Ports, 1 meter Rack

Model B00 32 RS-232-C Ports, 1 meter Rack

Model C00 48 RS-232-C Ports, 1 meter Rack

Limitations: The 4994 is not featureable.

Prerequisites: 4331, 4341, 4361, or 4381. S/370 Block Multiplexer Channel.

HIGHLIGHTS

The 4994 provides the ability to attach ASCII devices to host processors. The display terminals that can be attached are defined in Terminal Definition Tables which are down-loaded from the host to the controller. In order to be supported, the devices at a minimum must perform the following functions upon receipt of appropriate character sequences from the communication line:

- Clear-screen or clear to end-of-screen
- Absolute cursor positioning
- A character written to a screen position should replace (not over-strike) the previous character in that position.

The communication interface for the 4994 is an asynchronous EIA RS-232-C/CCITT V.24. In addition each line has a jumper-selectable 20mA Current Loop connection. Data rates for asynchronous operation are program-selectable in two jumper-selectable ranges (37.5 to 1200 and 300 to 19,200 bps).

Programming Support: Program support for the 4994 is the Host Loaded Yale ASCII Communications System (5798-RRJ). This program offering provides a down-stream load capability for the 4994 control unit program. This program support runs under VM/SP Rel. 2.1 or 3.0 (5664-167) in the host.

Environmental Restriction: Certain atmospheric contaminants can destroy miniaturized electronic circuitry. These contaminants may be found in certain industrial and general urban environments. This machine should be protected from hostile, ambient conditions. See *IBM 4994 ASCII Device Control Unit General Information Manual* (GA34-0282), for details.

Publications: *IBM Series/1 Customer Site Preparation Manual* (GA34-0050), *IBM 4994 ASCII Device Control Unit General Information Manual* (GA34-0282).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz):

  200V **#2732** 208V **#9902**
  220V **#2803** 240V **#9914**

- Power Cord: Standard power cord is 4.3 meters (14 feet), no specify required. Specify **#9986** for special 1.8 meter (6 foot) cord when required by local jurisdiction.
- Machine Nomenclature: English US only.
- Color Selection:

Willow Green	**#9060**	Classic Blue	**#9063**
Garnet Rose	**#9061**	Charcoal Brown	**#9064**
Sunrise Yellow	**#9062**	Pebble Gray	**#9065**

- Type of Distribution Channel: (Specify Only One)

  #9001 Sales to Third Party Participants (TPPs): Sales to Value Added Remarketers, systems integrators, programming houses, other equipment manufacturers (OEMs), who, in turn, resell to end-users. Includes sales to business concerns who resell to their independent franchises or distributors.

  #9002 End-User Sales: Sales directly to the business concern which will use the system for the intended application.

- Primary Application: (Specify only one)

  - Industry Terminal Systems

  #9010 Plant Floor System: Collection or dissemination of data using plant floor terminals requiring human intervention. Time and attendance, job reporting, etc.

  #9011 Banking: System with banking terminal(s) attached.

  #9012 Point of Sale: System with point of sale terminal(s) attached.

  #9019 Other Industry Terminal System: Hospital systems or any other industry terminal systems.

  - Industrial Automation

  #9020 Electrical Test and Inspection: Monitoring or control of equipment that measures material or products to ensure conformance with specifications.

  #9021 Process Control: Monitoring and control of production operations, primarily in the fluid and non-fluid process industries.

  #9022 Laboratory Automation Systems: Includes instrument automation, experiment monitoring, and general laboratory automation.

  #9023 Power Management - FC/PM: Power Management Systems which will use the Facilities Control/Power Management (FC/PM) licensed program.

  #9024 Power Management - Non-FC/PM: Power Management Systems which will not use the FC/PM licensed program.

  #9025 Facilities Management and Security: All other facilities management and security systems [except Controlled Access System (CAS)].

  #9029 Other Industrial Automation: Controlled Access System (CAS), production monitoring, testing, and inspection (other than electronic test), discrete piece manufacturing, numeric control tape control, materials handling, environmental monitoring, maritime, railroad, auto traffic control, air traffic control, simulators.

  - Communications

  #9030 Concentrators/Multiplexers: Consolidation of input from terminals for transmission over high-speed lines to a remote computer.

  #9031 Front End Processors: For large systems.

  #9032 Front End Processors: For small and medium sized systems.

  #9033 Message Switching: Message routing and dispatching in a data communications network.

  #9034 Telephone Switching: Switching (PABX Control), call routing, and central office switching.

  #9035 Audio Store and Forward.

  #9039 Other Communications Applications: All other communications applications.

  - Scientific Computation

  #9050 Problem Solving: Engineering/Scientific Calculations. May be timesharing.

  #9051 Instructional: Stand-alone or timeshared systems for computer-assisted instruction and related functions.

  - Business Data Processing

  #9070 Remote Job Entry: RJE or Remote Batch Terminal.

  #9071 Distributed Host Support - Data Entry: Single or clustered workstation terminal controller with limited peripherals and batch communication to a host. Primarily for dedicated intelligent data entry, but may be combined with Remote Job Entry/Batch functions.

  #9072 Distributed Processing - Host-Dependent: Combinations of terminal control, file management, communications, peripheral control, data entry, and local processing with heavy dependency on a host processor for continuous operation.

  #9073 Distributed Business Processing - Stand-Alone, Large Account: Stand-alone batch or interactive system for business applications in an enterprise with large systems. Offline communications to a host system is optional.

  #9074 Business System - Small Account: Same as **#9073** but in new accounts or in enterprises with small or medium-sized systems only.

  #9075 Business Problem Solving: Series/1 installed for the primary purpose of providing non-DP professional business problem solving support.

  #9076 Office Automation: Series/1 installed primarily for text processing, electronic mail, audio distribution, etc., with or without some commercial applications.

  #9079 Other Business Applications: All other business data processing applications.

  - Other Applications

  #9090 Applications not classified in any category above: For example, graphic arts (typesetting, etc.), design and drafting, undefined government, and any other.

4994 ASCII Device Control Unit (cont'd)

- Application Unknown

#9096 Applications temporarily unknown: Specify within 15 days of order entry.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Connectors/Tools : For information on connectors and tools ... see "Accessories" in M4959 pages.

Device Attachment Cable (#2056): Asynchronous local attachment cable.

EIA Data Set Cable (#2057): EIA data set attachment.

S/370 Channel Cables: Not provided with the 4994. These cables (Cable Group **1800**) should be identified and ordered through Field Engineering and the marketing divisions when the 4331, 4341, 4361, or 4381 planning associated with the 4994 is accomplished. See *IBM Series/1 Customer Site Preparation Manual* (GA34-0050) for details.

SUPPLIES (None)

4997 RACK ENCLOSURE

PURPOSE

The 4997 is a rack mounting enclosure for Series/1 units.

MODELS

Model 1A	01A	1 meter (39.4 inches), plain covers
Model 1B	01B	1 meter (39.4 inches), decorative covers
Model 2A	02A	1.8 meters (70.1 inches), plain covers
Model 2B	02B	1.8 meters (70.1 inches), decorative covers

Limitations: 1 meter (39.4 inch) and 1.8 meter (70.1 inch) racks may not be mixed on a single system.

Prerequisites: Half-width units require the Rack Mounting Fixture (**#4540**). Two half-width units can fit into one fixture. See *System Selection Guide* (GA34-0143).

HIGHLIGHTS

The 4997 provides an EIA standard 19-inch rack type enclosure for mounting of Series/1 units. See *Customer Site Preparation Manual* (GA34-0050) for details. Mdl 1A allows for mounting of two full-width units. Dimensions are approximately 1 meter (39.4 inches) high, 750mm (29.5 inches) deep, and 610mm (24 inches) wide. All unused openings are covered with plain black aluminum covers. Mdl 1B is similar to 1A, but includes decorative covers over all unused spaces and is more suitable for areas of public display. Mdl 2A is supplied with three sets of support rails (fixed) but space is available for mounting four full-width units. Supplemental units to be mounted within the 4997 will require additional support rails. All unused openings are covered with plain black aluminum covers. Mdl 2B is similar to 2A, but also includes decorative covers over all unused spaces. Dimensions are approximately 1.8 meters (70.1 inches) high, 750mm (29.5 inches) deep, and 610mm (24 inches) wide. All mdls include primary power receptacle panel and instantaneous power off switch.

SPECIFY

Specify codes **#9XXX** may not be ordered independently.

- Voltage (AC, 60 Hz, 1-phase): Specify **#9901** for 115V, **#9902** for 208V, or **#9904** for 230V.

  Note: The rack enclosure line cord is limited to 16 amperes. For detail power requirement, see *Customer Site Preparation Manual* (GA34-0050). In general, 115V AC 1-phase power will be limited to small systems such as mount on a 4997 mdl 1A or 1B.

- Power Cord: Standard power cord is 4.3 meters (14 feet), no specify required. Obtain special 1.8 meter (6 foot) cord when required by local jurisdiction, specify **#9986**.

- Rack Sequence: Specify **#9197** for first rack, **#9198** for subsequent rack. Unit location on 4997 is determined by IBM. For details, see *IBM Series/1 System Selection Guide* (GA34-0143). For special system configurations, submit RPQ. Relocation after delivery is billable CE service under Series/1 relocation plan.

SUPPLIES (None)

4999 BATTERY BACKUP UNIT

PURPOSE

The 4999 provides battery backup for processor units in conjunction with user-supplied batteries and charger.

MODELS

Model 1	001	For processors operating on 100 to 123.5V AC, 50/60 Hz
Model 2	002	For processors operating on 200 to 235V AC, 50/60 Hz

Limitations: May not be used with 4952 mdl C, 4954 mdl C, 4956 mdl C, or 4965. For 4952 mdl B, 4954 mdl B, 4955 mdls E and F, and 4956 mdl B, maximum configuration support is 800 VA (corrected for power factor). Contact IBM for further information. May not be used with 4952 mdl A prior to serial number 50000 (EC 375810).

Prerequisites: Space in Rack Mounting Fixture (**#4540**). See "Accessories" in the M4959 pages. #1565 is required for 4955 with 4959 attached.

HIGHLIGHTS

The 4999 is a half-width unit designed for mounting on a 4997 or an EIA standard 19-inch rack enclosure using the Rack Mounting Fixture (**#4540**). It provides capability for battery takeover in case of power failure. Duration of battery support depends on processor loading and customer-supplied battery characteristics. The 4999 does not include battery or battery charger.

Publications: *4999 Battery Backup Unit Description* (GA34-0032).

* Requires #7401 in 5026.

Limitations: Program preparation on configurations with 2K storage are not supported by IBM-supplied programming.

Prerequisites: The first module location in the 5026 Enclosure mdl A2, C3, or C6. A and B mdls with more than 8K of storage require Storage Power Addition (#7401) in the 5026 Enclosure ... see M5026 pages. #7401 is not required for E mdls. For E mdls replacing installed A or B mdls, or vice versa, an MES (lease) or RPQ (purchase) must be ordered for the proper 5026 Power Specify Code ... see M5026 pages. The B mdls require a Storage Access Channel (#7490) on the 1131 or a Storage Access Channel II (#7492) on an 1133.

HIGHLIGHTS

Uses binary arithmetic, fixed word length of 16 data bits plus two parity bits. Storage cycle time is 400 nanoseconds. Instructions are one or two words in length with full storage addressing. Standard features include 64 priority interrupts, including four interrupt levels with 16 sublevels, seven index registers, one accumulator, and one instruction address register per interrupt level, two interval timers, and an interface for the 5028 Operator Station. The 5010 Processor Module includes a read-only Tape Cassette Recorder attachment and associated connection cable (P/N 2703633). The attachment provides the capability to IPL and program load either Diagnostic Programs or the Disk Support System (DSS/7) (5707-SC2) from a tape cassette recorder (Norelco mdl 1420 or equivalent).

The A and E mdls have an Aysnchronous or Binary Synchronous Communications Adapter as an optional feature. This circuitry provides the capability for initial program load of the System/7 from a remote system with no resident program in the System/7. The B mdls have an interface for connection to an 1130 System as a standard feature.

Publications: *System/7 Summary* (GA34-0002).

SPECIFY

- Voltage: Voltages are specified for the 5026 Enclosure mdls. See M5026 pages.
- For the location of the Modules in the system: Specify one of the following.

  #9141: Where location of all I/O Modules are to be determined at the plant. Specify **#9143** if I/O Modules cannot be used.

  #9142: Where location of all I/O Modules are specified by the customer. Specify **#9143** must be used in each I/O Module order.

  #9144: For shipment without mounting in an enclosure.
- For identification of major application: Specify **#9XXX** on all mdls. See "Special Features" for identifier code. No-charge feature.
- System Control Programs: Must be ordered prior to Order Confirmation (OC) time.
- Cables: Use cable order form number Z120-2498.

SPECIAL FEATURES

Asynchronous Communications Control (#1610): [Mdls A, E] Provides control circuits for one asynchronous communications line adapter. #1610 is used for communication with S/360 and S/370 (via 2701, 2702, 2703, 3704, 3705), S/370 mdl 115 with Integrated Communications Adapter (#4640), S/370 mdl 125 with Integrated Communications Adapter (#4640), S/370 mdl 135 with Integrated Communications Adapter (#4640). **Note:** See the 3704 and 3705 Machines and Programming pages for attachment capability. Also see the host system Programming pages for possible restrictions to the above.

Data transmission is serial by bit using start/stop method of character and bit synchronization. The IBM PTTC/EBCD code is used. Point-to-point or multidrop transmission at speeds of 134.5 or 600 bps (14.8 or 66.7 characters per second) are available. Speed changes can be made in the field. Line control characters are identical to 2740 mdl 1. Line control characters are used in a manner similar to 2740 mdl 1, with error checking. See *IBM System/7 Functional Characteristics* (GA34-0003), for exact description of use. Communication Control provides the capability to load a program from the communication network into System/7 with no resident program in System/7 (remote IPL). For information on communications facilities, see M2700 pages. **Limitations:** Cannot be installed with Binary Synchronous Communications Adapter (#2074). **Maximum:** One #1610 per system. **Field Installation:** Yes.

Bi-Sync Control (BSCA) (#2074): [Mdls A ,E] Provides circuitry for one binary synchronous communications adapter. This feature is used for communications with S/370, another System/7 with BSCA (#2074), or a System/3 mdl 4, 6, 8, 10, 12, or 15 with BSCA, or a System/32 with BSCA (#2074) (switched or nonswitched point-to-point only), a System/34 with its Communications Adapter (switched or nonswitched point-to-point only), a System/3 mdl 8, 10, 12, or 15 with BSCA and EIA Local Attachment (#3601 or #3602), or a System/3 mdl 6, 10, or 15 with Local Communications Adapter (LCA) (#4765), or a System/3 mdl 8 or 12 with Integrated Communications Adapter (ICA) (#4645) or ICA-Local Interface, or a System/3 mdl 8 with ICA or BSCA. Data transmission is half-duplex over 2- or 4-wire circuits using binary synchronous line control. Data transfer on point-to-point (switched or nonswitched) and multipoint configurations are supported. In multipoint configurations, System/7 operates as a tributary station. On point-to-point networks System/7 functions as a processor terminal. Transmission codes supported are EBCDIC and ASCII, software controlled. Transparent mode is standard in the BSCA, but allowed only in EBCDIC. Control circuitry provides the capability for IPL of the System/7 from a remote system with no resident program in the System/7. Control of the IPL sequence is by the remote system. IPL can be accomplished on point-to-point switched and multipoint configurations and requires the use of transparent EBCDIC transmission code.

Local Attachment to System/3: Point-to-point nonswitched communication is also provided with the System/3 BSCA-EIA-Local, LCA, or ICA-Local.

S/3 Mdl	BSCA-EIA-Local LCA (#4765) Speed(bps)	(#3601, #3602) Speed(bps)	ICA (#4645) Speed(bps)
6	2400	N/A	N/A
8	N/A	2400, 4800, 8000	2400, 8000
10	2400	2400, 4800, 8000	N/A
12	N/A	2400, 4800, 8000	2400, 8000
15	2400	2400, 4800, 8000	N/A

For local attachment to a System/3 BSCA-EIA-Local, ICA-Local, or LCA, an appropriate cable order is required. *Installation Manual - Physical Planning* (GA34-0004), includes cable description and ordering information. **Limitations:** Cannot be installed with Asynchronous Communications Control (#1610), support as a multipoint central system is not provided. **Maximum:** One #2074 per system. **Field Installation:** Yes. **Prerequisites:** 5010 mdl A6 or larger, or mdl E16 or larger.

Common Carrier Adapter (#2165): [Mdls A, E] Provides interface to an external modem meeting EIA standard RS-232-C. The interface lines provided are Transmitted Data, Received Data, Request to Send, Clear to Send, Data Set Ready, Data Terminal Ready, Signal Ground and Protective Ground. **Limitations:** Cannot be used with Line Adapter (#4750, #4751 or #4752). **Maximum:** One per #1610. **Field Installation:** Yes. **Prerequisites:** #1610.

Cycle-Steal Basic (#2662): Provides a path between 5010 main storage for the 5022 Disk Storage Module, equipped with companion cycle-steal attachment, Disk Cycle-Steal (#2664). **Maximum:** One per 5010. **Field Installation:** Yes. **Prerequisites:** Mdl A4 or larger, mdl B4 or larger, or mdl E16 or larger. Required for 5998-T01, 3340 Attachment.

5024 Attachment Feature (#4115): [Mdl E] Provides a path between 5010E main storage for the 5024 I/O Attachment to enclosure. **Limitations:** Cannot be installed with 1200 bps Integrated Modem (#5500 or #5501) or with S/360/370 Channel Attach (RPQ D08112).

5010 Processor Module (cont'd)

Other 5010E RPQs must be submitted for review. **Maximum:** One per 5010E. **Field Installation:** Yes.

Internal Clock (#4703): [Mdls A, E] Provides BSCA clocking when modems do not provide clock pulses. Speed options are 1200, 2000, and 2400 bps which are hardware selectable. **Limitations:** Not available with Line Interface Type 1G (#4805). Do not use if System/7 is to interface to a System/3 mdl 8, 10, 12, or 15 BSCA-EIA-Local Attachment (#3601, 3602) or a System/3 mdl 6, 10, or 15 Local Communications Adapter (#4765), or a System/3 mdl 8 or 12 Integrated Communications Adapter (#4645). **Maximum:** One per #2074. **Field Installation:** Yes. **Prerequisites:** #2074.

Line Adapter, Limited Distance Type 2B (#4750): [Mdls A, E] A limited distance type 2B modem for 2-wire use up to 13 wire-km (8.25 wire-miles) at speeds of 134.5 or 600 bps. Point-to-point or multipoint communication facilities can be used. See Line Adapter Limited Distance Type 2B in GA24-3435 for specifications and requirements. **Limitations:** Cannot be used with Line Adapters (#4751 or #4752) or Common Carrier Adapter (#2165). **Maximum:** One per #1610. **Field Installation:** Yes. **Prerequisites:** #1610.

Line Adapter, Leased Line Type 1A (#4751): [Mdls A, E] A leased line type 1A modem for 2-wire unlimited distance use at speeds of 134.5 or 600 bps. Only point-to-point communications facilities can be used. See Line Adapter Leased Line Type 1A in GA24-3435 for specifications and requirements. **Limitations:** Cannot be used with Line Adapters (#4750 or #4752) or Common Carrier Adapter (#2165). **Maximum:** One per #1610. **Field Installation:** Yes. **Prerequisites:** #1610.

Line Adapter, Leased Line Type 1B (#4752): [Mdls A, E] A leased line type 1B modem for 4-wire unlimited distance use at speeds of 134.5 or 600 bps. Point-to-point or multipoint communications facilities can be used. See Line Adapter Leased Line Type 1B in GA24-3435 for specifications and requirements. **Limitations:** Cannot be used with Line Adapters (#4750 or #4751) or Common Carrier Adapter (#2165). **Maximum:** One per #1610. **Field Installation:** Yes. **Prerequisites:** #1610.

Line Interface Type 1D (#4800): [Mdls A, E] Provides a low- and medium-speed interface to permit operation with external modems that comply with the EIA RS-232-C standard and with System/3 mdl 8, 10, 12, 15 with BSCA and EIA Local Attachment (#3601, #3602), or a System/3 mdl 6, 10, or 15 with Local Communications Adapter (#4765), or System/3 mdl 8 or 12 with Integrated Communications Adapter (#4645). Modems of this type operate on switched or nonswitched facilities up to 2400 bps and over nonswitched facilities at up to 7200 bps. Auto-answer capability is supported. **Limitations:** Cannot be installed with Line Interface Type 1G (#4805) or 1200 bps Integrated Modem (#5500, 5501). **Maximum:** One per #2074. **Field Installation:** Yes. **Prerequisite:** #2074.

Line Interface Type 1G (#4805): Mdls A and E operating up to 50.0K bps max. Provides a high-speed interface for stand-alone modems operating on a wide band interface. Modems of this type operate at speeds of 10,000 bps and higher only on nonswitched lines. **Maximum:** One per #2074. **Limitations:** Cannot be installed with #4800, #5500, #5501. Internal Clock (#4703) is not available with this feature. Will not interface to S/370 mdl 135, Integrated Communications Adapter (#4640). **Field Installation:** Yes. **Prerequisites:** #2074.

1200 bps Integrated Modem, Leased (#5500): [Mdls A, E] Provides one 1200 bps Integrated Modem which is suitable for communication over facility D5 with another 1200 bps Integrated Modem. **Limitations:** Cannot be installed with #4115, #4800, #4805, or #5501; Will not interface to S/370 mdl 135 Integrated Communications Adapter (#4640). **Maximum:** One per #2074. **Field Installation:** Yes. **Prerequisites:** #2074, #4703.

1200 bps Integrated Modem, Switched (#5501): [Mdls A, E] Provides one 1200 bps Integrated Modem which is suitable for communication over facility C4 with another 1200 bps Integrated Modem. **Note:** Attachment to the switched network is via FCC registered protective circuitry of the CBS Type (or equivalent) provided by the user. This adapter includes the automatic answer capability. **Limitations:** Cannot be installed with #4115, #4800, #4805, or #5500. Will not interface to S/370 mdl 135 Integrated Communications Adapter (#4640). **Maximum:** One per #2074. **Field Installation:** Yes. **Prerequisites:** #2074, #4703.

IBM Modems that can be attached:

2400 bps:	3863
	3868 mdl 1
	3872
4800 bps:	3864
	3868 mdl 2
9600 bps:	3865
	3868 mdl 3/4

For Communications capabilities, product utilization and special features, see M2700, 3863, 3864, 3865, and 3872.

BSCA Communications Facilities:

Speed (bps)	*BSCA Features*
1200	#4800, #5500, #5501, #4703
2000	#4800, #4703
2400	#4800, #4703
4800	#4800
7200	#4800
19.2K	#4805
40.8K	#4805
50.0K	#4805

System/7 Application Identifier Codes: Specify codes have been added to the 5010 Processor Unit. These are no-charge features which identify the major application on the system.

Processing Unit - major applications on order in the account. Identifier **9XXX** all mdls.

Code	Feature (Application)
#9001	Data Collection
#9002	Telephone Data Entry
#9003	Power Management
#9004	Message Switching
#9005	Other TP Applications
#9006	CAS
#9007	Testing/Monitoring
#9008	Process Control
#9009	Lab. Applications
#9010	Stand-alone Scientific
#9011	Maritime
#9012	TTS/TR
#9013	CAMA
#9014	ACLR
#9015	ACDMS

Maximum: Only one code per 5010 can be specified.

MODEL CONVERSIONS

Conversions within mdls A, B or E are field installable. Replacement of A or B mdls with E mdls requires a 5026 MES to remove code #7401 or **#9490** on both and add code **#9491** (see M5026 pages). Conversions from A or B mdl to E mdl (and vice versa) within a 5010 cannot be field installed. Conversions from A mdl to B mdl (and vice versa) are not recommended for field installation.

ACCESSORIES (None)

SUPPLIES (None)

5012 MULTIFUNCTION MODULE

PURPOSE

To provide digital/input output, analog input/output, and 2790 control on System/7.

MODELS

Model A01

Maximum Configuration: The total number of input/output modules (5012, 5013, 5014, and 5022 in any combination) per system cannot exceed 11.

Prerequisites: One module location in a 5026 Enclosure model A2, C3, C6, D3, or D6.

HIGHLIGHTS

Provides capability for:

- Attachment of a 2790 Control.
- Up to 128 digital input points.
- Up to 32 isolated process interrupt points.
- Up to 64 digital output points.
- Up to 32 differential analog input points.
- Up to 2 isolated analog output points.

2790 Control: Provides the required logical interface for attachment of 2790 Data Communication devices to System/7. This allows System/7 to act as the "system controller" for 2791/2793 Area Stations or 2792 Remote Communication Controller. The 2790 Control allows transmission of data between System/7 and 2791/2793 Area Stations, 2795/2796/2797 Data Entry Units, and 2798 Guidance Display Units. Transmission rate is approximately 500,000 bits per second (900 characters per second). The combined number of 2791/2793s and 2792 mdl 1s on each 5012 or 5013 may not exceed 16. **Maximum:** Four 2790 Controls per system, one per 5012 Multifunction Module.

Digital Input: Provides up to eight groups of 16 digital input points. Either isolated or non-isolated digital input groups are available. Each digital input point is a voltage or contact sense, 2-terminal circuit. Each group can be program controlled for latching or non-latching operation. Any one of the eight groups may be read under direct program control. The first two groups of digital inputs may be converted to process interrupt points through the addition of the Process Interrupt feature.

Process Interrupt: An interrupt-on-change feature is offered on the first two groups of digital inputs. This feature provides the capability to compare the input of 16-bit groups against a program-loadable 16-bit register and initiate an interrupt on either an equal or unequal comparison.

Digital Output: Provides up to four groups of 16 digital output points. Each digital output point may be set or reset under program control. Each digital output group may be one of the following circuit types: low power, medium power, medium power non-isolated, or contact output. Low power output provides switching with a maximum rating of 6 volts at 4 milliamps. Medium power and medium power non-isolated operate up to 48 volts at 450 milliamps. Contact output provides a Form A mercury-wetted relay contact rated at 125V DC max., or 88V AC rms max., 2A AC rms max. The product of peak voltage and peak current must not exceed 100 (100VA maximum). Digital outputs operate under direct program control. Medium power and contact output points are isolated and may be directly connected to the standard digital input points. This provides the capability for wrap-around testing and multiplexing of digital and analog inputs with digital output points.

Analog Input: Provides up to eight groups of four differential analog input points. A multiplexer connects each point to an analog-to-digital converter which is capable of converting voltage signals, in the range of +/- 10 millivolts to +/- 5.12 volts full-scale, into binary values of 14 bits plus sign. Either an amplifier with a unit gain or an automatic multirange amplifier must be selected. The unity gain or high level amplifier provides a full-scale range of +/- 5.12 volts. The multirange amplifier provides full-scale ranges (plus or minus) of 10mV, 20mV, 40mV, 80mV, 160mV, 640mV, and 5.12 volts. Analog input is under direct program control. Immediate and external synchronization operations are both available. Two analog scanning rates are provided, #5246 uses a mercury-wetted relay multiplexer operating at a scanning rate of up to 200 points per second. #5248 uses a solid state multiplexer operating at scanning rates up to 20,000 points per second, depending on the level of the input signal and mode of operation. For thermocouple operations, resistance bulb thermometer (RBT) termination cards are available to be used for measurement of the reference junction temperature. **Limitations:** All of the 32 analog input points must use the same type of multiplexer in each multifunction module. The RBT capability is available only on the multirange amplifier.

Analog Ouput: Provides one or two isolated analog output voltages. The output signal has a polarized full-scale range from 0 to 10.24 volts, with a resolution of 10 bits and an accuracy of +/- 0.15% of full scale. Polarity of the output signal depends on the side of the isolated output that is grounded. Analog output operates under direct program control at a rate of 25 kHz (including amplifier settling time).

Attachment Accessories: A customer access area is provided in the back of every I/O Module. Termination cards and connectors can be installed in this area to provide for connecting customer signals to the System/7 I/O interface. For detailed information, see "5029 Attachment Accessories for System/7" in M5029 pages.

Publications: *System/7 Summary* (GA34-0002), *System/7 Installation Manual - Physical Planning* (GA34-0004).

SPECIFY

- Housing: For location of the 5012 I/O Module, specify as follows. If feature **#9141** was specified on the 5010, do not specify the following:

  #9143: Also enter the desired module location number in the quantity column of the order form. See "Module Locations" table in M5026 pages. Specify **#9142** in M5010 pages.

  #9144: For shipment without mounting in an enclosure (spare).

- Side Panels: Customer's signal wires enter through the rear side panels of the module. Three types of side panels are available: Type 1 provides a slot for cables, Type 2 has individual holes for each pair of wires, and Type 3 is a blank panel that can be customized by the customer. Separate side panels are used for digital and analog input signal wires. For details, refer to *System/7 Installation Manual - Physical Planning* (GA34-0004).

  For digital input/output specify one: **#9501** for Side Panel Digital Type 1, **#9502** for Side Panel Digital Type 2, or **#9503** for Side Panel Digital Type 3.

  For analog input specify one: **#9511** for Side Panel Analog Type 1, **#9512** for Side Panel Analog Type 2, or **#9513** for Side Panel Analog Type 3.

- 2790 Control (#8195): When #8195 is ordered on 5012 specify: **#9444** (Multiloop Device) for each new 5012 in a multiloop system. **Note:** When upgrading from a single loop system, **#9444** must be ordered on MES for the installed 5012 which contains #8195. It must also be ordered on MES for any 5013 which has #8195.

SPECIAL FEATURES

Amplifier High Level B (#1210): Provides a unity gain amplifier for high level analog input with a full-scale range of +/- 5.12 volts. **Limitations:** Cannot be ordered with Amplifier Multirange B (#1215). **Maximum:** One per #1232. **Field Installation:** Yes. **Prerequisites:** #1232.

Amplifier High Level C (#1211): Provides a unity gain amplifier for high level analog input with a full-scale range of +/- 5.12 volts. **Limitations:** Cannot be ordered with Amplifier Multirange C (#1216). **Maximum:** One per #1213. **Field Installation:** Yes. **Prerequisites:** #1213.

Analog Input Control Mdl C (#1213): Provides control and analog-to-digital conversion for an amplifier and eight groups of solid state multiplexers. Multiplexer scanning rate is up to 14,000 points per second for low level signals, and up to 20,000 points per second for high level inputs. For auto-ranging mode, maximum scanning rate is 7,000 points per second. **Limitations:** Cannot be ordered with Analog Input Control Mdl B (#1232). **Maximum:** One per #1221. **Field Installation:** Yes. **Prerequisites:** #1221.

Amplifier Multirange B (#1215): Provides a multirange amplifier for analog input signals. Full-scale ranges (plus or minus) of 10mV, 20mV, 40mV, 80mV, 160mV, 640mV, and 5.12 volts can either be preset under program control or automatically selected during the conversion process. With preset gains, a resolution of 14 bits plus sign is obtained. With auto-ranging, a resolution of 12 bits plus sign and three bits for gain indication is obtained. **Limitations:** Cannot be ordered with Amplifier High Level B (#1210). **Maximum:** One per #1232. **Field Installation:** Yes. **Prerequisites:** #1232.

Amplifier Multirange C (#1216): Provides a multirange amplifier for analog input signals. Full-scale ranges (plus or minus) of 10mV, 20mV, 40mV, 80mV, 160mV, 640mV, and 5.12 volts can either be preset under program control or automatically selected during the conversion process. With preset gains, a resolution of 14 bits plus sign is obtained, while auto-ranging provides a resolution of 12 bits plus sign and 3 bits gain indication. **Limitations:** Cannot be ordered with Amplifier High Level C (#1211). **Maximum:** One per #1213. **Field Installation:** Yes. **Prerequisites:** #1213.

Analog Basic (#1221): Provides the basic analog capability within the 5012. **Maximum:** One per 5012. **Field Installation:** Yes.

Analog Input Control Mdl B (#1232): Provides control and analog-to-digital conversion for an amplifier and eight groups of mercury-wetted relay multiplexers. Multiplexing is at a maximum scanning rate of 200 points per second. **Limitations:** Cannot be ordered with Analog Input Control Mdl C (#1213). **Maximum:** One per #1221. **Field Installation:** Yes. **Prerequisites:** #1221.

5012 Multifunction Module (cont'd)

Analog Output Control (#1245): Provides control for one or two Analog Output Points (#1246). **Maximum:** One per #1221. **Field Installation:** Yes. **Prerequisites:** #1221.

Analog Output Point (#1246): Provides a 0 to 10.24 volts isolated output signal. Polarity of the signal depends on the side of the signal that is grounded. **Maximum:** Two per #1245. **Field Installation:** Yes. **Prerequisites:** #1245 and customer signal connection. See M5029 pages.

Digital Input Control (#3284): Provides control for up to four digital inputs #3289 or #3292. **Maximum:** Two per 5012. **Field Installation:** Yes.

Digital Input Group (#3289): Provides 16 latching or non-latching digital input voltage or contact points. The voltage or contact and the isolation capability of each point is determined by the termination card used. **Maximum:** Four #3289s or #3292s in any combination per #3284. **Field Installation:** Yes. **Prerequisites:** #3284 and customer signal connection. See M5029 pages.

Digital Input Non-Isolated (#3292): Provides 16 latching or non-latching points of contact sense capabiltity. Input signals are referenced to frame ground. **Limitations:** Cannot be modified by Process Interrupt (#5710). **Maximum:** Four #3289s or #3292s in any combination per #3284. **Field Installation:** Yes. **Prerequisites:** #3284 and customer signal connection. See M5029 pages.

Function (max., one per group)	**1st Digital Input Control (#3284)** 1st Group	2nd Group	3rd Group	4th Group
Digital Input Isolated	#3289	#3289	#3289	#3289
Process Interrupt Isolated	#3289 and #5710	#3289 and #5710	N/A	N/A
Digital Input Non-Isolated	#3292	#3292	#3292	#9292
Process Interrupt Non-Isolated	N/A	N/A	N/A	N/A

Function (max., one per group)	**2nd Digital Input Control (#3284)** 5th Group	6th Group	7th Group	8th Group
Digital Input Isolated	#3289	#3289	#3289	#3289
Process Interrupt Isolated	N/A	N/A	N/A	N/A
Digital Input Non-Isolated	#3292	#3292	#3292	#3292
Process Interrupt Non-Isolated	N/A	N/A	N/A	N/A

Digital Output Control (#3296): Provides control for up to four groups of digital outputs (#3420, #3421, #3422, #3424) in any combination. **Maximum:** One per 5012. **Field Installation:** Yes.

DO Contact Group (#3420): Provides 16 isolated single-pole Form A mercury-wetted relay contacts rated at 125V DC max., or 88V AC rms max., 2A AC rms max. The product of peak voltage and peak current must not exceed 100 (100VA maximum). **Maximum:** Four #3420s, #3421s, #3422s, #3424s in any combination per #3296. **Field Installation:** Yes. **Prerequisites:** #3296 and customer signal connection. See M5029 pages.

DO Low Power Group (#3421): Provides 16 low power (4mA, 6V) digital output points. A user power supply is not required. **Maximum:** Four #3420s, #3421s, #3422s, #3424s in any combination per #3296. **Field Installation:** Yes. **Prerequisites:** #3296 and customer signal connection. See M5029 pages.

DO Medium Power Group (#3422): Provides 16 isolated medium power solid state digital output switches. Power up to 48V DC and 450mA must be provided by the user. **Maximum:** Four #3420s, #3421s, #3422s, #3424s in any combination per #3296. **Field Installation:** Yes. **Prerequisites:** #3296 and customer signal connection. See M5029 pages.

DO Medium Power Non-Isolated (#3424): Provides 16 non-isolated medium power (0mA at 5.5V to 12mA at 2.4V supplied by IBM) solid state digital output switches. Output signals are referenced to frame-ground. Customer-powered loads up to 450mA at 52.8V DC can be switched. **Maximum:** Four #3420s, 3421s, 3422s, 3424s in any combination per #3296. **Field Installation:** Yes. **Prerequisites:** #3296 and customer signal connection. See M5029 pages.

Multiplexer/MR4 (#5246): Provides a group of four mercury-wetted relay multiplexer points for analog input signals. Multiplexing is at a maximum rate of 200 points per second. Signals may be in the range of 0 to +/- 5.12 volts. **Maximum:** Eight per #1210 or #1215. **Field Installation:** Yes. **Prerequisites:** #1210 or #1215, and customer signal connection. See M5029 pages.

Multiplexer/MS4 (#5248): Provides a group of four solid state multiplexer points for analog input signals. Multiplexing is at a maximum scanning rate of 20,000 points per second. Signals may be in the range of 0 to +/- 5.12 volts. **Maximum:** Eight per #1211 or #1216. **Field Installation:** Yes. **Prerequisites:** #1211 or #1216, and customer signal connection. See M5029 pages.

Process Interrupt (#5710): Converts a Digital Input Group (#3289) to a process interrupt group. **Limitations:** #5710 cannot be installed on Digital Input Non-Isolated (#3292). **Maximum:** Two per 5012. Can only be used with the first two groups of Digital Input Group (#3289) in a 5012. **Field Installation:** Yes. **Prerequisites:** #3289.

Temperature Reference Attachment (#7830): Provides the capability to attach termination cards containing resistance bulb thermometers for determining the reference junction temperatures in thermocouple applications. See M5029 pages. **Maximum:** one per #1221. **Field Installation:** Yes. **Prerequisites:** #1215 or #1216, and customer signal connection. See M5029 pages.

2790 Control (#8195): Interface for 2790 Data Communication devices. For 2790 devices supported by programming, see MSP/7 in programming pages. **Limitations:** Online diagnostics are available for maintenace of the 2790 - System/7 and must be implemented on all systems which include a 2792 or have more than 16 area stations. See "System/7 Macro Library/Relocatable", PP 5707-AC1, in programming pages. All 5012 and 5013 modules with 2790 Control (#8195) must reside within the same 5026 Enclosure, mdl C or D. **Maximum:** One per 5012, four per System/7. MSP/7 provides support for a maximum of four 2792 mdl 1s (up to two per 2790 Control) or a maximum of 64 2791/2792 mdl 1/2793s (16 per 2790 Control). **Field Installation:** Yes. **Prerequisites:** Customer signal connection required, see 5029.

MODEL CONVERSIONS (None)

ACCESSORIES

Attachment Accessories: A customer access area is provided in the back of every I/O module. Termination cards and connectors can be installed in this area to provide for connecting customer signals to the System/7 interface. Cards and connectors are provided as accessories in the 5029. For details, see "5029 Attachment Accessories for System/7" in M5029 pages.

SUPPLIES (None)

5013 DIGITAL INPUT/OUTPUT MODULE

PURPOSE

To provide digital input/output, expansion capability for custom products, and 2790 control on a System/7.

MODELS

Model A01

Prerequisites: One module location in a 5026 Enclosure mdl A2, C3, C6, D3, or D6.

Maximum Configuration: The total number of Input/Output Modules (5012, 5013, 5014, and 5022 in any combination) per system may not exceed 11.

HIGHLIGHTS

Designed specifically to provide expansion capability for applications that require custom products along with digital input/output and 2790 control.

Provides capability for:

- Expansion for custom products.
- Attachment of a 2790 Control.
- Up to 128 digital input points.
- Up to 32 isolated process interrupt points.
- Up to 64 digital output points.

Expansion Capability: Provides the space, power, and logical interface to attach various custom products to the System/7. Refer to *System/7 Custom Product Marketing Guide* for available custom features or contact IBM.

2790 Control: Provides the required logical interface for attachment of 2790 Data Communication devices to System/7. This allows System/7 to act as the "system controller" for 2791/2793 Area Stations or 2792 Remote Communication Controller. The 2790 Control allows transmission of data between System/7 and the 2791/2793 Area Stations, 2795/2796/2797 Data Entry Units, and 2798 Guidance Display Units. Transmission rate is approximately 500,000 bits per second (900 characters per second). The combined number of 2791/2793s and 2792 mdl 1s on each 5012 or 5013 may not exceed 16. **Maximum:** Four 2790 Controls per system, one per 5013 Digital Input/Output Module.

Digital Input: Provides up to eight groups of 16 digital input points. Either isolated or non-isolated digital input groups are available. Each digital input point is a voltage or contact sense, 2-terminal circuit. Each group can be program-controlled for latching or non-latching operation. Any one of the eight groups may be read under direct program control. The first two groups of digital inputs may be converted to process interrupt points through the addition of the Process Interrupt feature.

Process Interrupt: An "interrupt-on-change" feature is offered on the first two groups of digital inputs. This feature provides the capability to compare the input of the 16-bit groups against a program-loadable 16-bit register and initiate an interrupt on either an equal or unequal comparison.

Digital Output: Provides up to four groups of 16 digital output points. Each digital output point may be set or reset under program control. Each digital output group may be one of the following circuit types: Low power, medium power, medium power non-isolated, or contact output. Low power output provides switching with a maximum rating of 6 volts at 4 milliamps. Medium power and medium power non-isolated operate up to 48 volts at 450 milliamps. Contact output provides a Form A mercury-wetted relay contact rated at 125V DC max., or 88V AC rms max., 2A AC rms max. The product of peak voltage and peak current must not exceed 100 (100VA maximum). Digital outputs operate under direct program control. Medium power and contact output points are isolated and may be directly connected to the standard digital input points. This provides the capability for wrap-around testing and multiplexing of digital and analog inputs with digital output points.

Publications: *System/7 Summary* (GA34-0002), *IBM System/7 Installation Manual - Physical Planning* (GA34-0004).

SPECIFY

- Housing: For location of the 5013, specify as follows. If feature **#9141** was specified on the 5010, do not use the following specify features.

  #9143: Also enter the desired module location number, in the quantity column of the order form. See "Module Locations" table under "Models", in the M5026 pages. Specify **#9142** in the 5010 Processor Module.

  #9144: For shipment without mounting in an enclosure (spare).

- Side Panels: Customer's signal wires enter through the rear side panels of the module. Three types of side panels are available: Type 1 provides a slot for cables, Type 2 has individual holes for each pair of wires, Type 3 is a blank panel that can be customized by the customer. Separate side panels are used for digital and analog input signals. For details, refer to *IBM System/7 Installation Manual - Physical Planning* (GA34-0004). For Digital Input/Output specify one: **#9501** for Side Panel Digital Type 1, **#9502** for Side Panel Digital Type 2, **#9503** for Side Panel Digital Type 3.
- 2790 Control: When 2790 Control (#8195) is ordered on 5013, specify **#9444** (Multiloop Device) for each new 5013 in a multiloop system. **Note:** When upgrading from a single loop system, **#9444** must be ordered on MES for the installed 5013 which contains #8195. It must also be ordered on MES for any 5012 which has #8195.

SPECIAL FEATURES

Digital Input Control (#3284): Provides control of up to four Digital Input (#3289 or #3292) groups. **Maximum:** Two per 5013. **Field Installation:** Yes.

Digital Input Group (#3289): Provides 16 latching or non-latching digital input voltage or contact points. The voltage or contact and the isolation capability of each point is determined by the termination card used. **Maximum:** Four #3289 or #3292 in any combination per #3284. **Field Installation:** Yes. **Prerequisites:** #3284 and customer signal connection required. See M5029 pages.

Digital Input Non-Isolated (#3292): Provides 16 latching or non-latching points of contact sense capability. Input signals are referenced to frame ground. **Limitations:** Cannot be modified by Process Interrupt (#5710). **Maximum:** Four #3289 or #3292 in any combination per #3284. **Field Installation:** Yes. **Prerequisites:** #3284 and customer signal connection. See M5029 pages.

Function (max., one per group)	**1st Digital Input Control (#3284)**			
	1st Group	2nd Group	3rd Group	4th Group
Digital Input Isolated	#3289	#3289	#3289	#3289
Process Interrupt Isolated	#3289 and #5710	#3289 and #5710	N/A	N/A
Digital Input Non-Isolated	#3292	#3292	#3292	#9292
Process Interrupt Non-Isolated	N/A	N/A	N/A	N/A

Function (max., one per group)	**2 nd Digital Input Control (#3284)**			
	5th Group	6th Group	7th Group	8th Group
Digital Input Isolated	#3289	#3289	#3289	#3289
Process Interrupt Isolated	N/A	N/A	N/A	N/A
Digital Input Non-Isolated	#3292	#3292	#3292	#3292
Process Interrupt Non-Isolated	N/A	N/A	N/A	N/A

Digital Output Control (#3296): Provides control for up to four groups of Digital Outputs (#3420, #3421, #3422, #3424) in any combination. **Maximum:** One per 5013. **Field Installation:** Yes.

DO Contact Group (#3420): Provides 16 isolated single-pole Form A mercury-wetted relay contacts rated at 125V DC max., or 88V AC rms max., 2A AC rms max. The product of peak voltage and peak current must not exceed 100VA maximum. **Maximum:** Four #3420s, #3421s, #3422s, #3424s in any combination per #3296. **Field Installation:** Yes. **Prerequisites:** #3296 and customer signal connection. See M5029 pages.

DO Low Power Group (#3421): Provides 16 low power (4mA, 6V) digital output points. A user power supply is not required. **Maximum:** Four #3420s, #3421s, #3422s, #3424s in any combination per #3296. **Field Installation:** Yes. **Prerequisites:** #3296 and customer signal connection. See M5029 pages.

DO Medium Power Group (#3422): Provides 16 isolated medium power solid state digital output switches. Power, up to 48V DC, and 450mA, must be provided by the user. **Maximum:** Four #3420s, #3421s, #3422s, #3424s in any combination per #3296. **Field Installation:** Yes. **Prerequisites:** #3296 and customer signal connection. See M5029 pages.

5013 Digital Input/Output Module (cont'd)

DO Medium Power Non-Isolated (#3424): Provides 16 non-isolated medium power (0mA at 5.5V to 12mA at 2.4V supplied by IBM) solid state digital output switches. Output signals are referenced to frame-ground. Customer-powered loads up to 450mA at 52.8V DC can be switched. **Maximum:** Four #3420s, #3421s, #3422s, #3424s in any combination per #2396. **Field Installation:** Yes. **Prerequisites:** #3296 and customer signal connection. See M5029 pages.

Process Interrupt (#5710): Converts a Digital Input Group (#3289) to a process interrupt group. **Limitations:** #5710 cannot be installed on Digital Input Non-Isolated (#3292). **Maximum:** Two per 5013. Can only be used with the first two groups of Digital Input Group (#3289) in a 5013. **Field Installation:** Yes. **Prerequisites:** #3289.

2790 Control (#8195): Interface for 2790 Data Communication devices. For 2790 devices supported by programming, see MSP/7 in programming pages. **Limitations:** Online diagnostics are available for maintenance of the 2790 - System/7 and must be implemented on all systems which include a 2792 or have more than 16 area stations. See "System/7 Macro Library/Relocatable", PP 5707-AC1, in programming pages. All 5012 and 5013 modules with 2790 Control (#8195) must reside within the same 5026 Enclosure mdl C or D. **Maximum:** One per 5013, four per System/7. MSP/7 provides support for a maximum of four 2792 mdl 1s (up to two per 2790 control) or a maximum of 64 2791/2792 mdl 1/2793s (16 per 2790 control). **Field Installation:** Yes. **Prerequisites:** Customer signal connection. See M5029 pages.

MODEL CONVERSIONS (None)

ACCESSORIES

Attachment Accessories: Termination cards and connectors for customer signal wires are provided as accessories. For details, see M5029 pages.

SUPPLIES (None)

5014 ANALOG INPUT MODULE

PURPOSE

To provide System/7 with the capability to use voltage signals as input data. The 5014 Analog Input Module provides capability for up to 128 analog input points.

MODELS

Model B1	B01	Scanning rate up to 200 points per second.
Model C1	C01	Scanning rate up to 20,000 points per second.
Model D1	D01	Scanning rate up to 100 points per second.
Model E1	E01	Expander for 5014 model D1.
Model E2	E02	Expander for 5014 model B1.

Limitations: The first mdl E1 must be located directly under its associated mdl D1. The second mdl E1 must be located directly under the first mdl E1. The first mdl E2 must be located directly under its associated mdl B1. The second mdl E2 must be located directly under the first mdl E2.

Maximum Configuration: Total number of Input/Output Modules (5012, 5013, 5014, 5022, and customer product modules in any combination) per system cannot exceed 11.

Prerequisites: One module location in 5026 Enclosure mdl A2, C3, C6, D3, or D6.

HIGHLIGHTS

Provides analog input capability including multiplexing, amplification, and analog-to-digital conversion.

Model Descriptions:

Mdl B1: Provides amplification, analog-to-digital conversion, and addressing of 128 analog input points at a scanning rate up to 200 points per second using mercury-wetted relay multiplexers. A special feature provides addressing for an additional 256 points in two attached mdl E2s (total 384 points).

Mdl C1: Provides amplification, analog-to-digital conversion, and addressing of 128 analog input points at a scanning rate up to 20,000 points per second using solid state multiplexers. The maximum scanning rate is dependent upon the input signal level and mode of operation. Low level signals may be scanned at a maximum rate of 14,000 points per second. High level signals may be scanned at a maximum rate of 20,000 points per second. Maximum scanning rate with auto-ranging is 7,000 points per second.

Mdl D1: Provides amplification, analog-to-digital conversion, and addressing of 384 analog input points at a scanning rate up to 100 points per second using mercury-wetted relay or dry-contact relay multiplexers. The first 128 points of relay multiplexers are installed in the mdl D1. The second 128 points of relay multiplexers are installed in a mdl E1 attached to the mdl D1. The third 128 points of relay multiplexers are installed in a mdl E1 attached to the first mdl E1.

Mdl E1: Expansion mdl for mdl D1. Provides for 128 analog input points selected by mercury-wetted relay or dry-contact relay multiplexers. It is connected to and uses the amplification, analog-to-digital conversion, and addressing circuits of a mdl D1. The maximum scanning speed is the same as the mdl D1 (100 points per second). **Limitations:** The first mdl E1 must be located directly under the mdl D1 to which it is attached. The second mdl E1 must be located directly under the first mdl E1. **Maximum:** Two per 5014 mdl D1. **Prerequisites:** 5014 mdl D1.

Mdl E2: Expansion module for mdl B1. Provides for 128 analog input points selected by mercury-wetted relay multiplexers. It is connected to and uses the amplification, analog-to-digital conversion, and addressing circuits of a mdl B1. The maximum scanning speed is the same as the mdl B1 (200 points per second). **Limitations:** The first mdl E2 must be located directly under the mdl B1 to which it is attached. The second mdl E2 must be located directly under the first mdl E2. **Maximum:** Two per 5014 mdl B1. **Prerequisites:** #1250 on the 5014 mdl B1.

Input signals may range from 0 to +/- 5.12 volts full-scale with mercury-wetted relay multiplexers and solid state multiplexers. Input signals may range from -640mV to +5.12 volts full-scale with dry-contact relay multiplexers.

The analog-to-digital converter has a resolution of 14 bits plus sign. Analog conversion and point addressing of the multiplexers are under program control. Immediate and external synchronization operations are both available. A special feature provides for attachment of resistance bulb thermometer (RBT) termination cards for determining the reference junction temperature in thermocouple applications. Connection of customer signals and signal conditioning is achieved by termination cards in the customer access area at the back of the Analog Input Module.

Publications: *System/7 Summary* (GA34-0002), *IBM System/7 Installation Manual - Physical Planning* (GA34-0004).

SPECIFY

- Housing: For location of the 5014, specify as follows. If feature **#9141** was specified on the 5010, do not use the following specify features.

  #9143: Also enter the desired module location number, in the quantity column of the order form. See "Module Locations" table in M5026 pages under "Models". Specify **#9142**, on the 5010 Processor Module.

  #9144: For shipment without mounting in an enclosure (spare).

- Side Panels: Customer's signal wires enter through the rear side panels of the module. Three types of panels are available: Type 1 provides a slot for cables, Type 2 has individual holes for each pair of wires, Type 3 is a blank panel that can be customized by the customer. For details refer to *IBM System/7 Installation Manual - Physical Planning* (GA34-0004). Specify one: **#9511** for Side Panel Analog Type 1, **#9512** for Side Panel Analog Type 2, **#9513** for Side Panel Analog Type 3.

- On each 5014 mdl E specify one of the following:

  #9185: For expansion from 128 to 256 points. First 5014 mdl E is connected to a single 5014 mdl B or D.

  #9186: For expansion from 256 to 384 points. Second 5014 mdl E is connected to a single 5014 mdl B or D.

SPECIAL FEATURES

Amplifier High Level B (#1210): [Mdl B1] Provides a unity gain amplifier for high level analog input signals with a full-scale range of +/- 5.12 volts. **Limitations:** Cannot be ordered with Amplifier Multirange B (#1215). **Maximum:** One per 5014 mdl B1. **Field Installation:** Yes.

Amplifier High Level C (#1211): [Mdl C1] Provides a unity gain amplifier for high level analog input signals with a full-scale range of +/- 5.12 volts. **Limitations:** Cannot be ordered with Amplifier Multirange C (#1216). **Maximum:** One per 5014 mdl C1. **Field Installation:** Yes.

Amplifier High Level D (#1212): [Mdl D1] Provides a unity gain amplifier for high level analog input signals with a full-scale range of +/- 5.12 volts with Multiplexer/MR16 (#5247) or -640mV to +5.12 volts with Multiplexer/MD16 (#5245). **Limitations:** Cannot be ordered with Amplifier Multirange D (#1217). **Maximum:** One per 5014 mdl D1. **Field Installation:** Yes.

Amplifier Multirange B (#1215): [Mdl B1] Provides a multirange amplifier for analog input signals. The amplifier gains can be set by the program or determined automatically by the amplifier. Amplifier ranges are (plus or minus) 10mV, 20mV, 40mv, 80mV, 160mV, 640mV, and 5.12 volts full-scale. In program-selected-gain mode of operation, 14 bits of data plus sign are generated. In auto-ranging mode of operation, 12 bits of data plus sign are generated. The remaining three bits are used to indicate the range. **Limitations:** Cannot be ordered with Amplifier High Level B (#1210). **Maximum:** One per 5014 mdl B1. **Field Installation:** Yes.

Amplifier Multirange C (#1216): [Mdl C1] Provides a multirange amplifier for analog input signals. The amplifier gains can be set by the program or determined automatically by the amplifier. Amplifier ranges are (plus or minus) 10mV, 20mV, 40mV, 80mV, 160mV, 640mV, and 5.12 volts full-scale. In program-selected-gain mode of operation, 14 bits of data plus sign are generated. In auto-ranging mode of operation, 12 bits of data plus sign are generated. The remaining three bits are used to indicate the range. **Limitations:** Cannot be ordered with Amplifier High Level C (#1211). **Maximum:** One per 5014 mdl C1 **Field Installation:** Yes.

Amplifier Multirange D (#1217): [Mdl D1] Provides a multirange amplifier for analog input signals. The amplifier gain is set by the program. When used with Multiplexer/MR16 (#5247), the full-scale ranges are (plus or minus) 10mV, 20mV, 40mV, 80mV, 160mV, 640mV, and 5.12 volts. When used with Multiplexer/MD16 (#5245), all of the above ranges are available with the exception that the +/- 5.12 volt range is modified to the range of -640mV to +5.12 volts. 14 bits of data plus sign are generated. **Limitations:** Cannot be ordered with Amplifier High Level D (#1212). **Maximum:** One per 5014 mdl D1. **Field Installation:** Yes.

Analog Input Adapter B (#1230): [Mdl B1] Provides capability for two Multiplexer/MR16 (#5247) groups. **Maximum:** Four per 5014 mdl B1. **Field Installation:** Yes. **Prerequisites:** #1210 or #1215.

Analog Input Adapter C (#1231): [Mdl C1] Provides capability for two Multiplexer/MS16 (#5249) groups. **Maximum:** Four per 5014 mdl C1. **Field Installation:** Yes. **Prerequisites:** #1211 or #1216.

Analog Input Adapter D/E (#1233): [Mdl D1, E1, E2] Provides capability for two Multiplexer/MR16 (#5247) groups on mdl D1, E1, E2, or two Multiplexer/MD16 (#5245) groups on mdl D1, or E1. **Maximum:** Four per 5014 mdl D1, E1, or E2. **Field Installation:** Yes. **Prerequisites:** #1212 or #1217 on 5014 mdl D1.

5014 Analog Input Module (cont'd)

Analog Input Expander B (#1250): [Mdl B1] Provides the capability to attach one or two 5014 mdl E2s to a 5014 mdl B1. This provides up to 384 analog input point addresses on a 5014 mdl B1. **Maximum:** One per 5014 mdl B1. **Field Installation:** Yes. **Prerequisites:** #1210 or #1215.

Multiplexer/MD16 (#5245): [Mdl D1, E1] Provides a group of 16 analog input points. Input points are multiplexed by dry-contact relays. Input signals can be in the range of -640mV to +5.12 volts. **Limitations:** The combined quantity of Multiplexer/MD16 (#5245) and Multiplexer/MR16 (#5247) must not exceed two per Analog Input Adapter D/E (#1233). Common-mode voltage must not exceed 100 volts and the average sampling rate per point must not exceed 20 samples per minute when averaged over at least 24 hours. This means that a single input point must not be addressed more than 28,800 times in 24 hours. **Maximum:** Two per Analog Input Adapter D/E (#1233). **Field Installation:** Yes. **Prerequisites:** #1233 and customer signal connection. See M5029 pages.

Multiplexer/MR16 (#5247): [Mdl B1, D1, E1, E2] Provides a group of 16 analog input points. Input points are multiplexed by mercury-wetted relays. Input signals can be in the range of +/- 5.12 volts. **Limitations:** The combined quantity of Multiplexer/MR16 (#5247) and Multiplexer/MD16 (#5245) must not exceed two per Analog Input Adapter B (#1230) or Analog Input Adapter D/E (#1233). Common-mode voltage must not exceed 250 volts and the average sampling rate is not limited. **Maximum:** Two per Analog Input Adapter B (#1230) or Analog Input Adapter D/E (#1233). **Field Installation:** Yes. **Prerequisites:** #1230 on 5014 mdl B1 or #1233 on mdl D1, E1, or E2. Customer signal connection required. See M5029 pages.

Multiplexer/MS16 (#5249): [Mdl C1] Provides a group of 16 analog input points. Input points are multiplexed by solid state switches. Input signals can be in the range of +/- 5.12 volts. **Limitations:** Common-mode voltage must not exceed 10 volts and the average sampling rate is not limited. **Maximum:** Two per Analog Input Adapter C (#1231). **Field Installation:** Yes. **Prerequisites:** #1231 and customer signal connection. See M5029 pages.

Temperature Reference Attachment (#7830): [Mdl B1, C1, D1] Provides the capability to attach termination cards containing resistance bulb thermometers (RBT). See M5029 pages. When this feature is installed in a 5014 mdl B1 or D1 the capability is extended to 5014 mdl E1 or E2 associated with it. **Limitations:** A maximum of 32 RBT termination cards can be attached to one Temperature Reference Attachment (#7830). **Maximum:** One per 5014 mdl B1, C1, or D1. **Field Installation:** Yes. **Prerequisites:** #1215, #1216 or #1217.

Maximum Feature Quantity Per Mdl:

Feature	Mdl B1 200 pt per sec	Mdl C1 20K pt per sec	Mdl D1 100 pt per sec	Mdl E1 100 pt per sec	Mdl E2 200 pt per sec
Amplifier High Level B (#1210)	1	0	0	0	0
Amplifier High Level C (#1211)	0	1	0	0	0
Amplifier High Level D (#1212)	0	0	1	0	0
Amplifier Multirange B (#1215)	1	0	0	0	0
Amplifier Multirange C (#1216)	0	1	0	0	0
Amplifier Multirange D (#1217)	0	0	1	0	0
Analog Input Adapter B (#1230)	4	0	0	0	0
Analog Input Adapter C (#1231)	0	4	0	0	0
Analog Input Adapter D/E (#1233)	0	0	4	4	4
Analog Input Expander B (#1250)	1	0	0	0	0
Multiplexer/MD 16 (#5245)	0	0	8	8	0
Multiplexer/MR 16 (#5247)	8	0	8	8	8
Multiplexer/MS 16 (#5249)	0	8	0	0	0
Temperature Reference Attachment (#7830)	1	1	1	0	0

MODEL CONVERSIONS

Conversions between model E1 and E2 are field installable. Conversions from B to C to D and vice versa are not recommended for field installation.

ACCESSORIES

See M5029 pages.

SUPPLIES (None)

5022 DISK STORAGE MODULE

PURPOSE

Disk storage unit for System/7.

MODELS

Model 1	001	Single drive, 2.457 million 16-bit words. Access 200 cylinders on removable cartridge and 200 cylinders on its non-removable disk. 269 millisecond average access time.
Model 2	002	Single drive, same as mdl 1 except 126 millisecond average access time.
Model 3	003	Single drive, 1.228 million 16-bit words. Access 200 cylinders on one non-removable disk. Average access time 269 milliseconds.
Model 4	004	Single drive, same as mdl 3 except 126 millisecond average access time.

Prerequisites:

1. An available I/O module location in the 5026 Enclosure.
2. Each 5022 mdl 1 or 2 requires a 5440 Disk Cartridge. See "Supplies".
3. Integral Power Supply (#4650) is required for:
   - Each additional 5022 after the first 5022 within a single 5026 Enclosure.
   - A 5022 installed in a 5026 mdl A2. See "Special Features".

HIGHLIGHTS

Removable Disk Cartridges: Each 5022 mdl 1 or 2 uses a removable 5440 Disk Cartridge that provides virtually unlimited offline disk storage. 5440s must be ordered separately.

Cylinder Concept: The access mechanism with four vertically aligned heads gives access to the top and bottom tracks of both the removable 5440 and the 5022s non-removable disk for mdl 1 or mdl 2. With one positioning of the access mechanism, 12,288 16-bit words are available. The access mechanism on mdl 3 or mdl 4 with two vertical aligned heads gives access to the top and bottom tracks of the non-removable disk, providing 6,144 16-bit words with one positioning of the access mechanism.

Formats: Each of the 200 customer-usable cylinders, three alternate cylinders and one CE cylinder on each disk is composed of two tracks of 24 sectors each. Each sector provides a fixed-length 128 word data field.

Housing: The 5022 can reside in an I/O module location in any of the 5026 enclosures. However, it is recommended that it be installed in the bottom module location for user accessability. See "Housing" under "Specify".

Access Times: On mdls 1 and 3, minimum access time is 39 milliseconds, average is 269 milliseconds and maximum is 750 milliseconds. On mdls 2 and 4, minimum access time is 28 milliseconds, average is 126 milliseconds and maximum is 255 milliseconds.

Data Transfer Rate: The disk rotates at 1,500 rpm, providing a data rate of 99,500 words per second and a rotational period of 40 milliseconds.

Environment: The 5022 operates within the following temperature and humidity range.

Temperature *	15°C-32°C (60°F-90°F)
Relative Humidity	8-95%
Max. Wet Bulb Temperature	29°C (85°F)
Non-Operating Temperature	10°C-43°C (50°F-110°F)
Non-Operating Humidity	8-95%

* In systems without Internal Air Isolation (#4621 or #4622 on 5026), the maximum operating temperature for a 5022 mdl 3 or 4 (fixed pack) is 40°C (105°F) if the disk is located in the bottom position of a 5026 Enclosure (module locations 2, 5, 8, or 11).

Configuration: Multiple 5022s may be installed on a single System/7. IBM-supplied programming support for Disk Cycle Steal (#2664) is mutually exclusive with Direct Program Control Disk support. Drives of both types are not supported on the same system. Multiple drives of either type are supported.

Publications: *System/7 Summary* (GA34-0002).

SPECIFY

- Voltage: Must be consistent with that of the 5026 Enclosure. See "Voltage" under "Specify" in the M5026 pages.
- Housing:

  #9143: For location of the module, also enter the desired module location number in the quantity column of the order form. See "Module Locations" chart in M5026 pages.

  #9144: For shipment without mounting in an enclosure (spare).

Limitations: The following limitations apply to the location where a 5022 module can be installed in a 5026 Enclosure. A 5022 cannot be located in a top position of a 5026 (module locations 0, 3, 6, or 9). It is recommended that 5022s be located in the bottom position of a 5026 enclosure (module locations 2, 5, 8, or 11). Only when absolutely necessary should a 5022 be located in the middle position of a 5026 enclosure (module locations 1, 4, 7, or 10). Locating a 5022 mdl 3 or 4 in the bottom position of a 5026 enclosure in systems without Internal Air Isolation (#4621 or #4622) will increase its maximum allowable operating temperature from 32°C to 40°C (90°F to 105°F). Housing a 5022 in a 5026 mdl D3 or D6 is not recommended due to the increased processor loading during data transfer.

SPECIAL FEATURES

Disk Cycle Steal (#2664): Provides data transfers between the 5022 and main storage of a 5010 equipped with companion Cycle Steal Basic (#2662). **Limitations:** One per 5022. **Field Installation:** Yes. **Prerequisites:** #2662 on the 5010.

Integral Power Supply (#4650): Provides 24 volt power supply required for, (1) Installation of each additional 5022 after the first 5022 within a single 5026 Enclosure, (2) Installation of 5022 on a 5026 Enclosure mdl A2 . **Field Installation:** Yes.

RPQs

5998-T01 3340 Direct Access Storage Facility Attachment (RPQ DO8331): Provides a module with the basic control logic for attaching and controlling the 3340 Direct Access Storage Facility to the System/7. The 3340 used with the System/7 may consist of up to eight drives. The prerequisite 3340 mdl A02 contains two drives and a control unit. Up to three additional 3340 mdl B units may be attached giving maximum configuration of eight drives. Allows the 3348 Data Module to be formatted to S/370 OS/VS and DOS/VS Standards. It also allows the System/7 programmer to access the 3348 Data Module as multiple 5022s and/or with a new direct access method. Application programs using MSP/7 symbolic file support access methods can be converted by changing parameters in specification macros such as #DIT, #DISK, #CONF, etc., and recompiling using programming supplied with the hardware (PSH). The 3340 is an initial program load device. The 3340 can be used as an auto-restart device in conjunction with 5026 Power Fail Detect (#5731). **Limitations:** Limited to 5026 mdl C03 equipped with 60 Hz high-power RPQ DO8332 or a 5026 mdl C06. The 5998-T01 must be mounted in position 2 of the 5026. Power loading characteristics influence the maximum configuration. May not be installed in environments where airborne contaminants exist. Installation of Internal Air Isolation (#4621), is not permitted.

This RPQ restricts the System/7 to Class B environment:

Temperature	15.6°C-32.2°C (60°F-90°F)
Relative Humidity	8 to 80%
Non-Operating Temperature	10°C-43.3°C (50°F-110°F)
Max. Wet Bulb Temperature	22.8°C (73.0°F)

3340 features not supported by this RPQ are: Remote Switch Attachment (#6148), Rotational Position Sensing (#6201, #6202), String Switch (#8150). A 5022 module cannot be mounted in Position 1 of a 5026 Enclosure when a 5998-T01 is mounted in Position 2. 5998-T01 to be installed in Position 2 of 5026. Specify **#9590** (System/7 mdl E) on 3340 mdl A02. Refer to M3340 and 3348 pages for further details. Power for 3340 must be consistent with that of 5026 Enclosure. **Maximum:** One 5998-T01 per System/7. **Prerequisites:** 5010 mdl E28 with #2662. If ordered for C03 Enclosure, RPQ DO8332 is required. 5028 required for each system.

MODEL CONVERSIONS

Field Installable.

ACCESSORIES (None)

SUPPLIES

Disk Cartridge: 5022 requires a 5440 Disk Cartridge that must be ordered seperately. Contact IBM for details.

5024 I/O ATTACHMENT ENCLOSURE

PURPOSE

The 5024 provides line printing and/or card reading capability for System/7.

MODELS

Model 1	001	Basic enclosure with line printer.
Model 2	002	Basic enclosure with 2502 Attachment.
Model 3	003	Expanded enclosure with line printer and 2502 Attachment.

Prerequisites: #2662 and #4115 on a 5010 mdl E. For 5024 mdls 2 or 3, a 2502 mdl A2 with specify features **#9901** for 115V AC and **#9046** for white color.

HIGHLIGHTS

Enclosure: The 5024 is a data processing oriented addition to the System/7. The enclosure provides basic space, power, and logic to attach a printer, a card reader, or both. If both a printer and a card reader are utilized, an enclosure expansion is provided. The 5024 attaches to any 5010 Processor Module mdl E equipped with 5024 Attachment (#4115). A fixed-length cable is supplied with the 5024. See *System/7 Installation Manual - Physical Planning* (GA34-0004) for further details.

5024 Attachment (#4115) on the 5010: Provides the interface between the 5010 mdl E and the 5024 and handles data transfers between 5010 mdl E storage and the 5024 on a cycle-steal basis. Cycle-Steal Basic (#2662) is required on the 5010 mdl E. If both a card reader and a printer are attached, operations may be interleaved but not overlapped. In the interleave mode of operation, performance of the devices will be less than the individual unit's rated speeds of 300 cpm reading and 155 lpm printing. For more details, see *System/7 Summary* (GA34-0002). Only one 5024 may be attached per 5010 mdl E. The 5024 Attachment is mutually exclusive with 1200 bps Integrated Modems (#5500, #5501) and S/360 and S/370 Channel Attachment (RPQ D08112). All systems planning to use any 5010 RPQ (except D08119, Sensor Based Control Adapter) together with #4115 must resubmit the RPQ for evaluation before it is proposed to the customer.

Publications: *System/7 Summary* (GA34-0002) and *System/7 Installation Manual - Physical Planning* (GA34-0004).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): Specify **#9901**.
- Color: Specify **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- Print Belt: Specify **#9490** for 96-character belt, **#9491** for 64-character belt, or **#9492** for 48-character belt. The 48-character belt uses a character set with equal sign, left parenthesis, and right parenthesis rather than cent sign, percent sign, and comma, respectively.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Conversions from model 1 or 2 to model 3 are field installable. No other model conversions can be made.

ACCESSORIES

Forms Stand (#4450): Permits feeding of continuous forms from the carton and provides for forms stacking after printing. This accessory is a one-shelf forms stand.

Print Belt, Add'l: Permits the customer to print more than one character set for various applications. Can be interchangeably used with the belt provided with the machine. Order by feature number with the machine or by MES for field installation.

48-character	**#5552**
64-character	**#5551**
96-character	**#5550**

SUPPLIES (None)

5026 ENCLOSURE

PURPOSE

To provide housing and power for System/7 Processor and Input/Output Modules.

MODELS

Model A2	A02	2-Position, for a Processor Module and one I/O Module.
Model C3	C03	3-Position, for a Processor Module and two I/O Modules.
Model C6	C06	6-Position, for a Processor Module and five I/O Modules.
Model D3	D03	3-Position Extension, three additional I/O Module locations with C3 or C6.
Model D6	D06	6-Position Extension, six additional I/O Module locations with C3 or C6.

Mdl D3 or D6 is cable attached to mdl C3 or C6 and may be located up to 60 meters (200 feet) from the mdl C3 or C6.

Prerequisites: Mdls D3 and D6 require a DX Enclosure Attachment (#3715) in mdls C3 and C6 enclosures.

Module Locations:

Mdl	Module Locations (front view)											
C3	0	1	2	-	-	-	-	-	-	-	-	-
C6	0	1	2	3	4	5	-	-	-	-	-	-
D3	-	-	-	-	-	-	6	7	8	-	-	-
D6	-	-	-	-	-	-	6	7	8	9	10	11

HIGHLIGHTS

Provides housing for the Processor Module and all Input/Output Modules. Also included are the necessary power supplies (see RPQ D08331 for power restrictions on 3340 Attachment) and interface connections for all modules. The Processor Module must be located in the first module location of A2, C3, or C6 mdls. I/O Modules may be housed in any of the remaining module locations, except Module 5998-TO1 which must be located in module position 2 and if it is installed, a 5022 module may not be located in module position 1. The D3 or D6 mdl may be located up to 60 meters (200 feet) from the C3 or C6 mdl. An Internal Air Isolation feature (not available on mdl A2) seals the enclosure and prevents the outside air from entering into the enclosure. Internal air is filtered through an activated carbon filtration system. Heat within the enclosure is dissipated through an air-to-air heat exchanger. This feature allows the System/7 to be used in environments where airborne elements might harm the electronic circuitry. Because this feature is not available on mdl A2 enclosures, in environments where there is a possibility of existence of contaminants, a C3 or C6 mdl must be used.

An Early Warning corrosion detector card is installed as a standard item in every System/7 enclosure. This card is specifically designed to be sensitive to airborne contaminants. Inspection of this card gives an early warning so that appropriate action for protection of the system may be taken.

A Power Failure Detect Feature (#5731) provides an early indication of imminent power failure so that the program can bring the system to an orderly halt. When power is restored, the auto-restart function of the system can provide automatic program load from either the Operator Station or host teleprocessing link. The processor console switch must be appropriately set.

A thermal detector in the enclosure generates a warning interrupt if the internal temperature of the enclosure rises above a specified operating level. The thermal detector causes a power shutdown after the warning signal is generated. The time between the thermal interrupt and the power shutdown could be used by the program to cause an orderly halt of the operation.

Publications: *System/7 Summary* (GA34-0002).

SPECIFY

- Voltage:

  Mdl A2, C3, D3 (AC, 1-phase, 60 Hz): For 208V, specify **#9902** or for 230V **#9904**.

  Mdl C3, C6, D3, D6 (AC, 3-phase, 60 Hz): For 208V, specify **#9903** or for 230V **#9905**.

  Note: When options are available, use of 3-phase power is recommended. This would eliminate the need for rewiring for system expansion to mdls C6 or D6.

- 5010 Power: Specify **#9490** for 5010 mdl A or B, or **#9491** for 5010 mdl E.

- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.

- Storage Power Addition (#7401) required for systems with more than 8K of storage (5010 mdls AXX and BXX only). See "Special Features".

- Kickstrips: **#9431**, if needed. When kickstrips are installed, the open area underneath the machine is enclosed. This may be inconvenient for the operator or for signal wiring. Use of kickstrips is recommended only when the physical appearance of the system is of prime importance.

- Cables: For System/7 external cables for 5026 mdl D3 and D6, supplied by IBM, use cable order form number Z120-2368.

SPECIAL FEATURES

DX Enclosure Attachment (#3715): [Mdls C3, C6] This feature provides for the connection of the Enclosure mdls D3 or D6 to mdls C3 or C6. **Maximum:** One per system. **Field Installation:** Yes.

Internal Air Isolation 3 (#4621): (not with 5998-TO1) [Mdls C3, D3] This feature seals the mdl C3 or D3 enclosures and provides an air-to-air heat exchanger for dissipation of the internal heat. An activated carbon filtration system filters the internal air. The feature isolates the inside air from the outside and is used in severe industrial environments where gaseous contaminants harmful to electronic circuitry exist. **Limitations:** Proposals are not to recommend the #4621 unless the FE Installation Planning Representative has determined that the feature is required, or the internal system detector indicates measures are necessary to protect an installed system. **Maximum:** One per C3 or D3 enclosure. **Field Installation:** Yes.

Internal Air Isolation 6 (#4622): (not with 5998-TO1) [Mdls C6, D6] This feature is identical to #4621 and is provided for mdl C6 or D6 enclosures. **Maximum:** One per C6 or D6 enclosure. **Field Installation:** Yes.

Power Failure Detect (#5731): Provides a signal to the system when the input AC voltage falls below a safe level. This signal is used by the program to bring the system to an orderly halt. This feature also provides auto-restart which can automatically restart system power when input AC power is restored. **Maximum:** One per enclosure. **Field Installation:** Yes.

Storage Power Addition (#7401): [Mdls A2, C3, C6] Provides a power supply for the 5010 Processor Module mdls AXX and BXX only, with storage in excess of 8K words. **Maximum:** One per system. **Field Installation:** Yes.

MODEL CONVERSIONS

Conversion from C3 to C6 and from D3 to D6 are field installable. No other model changes can be made.

ACCESSORIES

Cables: See "Specify".

SUPPLIES (None)

5028 OPERATOR STATION

PURPOSE

Purpose: To provide an operator and computer input/output device for System/7.

MODELS

Model 001:

Prerequisites: 5010.

HIGHLIGHTS

The 5028 Operator Station provides a keyboard, printer, paper tape punch, and paper tape reader. It is attached via a multi-wire cable to a System/7 Processor Module. The printer, paper tape reader, and paper tape punch operate at a speed of 10 characters per second. Transmission code is 7-level ASCII, with the 8th level for "even parity". The paper tape reader and punch can also read and punch 8-bit binary code without parity. The recording tape is one-inch wide and may be paper (P/N 304469 or 426362), or lubricated non-metallic plastic. A printing line is 72 characters with six lines per inch. Only single-part paper may be used for printing.

Local remote switches provide for offline and online operations. The 5028 is used for program loading, data input/output, and paper tape preparation.

The 5028 Operator Station must be available for system maintenance in all configurations. An Operator Station may be shared among several System/7s, except those with 5998-TO1. The customer must attach the Operator Station to the system requiring maintenance prior to the arrival of a customer engineer. Delays due to the relocation of an Operator Station from one system to another may result in extended down-time. Before ordering a system without an Operator Station, the customer must realize the above condition as well as the procedure for diconnecting an Operator Station that requires these steps: stop system, power off OperatorStation, disconnect Operator Station, start system.

Publications: *System/7 Summary* (GA34-0002).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9901**.
- Cables: Use cable order form Z120-2498.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Ribbon: A black ribbon, P/N 1136260 or equivalent, is required.

Paper Tape: Paper tape P/N 304469 or 426362.

5029 MDL 1 ATTACHMENT ACCESSORIES

PURPOSE

5029 Model 1 is an accessory control number used for ordering components and termination cards for connection of customer signal wires to the System/7 interface. 5029 is not a machine in itself; but it is entered in the machine field for ordering. Specify 5029 in the machine field only once per system for all termination cards and components. Features on 5029 cannot be ordered by MES. Accessories in the 5029 are for purchase only and no maintenance service is available. Normal parts warranty of three months applies to the accessories. **Note:** Agreement for Purchase of IBM Machines, Z120-7086, is not required for 5029 mdl 1.

HIGHLIGHTS

5029 Attachment Accessories provide a number of cards and components used for connection of customer signals to System/7 as well as conditioning and filtering of the signals. Standard circuits are offered for each type of sensor I/O point. Special circuits can be constructed by the customer on the custom cards. Termination cards provide a screw-down terminal for connection of customer wires. This feature offers several advantages:

- The customer can wire the signals to the cards prior to system arrival at the site, thereby reducing the installation time.
- When a system is upgraded, rewiring is merely a matter of unplugging the cards from the old module and plugging them into the new module.
- Sensor-based points may be quickly disconnected for trouble shooting.

Publications: *System/7 Summary* (GA34-0002).

ACCESSORIES

The tables below show a summary of the requirements for the attachment accessories.

AI Custom (#1110): This card contains screw-terminals for customer connection of four analog input signals to Multiplexer/MR16 (#5247) in 5014, Multiplexer/MD16 (#5245) in 5014, Multiplexer/MR4 (#5246) in 5012, Multiplexer/MS16 (#5249) in 5014, or Multiplexer/MS4 (#5248) in 5012. Solder terminals are provided for the customer addition of networks to each point to complete the connection. This card should be used where customers desire to construct analog input networks of their own design. **Limitations:** Use of this card can affect accuracy and repeatability of the analog-to-digital conversion of analog signals connected to it.

AI/MR Filter (#1113): This card contains filter circuits and screw-terminals for customer connection of four analog input signals to Multiplexer/MR16 (#5247) in 5014, Multiplexer/MD16 (#5245) in 5014, or Multiplexer/MR4 (#5246) in 5012. Current resistors can be added to the terminals. No provision is made to add other components.

AI/MR RBT/Filter (#1114): This card contains one resistance bulb thermometer circuit plus three filter circuits for customer connection of three analog input signals to Multiplexer/MR16 (#5247) in 5014, Multiplexer/MD16 (#5245) in 5014, or Multiplexer/MR4 (#5246) in 5012. The resistance bulb thermometer circuit output can be used to calculate a reference junction temperature. Current resistors cannot be added to the terminals. No provision is made to add components. **Maximum:** 32 per Temperature Reference Attachment (#7830). **Prerequisites:** #7830 in 5012 or 5014.

AI/MS Non-Polarized Filter (#1121): This card contains filter circuits and screw-terminals for customer connection of four analog input signals to Multiplexer/MSl6 (#5249) in 5014 or Multiplexer/MS4 (#5248) in 5012. The filter circuit is a non-polarized network, and therefore can accept both positive and negative signals. Current resistors can be added to the terminals. No provision is made to add other components.

AI/MS Connector (#1122): This card contains circuits and screw terminals for customer connection of four analog input signals to Multiplexer/MS16 (#5249) in 5014 or Multiplexer/MS4 (#5248) in 5012. No filter circuits are provided. Current resistors can be added to the terminals. No provision is made to add other components. **Limitations:** Use of this card can affect accuracy and repeatability of the analog-to-digital conversion of analog signals connected to it.

AI/MS RBT/Non-Polarized Filter (#1123): This card contains one resistance bulb thermometer circuit plus three filter circuits for customer connection of three analog input signals to Multiplexer/MS16 (#5249) in 5014 or Multiplexer/MS4 (#5248) in 5012. The resistance bulb thermometer circuit output can be used to calculate a reference junction temperature. The filter circuit is a non-polarized network and accepts both positive and negative signals. Current resistors cannot be added to the terminals. No provision is made to add other components. **Maximum:** 32 per Temperature Reference Attachment (#7830). **Prerequisites:** #7830 in 5012 or 5014.

AI/MS Polarized Filter (#1124): This card is identical to the AI/MS Non-Polarized Filter (#1121), except the filter circuit is polarized, and therefore accepts only a single polarity signal.

Voltage Check Card (#1184): This card provides seven voltage outputs of either polarity suitable for use as an analog input checking source. The card can be plugged into a specific socket and wired to one analog input point at a time to be used as a program-addressable voltage check source. The following voltages are provided: 4 volts, 512 millivolts, l28 millivolts, 64 millivolts, 32 millivolts, 15 millivolts, and 5 millivolts.

Connector, 3-Pin (#1240): This cable plug is used to connect the customer analog output signal wires to the analog output points on the 5012. One is required for each Analog Output Point (#1246) in 5012. Installation of wires on the connector is a customer responsibility.

Capacitor Non-Polarized 10uF (#1570): A special capacitor used to construct the network on the AI/MS Non-Polarized Filter (#1121) termination card. This 10 microfarad, 5 volt, non-polarized capacitor has very low dielectric absorption, low leakage, and small physical size.

Current Resistor 4-20mA (#1670): This precision resistor can be connected across analog input terminals to act as a current shunt. It converts 4 to 20 milliamperes into 128 to 640 millivolts. **Limitations:** Cannot be used on analog input termination cards AI/MR RBT/Filter (#1114) or AI/MS RBT/Non-Polarized Filter (#1123).

Current Resistor 10-50mA (#1671): This precision resistor can be connected across analog input terminals to act as a current shunt. It converts 10 to 50 milliamperes into 128 to 640 millivolts. **Limitations:** Cannot be used on analog input termination cards AI/MR RBT/Filter (#1114) or AI/MS RBT/Non-Polarized Filter (#1123).

DI Contact Sense Non-Isolated (#3280): This card contains contact sensing circuits and screw-terminals for customer connection of eight digital input signals to Digital Input Non-Isolated (#3292) in the 5012 or 5013. One side of each contact sensing point is connected to a common 48 volts DC to provide contact sensing capability. No provision is made to add components.

DI Contact Sense (#3281): This card contains contact sensing circuits and screw-terminals for customer connection of eight digital input signals to Digital Input Group (#3289) in 5012 or 5013 or Process Interrupt (#5710) in 5012 or 5013. One side of each contact sensing point is connected to a common 48 volts DC to provide contact sensing capability. No provision is made to add components.

DI Custom (#3282): This card contains screw-terminals for customer connection of eight digital input signals to Digital Input Group (#3289) in 5012 or 5013, Digital Input Non-Insolated (#3292) in 5012 or 5013, or Process Interrupt (#5710) in 5012 or 5013. Solder terminals are provided for the customer addition of networks to each point to complete the connection. This card should be used where customers desire to use digital input networks of their own design.

DI Voltage Sense (#3283): This card contains circuits and screw terminals for customer connection of eight contact digital input signals to Digital Input Group (#3289) in 5012 or 5013 or Process Interrupt (#5710) in 5012 or 5013. No provision is made to add components on this card.

DO Connector (#3410): This card contains screw-terminals for direct customer connection of eight digit output signals to DO Low Power Group (#3421) in 5012 or 5013, DO Medium Power Group (#3422) in 5012 or 5013, DO Medium Power Non-Isolated (#3424) in 5012 or 5013, or DO Contact Group (#3420) in 5012 or 5013. No provision is made to add components.

DO Custom (#3430): This card contains screw-terminals for customer connection of eight digital output signals to DO Low Power Group (#3421) in 5012 or 5013, DO Medium Power Group (#3422) in 5012 or 5013, DO Medium Power Non-Isolated (#3424) in 5012 or 5013, or DO Contact Group (#3420) in 5012 or 5013. Solder terminals are provided for the customer-addition of networks to each point.

Connector, 4-Pin (#8185): This plug is used to connect the 2790 loop transmission lines to the 2790 Control (#8195) in the 5012. One is required for the #8195. This plug is also used to connect to the external synchronization control on the 5012 and 5014. One is required for each 5014 and one for each 5012 with Analog Input Control Mdl B (#1232) or Analog Input Control Mdl C (#1213). Installation of wires on the connector is a customer responsibility.

5029 Attachment Accessories for System/7: Components required to connect to each sensor input/output feature.

Connector, 4-Pin (#8185)	One per I/O module. One per loop on 2790 Control (#8195) in 5012 or 5013, four loops per system.
AI Voltage Check Card (#1184)	Available to check AI. Maximum: One per 5012 with #1213 or #1232. Four per 5014.
Capacitor Non-Polarized 10uF (#1570)	Available to construct custom networks.

5081 DISPLAY

PURPOSE

A raster display, available in a color or monochrome model, for the 5080 Graphics System. The user interacts with the display via an alphameric or APL keyboard, a 5083 tablet, a lighted program function keyboard, and/or a Dials feature when these are connected to a 5085 Graphics Processor.

MODELS

Model 1 001 Monochrome Display

Model 2 002 Color Display

Prerequisites: A 5085 Graphics Processor. See M5085 pages for peripheral attachments for use with the 5081.

HIGHLIGHTS

- A steady, bright image using special phosphors uniquely adapted to a 50 Hz non-interlaced refresh rate.
- A sharp image on both the color and monochrome mdls because of the small pixel (spot) sizes they generate.
- Up to 256 simultaneously-displayable gray shades (mdl 1) or colors (mdl 2) selected from a range of 4,096.
- User controls for coarse convergence adjustment (mdl 2 only), picture centering, contrast and brightness, as well as four indicators for fault isolation are located at the bottom of the front of the display behind a flip-down cover.
- An anti-reflective treatment in both the color and the monochrome display screens for clear, comfortable operator viewing.
- Enhanced contrast through the use of special filter additives to the glass on the display.
- A 19-inch (diagonal) screen with a 1,024 x 1,024 pixel array displayed on an area 284mm (11.2 in.) by 284mm (11.2 in.).
- Compact dimensions - 490mm (19.29 in.) high, 490mm (19.29 in.) wide, and 553mm (21.77 in.) deep.
- A convenient tilt-and-swivel mechanism for user selection of viewing positions.
- A plug-in Peripheral Connection Assembly (PCA) can be housed in the base of the 5081 display for attachment of an Alphameric or APL Keyboard, Dials feature, a 5083 Tablet, and a Lighted Program Function Keyboard. The PCA is attached to the 5085 Graphics Processor by a single, 3.0m (9.8 ft.) cable which eliminates the need for separate, long cables connecting the 5085 to each peripheral device.
- Each 5081 provides an RS 343 attachment for the cable connection of an additional 5081 of the same mdl number. All 5081s connected in this fashion display the same picture.

Peripherals: The 5085 Processor controls the following peripherals which can be attached via a connection box stored in the tilt-swivel base of the 5081 Display:

5083 Tablet (see M5083 pages)
Dials (see M5085 pages)
Alphameric Keyboard (see M5085 pages)
Lighted Program Function Keyboard (see M5085 pages)

Physical Specifications:

	Model 1	Model 2
Width	490mm (19.29 in.)	490mm (19.29 in.)
Depth	553mm (21.77 in.)	553mm (21.77 in.)
Height	490mm (19.29 in.)	490mm (19.29 in.)
Weight	39.0kg (86 pounds)	44.0kg (97 pounds)

Customer Responsibilities: The customer is responsible for:

- Physical planning and site preparation.
- Provision of the required electrical service and facilities. See *5080 Graphics System Site Planning and Preparation Guide*, GA23-0129, for details on these responsibilities.
- Setup and installation of the 5081.
- Training of 5081 operators.

Maintenance: The 5081 is offered with Field Engineering on-site service under an MMMC.

Cables: Cables from the 5085 to the 5081 (three video coaxial cables and the 3.0m (9.8 ft.) flat ribbon cable with a special connector for the attachment of peripheral devices) are supplied with the 5085.

Cables for the peripheral devices controlled by the 5085, but physically attached to the front of the 5081 Display, are supplied with each device except for the alphameric keyboard cables which are supplied with the 5085. See GA23-0129 for descriptions.

The attachment of additional (output only) color Displays to the first 5081 mdl 2 requires a customer-supplied video coaxial cable made up of a combination of three cables (RG-59/U type). The attachment of additional (output-only) mono Displays to the first 5081 mdl 1 requires a customer-supplied single video coaxial cable (RG-59/U type). See GA23-0129 for further descriptions.

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): Attachment to a 120V power source is required for the 5081 and the 5085. The 5081 and its controlling 5085 must both be connected to the same supply voltage phase.
- **For Additional Displays:** A 9 ft. linecord is supplied with each additional 5081. If a 6-foot linecord is required, specify **#9986**. For an additional 5081 attached to a 5085, or for additional 5081s attached to 5081s, specify **#2001**.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

5083 TABLET

PURPOSE

The Tablet is a thin flat-surfaced unit of compact design, which offers a comfortable, easy-to-use way for users to interact with, for example, the 5080 Graphics System's 5081 Display and 5085 Graphics Processor. It has a palm rest and tilt-height adjustments so it can be used either on a desk or a user's lap. The X,Y coordinate position of the cursor or stylus is transmitted, for example, to the 5085 Graphics Processor when, and whenever, these units are moved on the tablet's active surface.

MODELS

Model 1 001

HIGHLIGHTS

- Has a resolution characteristic of 127mm (0.005 in.).
- The cursor feature provides users with a convenient hand-held "mouse-shaped" unit which has four buttons for application use and a fine cross-hair for precise alignment and accurate digitizing of source data.
- The stylus feature provides a pen-like device for user interaction with the 5080 system. An indication is provided to the application program when the user activates the stylus tip switch by pressing the stylus tip to the tablet surface. The tactile feedback from pressing the stylus tip assures the user that a selection has been made.
- Can be used for 3250 light-pen emulation using either the stylus or cursor feature.

Description: Has dimensions of 400mm (15.75 in.) wide, 431.5mm (17 in.) long, and 21mm (0.82 in.) deep which includes an active area of 292mm (11.5 in.) by 292mm (11.5 in.). Weighs 2.9kg (6.5 pounds). Has a thin cable connection to the Peripheral Control Assembly in the base of the 5081 Display.

Customer Responsibilities: The customer is responsible for setup and installation of the 5083 and training of the 5083 user.

Customer Problem Analysis and Resolution: The 5083 is offered with Field Engineering service under an MMMC.

SPECIFY (None)

SPECIAL FEATURES

Cursor (#1511): For user interaction with the displayed image through cursor location on the surface of the Tablet. Can also be used to emulate 3250 Light-Pen operation. Can be used for conveniently digitizing drawings placed on top of the Tablet surface. The cross-hair facilitates accurate positioning. Four buttons can be used to transmit additional information to the graphics application programs. Has cable to connect to the 5083 Tablet. **Maximum:** One. **Field Installation:** Yes. **Limitations:** Cannot be used concurrently with Stylus Feature (#6351).

Stylus (#6351): For user interaction with the displayed image through stylus pen contact with the surface of the Tablet. Can also be used to emulate 3250 Light-Pen operation. Has cable to connect to the 5083. **Maximum:** One. **Field Installation:** Yes. **Limitations:** Cannot be used concurrently with Cursor Feature (#1511).

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

5085 GRAPHICS PROCESSOR

PURPOSE

The 5085 has a comprehensive graphics architecture which includes 3250 Graphics Display System capability. The 5085 is dedicated to the operation of 5080 Graphics Systems units. The 5085 provides a powerful graphics order set with more than 75 orders and also controls the 5081/5085 workstations' display list buffers, concurrent graphics, and 3270 data mode sessions (with the optional 3270 feature), peripheral device attachments, and, for example, 7374 and 7375 color plotter attachments, and display functions. It contains up to 1.1 megabytes of system memory.

MODELS

Model 1 001 Configurable to individual application requirements.

Model 1 S01 Pre-configured with 128K bytes of storage, one increment of expansion pixel memory (#3621), an alphameric keyboard (#4631) and lighted program function keys (#4710). Associated 5081 Displays, 5083 Tablets, and 5088 Graphic Channel Controllers are orderable through normal ordering procedures.

Prerequisites: A 5088 Graphics Channel Controller or a 3258 Control Unit. Use of the 3258 limits the data rate to/from the 5085 to 1.0 megabits/second. It may be 2.0 megabits/second when using the 5088 ... provided no 3251/3255 workstations are attached. When a 3251/3255 workstation is in the configuration, the data rate must be 1.0 megabits/second.

Peripherals: The 5085 controls the following peripherals attached via connectors in the 5085's attached Peripheral Connection Assembly in the tilt-swivel base of the 5081 Display:

IBM 5083 Tablet (see M5083 pages)
Dials Feature (see "Special Features")
Alphameric Keyboard (see "Special Features")
APL Keyboard (see "Special Features")
Lighted Program Function Keyboard (See "Special Features")

Other devices are attachable through the 3270 and RS 232-C Attachment Feature (#5510). Two RS 232-C attachment ports are available. For example, both an 7374 and 7375 Color Plotter could be attached at the same time.

HIGHLIGHTS

- Compact size for convenient office placement ... fits beside a desk or under a table.
- 128K bytes of system memory for storage of display lists and 5085 control programming (expandable to 1.1 megabytes with the addition of system memory features). In a system which has the base 128K bytes of system memory, 64K bytes are reserved for the 5085 control program. Of the remaining 64K bytes, an additional 8K bytes are reserved for such display list functions as area fill workspace, area fill pattern, line patterns and future expansion. The remaining 56K bytes, as well as any additional system memory is available to the user for storage of information, such as display lists, and programmable vector character sets. **Note:** The 3270 and RS 232-C Attachment Feature includes an additional 192K of system memory which is used for the 3270 and RS 232-C microcode as well as for host generated device protocols and data used to communicate with devices attached to the RS 232-C ports.
- Polygon Area Fill with the following characteristics:
  - Use of solid, or user-defined fill patterns;
  - Filling of 2D objects including those being dynamically:
    - transformed (e.g rotated, scaled, and translated)
    - clipped.
  - Filling of circles as well as concave and convex objects.
  - Filling of multiple overlapped, and disjointed polygons that contain shapes (islands), and/or crossing sides (bowties).
- Has both fixed and programmable line type and character set generators.
  - Four fixed line types and four fixed character sets are provided in the hardware. Fixed characters and line types are not scaled which facilitates reading of text and easy line type identification when a picture has been scaled.
  - The programmable character generator permits users to define their own vector definitions for any character. These vector-defined characters can be scaled and rotated like any other vectors the 5085 processes. Multiple programmable character sets and line types may be loaded in the 5085 system memory with the active programmable character set and line type dynamically selectable by the user.
- Four simultaneously displayable colors or gray shades (expandable to 256 with the addition of Pixel Memory features)..)
- Automatic mapping of color to monochrome images to facilitate the intermixing of color and monochrome displays.
- 3250 graphic order compatibility *(Important:* See "3250 Compatibility" below.)
- Double frame buffers facilitate smooth picture transitions without blanking or flashing.
- A 3D, 64K (X) by 64K (Y) by 64K (Z) virtual world coordinate space.
- 4K by 4K virtual image space mapped to the 1K x 1K real screen coordinates.
- Images generated by a bit-map in the host can be conveniently displayed using a special graphic order.
- Circle generation is provided. This reduces the amount of information from the host required to draw a circle. The circle generation facility also allows circles, which are scaled using this facility, to retain a smooth form without requiring host interaction.
- An audible alarm with volume control.
- A frame buffer write/erase protect function which facilitates animation, menu overlays, and visual detection of vector intersections.
- Design for customer setup. For example, the user can set the addresses of the 5085 and its attachments without CE assistance.
- A 5-1/4 inch diskette drive with a formatted capacity of 360K/bytes to store the 5085 microcode, error statistics, and configuration data.

Performance: The new 5080 orders, in combination with the increased amount of 5080 system memory available to the user and the workstation-based microprocessor intelligence, enable an application to significantly offload host processing. The 5085 Graphics Processor uses multiple processors and specially designed hardware to achieve the following performance characteristics:

- Hardware-generated high-speed vector-to-raster conversion.
  - The pixel generator writes pixels in any direction at the rate of 100 nanoseconds per pixel. Actual drawing time varies based on the graphic order used for drawing and system variables such as dynamic RAM refresh time.
  - Horizontal pixel write speeds for certain area fill operations may be accomplished at faster rates.
- A high-speed fixed-character generator is provided by using special, dedicated high-performance memory.
- A separate microprocessor dedicated to handling data transfers between the 5085 and 5088 at the rate of 2 megabits/second. This permits other microprocessors in the 5085 to perform parallel processing of display lists, and peripheral device control.
- High-speed display list-order processing is provided by a 16-bit bit-sliced processor.
- High-speed transformations (scaling, rotating, and translation), with coordinate clipping of 2-and 3-dimensional objects is available with an optional feature. These permit image manipulations and successive transformations without interrupting the host application.
- Calculation capabilities, such as arithmetic operations including sine and cosine along with stacking and concatenation of transformation matrices.
- A separate microprocessor for the optional 3270 and RS 232-C attachment feature to permit 3270 processing in parallel with all other operations.
- Peripheral I/O units contain microprocessors to offload the 5085 and also provide diagnostic functions.

3250 Compatibility: Many 3250 Graphics Display System applications will work on an 5080 System unchanged. This is due in part to the internal functional compatibility of the two systems, and in part to the way information is displayed on the displays. Drawing the same characters on 3251 and raster technology screens would ordinarily cause the loss of half of any character around the screen border. A special 3250 migration aid ensures that the information shown on a 5081 remains equivalent to that shown on a 3251. The function is an option that can be activated by a user through the configuration and parameter specification function, called "setup".

3255 Display Control Units and 5085 Graphics Processors can be attached to the same 5088 Graphics Channel Controller or the same 3258 Control Unit.

Compatibility with existing IBM graphics systems, and their related application programs, is provided by GAM/SP Release 2 (5668-978). In addition to supporting all of the advanced graphics functions of the 5080 System, GAM/SP Release 2 also provides host programming support for the 3250 Graphics Display System in a manner compatible with the existing support provided by GAM/SP Release 1 (under

5085 Graphics Processor (cont'd)

VM/SP-CMS) or Graphics Programming Services (GPS) GAM under MVS or VS/1. Existing application programs should run unaltered within the same operating environment.

Although the 5080 System is functionally compatible with the 3250 System for major functions, there are certain incompatibilities due to the use of a raster display (the 5081) to emulate a directed beam display (the 3251) and to certain performance or function differences. These differences are found in the following areas. (See *IBM 5080 Graphics System Principles of Operation,* GA23-0134, for details.)

- Highlighting by overwriting of vectors
- Vectors with a single endpoint off the screen
- Never-Ending Display List
- Wrapping of vectors in coordinate space
- Last position of an unprotected field
- Buffer Wrap
- Address returned by GEOS (i.e., end of order list)
- End of Application
- Time-dependent display list programs

3270 Compatibility: 5080 system operation for 3270 applications requires the 3270 and RS 232-C Attachment Feature (#5510). It is recommended for systems with color 5081 Displays that at least one additional Expansion Pixel Memory feature be added in the 5085 Graphics Processor to achieve compatibility with color 3270 displays.

3270 programs can operate with the 5080 system using host systems which support SNA/SDLC 3270 attachment, and applications which use the supported features. IBM-provided programs (e.g., TSO, CICS, IMS, etc.) will also operate with the 3270 mode feature of the 5080 system.

The following 3270 functions and attachments are not supported:

- Data Entry Keyboards
- Numeric Lock
- Magnetic Slot Reader
- Magnetic Hand Scanner
- Loadable Programmed Symbols (PSS)
- Multiple Partitions with Scrolling
- Tablet emulation of a light-pen
- Keylock

Physical Specifications:

Width - 321mm (12.6 inches)
Depth - 568mm (22.37 inches)
Height - 590mm (23.23 inches)
Weight - 20kg (44 pounds)

Customer Responsibilities: The customer is responsible for:

- Physical Planning and Site Preparation.
- Providing the required electrical service and facilities. See *IBM 5080 Graphics System Site Planning and Preparation Guide,* GA23-0129, for details.
- Setup and installation of: The 5085 Graphics Processor and peripheral features (e.g., Lighted Program Function Keyboard, Alphameric Keyboard, Dials)
- Ordering and provision of the appropriate cables ... see "Cables" in Specify.
- Modem and TP line equipment for use with the 3270 feature.
- Education of 5080 System users.

Maintenance: The 5085 is offered with Field Engineering on-site service under an MMMC.

3270 and RS 232-C ATTACHMENT FEATURE

This feature adds both a 3270 feature processor and the ability to attach RS 232-C compatible devices.

3270 Feature: The 3270 feature permits an IBM 5080 Graphics System user to access 3270 applications in host systems which support an SNA/SDLC attachment. Separate and simultaneous interaction with 3270 and 5080 graphics applications can be maintained. The user may alternate images on the 5081 Display by a simple keyboard action. The integrity of the 3270 display image is preserved by the 5085 Graphics Processor. (The integrity of the 5085 graphics image is maintained assuming a display list capable of regenerating the image is retained in the 5085. This is normally the case.)

The 5080 Graphics System supports the data and graphics computing needs of engineers and other professionals in a single workstation by providing access to both 3270 applications and 5080 graphics applications.

The 5080 Graphics System 3270 feature supports the following 3270 Functions:

- Base 3270 Functions.
- Regular- and high-intensity for each of seven specifiable colors, provided that a color display and at least one additional Expansion Pixel Memory Feature is present.
- Screen Sizes (80 characters per line): 12 lines (960 characters), 24 lines (1,920 characters), as the default, 32 lines (2,560 characters), and 43 lines (3,440 characters).
- Multiple Partitions.
- Extended Highlighting: Blinking, Reverse Video and Underscore.
- Field Validation.
- Audible Alarm.
- Alphameric Keyboard with 24 Program Function Keys.
- APL using the APL keyboard and 12 of the 24 Program Function Keys.
- TP Communications using:
  SNA and SDLC protocols.
  External Modems only.
  Self-Clocked Modems only.
  Speeds up to 9600 bps.

Note: The 3270 Feature may be multi-dropped.

RS 232-C Feature: The 5085 Graphics Processor can have two 25-pin RS 232-C attachment ports which will support devices such as plotters that:

1. Conform to electrical interface specifications, EIA RS 232-C and CCITT V24, and
2. Have a transmission protocol which can be supported using the generalized 5085 RS 232-C attachment interface architecture.

The RS 232-C attachment port can support data transmissions up to 9600 bps for ASYNC. This is suitable for many devices, including the IBM 7374 and 7375 color plotters. Each RS 232-C port is addressed separately by the host application. Activated RS 232-C ports correspondingly reduce the number of 5085s and 3251/3255s that can be attached to the 5088.

When a device is attached to the RS 232-C port, it can run concurrently with the 5080 system graphics and 3270 capabilities. Two areas of 16K bytes each are provided with the feature for host generated device protocols and data used to communicate with the RS 232-C attached devices.

PERIPHERAL DEVICE FEATURES

Alphameric Keyboard: This feature is a low-profile, cable-attached, EBCDIC typewriter-like keyboard which can be adjusted to any of three surface inclinations matching a user's preferred hand position.

The keyboard has104 keys which may be operated with, or without audible feedback. The key arrangement has four clusters of keys. Three of them are side by side (left to right) with the fourth located at the rear center. The clusters are:

1. 10 keys (2x5) which are used for special functions.
2. 59 keys in QWERTY arrangement, plus special standard keys for engineering graphics.
3. 11 keys for cursor control, and special functions, such as shifting between 5080 graphic and 3270 modes.
4. 24 Program Function (PF) Keys arranged in two horizontal rows of twelve. In 5080 graphics mode, these PF keys can be used in place of the first 24 lighted program function keys, if lighted tops aren't required. Normal PF key function is supported in 3270 mode.

The keyboard cable required to attach the keyboard is shipped with the 5085 Graphics Processor.

APL Keyboard: The APL keyboard has modified keytops to facilitate the entry of 81 specific APL characters. Entry to and exit from APL mode is controlled through a special APL on/off key. In other respects the APL keyboard resembles the Alphameric keyboard. **Note:** The APL keyboard is supported via the 3270 feature only.

Lighted Program Function Keyboard: The lighted program function keyboard is a separate assembly with 32 keytops in which amber-colored light-emitting diodes (LED) are imbedded. The case profile and surface inclination adjustment are designed to match those of the alphameric keyboards.

The keyboard LEDs can be turned on and off under host application control to indicate which keys may be selected at a given moment. Correspondingly, a unique signal is returned to the application for any key pressed. In this way a user and an application may interact. The keyboard functions operate compatibly with 3250 programs.

Dials Feature: The Dials feature flat, compact, low-profiled, desk-top unit with eight, cone-like dials. The dials may be turned continuously in either direction by easy manipulation with one, or more fingers. Upon rotating the dials, a range of scalar values indicating extent of rotation and direction are signaled to the 5085 Graphics Processor. An

5085 Graphics Processor (cont'd)

application can read and interpret this input for any suitable purpose, such as panning, zooming, and rotating 2- or 3-dimensional images.

SPECIFY

* Voltage (AC, 1-phase, 3-wire, 60 Hz): Attachment to a 120 volt power source is required for the 5081, and 5085. The 5081 and its controlling 5085 must be connected to the same supply voltage phase. The line cord supplied is 9 feet long. Specify **#9986** if a 6 foot cord is required.

- Host System Designation and Location: Specify **#9333** to indicate host system location and CPU type on the first 5085 attached to that host. Supplementary information is to be filled out exactly as follows and entered at order entry time for the 5085. (Specify **#9444** on all additional 5085s other than the first attached to the host.)

  Line 1 - Company or Organization Name
  Line 2 - Street Address (or P.O. Box)
  Line 3 - City, State, Zip code
  Line 4 - Host CPU type and operating system used.

- **Cables:** For the 5085: Cables from the 5085 to the 5088 or 3258 are a customer responsibility to supply. Cables from the 5085 to the 5081 (three video coaxial cables and the 3.0m (9.8 ft.) flat ribbon cable with a special connector for the attachment of peripheral devices) are supplied with the 5085. The 3270 and RS 232-C Attachment Feature (#5510) includes one 10-foot cable for attachment to modems with EIA connectors.

  Cables for the peripheral devices controlled by the 5085, but physically attached to the front of the 5081 Display, are supplied with each device except for the Alphameric Keyboard cables which are supplied with the 5085. See GA23-0129 for further descriptions.

SPECIAL FEATURES

Transformation and Clipping Feature (#1021): Provides 2D, 3D Transformation (scale, rotate, translate) and 3D viewing capabilities, and sine, cosine, and multiply functions. **Maximum:** One. **Field Installation:** Yes.

Expansion Pixel Memory (#3621): Increases color or gray shade capability from base of 4 to 16 in first increment, 17 to 64 in second increment, and 65 to 256 in third, and final, increment. **Maximum:** Three. **Field Installation:** Yes.

Alphameric Keyboard (#4631): Has 104 keys with QWERTY layout and control keys. Serves graphics and 3270 modes. 24 Program Function Keys (PFK) are normally used for application -specific inputs. They may also be used as Lighted Program Function Keys (without lights). If a Lighted Program Function Keyboard (LPFK ... feature #4710) is attached to the 5085, the 24 PFKs serve as alternates to the first 24 keys on the (32-key) LPFK. If an LPFK is not attached to the 5085, the 24 PFKs may be used as a 24-key LPFK. Attachment cable is shipped with the 5085. Unit has operator-adjustable height, is movable, and has audible indication of character input. **Maximum:** One per 5085. **Field Installation:** Yes.

Lighted Program Function Keyboard (#4710): Has 32 backlighted function keys. Provides 3250 program compatibility. Has tilt adjustment and palm rest. **Maximum:** One per 5085. **Field Installation:** Yes.

3270 and RS 232-C Attachment Feature (#5510): Provides 3270 emulation. Also provides two RS 232-C interfaces (Ports) for attachment of up to two devices. The RS 232-C ports support data rates up to 9600 bps for each ASYNC port and are suitable for attachment of devices such as the 7374 and 7375 Color Plotters. Each RS 232-C port requires a separate host address and, when a corresponding device is attached, reduces the number of 5085 Graphics Processors or 3251/3255 workstations attached to a 5088 Graphics Channel Controller, or to a 3258 Control Unit, by one. Two areas of 16K bytes each are provided with the feature for host-generated device protocols and data used to communicate with the RS 232-C attached devices. **Maximum:** One per 5085. **Field Installation:** Yes.

System Memory (#6311): [Mdl 1] 512K expansion increments. **Maximum:** Two increments. **Field Installation:** Yes.

Dials (#8710): A separate, compact, desk top unit with eight dials for operator input of scalar values. Each dial discerns 128 discrete values within a dial rotation. The analog action each dial represents is a function of the application program in use. **Maximum:** One per 5085. **Field Installation:** Yes.

APL Keyboard (#4641): Same as Alphameric Keyboard but with APL symbols activated by an APL on/off key. **Maximum:** One per 5085. **Field Installation:** Yes.

MODEL CONVERSION (None)

ACCESSORIES (None)

SUPPLIES (None)

5088 GRAPHICS CHANNEL CONTROLLER

PURPOSE

The 5088 operates as a shared, high-speed control unit to 5081/5085 or 3251/3255 workstations. It can attach to a S/370, 4300 or 30XX channel with a channel data rate of up to 2.5 megabytes/second in data streaming mode, or up to 1 megabyte/second in conventional channel mode. Its functional compatibility with the 3258 permits both 3255s and 5085s to be attached. Since 5085s may also attach to the 3258, there is the capability to mix units from the 5080 Graphics System and the 3250 Graphics Display System.

MODELS

Model 1 001 — Permits the attachment of up to a maximum of 16 5081/5085s, 3251/3255s, and RS 232-C* compatibile decices. (In a 5085-only environment, the link between the 5088 and the 5085 can operate at 2 megabits/second. In a 5085 and 3255, or a 3255-only configuration, the link speed is limited to 1 megabit/second.)

Model 2 002 — Provides the same attachment capability as the model 1 for the first set of 16 5081/5085s, 3251/3255s and RS 232-C-compatible devices. The model 2, in addition, provides for the attachment of a second set of 16 5081/5085s, 3251/3255s and RS 232-C-compatibile devices with the same capabilities. This allows a maximum attachment capability of 32 workstations.

* Each RS 232-C-compatible device connected to a 5085's 3270 and RS 232-C attachment feature correspondingly reduces by one the number of workstations which may be attached to the 5088. This applies, for example, to attachment of the 7374 and 7375 color plotters.

Channel Attachment: Requires a control unit position on a system channel. The 5088 will attach to a Block Multiplexer, Selector, or Byte Multiplexer (burst mode only) Channel.

HIGHLIGHTS

Has the same physical dimensions as the 5085 Processor for easy placement relative to the host channel.

Attaches to all S/370, 4300, 30XX channel interfaces at a maximum distance of 121.9m (400 ft). Operates on block multiplexer, selector, or byte multiplexer (burst mode only) channels.

- Minimizes channel overhead for transmissions greater than 32K by using channel data buffering of approximately 64K.
- Provides new channel command capabilities which permit applications to use advanced or extended functions in the 5085 Graphics Processor. These capabilities include:
  - Control of display lists that are greater than 64K bytes.
  - Select Write/Read memory area commands for minimizing channel utilization on large writes/reads.
  - Loading of programmable vector character sets into system memory.
  - Controlling allocation of 5085 memory for functions such as large polygon fills which require more than the default workspace.
  - Overlapping of device processing.

  Note: The 5088 also supports the 3258 channel commands in order to assist existing 3250 users in either mixing 5080 systems with 3250 systems or to permit the use of the currently available GAM or GAM/SP1 access methods. When the 5088 execution is limited to 3258 channel commands, the performance characteristics of the 5088 may be less than those of the 3258 depending upon the amount of data which the application reads from the terminals. If the reading frequency and/or volume of input data is low, then the 5088 performance should be comparable to a 3258. (This is normally the case for the IBM-supported CAD/CAM applications.)
- Provides additional 5085 sense information to assist in fault isolation, program debugging, etc. Sense information is provided separately for each 5085 device.
- Provides additional RAS capabilities:
  - Enhanced 5088/5085 link problem determination capabilities.
  - Improved error detection.
  - I/O error alert.
  - Machine check broadcast to 5085 with optional automatic restart of the 5088.
- Can be powered on/off remotely from the host CPU (via the standard power control interface).

Physical Specifications:

	Model 1	Model 2
Width	320.6mm (12.6 inches)	320.6mm (12.6 inches)
Depth	568mm (22.3 inches)	568mm (22.3 inches)
Height	590mm (23.23 inches)	590mm (23.23 inches)
Weight	22.7kg (50 pounds)	24.5kg (54 pounds)

Cables: Cables to the S/370, 4300, 303X, or 308X processor must be ordered. Cables to the 5085/3255 are a customer responsibility to supply.

The 5088 uses either 3250 type (75 ohm) cable or 3270 type (93 ohm) cable for attachment to 5085 Processors. **Note:** The maximum distance between the 5088 and a 5085 depends upon the attenuation characteristics of the cable and any connectors (customer supplied). Use of RG-59/U (75 ohm) and RG-62/AU (93 ohm) cable (used in many 3270 installations) permits attachment up to 1,000m (3,280 ft.) apart. The use of special low-loss 75 ohm impedance coaxial cable will permit attachment up to 5,000m (16,400 ft.) apart. See *IBM 5080 Graphics System Site Planning and Preparation Guide,* GA23-0129, for details.

Customer Responsibilities: The customer is responsible for:

- Physical planning and site preparation.
- The provision of the required electrical service and facilities. (See *IBM 5080 Graphics System Site Planning and Preparation Guide,* GA23-0129, for details on the above responsibilities.)
- Ordering of cables to the S/370, 4300, or 30XX processor.
- Provision of cables to the 5085/3255.

Customer Problem Analysis and Resolution: The 5088 is offered with Field Engineering on-site service under an MMMC.

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): Attachment of a 120V power source is supplied as standard; specify **#9902** for 208V. Plugs supplied are non-locking. The linecord supplied is 9 feet long. Specify **#9986** if a 6 foot cord is required.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

5103 PRINTER

PURPOSE

Provides hard-copy output for the 5110 Computer and the 5120 Computing System.

MODELS

Model 11	011	[NO LONGER AVAILABLE] 80 cps maximum bidirectional printer
Model 12	012	[NO LONGER AVAILABLE] 120 cps maximum bidirectional printer

Customer Setup: The 5103 is designed as Customer Setup. Refer to the GI section for details. The CSU allowance is one day.

HIGHLIGHTS

Prints serially in both left-to-right and right-to-left directions. The maximum print line is 132 print positions at 10 characters per inch. Line spacing is at six lines per inch. All APL and BASIC special characters can be printed. Throughput is dependent upon output format and line length.

The 5103 mdls 11 and 12 allow the 5110 to overlap printing with processing functions. Mdls 11 and 12 also support both upper and lower case character printing.

The 5103 is packaged in its own table-top covers, measuring 61 x 36.8 x 30.5cm (24 x 14-1/2 x 12 inches), and weighing 24.8kg (55 pounds). The standard forms tractor allows multi-part, fan-fold paper. Overall forms width ranges from 8.9 to 38cm (3-1/2 to 15 inches). Continuous forms fold-to-fold length may vary from 7.6 to 35.6cm (3 to 14 inches). Up to 6-part forms can be printed with a maximum thickness of .046cm (.018 inches). 5- and 6-part forms should be tried for satisfactory feeding, registration, and print quality. Forms that exceed .046cm (.018 inches) thickness can create printer feeding registration and print quality problems. Card stock continuous forms are not recommended. Matrix characters are formed by eight vertical wires printing dots in up to four of seven possible horizontal positions. Refer to *Form-Design Printers Reference Guide* (GA24-3488) for forms design considerations and limitations.

Customer Responsibilities: The marketing representative must advise customers of their responsibilities before receipt of the machine. Use of the *Information Bulletin for Customers - Customer Setup* (G120-2743) is required. The customer is responsible for providing a desk or table-top to support the 5103.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): No specify required.
- Power Cord: 1.8 meter (6 foot) cable, nonlocking plug.
- Color: Pearl White only. No specify required.
- Attachment: Attachment to the computer , 5106, or 5114 is via a 1.2 meter (4 foot) cable.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

The upgrade purchase price for model conversions may be greater than the purchase price differentials. Customers should carefully evaluate their future requirements prior to purchasing a system.

For serial numbers 30000 and above, submit an MES for model 11 to model 12 upgrade.

ACCESSORIES

Forms Stand (#4450): This one-shelf stand permits feeding of continuous forms from the carton and provides for forms stacking after printing. For shipment to the field, order by feature number.

SUPPLIES

Ribbons: A black ribbon, P/N 1136653 or equivalent, is required on machines shipped before August 29, 1980 or on machines not having RPQ D09005 installed. A black cartridge ribbon, P/N 7034535 or equivalent, is required for all machines shipped on or after August 29, 1980 or on machines having RPQ D09005 installed.

5106 AUXILIARY TAPE UNIT

PURPOSE

Provides a second tape cartridge I/O unit for the 5110 Computer.

MODELS

Model 11	011	Attaches to the 5110 model 1

Customer Setup: The 5106 is designated as Customer Setup. Refer to the GI section for details. The CSU allowance is one day.

HIGHLIGHTS

Attractive for the user with extensive tape data storage requirements. Provides ease of copy and file update.

Housed in its own covers, the 5106 measures 31 x 26 x 19cm (12-1/4 x 10 x 7-1/4 inches) and weighs 8kg (20 pounds). Its characteristics are the same as those of the inboard unit provided with the 5110.

Customer Responsibilities: The marketing representative must advise customers of their responsibilities before receipt of the machine. Use of the *Information Bulletin for Customers - Customer Setup* (G120-2743) is required.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): No specify required.
- Power Cord: 1.8 meter (6 foot) cable, nonlocking plug. No specify required.
- Color: Pearl White only. No specify required.
- Attachment: Attachment to the portable computer is via a 0.6 meter (2 foot) cable.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Tape Cartridge: A tape cartridge is required and is available in packages of five from IBM.

SUPPLIES (None)

5110 COMPUTER MDL 3

[NO LONGER AVAILABLE]

PURPOSE

Designed to address a wide variety of commercial and problem solving applications in both the small and large business.

MODELS

The 5110 model 3 is the processor for the 5120 Computing System. The following chart gives the model number by memory size and programming language.

Models	Languages	Main Storage Bytes
A31	APL	16K
A32	APL	32K
A33	APL	48K
A34	APL	64K
B31	BASIC	16K
B32	BASIC	32K
B33	BASIC	48K
B34	BASIC	64K
C31	APL and BASIC	16K
C32	APL and BASIC	32K
C33	APL and BASIC	48K
C34	APL and BASIC	64K

Customer Setup (CSU): The 5110 mdl 3 is designated as Customer Setup. The Marketing Representative/BCC must advise the customers of their responsibilities before receipt of the machine. For information on CSU, refer to the "GI" section, and contact IBM. Use of the *Information Bulletin for Customers-Customer Setup* (G120-2743) is required. The CSU allowance is one day.

HIGHLIGHTS

- User-oriented data processing.
- Built-in high level interactive language ... APL, BASIC, or both.
- Integrated diskette storage of 2.4 megabyte capacity.
- Nine-inch CRT display screen.
- Easy-to-use keyboard for programs and data.
- Audible Alarm, standard.
- Composite Video Adapter, standard.
- Optional Asynchronous or Binary Synchronous Communications Adapters.
- Optional Serial I/O Adapter via EIA Standard RS-232-C .
- Optional Diskette Sort feature.

Features:

- Metal Oxide Semiconductor Field Effect Transistor (MOSFET) main storage.
- 530 nanosecond main storage cycle time.
- Internal parity checking.
- All features are field installable. Upgrades are field installable.
- Main storage available in 16K, 32K, 48K, or 64K bytes. **Note:** The language interpreters utilize part of main storage which is not available to the user, with BASIC this amounts to 4,624 bytes and with APL it is 6,915 bytes.

Keyboard: It has a familiar typewriter layout plus a numeric keypad. Four arithmetic operator keys located to the right of the numeric keypad provide convenient data entry in desk calculator mode. With a BASIC machine, the keys on the 10-key pad can be programmed by the user to perform special functions. These functions are activated by the COMMAND key. Keytops indicate special characters for APL and/or BASIC, depending on mdl. The top row of typewriter keys provides machine commands when depressed with the COMMAND key. Frequently used APL and/or BASIC statements are printed on the front of the keys. The user may then enter a statement keyword, such as GOTO or PRINT, by pressing the COMMAND key and the appropriate word key. The primary purpose of the COMMAND key is to make use of the 5110 mdl 3 easier and faster.

Display Screen: Is used to display keyed input, provide user guidance and display output. Up to 1,024 characters can be displayed on the nine-inch screen 16 lines of 64-characters each. Under program control, the user is permitted full-screen management and display of upper/lower case characters.

Interactive Languages: Implemented in three options within Read Only Storage (ROS): APL, BASIC and a combined APL/BASIC. With a combination machine, the language is selectable with a switch and a combined APL/BASIC keyboard is provided.

Input/Output Operations: Provide for update-in-place and Record I/O with Diskette.

Customer Support Functions: Are distributed with the 5110 mdl 3 on diskette. The functions provided include a relocatable loader, diskette initialize, diskette compress, diskette-to-diskette copy, diskette recovery and label display. Also included, but applicable only to 5110 mdl 1s, are: Tape-to-tape copy, tape-to-diskette copy, tape header recovery, tape data recovery and diskette-to-tape copy.

Composite Video Adapter: Provided for simultaneous display of CRT data on additional screens.

Audible Alarm: The audible alarm is provided to signal "system attention required" and under program control, operator messages like "end of job".

Customer Responsibilities: The customer is responsible for:

- The customer is responsible for providing a desk or table-top to support the 5110 mdl 3.
- Making arrangements for installation, pricing, and charges for the data communications facility and attachment of selected data sets.
- Toll charges, if required for installation and/or maintenance of BSCA, are to be paid by the customer.
- The IBM Marketing Representative/BCC must have the customer obtain a firm installation date for transmission service (including modems) before the order, BSCA (#2074), can be confirmed. For further information refer to "Teleprocessing Systems" and M2700 pages.

The customer must be advised *in writing* that he is responsible for:

- Attaching a device which meets the defined EIA Standard RS-232-C Specifications (Interface Type D) for Serial I/O.
- Assuring with the device manufacturer the time between data transfer is sufficient for their application.
- Supporting the I/O device with APL or BASIC programs.
- Determining program storage requirements.
- Maintenance of common carrier facilities/services as well as the IBM equipment. For further information see M2700 pages and "Teleprocessing Systems".

AAS Ordering Instructions: The 5110 mdl 3 is a Computer System.

Codes: SIU = 5110 ID = N40

SPECIFY

- Power (120V AC, 1-phase, 60 Hz): Nonlocking plug.
- Color: Pearl white
- Cables:
  - Standard Power - 1.8 meters (6 feet)
  - Asynchronous Communications Adapter (#1525) - 1.8 meters (6 feet)
  - EIA Interface (#3701) - 6 meters (20 feet)
  - Serial I/O (#6301) - 1.8 meters (6 feet)

SPECIAL FEATURES

Non-Communications Features

Expansion Feature (#1524): A prerequisite for attachment of the Asynchronous Communications Adapter (#1525) or the Serial I/O Adapter (#6301). **Limitations:** See "5120 Computing System Configuration Considerations". **Maximum:** One. **Field Installation:** Yes.

Channel Terminator (#1600): Required when the 5103 Printer is not attached. It logically and physically provides load termination to the channel. **Field Installations:** Yes.

Diskette Sort (#3200): Provides the 5110 mdl 3 user with the ability to sort diskette data files. Both full-record sorts and address-out (ADDROUT) sorts are possible. The sort resides in ROS and can be initiated through the system language or the keyboard. **Maximum:** One. **Field Installation:** Yes.

Serial I/O Adapter (#6301): Provides the 5110 mdl 3 with the capability to attach anyone of a variety of peripherals which satisfy EIA Standard RS-232-C Specifications. The customer may select 5-, 6-, 7-, or 8-bit code rates from 20 to 9600 bps (2400 maximum for 5-bit). Interaction with an attached device is through the APL or BASIC languages. **Limitations:** May not be installed with Asynchronous Communications Adapter(#1525) if Binary Synchronous Communications Adapter (#2074) is installed. See "5120 Computing System Configuration Considerations". **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1524. **References:** For Serial I/O Feature, refer to the "GI" section and *Site Preparation Manual* (GA34-0130) for

5110 Computer Mdl 3 (cont'd)

information concerning attachment requirements for the 5110 mdl 3 Serial I/O Adapter.

Communications Features

Asynchronous Communications Adapter (#1525): Provides the 5120 Computing System with the capability to appear as 2741 (using EBCDIC or Correspondence notation) to a remote system. The customer may select 134.5 bps or 300 bps start/stop transmission speeds, depending upon the remote system. Operation will be over appropriate B1, B2, C1, C2, and D1 facilities. Line connection is through a customer-supplied modem. The 5120 Computing System is supported in stop/start mode connected to a S/370, 303X, or 4300 Processor via an Integrated Communications Adapter (ICA), a 3704/3705/3725 Communications Controller with the Emulation Program (EP/VS), or the Network Control Program (NCP/VS). See M2700 pages for details concerning the facilities and prerequisites on these units. When in asynchronous communications mode, the 5120 Computing System is supported as a 2741 by the following:

SCP	Options	TP Access Methods
OS/VS1		BTAM, TCAM, or VTAM
OS/VS2	TSO (via TCAM)	BTAM, TCAM, or VTAM
DOS/VS		VTAM
VM/370		

In the asynchronous communications mode, the 5110 mdl 3 keyboard will be used in the same way as a 2741 keyboard. Output will be displayed on the CRT and may be printed on an optional printer. The user may also use the diskette to transmit and receive data from the remote system. While in the asynchronous communications mode the 5120 Computing System is a dedicated terminal device. Therefore, interaction with the APL or BASIC interpreter takes place only after the session is completed. **Limitations:** May not be installed with Serial I/O Adapter (#6301) if Binary Synchronous Communications Adapter (#2074 is installed). See "5120 Computing System Configuration Considerations". **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** A customer-supplied modem meeting EIA RS-232-C Specifications and #1524.

References:

- See M2700 pages for additional information concerning communication facilities, machine attachment requirements, operating capabilities and customer responsibilities.
- *IBM General Information and Site Preparation Manual* (GA34-0130), for physical installation requirements.

Notes:

- For questions regarding emulation of 2741 features and/or RPQs, contact Special Product Marketing .
- The functions of Receive Interrupt and Transmit Interrupt features on the 2741 are standard with the 5110 mdl 3 Asynchronous Communications feature, but require full-duplex modems. OS/VS BTAM does not support the transmit interrupt feature.

Bi-Sync Comm. Adapter [BSCA] (#2074): In conjunction with APL or BASIC program control, this feature permits the 5120 Computing System to function on a switched or nonswitched (leased or private) communications line as a processor terminal emulating 3741 line protocol with:

- A System/3 equipped with BSCA (#2074 or #2084) or BSCC (#2094).
- A System/32 equipped with BSCA (#2074)
- A System/34 equipped with Communications Adapter (#2500, #3500 or #4500).
- A System/36 equipped with Communications Adapter (#2500 or #4500).
- A 5110 equipped with BSCA (#2074).
- A 5120 Computing System equipped with BSCA (#2074).
- A 3741 mdl 2 or 4.
- Or when emulating 2770 line Protocol with: A S/370, 303X, or 4300 Processor, which is supported by OS/VS1, OS/VS2, TCAM, DOS/VS BTAM via an Integrated Communications Adapter, or a 3704/3705/3725 Communications Controller with NCP or EP, any of which are equipped with a binary synchronous adapter and appropriate sub-features.

This feature will operate with any of the above systems capable of communicating at the following nominal transmission rates on a point-to-point 1200/600, 2000, 2400, and 4800 bps. See M2700 pages for information on communications facilities. The 5120 Computing System may also operate as a tributary station residing on a multipoint (leased or private) communications line as a compatible member of the IBM family of BSC terminals in conjunction with a S/370, 303X, or 4300 Processor control station at transmission rates of 1200 to 4800 bps. This feature will operate in half-duplex mode over dial (switched network) facilities, and in half-duplex mode over leased (or equivalent private) communications lines which may be half or full-duplex facilities. Operation of this feature on the 5110 mdl 3 will be overlapped with printer operation at all rates including 4800 bps. BSC units at each termination of a data link to which the 5120 Computing System is attached must be set to operate at the same transmission rate and to use the same transmission code.

This feature supports, as a basic capability, the transmission and reception of blocked records. Switched network versions include the support of Manual Dial and Manual or Auto-Answer (where the attached modem supports this capability). The feature may be configured to operate with the EBCDIC transmission code or EBCDIC transparency code. The Internal Clock will generate synchronizing and timing signals for BSCA operation when they are not provided by the attached modem. The decision to use, or not use, the internal clock is made at configuration time. When the internal clock is used, all other terminals attached to the same data link must also be equipped with similar internal clocking capability. Transmission rates of 600 or 1200 bps are selectable at configuration time and initialization time. One of the IBM modems, 3863 (2400 bps), 3872 (2400 bps), or 3864 (4800 bps) may be attached to the BSCA (#2074) of the 5110 mdl 3. For more information on the capabilities of these modems refer to M3863 and 3864 pages. Communications facilities attachments for the 5110 mdl 3 BSCA are designed to operate on transmission facilities such as:

- Common Carrier leased telephone line services (voice grade), AT&T or Western Union Class 3002 (to 4800 bps) .
- Voice Grade nonswitched (common carrier or private) lines supporting a 4800 bps transmission rate. Channel requirements may vary according to the type of data set selected. The data set manufacturer should be consulted by the customer for this information.
- Voice Grade switchedcommon carrier network telephone service at 600, 1200, 2400, or 4800 bps.
- Private (customer-owned) communications facilities equivalent to the above common carrier facilities.

See M2700 pages for additional information concerning modems, communications facilities, machine attachment requirements, terminal intermix, operating capabilities and customer responsibilities.

Supported Configurations:

- Leased point-to-point, switched point-to-point, multipoint tributary
- Internal clock, modem clock
- EIA RS-232-C Interface
- Full-speed, half-speed line rate
- Full-duplex, half-duplex
- Use Switched Network Backup (SNBU), no SNBU
- Use 202 mode - Yes/No
- Use Auto-Answer - Yes/No
- Transparency Mode - Yes/No
- Error Threshold (1:18, 1:14, 1:2, 1:1, 2:1, 4:1, 8:1)
- Transmit/Receive
- Protocol Emulation 2770/3741
- Blank Truncation - Yes/No
- ENQ maximum count
- NAK maximum count
- 5110 Inactive timer
- Line Hold Timer (default 20 seconds)
- Record Length
- Poll ID
- Select ID
- Local ID
- Remote ID
- Space Compression Expansion - Yes/No
- Punch Device Number (DCI/DC2/DC3)
- Read/Write with Hold - Yes/No
- Connect dataset to line - Yes/No
- Send answer tone - Yes/No
- Online Test - Yes/No
- Calling Station - Yes/No
- Write Unblocked - Yes/No

5110 Computer Mdl 3 (cont'd)

Modem and Data Set interface to the BSCA (#2074) feature are:

Facility	Speed	Service	Modem
C4	1200/600	Switched	Integrated
C4M	1200/600	Switched	Stand-alone
C5	2400	Switched	3863
C5	2400	Switched	3872
C5M	2000/2400	Switched	Stand-alone
C6	4800	Switched	3864
C6M	4800	Switched	Stand-alone
D3	1200/600	Nonswitched	Integrated
D3M	1200/600	Nonswitched	Stand-alone
D4	2400	Nonswitched	3863, 3868 mdl 1
D4	2400	Nonswitched	3872
D4M	2000/2400	Nonswitched	Stand-alone
D4SB	2400/1200	Nonswitched	3872
D5	4800	Nonswitched	3864-C4, D6
D5M	4800	Nonswitched	Stand-alone
X1M	2400	Private	Stand-alone
X2M	4800	Private	Stand-alone

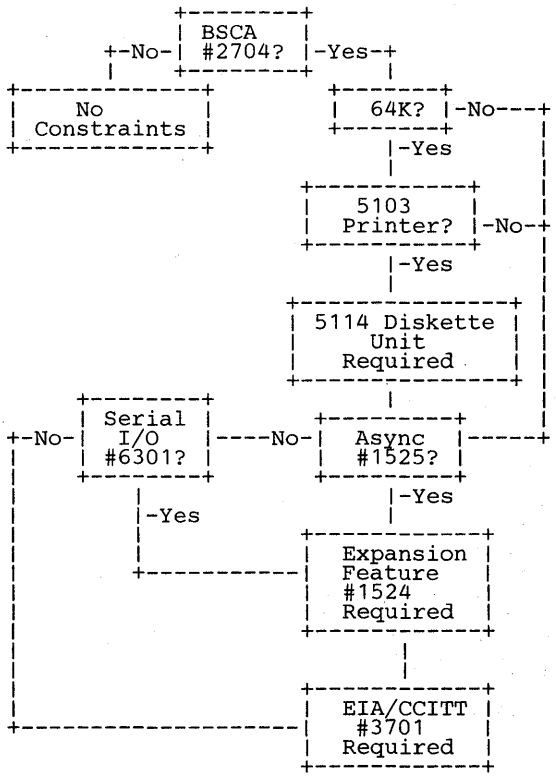
Limitations: See "5120 Computing System Configuration Considerations". **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** In addition to the basic functions of Binary Synchronous Communications, #3701 must be added.

EIA/CCITT Interface (#3701): Provides a cable and interface for the attachment of an IBM or non-IBM modem meeting EIA RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074.

5120 Computing System Configuration:

Most configurations of I/O and optional features are possible, but due to power and packaging considerations, some configurations are not available.

If BSCA is installed, the following options and constraints apply:



If BSCA (#2074) is used in conjunction with APL, a 32K minimum 5110 mdl 3 is required. If a 5103 printer is attached to the 5110 mdls A34, B34, or C34, a 5114 Diskette Unit is required.

MODEL CONVERSIONS

Upgrades of model 3 are field installable. Field conversion to the combination model (A to C, B to C) is permitted. Model upgrades from a 5110 model 1 or 2 to a model 3 are not permitted.

The upgrade purchase price for conversions may be greater than the the original purchase price of a larger model. The customer should carefully evaluate future requirements prior to purchasing a system.

Replaced parts from any model conversion become the property of IBM.

ACCESSORIES

Cables: Cables to attach peripheral devices to the 5110 via the Parallel I/O Adapter may be purchased from IBM or from a customer-selected source. See *5110 General Information and Physical Planning Manual* (GA21-9300), for cable and connector specifications. Assembled cables 2 meters (6.5 feet) long may be purchased from IBM. Order on MES from Rochester plant, A/N **4836338.** **Note:** Maximum interconnecting device cabling as specified in IEEE 488-1975 standard is 20 meters (65 feet).

SUPPLIES

Diskettes: Preinitialized diskettes for the 5110 mdl 3 are available in packages of ten from IBM.

5114 DISKETTE UNIT

[NO LONGER AVAILABLE]

PURPOSE

The 5114 provides diskette attachment to the 5110 Computer.

MODELS

Model 1 001

Maximum: A maximum of one 5114 is possible on the 5110 mdl 3, and a maximum of two 5114s is possible on the 5110 mdls 1 and 2.

Customer Setup: The 5114 is designated as Customer Setup. The CSU allowance is one day.

HIGHLIGHTS

- 1.2 to 2.4MB storage capacity.
- Direct access capability.
- Multiple open files (maximum of 10).
- Media exchange capability with other diskette devices that conform to basic interchange conventions.
- Self-contained floor-standing unit.
- Average access .243 seconds (25 tracks including latency, excluding head load).

Housed in its own covers, the 5114 measures 45 x 57 x 74cm (17-3/4 x 22-1/4 x 29 inches) and weighs from 55 to 62kg (120 to 136 pounds). Diskettes 1, 2, and 2D can be initialized and used to read/write data and to load/save programs and data. Rotational speed is 360 rpm, yielding (in 1,000 bytes per second):

Diskette Type	Maximum Capacity	Data Transfer	Read	Write and Verify
1	303	31.3	24	9.5
2	606	31.3	24	9.5
2D	1,212	62.5	48	18.9

One diskette drive is standard. A second drive is optional.

Customer Responsibilities: The Marketing Representative must advise customers of their responsibilities before receipt of the machine. Use of the *Information Bulletin for Customers - Customer Setup* (G120-2743) is required.

SPECIFY (None)

SPECIAL FEATURES

2nd Diskette Drive (#3240): Provides for up to twice the capacity on a single 5114 Diskette Unit. The second drive can be used for increased capacity and backup requirements. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

Diskettes: Pre-initialized diskettes for the 5114 are available in packages of 10 from IBM.

5150 PERSONAL COMPUTER

PURPOSE

The 5150 Personal Computer is a low-cost system that provides computing capability in a small package. A variety of operating systems and programming languages is supported. Software is available to allow stand-alone use for applications such as professional decision-making support, word processing, computer-based training, business accounting, and home entertainment. The 5150 Personal Computer may also be used as an intelligent workstation, connected to a wide variety of IBM data processing and office automation systems. Such connection allows the 5150 user to take advantage of the additional computing power, communications, mass storage, high-speed printing, application software, and data bases provided by the host system.

MODELS

Model 104 System Unit/Keyboard, 64KB Memory.

Model 114 System Unit/Keyboard, 64KB Memory, 5-1/4 Inch Diskette Drive Adapter, one 5-1/4 Inch Single-Sided Diskette Drive.

Model 164 System Unit/Keyboard, 64KB Memory, 5-1/4 Inch Diskette Drive Adapter, one 5-1/4 Inch Double-Sided Diskette Drive.

Model 174 System Unit/Keyboard, 64KB Memory, 5-1/4 Inch Diskette Drive Adapter, two 5-1/4 Inch Double-Sided Diskette Drives.

Model X14 System Unit, 64KB Memory, 5-1/4 Inch Diskette Drive Adapter, one 5-1/4 Inch Single-Sided Diskette Drive. For use with the 3270 Personal Computer Attachment.

Model X64 System Unit, 64KB Memory, 5-1/4 Inch Diskette Drive Adapter, one 5-1/4 Inch Double-Sided Diskette Drive. For use with the 3270 Personal Computer Attachment.

Model X74 System Unit, 64KB Memory, 5-1/4 Inch Diskette Drive Adapter, two 5-1/4 Inch Double-Sided Diskette Drives. For use with the 3270 Personal Computer Attachment.

Prerequisites:

— **For mdls 104, 114, 164, 174:**
Attachment of one of the following display options:
- A 5151 Monochrome Display mdl 001 and the Monochrome Display and Printer Adapter (#4900)
- A 5153 Color Display mdl 001 and the Color/Graphics Monitor Adapter(#4910)
- A user-supplied direct-drive color or black and white video monitor, or a user-supplied color or black and white television set with an RF modulator, and the Color/Graphics Monitor Adapter (#4910)

— **For mdls X14, X64, X74:**
- Color/Graphics Monitor Adapter (#4910) (for use with 3278 mdls 1, 2, 3, 4, 5) or Monochrome Display and Printer Adapter (#4900) (for use with 3278 mdls 1, 2, 3, 4)

— For additional ordering information and prerequisites for the IBM 3270 Personal Computer Attachment, see IBM.

Customer Setup (CSU): All mdls and special features of the 5150 Personal Computer are customer setup.

HIGHLIGHTS

- The System Unit is the heart of the 5150 Personal Computer. This table-top unit houses the high-performance microprocessor, up to two 5-1/4 Inch diskette drives, 40KB of read-only memory (ROM), up to 640KB of random access memory for user programs, five system expansion slots, attachment for a customer-supplied cassette recorder, a speaker which can be programmed to produce tones, and a power supply. The system can be further expanded through options that provide additional configuration flexibility.
- The following features are supplied as standard with the 5150 Personal Computer System Unit:
  - 83-key keyboard (mdls 104, 114, 164, 174 only)
  - Five system expansion slots (one slot is required for a display adapter; one additional slot is used for the 5-1/4 Inch Diskette Drive Adapter (#3780) if required.
  - Intel 8088 Microprocessor
    4.77 MHz clock speed
    410 ns cycle time
  - 64KB random access memory
    Parity checking
    250 ns memory access time
  - 40KB read-only memory
    Enhanced version of BASIC-80 Interpreter (cassette level)
    Built-in power-on diagnostic self-test
  - 5-1/4 Inch Diskette Drive(s) and adapter
    One single-sided drive standard on mdls 114 and X14
    One double-sided drive standard on mdls 164 and X64
    Two double-sided drives standard on mdls 174 and X74
  - 63.5 watt power supply with cooling fan
  - Attachment for a user-supplied cassette recorder for loading or saving programs or data
  - Programmable speaker which can be used to produce tones
- Dimensions (approximate):
  Height: 142mm (6")
  Width: 500mm (20")
  Depth: 410mm (16")
- Weight (approximate): 9.5kg (21 lbs) (without diskette drives or adapter)
- Some of the options available for the 5150 Personal Computer include:
  - Attachment of the 5161 Expansion Unit mdl 001 provides:
    10MB Fixed Disk Drive for increased storage capacity
    Additional configuration flexibility
  - 5151 Monochrome Display mdl 001
  - 5153 Color Display mdl 001
  - 5152 Graphics Printer mdl 002
- Highlights of the BASIC-80 Interpreter include:
  - Full screen editor for easy program creation and modification
  - Select 40- or 80-character display lines
  - Up to 16 foreground and 8 background colors (with appropriate monitor and adapter)
  - Automatic line numbering
  - 40-character variable names (all characters significant)
  - Multiple statements per program line
  - 250 characters per program line
  - Comments on program lines
  - Up to 17-digit numeric precision
  - Supports sequential cassette files
  - Error trapping
  - Addressable workspace up to 60KB
  - Integer/real/string variables
  - Single-and double-precision floating point numbers
- When turned on, the 5150 automatically runs a power-on self-test to verify system readiness. If the validation is successfully completed, the BASIC ROM Interpreter (cassette level) is made ready and identified on the display screen. The user may now enter a program from the keyboard or load it from a cassette recorder. If a failure is found, an identifying number will appear on the screen. If a diskette drive is installed, the 5150 automatically loads from the diskette in drive "A". This is typically the Disk Operating System (DOS) or an application program. The DOS may in turn invoke the Disk or Advanced levels of BASIC, followed then by the manual or automatic execution of one or more BASIC programs.

Bibliography: *IBM Personal Computer 3278/79 Emulation Adapter Technical Reference Manual Addendum* (#2336): Provides detailed information about the Personal Computer 3278/79 Emulation Adapter (#2507) for users of the *IBM Personal Computer Technical Reference Manual* (#5005).

IBM Personal Computer 3278/79 Emulation Adapter Hardware Maintenance and Service Manual Addendum (#2337): Provides detailed maintenance information about the Personal Computer 3278/79 Emulation Adapter (#2507) for users of the *IBM Personal Computer Hardware Maintenance and Service Manual* (#5072).

Display Station Emulation Adapter Hardware Maintenance and Technical Reference Manual Version 2 (#2883): Provides maintenance information for a Display Station Emulation Adapter (#2887) used with the 5520/Personal Computer Attachment Program Version 2 (#2884). This manual will enable the customer to perform problem diagnosis to the field replaceable unit level.

Display Station Emulation Adapter Hardware Maintenance Manual (#2889): Provides maintenance information for a Display Station Emulation Adapter (#2887) used with the 5520/Personal Computer Attachment Program Version 1 (#2888) or the Personal Computer 5250 Emulation Program (#2885). This manual will enable the customer to perform problem diagnosis to the field replaceable unit level.

Learning to Use DOS 2 (#4080): A guide to the use of the IBM Personal Computer DOS - Version 2. It takes new users of DOS step-by-step through the most commonly used DOS 2 commands. The course starts with the fundamentals of DOS. It then moves on to the use of the fixed disk and a list of similarities and differences between DOS 2 and DOS 1.1. Rather than teaching complex concepts, it teaches step-by-step procedures to accomplish everyday tasks.

IBM Personal Computer Technical Reference (#5005): This manual is designed to provide hardware design and interface information. The publication also provides Basic Input Output System (BIOS) information as well as programming support material. The manual is intended for programmers, engineers involved in hardware and software design, designers, and interested persons who have a need to know how the 5150 is designed and works.

5150 Personal Computer (cont'd)

BASIC Reference Manual (#5010): The 5150 BASIC interpreter consists of three upward compatible versions: Cassette, Disk, and Advanced. This manual is a reference for all three versions of BASIC release 1.10. The manual is packaged in a 3-ring looseleaf binder, and it is shipped as a standard item with each 5150.

IBM Personal Computer Hardware Maintenance and Service (#5072): Provides step-by-step instructions that aid the user in identifying the failure of an IBM Personal Computer Field Replaceable Unit (FRU). When the FRU has been identified, the manual provides the necessary information to complete the repair activity (i.e., adjustments, replacements, etc.).

SPECIFY

- Voltage (110V AC, 60 Hz): No specify required.

SPECIAL FEATURES

16KB Memory Expansion Kit (#1001): This feature may be ordered to expand the user memory for 5150 mdls 001 and 813 which have been withdrawn from marketing. Up to 64KB of memory can be plugged into the system board. This memory is available in 16KB increments and must be used to provide the first 64KB of memory. **Maximum:** Three per supported 5150 System Unit. **Field Installation:** Yes. **Prerequisites:** An available set of user memory sockets on the system board of a 5150 mdl 001 or mdl 813. **Customer Setup:** Yes.

Math Co-processor Option (#1002): Provides for the addition of the Intel 8087 Processor as a companion to the Intel 8088 to increase speed and precision in arithmetic, logarithmic, and trigonometric functions. The Option Kit provides a matched Intel 8088 along with the Intel 8087 to ensure high performance. The Intel 8087 multiplies 32-bit and 64-bit floating point numbers approximately 80 times faster than the Intel 8088. This option is supported only by IBM Personal Computer APL and by the Macro Assembler "escape" instruction. **Maximum:** One. **Field Installation:** Yes. The customer is responsible for ensuring that the Math Co-processor Option is installed by a technically skilled person. It is recommended that IBM or an IBM-authorized Personal Computer Dealer install this option.

64KB Memory Module Kit (#1003): Provides a 64KB increment of parity-checked random access memory which may be plugged into sockets on the 5150 system board (mdls 104, 114, 164, 174, X14, X64 X74 only) or the 64/256KB Memory Expansion Option (#1013). The 64KB Memory Module Kits are sold as small, plug-in circuits with instructions for user installation. **Maximum:** Up to three 64KB Memory Module Kit increments may be customer installed on the system board, to provide an additional 192KB of memory. The 64/256KB Memory Expansion Option provides 64KB of memory as standard. Up to three 64KB Memory Module Kit increments may be customer-installed on a 64/256KB Memory Expansion Option, to provide an additional 192KB of memory. **Field Installation:** Yes. **Prerequisites:** Available sockets on the 5150 system board or available sockets on a 64/256KB Memory Expansion Option. **Customer Setup:** Yes.

64/256KB Memory Expansion Option (#1013): Increments system memory by 64KB (65,536 bytes) and is easily expandable to 256KB by plugging in additional increments of 64KB with 64KB Memory Module Kits (#1003). The 64/256KB Memory Expansion Option is packaged as a circuit card designed to plug into one of the 5150's five system expansion slots. **Technical Information:** Random access memory ... starting address is set by switches ... 250 ns access time ... 410 ns memory cycle time ... parity checking ... sockets for expansion to 256KB. **Limitations:** The 5150 supports a maximum addressable memory of 640K bytes. The combination of the memory installed on the system board, and any installed 64/256KB Memory Expansion Options, and 64KB Memory Module Kits must not exceed a total of 640KB of memory. The 64/256KB Memory Expansion Option must be installed in the 5150 System Unit and not in a 5161 Expansion Unit. **Maximum:** A maximum of two 64/256KB Memory Expansion Options may be installed in a 5150. **Field Installation:** Yes. **Prerequisites:** The system board must have 256KB of memory installed (mdls 104, 114, 164, 174, X14,X64, X74 only) or 64KB (other mdls) before adding any additional memory via memory expansion options. An available system expansion slot is required for each 64/256KB Memory Expansion Option. **Customer Setup:** Yes.

Keyboard (#1100): The keyboard (standard on mdls 104, 114, 164, 174) is attached to the 5150 with a 1.8m (6 foot) coiled cable, permitting adaptation to a variety of work environments. The 83-key keyboard, with an adjustable typing angle, offers commonly-used data and word processing functions in a design that combines the familiar typewriter and calculator pad layouts. All non-control keys are typamatic (repeating). Ten program-supported function keys (total of 40 possible functions using keyboard shift keys) are standard. Special symbols, such as those used to draw lines, may be accessed with a combination of keys. Depending on the application program, from ten to forty special function keys may be supported. Other keys, like those used to print the current screen contents, correct a typing error, or "scroll" a long document, are clearly labeled. Access to all 256 characters (ASCII and special) is provided by the use of the ALT key. The keyboard is plugged directly into the 5150. The approximate dimensions of the keyboard are: 57mm (2.5") height, 500mm (20") width, 200mm (8") depth. The approximate weight is 2.8kg (6 lbs). **Limitations:** The keyboard is not provided with 5150 mdls X14, X64, and X74. When integrated into the 3270 system, the 3278 keyboard is used with these 5150 mdls. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes.

Game Control Adapter (#1300): Provides support for two customer-supplied joysticks for video game interaction, allowing the user to move an object on the screen in any direction, or it supports up to four customer-supplied game "paddles" for simple horizontal or vertical movement. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available special or full-feature system expansion slot. **Customer Setup:** Yes.

Prototype Card (#1400): Professional engineers or hobbyists may utilize the Prototype Card as a base for building and testing custom attachments to the system. The Prototype Card is designed to plug into one of the 5150's five expansion slots. It is a full-size, high-quality circuit board. Circuitry and module holes are provided for interface with the IBM bus. A bracket is included to secure the card in the 5150 with a cut-out provided for up to a 37-pin external connector. Detailed instructions and component identifications are included for I/O decode attachment logic. **Technical Information:** Physical dimensions -- 107mm (4.2") high x 335mm (13.2") long ... completely etched and drilled with plated-through holes ... preprinted circuitry for interface to IBM bus ... attachment bracket and screws included ... block diagram and I/O decode logic description included. **Field Installation:** Yes. **Prerequisites:** An available system expansion slot. **Customer Setup:** Yes.

Asynchronous Communications Adapter (#2074): Provides a channel to data processing or input/output devices outside of the immediate system. Such devices can be connected by telephone using a plug-in modem, or directly by cable when the device is nearby. The communication "target" may be a large host computer, a Series/1, another 5150/5160, a paper tape reader, a communicating typewriter, a laboratory instrument, or other machines providing the popular RS-232-C asynchronous interface. This adapter is flexible enough to match most of the computers and related products available in the microcomputer marketplace. The user's program selects the appropriate speed (50-9600 bps), format (5-, 6-, 7-, or 8-bit characters), parity and stop bits to reflect the attached device. Once communication has been established, the user's program performs reads and writes. Interrupts permit the program to perform data processing such as calculating, diskette reading or writing, or printing, and then pause to resume communications when a signal appears on the line. The adapter provides an EIA RS-232-C interface. One 25-pin "D" shell, male-type connector is provided to attach various peripheral devices. In addition, a current-loop interface is located in the same connector. A jumper block is provided to select manually either the voltage or the current-loop interface. **Maximum:** Two. **Cable:** A user-supplied communication cable is required for connection of external modems or other devices to the Asynchronous Communications Adapter. **Field Installation:** Yes. **Prerequisites:** An available special or full-feature system expansion slot is required. **Customer Setup:** Yes.

Binary Synchronous Communications (BSC) Adapter (#2075): The BSC Adapter when used with the BSC 3270 Emulation Program (6024037) can be used to emulate 3270 interactive BSC operation. The adapter provides the ability for a 5150 attached to a host system via communications lines to participate in a network using BSC protocol. The network may be either switched or nonswitched line. When used as a 3270 with the BSC 3270 Emulation Program, the 5150 operates as and appears to a host as one of the following 3270 devices:

3271 mdl 2/3277 mdl 2	Nonswitched line
3274 mdl 51C/3278 mdl 2	Nonswitched line
3275 mdl 2	Switched and nonswitched line
3276 mdl 2	Nonswitched line

Technical Information: EIA RS-232-C interface ... operates at up to 9600 bps with switched or nonswitched line support ... provides modem control functions ... facilitates program controlled data transfer ... supports electrical wrap and error status reporting ... prioritized interrupt system controls. **Limitations:** Only one BSC Adapter may be installed if an SDLC Adapter is installed in the same system. **Maximum:** Two. **Cable:** The Communications Adapter Cable (#2067) allows the user to connect the BSC Adapter card to a modem via a plug at the rear of the 5150. The cable is double shielded and approximately 3m (10 feet) long. A wrap connector is provided to test the cable. **Field Installation:** Yes. **Prerequisites:** An available system expansion slot. Software such as the BSC 3270 Emulation Program is required for communication. An external modem must be cable-connected between the BSC Adapter and the telephone line. **Customer Setup:** Yes.

SDLC Communications Adapter (#2090): The SDLC Communications Adapter when used with the SNA 3270 Emulation and RJE Support Program (6024036) permits the 5150 to emulate 3270 interactive SNA operation or 3770 batch SNA. The adapter provides the ability for a 5150 attached to a host system via communications lines to participate in a network using SDLC protocol. When used as a 3270 with the SNA 3270 Emulation and RJE Support Program, the 5150 operates as and appears to a host as a 3278 mdl 2 attached to a 3274 mdl 51C.

5150 Personal Computer (cont'd)

Technical Information: EIA RS-232-C interface ... operates at up to 9600 bps (up to 4800 bps when used with the SNA 3270 Emulation and RJE Support Program) with switched or nonswitched line support (including multipoint) ... provides modem control functions ... facilitates program-controlled data transfer ... supports electrical wrap and error status reporting ... prioritized interrupt system controls. **Limitations:** Only one Asynchronous Communications Adapter may be installed if the SDLC Communications Adapter is installed. **Maximum:** One. **Cable:** The Communications Adapter Cable (#2067) allows the user to connect the SDLC Communications Adapter card to a modem via a plug at the rear of the 5150. The cable is double-shielded and approximately 3m (10 feet) long. A wrap connector is provided to test the cable. **Field Installation:** Yes. **Prerequisites:** An available system expansion slot. Software such as the SNA 3270 Emulation and RJE Support Program (6024036) is required to allow communication. An external modem must be cable-connected between the SDLC Communications Adapter and the telephone line. **Customer Setup:** Yes.

3278/79 Emulation Adapter (#2507): Expands the capabilities of the 5150 by providing coaxial cable attachment to the 3274 Control Unit, the 4321, 4331, or 4361 Processor Display/Printer Adapter, or the 4701 Finance Communication Controller. When used with the Personal Computer 3278/79 Emulation Control Program (6024134), the 5150 can emulate the functions of an 3278 Display Station mdl 2 or a 3279 Color Display Station mdl 2A or S2A and can also support file transfer with the host. Both the host-controlled 3270 session and a local IBM Personal Computer DOS session can be active concurrently and the user can interact with either session alternately. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes. **Prerequisites:** An available 5150 system unit expansion slot is required. A customer-supplied coaxial cable is required for host system attachment. Software such as the 3278/79 Emulation Control Program (#4134) is required. A 3270-PC File Transfer Program (such as 5664-281 for VM/SP or 5665-311 for MVS/TSO) or equivalent is required to allow for file transfer. For attachment to the 4321 or 4331, specify code **#9843** must be installed on the 4321 or 4331. For attachment to the 4701, the Device Cluster Adapter (#3101) must be installed on the 4701. **Limitations:** File transfer is not supported when attached to the 4701. For additional information, limitations, and prerequisites, see IBM.

5253 Emulation Installation Convenience Kit Version 2 (#2882): Provides the following items necessary to permit attachment of the 5150 to the 5520 Administrative System:

- Display Station Emulation Adapter (#2887)
- 5520/Personal Computer Attachment Program Version 2 (#2884)
- T-connector (#2891)
- Twinaxial Cable Assembly (#2892)

When emulating a 5253, the 5150 user has access to the word- and record-processing functions, storage, distribution facilities, and most other functions of the 5520 Administrative System. This option (#2882) provides the function of the 5253 Emulation Installation Convenience Kit Version 1 (#2890) plus expanded configuration support, 3270 emulation, display of special characters and symbols, and usability enhancements. **Maximum:** One. **Field Installation:** Yes. **Customer setup:** Yes. **Prerequisites:** A 5150 with a minimum of 128KB of user memory, an available full-feature system expansion slot, one 5-1/4 Inch Diskette Drive Adapter (#3780), one 5-1/4 Inch Diskette Drive (single-sided, #3800 or double-sided, #3810), and one of the following display options: A) A 5151 Monochrome Display and the Monochrome Display and Printer Adapter (#4900), or B) an 5153 Color Display and the Color/Graphics Monitor Adapter (#4910), or C) a user-supplied 80-column color video monitor and the Color/Graphics Monitor Adapter (#4910). One Terminator (#2893) is required only if the 5150 is the last display station or only display station on a twinaxial line. IBM Personal Computer Disk Operating System (DOS) Version 2 (6024061) is required. **Limitations:** The 5150 should not be used as the master display station or as the alternative master display station on the 5520 Administrative System. For additional information, limitations, and prerequisites, refer to IBM.

5250 Emulation Convenience Kit (#2886): Provides the following items necessary to permit attachment of the 5150 to the System/34, System/36, or System/38:

- Display Station Emulation Adapter (#2887)
- Personal Computer 5250 Emulation Program (#2885)
- T-connector (#2891)
- Twinaxial Cable Assembly (#2892)

Allows connection of a 5150 as a peripheral to a System/34, System/36, or System/38 either as a locally-attached workstation or remotely by using a 5251-12. The 5150 in 5250 emulation mode has access to the functions of the host system available to a display station operator, providing the user with the power of the System/34, System/36, or System/38. The 5150 can also operate as a stand-alone personal computer. **Maximum:** One. **Prerequisites:** A 5150 with a minimum of 64KB of user memory, an available system expansion slot, one 5-1/4 Inch Diskette Drive Adapter (#3780), one 5-1/4 Inch Diskette Drive (single-sided #3800 or double-sided #3810), and one of the following display options: A) A 5151 Monochrome Display and the Monochrome Display and Printer Adapter (#4900), or B) a 5153 Color Display and the Color/Graphics Monitor Adapter (#4910), or C) a user-supplied 80-column color video monitor and the Color/Graphics Monitor Adapter (#4910). One Twinaxial Cable Adapter (#2894) is required in place of the T-connector if the 5150 is the last display station or only display station on a twinaxial line. IBM Personal Computer Disk Operating System (DOS) is required. **Limitations:** The Display Station Emulation Adapter (#2887) must be installed in the 5150 system unit and not in a 5161 Expansion Unit. For additional information, limitations, and prerequisites, refer to IBM.

Display Station Emulation Adapter (#2887): Allows connection of the 5150 to the 5520 Administrative System or to the System/34, System/36, or System/38. When used with the 5520/Personal Computer Attachment Program Version 1 (#2888) or Version 2 (#2884), a 5150 equipped with this option has access to the word processing, records processing, storage, distribution, and 3270 emulation (Version 2 only) facilities of a local 5520 system. When used with the Personal Computer 5250 Emulation Program (#2885), a 5150 equipped with this option can be connected to a System/34, System/36, or System/38 either as a locally attached workstation or remotely by using a 5251-12 Display Station. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot is required. For attachment of this option to the 5520 Administrative System, a T-connector (#2891) and Twinaxial Cable Assembly (#2892) are required. In addition, a Terminator (#2893) is required if the 5150 is the last display station, or only display station, on a twinaxial line. For attachment of this option to a System/34, System/36, or System/38, a Twinaxial Cable Assembly (#2892) is required. In addition, a T-connector (#2891) is required if the 5150 is not the last device on a twinaxial line. A Twinaxial Cable Adapter (#2894) is required in place of the T-connector if the 5150 is the last or only device on a twinaxial line. **Customer setup:** Yes. **Limitations:** When used with the Personal Computer 5250 Emulation Program (#2885) or the 5520/Personal Computer Attachment Program Version 1 (#2888) this option must reside in the 5150 system unit and not in a 5161 Expansion Unit.

5253 Emulation Installation Convenience Kit Version 1 (#2890): Provides the following items necessary to permit attachment of the 5150 to the 5520 Administrative System:

- Display Station Emulation Adapter (#2887)
- 5520/Personal Computer Attachment Program Version 1 (#2888)
- T-connector (#2891)
- Twinaxial Cable Assembly (#2892)

When emulating a 5253, the 5150 user has access to the word- and record-processing functions, storage, distribution facilities, and most other functions of the 5520 Administrative System. **Maximum:** One. **Field Installation:** Yes. **Customer setup:** Yes. **Prerequisites:** A 5150 with a minimum of 64KB of user memory, an available system expansion slot, one 5-1/4 Inch Diskette Drive Adapter (#3780), one 5-1/4 Inch Diskette Drive (single-sided (#3800) or double-sided (#3810)), a 5151 Monochrome Display and the Monochrome Display and Printer Adapter (#4900). One Terminator (#2893) is required only if the 5150 is the last display station or only display station on a twinaxial line. IBM Personal Computer Disk Operating System (DOS) Version 1.1 (6024001) is required. **Limitations:** The 5150 should not be used as the master display station or as the alternative master display station on the 5520 Administrative System. The 5150, when operating in 5253 emulation mode, cannot emulate a 3270 through the 5520 Administrative Processing Program. The Display Station Emulation Adapter (#2887) must be installed in the 5150 system unit and not in a 5161 Expansion Unit. For additional information, limitations, and prerequisites, refer to IBM.

T-connector (#2891): Required to permit attachment of the Display Station Emulation Adapter (#2887) to the system twinaxial cables of the 5520 Administrative System or the System/34, System/36, or System/38. **Limitations:** Required for System/34, System/36, or System/38 attachment only if the 5150 is not the last device on the cable. **Prerequisites:** #2892 is required. **Maximum:** One. **Field Installation:** Yes.

5150 Personal Computer (cont'd)

Twinaxial Cable Assembly (#2892): Required to permit attachment of the Display Station Emulation Adapter (#2887) to the system twinaxial cables of the 5520 Administrative System or the System/34, System/36, or System/38. **Prerequisites:** #2887. **Maximum:** One. **Field Installation:** Yes.

Terminator (#2893): Required to permit attachment of the Personal Computer/Display Station Emulation Adapter (#2887) to the 5520 Administrative System if the 5150 is the last display station, or only display station, on a twinaxial line. **Prerequisites:** #2891 and #2892. **Maximum:** One. **Field Installation:** Yes.

Twinaxial Cable Adapter (#2894): Required to permit attachment of the Display Station Emulation Adapter (#2887) to the System/34, System/36, or System/38 if the 5150 is the last or only device on a twinaxial line. **Prerequisites:** #2892. **Maximum:** One. **Field Installation:** Yes.

5-1/4 Inch Diskette Drive Adapter (#3780): Provides for the attachment of up to two 5-1/4 inch diskette drives. Both single-sided and double-sided drives are supported by the adapter. The adapter is a standard feature with 5150 mdls 114, X14, 164, X64, 174, and X74. **Limitations:** The 5-1/4 Inch Diskette Drive Adapter must be installed in the 5150 System Unit and not in the 5161 Expansion Unit. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available system expansion slot is required. **Customer Setup:** Yes.

5-1/4 Inch Single-Sided Diskette Drive (#3800): Provides for the 5150 to read and write data on one side of a soft-sectored 5-1/4 inch diskette. Formatted storage capacity is approximately 160KB (180KB with IBM Personal Computer DOS 2.0). The diskette drive has the following characteristics: Track density: 48 tracks per inch ... number of tracks: 40 per surface ... data surfaces: 1 per diskette ... rotational speed: 300 rpm ... access time: 8ms track-to-track ... data transfer rate: 20,480 bytes per second. The 5-1/4 Inch Single-Sided Diskette Drive resides inside the 5150 to provide diskette access from the front. Two drives may be installed, but the left-hand drive is always used to load the disk operating system or machine language program at power-on. **Maximum:** Up to two 5-1/4 Inch Single or Double-Sided Diskette Drives may be installed in a 5150. **Field Installation:** Yes. **Prerequisites:** #3780. **Customer Setup:** Yes.

5-1/4 Inch Double-Sided Diskette Drive (#3810): Allows the 5150 to read and write data on both sides of a soft-sectored 5-1/4 inch diskette. Formatted storage capacity is approximately 320KB (360KB with IBM Personal Computer DOS 2.0). The diskette drive has the following characteristics: Track density -- 48 tracks per inch ... number of tracks -- 40 per surface ... data surfaces -- 2 per diskette ... rotational speed -- 300 rpm ... access time -- 6ms track to track ... data transfer rate -- 20,480 bytes per second. The 5-1/4 Inch Double-Sided Diskette Drive resides inside the 5150 to provide diskette access from the front. Two drives may be installed, but the left-hand drive is always used to load the disk operating system or machine language program at power-on. **Maximum:** Up to two 5-1/4 Inch Single or Double-Sided Diskette Drives may be installed in a 5150. **Field Installation:** Yes. **Prerequisites:** #3780. **Customer Setup:** Yes.

Monochrome Display and Printer Adapter (#4900): Provides for the attachment of both the 5151 Monochrome Display mdl 001 and the 5152 Graphics Printer mdl 002. The adapter provides cable connectors for attachment of the printer and the display at the rear of the 5150. **Limitations:** The primary monitor/display adapter must be installed in the 5150 System Unit and not in the 5161 Expansion Unit. **Maximum:** One. **Cable:** The Printer Cable (#5612) is available to connect the 5152 mdl 002 to the Monochrome Display and Printer Adapter. **Field Installation:** Yes. **Prerequisites:** An available system expansion slot. **Customer Setup:** Yes.

Color/Graphics Monitor Adapter (#4910): Provides for the attachment of a color display to the 5150. Either a "direct-drive RGB" signal or a "composite" video signal can be selected. The display can be a direct-drive 5153 Color Display mdl 001, a video monitor, or through a customer-supplied RF modulator, a standard TV set. Either a color or black and white monitor or TV can be attached. 16 foreground and eight background colors are supported in text (character) mode. This attachment also provides support for 4-color medium resolution graphics (320 dots horizontal, 200 dots vertical) and black and white high-resolution graphics (640 dots horizontal, 200 vertical). 256 characters are available in "text" mode, 128 in medium-or high-resolution graphics. The adapter provides 16KB of built-in memory to store multiple display screen contents and supports a customer-supplied light-pen. **Limitations: Limitations:** The primary monitor/display adapter must be installed in the 5150 System Unit and not in the 5161 Expansion Unit. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available system expansion slot. **Customer Setup:** Yes.

Printer Adapter (#5200): Provides for attachment of the 5152 Graphics Printer mdl 002. This option is used when the Color/Graphics Monitor Adapter (#4910) is selected instead of the Monochrome Display and Printer Adapter (#4900), or when support for more than one printer is required and the Monochrome Display and Printer Adapter is already installed. The adapter provides a connector for attachment of the printer cable to the rear of the 5150. **Maximum:** One. **Cable:** The Printer Cable (#5612) is available to connect the 5152 mdl 002 to the Printer Adapter. **Field Installation:** Yes. **Prerequisites:** An available special or full-feature system expansion slot. **Customer Setup:** Yes.

IBM Personal Computer 3278 Attachment Option (#5315, #5316): Permits attachment of 3278 mdls 001 through 005 to the 5150 system unit. The 3278 Display Station and associated keyboard are used in place of the 5150 display and keyboard and are common to both the 3278 Display Station and 5150. This provides for concurrent operation of host and 5150 programming, plus the ability to transfer data between a host and the 5150. The 3270 Personal Computer Attachment (#5315, #5316) contains material for both the 3278 and the 5150 system unit. **Prerequisites:** A 3278 Display Station, mdl 1, 2, 3, 4, or 5, attached to a 3274 Control Unit or 3276 Control Unit Display Station is required. If the 3278 mdl 1, 2, 3, or 4 serial number is in the range A0000 - N9999 or 9V000 - 9W999 order option #5316. For attachment of 3278 mdl 1, 2, 3, or 4 with any other serial number (e.g., P0123, 1A425, 71G65) or for attachment of 3278 mdl 5 order option #5315. An available expansion slot in a supported 5150 system unit is required. Supported system units include A) 5150 mdl X14, X64, or X74 with either the Color/Graphics Monitor Adapter (#4910) (for use with 3278 mdls 1, 2, 3, 4, or 5) or the Monochrome Display and Printer Adapter (#4900) (for use with 3278 mdls 1, 2, 3, or 4) or B) a 5150 system unit with a 5-1/4 Inch Diskette Drive Adapter (#3780), a minimum of one 5-1/4 Inch Single-sided Diskette Drive (#3800) or 5-1/4 Inch Double-sided Diskette Drive (#3810), a minimum of 64KB of memory, and either the Color/Graphics Monitor Adapter (#4910) (for use with 3278 mdls 1, 2, 3, 4, or 5) or the Monochrome Display and Printer Adapter (#4900) (for use with 3278 mdls 1, 2, 3, or 4). **Maximum:** One. **Limitations:** The ability to transfer data between a host system and the 5150 is not available with 3276 attachment. This option can not be installed if the 3278 has feature #4999 (Magnetic Reader Control) installed. See M3274 pages (mdls 1A, 1C, 1D, 31A, 31C, 51C) for control storage requirements or special considerations. **Field Installation:** Yes. For additional information, prerequisites and limitations see IBM.

3279 Attachment Option (#5322): This option permits customers to separately order the 5150 portion of the 3270 Personal Computer Attachment for 3279 Color Display Station (#5325, #5326). The option consists of: An adapter which resides in the 5150 system unit slot number one and connects to the 3279 keyboard and display; additional 1.5 meter (5 ft.) cables to connect the 5150 to the 3279 display and keyboard; a cable distribution box; a user's guide containing user instructions and 5-1/4 inch diskettes. **Maximum:** One. **Prerequisites:** A 3279 Color Display Station, mdl 2A, 3A, 2B, 3B, S2A, S2B, S3G, 2X, or 3X attached to an 3274 control unit or 3276 Control Unit Display Station is required. A 3279 Personal Computer Adapter is required. For 3279 mdls S2A, S2B, or 2X with serial numbers below E0000, and for all mdls S3G and 3X, order feature #5327. For mdls S2A, S2B, or 2X with serial numbers above E0000, order feature #5328. An available expansion slot in a supported 5150 System Unit is required. Supported system units include: A) 5150 mdl X14, X64, or X74 with a Color/Graphics Monitor Adapter (#4910); or B) a 5150 system unit with a 5-1/4 Inch Diskette Drive Adapter (#3780), a minimum of one 5-1/4 Inch Single-sided Diskette Drive (#3800) or 5-1/4 Inch Double-sided Diskette Drive (#3810), a minimum of 64KB of user memory, and the Color/Graphics Monitor Adapter (#4910). **Customer Setup:** Yes. For additional information, limitations, and prerequisites see IBM.

5150 Personal Computer (cont'd)

3270 Personal Computer Attachment for 3279 Color Display Station (#5325, #5326): Permits attachment of 3279 mdls 2A, 3A, 2B, 3B, S2A, S2B, S3G, 2X, or 3X to the 5150 system unit. The 3279 Color Display Station and associated keyboard are used in place of the 5150 display and keyboard and are common to both the 3279 and the 5150. This provides for concurrent operation of host and 5150 programming, plus the ability to transfer data between a host and the 5150. The 3270 Personal Computer Attachment for 3279 Color Display Station (#5325, #5326) contains material for both the 3279 and the 5150. The 5150 portion may be separately ordered as the 3279 Attachment Option (#5322), and the 3279 portion may be separately ordered as the 3279 Personal Computer Adapter (#5327, #5328). **Prerequisites:** A 3279 Color Display Station, mdl 2A, 3A, 2B, 3B, S2A, S2B, S3G, 2X, or 3X attached to an 3274 control unit or 3276 Control Unit Display Station is required. For 3279 mdls S2A, S2B, or 2X with serial numbers below E0000, and for all mdls S3G and 3X, order feature #5325. For mdls S2A, S2B, or 2X with serial numbers above E0000, order feature #5326. An available expansion slot in a supported 5150 System Unit is required. Supported system units include: A) 5150 mdl X14, X64, or X74 with a Color/Graphics Monitor Adapter (#4910); or B) a 5150 System Unit a 5-1/4 Inch Diskette Drive Adapter (#3780), a minimum of one 5-1/4 Inch Single-sided Diskette Drive (#3800) or 5-1/4 Inch Double-sided Diskette Drive (#3810), a minimum of 64KB of user memory, and the Color/Graphics Monitor Adapter (#4910). **Maximum:** One. **Limitations:** The following features cannot be installed on the 3279: Magnetic Reader Control (#4999); Selector Light-Pen (#6350, #6351, or #6360); Video Output (#8750). For data transfer, Configuration Support C (EC level R46 or higher) or Configuration Support D (EC level R60 or higher) is required on the 3274. Data transfer support is not available on the 3276. **Field Installation:** The 3279 Personal Computer Adapter (3279 portion of #5325, #5326) is available for field installation only. **Customer Setup:** The IBM Personal Computer 3279 Attachment Option (5150 portion of #5325, #5326) is customer setup. For additional information, limitations, and prerequisites see IBM.

3279 Personal Computer Adapter (#5327, #5328): This option permits customers to separately order the 3279 portion of the 3270 Personal Computer Attachment for 3279 Color Display Station (#5325, #5326). The option provides: the ability to accept screen images from the 3279 or from the Color/Graphics Monitor Adapter (#4910); a path for data transfer between the 3279 and the 5150; a 3279 I/O panel for cable attachment and a customer-operable test switch. **Maximum:** One. **Prerequisites:** A 3279 Color Display Station, mdl 2A, 3A, 2B, 3B, S2A, S2B, S3G, 2X, or 3X attached to a 3274 control unit or 3276 Control Unit Display Station is required. For 3279 mdls S2A, S2B, or 2X with serial numbers below E0000, and for all mdls S3G and 3X, order feature #5327. For models S2A, S2B, or 2X with serial numbers above E0000, order feature #5328. 3279 Attachment Option (#5322) installed in a supported mdl of the 5150 System Unit is required. **Limitations:** The following features cannot be installed on the 3279: Magnetic Reader Control (#4999); Selector Light-Pen (#6350, #6351, or #6360); Video Output (#8750). For data transfer, Configuration Support C (EC level R46 or higher) or Configuration Support D (EC level R60 or higher) is required on the 3274. Data transfer support is not available on the 3276. **Field Installation:** Field installation only. **Customer Setup:** No. For additional information, limitations, and prerequisites see IBM.

5151 MONOCHROME DISPLAY

PURPOSE

The 5151 Monochrome Display is a high-resolution video monitor which provides for the display of alphameric output from programs running on the 5150 Personal Computer, the 5160 Personal Computer XT, or the 3270 Personal Computer.

MODELS

Model 001

Prerequisites: The Monochrome Display and Printer Adapter (#4900) is required on the 5150 Personal Computer system or on the 5160 Personal Computer XT system. The 5151 Monochrome Display is supported by the IBM Personal Computer DOS (Versions 1.0, 1.1, and 2.0), CP/M-86*, and the UCSD p-System**, Version IV.

* Trademark of Digital Research, Inc.
** Trademark of the Regents of the University of California

Customer Setup (CSU): The 5151 Monochrome Display is a customer setup machine. Detailed setup and operation instructions are included with each machine. The customer is responsible for unpacking the 5151, attaching it to the Monochrome Display and Printer Adapter, and obtaining an operating system version that supports the 5151, or the 5271 System Unit.

Limitations: The 5151 Monochrome Display attached to the IBM Monochrome Display and Printer Adapter cannot be used to display dot-addressable graphic images such as those that can be created by programs written under Advanced BASIC. A set of line and block graphic characters is supported for simple display drawings and graphs.

Maximum: One per system.

HIGHLIGHTS

- A high-resolution, direct-drive display designed for use with IBM Personal Computer applications requiring alphameric output (such as text processing, programming, and problem solving).
- A 292mm (11-1/2") (diagonal) display with a green phosphor screen. The screen area provides for 25 rows of 80 characters. Alphameric characters are 7x9 dots in a 9x14 dot box. Both upper and lower case letters can be displayed. The character attributes provide underline, blinking, high intensity, reverse image, and non-display. In addition to the normal alphameric characters, a large number of special characters are provided.
- Easily adjusted with front-mounted brightness and contrast controls available to the operator. The Monochrome Display may be placed either on top of the system unit or on a nearby table top or desk.
- Supplied with signal and power cables (approximate length 914mm (3') each). The signal cable is plugged into a Monochrome Display and Printer Adapter which is inserted into an available system expansion slot. The AC power cable is plugged into the system unit, allowing the system unit power On/Off switch to also control the display unit.
- The 5151 Monochrome Display has the following characteristics:
  - Screen size: 292mm (11-1/2") (diagonal) monitor.
  - CRT: High-persistance green phosphor (P39) with etched surface to reduce glare.
  - Video signal: Maximum video bandwidth of 16.27 MHz. Screen refreshed at 50 Hz with 350 vertical lines of resolution and 720 lines of horizontal resolution. Horizontal drive frequency 18.432 kHz, TTL compatible.
  - Dimensions: Width 380mm (15")
Depth 350mm (14")
Height 280mm (11").
  - Weight: Approximately 7.9kg (17 pounds).

SPECIFY

- Voltage (120V AC, 60 Hz): No specify required.

5152 GRAPHICS PRINTER MDL 002

PURPOSE

The 5152 Graphics Printer model 002 provides a versatile, low-cost, quality dot matrix printer for the 5150 Personal Computer, the 5160 Personal Computer XT, and the 3270 Personal Computer. It allows printing of graphic images and an expanded set of text characters. It is a bidirectional printer that prints at 80 characters per second on continuous-feed, single- or multi-part forms.

MODELS

Model 002 Graphics Printer

Prerequisites: A separately purchased Printer Cable (#5612). System or Expansion Unit attachment is made through either the Monochrome Display and Printer Adapter or Printer Adapter using the printer cable option. The 5152 Graphics Printer mdl 002 is supported by the IBM Personal Computer DOS (Versions 1.0, 1.1, and 2.0), CP/M-86*, and the UCSD p-System**, Version IV.

* Trademark of Digital Research, Inc.
** Trademark of the Regents of the University of California

Customer Setup (CSU): The 5152 Graphics Printer mdl 002 is a customer set-up machine. Detailed setup and operation instructions are included with each machine. The customer is responsible for unpacking the 5152 mdl 002, assembling the printer, attaching it to the system unit, connecting the Printer Cable (#5612), and obtaining an operating system version that supports the 5152 mdl 002.

HIGHLIGHTS

- Bidirectional printing
- 80 characters per second rated speed (nominal)
- Line buffer for performance
- 12 character styles
- Normal, compressed, and emphasized modes with double strike, subscript, and superscript. Normal- and double-width combinations, 24 modes in all.
- Character font: 9x9 dot matrix
- Expanded character set consisting of:
  - 96 standard ASCII characters
  - accented alphabetics
  - box drawing
  - gray tone
  - block
  - Greek characters
  - math
- Underlining
- Variable form length
- Skip to top of next page (manual or programmed)
- Horizontal tab stops
- Warning beep when out of forms or activated from system unit
- Printer self-test
- Replaceable print head
- Replaceable ribbon cartridge, black ribbon
- The 5152 Graphics Printer mdl 002 has the following characteristics:
  - Print method: Impact dot matrix
  - Character size (normal):
    Width 2.1mm (0.08")
    Height 3.2mm (0.12")
  - Paper feed: Adjustable pinfeed tractors
  - Paper: Continuous form
  - Paper width: From 101.6mm (4") to 254mm (10")
  - Copies: One original with two carbon copies
  - Paper thickness: 0.3mm (0.01") maximum
  - Line spacing: 4.23mm (1/6"), or programmable
  - Columns: 80 (normal size)
    40 (double width size)
    132 (condensed size)
    66 (condensed - double width size)
  - Dimensions: Length 400mm (16")
    Depth 370mm (15")
    Height 110mm (4.5")
  - Weight: Approximately 5.9kg (13 pounds)

SPECIFY

- Voltage (120V AC, 60 Hz): No specify required.

5153 COLOR DISPLAY

PURPOSE

The 5153 Color Display provides the capability for programs running on the 5150 Personal Computer system or the 5160 Personal Computer XT system to display text and graphics output in color.

MODELS

Model 001

Prerequisites: A 5150 Personal Computer system or a 5160 Personal Computer XT system with the Color/Graphics Monitor Adapter (#4910) is required. The 5153 Color Display is supported by the IBM Personal Computer DOS (Versions 1.0, 1.1, and 2.0), CP/M-86*, and the UCSD p-System**, Version IV.

* Trademark of Digital Research, Inc.
** Trademark of the Regents of the University of California

Customer Setup (CSU): The 5153 is a customer setup machine. Detailed setup and operational instructions are included with each machine. The customer is responsible for unpacking the 5153, attaching it to the Color/Graphics Monitor Adapter, and obtaining an operating system version that supports the 5153.

Limitations: For word processing and other text use, the 5153 and Color/Graphics Monitor Adapter provide lower resolution than that obtainable with the Monochrome Display attached to the Monochrome Display and Printer Adapter.

Maximum: One.

HIGHLIGHTS

- High resolution, direct-drive display
- Connected to the 5150 or 5160 with the Color/Graphics Monitor Adapter and a 150cm (5-foot) cable that is provided
- 330mm (13") (diagonal) monitor capable of displaying sixteen colors
- Easily adjusted with front-mounted brightness and contrast controls
- The 5153 Color Display has the following characteristics:
  - Screen size: 330mm (13") (diagonal) monitor
  - 640 (horizontal) x 200 (vertical) addressability
  - Colors: 16 (red, green, blue, white, yellow, black, cyan, magenta, brown, light gray, dark gray, light blue, light green, light cyan, light red, and light magenta)
  - Horizontal scanning frequency: 15.75KHz +/- 200Hz
  - Vertical drive: 60 Hz
  - Operating temperature: 16 C to 32 C ambient (60 F to 90 F)
  - Storage temperature: 10 C to 43 C (50 F to 110 F)
  - Relative humidity: 8% to 80% (non-condensing) when on ... 20% to 80% (non-condensing) when off
  - Dimensions: Width 394mm (15-1/2")
    Depth 432mm (17")
    Height 292mm (11-1/2")
  - Weight: Approximately 12kg (26 pounds)

SPECIFY

- Voltage (120V AC, 60 Hz, 1 A, 240 BTU/hour): No specify required.

5160 PERSONAL COMPUTER XT

PURPOSE

The 5160 Personal Computer XT is an extended version of the 5150 Personal Computer. A variety of operating systems and programming languages is supported. Software is available to allow stand-alone use for applications such as professional decision-making support, word processing, computer-based training, business accounting, and home entertainment. The 5160 Personal Computer XT may also be used as an intelligent workstation, connected to a wide variety of IBM data processing and office automation systems. Such connection allows the 5160 user to take advantage of the additional computing power, communications, mass storage, high-speed printing, application software, and data bases provided by the host system. The XT/370 (5160 models 568 and 588) are S/370 intelligent workstations that allow the execution of many S/370 programs (up to 4MB virtual) as well as the capability of attaching as a 3277-2 to 3270 family controllers via coaxial cable. The XT/370 can also operate as a standard XT.

MODELS

Model 087 — System Unit/Keyboard, 128KB Memory, 10MB Fixed Disk Drive, Fixed Disk Drive Adapter, one 5-1/4 Inch Double-Sided Diskette Drive, 5-1/4 Inch Diskette Drive Adapter, Asynchronous Communications Adapter.

Model 568 — System Unit/Keyboard, 256KB Memory on system board, PC/370-M Card (512KB Memory), PC/370-P Card (370 Processor), PC/3277EM Card (3277-2 Emulation), attachment adapter for a 5161, and one 5-1/4 inch 320KB Diskette Drive and Adapter.

Model 588 — System Unit/Keyboard, 256KB Memory on system board, PC/370-M Card (512KB Memory), PC/370-P Card (370 Processor), PC/3277EM Card (3277-2 Emulation), 10MB Fixed Disk and Adapter, one 5-1/4 inch 320KB Diskette Drive and Adapter.

Prerequisites: Attachment of one of the following display options:
- A 5151 Monochrome Display mdl 001 and the Monochrome Display and Printer Adapter (#4900).
- A 5153 Color Display mdl 001 and the Color/Graphics Monitor Adapter (#4910).
- A user-supplied direct-drive color or black and white video monitor (not applicable to mdls 588 and 568), or a user-supplied color or black and white television set with an RF modulator, and the Color/Graphics Monitor Adapter (#4910).
- For 5160 mdl 588 or 568: A user-supplied coaxial cable to attach, via the PC/3277EM Card (3277-2 Emulation), to a 3274 Control Unit (with B type adapter). The maximum length cable is 2,000 feet.

Customer Setup (CSU): All mdls and special features of the 5160 Personal Computer XT are customer setup.

HIGHLIGHTS

- The 5160 Personal Computer XT System Unit is a table-top unit which houses the high-performance microprocessor.
- The 5160 contains eight option (feature) slots. These slots allow the addition of feature cards to support additional devices, features, or memory. Six of these slots are full-feature slots that will accept full-size feature cards. The remaining two are special-feature slots that will accept smaller feature cards.
- The following features are supplied as standard with the 5160:
  - 83-key keyboard
  - Eight system expansion slots (one slot is required for a display adapter; one is used for the 5-1/4 inch Diskette Drive Adapter
  - Intel 8088 Microprocessor
    - 4.77 MHz clock speed
    - 410 ns cycle speed
  - 40KB read-only memory
    - Enhanced version of BASIC-80 Interpreter
    - Built-in power-on diagnostic self-test
  - 5-1/4 inch 320KB Diskette Drive and Adapter (formatted capacity of up to 360KB)
  - 130 watt power supply with cooling fan
  - Programmable speaker which can be used to produce tones
- The following table shows the slot utilization and memory on the system board for the 5160 mdls:

Slot #	Type	Models 087	588	568	Description
1	Full	open	open	open	Recommended for Prereq. Display Adapter
2	Full	open	used	used	PC/3277EM Card (3277-2 Emulation)
3	Full	open	used	used	PC/370-M Card (512KB Memory)
4	Full	open	used	used	PC/370-P Card (370 Processor)
5	Full	used	used	----	Fixed Disk Drive Adapter in mdl 087/588
	Full	----	----	used	Attachment adapter for 5161 in mdl 568
6	Full	used	used	used	5-1/4 inch Diskette Adapter
7	Spec.	open	open	open	
8	Spec.	used	open	open	Asynchronous Communications Adapter
		128KB	256KB	256KB	Memory on XT system board

- Additional memory increments of 64KB are available (unnecessary in mdls 588 and 568). Two additional memory increments can be installed on the system board and the remainder on expansion options (feature cards). The 5160 supports user memory up to a maximum of 640KB in Personal Computer mode but only 480KB in XT/370 mode.
- Further expansion is available with a 5161 Expansion. The 5161 mdl 002 is used as an expansion unit for the 5160 mdls 087 or 588. The 5161 mdl 003 is used as an expansion unit for the 5160 mdl 568. The 5161 mdl 003 contains two additional 10MB fixed drives and hard file adapter. The 5161 mdl 002 contains an additional 10MB Fixed Disk Drive and eight additional option slots. Upon installing the Expansion Unit, the Fixed Disk Drive and Fixed Disk Drive Adapter in the 5160 may be moved into the Expansion Unit for a total of 20MB (two 10MB Fixed Disk Drives) in the Expansion Unit. An additional diskette drive may then be installed in the 5160, resulting in a maximum configured system of 20MB Fixed Disk, 720KB diskette, and 640KB user memory. When the Expansion Unit is attached to the 5160, one slot in each unit is occupied by an attachment card.
- Dimensions (approximate): Height -- 142mm (6 in.) ... Width -- 500mm (20 in.) ... Depth -- 410mm (16 in.).
- Weight (Approximate): 14.5kg (32 lbs).
- Some of the options available for the 5160 Personal Computer XT include:
  - Attachment of the 5161 Expansion Unit mdl 002 provides:
    - 10MB Fixed Disk Drive for increased storage capacity
    - Additional configuration flexibility
  - 5151 Monochrome Display mdl 001
  - 5153 Color Display mdl 001
  - 5152 Graphics Printer mdl 002
  - XT/370 Option Kit
- Highlights of the BASIC-80 Interpreter include:
  - Full screen editor for easy program creation and modification
  - Select 40- or 80-character display lines
  - Up to 16 foreground and 8 background colors (with appropriate monitor and adapter)
  - Automatic line numbering
  - 40-character variable names (all characters significant)
  - Multiple statements per program line
  - 250 characters per program line
  - Comments on program lines
  - Up to 17-digit numeric precision
  - Error trapping
  - Addressable workspace up to 60KB
  - Integer/real/string variables
  - Single- and double-precision floating point numbers

IBM Personal Computer 3278/79 Emulation Adapter Hardware Maintenance and Service Manual Addendum (#2337): Provides detailed maintenance information about the 3278/79 Emulation Adapter (#2507) for users of the *IBM Personal Computer XT Hardware Maintenance and Service Manual* (#6809).

Display Station Emulation Adapter Hardware Maintenance and Technical Reference Manual Version 2 (#2883): Provides maintenance information for a Display Station Emulation Adapter (#2887) used with the IBM 5520/Personal Computer Attachment Program Version 2 (#2884). This manual will enable the customer to perform problem diagnosis to the field replaceable unit level.

Display Station Emulation Adapter Hardware Maintenance Manual (#2889): Provides maintenance information for a Display Station Emulation Adapter (#2887) used with the IBM Personal Computer IBM 5250 Emulation Program (#2885). This manual will enable the customer to perform problem diagnosis to the field replaceable unit level.

Learning to Use DOS 2 (#4080): A guide to the use of the IBM Personal Computer DOS - Version 2. It takes new users of DOS step-by-step

5160 Personal Computer XT (cont'd)

through the most commonly used DOS 2 commands. The course starts with the fundamentals of DOS. It then moves on to the use of the fixed disk and a list of similarities and differences between DOS 2 and DOS 1.1. Rather than teaching complex concepts, it teaches step-by-step procedures to accomplish everyday tasks.

IBM Personal Computer XT Technical Reference (#6808): This manual is designed to provide hardware design and interface information. The publication also provides Basic Input Output System (BIOS) information as well as programming support material. The manual is intended for programmers, engineers involved in hardware and software design, designers, and interested persons who have a need to know how the IBM Personal Computer XT is designed and works.

IBM Personal Computer XT Hardware Maintenance and Service (#6809): Provides step-by-step instructions that aid the user in identifying the failure of an IBM Personal Computer XT Field Replaceable Unit (FRU). When the FRU has been identified, the manual provides the necessary information to complete the repair activity (i.e., adjustments, replacements, etc.).

SPECIAL FEATURES

Math Co-processor Option (#1002): Provides for the addition of the Intel 8087 Processor as a companion to the Intel 8088 to increase speed and precision in arithmetic, logarithmic, and trigonometric functions. The Option Kit provides a matched Intel 8088 along with the Intel 8087 to ensure high performance. The Intel 8087 multiplies 32-bit and 64-bit floating point numbers approximately 80 times faster than the Intel 8088. This option is supported only by IBM Personal Computer APL and by the Macro Assembler "escape" instruction. **Maximum:** One. **Field Installation:** Yes. The customer is responsible for ensuring that the Math Co-processor Option is installed by a technically skilled person. It is recommended that IBM or an IBM-authorized Personal Computer Dealer install this option.

64KB Memory Module Kit (#1003): [Unnecessary in mdls 588 and 568] Provides a 64KB increment of parity-checked random access memory which may be plugged into sockets on the 5160 system board or the 64/256KB Memory Expansion Option (#1013). The 64KB Memory Module Kits are sold as small, plug-in circuits with instructions for user installation. **Maximum:** Up to two 64KB Memory Module Kit increments may be customer-installed on the system board, to provide an additional 128KB of memory. The 64/256KB Memory Expansion Option provides 64KB of memory as standard. Up to three 64KB Memory Module Kit increments may be customer-installed on a 64/256KB Memory Expansion Option, to provide an additional 192KB of memory. **Field Installation:** Yes. **Prerequisites:** Available sockets on the 5160 system board, or available sockets on a 64/256KB Memory Expansion Option. **Customer Setup:** Yes.

64/256KB Memory Expansion Option (#1013): Increments system memory by 64KB (65,536 bytes) and is easily expandable to 256KB by plugging in additional increments of 64KB with 64KB Memory Module Kits (#1003). The 64/256KB Memory Expansion Option is packaged as a circuit card designed to plug into one of the 5160's full-feature system expansion slots. **Technical Information:** Random access memory ... starting address is set by switches ... 250 ns access time ... 410 ns memory cycle time ... parity checking ... sockets for expansion to 256KB. **Limitations:** The 5160 supports a maximum addressable memory of 640K bytes. The combination of the 256KB installed on the system board, and any installed 64/256KB Memory Expansion Options, and 64KB Memory Module Kits, must not exceed a total of 640KB of memory. The 64/256KB Memory Expansion Option must be installed in the 5160 System Unit and not in a 5161 Expansion Unit. **Maximum:** Two. **Field Installation:** Yes. **Prerequisites:** The system board must have 256KB of memory installed before adding any additional memory via memory expansion options. An available full-feature system expansion slot is required for each 64/256KB Memory Expansion Option. **Customer Setup:** Yes.

Keyboard (#1100): The keyboard (standard on the 5160 mdls 087, 588 and 568) is attached to the 5160 with a 1.8m (6 foot) coiled cable, permitting adaptation to a variety of work environments. The 83-key keyboard, with an adjustable typing angle, offers commonly-used data and word processing functions in a design that combines the familiar typewriter and calculator pad layouts. All non-control keys are typamatic (repeating). Ten program-supported function keys (total of 40 possible functions using keyboard shift keys) are standard. Special symbols, such as those used to draw lines, may be accessed with a combination of keys. Depending on the application program, from ten to forty special function keys may be supported. Other keys, like those used to print the current screen contents, correct a typing error, or "scroll" a long document, are clearly labeled. Access to all 256 characters (ASCII and special) is provided by the use of the ALT key. The keyboard is plugged directly into the 5160. The approximate dimensions of the keyboard are: 57mm (2.5 in.) height, 500mm (20 in.) width, 200mm (8 in.) depth. The approximate weight is 2.8kg (6 lbs). **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes.

Game Control Adapter (#1300): Provides support for two customer-supplied joysticks for video game interaction, allowing the user to move an object on the screen in any direction, or it supports up to four customer-supplied game "paddles" for simple horizontal or vertical movement. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available special-feature (small) or full-feature system expansion slot. **Customer Setup:** Yes.

Prototype Card (#1400): Professional engineers or hobbyists may utilize the Prototype Card as a base for building and testing custom attachments to the system. The Prototype Card is designed to plug into one of the 5160's full-feature expansion slots. It is a full-size, high-quality circuit board. Circuitry and module holes are provided for interface with the IBM bus. A bracket is included to secure the card in the 5160 with a cut-out provided for up to a 37-pin external connector. Detailed instructions and component identifications are included for I/O decode attachment logic. **Technical Information:** Physical dimensions - 107mm (4.2") high x 335mm (13.2") long ... completely etched and drilled with plated-through holes ... preprinted circuitry for interface to IBM bus ... attachment bracket and screws included ... block diagram and I/O decode logic description included. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot. **Customer Setup:** Yes.

Asynchronous Communications Adapter (#2074): Provides a channel to data processing or input/output devices outside of the immediate system. Such devices can be connected by telephone using a plug-in modem, or directly by cable when the device is nearby. The communication "target" may be a large host computer, a Series/1, another 5150/5160, a paper tape reader, a communicating typewriter, a laboratory instrument, or other machines providing the popular RS-232-C asynchronous interface. The Asynchronous Communications Adapter is a standard feature on the 5160 mdl 087. This adapter is flexible enough to match most of the computers and related products available in the microcomputer marketplace. The user's program selects the appropriate speed (50-9600 bps), format (5-, 6-, 7-, or 8-bit characters), parity and stop bits to reflect the attached device. Once communication has been established, the user's program performs reads and writes. Interrupts permit the program to perform data processing such as calculating, diskette reading or writing, or printing, and then pause to resume communications when a signal appears on the line. The adapter provides an EIA RS-232-C interface. One 25-pin "D" shell, male-type connector is provided to attach various peripheral devices. In addition, a current-loop interface is located in the same connector. A jumper block is provided to select manually either the voltage or the current-loop interface. **Maximum:** Two. **Cable:** A user-supplied communication cable is required for connection of external modems or other devices to the Asynchronous Communications Adapter. **Field Installation:** Yes. **Prerequisites:** An available special-feature (small) or full-feature system expansion slot is required. **Customer Setup:** Yes.

Binary Synchronous Communications (BSC) Adapter (#2075): The BSC Adapter when used with the BSC 3270 Emulation Program (6024037) can be used to emulate 3270 interactive BSC operation. The adapter provides the ability for a 5160 attached to a host system via communications lines to participate in a network using BSC protocol. The network may be either switched or nonswitched line. When used as a 3270 with the BSC 3270 Emulation Program, the 5160 operates as and appears to a host as one of the following 3270 devices:

3271 mdl 2/3277 mdl 2	Nonswitched line
3274 mdl 51C/3278 mdl 2	Nonswitched line
3275 mdl 2	Switched and nonswitched line
3276 mdl 2	Nonswitched line

Technical Information: EIA RS-232-C interface ... operates at up to 9600 bps with switched or nonswitched line support ... provides modem control functions ... facilitates program controlled data transfer ... supports electrical wrap and error status reporting ... prioritized interrupt system controls. **Limitations:** Only one BSC Adapter may be installed if an SDLC Adapter is installed on the same system. **Maximum:** Two. **Cable:** The Communications Adapter Cable (#2067) allows the user to connect the BSC Adapter card to a modem via a plug at the rear of the 5160. The cable is double-shielded and approximately 3m (10 feet) long. A wrap connector is provided to test the cable. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot. Software such as the BSC 3270 Emulation Program is required for communication. An external modem must be cable-connected between the BSC Adapter and the telephone line. **Customer Setup:** Yes.

SDLC Communications Adapter (#2090): The SDLC Communications Adapter when used with the SNA 3270 Emulation and RJE Support Program (6024036) permits the 5160 to emulate 3270 interactive SNA operation or 3770 batch SNA. The adapter provides the ability for a 5160 attached to a host system via communications lines to participate in a network using SDLC protocol. When used as a 3270 with the SNA 3270 Emulation and RJE Support Program, the 5160 operates as and appears to a host as a 3278 mdl 2 attached to a 3274 mdl 51C. **Technical Information:** EIA RS-232-C interface ... operates at up to 9600 bps (up to 4800 bps when used with the SNA 3270 Emulation and RJE Support Program) with switched or nonswitched line support (including multipoint) ... provides modem control functions ... facilitates program controlled data transfer ... supports electrical wrap and error status reporting ... prioritized interrupt system controls. **Limitations:** Only one Asynchronous Communications Adapter may be installed if the SDLC Communications Adapter is installed. **Maximum:** One.

5160 Personal Computer XT (cont'd)

Cable: The Communications Adapter Cable (#2067) allows the user to connect the SDLC Communications Adapter card to a modem via a plug at the rear of the 5160. The cable is double-shielded and approximately 3m (10 feet) in length. A wrap connector is provided to test the cable. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot. Software such as the SNA 3270 Emulation and RJE Support Program (6024036) is required to allow communication. An external modem must be cable-connected between the SDLC Communications Adapter and the telephone line. **Customer Setup:** Yes.

10MB Fixed Disk Drive (#2500): Provides storage for user programs and data. One 10MB Fixed Disk Drive is provided as standard on the 5160. The disk drive has the same physical dimensions and mounting as the 320KB diskette drive. **Technical Information:** 512 bytes per sector ... 17 sectors per track ... 306 tracks per surface ... 4 surfaces ... 3,600 rpm ... 90ms average access time ... 5M bit per second transfer rate. **Maximum:** One. If a 5161 mdl 002 is attached to the 5160, the 10MB Fixed Disk Drive and the Fixed Disk Drive Adapter in the 5160 must be moved into the 5161 to provide a total of 20MB of fixed disk storage (two 10MB Fixed Disk Drives) available to the system. **Field Installation:** Yes. **Prerequisites:** #2501. **Customer Setup:** Yes.

Fixed Disk Drive Adapter (#2501): Provides the buffering, error detection, and data transfer between the 10MB Fixed Disk Drive (#2500) and the 5160. One Fixed Disk Drive Adapter is included as a standard feature on the 5160. The Fixed Disk Drive Adapter can attach up to two 10MB Fixed Disk Drives. **Technical Information:** 32-bit error-correcting code ... microprocessor controlled ... on-board sector buffers ... internal diagnostics ... direct memory access (DMA) data transfer ... high-level command set ... automatic error detection and correction ... automatic retries on disk access. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot. **Customer Setup:** Yes.

3278/79 Emulation Adapter (#2507): Expands the capabilities of the 5160 by providing coaxial cable attachment to the 3274 Control Unit, the 4321, 4331 or 4361 Processor Display/Printer Adapter, or the 4701 Finance Communication Controller. When used with the IBM Personal Computer 3278/79 Emulation Control Program (6024134), the 5160 can emulate the functions of a 3278 Display Station mdl 2 or a 3279 Color Display Station mdl 2A or S2A and can also support file transfer with the host. Both the host-controlled 3270 session and a local IBM Personal Computer DOS session can be active concurrently and the user can interact with either session alternately. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes. **Prerequisites:** An available 5160 system unit full-feature expansion slot is required. A customer-supplied coaxial cable is required for host system attachment. Software such as the Personal Computer 3278/79 Emulation Control Program (#4134) is required. A 3270-PC File Transfer Program (such as 5664-281 for VM/SP or 5665-311 for MVS/TSO) or equivalent is required to allow for file transfer. For attachment to the 4321 or 4331, specify code **#9843** must be installed on the 4321 or 4331. For attachment to the 4701, the Device Cluster Adapter (#3101) must be installed on the 4701. **Limitations:** File transfer is not supported when attached to the 4701. For additional information, limitations, and prerequisites, see IBM.

5250 Emulation Convenience Kit (#2886): Provides the following items necessary to permit attachment of the 5160 to the System/34, System/36, or System/38:

- Personal Computer/Display Station Emulation Adapter (#2887)
- Personal Computer 5250 Emulation Program (#2885)
- T-connector (#2891)
- Twinaxial Cable Assembly (#2892)

Allows connection of a 5160 as a peripheral to a System/34, System/36, or System/38 either as a locally-attached workstation or remotely by using a 5251-12. The 5160 in 5250 emulation mode has access to the functions of the host system available to a display station operator, providing the user with the power of the System/34, System/36, or System/38. The 5160 can also operate as a stand-alone personal computer. **Maximum:** One. **Prerequisites:** A 5160 with a minimum of 64KB of user memory, an available full-feature system expansion slot, one 5-1/4 Inch Diskette Drive Adapter (#3780), one 5-1/4 Inch Diskette Drive (single-sided (#3800) or double-sided (#3810), and one of the following display options: A) A 5151 Monochrome Display and the Monochrome Display and Printer Adapter (#4900), or B) a 5153 Color Display and the Color/Graphics Monitor Adapter (#4910), or C) a user-supplied 80-column color video monitor and the IBM Color/Graphics Monitor Adapter (#4910). One Twinaxial Cable Adapter (#2894) is required in place of the T-connector if the 5160 is the last display station or only display station on a twinaxial line. IBM Personal Computer Disk Operating System (DOS) is required. **Limitations:** The Display Station Emulation Adapter (#2887) must be installed in the 5160 system unit and not in a 5161 Expansion Unit. For additional information, limitations, and prerequisites, refer to IBM.

Display Station Emulation Adapter (#2887): Allows connection of the 5160 to the 5520 Administrative System or to the System/34, System/36, or System/38. When used with the 5520/Personal Computer Attachment Program Version 1 (#2888) or Version 2 (#2884), a 5160 equipped with this option has access to the word processing, records processing, storage, distribution, and 3270 emulation (Version 2 only) facilities of a local 5520 system. When used with the Personal Computer 5250 Emulation Program (#2885), a 5160 equipped with this option can be connected to a System/34, System/36, or System/38 either as a locally attached workstation or remotely by using a 5251-12 Display Station. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot is required. For attachment of this option to the 5520 Administrative System, a T-connector (#2891) and Twinaxial Cable Assembly (#2892) are required. In addition, a Terminator (#2893) is required if the 5160 is the last display station, or only display station, on a twinaxial line. For attachment of this option to a System/34, System/36, or System/38, a Twinaxial Cable Assembly (#2892) is required. In addition, a T-connector (#2891) is required if the 5160 is not the last device on a twinaxial line. A Twinaxial Cable Adapter (#2894) is required in place of the T-connector if the 5160 is the last or only device on a twinaxial line. **Customer setup:** Yes. **Limitations:** When used with the Personal Computer 5250 Emulation Program (#2885) or the 5520/Personal Computer Attachment Program Version 1 (#2888) this option must reside in the 5160 system unit and not in a 5161 Expansion Unit.

T-connector (#2891): Required to permit attachment of the Display Station Emulation Adapter (#2887) to the system twinaxial cables of the 5520 Administrative System or the System/34, System/36, or System/38. **Limitations:** Required for System/34, System/36, or System/38 attachment only if the 5160 is not the last device on the cable. **Prerequisites:** #2892. **Maximum:** One. **Field Installation:** Yes.

Twinaxial Cable Assembly (#2892): Required to permit attachment of the Display Station Emulation Adapter (#2887) to the system twinaxial cables of the 5520 Administrative System or System/34, System/36, or System/38. **Prerequisites:** #2887. **Maximum:** One. **Field Installation:** Yes.

Terminator (#2893): Required to permit attachment of the Display Station Emulation Adapter (#2887) to the 5520 Administrative System if the 5160 is the last display station, or only display station, on a twinaxial line. **Prerequisites:** #2891 and #2892. **Maximum:** One. **Field Installation:** Yes.

Twinaxial Cable Adapter (#2894): Required to permit attachment of the Display Station Emulation Adapter (#2887) to the System/34, System/36, or System/38 if the 5160 is the last or only device on a twinaxial line. **Prerequisites:** #2892. **Maximum:** One. **Field Installation:** Yes.

5-1/4 Inch Diskette Drive Adapter (#3780): Provides for the attachment of up to two 5-1/4 inch diskette drives. Both single-sided and double-sided drives are supported by the adapter. The adapter is a standard feature on the 5160. **Limitations:** The 5-1/4 Inch Diskette Drive Adapter must be installed in the 5160 System Unit and not in a 5161 Expansion Unit. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot. **Customer Setup:** Yes.

5-1/4 Inch Single-Sided Diskette Drive (#3800): Provides for the 5160 to read and write data on one side of a soft-sectored 5-1/4 inch diskette. Formatted storage capacity is approximately 160KB (180KB with IBM Personal Computer DOS 2.0). The diskette drive has the following characteristics: Track density -- 48 tracks per inch ... number of tracks -- 40 per surface ... data surfaces -- 1 per diskette ... rotational speed -- 300 rpm ... access time -- 8ms track-to-track ... data transfer rate -- 20,480 bytes per second. **Limitations:** Installation of a 5-1/4 inch single-sided Diskette Drive in the 5160 may require the removal and transfer of a previously installed 10MB Fixed Disk Drive to a 5161 mdl 002. **Maximum:** Up to two diskette drives (single- or double-sided) may be installed in a 5160. **Field Installation:** Yes. **Prerequisites:** #3780. **Customer Setup:** Yes.

5-1/4 Inch Double-Sided Diskette Drive (#3810): Allows the 5160 to read and write data on both sides of a soft-sectored 5-1/4 inch diskette. Formatted storage capacity is approximately 320KB (360KB with IBM Personal Computer DOS 2.0). The diskette drive has the following characteristics: Track density -- 48 tracks per inch ... number of tracks -- 40 per surface ... data surfaces -- 2 per diskette ... rotational speed -- 300 rpm ... access time -- 6ms track to track ... data transfer rate -- 20,480 bytes per second. The 5-1/4 Inch Double-Sided Diskette Drive resides inside the 5160 to provide diskette access from the front. One Double-Sided Diskette Drive is standard on the 5160. **Limitations:** Installation of an additional 5-1/4 inch Double-Sided Diskette Drive in the 5160 may require the removal and transfer of a previously-installed 10MB Fixed Disk Drive to a 5161 mdl 002. **Maximum:** Up to two diskette drives (single- or double-sided) may be installed in a 5160. **Field Installation:** Yes. **Prerequisites:** #3780. **Customer Setup:** Yes.

XT/370 Option Kit (#3891): The XT/370 Option Kit is a set of three cards which allow the 5160 to execute many of the S/370 instructions and/or act as a 3277-2 Display Station. Following is a description of these cards:

1. XT/370 Processor Card (PC/370-P Card): Consists of three microprocessors, a page table and attendant circuitry. The first

5160 Personal Computer XT (cont'd)

microprocessor engine executes most of the commonly used fixed point S/370 instructions. The second microprocessor emulates the remaining non-floating point S/370 instructions. The third microprocessor executes S/370 floating point instructions.

2. XT/370 512KB Memory Card (PC/370-M Card): This Auxiliary RAM card contains 512KB of parity-checked RAM accessible from either the PC/370-P Card or the Intel 8088 (the microprocessor for the 5160). Concurrent requests for memory accesses are arbitrated, with the 8088 accesses receiving highest priority. This memory (512KB) is viewed in Personal Computer mode as a contiguous storage area that begins at the end of the 256KB of required 5160 memory. However, in Personal Computer mode, the IBM Personal Computer XT/370 has only 640KB of usable memory. When in this native mode, this memory operates marginally slower than the 256KB of memory on the systems board. The PC/370-P Card views this memory as two separate areas which are not contiguously addressable. The area from 0 to 480KB is addressed from 0 to 480KB and is real S/370 space. The area from 480KB to 512KB is addressed from 0 to 32KB and is control store for the second microprocessor on the PC/370-P Card.
3. XT/370 3277 Emulation Card (PC/3277EM Card): This Card provides the connection which permits the 5160 with XT/370 Option to attach via coaxial cable to an appropriately configured 3270 Control Unit. This permits local and remote operation so that the 5160 can emulate a 3277 mdl 2 using the 5151 Monochrome Display. The Color Display (5153 mdl 001) with appropriate adapter may also be used. Since there is no color support in 3277 mode, the default colors will be used if this color display is installed. This connection is also supported by VM/PC for upload and download of data between host VM systems and the 5160 with XT/370.

Maximum: One. **Field Installation:** Yes. **Customer Setup:** Yes. **Prerequisites:** Must be installed respectively in full-feature slots numbers 4, 3, and 2 ... Software such as the VM/PC Licensed Program (6936733) ... A user-supplied coaxial cable to attach to a 3270 Controller ... 256KB of memory on 5160 Systems Board.

Monochrome Display and Printer Adapter (#4900): Provides for the attachment of both the 5151 Monochrome Display mdl 001 and the 5152 Graphics Printer mdl 002. The adapter provides cable connectors for attachment of the printer and the display at the rear of the 5160. **Limitations:** The primary monitor/display adapter must be installed in the 5160 System Unit and not in a 5161 Expansion Unit. **Maximum:** One. **Cable:** The Printer Cable (#5612) is available to connect the 5152 mdl 002 to the Monochrome Display and Printer Adapter. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot. **Customer Setup:** Yes.

Color/Graphics Monitor Adapter (#4910): Provides for the attachment of a color display to the 5160. Either a "direct-drive RGB" signal or a "composite" video signal can be selected. The display can be a direct-drive 5153 Color Display mdl 001, a video monitor, or, through a customer-supplied RF modulator, a standard TV set. Either a color or black and white monitor or TV can be attached. 16 foreground and eight background colors are supported in text (character) mode. This attachment also provides support for 4-color medium resolution graphics (320 dots horizontal, 200 dots vertical) and black and white high-resolution graphics (640 dots horizontal, 200 vertical). 256 characters are available in "text" mode, 128 in medium- or high-resolution graphics. The adapter provides 16KB of built-in memory to store multiple display screen contents and supports a customer-supplied light-pen. **Limitations:** The primary monitor/display adapter must be installed in the 5160 System Unit and not in a 5161 Expansion Unit. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot. **Customer Setup:** Yes.

Printer Adapter (#5200): Provides for attachment of the 5152 Graphics Printer mdl 002. This option is used when the Color/Graphics Monitor Adapter (#4910) is selected instead of the Monochrome Display and Printer Adapter (#4900), or when support for more than one printer is required and the Monochrome Display and Printer Adapter is already installed. The adapter provides a connector for attachment of the printer cable to the rear of the 5160. **Maximum:** One. **Cable:** The Printer Cable (#5612) is available to connect the 5152 mdl 002 to the Printer Adapter. **Field Installation:** Yes. **Prerequisites:** An available special-feature (small) or full-feature system expansion slot. **Customer Setup:** Yes.

5253 Emulation Installation Convenience Kit Version 2 (#2882): Provides the following items necessary to permit attachment of the 5160 to the 5520 Administrative System:

- Display Station Emulation Adapter (#2887)
- 5520/Personal Computer Attachment Program Version 2 (#2884)
- T-connector (#2891)
- Twinaxial Cable Assembly (#2892)

When emulating a 5253, the 5160 user has access to the word- and record-processing functions, storage, distribution, and 3270 emulation facilities, and most other functions of the 5520 Administrative System. **Maximum:** One. **Field Installation:** Yes. **Customer setup:** Yes. **Prerequisites:** A 5160 with a minimum of 128KB of user memory, an available full-feature system expansion slot, one 5-1/4 Inch Diskette Drive Adapter (#3780), one 5-1/4 Inch Diskette Drive (single-sided, #3800 or double-sided, #3810), and one of the following display options: A) A 5151 Monochrome Display and the Monochrome Display and Printer Adapter (#4900), or B) a 5153 Color Display and the Color/Graphics Monitor Adapter (#4910), or C) a user-supplied 80-column color video monitor and the Color/Graphics Monitor Adapter (#4910). One Terminator (#2893) is required only if the 5160 is the last display station or only display station on a twinaxial line. IBM Personal Computer Disk Operating System (DOS) Version 2 (6024061) is required. **Limitations:** The 5160 should not be used as the master display station or as the alternative master display station on the 5520 Administrative System. For additional information, limitations, and prerequisites, refer to IBM.

5161 EXPANSION UNIT

PURPOSE

The 5161 Expansion Unit provides additional configuration flexibility for the 5150 Personal Computer and the 5160 Personal Computer XT. Each Expansion Unit contains one 10MB Fixed Disk Drive and eight option expansion slots which allow for the installation of feature cards to support additional system function. In addition, the 5161 Expansion Unit model 1 contains one Fixed Disk Drive Adapter (#2501) as standard. The primary monitor/display attachment adapter, the diskette adapter, and any memory expansion options must reside in a System Unit. Other IBM attachment adapters may reside in either an Expansion Unit or System Unit. One additional 10MB Fixed Disk Drive (#2500) may be installed in an Expansion Unit for a total of 20MB of fixed disk storage.

MODELS

Model 001 Expansion Unit, 10MB Fixed Disk Drive, Fixed Disk Drive Adapter, attachment cards and cable for a 5150.

Model 002 Expansion Unit, 10MB Fixed Disk Drive, attachment cards and cable for a 5160.

Maximum: One per system.

Prerequisites:

- Mdl 001: A 5150 Personal Computer System Unit with an available system expansion slot is required. A read-only memory (ROM) replacement kit is provided with the Expansion Unit. The kit contains a ROM module which must be used to replace one of the ROM modules in the 5150 System Unit. A tool is provided to facilitate this replacement.
- Mdl 002: A 5160 Personal Computer XT System Unit with an available full-feature system expansion slot is required.

Customer Setup (CSU): All mdls and special features of the 5161 Expansion Unit are customer setup.

HIGHLIGHTS

- The 5161 Expansion Unit mdl 001 attaches to the 5150 Personal Computer, and the 5161 Expansion Unit mdl 002 attaches to the 5160 Personal Computer XT. The Expansion Unit contains one 10MB Fixed Disk Drive, and eight option expansion slots. In addition, the 5161 mdl 001 contains a Fixed Disk Drive Adapter. Six of the expansion slots are full-feature slots which will accept full-size feature cards. The remaining two are special-feature slots which will accept smaller feature cards. The primary monitor/display adapter, the diskette adapter, and any memory expansion options must reside in the 5150/5160. Other IBM feature cards may reside in either an Expansion Unit or a System Unit. One additional 10MB Fixed Disk Drive may be installed in the Expansion Unit to provide a total of 20MB of fixed disk storage.
- The following features are supplied as standard with the 5161 Expansion Unit:
  - Eight system expansion slots (one full-feature slot is required for the Fixed Disk Drive Adapter; one full-feature slot is required for the attachment card)
  - 10MB Fixed Disk Drive (#2500)
  - Fixed Disk Drive Adapter (#2501) (5161 mdl 1 only)
  - 1 meter (39 inch) cable and attachment cards for connection to the System Unit
  - 130 watt power supply with cooling fan
- Dimensions (approximate):
  Height: 142mm (6")
  Width: 500mm (20")
  Depth: 410mm (16")
- Weight (approximate): 12.2kg (27 lbs)
- Environment:

	System On	System Off
Air temperature:	15 to 32 C (60 to 90F)	10 to 43C (50 to 110 F)
Humidity:	8% to 80%	20% to 80%

SPECIFY

- Voltage (120V AC, 60 Hz): No specify required.

SPECIAL FEATURES

10MB Fixed Disk Drive (#2500): Provides storage for user programs and data. One 10MB Fixed Disk Drive is provided as standard on the 5161. **Technical Information:** 512 bytes per sector ... 17 sectors per track ... 306 tracks per surface ... 4 surfaces ... 3,600 rpm ... 90ms average access time ... 5M bit per second transfer rate. **Maximum:** Two 10MB Fixed Disk Drives may be installed in the 5161. If a 5161 mdl 002 is attached to a 5160, the 10MB Fixed Disk Drive and the Fixed Disk Drive Adapter in the 5160 must be moved into the 5161 to provide a total of 20MB of fixed disk storage (two 10MB Fixed Disk Drives) available to the system. **Field Installation:** Yes. **Prerequisites:** Fixed Disk Drive Adapter (#2501). **Customer Setup:** Yes.

Fixed Disk Drive Adapter (#2501): Provides the buffering, error detection, and data transfer between the 10MB Fixed Disk Drive (#2500) and the 5150/5160. One Fixed Disk Drive Adapter is included as a standard feature on the 5161 mdl 001. The Fixed Disk Drive Adapter can attach up to two 10MB Fixed Disk Drives. When a 5161 mdl 002 is attached to a 5160, the 10MB Fixed Disk Drive and the Fixed Disk Drive Adapter in the 5160 must be moved into the 5161 to provide a total of 20MB of fixed disk storage (two 10MB Fixed Disk Drives) available to the system. **Technical Information:** 32-bit error-correcting code ... microprocessor controlled ... on-board sector buffers ... internal diagnostics ... direct memory access (DMA) data transfer ... high-level command set ... automatic error detection and correction ... automatic retries on disk access. **Limitations:** The Fixed Disk Drive Adapter may not be installed in a 5150 expansion slot. Both the 10MB Fixed Disk Drive and the Fixed Disk Adapter must reside in the 5161 mdl 001. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** An available full-feature system expansion slot. **Customer Setup:** Yes.

ACCESSORIES (None)

SUPPLIES (None)

5181 COMPACT PRINTER

PURPOSE

The 5181 Compact Printer mdl 001 is a low-cost lightweight dot matrix printer that may be attached to the 4860 PCjr, the 5150 Personal Computer, and the 5160 Personal Computer XT. The 5181 mdl 001 provides 50 characters per second print speed and all-points-addressable graphics on thermally-sensitive cut sheet, roll, or fanfold paper.

MODELS

Model 1 001

Limitations: The 5181 will not operate on the 4860 PCjr if the Parallel Printer Attachment (4860 feature #0009) is installed. The Compact Printer is compatible with Personal Computer programs, but certain unique characteristics should be recognized when using application programs designed for the 5150 or 5160. Limitations and unique characteristics are outlined in detail in the manuals provided with the printer.

Prerequisites: For use with the 4860 PCjr, the attachment cable (provided as standard with the 5181) plugs into the PCjr serial device connector. For use with the 5150 Personal Computer or 5160 Personal Computer XT, the Compact Printer connector adapter (#0102) and an asynchronous communications adapter (feature #2074 on the 5150 or 5160) are required.

Customer Setup (CSU): Yes.

H'GHLIGHTS

- Thermal technology
- Serial interface
- Four print modes:
  - 80 characters per line, 10 cpi (standard)
  - 40 characters per line, 5 cpi (double width)
  - 136 characters per line, 17.5 cpi (compressed)
  - 68 characters per line, 8.75 cpi (compressed double width)
- Print speed (instantaneous):
  - 50 cps (standard character print)
  - 2,400 dots per second (image print)
- Throughput: 25 cps (typical)
- Printing mode: Unidirectional (left to right)
- Paper handling:
  - Friction feed
  - 216mm (8.5 in.) width maximum
- Line spacing: Program selectable at 6 lines/in. or 9 lines/in.
- Print quality: 560 dots per 8-inch line; 8 dots vertically
- Print matrix: Thermal head technology; 5 x 8 dot matrix (5 x 7 for all alpha characters except lower case).
- Interface:
  - Serial EIA (modified RS-232-C)
  - 1200 bits per second
  - 8-bit ASCII (two stop bits; no parity check)
  - 256-character buffer

Physical Specifications:
Width - 312mm (12.3 inches)
Depth - 220mm (8.7 inches)
Height - 88mm (3.5 inches)
Weight - 3.0kg (6.6 pounds)

Customer Responsibilities: The customer is responsible for unpacking and setting up the 5181, attaching it to the system unit, and running the power-on diagnostics. Necessary installation instructions are packed with the printer.

SPECIFY

- Voltage (120V AC, 50/60 Hz), 36 watts, 3-prong grounded plug: No specify required.

MODEL CONVERSIONS (None)

SPECIAL FEATURES

Compact Printer Connector Adapter (#0102): Required for attachment of the 5181 to the 5150 Personal Computer or to the 5160 Personal Computer XT. The connector adapter mates the 16-pin connector on the compact printer cable (which comes as standard on the 5181) with the 25-pin connector of the asynchronous communications adapter on the 5150 or 5160.

ACCESSORIES (None)

SUPPLIES

Paper is available from SSD as follows: roll (P/N 1503923) 89 feet/2 rolls per box; cut sheet (P/N 1503924) 250 sheets; fanfold (P/N 1503926) 250 pages. All paper is 8.5 inches wide, and each sheet or page is 11 inches long. Additional information is available from IBM branch office or IBM direct at 1-800-426-2468.

5182 Color Printer

PURPOSE

The 5182 Color Printer is a versatile bidirectional dot-matrix printer that may be attached to the 5150 Personal Computer and the 5160 Personal Computer XT. The 5182 prints reports and graphic images in any of three programmable states: All black, 4-color (red, green, blue, black), and 8-color (yellow, magenta, cyan, black, orange, green, violet, brown) at speeds of 35 to 200 cps, depending on the image quality desired. Three levels of printing are available: draft at 200 cps, text or correspondence at 110 cps, and near-letter-quality at 35 cps. The last is achieved by dense matrix imaging in a 2-pass print cycle.

MODELS

Model 001

Prerequisites: System unit or expansion unit attachment is made via the monochrome display and printer adapter (feature #4900 on the 5150 or 5160) or the printer adapter (feature #5200 on the 5150 or 5160). A printer cable (#5612) is required.

Customer Setup (CSU): Yes.

HIGHLIGHTS

- Dot-matrix color printer.
- Parallel interface.
- Bidirectional printing.
- 13.5 inch print line - 132 print columns (10 cpi).
- Character set: 191 characters compatible with 5152 mdl 002 Graphics Printer - 96-character upper/lower case ASCII with lower case descenders and IBM Personal Computer special characters.
- Paper width: 127mm to 375mm (5.0 in. to 14.9 in.).
- Paper feeds:
  - Tractor feed.
  - Manual single-sheet feed.
- Paper types:
  - Fanfold.
  - Cut sheet.
  - Single ply.
  - Up to 4-part form (tractor feed only).
- Print speed/quality:
  - 200 cps draft mode (default mode).
  - 120 cps text - proportional spacing.
  - 110 cps text - fixed spacing.
  - 35 cps near-letter-quality (NLQ).
- Print matrix:
  - 8 x 9 draft mode
  - 24 x 9 text mode
  - 36 x 18 NLQ
  - 24 x 14 graphics
- Print head: ballistic type using 9-wire (5 x 4 array) staggered design.
- Character size/pitch: 0.09 in. to 0.10 in. high; 10, 12, 17.1 cpi, double-width characters at each line density; super and subscripting via line indexing - smaller size image, all fonts; line graphic characters 0.167 in. high. 10 pitch is standard. Two aspect ratios are supported: 5:6 (standard), 1:1 (selectable).
- Programmable features: Print mode; line spacing; line width; forms length; intercharacter spacing; margins; tabs; auto underline; fixed/proportional character spacing; auto text justification.
- Forms length control: Switch- and software-selectable; 8.5, 11.0, 12.0, 14.0 in.; also auto perforation skip; TOF control by operator (offline); arbitrary form lengths are software-selectable.
- Slew rate: Stepper-motor pinfeed tractor; 7.5 in./sec.
- Line spacing: 6 or 8 lines/in., switch-selectable. Arbitrary line spacing is software-selectable for bit-image graphics.
- Line buffering: 6KB buffer.
- Graphics: 82.5 x 82.5 DPI matrix (1:1 aspect ratio); each of upper eight print head wires is addressable by one bit of each byte sent in graphics mode. All points addressable.
- Ribbon: Easy-change cartridge 0.75 in. wide, 36 yd. long; 1.5 million character color ribbon; "fails" if a band fails (that is, a dot is unprinted); standard eight colors mixable-color ribbon (yellow/magenta/cyan/black) shipped with each printer.
- Ribbon saver: Automatic band lift at end of page (black ribbon usage).
- Printer diagnostics: Auto power-on; operator-initiated self-test with alphameric patterns repeated, colors tested; host-driven test.

Physical Specifications:

Width - 549mm (21.6 inches)
Depth - 315mm (12.4 inches)
Height - 231mm (9.1 inches)
Weight - 16.3kg (36 pounds)

Customer Responsibilities: The customer is responsible for unpacking and setting up the Color Printer, attaching it to the system unit, and running the power-on diagnostics. Necessary installation instructions are packed with the printer.

Publications: *Color Printer Hardware Maintenance and Service Manual* (#2383): Provides diagnostic and service information for the 5182 Color Printer.

SPECIFY

- Voltage (100/120/200/220V AC, 50/60 Hz): Factory set to 120V AC, 60 Hz. No specify required.
- Power cord standard. No specify required.

MODEL CONVERSIONS (None)

SPECIAL FEATURES

Color Printer Paper Rack (#0101): Provides a convenient stand for stacking printed paper. Attaches by simply snapping ends into indicated holes in printer cover. The option is a wire rack which can hold a stack of single sheets or continuous fanfold paper printed by the 5182 Color Printer. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes.

Printer Cable (#5612): Required for attachment to the monochrome display and printer adapter or the printer adapter of the 5150 or 5160.

ACCESSORIES (None)

SUPPLIES

Ribbons: Ribbons for the 5182 Color Printer are available from SSD as follows: Black (P/N 6320194); 4-color primary (red, green, blue, black) (P/N 1501573); 8-color process (yellow, magenta, cyan, black); to obtain 8-color capability, the printer must make a second pass and ribbon shifts to mix the colors (P/N 1501574). Additional information is available from IBM branch office or call IBM Direct at 1-800-426-2468.

MODEL CONVERSION(None)

ACCESSORIES (None)

5210 PRINTER MDLS E01, E02

PURPOSE

A bidirectional, impact printer providing high quality printed output for the 8100 Information System. Print wheels in 10 pitch, 12 pitch, 15 pitch or proportional spacing are available to provide a selection of type style and graphic variations.

MODELS

Model E01	40 cps
Model E02	60 cps

Prerequisites: Appropriately configured IBM 8100 Information System and DPCX/DOSF Release 3 or DPPX/SP.

Customer Setup (CSU): The 5210 is designed as a Customer Setup device, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM. The Marketing Representative must advise the customer of his responsibilities before receipt of the machine.

Limitations:

1. Continuous forms:

   Pinfed continuous forms can be used. See "Optional Features" for Forms Stand and Continuous Forms Feed Device. Both edges of the pinfed forms must be fastened in the forms tractors. No staples are permitted in the areas exposed to the interchangeable print wheel.

   Printer operation and print quality vary with paper and number of copies. Multiple part forms should be tested in operating conditions to verify that results are satisfactory.

   Paper Specifications:
   - Maximum carbons: 5
   - Maximum paper width: 392mm (15.4 in.)
   - Maximum pin-to-pin width on forms tractor is 368mm (14.5 in.)
   - Maximum print-line width: 335mm (13.2 in.)

2. Single sheet feed is by hand insertion, unless the optional Cut Sheet Feed Device (#7860) or Front Exit Sheet Feed (#7870) or Front Exit Sheet and Envelope Feed (#7875) is used.

3. Drawer selection of the sheet feed is limited to the L2DCA (SNA-LU1) data stream. Only the bottom drawer is accessible with the SCS (SNA-LU1) data stream using the forms feed command. The writing line is reduced to 11.69 inches maximum when using automatic cut sheet paper handling equipment.

4. Cut Sheet Feed and Front Exit Sheet and Envelope Feed Device Paper Recommendations:

   Suitable Paper: All of the papers placed in the IBM Cut Sheet Feed and Front Exit Sheet and Envelope Feed Devices should be new, unused and without packaging damage. To ensure feed reliability, all papers should be "riffled" or "fluffed" before being placed into the supply trays. The papers defined in this section are the only papers considered acceptable for use in the IBM Cut Sheet Feed and Front Exit Sheet and Envelope Feed Devices.

   Type and Composition: Plain bond paper of one of the following compositions:

   - No. 1 sulfite (100% chemical wood pulp)
   - 25% cotton content
   - 50% cotton content
   - 100% cotton content
   - Paper made from recycled office paper.

   Size: The following paper sizes can be fed either lengthwise or sideways unless otherwise noted.

– *	178mm x 267mm	(7.0" x 10.5")
– *	185mm x 267mm	(7.25" x 10.5")
– *	191mm x 267mm	(7.5" x 10.5")
–	203mm x 267mm	(8.0" x 10.5")
– *	203mm x 330mm	(8.0" x 13.0")
–	216mm x 279mm	(8.5" x 11.0")
– *	216mm x 330mm	(8.5" x 13.0")
– *	216mm x 356mm	(8.5" x 14.0")

   *Feed lengthwise only.

   Basis weights:

   - 60g/square meter to 90g/square meter (16 to 24 lb.)
   - Optimum: 75g/square meter to 90g/square meter (20-24 lb. bond) 25% or 50% cotton content

   Unsuitable Paper for the cut sheet feeders: Following is a list of paper supplies that may be found in an office that will not feed reliably and may cause misfeeds and paper jams. (This list is not intended to be all-inclusive.)

   - Coated paper
   - Vellum paper
   - Coated erasable bond paper
   - Synthetic papers (rice paper, parchment, etc.)
   - Translucent paper
   - Multi-sheet forms and documents (bound or unbound)
   - Peel-off, pressure sensitive labels
   - Some types of chemically-treated papers (such as paper used to make copies without carbon paper)
   - Preprinted forms requiring critical character placement
   - Dark colored paper
   - Envelopes
   - Card stock
   - Folded or creased documents
   - Paper with exposed gummed surfaces, holes, perforations, cutouts or windows
   - Highly embossed paper* (embossment height exceeding 0.508mm (0.02")
   - Preprinted papers containing chemicals or substances that leave a residue on the Cut Sheet Feed Device or printer components
   - A mix of different sizes and types of paper in a paper tray
   - Paper in unsatisfactory conditions:
     - Paper with excessive curl or waviness exceeding 3mm (0.118 inch)
     - Reams of paper with edges or corners folded or bonded together (fluffing may correct this condition)
     - Paper with poorly cut (rough) edges

   Note: Paper should not be exposed to adverse temperature or humidity conditions (consult the paper manufacturer for recommended storage environment).

   * **Note:** Embossments should not be located within 15mm (0.59") of any edge of the sheet.

5. Envelope Recommendations:

   Suitable Envelopes:

   Envelope feeding characteristics vary with the type size and weight of envelopes used.

   All of the envelopes placed in the Front Exit Sheet and Envelope Feed devices should be new, unused, and without packaging damage. The envelopes defined in this section are the only ones considered acceptable for use in the Front Exit Sheet and Envelope Feed devices.

   Type and Composition:

   United States: Plain bond envelopes of one of the following compositions:

   - No. 1 sulfite (100% chemical wood pulp)
   - 25% cotton content
   - 50% cotton content
   - 100% cotton content
   - Paper made from recycled office paper
   - White wove envelopes.

   World Trade: Well sized bond paper with non-coated surfaces.

   Size: The following United States standard envelope sizes can be fed:

   - No. 7 3/4 98.4mm x 190.5mm (3.875" x 7.5")
   - No. 9 98.4mm x 225.4mm (3.875" x 8.875")
   - No. 10 114.8mm x 241.3mm (4.5" x 9.5")

   The size of World Trade envelopes which can be fed range from 98.4mm to 114.8mm (3.875" to 4.5") in width and 190.5mm to 241.3mm (7.5" to 9.5") in length.

   Basis weights:

   - Optimum: 75g/square meter (20 lb.) sulfite or 25% cotton content plain bond envelopes.

   Unsuitable Envelopes:

   Following is a list of envelope supplies that may be found in an office that will not feed reliably and may cause misfeeds and envelope jams. (This list is not intended to be all-inclusive.)

   - Window envelopes
   - Envelopes with holes, perforations, cut out or deep embossing
   - Envelopes with side flaps, i.e., flaps that fold along the short dimension of the envelope
   - Envelopes with flaps that extend more than 60mm (2.36") beyond the line of the fold

   Unsuitable Envelope Conditions:

   - Envelopes that are stuck together
   - Envelopes that will not stack flat
   - Envelopes that are damaged or bent such that they are interlocked

5210 Printer Mdls E01, E02 (cont'd)

HIGHLIGHTS

- Mdl E01 has a rated burst print speed of up to 40 cps (assumes 96-character set with 10 pitch). Mdl E02 has a rated burst print speed of up to 60 cps (assumes 96-character set with 10 pitch).
- Accommodates horizontal character spacing of 10-pitch, 12-pitch, 15-pitch or proportional spacing, according to the print wheel selected (see 8100 DOSF Release 3 or DPPX/SP for limitations).
- Vertical spacing of 5-1/3, 6, or 8 lines per inch (see 8100/DOSF Release 3 or DPPX/SP for limitations). (Metric platen one line per centimeter.)
- Half-line spacing for superscripts and subscripts to a single level.
- First line registration, form skipping and spacing performed at the console by the user and then controlled by the licensed program.
- Single-speed carriage with skipping at up to 6 inches per second.
- Single sheet feeding by hand, or the optional Cut Sheet Feed Device (#7860) or Front Exit Sheet Feed and Envelope Feed (#7875) is used.
- Forms tractor for feeding continuous forms is optional.
- Multiple 96-character print wheel options available by type style and language graphic variations. See "Specify" and "Print Wheel" chart in "Accessories" for details.
- Attaches to the 8100 System via the direct-attach loop (9600 bps or 38.4K bps), or data link-attached loop (9600 bps only).
- Ribbon Saver: Provides two modes of ribbon feed via a switch on the printer to allow two levels of print quality. Quality Mode provides approximately one million character yield; Saver Mode provides approximately three million character yield.
- Optional forms stand.
- Customer setup for early availability and relocation flexibility.

Problem Determination Procedures: Problem Determination (and recovery) Procedures are provided by IBM with the 5210 Printer. These procedures are designed to be easy to follow and use by the customer and it is the customer's responsibility to follow them prior to calling for IBM service.

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking and placement of the 5210.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting, and checkout in accordance with instructions provided by IBM.
- Notifying IBM of intent to relocate and follow IBM instructions for relocation of the 5210 Printer.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal or relocation instructions and packing materials (if required) will be ordered by the Branch Office.
- Relocation of the 5210, if required, to allow IBM service access.
- Installation and maintenance of signal cables and associated cable connectors for attaching the 5210 to the direct attach loop on the 8100 System.

Bibliography: See *KWIC INDEX*, GA20-1621, or Specific System Bibliography.

AAS Ordering Instructions: The 5210 is a system component.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): No specify for a standard non-locking plug (uses customer standard type receptacle). Standard power cord is 3 meters (9.8 feet) and no specify is required. Some localities restrict power cord length to 1.8 meters (6 feet); if the 1.8 meter cord is required specify **#9986**.
- Color: Pearl white only (no specify required).
- Language: English (no specify required).
- Print Wheel Type Style: One US Courier 10 Data Processing print wheel is provided with the machine. See chart of available print wheel assemblies in "Accessories" section. Additional print wheels may be ordered as supplies by part number. Part numbers of all available print wheel assemblies are included in the Accessories chart. See SSD sales manual for additional details.
- DPPX/SP Attachment: For attachment to an 8100 Information System running DPPX/SP, specify **#9901**.

SPECIAL FEATURES

Metric Platen (#300): An optional platen; the attaching system is required to support one line per centimeter index spacing (Set Single Line Density, SSLD in DCA-L2). This option is effected only with friction feed. Tractor feeding is unaffected by this option. English index increments are nominally short by approximately 0.005mm per mm of platen movement. **Field Installation:** No. No charge.

Continuous Forms Feed Device (#7850): Provides a variable-width tractor for feeding continuous forms. **Field installation:** Yes.

Cut Sheet Feed Device (#7860): Provides for feeding cut sheets of paper from two source trays under system control. Consists of paper transport and output tray. Paper is stacked face down. See "Limitations" for paper specifications. **Field installation:** Yes.

Front Exit Sheet Feed (#7870): Provides for feeding cut sheets of paper from two source trays under system control. Consists of paper transport and output tray. Paper is stacked face down. **Field Installation:** Yes. **Customer Setup:** Yes. See "Limitations" for Paper Specifications. Must have cable adapter for use with mdls E01 and E02. Cable adapter shipped with printer or with Front Exit Cut Sheet Feed Device if ordered for field installation. **Prerequisites:** Direct-Attach Loop or a Data Link-Attach Loop. **Limitations:** Refer to "Limitations", Item 3.

Front Exit Sheet and Envelope Feed (#7875): Provides for feeding cut sheets of paper from two paper source trays and envelopes from a separate source tray under system control. Consists of paper transport and separate output trays for cut sheets and envelopes. Paper is stacked face down. **Field Installation:** Yes. **Customer Setup:** Yes for mdls E01 and E02 above serial number 55166. Must have cable adapter for use with mdls E01 and E02. Cable adapter shipped with printer or with Front Exit Cut Sheet and Envelope Feed Device if ordered for field installation. **Prerequisites:** Direct-Attach Loop or Data Link-Attach Loop. **Limitations:** Refer to "Limitations", Item 3.

MODEL CONVERSIONS

Model changes E01 to E02 are field installable. All features may be field installed.

ACCESSORIES

Accessories are available on purchase-only basis.

Add Envelope Feed Capability to the Front Exit Sheet Feed (#7876): Field Installation: Only. **Prerequisites:** Must have #7870 installed; must be above serial number 55166.

Add Envelope Feed Capability to the Front Exit Sheet Feed (#7877): Field Installation: Only. **Prerequisites:** Must have #7870 installed and serial number must be below serial number 55167.

Front Exit Sheet and Envelope Feed (#7878): Provides cut sheet paper from two source trays and envelopes from a separate source tray under system control. Consists of paper transport and separate output trays for cut sheets and envelopes. **Field Installation:** Only. Serial number must be below 55167. Must have cable adapter which is shipped with this feature.

Paper Stacker/Tray (P/N 1494596): Permits feeding of continuous forms from a carton and provides for form stacking on a single shelf after printing. For shipment with the machine order by P/N.

Paper Table (P/N 1495352): Provides paper support and a movable guide to assist manual cut sheet insertion when Paper Feed Devices #7850, #7860, #7870, or #7875 are not ordered.

Paper Trays (Top P/N 6819687, Bottom P/N 6819442): Provides additional trays for Cut Sheet Feed Device (#7860), Front Exit Sheet Feed (#7870) and Front Exit Sheet and Envelope Feed (#7875). Eliminates paper removal/installation from trays when customer uses a wide variety of papers.

Print Wheels: Additional print wheels are available in a variety of print styles and character sets. These are supply items and are interchangeable with the print wheel supplied with the machine. Replacement and installation of the print wheel is the customer's responsibility. Additional print wheels for the 5210 may be ordered from IBM. Specify quantity required, quoting following P/Ns as appropriate:

5210 Printer Mdls E01, E02 (cont'd)

* Only available as additional print wheels

SUPPLIES

Ribbons: The IBM 463 Ribbon (P/N 1299463) or equivalent.

5210 PRINTER MDLS G01, G02

PURPOSE

A bidirectional, impact printer providing correspondence quality printed output for the 3274 Control Unit (all mdls), a 3276 Control Unit Display Station (mdls 1, 2, 3, 4, 11, 12, 13, 14), a 4701 Finance Communication Controller, or a 8775 Control Unit Display Station. Print wheels in 10 pitch, 12 pitch, 15 pitch or proportional spacing are available to provide a selection of type style and graphic variations with appropriate application programming.

MODELS

Model G01	G01	40 cps	(13.2 inch writing line*)
Model G02	G02	60 cps	(13.2 inch writing line*)

* 11.69 inch writing line when using feature #7860.

Note: Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration and line transmission speed, output format, and programming application processing must be considered in determining actual throughput.

The FIVE 3270 SE Aid is available to estimate printer performance for a particular environment in which the 5210 model G01, G02 will be installed. Use of this Aid is essential for understanding the effects of transmission line speed, data stream, protocol, and message sizes on system throughput.

Prerequisites: Customer must supply the printer to system (controller) coax attachment cable. The 3274 requires an available category A terminal port. The 3276 requires an available port or added feature #3255, #3256, or #3257. The 4701 requires an available port on the Device Cluster Adapter feature #3101. An 8775 requires Printer Attachment feature #5580.

Customer Setup (CSU): The 5210 is designed as a Customer Setup device, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM. The Marketing Representative must advise the customer of his responsibilities before receipt of the machine.

Limitations:

1. Continuous forms:

   Pin fed continuous forms can be used. (See "Special Features" for Forms Stand and Continuous Forms Feed Device.)

   Both edges of the pin fed forms must be fastened in the forms tractors.

   No staples are permitted in the areas exposed to the interchangeable print wheel.

   Printer operation and print quality vary with paper and number of copies. Multiple part forms should be tested in operating conditions to verify that results are satisfactory. See *Forms Design Reference Guide for Printers,* GA24-3488, for forms design considerations.

   Paper Specifications:
   - Maximum carbons: 5
   - Maximum paper width: 392mm (15.4 in)
   - Maximum pin-to-pin width on forms tractor is 368mm (14.5 in)
   - Maximum print-line width: 335mm (13.2).

2. Single sheet feed is by hand insertion, unless the optional Cut Sheet Feed Device (#7860) is used. A top margin of one third of an inch is minimum for cutsheet paper. Application attempts to print in this area will result in the printer first moving the writing line (vertically) such that the base line of the graphic to be printed will appear one third of an inch from the top of the sheet. First print lines which contain superscripts will print the superscripts on the base line.

   Printing should not include the last physical line area (0.19 of an inch - 4.8mm from the bottom of the sheet) on a cutsheet. Attempts to do so may result in loss of printed data.

3. Drawer selection of the sheet feed is limited to the DCA-L2 (SNA-LU1) data streams. Only the bottom drawer is accessible with the other data stream using the forms feed command. The writing line is reduced to 11.69 inches maximum when using automatic cutsheet paper handling equipment.

   Cut Sheet Feed Drive Paper Recommendations:

   Suitable Paper: All of the papers placed in the Cut Sheet Feed Device Handler should be new, unused and without packaging damage. To insure feed reliability all papers should be "riffled" or "fluffed" before being placed into the supply trays. The papers defined in this section are the only papers considered acceptable for use in the Cut Sheet Feed Device.

   Type and Composition: Plain bond paper of one of the following compositions:

   - No. 1 sulfite (100% chemical wood pulp)
   - 25% cotton content
   - 50% cotton content
   - 100% cotton content
   - Paper made from recycled office paper

   Size: The following paper sizes can be fed either lengthwise or sidewise unless otherwise noted.

   - 178mm x 267mm * (7.0" x 10.5")
   - 185mm x 267mm * (7.25" x 10.5")
   - 191mm x 267mm * (7.5" x 10.5")
   - 203mm x 267mm (8.0" x 10.5")
   - 203mm x 330mm * (8.0" x 13.0")
   - 216mm x 279mm (8.5" x 11.0")
   - 216mm x 330mm * (8.5" x 13.0")
   - 216mm x 356mm * (8.5" x 14.0")

     * Feed lengthwise only.

   Basis weights:

   - 60g/square meter to 90g/square meter (16 to 24 lb.)
   - Optimum: 75g/square meter to 90g/square meter (20-24 lb. bond) 25% or 50% cotton content

   • Unsuitable Paper for the cut sheet feeder.

   Following is a list of paper supplies that may be found in an office that will not feed reliably and may cause misfeeds and paper jams. (This list is not intended to be all-inclusive).

   - Coated paper
   - Vellum paper
   - Coated erasable bond paper
   - Synthetic papers (rice paper, parchment, etc)
   - Translucent paper
   - Multi-sheet forms and documents (bound or unbound)
   - Peel-off, pressure sensitive labels
   - Some types of chemically-treated papers (such as paper used to make copies without carbon paper)
   - Preprinted forms requiring critical character placement
   - Dark colored paper
   - Envelopes
   - Card stock
   - Folded or creased documents
   - Paper with exposed gummed surfaces, holes, perforations, cutouts or windows
   - Highly embossed paper* (embossment height exceeding 0.508mm (0.02")
   - Preprinted papers containing chemicals or substances that leave a residue on the Cut Sheet Feed Device or printer components
   - A mix of different sizes and types of paper in a paper tray
   - Paper in unsatisfactory conditions:
     - Paper with excessive curl or waviness exceeding 3mm (0.118 inch)
     - Reams of paper with edges or corners folded or bonded together (fluffing may correct this condition.)
     - Paper with poorly cut (rough) edges

   Note: Paper should not be exposed to adverse temperature or humidity conditions (consult the paper manufacturer for recommended storage environment).

   Note: Embossments should not be located within 15mm (0.59") of any edge of the sheet.

4. The 5210 G01, G02, at power on (default) is set to 10 pitch 6 lines per inch and the Courier 10 data processing print wheel is assumed mounted. When the DCA-L2 data stream is selected, the printer is set to 10 pitch, 6 lines per inch and the operator will be instructed to mount the Courier 10 word processing printwheel. Other pitch line space selections and character print wheel arrangements supported by the printer must be transmitted to the printer via the data stream from the connecting host/controller or entered via the printer console by the operator when transmitting 3270 Display/Printer Data Streams. 5-1/3, 9.6, 12, 24 and 48 lines per inch, 1 line per cm and PSM require DCA-L2 data stream application support.

   Some configurations do not support all data stream architectures. See attaching system/controller for support provided.

5. Printer interface support when attached to 3274s, 3276s or 8775s is either LU type 3 using 3270 Display/printer data stream or as LU type 1 using the SCS data stream. 3274 also supports using the DCA-L2 data stream as LU type 1. Non-SNA (BSC/Direct Channel) data streams are also supported. The 4701 supports the SCS data stream only.

6. See the operators guide for additional super/subscripting limitations.

5210 Printer Mdls G01, G02 (cont'd)

HIGHLIGHTS

- The 5210 consists of control functions, printer and indicator lights in one integrally designed desk-top unit. Special user selectable features (at time of order) permit tailoring of the printer to user requirements.
- Mdl G01 has a rated burst print speed of up to 40 cps (assumes 96-character set with 10 pitch). Mdl G02 has a rated burst print speed of up to 60 cps (assumes 96-character set with 10 pitch).
- Provides printing for either 3270 mode (SNA LU3 or BSC/Direct Channel), SCS (SNA LU1) mode or Document Content Architecture DCA-L2* (SNA LU1) mode (see note 5 under Limitations).
- Dual case operation.
- Accommodates horizontal character spacing of 10 pitch, 12 pitch, 15 pitch, or proportional spacing (DCA-L2 with 3274 only), according to the print wheel selected (see limitations 4).
- Vertical spacing of 3.4, 5-1/3, 6, 8, 9.6, 12, 24, or 48 lines per inch and 1 line per centimeter (see limitations 4 and 5).
- Cancel print.
- Half-line spacing for superscripts and subscripts to a single level (DCA-L2 only). (See limitations 2 and 6.)
- First line registration, form indexing and spacing performed at the console by the user and then controlled by the user program.
- Operator selectable national use character sets (SCS and 3270 data streams only).
- Maximum print positions available when using cutsheet manual or continuous form feed/10 pitch - 132; 12 pitch - 158; 15 pitch - 198; (PSM max is dependent upon text content).
- Multiple speed carriage with indexing at up to 6 inches per second vertically.
- Single sheet feeding by hand, or the optional Cut Sheet Feed Device (see limitations 3).
- Variable width forms tractor for feeding continuous forms is optional (see limitations 1).
- Multiple 96-character print wheel options available by type style and language graphic variations. See "Specify" and "Print Wheel" chart in "Accessories" for details.
- Metric platen (1 line/cm with CDA-L2 control) optional.
- Ribbon Saver: Provides two modes of ribbon feed via a switch on the printer to allow two levels of print quality. General Correspondence Mode provides approximately one million character yield; Saver Mode provides approximately three million character yield with a decrease in print quality.
- Optional forms stand.
- Customer Setup for early availability and relocation flexibility.

Problem Determination Procedures: Problem Determination (and recovery) Procedures are provided by IBM with the 5210 Printer. These procedures are designed to be easy to follow and use by the customer and it is the customer's responsibility to follow them prior to calling for IBM service. See "Customer Responsibilities".

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking and placement of the 5210.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting, and checkout in accordance with instructions provided by IBM.
- Notifying IBM of intent to relocate and follow IBM instructions for relocation of the 5210 Printer.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal or relocation instructions and packing materials (if required) will be ordered by the Branch Office.
- Relocation of the 5210, if required, to allow IBM service access.
- Procurement, installation and maintenance of coaxial signal cables and associated cable connectors for attaching the 5210 to the 3274, 3276 and 8775 controllers. Maximum length is 1.5 kilometers.

Basic Configuration: Base machine is shipped with the following specifications:

- Voltage 120V AC, 1-phase, 3-wire, 60Hz
- Power cord plug; nonlocking
- Power cord length; 3 meters (9.8 feet)
- Printwheel: 10 pitch Courier (data processing)
- Print ribbon cartridge: IBM Part No. 1299463
- Character print operation: 1920 bytes

Bibliography: See KWIC INDEX, GA20-1621, or specific system bibliography.

AAS Ordering Instructions: The 5210 is a system component

SPECIFY

Note: A 3 meter power cord and plug are shipped from the plant of manufacture.

- Voltage (115V AC, 1-phase, 60 Hz): No specify for a standard nonlocking plug (uses customer standard type receptacle). Standard power cord is 3 meters (9.8 feet) and no specify is required. Some localities restrict power cord length to 1.8 meters (6 feet); if the 1.8 meter cord is required specify **#9986**.
- Color: Pearl white only (no specify required).
- Language: English (no specify required).
- Print Wheel Type Styles (no specify required) data processing Courier 10.
- Cables: See "Accessories" and *Installation Manual - Physical Planning,* GA27-2787 (3268 Printer), for cable details.
- Compatibility Options for the 3270 Data Stream (Non-SCS/DCA-L2) Operation: Operation of the 5210 is defined as standard. Alternate operation may be specified. *Note:* Standard 5210 operation is the same as the standard 3287 mdls 1 and 2.

1. CARRIAGE RETURN (CR) AT MPP PLUS 1

Standard:	An automatic New Line (NL) is executed at MPP plus 1, then the CR is executed. The next print position will be the first print position of the next line.
#9608	No automatic New Line (NL) is executed. The CR is executed at MPP plus 1. The next print position will be the first print position of the current line. Compatible with 3287 RPQ S30219.

2. NEW LINE (NL) AT MPP PLUS 1

Standard:	An automatic New Line (NL) is executed at MPP plus 1, then the NL is executed. The next print position will be the first print position of the current line plus 2.
#9609	No automatic New Line (NL) is executed. The NL is executed at MPP plus 1. The next print position will be the first print position of the next line. Compatible with 3287 RPQ S30219.

3. FORM FEED FOLLOWED BY DATA

Standard:	The form will be skipped to the first line of the next form and the next print position will be the second print position of that line.
#9610	The form will be skipped to the first line of the next form and the next print position will be the first print position of that line. Compatible with 3289 RPQ S30220-SC3752.

4. FORM FEED IS LAST CHARACTER IN PRINT ORDER

Standard:	An automatic New Line (NL) is executed after the form feed is completed. The next print position will be the first print position of the second line on the next form.
#9611	The automatic New Line (NL) is suppressed at the completion of the form feed. The next print position will be the first print position of the first line of the next form. Compatible with 3287 RPQ S30219-SC3749.

5. NULL SUPPRESSION

Standard:	If an entire print Line contains no printable characters, no New Line (NL) is performed. Space (X'40') is considered a printable character. Next print position is the first print position of current line.
#9612	Prints all null lines as a blank line and performs a new Line (NL). Next print position is first print position of next line. Compatible with 3287 RPQ ML0442-SC 3741 or 3287 RPS MK3988 - SC3741.

6. FORM FEED (FF) COMMAND POSITION

Standard:	Execute a Form Feed (FF) command only if it occurs at the first print position in a line or at

* DCA-L2 is supported by the 3274 only.

5210 Printer Mdls G01, G02 (cont'd)

MPP plus 1. Treat Form Feed (FF) at other positions as spaces.

#9613 Execute a Form Feed (FF) command whenever it is encountered in the Data Stream. Compatible with 3287 RPQ ML0442 - SC3739 or 3287 RPQ MK3988 - SC3739.

7. AUTOMATIC FUNCTION AT END OF PRINT BUFFER

Standard: An automatic New Line (NL) is executed following a print order. Next print position is first print position of the next line.

#9614 An automatic Form Feed (FF) is executed following a print order (unless a form feed was the last function executed). Next print position is first print position of first line of next form. Compatible with 3287 RPQ MK3988 - SC3740. This feature is ignored if feature #9604 is selected.

8. SUPPRESS TIMEOUT - NO DATA LOSS I.R.

Standard: A 1 minute or 10 minute timeout with message to host following an intervention required condition.

#9605 Suppress 1 minute and 10 minute timeouts with message to host of intervention required.

9. AUTO FORM FEED AT END OF LOCAL COPY

Standard: Execute form feed command as encountered in data stream or setting.

#9604 Execute auto form feed at end of operator initiated local copy operation (unless a form feed was the last function executed). The next print position is the first print position of line one of the next form (overrides #9614).

- Character Print Operation: The basic machine provides for operation with a program which requires a print buffer of 1,920 bytes while using Erase/Write Alternate Command. For other buffer size requirements, specify as listed below.

  #9521 (960 character print operation) for use with a program which requires a printer buffer size of 960 bytes while using Erase/Write Alternate Command.

  #9523 (2,560 character print operation) for use with a program which requires a printer buffer size of 2,560 bytes while using Erase/Write Alternate Command.

  #9524 (3,440 character print operation) for use with a program which requires a print buffer size of 3,440 bytes while using Erase/Write Alternate Command.

  #9525* (3,564 character print operation) for use with a program which requires a print buffer size of 3,564 bytes while using Erase/Write Alternate Command.

  * 3274 only

SPECIAL FEATURES

Metric Platen (#0300): An optional platen; the attaching system is required to support one line per centimeter index spacing (Set Single Line Density (SSLD in DCA-L2)). This option is effective only with friction feed. Tractor feeding is unaffected by this option. English index increments are nominally short by approximately .005mm per mm of platen movement. Available at time of order only (not field installable).

Continuous Forms Feed Device (#7850): Provides a variable width tractor for feeding continuous forms.

Cut Sheet Feed Device (#7860): Provides for feeding cut sheets of paper from two source trays under System Control. Consists of paper transport and output tray. Paper is stacked face down. See Limitations #3 for drawer selector and Paper Specifications.

MODEL CONVERSIONS

Model changes G01 to G02 are field installable.

ACCESSORIES

Cables: Cables and or associated parts to attach the 5210 to the 3274 Control Unit and 3276 Control Unit Display Station may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see *IBM 3270 Installation Manual - Physical Planning,* GA27-2787 . The customer is responsible for installation and maintenance of these cables and their associated parts.

Item	Number	Description
Assm	2577672	Cable Assembly In-Door
Bulk	0323921	Coax Wire (Note 1)
P/N	1836418	Connector Kit (Note 1)
Assm	1833108	Cable Assembly Out-Door
Bulk	5252750	Coax Wire (Note 2)
P/N	1836419	Connector Kit (Note 2)
P/N	2621414	Modification Kit (Note 3)
P/N	1833106	Station Protector Attachment Kit (Note 5)
P/N	5252643	Adapter (Note 7)
P/N	1830818	Station Protection Kit, Gas (Note 4)
P/N	5252899	Station Protector Element, Gas (Note 6)

Specify P/N, Assembly Number, or Bulk Number as appropriate. Allow a lead time of 6 weeks.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N **1836446)** required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N **1836447)** required for each outdoor cable assembly.
3. Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N **2577672** or two P/N **1833108** cable assemblies together.

Paper Trays (Top P/N 6819687) (Bottom P/N 6819442): Provides additional trays for Cut Sheet Feed Device (#7860). Eliminates paper removal/ installation from trays when customer uses a wide variety of paper.

Paper Stacker/Tray (P/N 1494596): Permits feeding of continuous forms from a carton and provides for form stacking on a single shelf after printing.

Paper Table (P/N 1495352): Provides paper support and a moveable guide to assist manual cut sheet insertion when Cut Sheet Feed Device (#7860) is not ordered.

5210 Print Wheel Assemblies - Word Processing: Additional print wheels are available in a variety of print styles and character sets. These are supply items and are interchangeable with the print wheel supplied with the machine. Replacement and installation of the print wheel is the customer's responsibility. Additional print wheels for the 5210 may be ordered from IBM. Specify quantity required, quoting following P/Ns as appropriate:

SUPPLIES

Ribbons: The IBM 463 Ribbon (P/N 1299463).

5211 PRINTER

PURPOSE

The 5211 is a stand-alone printer for System/34 and System/38.

MODELS

Model 1	001	System/34 only	160 lpm
Model 2	002	System/34 and System/38	300 lpm

Limitations:

- Only pin-fed, continuous forms can be used.
- Both edges of the forms must be fastened in the forms tractors.
- No staples are permitted in the areas exposed to the interchangeable print belt.
- Printer operation and print quality vary with paper and number of copies. Form sets of more than four parts should be tested in operating conditions to verify that results are satisfactory.
- Due to the complexity of certain characters on the 188-character Multinational print belt, all multiple part forms should be tested in operating conditions to ensure that results are satisfactory.

Maximum: Only one 5211 Printer mdl 1 or 2 may be attached to a System/34. Two 5211-2 printers may be attached to System/38.

Prerequisites: A 5211 Attachment (#5811) and 5211/3262 Base Printer Attachment (#1110) on the 5340 System Unit. Specify **#9301** or **#9302** on 5340. See M5340 "Specify". OCR print available only with 5211-2 machines with serial numbers above 51200. A 5211 Attachment feature on the 5381 System Unit (#1100 for the first 5211 Attachment; #1110 for the second 5211 Attachment). See M5381 "Special Features".

Nominal rated speeds are based on 48-character set. Specialized accessory belts allowing increased speeds are available. See "Highlights".

HIGHLIGHTS

A universal character set buffer of 192 positions. The 5211 attachment allows the use of graphic sets of up to 192 characters. Print speeds vary depending on character set size and frequency of character repetition on the belt. General purpose belts of 48, 64, 96, and 188 characters are available with the following rated speeds:

	Mdl 1	Mdl 2
48-character set	160 lpm	300 lpm
64-character set	123 lpm	235 lpm
96-character set	84 lpm	164 lpm
188-character set	44 lpm	86 lpm

Specialized print belts which can provide greater speeds up to 225 lpm for mdl 1 and up to 395 lpm for mdl 2, for numeric printing, are available as accessories. See "Type Catalog". 132 print positions are standard. Horizontal spacing is 10 characters per inch. Vertical spacing is six or eight lines per inch under operator control (System/34) and CL control (System/38). Continuous marginally punched forms from 89mm (3.5 inches) to 387mm (15.25 inches) in overall width are fed by an automatic carriage. Forms skipping and spacing are program-controlled. The carriage is a single speed unit allowing skipping up to 20 inches per second. Continuous forms are fed by a forms tractor. See *Form-Design Printers Reference Guide* (GA24-3488) for forms design considerations.

OCR capability is provided for the mdl 2 only. 48-character print belts containing numeric A or B font (13 characters) are available as accessories. The mdl 2 can prepare OCR documents on 20 to 24 lb. (75-90 g/sq.m) OCR bond single-part paper, using an OCR ribbon, that can be read by the 3886 Optical Character Reader with 3211/5211 Compatibility (**#9701**). No representation or commitment as to readability of 5211 mdl 2 printing by OCR equipment other than the 3886 reader with specify code **#9701** shall be made.

The translation capability within the 5211 Attachment Feature (#5811) on the 5340 provides for character substitution when using a print belt which does not contain all the characters in the printer data stream.

SPECIFY

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9902** for 208V or **#9904** for 230V.
- Color: One color accent panel must be specified. Specify **#9060** for Willow Green, **#9061** for Garnet Rose, **#9062** for Sunrise Yellow, **#9063** for Classic Blue, **#9064** for Charcoal Brown, or **#9065** for Pebble Gray. Printer background color is Pearl White.
- Interchangeable Print Belt (available at time of manufacture only): See "Type Catalog" for print belt arrays. When ordering, indicate one specify code for character set and one specify code for character height. When printing eight lines per inch, .079 inch character height is recommended.

Character Set	Specify Code
48-Character EBCDIC	**#9497**
48-Character FORTRAN *	**#9492**
60-Character S/38 Special	**#9509**
64-Character EBCDIC	**#9498**
64-Character ASCII	**#9496**
64-Multinational **	**#9505**
96-Character EBCDIC **	**#9501**
96-Character ASCII **	**#9502**
96-Multinational **	**#9504**
188-Multinational **	**#9503**

* Available only on System/34 with 2.4mm (.095 inch) character height (**#9950**).

Available only with 2.4mm (.095 inch) character height (#9950**).

The 60-character System/38 special belt is a specially designed belt which will enable the user to print the System/38 Control Language characters.

If Spanish N printing capability is desired on the print belt provided with the 5211, order specify code **#2961** plus two additional specify codes selected from the following offerings of character set size and height:

Character Set Size	Specify Code
48	**#2767**
64	**#2768**
96 *	**#2770**

* Available only with 2.4mm (.095 inch) character set height.

Only one "Specify" print belt may be ordered with each 5211.

Character Height	Specify Code
2.0mm (.079 inches) *	**#9951**
2.4mm (.095 inches)	**#9950**

* Recommended for eight lines per inch.

- System Attachment: For System/38 attachment, specify **#9010** (mdl 2 only). For System/34 attachment, specify **#9020**. When changing from System/34 to System/38, **#9020** must be removed and **#9010** must be added.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Model changes are field installable.

ACCESSORIES

Additional print belts permit the customer to print more than one character set for various applications. These can be interchangeably used with the belt provided with the machine. See "Type Catalog" for print belt arrays. When ordering, indicate one feature number for character set and one feature number for character height. When printing eight lpi, 2.0mm (.079 inch) character height is recommended. Order by MES. Only one print belt per MES.

Character Set	Feature Number
38-Character	**#5915**
42-Character Numeric	**#5916**
48-Character	**#5911**
48-Character FORTRAN *	**#5552**
48-Character OCR A	**#5919** (mdl 2 only)
48-Character OCR B	**#5920** (mdl 2 only)
60-Character S/38 Special	**#5956**
64-Character EBCDIC	**#5910**
64-Character ASCII	**#5912**
64-Multinational **	**#5925**
96-Character EBCDIC **	**#5917**
96-Character ASCII **	**#5918**
96 Multinational **	**#5924**
188 Multinational **	**#5923**

* Available on System/34 only with 2.4mm (.095 inch) character height (**#5950**).

Available only with 2.4mm (.095 inch) character height (#5950**).

The 60-character System/38 special belt is a specially designed belt which will enable the user to print the System/38 Control Language characters.

Note: Accessory features **#5910**, **#5911**, and **#5912** are the same as System/32 accessory belts **#5910**, **#5911**, and **#5912**, respectively.

For Spanish N printing capability on an additional 5211 print belt, order **#2761** plus two additional feature codes selected from the following offerings of character set size and height:

5211 Printer (cont'd)

Character Set Size	Feature Number
48	**#2867**
64	**#2868**
96 *	**#2870**

* Available only with 2.4mm (.095 inch) character set height (**#5950**

Character Height	Feature Number
2.0mm (.079 inches) *	**#5951**
2.4mm (.095 inches)	**#5950**

* Recommended for eight lines per inch.

SUPPLIES

Ribbons: A black ribbon, P/N 1299115 or equivalent, is required. For OCR applications an OCR ribbon, P/N 1299243 or equivalent, is required. Contact IBM.

5215 SELECTRIC ELEMENT PRINTER

PURPOSE

The Selectric® Element Printer is an impact printer to satisfy many establishments' general text processing needs, especially if their work is keyboard-intensive rather than print-intensive.

Note: The 5215 is not approved for use in an environment requiring TEMPEST Modification features. The use of unmodified components with TEMPEST Modification features will result in increased emanation levels.

MODELS

Model 001

HIGHLIGHTS

- Rated burst speed of up to 15.5 cps.
- Well suited for stand-alone workstation configuration.
- Compatible with many IBM Selectric Typewriter 10- and 12-pitch elements.
- System software provides "Trail Printing" capability allowing playout of one job, while another is being keyed.
- The Selectric Element Printer is a "Reconditioned" product and may not qualify for new investment tax credit. This statement should be included in all proposals.
- Dimensions:
  Width: 686mm (27 inches)
  Depth: 470mm (18.5 inches)
  Height: 191mm (7.5 inches)
  Weight: 25kg (55 pounds)
  Cable length: 4m (13.1 feet)

SPECIFY

- Voltage: 115V AC, 1-phase, 60 Hz (no specify required).
- Ribbon Mechanism:
  Selective Ribbon Mechanism **#9560**
  Fabric Ribbon Mechanism **#9565**
- Line Spacing Group:
  46-Tooth Line Spacing Group **#9746**
  48-Tooth Line Spacing Group **#9748**
  54-Tooth Line Spacing Group **#9754**
- Acoustic Hood Group: **#9000** for metric, **#9005** for inch.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

A Prestige Elite Element **(P/N 1167033)** and one Tech III Ribbon are shipped with the 5215 Printer.

5217 PRINTER

PURPOSE

A bidirectional, impact printer providing letter quality printed output for the System/23 and the 5280 Distributed Data System. Print wheels in 10 pitch, 12 pitch, 15 pitch or proportional spacing are available to provide a selection of type style and graphic variations.

MODELS

Model C02 60 cps

Limitations:

1. Character Sets:

   The 5217 Printer may utilize any one of a variety of 96-character type wheels on any particular printing operation. However, because a 5322 or 5324 computer and the 5280 Distributed Data System can display significantly more than 96 different characters, it is possible that all characters being displayed cannot be printed with the type wheel mounted on the printer.

   It is the customer's responsibility to match the type wheel selected to the printing requirements.

   For available character set details, refer to *Using Your 5217 Printer* (SA34-1593) for System/23, or *IBM 5280-5217 Printer Setup and Operator's Guide* (GA23-1016) for the 5280.

2. Continuous Forms:

   Pin-fed continuous forms can be used. (See Special Features for Continuous Forms Feed device).

   Both edges of the pin-fed forms must be fastened in the forms tractors.

   No staples are permitted in the areas exposed to the interchangeable print wheel.

   Printer operation and print quality vary with paper and number of copies. Multiple part forms should be tested in operating conditions to verify that results are satisfactory.

   Paper Specifications

   Maximum carbons is five

   Maximum paper width is 392mm (15.4 in.)

   Maximum pin-to-pin width on forms tractor is 368mm (14.5 in.)

   Maximum print-line width is 335mm (13.2 in.)

3. Single sheet feed is by hand insertion, unless the optional Cut Sheet Feed Device (#7860) is used. Multi-page printing with single sheet feeding requires operator intervention or special application programming support to avoid paperless printing. For further details, see *Using Your 5217 Printer* (SA34-1593) for System/23, or the appropriate 5280 language reference manual.

4. Cut Sheet Feed Device Paper Recommendations:

   Suitable Paper

   All of the papers placed in the IBM Cut Sheet Feed Device Handler should be new, unused and without packaging damage. To ensure feed reliability all papers should be "riffled" or "fluffed" before being placed into the supply trays. The papers defined in this section are the only papers considered acceptable for use in the IBM Cut Sheet Feed Device.

   Type and Composition: Plain bond paper of one of the following compositions.

   - No. 1 sulfite (100% chemical wood pulp).
   - 25% cotton content.
   - 50% cotton content.
   - 100% cotton content.
   - Paper made from recycled office paper.

   Size: The following paper sizes can be fed either lengthwise or sidewise unless otherwise noted.

   - 178mm x 267mm * (7.0 in. x 10.5 in.)
   - 185mm x 267mm * (7.25 in. x 10.5 in.)
   - 191mm x 267mm * (7.5 in. x 10.5 in.)
   - 203mm x 267mm (8.0 in. x 10.5 in.)
   - 203mm x 330mm * (8.0 in. x 13.0 in.)
   - 216mm x 279mm (8.5 in. x 11.0 in.)
   - 216mm x 330mm * (8.5 in. x 13.0 in.)
   - 216mm x 356mm * (8.5 in. x 14.0 in.)

   * Feed lengthwise only.

   Basic weights:

   - 60g/sq.m to 90g/sq.m (16 lb to 24 lb)
   - Optimum: 75g/sq.m to 90g/sq.m (20-24 lb bond) 25% or 50% cotton content.

   Unsuitable Paper for the cut sheet feeder

   Following is a list of paper supplies that may be found in an office that will *not* feed reliably and may cause misfeeds and paper jams. (This list is not intended to be all-inclusive).

   - Coated paper.
   - Vellum paper.
   - Coated erasable bond paper.
   - Synthetic papers (rice paper, parchment, etc.).
   - Translucent paper.
   - Multi-sheet forms and documents (bound or unbound).
   - Peel-off, pressure sensitive labels.
   - Some types of chemically-treated papers (such as paper used to make copies without carbon paper).
   - Preprinted forms requiring a high degree of character placement accuracy.
   - Dark colored paper.
   - Envelopes.
   - Card stock.
   - Folded or creased documents.
   - Paper with exposed gummed surfaces, holes, perforations, cutouts, or windows.
   - Highly embossed paper (embossment height exceeding 0.508mm (0.02 in.).

     Note: Embossments should not be located within 15mm (0.59 in.) of any edge of the sheet.
   - Preprinted papers containing chemicals or substances that leave a residue on the Cut Sheet Feed Device or printer components
   - A mix of different sizes and types of paper in a paper tray.
   - Paper in unsatisfactory conditions:
     - Paper with excessive curl or waviness (exceeding 3mm (0.118 in.).
     - Reams of paper with edges or corners folded or bonded together (Fluffing may correct this condition).
     - Paper with poorly cut (rough) edges.

     Note: Paper should not be exposed to adverse temperature or humidity conditions (consult the paper manufacturer for recommended storage environment).

Prerequisites:

For System/23, each 5322 or 5324 Computer which will utilize the 5217 Printer must have the Second Printer Attachment (#6350) installed. However, when this feature is installed, the 5217 may be attached to either printer attachment.

For 5280, the 5285 Programmable Data Station must have Start/Stop Printer Attachment (#1152) installed. The 5288 Programmable Control Unit must have Multiple Start/Stop-Twinaxial Printer Attachment (#1162) installed. If #1152 or #1162 was shipped before April 1, 1983, the 5285 or 5288 also requires EC #467318.

HIGHLIGHTS

- Rated burst print speed of up to 60 cps (assumes 96-character set with 10 pitch).
- Accommodates horizontal character spacing of 10 pitch, 12 pitch, or 15 pitch, according to the print wheel selected. Proportional spacing may be accomplished via customer application programming on the System/23 and the 5280.
- For the System/23, vertical spacing is program selectable in increments of 1/96 inch (0.0104 inch). For a single program command, the vertical movement is 4 increments minimum and 24 maximum. This permits line spacing from 4 lines/inch to 24 lines/inch.

  The printer will default to 6 lines/inch if the user does not program select a vertical line spacing.

  The lines per page parameter is also program-selectable.
- Single speed carriage with skipping at up to 6 inches per second.
- Single sheet feeding by hand, or the optional Cut Sheet Feed Device.
- Multiple 96-character print wheel options available by type style and language graphic variations.

5217 Printer (cont'd)

- Ribbon Saver: Provides two modes of ribbon feed via a switch on the printer to allow two levels of print quality. Quality Mode provides approximately one million character yield; Save Mode provides approximately three million character yield.
- Forms tractor for feeding continuous forms is an optional feature that is advantageous for multi-page printing applications and is required for successful printing operations encountered in the system support programs and some application programs.

Customer Setup (CSU) and Responsibilities: The 5217 is designated a customer setup machine. The marketing representative must advise the customer of his/her responsibilities before receipt of the machine. For System/23, *Customer Setup Instructions* (SA34-0197) is shipped with the machine. For the 5280, *IBM 5280-5217 Printer Setup and Operator's Guide* (GA23-1016) is shipped with the machine.

CSU allowance is one day (two days when installed concurrently with a 5280).

Physical Planning Information:

Unit	Height	Width	Depth	Weight	Max KVA	BTU /HR
5217 Prtr	200mm 8 in	660mm 26 in	583mm 23 in	26.5 kg 58.4 lb	.50	900
Cut Sheet Feed #7860	284mm 11 in	540mm 21 in	490mm 19 in	11.4 kg 25.0 lb	NA	NA
Continuous Forms Tractor #7850	130mm 5 in	525mm 21 in	498mm 20 in	4.0 kg 8.8 lb	NA	NA

AAS Ordering Instructions: The 5217 is a system component.

SPECIFY

- Voltage (115 V AC, 1-phase, 60 Hz): No specify for a standard non-locking plug (uses customer standard type receptacle). Standard power cord is 3 meters (9.8 feet) and no specify is required. Some localities restrict power cord length to 1.8 meters (6 feet); if the 1.8 meter cord is required, specify **#9986**.
- Color: Pearl White only (no specify required).
- Language: English (no specify required).
- One Print Wheel Type Style: One ASCII Courier 10 (P/N **1439652**) print wheel is provided with the machine. Additional print wheels may be ordered as supplies by part number.

- 5280 Cable: Specify **#9050** for special attachment cable for use with the 5280.

SPECIAL FEATURES

Printer Switch and Cable Assembly (#5600): Provides a 2-position manually operated switch and cables which permit the connection of any 5217 Printer between any two 5322 or 5324 Computers on an either-or-basis. The Printer Switch Box has two cables, 6 meters (19.8 feet) in length that attach to the computers. The box is marked 1 and 2 and the switch is accessible at the recessed top. The box is 76.2mm x 101.6mm x 38.1mm (3 in. x 4 in. x 1-1/2 in.). For shipment to the field, order by feature number. **Limitations:** Cannot be installed on a 5217 which is attached to a 5280. **Field Installation:** Yes. **CSU:** Yes.

Continuous Forms Feed Device (#7850): Provides a variable-width tractor for feeding continous forms. This feature is required for successful multi-page printing operations encountered in the system support programs and some application programs. See "Limitations" for Forms Requirements. **Field Installation:** Yes. **CSU:** Yes.

Cut Sheet Feed Device (#7860): Provides for feeding cut sheets of paper from two source trays under System Control. Consists of paper transport and output tray. Paper is stacked face down. See "Limitations" for Paper Specifications. **Field Installation:** Yes. **CSU:** Yes.

MODEL CONVERSIONS: None

ACCESSORIES

Paper Stacker/Tray (P/N 1494596): Permits feeding of continuous forms from a carton and provides for form stacking on a single shelf after printing.

Paper Table (P/N 1495352): Provides paper support and a movable guide for manual cut sheet insertion when no sheet or tractor feed is installed.

Paper Trays (Top P/N 6819687) (Bottom P/N 6819442): Provides additional trays for Cut Sheet Feed Device (#7860). Eliminates paper removal/installation from trays when customer uses a wide variety of papers.

Contact IBM for accessory ordering details.

SUPPLIES

Ribbons: The IBM 463 ribbon (P/N **1299463**) or equivalent. None required with machine order. Contact IBM for details.

Print Wheels: None required with machine order. Additional print wheels are available in a variety of print styles (see TC 5210 pages in "Type Catalog") and character sets and are interchangeable with the print wheel supplied with the machine. See IBM for details. When ordering, consideration should be given to ordering a second identical wheel for backup. Replacement and installation of the print wheel is the customer's responsibility.

5218 PRINTWHEEL PRINTER

PURPOSE

A bidirectional, impact printer providing letter quality printed output for the 6580 Displaywriter System. Printwheels in 10 pitch, 12 pitch, 15 pitch or proportional spacing are available to provide a selection of type style variations. With the proper hardware and software, each printer can also be used in a clustered system, supporting up to three workstations.

MODELS

Model	A01	40 cps	
Model	A02	60 cps	
Model	A03	40 cps	Includes support for Front Exit Sheet and Envelope devices.
Model	A04	60 cps	Includes support for Front Exit Sheet and Envelope devices.

Prerequisite: In order for 2 or 3 workstations to share a printer, the primary workstation must have the Printer Sharing Prerequisite installed, and each workstation must have Textpack 2, 4, or 6 with the respective memory requirement.

Note: The 5218 will require an enclosure for use in an environment requiring Modification Features. See "Accessories" below.

The Automatic Paper Handling Prerequisite feature (#1200) is standard on 5218 machines shipped from the plant on or after June 9, 1983.

Physical Planning Information:

Unit	Height	Width	Depth	Weight	Max KVA	BTU /HR
5218 Printer	200mm 8 in.	660mm 26 in.	583mm 23 in.	26.5kg 58.4 lb.	0.50	900
With Sheet Feed Paper Handler	484mm 19 in.	660mm 26 in.	725mm 29 in.	11.4kg 25.0 lb.	NA	NA
With Front Exit Sheet Feed	522mm 20.7 in.	660mm 26 in.	902mm 35.5 in.	38.6kg 85.4 lb.	NA	NA
With Front Exit Sheet and Envelop Feed	522mm 20.7 in.	660mm 26 in.	902mm 35.5 in.	40.6kg 88.4 lb.	NA	NA
With Tractor Feed	330mm 13 in.	660mm 26 in.	735mm 29 in.	4.0kg 8.8 lb.	NA	NA

HIGHLIGHTS

- Rated burst print speed of up to 40 cps (mdl A01) or 60 cps (mdl A02) (assumes 96-character set with 10 pitch).
- Accommodates horizontal character spacing of 10 pitch, 12 pitch, or 15 pitch, and proportional spacing according to the printwheel selected.
- Vertical spacing is program selectable in increments of 0.26mm (1/96 in. (0.0104 in.)). For a single program command, the vertical movement is 4 increments minimum and 24 maximum. This permits line spacing from 4 lines/inch to 24 lines/inch.

  The printer will default to 6 lines/inch if the user does not program select a vertical line spacing.

  The lines per page parameter is also program selectable, the default being 66 lines per page.
- Single speed carriage with skipping at up to 6 inches per second.
- Single sheet feeding by hand, or the optional Sheet Feed Paper Handler.
- Automatic Envelope Feeding by the optional Front Exit Sheet and Envelope Feed Attachment.
- Ribbon switch allowing one million or three million character yield selection. (Mdls A03, A04.)
- Forms tractor for feeding continuous forms is an optional feature.
- Multiple 96-character printwheel options available by type style and language graphic variations. (See "Supplies" below.)

Customer Setup (CSU) and Responsibilities: The 5218 is designated a customer setup machine. The marketing representative must advise the customer of his/her responsibilities before receipt of the machine. *Customer Setup Instructions* are shipped with the machine.

CSU allowance is *one* day.

Limitations:

1. Character Sets:

   The 5218 Printer may utilize any one of a variety of 96-character type wheels on any particular printing operation.

   It is the customer's responsibility to match the type wheel selected to the printing requirements.

2. Continuous Forms:

   Pinfed continuous forms can be used. (See "Special Features" for Tractor Feed device.)

   Both edges of the pinfed forms must be fastened in the forms tractors.

   No staples are permitted in the areas exposed to the interchangeable printwheel.

   Printer operation and print quality vary with paper and number of copies. Multiple part forms should be tested in operating conditions to verify that results are satisfactory.

   Paper Specifications:

   Maximum carbons is five Maximum paper width is 392mm (15.4 in.) Maximum pin-to-pin width on forms tractor is 368mm (14.5 in.) Maximum print-line width is 335mm (13.2 in.)

3. Single sheet feed is by hand insertion, unless the optional Sheet Feed Paper Handler **(#7860)**, or Front Exit Sheet Feed **(#7870)**, or Front Exit Sheet and Envelope Feed **(#7875)** is used. Multi-page printing with single sheet feeding requires operator intervention.

4. Paper Recommendations:

   Suitable Paper

   All of the papers placed in the Sheet Feed Paper and Front Exit Sheet and Envelope Feed should be new, unused and without packaging damage. To ensure feed reliability all papers should be "riffled" or "fluffed" before being placed into the supply trays. The papers defined in this section are the only papers considered acceptable for use in the Sheet Feed Paper and Front Exit Sheet and Envelope Feed.

   Type and Composition: Plain bond paper of one of the following compositions.

   - No. 1 sulfite (100% chemical wood pulp).
   - 25% cotton content.
   - 50% cotton content.
   - 100% cotton content.
   - Paper made from recycled office paper.

   Size: The following paper sizes can be fed either lengthwise or sidewise unless otherwise noted.

   - 178mm x 267mm * (7.0 in. x 10.5 in.)
   - 185mm x 267mm * (7.25 in. x 10.5 in.)
   - 191mm x 267mm * (7.5 in. x 10.5 in.)
   - 203mm x 267mm (8.0 in. x 10.5 in.)
   - 203mm x 330mm * (8.0 in. x 13.0 in.)
   - 216mm x 279mm (8.5 in. x 11.0 in.)
   - 216mm x 330mm * (8.5 in. x 13.0 in.)
   - 216mm x 356mm * (8.5 in. x 14.0 in.)

     * Feed lengthwise only.

   Basic weights:

   - 60g/sq.m to 90g/sq.m (16 lb. to 24 lb.)
   - Optimum: 75g/sq.m to 90g/sq.m (20-24 lb. bond) 25% or 50% cotton content.

   Unsuitable Paper for the cut sheet feeders

   Following is a list of paper supplies that may be found in an office that will *not* feed reliably and may cause misfeeds and paper jams. (This list is not intended to be all-inclusive.)

   - Coated paper.
   - Vellum paper.
   - Coated erasable bond paper.
   - Synthetic papers (rice paper, parchment, etc.).
   - Translucent paper.
   - Multi-sheet forms and documents (bound or unbound).
   - Peel-off, pressure-sensitive labels.
   - Some types of chemically-treated papers (such as paper used to make copies without carbon paper).
   - Preprinted forms requiring a high degree of character placement accuracy.
   - Dark colored paper.
   - Envelopes.
   - Card stock.
   - Folded or creased documents.

5218 Printwheel Printer (cont'd)

- Paper with exposed gummed surfaces, holes, perforations, cutouts, or windows.
- Highly embossed paper (embossment height exceeding 0.508mm (0.02 in.).

  Note: Embossments should not be located within 15mm (0.59 in.) of any edge of the sheet.
- Preprinted papers containing chemicals or substances that leave a residue on the Sheet Feed Paper Handler or printer components.
- A mix of different sizes and types of paper in a paper tray.
- Paper in unsatisfactory conditions:
  - Paper with excessive curl or waviness (exceeding 3mm (0.118 in.).
  - Reams of paper with edges or corners folded or bonded together (fluffing may correct this condition).
  - Paper with poorly cut (rough) edges.

  Note: Paper should not be exposed to adverse temperature or humidity conditions (consult the paper manufacturer for recommended storage environment).

5. Envelope Recommendations:

Suitable Envelopes

Envelope feeding characteristics vary with the type, sizes, and weight of envelopes used. All of the envelopes placed in the Front Exit Sheet and Envelope Feed should be new, unused and without packaging damage. The envelopes defined in this section are the only ones considered acceptable for use in the Front Exit Sheet and Envelope Feed.

Type and Composition: US plain bond envelopes of one of the following compositions.

- No. 1 sulfite (100% chemical wood pulp).
- 25% cotton content.
- 50% cotton content.
- 100% cotton content.
- Paper made from recycled office paper.
- White envelopes.

World Trade Envelopes:

- Well sized boxed paper with non-coated surface.

Size: The following US standard envelopes sizes can be fed:

- No. 7-3/4 98.4mm x 190.5mm (3.875 x 7.5 in.)
- No. 9 98.4mm x 225.4mm (3.875 x 8.875 in.)
- No. 10 114.8mm x 241.3mm (4.5 x 9.5 in.)

The size of World Trade envelopes which can be fed range from 98.4mm to 114.8mm (3.875 in. to 4.5 in.) in width and 190.5mm to 241.3mm (7.5 in. to 9.5 in) in length.

Basic weights:

- Optimum: 70g/sq.m (20 lb.) sulfite or 25% cotton content plain bond envelopes.

Unsuitable Envelopes:

Following is a list of envelopes supplies that may be found in an office that will not feed reliably and may cause misfeeds and envelopes jams. (This list is not intended to be all-inclusive.)

- Window envelopes.
- Envelopes with holes, perforations, cut out or deep embossing.
- Envelopes with side flaps, i.e., flaps that fold along the the short dimension of the envelope.
- Envelopes with flaps that extend more than 60mm (2.36 in.) beyond the line of the fold.
- Envelopes that are stuck together.
- Envelopes that will not stack flat.
- Envelopes that are damaged or bent so that they are interlocked.

AAS **Ordering Instructions**: The 5218 is a system component.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): No specify for a standard non-locking plug (uses customer standard type receptacle). Standard power cord is 3m (9.8 ft.), no specify required. Some locations restrict power cord length to 1.8m (6 ft.), if the 1.8m cord is required, specify **#9986**.
- **Cable Lengths (required cable for 5218 to Workstation)**: Cables in lengths of 3, 6, 30, and 60 meters (9.9, 19.7, 98.4 and 196.8 ft.) can be ordered to cable connect the 5218 to a workstation. One cable is required for either a stand-alone or printer-sharing configuration. 3m (9.9 ft.) cable **(#2030)**, 6m (19.7 ft.) cable **(#2000)**, 30m (98.4 ft.) cable **(#2010)**, 60m (196.8 ft.) cable **(#2020)**. The 6m (19.7 ft.) cable is standard unless otherwise specified. If *no* cable is desired, use **#3999**.
- Color: Pearl White only (no specify required).
- Language: English (no specify required).
- Printwheel Type Style: One standard printwheel is shipped with the machine except as outlined below:
  Prestige Elite 12, no specify required

  Additional printwheels may be ordered as supplies by part number. See "Supplies" below.

SPECIAL FEATURES

Tractor Feed Device (#7850): Provides a variable-width tractor for feeding continuous forms. This feature is advantageous for successful multi-page forms printing operations. See "Limitations" for Forms Requirements. **Field Installation**: Yes. **CSU**: Yes.

Sheet Feed Paper Handler (#7860): Provides for feeding cut sheets of paper from two source trays. Consists of paper transport and output tray. Paper is stacked face down. See "Limitations" for Paper Specifications. **Field Installation**: Yes. **CSU**: Yes.

Front Exit Sheet Feed (#7870): Provides for feeding cut sheets of paper from two source trays under system control. Consists of paper transport and output tray. Paper is stacked face down. **Field Installation**: Yes. **CSU**: Yes. See "Limitations" for paper specifications. Must have cable adapter for use with mdls A01 and A02. Cable adapter is shipped with printer or with Front Exit Sheet Feed if ordered for field installation.

Front Exit Sheet And Envelope Feed (#7875): Provides for feeding cut sheets of paper from two paper source trays and envelopes from separate source tray under system control. Consists of paper transport and separate output trays for sheets and envelopes. Paper is stacked face down. **Field Installation**: Yes. **CSU**: Yes, mdls A03 and A04 only. **Prerequisites**: Level G update of Textpack 4 or Textpack 6.

Field Conversion to add Envelope Feed capability to Front Exit Sheet Feed (#7876): [Mdls A03, A04] **Field Installation**: Only. **Prerequisites**: Must have #7870 installed and Level G update of Textpack 4 or Textpack 6.

Field Conversion to add Envelope Feed capability to Front Exit Sheet Feed (#7877): [Mdls A01, A02] **Field Installation**: Only. **Prerequisites**: Must have #7870 installed and Level G update of Textpack 4 or Textpack 6.

Front Exit Sheet And Envelope Feed (#7878): [Mdls A01, A02] Provides for feeding cut sheets of paper from two paper source trays and envelopes from separate source tray under system control. Consists of paper transport and separate output trays for sheets and envelopes. Paper is stacked face down. **Field Installation**: Only. **CSU**: No. **Prerequisites**: Must have cable adapter which is shipped with this feature and Level G update of Textpack 4 or Textpack 6.

MODEL CONVERSIONS

40 cps to 60 cps (A01 to A02). A03 to A04 not offered.

ACCESSORIES

Cable Adapter (P/N 4749559): Provides capability to connect Sheet Feed Paper Handler (#7860) to the 5218 mdls A03 and A04.

Paper Trays (Top P/N 6819687) (Bottom P/N 6819442): Provides additional trays for Sheet Feed Paper Handler (#7860) or Front Exit Sheet Feed (#7870) or Front Exit Sheet and Envelope Feed (#7875). Eliminates paper removal/installation from trays when customer uses a wide variety of papers.

Paper Stacker/Tray (P/N 1494596): Permits feeding of continuous forms from a carton and provides for form stacking on a single shelf after printing.

Paper Table (P/N 1495352): Provides paper support and a movable guide to assist manual cut sheet insertion where no sheet or tractor feed is installed. Contact IBM for accessories ordering details.

5218 Printwheel Printer (cont'd)

5218 Printer Tempest Enclosure (P/N 4782695): Designed to help protect information being printed by a Tempest-modified Displaywriter with the 5218 mdl A02 printer with serial numbers between 26-31628 and 26-62013, with or without an optional Sheet-Feed Paper Handler (#7860). It is a floor-standing steel module. The Enclosure is approximately 1.72m (50 inches) high, 86.4cm (34 inches) wide, 99.1cm (39 inches) deep. It weighs approximately 272kg (600 lbs.) and is equipped with casters to assist in moving. A front-mounted door provides access for printer service. Data security requires that the Enclosure door be completely closed during printer operation. Door closing is the customer's responsibility. A data signal cable and power cable are included for internal attachment of the printer to the Enclosure. A 6-meter printer cable is provided for external connection of the Enclosure to the Displaywriter System. Electrical support is limited to printwheel printers with 110V, 60 Hz power supply. The Enclosure is not designed to accommodate the Tractor Feed Paper Handler or the 5228 Wide-Carriage Printwheel Printer. **Warranty:** These Enclosures are available only on a purchase basis. Installation, check-out, and and maintenance will not be provided by IBM and expenses involved will be paid by the customer. For 90 days commencing on the date of installation or 120 days after shipment, whichever comes first, the Enclosure is warranted free from defect in materials and workmanship. IBM's obligation is limited to providing replacement parts on an exchange basis. Service information including aids, diagnostics, and part numbers are included with the Enclosure. **Limitations:** The Enclosure is approved for operation only with 5218 mdl A02 printers with serial numbers between 26-31628 and 26-62013. **Ordering Instructions:** Contact IBM. **Delivery Instructions:** The Enclosure is shipped via padded van F.O.B. at the vendor (shipping charges collect) to the delivery point designated by the customer. Shipment can not be designated to an APO or FPO. Damage claims against the carrier are the customer's responsibility.

SUPPLIES

Ribbons: The IBM 463 ribbon (P/N 1299463) or equivalent. None required with machine order. Contact IBM.

Printwheels: None required with machine order. Additional printwheels are available in a variety of print styles, and character sets see "Type Catalog" - 5210, and are interchangeable with the printwheel supplied with the machine. When ordering, consideration should be given to ordering a second identical wheel for backup. Replacement and installation of the printwheel is the customer's responsibility. Contact IBM for ordering instructions.

5219 PRINTER

PURPOSE

A bidirectional impact printer providing letter quality output for the 5520 Administrative System, Series/1, System/34, System/36, System/38, and 5251 models 2 or 12 Information Display Station. Print wheels in 10 pitch, 12 pitch, 15 pitch, or proportional spacing are available to provide a selection of type style and graphic variations.

MODELS

Model B01	40 cps	Attaches to the 5520 Administrative System
Model B02	60 cps	Attaches to the 5520 Administrative System
Model D01	40 cps	Attaches to the Series/1, System/34, System/36, System/38, and the 5251 models 2 or 12 Information Display Station
Model D02	60 cps	Attaches to the Series/1, System/34, System/36, System/38, and the 5251 models 2 or 12 Information Display Station

Limitations:

- Continuous forms:

  Pin-fed continuous forms can be used. (See "Special Features" for forms stand and Continuous Forms Feed Device.) Both edges of the pin-fed forms must be fastened in the forms tractors. No staples are permitted in the areas exposed to the interchangeable print wheel.

- Printer operation and print quality vary with paper and number of copies. Multiple part forms should be tested in operating conditions to verify that results are satisfactory.

- Single sheet feed is by hand insertion, unless the optional Cut Sheet Feed Attachment (#7860) or Front Exit Sheet Feed (#7870) or Front Exit Sheet and Envelope Feed (#7875) is used. Mdls B01 and B02 require attachment via the Auto Paper Handling Prerequisite (#1200).

- There is a limit on the number of permissible cable "junctions" on the twinaxial cable used to attach multiple 5219 and 5258 Printers to the 5525 System Unit. See the *5520 Administrative Systems Installation Manual - Physical Planning* (GA23-1002 or GA23-1011) for details. The manual also describes the limits on total number of printers attachable to the 5525, and multidrop limits on a single line. For 5219 mdls D01 or D02, see *IBM 5250 Information Display Systems Planning and Site Preparation Guide* (GA21-9337), and *Series/1 Customer Site Preparation Manual* (GA34-0050).

- Paper specifications:

  Maximum paper width 392mm (15.4 inches)
  Maximum pin-to-pin width on forms tractor 368mm (14.5 inches)
  Maximum print-line width 335mm (13.2 inches)
  Maximum print-line depth 533mm (21 inches)

- Cut Sheet Feed, and Front Exit Sheet and Envelope Feed Attachment paper recommendations:

  Suitable paper:

  All of the papers placed in the Cut Sheet Feed, and Front Exit Sheet and Envelope Feed Attachments should be new, unused, and without packaging damage. To ensure feed reliability, all papers should be riffled or "fluffed" before being placed into the supply trays. The papers defined in this section are the only papers considered acceptable for use in the sheet feed attachments.

  Type and composition: Plain bond paper of one of the following compositions:

  - No. 1 sulfite (100% chemical wood pulp)
  - 25% cotton content
  - 50% cotton content
  - 100% cotton content
  - Paper made from recycled office paper

  Size: The following paper sizes can be fed only lengthwise unless otherwise noted:

  - 178mm x 267mm (7.0 inches x 10.5 inches)
  - 185mm x 267mm (7.25 inches x 10.5 inches)
  - 191mm x 267mm (7.5 inches x 10.5 inches)
  - 203mm x 267mm (8.0 inches x 10.5 inches) *
  - 203mm x 330mm (8.0 inches x 13.0 inches)
  - 216mm x 279mm (8.5 inches x 11.0 inches) *
  - 216mm x 330mm (8.5 inches x 13.0 inches)
  - 216mm x 356mm (8.5 inches x 14.0 inches)

  * Can be fed lengthwise or sidewise.

  Basis weights:

  - 60g/sq.m to 90g/sq.m (16 pound to 24 pound)
  - Optimum: 75g/sq.m to 90g/sq.m (20-24 pound bond) 25% or 50% cotton content

  Unsuitable paper:

  Following is a list of paper supplies that may be found in an office that will *not* feed reliably and may cause misfeeds and paper jams. (This list is not intended to be all-inclusive.)

  - Coated paper
  - Vellum paper
  - Coated erasable bond paper
  - Synthetic papers (rice paper, parchment, etc.)
  - Translucent paper
  - Multi-sheet forms and documents (bound or unbound)
  - Peel-off, pressure-sensitive labels
  - Some types of chemically treated papers (such as paper used to make copies without carbon paper)
  - Preprinted forms requiring a high degree of character placement accuracy
  - Dark colored paper
  - Envelopes
  - Card stock
  - Folded or creased documents
  - Paper with exposed gummed surfaces, holes, perforations, cutouts, or windows
  - Highly embossed paper - embossment height exceeding 0.508mm (0.02 inches). **Note:** Embossments should not be located within 15mm (0.59 inches) of any edge of the sheet.
  - Preprinted papers containing chemicals or substances that leave a residue on the Cut Sheet Feed Attachment or printer components
  - A mix of different sizes and types of paper in a paper tray
  - Paper in unsatisfactory condition: Paper with excessive curl or waviness, exceeding 3mm (0.118 inches); reams of paper with edges or corners folded or bonded together (fluffing may correct this condition); and paper with poorly cut (rough) edges. **Note:** Paper should not be exposed to adverse temperature or humidity conditions. (Consult the paper manufacturer for recommended storage environment.)

- Character Sets:

  The 5219 Printer may utilize any one of a variety of 96-character type wheels on any particular printing operation. It is possible that some characters which appear on a display or display keyboard cannot be printed with the type wheel mounted on the printer. For example, special characters may differ between word processing printwheels and data processing printwheels, or the same character may appear in different printwheel positions. It is the customer's responsibility to match the type wheel selected to the printing requirements.

- Envelope Recommendations:

  Suitable Envelopes:

  Envelope feeding characteristics vary with the type, size, and weight of envelopes used. All of the envelopes placed in the Front Exit Sheet and Envelope Feed should be new, unused and without packaging damage. The envelopes defined in this section are the only ones considered acceptable for use in the Front Exit Sheet and Envelope Feed.

  Type and Composition: Plain bond envelopes of one of the following compositions:

  - No. 1 sulfite (100% chemical wood pulp)
  - 25% cotton content
  - 50% cotton content
  - 100% cotton content
  - Paper made from recycled office paper
  - White wove envelopes

  Size: The following standard envelope sizes can be fed:

- No. 7-3/4	98.4 X 190.5mm (3.875 X 7.5 inches)
- No. 9	98.4 X 225.4mm (3.875 X 8.875 inches)
- No. 10	114.8 X 241.3mm (4.5 X 9.5 inches)

  Basis Weight:

  - Optimum: 75g/sq.m (20 pound) sulfite or 25% cotton content plain bond envelopes.

  Unsuitable Envelopes:

  Following is a list of envelope supplies that may be found in an office that will not feed reliably and may cause misfeed and and envelope jams. This list is not intended to be all inclusive.

  - Window envelopes
  - Envelopes with holes, perforations, cutouts or deep embossing
  - Envelopes with side flaps, i.e., flaps that fold along the short dimension of the envelope

5219 Printer (cont'd)

- Envelopes with flaps that extend more than 60mm (2.36 inches) beyond the line of the fold

Unsuitable Envelope Conditions:

- Envelopes that are stuck together
- Envelopes that will not stack flat
- Envelopes that are damaged or bent such that they are interlocked.

Prerequisites: In the 5525 System Unit, Local Device Control (#4710, #4711, #4712); LDC Attachment (#4715); and either #1105, #1700, #1701, #1702, or #1704. See M5525 pages for details. In the Series/1 system, #5640 and an available position in a 4952, 4954, 4955, or 4956 Processor, the 4959 Input/Output Expansion Unit or the 4965 Diskette Drive and Input/Output Expansion Unit.

Customer Setup (CSU): The 5219 is designated as a Customer Setup device, thereby offering the customer early availability and relocation flexibility. The marketing representative must advise the customers of their responsibilities before receipt of the machine. The CSU allowance is one day.

HIGHLIGHTS

- Mdls B01 and D01 have a rated burst print speed of up to 40 cps (assumes 96-character set with 10 pitch). Mdls B02 and D02 have a rated burst print speed of up to 60 cps (assumes 96-character set with 10 pitch).
- Accommodates horizontal character spacing of 10 pitch, 12 pitch, 15 pitch (maximum 172-character line), or proportional spacing, according to the print wheel selected. System/34 and System/36 SSP support 10 pitch character spacing only. System/38 CPF supports 10, 12, and 15 pitch character spacing. The System/38 CPF does not support proportional spacing.
- Vertical spacing of 5-1/3, 6, or 8 lines per inch. System/34 SSP and System/36 SSP support six lines per inch only. System/38 CPF supports six or eight lines per inch only.
- Half-line spacing for superscripts and subscripts to a single level. System/34 and System/36 SSP and System/38 CPF do not support these functions.
- First line registration, form skipping, and spacing chosen by the user and then controlled by the licensed program.
- Single speed carriage with skipping at up to six inches per second.
- Noise level consistent with an office environment.
- Ribbon saver facility permits two modes of ribbon feed, to extend ribbon life where appropriate.
- Single sheet feeding by hand, or the optional Cut Sheet Feed or Front Exit Sheet Feed or Front Exit Sheet and Envelope Feed Attachments. Mdls B01 and B02 require Auto Paper Handling Prerequisite (#1200).
- Forms tractor for feeding continuous forms is optional. Mdls B01 and B02 require Auto Paper Handling Prerequisite (#1200).
- Multiple 96-character print wheel options available by type style and language graphic variations. See the "Supplies" section.
- Optional Paper Stacker Tray.
- Standard Cable-Thru capability to allow multiple printers on a single twinaxial cable at up to a cumulative total of 1,524 cable-meters (5,000 cable-feet) radially from the system unit or workstation.
- Customer Setup for early availability and relocation flexibility.

Problem Determination Procedures: Problem determination (and recovery) procedures are provided by IBM with the 5219 Printer. When attached to the 5525 System Unit using Licensed Program 5611-SS1, these procedures will be described in the HELPs and Messages facilities in the licensed program and in *IBM 5219 Printer Operators Guide* (GA23-1009) and *IBM 5520 Administrative System Messages and Recovery Aids* (SC23-0733 or SC23-0749).

These procedures are designed to be easy to follow and use by the customer, and it is the customer's responsibility to follow them prior to calling for IBM service.

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking, and placement of the 5219.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting, and checkout in accordance with instructions provided by IBM.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5219.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the branch office.
- Relocation of the 5219, if required, to allow IBM service access.
- Installation and maintenance of signal cables and associated cable adapters for attaching the 5219 to the system unit or workstation.
- When adding or moving 5219 or 5258 Printers on the 5520 Administrative System, the customer may have to modify the system configuration specifications. See the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011).

Publications: *IBM 5520 Administrative System Introduction* (GC23-0702), *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011), *IBM System/34 Introduction* (GC21-5153), *IBM System/34 Installation Manual - Physical Planning* (GA21-9242), *IBM System/34 Planning Guide* (GC21-5154), *IBM System/34 Installation and Modification Reference Manual* (SG21-7689), *IBM System/36 Setting Up Your Computer* (SA21-9430), *IBM System/36 Planning for System Configuration* (SA21-9440), *IBM System/36 - Preparing a Place for Your Computer* (SA21-9444), *Planning for System Configuration* (SA21-9440), *Changing Your System Configuration* (SA21-9052), *IBM System/38 Introduction* (GC21-7728), *IBM 5250 Information Display System Introduction* (GA21-9246), and *IBM Information Display System Planning and Site Preparation Guide* (GA21-9337). *Series/1 Printer Attachment - 5200 Series/1 Description* (GA34-0242), *Series/1 Customer Site Preparation Manual* (GA34-0050), *Series/1 Pocket Digest* (GX34-0104), *Series/1 Digest* (GA60-0061), and *IBM 5219 Printer Model D01 and D02 Programmer's Reference Guide* (GA23-1025).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): No specify for a standard nonlocking plug (uses customer standard type receptacle). Standard power cord is 3 meters (9.8 feet) and no specify is required. Some localities restrict power cord length to 1.8 meters (6 feet); if the 1.8 meter cord is required, specify **#9986**.
- Color: Pearl White only (no specify required).
- Language: English (no specify required).
- Print Wheels: [Mdls B01, B02] One standard print wheel is shipped with the machine.

  Prestige Elite 12, no specify required.

  Additional print wheels may be ordered as supplies by part number. See "Supplies" below.
- Print Wheels: [Mdls D01, D02] One Courier 10 print wheel will be shipped with each unit. The printer will be preset at the manufacturing plant for the selected character set (field changes must be made by a CE). Additional print wheels may be ordered by P/N ... see "Supplies". Specify either ASCII (**#2950**) or EBCDIC (**#2956**).
- Cables: Customer-supplied (mdls B01, B02); see "Accessories" and the *IBM 5520 Administrative Systems Installation Manual - Physical Planning* (GA23-1002 or GA23-1011) for ordering information. Specify **#9050** if cable is ordered from IBM or **#9055** if cable is ordered from another supplier. For mdls D01 and D02, see *IBM Information Display System Planning and Site Preparation Guide* (GA21-9337) for ordering information and *IBM Series/1 Customer Site Preparation Manual* (GA34-0050). A 6 meter (20 foot) twinaxial cable (#5780) is available for Series/1 attachment.
- Data Rate: [Mdls B01, B02] The data transfer rate is determined by the Local Device Control feature and the 5525 System Unit mdl. Specify **#9300** for printers attaching through feature #4710 on the 5525 on mdl 020 or 021; **#9305** for printers attaching through feature #4710 on the 5525 mdl 030, 031, or 032; **#9315** for printers attaching through feature #4711 or #4712 on any mdl 5525.
- Printers: [Mdls D01, D02] **#9561** for printers attached to System/34, **#9563** for printers attached to System/38, **#9565** for printers attached to System/36.

SPECIAL FEATURES

Auto Paper Handling Prerequisite (#1200): [Required for mdl B01 and B02 only shipments starting December 1, 1983] Provides paper path sensors and electrical connector for Continuous Forms Feed Device (#7850) or Cut Sheet Feed Attachment (#7860) or Front Exit Sheet Feed (#7870) or Front Exit Sheet and Envelope Feed (#7875). **Field Installation:** Yes.

Continuous Forms Feed Device (#7850): Provides a variable-width tractor for feeding continuous forms. **Field Installation:** Yes. **Customer Setup:** Yes. **Prerequisites:** Mdls B01 and B02 must have #1200 installed.

Cut Sheet Feed Attachment (#7860): Provides cut sheet paper from two source trays under system control, paper transport, and output tray. **Note:** The System/34 SSP and the System/38 CPF support one source tray only. **Field Installation:** Yes. **Customer Setup:** Yes. **Prerequisites:** Mdls B01 and B02 must have #1200 installed.

5219 Printer (cont'd)

Front Exit Sheet Feed (#7870): Provides cut sheet paper from two source trays under system control, paper transport, and output tray. **Note:** The System/34 SSP, The System/36 SSP and the System/38 CPF support one source tray only. The System/36 Text Management System (TMS/36) licensed program supports paper selection from both drawers. **Field Installation:** Yes. **Customer Setup:** Yes. **Prerequisites:** Must have cable adapter for use with mdls B01, B02, D01, and D02. Cable adapter shipped with printers or with Front Exit Sheet Feed if ordered for field installation.

Front Exit Sheet and Envelope Feed (#7875): Provides cut sheet paper from two source trays and envelopes from a separate source tray under system control, paper transport, and separate output tray for cut sheets and envelopes. **Note:** The System/34 SSP and the System/36 SSP support one source tray only. The System/36 Text Management System (TMS/36) licensed program supports paper selection from both drawers and envelope hopper. Envelope feed support is not currently available for System/38. **Field Installation:** Yes. **Customer Setup:** Yes for mdls D02 and D02; yes for mdls B01 and B02 above serial number 07399. **Prerequisites:** Must have cable adapter for use with mdls B01, B02, D01, and D02. Cable adapter shipped with printers or with Front Exit Sheet and Envelope Feed attachment if ordered for field installation.

Field Conversion to Add Envelope Feed Capability to the Front Exit Sheet Feed (#7876): Field Installation: Yes. No plant installation. **Prerequisites:** Mdls B01, B02, D01, and D02 must have #7870 installed. Mdls B01 and B02 must be above serial number 07399.

Field Conversion to Add Envelope Feed Capability to the Front Exit Sheet Feed (#7877): Field Installation: Yes. No plant installation. **Prerequisites:** Mdls B01, B02, only; must have #7870 installed and serial number must be below 07400.

Front Exit Sheet and Envelope Feed (#7878): Provides cut sheet paper from two source trays and envelopes from a separate source tray under system control, paper transport, and separate output tray for cut sheets and envelopes. **Field Installation:** Yes, for mdls B01 and B02 only below serial number 07400. **Prerequisites:** Must have cable adapter which is shipped with this feature.

MODEL CONVERSIONS

Model conversions between B01 and B02 and between D01 and D02 are permitted and field installable. Model conversions between Bs and Ds are not possible.

ACCESSORIES

(Available on Purchase-Only Basis)

Paper Stacker/Tray (P/N 1494596): Permits feeding of continuous forms from a carton and provides for form stacking on a single shelf after printing.

Paper Table (P/N 1495352): Provides paper support and a movable guide for manual cut sheet insertion where no sheet or tractor feed is installed.

Paper Trays (Top - P/N 6819687, Bottom - P/N 6819442): Provides additional trays for Cut Sheet Feed Attachment (#7860) or Front Exit Sheet Feed (#7870) or Front Exit Sheet and Envelope Feed (#7875). Eliminates paper removal and installation from trays.

Contact IBM for ordering details on above accessories.

Cables: The cables and/or associated parts to attach the 5219 to the 5525 may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5219.

Twinaxial Connector Kit (P/N **7362268**): Includes two connectors. Twinaxial Wire and one connector kit are required for each attachment cable. (Individual connectors P/N **7362229** are available for replacement.)

Twinaxial Wire (P/N **7362211**): Order must specify the desired length. Twinaxial Wire and one connector kit are required for each attachment cable. (This is an indoor/outdoor cable.)

Twinaxial Cable Assembly (P/N **7362267**): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (P/N **7362230**): Permits two Twinaxial Cable Assemblies to be joined together.

Order cables via part number. Allow lead time of 120 days.

Twinaxial Station Protector (P/N **6819750**): One is required at each end of each twinaxial attachment cable installed outdoors (either above or below ground level). **Note:** This station protector is different from those used with displays.

Order station protector via part number.
Allow lead time of 120 days.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362063** for Teflon-covered cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362061** for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N **7362062** for Teflon-covered cable assembly.

Series/1 Attachment Cables: For a description of cable and/or associated parts to attach the 5219 Printer to the Series/1 (feature #5640), see *IBM Series/1 Customer Site Preparation Manual* (GA34-0050). Twinaxial cabling for attachment to the 4952, 4954, 4955, 4959, or 4965 (feature #5640):

Device (5219) connector	P/N **7362229**
2X4 Berg Connector Kit	P/N **6095524**
Twinaxial Cable	P/N **7362211**

SUPPLIES

Ribbons: The IBM 463 ribbon (P/N **1299463**) or equivalent. None required with machine order. Contact IBM, for detail listing. Replacement and installation of the print wheel is the customer's responsibility.

5219 Print Wheel Assemblies (Data Processing Character Sets)
(Supported by System/34, System/36, and System/38)

Descriptions/ Part Numbers	Courier 10	Artisan 10

EBCDIC	1439900	1439932
Spanish Speaking	1439915	1439947

5222 PRINTER

PURPOSE

The 5222 produces printed output for a 5280 Distributed Data System.

MODELS

Model 1 001

Prerequisites: #1152 on the 5285. #1157 or #1162 on the 5288.

Customer Setup: The 5222 is designated as a Customer Setup (CSU) machine, thereby offering the customer early availability and relocation flexibility. Customer responsibilities are set forth in *Information Bulletin for Customers - Customer Setup* (G120-2743). CSU allowance is one day ordinarily but is extended to two days if the printer is installed concurrently with a 5280 system.

HIGHLIGHTS

This wire matrix, table-top printer provides bidirectional printing at a maximum rate of 80 cps at 10 or 15 cpi horizontal print density. Horizontal print density is operator-selectable. Vertical spacing of six or eight lpi is also operator-selectable. Page length is program-selectable with a maximum length of 255 lines per page. Character formation is created in an 8 x 7 matrix. The length of the print line is 33.5cm (13.2 inches) providing 132 characters at 10 cpi or 198 characters at 15 cpi. A variable-width forms tractor provides for the feeding of continuous forms.

For optimum handling of continuous forms, the Forms Stand (**#4450**) is recommended. An optional Rear Document Insertion Device (#6100) accommodates single-cut forms. Refer to *Form-Design Printers Reference Guide* (GA24-3488) for forms design considerations and limitations.

One character set may be selected from several options. Character set size has no effect on throughput. See "Type Catalog" for character set arrays.

A cartridge ribbon offers ease in replacing the ribbon. One cartridge ribbon is provided with the 5222.

Attachment to a 5280 System: One 5222 Printer can be attached to the 5285 Programmable Data Station via the Start/Stop Printer Attachment (#1152). One 5222 Printer can be attached to the 5288 Programmable Control Unit via the Single 5222 Printer Attachment (#1157). Up to four 5222 Printers can be attached to the 5288 Programmable Control Unit via the Multiple Start/Stop-Twinax® Printer Attachment (#1162). This attachment also provides a single twinaxial port for attachment of 5224, 5225, and/or 5256 Printers. The attachment cable (4-conductor, twisted-pair) provided with each 5222 is 6 meters (20 feet) long. See "Accessories" for extension cabling.

When adding printers to the 5280 Distributed Data System, the customer must modify the system configuration specifications. See *IBM 5280 System Control Programming Reference Manual* (GC21-7824).

Publications: *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

SPECIFY

- Voltage (120V AC, 1-phase, 60 Hz): Specify **#9890** for a locking plug (requires a locking type receptacle) or **#9891** for a nonlocking plug (requires a standard type receptacle).
- Power Cord: Cord is 2.4 meters (8 feet) long. No specify required.
- Color: Pearl White only (no specify required).
- Character Sets: Specify one of the following:

  #9501 for 95-character EBCDIC
  #9570 for 95-character Spanish Speaking (N and n capability)
  #9470 for 185-character Multinational

  See "Type Catalog" for character set arrays.

SPECIAL FEATURES

Rear Document Insertion Device (#6100): The Rear Document Insertion Device (RDID) provides the capability for manually inserting individual cut forms or cut forms sets. The forms tractor is removed by the operator and the RDID installed. Adjustable guides permit forms from 14.6cm (5 3/4 inches) to 30.5cm (12 inches) wide to be utilized. Form length can be from 7.6cm (3 inches) to 35.6cm (14 inches). Up to 4-part forms may be used. Forms should always be tested to ensure customer acceptance. The leading edge (top edge) of form sets must be glued. Scribed lines on the forms guide assist in form alignment. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Forms Stand (#4450): A one-shelf floor-standing forms stand provides for stacking of continuous forms after printing.

Cables: Additional attachment cabling with appropriate connectors to attach the 5222 to a 5285 or a 5288 may be purchased from IBM or a customer-selected source. For cable specifications and assembly procedures, see *IBM 5280 Cable Assembly Manual* (GA21-9341). The customer is responsible for installation and maintenance of these cables and their associated parts. Specify cable assembly number, external cable, and length of cable.

Extension Cable (P/N 6846671): Order must specify desired length. Maximum length is 55 meters (180 feet). Includes two connectors attached to bulk wire. For operator convenience, the 5222 should be located close to a display station.

SUPPLIES

Ribbons: A black ribbon in cartridge form, P/N 7034535 or equivalent, is required. For details see IBM.

5224 PRINTER MDLS 1, 2

PURPOSE

A table-top impact matrix line printer for the 5280 Distributed Data System, Series/1, System/34, System/36, and System/38.

MODELS

Models		Maximum Rated Speeds* 10 Characters per inch	15 Characters per inch
Mdl 1	001	140 lpm	95 lpm
Mdl 2	002	240 lpm	170 lpm

* For a 18.8cm (7.4 inch) print line.

See "Throughput Considerations" below for print speed factors.

Customer Setup (CSU): The 5224 is a customer setup machine, thereby offering the customer early availability and relocation flexibility. Customer responsibilities are set forth in *Information Bulletin for Customers - Customer Setup* (G120-2743). CSU allowance is one day. The CSU allowance is two days if installed concurrently with a 5280 system. CSU instructions are included with the 5224.

HIGHLIGHTS

The 5224 is an impact matrix line printer of table-top design with characteristics simliar to the 5225 printer. A table is not provided with the 5224 (see "Accessories"). The character matrix is eight dots high and seven dots wide. Maximum character height is 2.92mm (0.115 inches). Three character sets are available. Character set selection has no effect on print speed. Upper and lower case is provided in all character sets. See "Type Catalog" for character set arrays. Horizontal print density of 10 or 15 characters per inch (cpi) is operator-selectable. Line spacing of six or eight lines per inch (lpi) is similarly selectable. System/34, System/36, and System/38 Programming supports programmable control of print density and line spacing. Operator selection of density and spacing can optionally be exercised. See "System Attachment" below. The 33.5cm (13.2 inch) print line provides for a maximum of 132 characters at 10 cpi and 198 characters at 15 cpi. Oversize and special characters, logos, business graphics, OCR-A, and bar-code printing can be printed dependent upon host program support. An audible alarm provides an indication to the operator when manual intervention is required due to one of nine printer error conditions. Cable-thru provides the capability of connecting a total of seven multiple 5219s, 5224s, 5225s, 5251 mdl 1 or 11, 5252s, and to a single twinaxial cable. Each unit on the cable, except the last, requires this feature. Only one additional printer may be attached via Cable-Thru if coax cable is used. A cartridge ribbon provides for fast, easy and clean ribbon changes. One cartridge ribbon and a ribbon shield, to prevent smudging, are provided with the 5224. A fully adjustable forms tractor provides for feeding margin-punched continuous forms. Up to 4-part forms may be utilized. Forms greater than four parts should be tested for customer acceptance. See *Forms Design Reference Guide for Printers* (GA24-3488) for forms design considerations. Forms skipping and vertical spacing are under program control.

Throughput Considerations: Six factors determine print speed:

1. The mdl of the 5224.
2. The print position of the right-most character in the line being printed.
3. The print density (10 cpi or 15 cpi).
4. Vertical spacing and skipping.
5. Communications and programming considerations.
6. Density (quantity of dots) in each line printed.

The 5224 maximizes throughput by taking advantage of short line lengths prevalent in most printing. Throughput of mdl 1 is line-length dependent as indicated by the position of the right-most character printed. The mdl 2 is similarly line-length dependent except for the left-most 18.8cm (7.4 inches) of the print line. Any print line 18.8cm (7.4 inches) long or less, as measured from the left, will print at the rate of 240 lines per minute at 10 cpi or 170 lines per minute at 15 cpi. Lines longer than 18.8cm (7.4 inches) will print at a rate reduced in proportion to the number of characters printed beyond 18.8cm (7.4 inches). The mdl 2 has a "design point" of 18.8cm (7.4 inches). A "design point" is not applicable to the mdl 1.

Care in forms design can significantly improve printer throughput. Unnecessary blanks between vertical columns should be avoided. Columns with low data content should be placed to the right of the form. Consideration should be given to print density; 10 or 15 cpi. By redesigning the form for 15 cpi, two-up output may be achieved, thereby improving final throughput.

The 5224 Printer uses an internal print management feature to guard against damaging the printer due to the quanitity of dots in a print line. When printing a dense line (a line with a large number of dots), this safeguard may cause the print mechanism to print the line by using multiple passes of the print head. When the printer operates in multi-pass mode, each print line requiring multiple passes is considered to be full length 33.5 cm (13.2 inches). The nominal print speed in multi-pass mode for the mdl 1 is 20 lpm at 10 cpi and 15 lpm at 15 cpi. The mdl 2 in multi-pass mode operates at 25 lpm at 10 cpi and 20 lpm at 15 cpi. The additional time required for multi-pass printing lowers the overall throughput proportionally to the frequency of the dense lines printed.

Although some print lines may contain large quantities of dots (forcing multi-pass printing), usually only repetitive printing of the same character causes multi-pass printing. For example, a series of asterisks or dashes, normally used for highlighting are printed at a lower speed. In printing operations where speed is a primary concern, special techniques can be used to avoid multi-pass printing. For example:

Instead of using	Use
**********	* * * * * * * * * *
##########	# # # # # # # # # #
----------	_ _ _ _ _ _ _ _ _ _

Use of the Load Alternate Charater (LAC) command on System/34 or System/36 via the Advanced Printer Function PRPQ, Bar Code Print FDP or other user-generated programs may result in the use of graphics which will result in multi-pass printing. Since print time may vary with each line printed, as line length varies, or due to skipping and spacing, typical customer documents should be benchmarked if specific throughput rates are desired.

The following charts show the relationship of these variable factors in determining print speed.

10 Character Per Inch Print Density

	Mdl 1	Mdl 2
Design Point	N/A	74 Characters 18.8cm (7.4 inches)
Throughput (74-character Lines)	140 lpm	240 lpm
Maximum (Characters per line)	132	132
Throughput (132-character Print Line)	90 lpm	120 lpm

15 Characters Per Inch Print Density

	Mdl 1	Mdl 2
Design Point	N/A	111 Characters 18.8cm (7.4 inches)
Throughput (111-character Lines)	95 lpm	170 lpm
Maximum (characters per line)	198	198
Throughput (198-character Print Line)	60 lpm	85 lpm
Throughput (132-character Print Line)	80 lpm	135 lpm

Problem Determination Procedures: Problem determination is aided by significant offline verification tests which have been designed into the printer control unit to provide greater printer availability to the customer. See *IBM 5224 Printer Operator's Guide* (GA34-0092) for procedures.

System Attachment

The 5224 attaches to System/34, System/36, System 38, and the 5280 System in a manner identical to the 5219, 5225, and 5256 printers.

For Direct Attachment to System/34: The 5224 Printer may be attached to System/34 in the following manner:

- When designated as the system printer, the 5224 connects to the workstation controller via one of the four twinaxial cable connectors (ports) on the 5340 System Unit. A 6 meter (20 foot) cable is provided with the 5340. Specify **#9308** on the 5340.
- When designated as a local workstation printer, the 5224 attaches in a manner similar to 5250 Information Display System devices.

See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

Direct Attachment to System/36: The 5224 Printer may be attached to System/36 in a manner similar to 5250 Information Display Station

5224 Printer Mdls 1, 2 (cont'd)

devices. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337), for cabling information.

Direct Attachment to System/38: For use as a local workstation printer, the 5224 Printer may be directly attached to the System/38 via the workstation controller features on the 5381. Attachment is by twinaxial cable in a manner similar to the 5225 and 5256 printers. See M5381 pages for workstation controller information.

For Remote Printing in a Communications Environment on System/34, System/36, and System/38: The 5224 may be attached to the 5251 mdl 2 or 12 with the Cluster Feature (#2550) or the Dual Cluster Feature (#2551) on the 5251.

For Attachment to the 5280 Distributed Data System: The 5285 Programmable Data Station and the 5288 Programmable Control Unit provide for the attachment of the 5224 Printer via twinaxial cable, 1,525 meters (5,000 feet) maximum to the appropriate printer attachment. The prerequisite attachment feature on the 5285 is the Twinax® Printer Attachment (#1150). The prerequisite attachment feature on the 5288 can be the Single Twinax Printer Attachment (#1155); the Multiple Twinax Printer Attachment (#1160); or the Multiple Start/Stop-Twinax Printer Attachment (#1162). See *IBM 5280 Cable Assembly Manual* (GA21-9341) for cabling information. A maximum of eight printers can be attached to the 5288.

Attachment to Series/1: The 4952, 4954, 4955, 4956, 4959 Input/Output Expansion Unit, and 4965 Diskette Drive and I/O Expansion Unit provide for the attachment of the 5224 via the Printer Attachment - 5200 Series (#5640). A 6 meter (20 foot) twinaxial Attachment Cable (#5780), is available. The printer may be attached up to a maximum distance of 1,525 meters (5,000 feet) using twinaxial cable. See *Series/1 Customer Site Preparation Manual* (GA34-0050) for cabling information.

Publications: The following manuals are included with the 5224 when it is shipped to the customer: *IBM 5224 Printer Operator's Guide* (GA34-0092), *IBM 5224 Printer Customer Setup Guide* (GA34-0093).

AAS Ordering Instructions: The 5224 is a System Component.

SPECIFY

- Voltage (120V AC, 1-phase, 60 Hz): With a nonlocking plug on a 2.4 meter (8 foot) power cord. No specify is required.
- Color: Pearl White (no specify is required).
- Cables: See "Accessories". For cable specifications, see the *IBM 5250 Information Display Systems Planning and Site Preparation Guide* (GA21-9337), or *IBM 5280 Cable Assembly Manual* (GA21-9341).
- System Attachment: Specify one of the following:

Series/1	**#9566**
System/34	**#9561** for system printer **#9560** for local workstation printer **#9559** for remote workstation printer
System/36	**#9567** for system printer **#9568** for local workstation printer **#9569** for remote workstation printer
System/38	**#9563** for system printer **#9564** for local workstation printer **#9565** for remote workstation printer
5280 System	**#9562**

- Character Set: Specify one of the following: See "Type Catalog" for character set arrays. All workstations and printers attached to a System/34, System/36, and a 5251 mdl 2 or 12 must have the same character set.

  #9501 for 95-character EBCDIC
  #9470 for 184-character Multinational (includes ASCII graphics)
  #9570 for 95-character Spanish Speaking (N and n capability)

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Field installation available. The upgrade purchase prices for model conversions may be greater than the purchase price differentials. Customers should carefully evaluate their future requirements when purchasing a 5224 Printer. Replaced parts from any model conversion become the property of IBM.

ACCESSORIES

Forms Stand (#4450): A one-shelf, floor-standing forms stand provides for stacking of continuous forms after printing. For field installation, order by feature number on MES.

Printer Table: SSD offers a table especially designed for the 5224 providing such features as a slot in the surface for paper feeding, a shelf for manuals, a paper stacking rack and a design that compliments the 5224 in style and color. Interested customers may order from IBM directly, toll-free at 800-631-5582 (in New Jersey use 800-352-4960 and in Hawaii and Alaska use 800-526-2484). For further information contact an IBM Marketing Representative.

Cables: Cables and/or associated parts to attach the 5224 Printer to the 5251 mdl 2 or 12, 5340, 5360, 5381, 5285, or 5288 may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337), or the *IBM 5280 Cable Assembly Manual* (GA21-9341). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5224.

Twinaxial Cabling: Order via MSORDER (Category = Bulk Cable) , specifying part number. Allow a lead time of 120 days.

Twinaxial Connector Kit (P/N **7362268**): Includes two connectors. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. Individual connectors P/N **7362229** are available for replacements.

Twinaxial Wire (P/N **7362211**): Order must specify the desired length. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. This is an indoor/outdoor cable.

Twinaxial Cable Assembly (P/N **7362267**): Includes a Connector Kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (P/N **7362230**): Permits two Twinaxial Cable Assemblies to be joined together.

Twinaxial Station Protector Kit (B/M 7361807): A kit includes two protectors. One is required at each end of each Twinaxial Attachment Cable installed outdoors (either above or below ground level). Individual Twinaxial Station Protectors, P/N **7362426**, are available for replacement purposes. Order via MSORDER (Category = Accessory/Supplies) specifying bill of material number. Allow a lead time of 120 days. **Customer Setup:** Yes.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362063** for Teflon-covered cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362061** for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N **7362062** for Teflon-covered cable assembly.

Series/1 Attachment Cables: For a description of cables and/or associated parts to attach the 5224 Printer to the Series/1 (feature #5640), see *IBM Series/1 Customer Site Preparation Manual* (GA34-0050). Twinaxial cabling for attachment to the 4952, 4954, 4955, 4959, or 4965 (feature #5640):

Device (5224) connector	**P/N 7362229**
2x4 Berg Connector Kit	**P/N 6095524**
Twinaxial cable	**P/N 7362211**

SUPPLIES

Ribbons: A black cartridge ribbon, P/N **6845100**, or equivalent, is required. Contact IBM.

Ribbon Shields: One ribbon shield is included with each quantity of five ribbons purchased from IBM. Ribbon shields are also available separately. For additional information, call 800-631-5582.

5225 PRINTER MDLS 1, 2, 3, 4

PURPOSE

An impact matrix line printer for the 5280 Distributed Data System, Series/1, System/34, System/36, and System/38.

MODELS

Maximum Rated Speeds

		10 Characters Per Inch	15 Characters Per Inch
Model 1	001	280 lpm	195 lpm
Model 2	002	400 lpm	290 lpm
Model 3	003	490 lpm	355 lpm
Model 4	004	560 lpm	420 lpm

See "Throughput Considerations" below for print speed factors.

Prerequisites: All 5225 Printers used in applications printing characters more dense than normal must have E/C 323150 factory installed or field B/M 6844756 installed. 5225 mdl 1 Printers printing OCR-A or bar-code must have E/C 987958 factory installed or field B/M 6840638 installed.

Customer Setup (CSU): The 5225 is a Customer Setup machine. The CSU allowance is one day. The CSU allowance is two days if installed concurrently with a 5280 System. For additional information on CSU, see the GI section.

HIGHLIGHTS

An impact matrix printer utilizing refinements in technology to achieve line printer speeds. The character matrix is eight dots high and seven dots wide. Maximum character height is 2.92mm (0.115 inches). A variety of character sets are available. Character set size has no effect on print speed. Upper and lower case is provided in all character sets. See "Type Catalog" for character set arrays. Horizontal print density of 10 or 15 characters per inch (cpi) is operator-selectable. Line spacing of six or eight lines per inch (lpi) is also selectable. The 33.5cm (13.2 inch) print line provides for a maximum of 132 characters at 10 cpi and 198 characters at 15 cpi. Oversize and special characters, logos, business graphics, OCR-A, and bar-code printing can be printed dependent upon host programming support. See "Prerequisites" above. One ribbon and a ribbon shield, to prevent ink smudging, are provided with the 5225. A forms tractor provides for feeding margin punched continuous forms. See *Form-Design Printers Reference Guide* (GA24-3488) for forms design considerations. Forms skipping and vertical spacing are under program control.

Throughput Considerations: Five factors determine print speed:

1. The mdl of the 5225.
2. The print position of the right-most character in the line being printed.
3. The print density (10 cpi or 15 cpi).
4. Spacing and skipping.
5. Communications considerations.

Each mdl of the 5225 is designed to achieve maximum print speed for lines having up to a predetermined number of characters (design point). For each line exceeding the design point in length, print speed (lpm) will be reduced in proportion to the number of additional characters. Line lengths are determined by the print position of the right-most character in the line being printed, not by the number of characters actually printed in the line. The following charts show the relationship of these variable factors in determining print speed.

10 Characters Per Inch Print Density

	Mdl 1	Mdl 2	Mdl 3	Mdl 4
Design Point (Characters)	74	98	118	130
Throughput for Lines up to the Design Point in Length	280 lpm	400 lpm	490 lpm	560 lpm
Maximum Characters Per Line	132	132	132	132
Throughput for a 132-Character Print Line	130 lpm	205 lpm	330 lpm	520 lpm

15 Characters Per Inch Print Density

	Mdl 1	Mdl 2	Mdl 3	Mdl 4
Design Point (Characters)	111	147	177	195
Throughput for Lines up to the Design Point in Length	195 lpm	290 lpm	355 lpm	420 lpm
Maximum Characters Per Line	198	198	198	198
Throughput for a 198-Character Print Line	90 lpm	145 lpm	235 lpm	385 lpm
Throughput for a 132-Character Print Line	150 lpm	290 lpm	355 lpm	420 lpm

Form design, which reduces the number of lines exceeding the design point, can optimize printer throughput. Since print time may vary with each line printed, typical customer documents should be benchmarked if specific throughput rates are required. Multiple printer and display station operational loads may also affect performance.

Problem Determination Procedures: Problem determination is aided by significant offline verification tests which have been designed into the control unit to provide greater printer availability to the customer. See *IBM 5225 Printer Operator's Guide* (GA34-0054) for procedures.

For Direct Attachment to System/34: The 5225 Printer may be attached to System/34 in the following manner:

- When designated as the system printer, the 5225 connects to the Workstation Controller via one of the four twinaxial cable connectors on the 5340 System Unit. A 6 meter (20 foot) cable is provided with the 5340. Specify **#9307** on the 5340.
- When designated as a local workstation printer, the 5225 attaches in a manner similar to other 5250 Information Display System devices.

See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

For Direct Attachment to System/36: The 5225 Printer may be attached to the System/36 in a manner similar to 5250 Information Display Station devices. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337), for cabling information.

For Direct Attachment to System/38: The 5225 printer may be attached to System/38 in the following manner:

- When designated as the system printer, the 5225 connects to the Workstation Controller feature on the 5381 via user-provided twinaxial cable. Specify **#9817** on the 5381.
- When designated as a local workstation printer, the 5225 attaches via the Workstation Controller feature on the 5381. Attachment is by user-provided twinaxial cable in a manner similar to the 5219, 5224, and 5256 Printers.

See M5381 pages for Workstation Controller information. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

For Remote Printing in a Communications Environment on System/34, System/36, and System/38: The 5225 may be attached to the 5251 mdl 2 or 12 with the Cluster feature (#2550) or the Dual Cluster feature (#2551) on the 5251. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling and configuration information.

Series/1 Attachment: The 4952, 4954, 4955, 4956, 4959 Input/Output Expansion Unit, and the 4965 Diskette Drive and I/O Expansion Unit provide for the attachment of the 5225 via the Printer Attachment - 5200 Series (#5640). A 6 meter (20 foot) twinaxial Attachment Cable (#5780), is available. The printer may be attached up to a maximum distance of 1,525 meters (5,000 feet) using twinaxial cable. See *Series/1 Customer Site Preparation Manual* (GA34-0050) for cabling information.

For Attachment to the 5280 Distributed Data System: The 5285 Programmable Data Station and the 5288 Programmable Control Unit each provide for the attachment of the 5225 Printer, via twinaxial cable 1,525 meter (5,000 foot) maximum, to the appropriate printer attachment. See *IBM 5280 Cable Assembly Manual* (GA21-9341) for cabling information.

Customer Responsibilities: The marketing representative must advise customers of their responsibilities before receipt of the machine. For additional information, see the GI section.

The customer is responsible for:

- Receipt, unpacking, and placement of the 5225.
- Physical setup, connection of cables to IBM devices incorporating

5225 Printer Mdls 1, 2, 3, 4 (cont'd)

protected access areas, switch setting, and checkout in accordance with instructions supplied with the 5225.

- Notifying IBM of intent to relocate and for following IBM instructions for relocation of the 5225.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the IBM Branch Office.
- Relocation of the 5225, if required, to allow IBM service access.
- Using and following the problem determination procedures for the 5225 prior to calling IBM for service.
- Installation and maintenance of signal cables and associated parts for attaching the 5225 to the 5251, 5285, 5288, 5340, or 5381.
- When adding additional printers to the System/34, System/36, System/38 or 5280 Distributed Data System, the customer must modify the system configuration specifications. See *IBM System/34 Program Product Installation and Modification Reference Manual* (SC21-7689), *System/36 - Preparing a Place for Your Computer* (SA21-9444), *Planning for System Configuration* (SA21-9440), *Changing Your System Configuration* (SC21-9052), *IBM System/38 Guide to Program Product Installation and Device Configuration* (GC21-7775), or *IBM 5280 System Control Programming Reference Manual* (GC21-7824).

Publications: *IBM 5250 Information Display System Introduction* (GA21-9246), *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337), *IBM 5280 Planning and Site Preparation Guide* (GA21-9351), *IBM 5280 Cable Assembly Manual* (GA21-9341) and *IBM 5225 Printer Operator's Guide* (GA34-0054).

SPECIFY

- Voltage (120V AC, 1-phase, 60 Hz): **#9890** for a locking plug or **#9891** for a standard nonlocking plug. 208V AC, 1-phase, 60 Hz: **#9884** for a locking plug or **#9885** for a nonlocking plug. 240V AC, 1-phase, 60 Hz: **#9894** for a locking plug or **#9895** for a nonlocking plug.
- Color: One color accent must be specified. Specify **#9060** for Willow Green, **#9061** for Garnet Rose, **#9062** for Sunrise Yellow, **#9063** for Classic Blue, **#9064** for Charcoal Brown, or **#9065** for Pebble Gray. Printer background color is Pearl White.
- Character Sets: Specify one of the following:

  #9501 for 95-Character EBCDIC
  #9470 for 184-Character Multinational (includes ASCII graphics)
  #9570 for 95-Character Spanish Speaking (N and n capability)

  See "Type Catalog" for character set arrays. All workstations and printers attached to a System/34, System/38, and 5251 mdl 2 or 12 must have the same character set.
- Cables: See "Accessories" for cable ordering instructions. For cable specifications, see the *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337), or *IBM 5280 Cable Assembly Manual* (GA21-9341).
- System Attachment: Specify one of the following:

Series/1:	**#9566**
System/34:	**#9561** for system printer **#9560** for local workstation printer **#9559** for remote workstation printer
System/36:	**#9567** for system printer **#9568** for local workstation printer **#9569** for remote workstation printer
System/38:	**#9563** for system printer **#9564** for local workstation printer **#9565** for remote workstation printer
5280 System:	**#9562**

SPECIAL FEATURES

Replaced parts from any special feature installation or removal remain the property of the customer.

Audible Alarm (#1470): Provides an indication to the operator when manual intervention is required due to one of nine printer error conditions or on command from the host. **Maximum:** One. **Field Installation:** Yes .

Cable-Thru (#2680): Provides the capability of connecting multiple 5219s, 5224s, 5225s, 5251 mdl 1 or 11, 5252s, and 5256s to a single twinaxial cable. Each unit on the cable, except the last, requires this feature. (**Note:** For relocation flexibility, the customer should have Cable-Thru on all workstations.) **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

The upgrade purchase prices for model conversions may be greater than the purchase price differentials. Customers should carefully evaluate their future requirements when purchasing a 5225 Printer. Replaced parts from any model conversions become the property of IBM.

ACCESSORIES

Cables: Cables and/or associated parts to attach the 5225 Printer to the 5251 mdl 2 or 12, 5285, 5288, 5340, 5360, or 5381 may be purchased from IBM or from a customer-selected source. For description of these cables and parts, see *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) or *IBM 5280 Cable Assembly Manual* (GA21-9341). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5225.

Twinaxial Cabling (for attachment to the 5251 mdl 2 and 12, 5285, 5288, 5340, and 5360):

Twinaxial Connector Kit (P/N **7362268**): Includes two connectors. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. (Individual connectors, P/N **7362229**, are available for replacements.)

Twinaxial Wire (P/N **7362211**): Order must specify the desired length. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. (This is an indoor/outdoor cable.)

Twinaxial Cable Assembly (P/N **7362267**): Includes a Twinaxial Connector Kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (P/N **7362230**): Permits two Twinaxial Cable Assemblies to be joined together.

Twinaxial Station Protector Kit (B/M **7361807**): A kit includes two protectors. One is required at each end of each twinaxial attachment cable installed outdoors (either above or below ground level). Individual Twinaxial Station Protectors, P/N **7362426**, are available for replacement purposes. The station protector is a CSU accessory.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362063** for Teflon-covered cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362061** for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N **7362062** for Teflon-covered cable assembly.

Series/1 Attachment Cables: For a description of cables and/or parts to attach the 5225 printer to the Series/1 (feature #5640)... see *IBM Series/1 Customer Site Preparation Manual* (GA34-0050). Twinaxial cabling for attachment to the 4952, 4954, 4955, 4959, or 4965 (feature #5640):

Device (5225) connector	P/N **7362229**
2x4 Berg Connector Kit	P/N **6095524**
Twinaxial cable	P/N **7362211**

SUPPLIES

Ribbons: A black ribbon, P/N **4412372** or equivalent, is required. Contact IBM.

Ribbon Shields: One ribbon shield is included with each quantity of five ribbons purchased from SSD. Ribbon shields are also available separately from SSD. For additional information, contact an IBM Marketing Representative or call 800-631-5582.

5228 PRINTWHEEL PRINTER

(Wide Carriage)

PURPOSE

A bidirectional, impact, wide carriage printer providing letter quality printed output for the 6580 Displaywriter System. Print wheels in 10 pitch, 12 pitch, 15 pitch or proportional spacing are available to provide a selection of type style variations. With the proper hardware and software, each printer can also be used in a clustered system, supporting up to three workstations.

MODELS

Model A12 60 cps

Prerequisites: In order for two or three workstations to share a printer, the primary workstation must have the Printer Sharing Prerequisite installed, and each workstation must have Textpack 2, 4, or 6 with the respective memory requirement.

Note: The 5228 is not approved for use in an environment requiring Modification Features. The use of unmodified components with Modification Features will result in increased emanation levels.

Physical Planning Information:

Unit	Height	Width	Depth	Weight	Max KVA	BTU /HR
5228 Printer	200mm 7.9 in.	760mm 30 in.	583mm 23 in.	31kg 68 lb.	.50	900
With Sheet Feed Paper Handler	484mm 19 in.	760mm 30 in.	725mm 29 in.	12kg 26.4 lb.	NA	NA
With Tractor Feed	330mm 13 in.	760mm 30 in.	735mm 29 in.	4kg 8.8 lb.	NA	NA

HIGHLIGHTS

- Rated burst print speed of 60 cps (assumes 96-character set with 10 pitch).
- Accommodates horizontal character spacing of 10 pitch, 12 pitch, or 15 pitch, and proportional spacing according to the printwheel selected.
- Vertical spacing is program selectable in increments of 1/96 in. (0.0104 in.). For a single program command, the vertical movement is 4 increments minimum and 24 maximum. This permits line spacing from 4 lines/inch to 24 lines/inch.

  The printer will default to 6 lines/inch if the user does not program select a vertical line spacing.

  The lines per page parameter is also program selectable, the default being 66 lines per page.
- Single speed carriage with skipping at up to 6 inches per second.
- Single sheet feeding by hand, or the optional Sheet Feed Paper Handler.
- Forms tractor for feeding continuous forms is an optional feature.
- Multiple 96-character printwheel options available by type style and language graphic variations.

Customer Setup (CSU) and Responsibilities: The 5228 is designated a customer setup machine. The marketing representative must advise the customer of his/her responsibilities before receipt of the machine. *Customer Setup Instructions* are shipped with the machine.

CSU allowance is *one* day.

Limitations:

1. Character Sets:

   The 5228 Printer may utilize any one of a variety of 96-character type wheels on any particular printing operation.

   It is the customer's responsibility to match the type wheel selected to the printing requirements.

2. Continuous Forms:

   Pinfed continuous forms can be used. (See "Special Features" for Tractor Feed device).

   Both edges of the pinfed forms must be fastened in the forms tractors.

   No staples are permitted in the areas exposed to the interchangeable printwheel.

   Printer operation and print quality vary with paper and number of copies. Multiple part forms should be tested in operating conditions to verify that results are satisfactory.

   Paper Specifications:

   Maximum carbons is five

   Maximum paper width is 483mm (19.0 in.)

   Maximum pin-to-pin width on forms tractor is 445mm (17.5 in.)

   Maximum print-line width is 432mm (17.0 in.)

3. Single sheet feed is by hand insertion, unless the optional Sheet Feed Paper Handler (#3295) is used. Multi-page printing with single sheet feeding requires operator intervention or special application programming support to avoid paperless printing.

4. Paper Recommendations:

   Suitable Paper

   All of the papers placed in the Sheet Feed Paper Handler should be new, unused and without packaging damage. To ensure feed reliability all papers should be "riffled" or "fluffed" before being placed into the supply trays. The papers defined in this section are the only papers considered acceptable for use in the Sheet Feed Paper Handler.

   Type and Composition: Plain bond paper of one of the following compositions.

   - No. 1 sulfite (100% chemical wood pulp).
   - 25% cotton content.
   - 50% cotton content.
   - 100% cotton content.
   - Paper made from recycled office paper.

   Size: Using the Sheet Feed Paper Handler, the following paper sizes can be fed either lengthwise or sidewise unless otherwise noted.

178mm x 267mm	*	(7.0 in. x 10.5 in.)
185mm x 267mm	*	(7.25 in. x 10.5 in.)
191mm x 267mm	*	(7.5 in. x 10.5 in.)
203mm x 267mm		(8.0 in. x 10.5 in.)
203mm x 330mm	*	(8.0 in. x 13.0 in.)
216mm x 279mm		(8.5 in. x 11.0 in.)
216mm x 330mm	*	(8.5 in. x 13.0 in.)
216mm x 356mm	*	(8.5 in. x 14.0 in.)

   * Feed lengthwise only.

   Basic weights:

   - 60g/sq.m to 90g/sq.m (16 lb to 24 lb)
   - Optimum: 75g/sq.m to 90g/sq.m (20-24 lb bond) 25% or 50% cotton content.

   Unsuitable Paper for the cut sheet feeder

   Following is a list of paper supplies that may be found in an office that will *not* feed reliably and may cause misfeeds and paper jams. (This list is not intended to be all-inclusive).

   - Coated paper.
   - Vellum paper.
   - Coated erasable bond paper.
   - Synthetic papers (rice paper, parchment, etc.).
   - Translucent paper.
   - Multi-sheet forms and documents (bound or unbound).
   - Peel-off, pressure sensitive labels.
   - Some types of chemically-treated papers (such as paper used to make copies without carbon paper).
   - Preprinted forms requiring a high degree of character placement accuracy.
   - Dark colored paper.
   - Envelopes.
   - Card stock.
   - Folded or creased documents.
   - Paper with exposed gummed surfaces, holes, perforations, cutouts, or windows.
   - Highly embossed paper (embossment height exceeding 0.508mm (0.02 in.).

     Note: Embossments should not be located within 15mm (0.59 in.) of any edge of the sheet.
   - Preprinted papers containing chemicals or substances that leave a residue on the Sheet Feed Paper Handler or printer components.
   - A mix of different sizes and types of paper in a paper tray.

5228 Printwheel Printer (cont'd)

- Paper in unsatisfactory conditions:
  - Paper with excessive curl or waviness (exceeding 3mm (0.118 in.).
  - Reams of paper with edges or corners folded or bonded together (fluffing may correct this condition).
  - Paper with poorly cut (rough) edges.

  Note: Paper should not be exposed to adverse temperature or humidity conditions (consult the paper manufacturer for recommended storage environment).

AAS Ordering Instructions: The 5228 is a system component.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): No specify for a standard nonlocking plug (uses customer standard type receptacle). Standard power cord is 3m (9.8 ft.), no specify required. Some localities restrict power cord length to 1.8m (6 ft.). If 1.8m cord is required, specify **#9986**.

- **Cable Lengths (required cable for IBM Printwheel Printer to Workstation):** Cables in lengths of 3, 6, 30, and 60 meters (9.9, 19.7, 98.4 and 196.8 ft.) can be ordered to cable connect the IBM Printwheel Printer to a workstation. One cable is required for either a stand-alone or printer-sharing configuration. 3m (9.9 ft.) cable **(#2030)**, 6m (19.7 ft.) cable **(#2000)**, 30m (98.4 ft.) cable **(#2010)**, 60m (196.8 ft.) cable **(#2020)**. If *no* cable is desired, use **#3999**.
- Color: Pearl White only (no specify required).
- Language: English (no specify required).
- Printwheel Type Style: One standard printwheel is shipped with the machine except as outlined below:
  Prestige Elite 12, no specify required

  Additional printwheels may be ordered as supplies by part number. See "Supplies" below.

SPECIAL FEATURES

Tractor Feed Device (#3290): Provides a variable-width tractor for feeding continuous forms. This feature is advantageous for successful multi-page forms printing operations. See "Limitations" for Forms Requirements. **Field Installation:** Yes. **CSU:** Yes.

Sheet Feed Paper Handler (#3295): Provides for feeding cut sheets of paper from two source trays. Consists of paper transport and output tray. Paper is stacked face down. See "Limitations" for Paper Specifications. **Field Installation:** Yes. **CSU:** Yes.

Note: Paper Handling prerequisite is standard on the 5228 Wide Carriage Printer.

MODEL CONVERSIONS: None

ACCESSORIES

Paper Trays (Top P/N 6819687) (Bottom P/N 6819442): Provides additional trays for Sheet Feed Paper Handler (#3295). Eliminates paper removal/installation from trays when customer uses a wide variety of papers.

Paper Stacker/Tray (P/N 1494596): Permits feeding of continuous forms from a carton and provides for form stacking on a single shelf after printing.

Paper Table (P/N 1308894): Provides paper support and a movable guide for manual cut sheet insertion when no sheet or tractor feed is installed.

Order accessories: : From IBM.

SUPPLIES

Ribbons: The IBM 463 ribbon (P/N **1299463**) or equivalent. None required with machine order. Contact IBM.

Printwheels: None required with machine order. Additional printwheels are available in a variety of print styles (see "Type Catalog -5210") and character sets, which are interchangeable with the printwheel supplied with the machine. When ordering, consideration should be given to ordering a second identical wheel for backup. Replacement and installation of the printwheel is the customer's responsibility. Contact IBM.

5229 PRINTER

PURPOSE

A bidirectional, wide-carriage, impact printer providing high quality printed output for the 5520 Administrative System. Print wheels in 10 pitch, 12 pitch, 15 pitch or proportional spacing are available to provide a selection of type style and graphic variations.

MODELS

Model B12 60 cps

Limitations:

1. Continuous forms:

   Pin fed continuous forms can be used. See "Special Features" for Continuous Forms Feed Device and "Accessories" for Paper Table.

   1 to 3-part continuous forms can be used on the full-width of the 5229 pin feed carriage. 4 or 5-part forms must be limited to a 14.5 inch pin-to-pin width.

   Both edges of the pin fed forms must be fastened in the forms tractors.

   No staples are permitted in the areas exposed to the interchangeable print wheel.

2. Printer operation and print quality vary with paper and number of copies. Multiple part forms should be tested in operating conditions to verify that results are satisfactory.

3. Single-sheet feed is by hand insertion, unless the optional Cut Sheet Feed Attachment (#3295) is used.

4. There is a limit on the number of permissible cable "junctions" on the twinaxial cable used to attach multiple 5219, 5229, 5258, Printers to the 5525 System Unit. See the *5520 Administrative Systems Installation Manual - Physical Planning* (GA23-1011) for details. The manual also describes the limits on total number of printers attachable to the 5525, and multi-drop limits on a single line.

5. Paper Specifications:

   Maximum paper width 483mm (19.0 inches)
   Maximum pin-to-pin width on forms tractor is 445mm (17.5 inches)
   Maximum print-line width 432mm (17.0 inches)
   Maximum print depth 533mm (21.0 inches)

6. Cut Sheet Feed Attachment Paper Recommendations:

   Suitable Paper:
   All of the papers placed in the Cut Sheet Feed Attachment should be new, unused and without packaging damage. To insure feed reliability all papers should be "riffled" or "fluffed" before being placed into the supply trays. The papers defined in this section are the only papers considered acceptable for use in the Cut Sheet Feed Attachment.

   Type and Composition: Plain bond paper of one of the following compositions.

   - No. 1 sulfite (100% chemical wood pulp)
   - 25% cotton content
   - 50% cotton content
   - 100% cotton content
   - Paper made from recycled office paper

   Size: Using the Cut Sheet Feed Attachment, the following paper sizes can be fed lengthwise only unless otherwise noted.

   - 178mm x 267mm (7.0 inches x 10.5 inches)
   - 185mm x 267mm (7.25 inches x 10.5 inches)
   - 191mm x 267mm (7.5 inches x 10.5 inches) *
   - 203mm x 267mm (8.0 inches x 10.5 inches)
   - 203mm x 330mm (8.0 inches x 13.0 inches) *
   - 216mm x 279mm (8.5 inches x 11.0 inches)
   - 216mm x 330mm (8.5 inches x 13.0 inches)
   - 216mm x 356mm (8.5 inches x 14.0 inches)

   * Can be fed lengthwise or sidewise.

   Basis weights:

   - 60 g/sq.m to 90 g/sq.m (16 pounds to 24 pounds).

   - Optimum: 75 g/sq.m to 90 g/sq.m (20 pounds to 24 pounds bond) 25% or 50% cotton content.

   Unsuitable Paper:
   Following is a list of paper supplies that may be found in an office that *will not feed reliably* and may cause misfeeds and paper jams. This list is not intended to be all-inclusive.

   - Coated paper.
   - Vellum paper.
   - Coated erasable bond paper
   - Synthetic papers (rice paper, parchment, etc.).
   - Translucent paper.
   - Multi-sheet forms and documents (bound or unbound)
   - Peel-off, pressure-sensitive labels.
   - Some types of chemically-treated papers (such as paper used to make copies without carbon paper).
   - Preprinted forms requiring a high degree of character placement accuracy.
   - Dark colored paper.
   - Envelopes.
   - Card stock.
   - Folded or creased documents.
   - Paper with exposed gummed surfaces, holes, perforations, cutouts, or windows.
   - Highly embossed paper (embossment height exceeding 0.508mm (0.02 inches). **Note:** Embossments should not be located within 15mm (0.59 inches) of any edge of the sheet.
   - Preprinted papers containing chemicals or substances that leave a residue on the Cut Sheet Feed Attachment or printer components.
   - A mix of different sizes and types of paper in a paper tray.
   - Paper in unsatisfactory conditions: Paper with excessive curl or waviness exceeding 3mm (0.118 inches). Reams of paper with edges or corners folded or bonded together (fluffing may correct this condition). Paper with poorly cut (rough) edges.

   Note: Paper should not be exposed to adverse temperature or humidity conditions (consult the paper manufacturer for recommended storage environment).

Prerequisites: In the 5525 System Unit, #4710, #4711, #4712 or #4715, and either #1105, #1700, #1701, #1702, or #1704 and licensed program 5611-SS2. See M5525 pages for details.

Customer Setup (CSU): The 5229 is designed as a Customer Setup device, thereby offering the customer early availability and relocation flexibility. For additional information on CSU refer to the GI section. The CSU allowance is one day.

HIGHLIGHTS

- Has a rated burst print speed of up to 60 cps (assumes 96-character set with 10 pitch).
- Accommodates horizontal character spacing of 10 pitch, 12 pitch, 15 pitch or proportional spacing, according to the print wheel selected. Maximum 255-character line.
- Vertical spacing of 5-1/3, 6, or 8 lines-per-inch.
- Half-line spacing for superscripts and subscripts to a single level.
- First line registration, form skipping and spacing chosen by the user and then controlled by the licensed program.
- Single-speed carriage with skipping rate up to six inches-per-second.
- Noise level consistent with an office environment.
- Ribbon saver facility permits two modes of ribbon feed, to extend ribbon life where appropriate.
- Single-sheet feeding by hand, or the optional Cut Sheet Feed Attachment.
- Forms tractor for feeding continuous forms is optional.
- Multiple 96-character print wheel options available by type style and language graphic variations. See "Supplies" section.
- Optional Paper Table.
- Standard cable-thru capability to allow multiple printers on a single twinaxial cable up to an accumulative total distance of 1,524 cable meters (5,000 cable feet) radially from the 5525 System Unit.
- Customer setup for early availability and relocation flexibility.

Problem Determination Procedures: Problem determination and recovery procedures are provided with the 5229 Printer when attached to the 5525 System Unit using licensed program 5611-SS2 to help provide increased availability of the printer, and other parts of the system, to the user. These procedures will be described in the HELPs and Messages facilities in the licensed program and in the following manuals: *IBM 5229 Printer Operators Guide* (GA23-1009), *IBM 5520 Administrative System Messages and Recovery Aids* (SC23-0748).

These procedures are designed to be easy to follow and use by the customer and it is the customers responsibility to follow them prior to calling for IBM service.

Customer Responsibility: The customer is responsible for:

- Receipt, unpacking, and placement of the 5229.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting, and checkout in accordance with instructions provided by IBM.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5229.

5229 Printer (cont'd)

- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the branch office.
- Relocation of the 5229, if required, to allow IBM service access.
- Installation and maintenance of signal cables and associated cable adapters for attaching the 5229 to the 5525 System Unit.
- When adding or moving 5229 Printers on the 5520 Administrative System, the customer may have to modify the system configuration specifications. See the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1011).

Publications: *IBM 5520 Administrative System Introduction* (GC23-0702), and *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1011).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): No specify for a standard nonlocking plug (uses customer standard type receptacle). Standard power cord is 3 meters (9.8 feet) and no specify is required. Some localities restrict power cord length to 1.8 meters (6 feet). If the 1.8 meter cord is required, specify **#9986**.
- Language: English (no specify required)
- Print Wheels: [Mdls B01, B02] One standard print wheel is shipped with the machine.

  Prestige Elite 12, no specify required.

  Additional print wheels may be ordered as supplies by part number. See "Supplies" below.
- Cables: Customer-supplied. See "Accessories" and the *IBM 5520 Administrative Systems Installation Manual - Physical Planning* (GA23-1011) for ordering information. Specify **#9050** if cable is ordered from IBM or **#9055** if cable is ordered from another supplier.
- Data Rate: The data transfer rate is determined by the Local Device Control feature and the 5525 System Unit mdl. Specify **#9300** for printers attaching through #4710 on the 5525 mdl 021, **#9305** for Printers attaching through #4710 on the 5525 mdl 031 or 032, **#9315** for Printers attaching through #4711 or #4712 on any mdl 5525.

SPECIAL FEATURES

Continuous Forms Feed Device (#3290): Provides a variable-width tractor for feeding continous forms. **Field Installation:** Yes. **Customer Setup:** Yes.

Cut Sheet Feed Attachment (#3295): Provides cut sheet paper from two source trays under system control, paper transport, and output tray. **Field Installation:** Yes. **Customer Setup:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Paper Table (P/N 1308894): Provides paper support and a moveable guide for manual cut sheet insertion when no sheet or tractor feed is installed.

Paper Stacker/Tray (P/N 1494596): Permits feeding of continuous forms from a carton and provides for form stacking on a single shelf after printing.

Paper Trays (Top P/N 6819687) (Bottom P/N 6819442): Provides additional trays for Cut Sheet Feed Attachment (#3295). Eliminates paper removal or installation from trays when customer uses a wide variety of papers.

Contact IBM for ordering details on above accessories.

Cables: The cables and/or associated parts to attach the 5229 to the 5525 may be purchased from IBM or from a customer-selected source. For the proper identification, installation and application of the subject cables and parts, see the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1011). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5229.

Twinaxial Connector Kit (P/N **7362268**): Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire (P/N **7362211**): Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Cable is an indoor/outdoor cable.

Twinaxial Cable Assembly (P/N **7362267**): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (P/N **7362230**): Permits two Twinaxial Cable Assemblies to be joined together.

Order cables specifying part number. Allow lead time of 120 days.

Twinaxial Station Protector (P/N **6819750**): One is required at each end of each Twinaxial Attachment Cable installed outdoors (either above or below ground level). **Note:** This Station Protector is different from those used with displays.

Order Station Protector specifying part number. Allow lead time of 120 days.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362063** for Teflon-covered cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362061** for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N **7362062** for Teflon-covered cable assembly.

SUPPLIES

Ribbons: The IBM 463 ribbon (P/N **1299463**) or equivalent. None required with machine order. Contact IBM for details.

Print Wheels: None required with machine order. Additional print wheels are available in a variety of print styles (see TC 5210 pages in "Type Catalog") and character sets and are interchangeable with the print wheel supplied with the machine. Contact IBM for Details. When ordering, consideration should be given to ordering a second print wheel for backup. Replacement and installation of the print wheel is a customer responsibility.

5231 CONTROLLER

PURPOSE

Control Unit for the 5230 Data Collection System for central collection of data from 5234 Time Entry Stations and 5235 and 5236 Data Entry Stations. Data is collected at the controller on either card or diskette media for subsequent transfer and processing on a data processing system.

MODELS

Mdl 1 001 — Punches and interprets 96-column card output records from data entered through the Time Entry and Data Entry Stations. Punches and prints at 20 cards per minute. Also provides read capability for loading system definition records for system start-up. Characters punched and interpreted are the standard 64-character set corresponding to the 96-column card code. All other EBCDIC characters will be accepted by the system and converted to blanks. Card hopper and stacker capacity is 350 cards.

Mdl 2 002 — Stores output records entered through the Time Entry and Data Entry Stations on diskette in 128-character records. An additional feature provides binary synchronous communication of data directly to a data processing system (unidirectional transmission only). See "Communications" for special attachment instructions to S/370 and 3741. The mdl 2 also provides read capability for loading system definition records for system start-up.

Mdl 3 003 — Punches and interprets 80-column card output records from data entered through Time Entry and Data Entry Stations. The mdl 3 punches and prints at 21 cards per minute. Printed characters will be represented by the 64 character set EL. All other EBCDIC characters will be accepted by the system and converted to blanks. Card hopper and stacker capacity is 400 cards. The mdl 3 also provides read capability for loading system definition records for system start up.

Prerequisites: 5230 Data Collection System Accessory Package. See "Accessories" for details.

HIGHLIGHTS

- Non-programmable.
- Personalized through easy-to-use fill-in-the-blank forms.
- Application independent.
- Performs self-diagnosis during idle time.
- Choice of output media available.
- Operator guidance at entry stations.
- Optional communication capability via BSCA.
- Audible alarm sounds when operator attention is required.
- All controller mdls can be ordered with loop connection features which allow attachment of up to 15 entry stations in any combination.
- All models provide operator guidance to the user to assist them in responding to conditions requiring operator attention, e.g., output media full and almost full or a loop error.

See "Publications" for Guide form numbers.

Host Support: For System/3, System/32, System/34, and System/38. Host support programs are available for the System/3 (5705-M31), System/32 (5725-M3A), System/34 (5726-M4A) and (5726-M3A), and System/38 (5714-M4A). These programs provide a system to edit, sort, expand, and reformat records collected by the 5230. Output from these programs can be tailored to be accepted by user programs or as input records to IBM application programs. The System/3 host support program is to be used with the System/3 Shop Loading and Control program or IPICS FDP's.

The following three manufacturing application programs under MMAS and MAPICS are supported on the System/32, System/34 and System/38 as a single application or in any combination:

- Payroll
- Inventory Management
- Production Status and Costing

System Features: A non-programmable device utilizing read-only storage (ROS) for operational control with random access memory (RAM) for definitions uniquely specifying output record format and input requirements from entry stations. Definitions are personalized for customer application through up to six simple question and answer forms, key-entered into appropriate media for input into the controller at system start-up.

2-Wire Loop Attachment: Controls 2-wire loop for attachment of Time Entry Stations and Data Entry Stations to controller.

Unattended Operation: Once loaded with definition records the system will operate in an unattended mode (assuming no power or system failures) collecting data from entry devices. Status codes will be displayed and the internal alarm will sound whenever operator attention is required. In addition, the external alarm contacts will activate any external alarm provided by the customer. The alarm will also be activated when the output storage device is *almost* filled to capacity.

Input Media Validation: A check character can be defined for each card or badge entered at the entry stations. If the character does not match, the error will be indicated at the entry station and wait for the correctly coded badge or card to be entered into the station. It is recommended that the check character capability be used for card input to ensure proper orientation of the card when it is inserted into the Data Entry Station.

Self Diagnosis: Whenever there is idle time, the system will continue self diagnosis and display a status message if any problem is found. Alarm contacts will be activated and the internal alarm will sound if operator attention is required.

Controller Console: The console provides user communication with the controller to perform such functions as start/stop controller, set time of day, start/stop individual loops, respond to status messages, etc.

Console Lock: A keylock is provided to enable entry of data through the console. The key is removable in the "locked" or "disabled" position so no entry of data can be made via the console.

Alarm Contacts: Provides the capability for the customer to add an external alarm to indicate a system status message has been displayed at the controller console requiring operator attention. Alarm contacts work in conjunction with the standard alarm. Customers may require both alarms, the standard audible alarm for the immediate vicinity and their own external (audible or visual) alarm for a remote location.

CE Diagnostic Port: The first loop can be used to attach up to three entry stations to the controller. The three remaining loops can support up to four entry stations each. The first loop is limited to three in order to accommodate a CE port in the controller to be used only by the CE (or other maintenance personnel for purchased systems) for entry station diagnosis, checkout, and repair of failing units.

Communications: The 5231 mdl 2 with the optional BSCA feature can communicate with appropriately configured System/3, System/32 (point-to-point only), System/34 (point-to-point only), 3741 mdls 2, 4 (point-to-point only), 5110 (point-to-point only), System/7, or S/370 mdls 115, 125, 135, 138, 145, 148, 155II, 158, 165II, 168, or 3031, 3032, 3033. Communications with S/370 mdls or 3031, 3032, 3033, is via ICA (where applicable), 2701, 2703, 3704 and 3705 operating under DOS/VS BTAM, OS/VS1 BTAM, or OS/VS2 BTAM. In particular, 2703 is not supported in 303X configurations. BSCA attachment is supported by CICS/VS operating under DOS/VS, OS/VS. Transmission to a 3741 is via communications link and must be reestablished for subsequent diskette transmission. Data communication on the mdl 2 controller is supported as a 3741 mdl 2 or 4. Transmission of data is one-way only, from the 5231 mdl 2 to a host. Communications is over multipoint (nonswitched) or point-to-point leased or switched facilities. Certain data communications characteristics such as full-speed or half-speed, security, and identification, are specified through the 5231 definition records and console messages. Refer to *5230 Data Collection System User Guide* (GA34-0040) for complete description.

Customer Responsibilities: For details, see the *5230 Data Collection System User Guide* (GA34-0040). The customer is responsible for the following:

Prior to receipt of the 5230 Data Collection System:
- Sign the IBM Central Facility Maintenance Agreement Amendment (Z120-2476).
- Provide a Central Facility Maintenance location at the controller for entry station maintenance.
- Install and check out loop cables and station connectors.
- Supply proper power outlets to the controller and entry stations.
- Meet all applicable electrical, fire, safety, and other codes required in the area.
- Proper addressing of the station connectors.
- Install entry station mounting brackets.
- Connect the loop cable to the 5231 Controller loop connectors.

After receipt of the 5230 Data Collection System:
- Connect the entry stations to the loop.
- Problem determination of failing Entry Stations, failing loops and the controller to a limited extent.
- Deliver the failing entry station to the Central Maintenance Facility site and return it to the floor location.
- Maintain loops.
- Security of customer data collected by the 5230.

If installing BSCA (#2704) on the 5231 Controller mdl 2, the following apply:
- Responsibilities related to the installation and maintenance of common carrier facilities/services as well as the IBM equipment. For further information, see M2700 and "Teleprocessing Systems" pages.

5231 Controller (cont'd)

Obtain a firm installation date for the start of transmission services (including any required modems) prior to processing the order confirmation card. Refer to installation schedule section of the *IBM 5230 Data Collection System User Guide* (GA34-0040) for customer preinstallation responsibilities and recommended schedule.

IBM Modems: The following IBM modems can be attached to a 5231 mdl 2 Controller:

Modem	Speed (bps)
3863	2400
3868 mdl 1	2400
3872 mdl 1	2400/1200
3864	4800
3868 mdl 3/4	4800
3976 mdl 3	1200/600

Note: The 5231 Controller does not support Auto-Call Originate (#1091) on the 3872.

Environment: The 5230 Data Collection System is designed to operate in the following environment:

	5231* 5236	5234 5235 5239
Temperature	10°C to 40°C (50°F to 105°F)	4°C to 45°C (40°F to 113°F)
Relative Humidity	8 - 80%	8 - 80%
Maximum Wet Bulb	26.7°C (80°F)	26.7°C (80°F)

*The 5231 mdl 2 will operate up to 43°C (110°F)

The system is designed to operate in offices or factories. This assumes a building that is not air conditioned, but with normal winter heat and normal ventilation. For further environmental information, see the GI section, "Use of IBM Equipment in Industrial Environments". For questionable environments, contact Field Engineering for assistance in determining the environmental suitability for the 5230 Data Collection System.

References: See M2700 pages for additional information concerning modems, communication facilities, machine attachment requirements, operating capabilities, and customer responsibilities.

Publications: *5230 Data Collection System User Guide* (GA34-0040), *5230 Data Collection System Console Guide, Mdl 1* (GX34-0041), *5230 Data Collection System Console Guide, Mdl 2* (GX34-0042), *5230 Data Collection System Console Guide, Mdl 3* (GX34-0043), *5230 Data Collection System Data Communications Guide* (GC34-0044), *5230 Data Collection System Badge Specifications* (GA21-9259).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz, 3-wire): With locking plug, **#9880**.
- Power Cords: No special number needed.
- Color:

#9060	Willow Green
#9061	Garnet Rose
#9062	Sunrise Yellow
#9063	Classic Blue
#9064	Charcoal Brown

- Processing system for the data collected by the 5231:

#9270	System/3 mdl 15
#9271	System/3, all mdls except 15
#9273	System/7
#9272	System/32
#9279	System/34, Processing System
#9294	System/34, Planned Device Attachment
#9283	System/38
#9274	S/360
#9277	S/370, below mdl 145
#9278	S/370, mdls 145 - 168
#9281	S/370, 3031, 3032, 3033
#9280	5110
#9276	Non-IBM equipment
#9275	Other IBM equipment

- Cables: See "Accessories" for cable details.

SPECIAL FEATURES

Bi-Sync Comm. Adapter (BSCA) (#2074): This feature permits the 5231 Controller mdl 2 (only) to function on a switched or nonswitched point-to-point line or multipoint nonswitched line as a 3741 mdl 2 or 4 terminal communicating in binary synchronous mode. The transmission is unidirectional from the 5231 mdl 2 to the host system. The 5231 mdl 2 will transmit to:

- A System/3 equipped with BSCA (#2074, #2084), LCA (#4765) or ICA (#4645 and #4802).
- A System/7 with TPMM (RPQ D08011) or TPMF (RPQ D08010).
- A System/32 with #2074 (point-to-point only).
- A System/34 with Communications Adapter (#2500).
- A System/38 with appropriately configured BSC adapter and subfeatures (point-to-point only).
- A 3741 Data Station mdl 2 or 3741 Programmable Workstation mdl 4. Transmission to the 3741 is restricted to single diskette transfer (point-to-point only).
- A 5110 with BSCA (#2074). Transmission to the 5110 is restricted to single diskette transfer (point-to-point only).
- A S/370 mdl 115, 125, 135, 138, 145, 148, 155 II, 158, 165 II, 168 or 3031, 3032, 3033. Communications with a S/370 is via ICA (where applicable), 2701, 2703, 3704 or 3705 operating under DOS/VS BTAM, OS/VS1 BTAM, or OS/VS2 BTAM. BSCA attachment is supported by CICS/VS (operating under DOS/VS, OS/VS).

BSCA Optional Specifications (Mdl 2): When ordering, one selection must be specified from each of the first three categories below. Selection from category (4.) must be based on the notes following:

1. Transfer Rate:

1200 bps	**#9751**
2000 bps	**#9752**
2400 bps	**#9753**
4800 bps	**#9754**

2. Network Attachment:

Point-to-Point (Nonswitched)	**#9481**
Multipoint Tributary	**#9482**
Point-to-Point (Switched)	**#9483**

3. Planned Device Attachment:

System/3	**#9580**
System/7	**#9590**
System/32	**#9591**
System/34	**#9594**
System/38	**#9599**
S/370	**#9570**
S/370, 3031, 3032, 3033	**#9596**
3741 mdl 2, or 4	**#9579**
5110	**#9595**
Other IBM Equipment	**#9592**
Non-IBM Equipment	**#9593**

4. Line Facility Attachment: *

Duplex (4-wire only) **	**#9391**
Half-duplex (2-wire only) ***	**#9392**

Notes:

* If Interface (#4780) is ordered with a 2-wire telephone connection or if a 1200 bps Integrated Modem (#5501) switched is ordered, no specify code is required.

** Specify **#9391** only as follows: If Multipoint Tributary (#9482) is ordered, or
If 1200 bps Integrated Modem (#5500) nonswitched is ordered, or
If Interface (#4780) is ordered, and external modem attachment is to a 4-wire telephone line.

*** Specify **#9392** only if Integrated Modem (#5500) is ordered based on 2-wire or 4-wire telephone line.

BSCA Feature Configuration: When the BSCA feature is ordered, either the Integrated Modem or External Modem Interface must be selected. Select either Item (1.) or (2.) and the required or optional special features.

	Modem Interface	Internal Clock (#9334)
1.	Interface (#4780)	Optional
2.	1200 bps Integrated Modem:	
	- Nonswitched (#5500)	Required
	- Switched with Auto-Answer (#5501)	Required

The BSCA feature is designed to operate at speeds between 1200 and 4800 bps over common carrier switched or nonswitched facilities or

5231 Controller (cont'd)

equivalent privately owned communication facilities. See M2700 pages for information on communications facilities. #2074 will operate in half-duplex mode over nonswitched communications lines which may be duplex or half-duplex facilities. Switched network versions include, as a basic capability, support of manual dial and manual or auto-answer operations (assumes the attached modems will support this mode of operation). Transmission code is EBCDIC. **Limitations:** For mdl 2 only. **Maximum:** One. **Prerequisites:** #5500, #5501, or #4780.

Secondary Output Punch Attachment (#3210): [Mdls 1 and 3 only] When ordered with the 5231 mdl 1 provides attachment of a 5496 Data Recorder equipped with System/3 mdl 6 or 5230 Attachment (#7501). When ordered with mdl 3 provides attachment of a 129 Card Data Recorder equipped with Card Input/Output Attachment (#7503). The attachment allows the 5496 Data Recorder or the 129 Card Data Recorder to be connected as a backup card punch/print for the 5231 Primary Punch. **Limitations:** For mdls 1 and 3 only. **Maximum:** One. **Field Installation:** Yes.

Loop 2 Attachment (#4700): Provides capability to attach four additional Data Entry or Time Entry Stations to the 5231 Controller. This expands total system capability to seven entry stations. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** 5230 Data Collection System Accessory Package (B/M **2461786**).

Loop 3 Attachment (#4701): Provides capability to attach four additional data entry or time entry stations to the 5231 controller. This expands the total system capability to eleven entry stations. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4700 and 5230 Data Collection System Accessory Package (B/M **2461786**).

Loop 4 Attachment (#4702): Provides capability to attach four additional Data Entry or Time Entry Stations to the 5231 controller. This expands the total system capability to its full capacity of fifteen entry stations. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4701 and 5230 Data Collection System Accessory Package (B/M **2461786**).

EIA Interface (#4780): Provides a cable and interface which meets RS-232-C characteristics for attachment of an IBM modem or Non-IBM modem. Non-IBM modems may be attached subject to Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with 1200 bps Integrated Modem (#5500, #5501). For mdl 2 only. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074. **Note:** This feature may also require Internal Clock. Internal clock is available at 1200 bps only. **Specify:** If the internal clock is desired with the interface, specify **#9334**, or **#9483** for attachment to switched lines.

1200 bps Integrated Modem (#5500, #5501): [Mdl 2 only] A modem for BSC data transmission at 1200 bps over nonswitched facilities or switched facilities. Available in two versions: #5500 for nonswitched and #5501 for switched with auto-answer. Attachment to the nonswitched facilities is via an IBM-provided cable directly to the telephone line. Attachment to the switched network is via FCC registered protective circuitry of the CBS Type (or equivalent) provided by the user. The device communicating with the 5231 Controller must also be equipped with a 1200 bps Integrated Modem/Line Adapter. **Limitations:** Cannot be installed with Interface (#4780). #5500 and #5501 cannot be installed together. For mdl 2 only. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074. **Specify:** **#9334** for Internal Clock, and **#9483** if #5501 was selected.

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: Except for loop cables (see below), no special order required for 5230 Data Collection System. Cables are shipped automatically with the type mdl and the associated features. A 9.1 meter (30 foot) modem cable will be furnished with the Control Unit. No cable order is required for 5231 mdl 2.

5230 Data Collection System Accessory Package: Contains the parts necessary for the customers to complete their preinstallation responsibilities. All items in the Accessory Package are prerequisites, except the Alarm Connector (B/M **2461785**), to some machines of the 5230 System. The Contacts Closure Accessory is a prerequisite only for feature code #1480. The accessory items are ordered via the *MES Order Guide* (Z120-2665). Normal schedule ship date for the accessory package items or customer supplied equivalents should be scheduled to precede the 5230 system by a minimum of seven weeks. This is to allow the customers time to complete their preinstallation responsibilities prior to receiving the 5230 system. Items ordered are purchase only and no maintenance is available. Normal parts warranty of three months is applicable.

The Accessory Package provides the capability for the customer to order and install those physical installation accessories not readily available from the customer's normal supplier. See the *5230 Data Collection System User Guide* (GA34-0040) chapter titled "Installation - Schedule of Events" for scheduled and preinstallation instructions.

Station Connector (B/M **2461780**): Provides the interface between each Entry Station (5234, 5235 and 5236) and the loop cable. Addressing switches for entry station identification and a bypass relay are included as part of the connector. One station connector is required for each 5234, 5235 and 5236. It is recommended that at least one spare station connector should be ordered per 5230 system. The customer is responsible for supplying the receptacle housing for the station connector. Refer to *IBM 5230 Data Collection System User Guide* (GA34-0040) for details.

Mounting Bracket (B/M **2461781**): Provides a metal bracket for either wall, pedestal or table mounting of a 5235 or a 5234. One mounting bracket is a prerequisite for each 5235 and 5234.

Loop Cable: Cable available from IBM to meet the loop requirements. Available in either a 152 meter (500 foot) spool (B/M **2461783**) or 304 meter (1000 foot) spool (B/M **2461784**). Loop cable B/M **2461783** or B/M **2461784** or equivalent must be used for system preinstallation. Specifications of this cable must be met if other cable is used. **Note:** Specifications for the 5230 Data Collection System loop cable are available from IBM.

Alarm Connector (B/M **2461785**): Provides a 3-pin connector to attach an external alarm to the 5231 Controller. The customer provides the external alarm and the wiring to the alarm connector (B/M **2461785**). The customer provided wire must be stranded 20 AWG. Voltage and current on the wire must not exceed 48V and 1.5A respectively. The connector is plugged into the 5231 Controller at installation time. The customer supplied alarm is used, if desired, to provide an audible or visual signal to the customer when the 5231 Controller requires operator attention. This no-charge feature may be desirable even though the 5231 has an internal audible alarm as a standard feature.

Loop Connectors (B/M **2461786**): Provides the connection between the 5231 Controller and the loop cable. One loop connector is a prerequisite for each 5231 Controller, and one for each additional loop (#4700, #4701, #4702) attached to the controller.

Contacts Closure Accessory (B/M **4413082**): Is prerequisite for installing the Contacts Closure Feature (#1480) on the 5234 or 5235/5236. Contact Closure Accessory contains associated connectors, printed circuit card, and relay. It is recommended that at least one spare be ordered per 5230 System. More may be required if several features are installed per system. Customer must provide the external devices with required power and, if necessary, any circuity to activate external devices that may require a longer time than the contact closure time of 0.5 seconds minimum. Contact maximum ratings are 28V AC/DC at 1.5A. The IBM-supplied crimp-on terminals for connecting external devices are designed for 18 to 22 AWG wire. Two sets of contacts are provided that can be used in a normally open or normally closed mode. The customer is responsible for supplying the receptacle housing for the Contact Closure Accessory. Refer to *5230 Data Collection System User Guide* (GA34-0040) for details.

Berg Connector (B/M 8327397): Provides for the connection between the Series/1 and the loop cable. One Berg connector is required for each RPQ D02312, D02313, or D02314 attached to the Series/1.

SUPPLIES

The following items may be ordered for initial and replacement quantities as appropriate. The *5230 Data Collection System User Guide* (GA34-0040) contains order forms for supplies. The User Guide instructs the customer to give the completed order form to the marketing representative. It must be forwarded to the appropriate marketing representative.

Badges: See *5230 Data Collection System User Guide* (GA34-0040) for standard format and other supplies data. For each badge order placed with SSD, there is a minimum order quantity for each badge setup and a minimum total-quantity-per-customer order.

Cards:
Mdl 1 ... 96-column (P/N **3700**).
Mdl 3 ... 80-column (P/N **5081**).
Manufacturing Applications... Four cards commonly used in manufacturing related data collection applications can be ordered as standard supplies. Each type of card may be individually ordered.

	SSD Part Number	
Card Type	80-Column	96-Column
Order/Material Receipt	**W41071**	**W41067**
Material Issue	**W41072**	**W41068**
Move	**W41073**	**W41069**
Operation	**W41074**	**W41070**

For format of these cards see the *Data Collection Application Workbook* (GH30-0203).

Diskette: Mdl 2 (P/N **2305830**) 128 byte.

Ink Roll Assembly: Mdl 3 (P/N **432695**).

Ribbon: Mdl 1 (P/N **1136849**). One supplied with the controller.

5234 TIME ENTRY STATION

PURPOSE

The 5234 is an input device for the 5230 Data Collection System. The 5234 also attaches to Series/1 via RPQ DO2312, DO2313, or DO2314. Contact IBM for information concerning these RPQs.

MODELS

Model 1	001	With Hole Badge Reader
Model 2	002	With Magnetic Stripe Badge Reader

Limitations: Loop operations will not continue properly in the event of a 5234, 5235, or 5236 power off situation if the total resultant distance between operating units (5231, 5234, 5235, 5236) exceeds 690 meters (2,000 feet).

Prerequisites:

An available position on a loop multiplexer on the 5231 Controller.

The following items from the 5230 Data Collection System Accessory Package. See M5231 pages for details.

- Contacts Closure Accessory (B/M 4413082) required for Contacts Closure (#1480).
- Mounting Bracket (B/M 2461781).
- Station Connector (B/M 2461780).

Note: The 5230 Data Collection System Accessory Package items must have a scheduled ship date at least seven weeks prior to the ship date of the 5234 Time Entry Station. See the *5230 Data Collection System User's Guide* (GA34-0040) for the pre-installation schedule.

HIGHLIGHTS

The 5234 is industrially packaged and attaches to the 5231 Controller via a twisted pair shielded loop. Both mdls provide a 4-position continental time-of-day display. Additionally, a key-operated 3-position mode switch (supervisor, test, and normal mode) is provided. Two keys operate the mode switch, one for supervisor mode and a separate key for test mode.

Mdl 1 with Hole Badge Reader: Reads identification badges (22-column card sized) prepunched in IBM code with a maximum of 10 numeric digits. Badges with or without a pocket clip may be used. Size-compatible hole badges used with other IBM products are accepted by the 5234 if they meet other specifications for the 5234. Badges may be purchased from IBM. All badges used must meet the specifications for the 5234 Time Entry Station. See "Information Records" in the GI section.

Mdl 2 with Magnetic Stripe Badge Reader: Reads identification badges (22-column card sized) magnetically encoded with a maximum of 17 numeric digits. Badges with or without a pocket clip may be used. Size-compatible magnetic stripe badges used with other IBM products are accepted by the 5234. Badges may be purchased from IBM. All badges used must meet the specifications for the 5234 Time Entry Stations. See "Information Records" in the GI section.

Customer Responsibilities: Maintenance of the 5234 will take place at the 5231 Controller location or Series/1 location as appropriate. The dedicated maintenance port (first entry station position on the standard loop multiplexer) will be used for maintenance only.

For specific customer responsibilities, see "Customer Responsibilities" in the M5231 pages.

Note: The customer must sign the IBM Central Facility Maintenance Machine Amendment I (Z120-2476). For details, consult "Central Facility Maintenance" in the GI section.

Environment: The 5234 is designed to operate in an environment of 4-45 degrees Celsius (40-113 degrees Fahrenheit), 8-80% relative humidity, and a maximum wet bulb of 26.7 degrees Celsius (80 degrees Fahrenheit).

The 5230 system is designed to operate in offices or factories. This assumes a building which is not air conditioned, but with normal winter heat and normal ventilation. For further environmental information, see "Use of IBM Equipment in Industrial Environments" in the GI section. For questionable environments, contact Field Engineering for assistance in determining the environmental suitability for the 5234.

Publications: *5230 Data Collection System User's Guide* (GA34-0040).

SPECIFY

- Voltage (115V AC, 1-phase, 3-wire, 60 Hz, locking plug): Specify **#9880**.

SPECIAL FEATURES

Audible Indicator (#1470): Provides an audible indication to the operator at the successful completion of a badge read operation. **Field Installation:** Yes.

Contacts Closure (#1480): Provides the capability for the activation of customer-provided external devices. These devices, for example, may be audible alarms, visual indicators, or devices that provide limited access to restricted areas. Activation of the external contacts will occur on 5234 Time Entry Station successful badge read. This feature, which is in addition to the normal visual indicators, can be ordered instead of or in addition to the Audible Indicator (#1470). A set of DPDT contacts is available (two sets of contacts that can be used in either a normally open or normally closed mode). **Limitations:** Customer must provide power supply for driving external devices. Contact maximum rating is 28V AC/DC at 1.5 amperes. Contact activation time is 0.5 seconds minimum. **Field Installation:** Yes. **Prerequisites:** Contacts Closure Accessory (B/M 4413082). See M5231 pages. **Installation:** Refer to *5230 Data Collection System User's Guide* (GA34-0040). Installation of Contacts Closure Accessory is similar to installation of Station Connector assembly.

MODEL CONVERSIONS

All model changes are field installable.

ACCESSORIES

Cables: No cable order required for the 5234. Loop cable is required for the 5230 system. See M5231 pages for details and ordering information.

SUPPLIES

See "Supplies" in the M5231 pages.

5235 DATA ENTRY STATION

PURPOSE

The 5235 is an input device for the 5230 Data Collection System. The 5235 also attaches to Series/1 via RPQ DO2312, DO2313, or DO2314. Contact IBM for further information concerning these RPQs.

MODELS

Model 1 001

Limitations: Loop operations will not continue properly in the event of a 5234, 5235, or 5236 power off situation if the total resultant distance between operating units (5231, 5234, 5235, 5236) exceeds 609 meters (2,000 feet).

Prerequisites:

An available position on a loop multiplexer on the 5231 Controller.

The following items from the 5230 Data Collection System Accessory Package. See M5231 pages for details.

- Contacts Closure Accessory (B/M 4413082) required for Contacts Closure (#1480).
- Mounting Bracket (B/M 2461781).
- Station Connector (B/M 2461780).

Note: The 5230 Data Collection System Accessory Package items must have a scheduled ship date at least seven weeks prior to the ship date of the 5235 Data Entry Station. See the *5230 Data Collection System User's Guide* (GA34-0040) for the pre-installation schedule.

HIGHLIGHTS

The 5235 is industrially packaged and attaches to the 5231 Controller via a twisted-pair shielded loop.

The basic unit provides variable numeric data entry capability, customer-defined action keys, numeric display ability, continental time-of-day display, mode switch (key-operated), control keys, and status indicators.

Action Keys: Eight customer-defined keys used for individual action definitions.

Numeric Keyboard: Ten numeric keys arranged in a pattern similar to a telephone keypad.

Display: An 8-position display used for continental time-of-day, operator guidance, and display of key-entered data. Data entered through the Value Read Attachment (#3400) is also displayed.

Mode Switch (Key-Operated): A 3-position keylock (supervisor, test, and normal mode). One key is supplied for supervisor use and a second different key for test mode use.

Control Keys: The "Enter" (E) key is used to indicate completion of a field of keyed data. The "Clear" (C) key is used to delete a field of keyed data.

Status Indicators: These advise the operator that the station is ready, in process, or in an error condition.

Optional Features: Either an 80- or 96-column card reader may be attached as a feature. Either a punched hole or magnetic stripe badge reader may be attached as a feature. See "Special Features".

Customer Responsibilities: Maintenance of the 5235 will take place at the 5231 Controller loation or Series/1 location as appropriate. The dedicated maintenance port (first entry station position on the standard loop multiplexer) will be used for maintenance only.

For specific customer responsibilities, see "Customer Responsibilities" in the M5231 pages.

Note: The customer must sign the IBM Central Facility Maintenance Machine Amendment I (Z120-2476). For details, consult "Central Facility Maintenance" in the GI section.

Environment: The 5235 is designed to operate in an environment of 4-45 degrees Celsius (40-113 degrees Fahrenheit), 8-80% relative humidity, and a maximum wet bulb of 26.7 degrees Celsius (80 degrees Fahrenheit).

The 5230 system is designed to operate in offices or factories. This assumes a building which is not air conditioned, but with normal winter heat and normal ventilation. For further environmental information, see "Use of IBM Equipment in Industrial Environments" in the GI section. For questionable environments, contact Field Engineering for assistance in determining the environmental suitability for the 5235.

Publications: *5230 Data Collection System User's Guide* (GA34-0040).

SPECIFY

- Voltage (115V AC, 1-phase, 3-wire, 60 Hz, locking plug): Specify **#9880**.

SPECIAL FEATURES

Badge Reader - Punched Hole (#1401): Provides the ability to read identification badges (22-column card sized) pre-punched in IBM code with a maximum of 10 numeric digits. Badges with or without a pocket clip may be used. Size-compatible hole badges used with other IBM products are accepted by the 5235 if they meet other specifications for the 5235. Badges may be purchased from IBM. Badges must meet the specifications for the 5235 Data Entry Station. See "Information Records" in the GI section. **Limitations:** This feature is mutually exclusive on the same Data Entry Station with Badge Reader - Magnetic Stripe (#1402). **Field Installation:** Yes.

Badge Reader - Magnetic Stripe (#1402): Provides the ability to read identification badges (22-column card sized) magnetically encoded with a maximum of 17 numeric characters. Badges with or without a pocket clip may be used. Size-compatible magnetic badges used with other IBM products are accepted by the 5235. Badges may be purchased from IBM. Badges used must meet the specifications for the 5235 Data Entry Station. See "Information Records" in the GI section. **Limitations:** This feature is mutually exclusive on the same Data Entry Station with Badge Reader - Punched Hole (#1401). **Field Installation:** Yes.

Audible Indicator (#1470): Provides an audible indication to the operator at the successful completion of a badge read operation or upon completion of a transaction when the Transaction Indicator RPQ DO7009 is installed on the associated 5231. Either badge reader or RPQ DO7009 is required for this feature. **Field Installation:** Yes.

Contacts Closure (#1480): Provides the capability for the activation of customer-provided external devices. These devices, for example, may be audible alarms, visual indicators, or devices that provide limited access to restricted areas. Activation of the external contacts will occur on 5235 Data Entry Station successful badge read or upon completion of a transaction when the Transaction Indicator RPQ DO7009 is installed on the associated 5231. Either badge reader or RPQ DO7009 is required for this feature. This feature, which is in addition to the normal visual indicators, can be ordered instead of or in addition to the Audible Indicator (#1470). The customer may order spare Contacts Closure Accessory (B/M 4413082). A set of DPDT contacts is available (two sets of contacts that can be used in either a normally open or normally closed mode). **Limitations:** Customer must provide power supply for driving external devices. Contact maximum rating is 28V AC/DC at 1.5 amperes. Contact activation time is 0.5 seconds minimum. **Field Installation:** Yes. **Prerequisites:** Contacts Closure Accessory (B/M 4413082). See M5231 pages. **Installation:** Refer to *5230 Data Collection System User's Guide* (GA34-0040). Installation of Contacts Closure Accessory is similar to installation of Station Connector assembly.

Card Reader - 96-Column (#1510): Provides a single card reader capable of reading columns 1-32 of a 96-column card (first tier) at a rated speed of 30 columns per second. A 64-character set including blanks is recognized. All other EBCDIC characters will be accepted by the entry station and converted to blanks. Cards are inserted face up, column one edge first. Upper left and upper right corner cuts are permitted. External scores System/3-1 (bottom edge) and System/3-3 (column 32 edge) are permitted as well as left and right edge continuous forms scores. Standard DP-7 point, heavy duty card stock, DP-9 point, super stock, and merchandise tags with or without upper right score or hole may be used. **Limitations:** This feature is mutually exclusive on the same Data Entry Station with Card Reader - 80-Column (#1520). **Field Installation:** Yes.

Card Reader - 80-Column (#1520): Provides a single card reader capable of reading columns 1-64 of an 80-column card at a rated speed of 30 columns per second. A 64-character set including blanks is recognized. All other EBCDIC characters will be accepted by the entry station and converted to blanks. Upper left and upper right corner cuts (C1, C2, C3) are permitted. Cards are inserted face up, 80-column edge first. External scores (column 1 end only), M-3, M-4, M-5, M-6, M-7, OM-2, CF-4, and CF-11 are permitted. Internal scores may be M-3, M-4, and inverse M-5. Standard DP-7 point, heavy duty card stock, DP-9 point, super stock, and port-a-punch cards may be used. **Limitations:** This feature is mutually exclusive on the same Data Entry Station with Card Reader - 96-Column (#1510). **Field Installation:** Yes.

Value Read Attachment (#3400): Provides the capability to enter values from scales, counters, keyboards, switches, and other similar devices directly into the 5235 or 5236 Data Entry Station. Connection of the device to the Value Read Attachment is accomplished through the 5239 Value Read Module. The Value Read Attachment is mutually exclusive with the badge or card reader on the 5235 or 5236 Data Entry Station. **Note:** The user is responsible for setting up the 5239 and performing all connections to the value input device. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: No cable order required for the 5235. Loop cable is required for the 5230 system. See the M5231 pages for details and ordering

5235 Data Entry Station (cont'd)

information.

SUPPLIES

See "Supplies" in the M5231 pages.

5236 DATA ENTRY STATION

PURPOSE

The 5236 is an input device for the 5230 Data Collection System. The 5236 also attaches to Series/1 via RPQ DO2313 or DO2314. Contact IBM for further information concerning these RPQs.

MODELS

Model 1 001

Limitations: Loop operations will not continue properly in the event of a 5234, 5235, or 5236 power off situation if the total resultant distance between operating units (5231, 5234, 5235, 5236) exceeds 609 meters (2,000 feet).

Prerequisites:

An available position on a loop multiplexer on the 5231 Controller.

The following items from the 5230 Data Collection System Accessory Package. See M5231 pages for details.

- Contacts Closure Accessory (B/M 4413082) required for Contacts Closure (#1480).
- Station Connector (B/M 2461780).

Note: The 5230 Data Collection System Accessory Package items must have a scheduled ship date at least seven weeks prior to the ship date of the 5236 Data Entry Station. See the *5230 Data Collection System User's Guide* (GA34-0040) for the pre-installation schedule.

HIGHLIGHTS

The 5236 is packaged in an attractive desk-top configuration and attaches to the 5231 Controller via a twisted-pair shielded loop.

The basic unit provides variable numeric data entry capability, customer-defined action keys, numeric display ability, continental time-of-day display, mode switch (key-operated), control keys, and status indicators.

Action Keys: Eight customer-defined keys used for individual action definitions.

Numeric Keyboard: Ten numeric keys arranged in a pattern similar to a telephone keypad.

Display: An 8-position display used for continental time-of-day, operator guidance, and display of key-entered data. Data entered through the Value Read Attachment (#3400) is also displayed.

Mode Switch (Key-Operated): A 3-position keylock (supervisor, test, and normal mode). One key is supplied for supervisor use and a second different key for test mode use.

Control Keys: The "Enter" (E) key is used to indicate completion of a field of keyed data. The "Clear" (C) key is used to delete a field of keyed data.

Status Indicators: These advise the operator that the station is ready, in process, or in an error condition.

Optional Features: Either an 80- or 96-column card reader may be attached as a feature. Either a punched hole or magnetic stripe badge reader may be attached as a feature. See "Special Features".

Customer Responsibilities: Maintenance of the 5236 will take place at the 5231 Controller loation or Series/1 location as appropriate. The dedicated maintenance port (first entry station position on the standard loop multiplexer) will be used for maintenance only.

For specific customer responsibilities, see "Customer Responsibilities" in the M5231 pages. Note: The customer must sign the IBM Central Facility Maintenance Machine Amendment I (Z120-2476). For details, consult "Central Facility Maintenance" in the GI section.

Environment: The 5236 is designed to operate in an environment of 10-40 degrees Celsius (50-105 degrees Fahrenheit), 8-80% relative humidity, and a maximum wet bulb of 26.7 degrees Celsius (80 degrees Fahrenheit).

The 5230 system is designed to operate in offices or factories. This assumes a building which is not air conditioned, but with normal winter heat and normal ventilation. For further environmental information, see "Use of IBM Equipment in Industrial Environments" in the GI section. For questionable environments, contact Field Engineering for assistance in determining the environmental suitability for the 5236.

Publications: *5230 Data Collection System User's Guide* (GA34-0040).

SPECIFY

- Voltage (115V AC, 1-phase, 3-wire, 60 Hz, locking plug): Specify **#9880**.

SPECIAL FEATURES

Badge Reader - Punched Hole (#1401): Provides the ability to read identification badges (22-column card sized) pre-punched in IBM code with a maximum of 10 numeric digits. Badges with or without a pocket clip may be used. Size-compatible hole badges used with other IBM products are accepted by the 5236 if they meet other specifications for the 5236. Badges may be purchased from IBM. Badges must meet the specifications for the 5236 Data Entry Station. See "Information Records" in the GI section. **Limitations:** This feature is mutually exclusive on the same Data Entry Station with Badge Reader - Magnetic Stripe (#1402). **Field Installation:** Yes.

Badge Reader - Magnetic Stripe (#1402): Provides the ability to read identification badges (22-column card sized) magnetically encoded with a maximum of 17 numeric characters. Badges with or without a pocket clip may be used. Size-compatible magnetic badges used with other IBM products are accepted by the 5236. Badges may be purchased from IBM. Badges used must meet the specifications for the 5236 Data Entry Station. See "Information Records" in the GI section. **Limitations:** This feature is mutually exclusive on the same Data Entry Station with Badge Reader - Punched Hole (#1401). **Field Installation:** Yes.

Audible Indicator (#1470): Provides an audible indication to the operator at the successful completion of a badge read operation or upon completion of a transaction when the Transaction Indicator RPQ DO7009 is installed on the associated 5231. Either badge reader or RPQ DO7009 is required for this feature. **Field Installation:** Yes.

Contacts Closure (#1480): Provides the capability for the activation of customer-provided external devices. These devices, for example, may be audible alarms, visual indicators, or devices that provide limited access to restricted areas. Activation of the external contacts will occur on 5235 Data Entry Station successful badge read or upon completion of a transaction when the Transaction Indicator RPQ DO7009 is installed on the associated 5231. Either badge reader or RPQ DO7009 is required for this feature. This feature, which is in addition to the normal visual indicators, can be ordered instead of or in addition to the Audible Indicator (#1470). The customer may order spare Contacts Closure Accessory (B/M 4413082). A set of DPDT contacts is available (two sets of contacts that can be used in either a normally open or normally closed mode). **Limitations:** Customer must provide power supply for driving external devices. Contact maximum rating is 28V AC/DC at 1.5 amperes. Contact activation time is 0.5 seconds minimum. **Field Installation:** Yes. **Prerequisites:** Contacts Closure Accessory (B/M 4413082). See M5231 pages. **Installation:** Refer to *5230 Data Collection System User's Guide* (GA34-0040). Installation of Contacts Closure Accessory is similar to installation of Station Connector assembly.

Card Reader - 96-Column (#1510): Provides a single card reader capable of reading columns 1-32 of a 96-column card (first tier) at a rated speed of 30 columns per second. A 64-character set including blanks is recognized. All other EBCDIC characters will be accepted by the entry station and converted to blanks. Cards are inserted face up, column one edge first. Upper left and upper right corner cuts are permitted. External scores System/3-1 (bottom edge) and System/3-3 (column 32 edge) are permitted as well as left and right edge continuous forms scores. Standard DP-7 point, heavy duty card stock, DP-9 point, super stock, and merchandise tags with or without upper right score or hole may be used. **Limitations:** This feature is mutually exclusive on the same Data Entry Station with Card Reader - 80-Column (#1520). **Field Installation:** Yes.

Card Reader - 80-Column (#1520): Provides a single card reader capable of reading columns 1-64 of an 80-column card at a rated speed of 30 columns per second. A 64-character set including blanks is recognized. All other EBCDIC characters will be accepted by the entry station and converted to blanks. Upper left and upper right corner cuts (C1, C2, C3) are permitted. Cards are inserted face up, 80-column edge first. External scores (column 1 end only), M-3, M-4, M-5, M-6, M-7, OM-2, CF-4, and CF-11 are permitted. Internal scores may be M-3, M-4, and inverse M-5. Standard DP-7 point, heavy duty card stock, DP-9 point, super stock, and port-a-punch cards may be used. **Limitations:** This feature is mutually exclusive on the same Data Entry Station with Card Reader - 96-Column (#1510). **Field Installation:** Yes.

Value Read Attachment (#3400): Provides the capability to enter values from scales, counters, keyboards, switches, and other similar devices directly into the 5235 or 5236 Data Entry Station. Connection of the device to the Value Read Attachment is accomplished through the 5239 Value Read Module. The Value Read Attachment is mutually exclusive with the badge or card reader on the 5235 or 5236 Data Entry Station. Note: The user is responsible for setting up the 5239 and performing all connections to the value input device. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: No cable order required for the 5236. Loop cable is required for the 5230 system. See M5231 pages for details and ordering information.

SUPPLIES

See "Supplies" in the M5231 pages.

5239 VALUE READ MODULE

PURPOSE

The 5239 is an input device for the 5230 Data Collection System that provides an interface between external devices (such as scales, counters, keyboards, and switches) and the Value Read Attachment (#3400) of the 5235 and 5236 Data Entry Stations.

MODELS

Model 1 001

Prerequisites: Value Read Attachment (#3400) on a 5235 or 5236 Data Entry Station.

HIGHLIGHTS

The 5239 provides four selectable modes of operation from manual to automatic:

- Manual: Operator-controlled reading and entry. Keyboard or device input available.
- Protected: Keyboard locked during data reading. Operator-controlled reading and entry from device.
- Semi-Automatic: Reading of data is controlled from external device. Entry of data is performed by operator.
- Automatic: Reading and entry of data is controlled from external device. Permits unattended data collection of externally provided data.

Customer selection of reading mode for each terminal. Up to eight numeric digits can be entered from one or more devices.

Operates with either BCD/TTL parallel or one-of-ten dry contact external devices.

Customer Responsibilities: Maintenance of the 5239 will take place at the 5231 Controller location or Series/1 location as appropriate.

For specific customer responsibilities, see "Customer Responsibilities" in the M5231 pages.

Note: The customer must sign the IBM Central Facility Maintenance Machine Amendment I (Z120-2476). For details, consult "Central Facility Maintenance" in the GI section.

Environment: The 5239 is designed to operate in an environment of 4-45 degrees Celsius (40-113 degrees Fahrenheit), 8-80% relative humidity, and a maximum wet bulb of 26.7 degrees Celsius (80 degrees Fahrenheit).

The 5230 system is designed to operate in offices or factories. This assumes a building which is not air conditioned, but with normal winter heat and normal ventilation. For further environmental information, see "Use of IBM equipment in Industrial Environments" in the GI section. For questionable environments, contact Field Engineering for assistance in determining the environmental suitability for the 5239.

Publications: *5230 Data Collection System User's Guide* (GA34-0040).

SPECIFY

- Voltage (115V AC, 1-phase, 3-wire, 60 Hz, locking plug): Specify **#9880.**
- Color: Specify **#9065** for Pebble Gray if used with the 5235 Data Entry Station, or **#9066** for Pearl White if used with the 5236 Data Entry Station.
- Value Read: Specify **#9950** for BCD. Electronic device input provides for connection of BCD/TTL parallel external devices to the Value Read Attachment. Provides manual and automatic selectable modes of operation. **Prerequisites:** #3400 on the 5235 and 5236.

  Specify **#9951** for one-of-ten. Electromechanical device input provides for connection of one-of-ten or BCD dry contact external devices to the Value Read Attachment. Provides manual and automatic selectable modes of operation. **Prerequisites:** #3400 on the 5235 and 5236.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: No cable order required.

SUPPLIES (None)

5241 PRINTER

PURPOSE:

Serial impact matrix printer which provides hard copy output for the System/23 Datamaster (5322 or 5324).

MODELS:

Model 001 Speed, 80 cps Print Type, Matrix

Customer Setup (CSU): The printer is designated as Customer Setup. All features are CSU. Refer to the GI section for particulars. There is no setup publication shipped with the printer. That information is included in *Setting Up Your System/23* (SA34-0107) shipped with the 5322 or *System/23 Setup Instructions* (SA34-0186) shipped with the 5324. The CSU allowance is one day.

HIGHLIGHTS:

Prints bidirectionally. Horizontal character spacing is program-selectable, as follows:

Characters Per Inch	Maximum Characters Per Line
10	132
15	198

If no horizontal character spacing is specified, 10 characters per inch will be printed.

Matrix characters are formed by eight vertical wires printing dots in up to four of seven possible horizontal positions. The 5241 Printer can print any character (except 1/4, 1/2, or 3/4) that can be displayed on the 5322 or 5324. See *BASIC Language Reference* (SA34-0109) for details.

Vertical spacing is program-selectable in increments of 1/96 inches (.0104 inches). For a single program command, the vertical movement is eight increments minimum and 96 maximum. This permits line spacing from one line per inch to 12 lines per inch. The printer will default to six lines per inch if the user does not program-select a vertical line spacing. The lines per page parameter is also program-selectable, the default being 66 lines per page.

A forms tractor feed is standard. The left tractor feed guide can be operator-adjusted laterally over a 2.5 character distance to provide for character/form alignment. The right-hand tractor feed guide is fully adjustable for variable form widths.

The tractor feed mechanism and the Document Insertion Device feature mount simply and quickly. No cables or bolts need be attached since mere physical placement with a downward force of the tractor feed engages the necessary drive mechanism. See "Special Features" for more information on the Document Insertion Device (#3250).

The 5241 Printer is packaged in its own tabletop covers and measures 655mm x 420mm x 220mm (26 inches x 17 inches x 9 inches) and weighs 31kg (68 pounds). The standard forms tractor allows multi-part fan-folded paper. Overall forms width ranges from 76mm to 381mm (3 inches to 15 inches). Continuous forms fold-to-fold length may vary from 76mm to 355mm (3 inches to 14 inches). Up to four-part forms can be printed with a maximum thickness of .30mm (.012 inches). Forms less than 127mm (5 inches) in width should be tried for satisfactory feeding, registration, and print quality. Forms that exceed .30mm (.012 inches) thickness can create printer feeding, registration, and print quality problems. Card stock continuous forms are not recommended. Refer to *Form-Design Printers Reference Guide* (GA24-3488) for forms design considerations and limitations.

Customer Responsibilities: The marketing representative must advise the customers of their responsibilities before receipt of the machine. Refer to the GI section for particulars. The customer is responsible for providing a desk or tabletop to support the printer.

SPECIFY

- Voltage (120V AC, 1-phase, 60 Hz): With nonlocking plug. Standard power cord is 2.4 meters (8 feet).
- Color: Pearl White.
- Signal Cable (standard): One 6 meter (19.8 foot) cable is provided which is permanently attached. For a 1.8 meter (6 foot) cable, specify **#9987**.

SPECIAL FEATURES

Document Insertion Device (#3250): The Document Insertion Device allows operator insertion of single sheets or multiple copy forms (up to four-part sets) meeting the following criteria:

	Maximum	Minimum
Width	304.8mm (12 inches)	146mm (5.75 inches)
Length	355.6mm (14 inches)	76.2mm (3 inches)
Thickness:		
Single-Part	.13mm (.005 inches)	.08mm (.003 inches)
Four-Part	.30mm (.012 inches)	

The left-hand feed guide is adjustable horizontally, approximately one character width for alignment of preprinted forms. The right-hand feed guide is fully adjustable for variable form widths. For shipment to the field, order by feature number. **Field Installation:** Yes. **Customer Setup:** Yes.

Printer Switch And Cable Assembly (#5600): Provides a two-position manually operated switch and cables, which permits the connection of any 5241 Printer between any two 5322 or 5324 Computers.

The printer switch box clips to the printer and has two cables, 6 meters (19.8 feet) in length, that attach to the computers. For a 1.8 meter (6 foot) cable, specify **#9987**. The box is marked 1 and 2 and the switch is accessible at the recessed top. The box is 76.2mm x 101.6mm x 38.1mm (3 inches x 4 inches x 1.5 inches). For shipment to the field, order by feature number. **Field Installation:** Yes. **Customer Setup:** Yes.

MODEL CONVERSIONS: (None)

ACCESSORIES

Forms Stand (#4450): Permits feeding of continuous forms and provides for forms stacking after printing. This accessory is a one shelf forms stand. For shipment to the field, order by feature number.

SUPPLIES:

Ribbons: A cartridge ribbon, P/N 7034535 or equivalent, is required. One cartridge is supplied with the printer.

5242 PRINTER

PURPOSE

Serial impact matrix printer which provides hard copy output for the System/23 Datamaster (5322 or 5324) and the 5280 Distributed Data System.

MODELS

Model 002	Speed, 40 cps	Print Type, High-Density Matrix
	or	
	Speed, 160 cps	Print Type, Matrix

Customer Setup (CSU): The printer is designated as Customer Setup. All features are CSU. Refer to the GI section for particulars. For the System/23, no setup publication is shipped with the printer. That information is included in *Setting Up Your System/23* (SA34-0107) shipped with the 5322, or *System/23 Setup Instructions* (SA34-0186) with the 5324. For the 5280, *IBM 5280-5242 Printer Unpacking and Setup* (GA23-1022) is shipped with the 5242. The CSU allowance is one day (two days when installed concurrently with a 5280).

HIGHLIGHTS

Prints bidirectionally. Horizontal character spacing is program-selectable, as follows:

Characters Per Inch	Maximum Characters Per Line
10	132
15	198

If no horizontal character spacing is specified, 10 characters per inch will be printed. Horizontal spacing using the mdl 2 in high-density mode is 10 characters per inch only.

Matrix characters are formed by eight vertical wires printing dots in up to four of seven possible horizontal positions. When the printer is used to create higher quality impact printing, both the columns and rows have the intra-character spaces filled in with dots. The 5242 Printer can print any character that can be displayed on the 5322 or 5324. See *BASIC Language Reference* (SA34-0109) for details.

Vertical spacing is program-selectable in increments of 1/96 inches (0.0104 inches). For a single program command, the vertical movement is eight increments minimum and 96 maximum. This permits line spacing from one line per inch to 12 lines per inch. The printer will default to six lines per inch if the user does not program-select a vertical line spacing. The lines per page parameter is also program-selectable.

A forms tractor is standard. The left tractor feed guide can be operator-adjusted over a 2.5 character distance to provide for character/form alignment. The right-hand tractor feed guide is fully adjustable for variable form widths.

The tractor feed mechanism and the Document Insertion Device mount simply and quickly. No cables or bolts need be attached since mere physical placement with a downward force of the tractor feed engages the necessary drive mechanism. See "Special Features" for more details on the Document Insertion Device (#3250).

A horizontal vernier adjustment knob is standard permitting centering within a one character width.

Offers the ability to create high-density, high-quality matrix impact printing on cut forms through a second head pass over the same printed line. High-density printing is invoked by a program command (Set Font command) and will operate at 40 cps with a character spacing of 10 characters per inch.

Note: High-density print is specified to provide high-quality print with platen-fed cut forms such as typing paper. Tractor-fed continuous forms may not provide the same quality print and should be tested for satisfactory registration.

The 5242 is a table-top printer 655mm x 420mm x 220mm (26 inches x 17 inches x 9 inches) and weighs 35kg (77 pounds). The standard forms tractor allows multi-part fan-folded paper. Overall forms width ranges from 76mm to 381mm (3 inches to 15 inches). Continuous forms fold-to-fold length may vary from 76mm to 355mm (3 inches to 14 inches). Up to 4-part forms can be printed with a maximum thickness of 0.30mm (0.012 inches). Forms less than 127mm (5 inches) in width should be tried for satisfactory feeding, registration, and print quality. Forms that exceed 0.30mm (0.012 inches) thickness can create printer feeding, registration, and print quality problems. Card stock continuous forms are not recommended. Refer to *Form-Design Printers Reference Guide* (GA24-3488) for forms design considerations and limitations.

Customer Responsibilities: The marketing representative must advise the customers of their responsibilities before receipt of the machine. Refer to the GI section for particulars. The customer is responsible for providing a desk or tabletop to support the printer.

SPECIFY

- Voltage (120V AC, 1-phase, 60 Hz): With nonlocking plug. Standard power cord is 2.4 meters (8 feet).
- Color: Pearl White.
- Signal Cable (standard): For System/23, one 6 meter (19.8 foot) cable is provided which is permanently attached. For a 1.8 meter (6 foot) cable, specify **#9987**. For 5280, **#9050** *must* be specified for a 6 meter (19.8 foot) permanently attached signal cable.

SPECIAL FEATURES

Document Insertion Device (#3250): The Document Insertion Device allows operator insertion of single sheets or multiple copy forms (up to 4-part sets) meeting the following size criteria:

	Maximum	Minimum
Width	304.8mm (12 inches)	146.mm (5.75 inches)
Length	355.6mm (14 inches)	76.2mm (3 inches)
Thickness:		
Single-Part	0.13mm (0.005 inches)	0.08mm (0.003 inches)
Four-Part	0.30mm (0.012 inches)	

The left-hand feed guide is adjustable horizontally, approximately one character width for alignment of preprinted forms. For shipment to the field, order by feature number. **Field Installation:** Yes. **Customer Setup:** Yes.

Printer Switch And Cable Assembly (#5600): Provides a 2-position manually operated switch and cables, which permit the connection of any 5242 Printer between any two 5322 or 5324 Computers.

The printer switch box clips to the printer and has two cables, 6 meters (19.8 feet) in length, that attach to the 5322 or 5324 Computers. For a 1.8 meter (6 foot) cable, specify **#9987**. The box is marked 1 and 2 and the switch is accessible at the recessed top. The box is 76.2mm x 101.6mm x 38.1m (3 inches x 4 inches x 1.5 inches). For shipment to the field, order by feature number. **Limitations:** Cannot be installed on a 5242 that is attached to a 5280 system. **Field Installation:** Yes. **Customer Setup:** Yes.

MODEL CONVERSIONS

Model upgrade is permitted and field installable.

ACCESSORIES

Forms Stand (#4450): Permits feeding of continuous forms and provides for forms stacking after printing. This accessory is a one shelf forms stand. For shipment to the field, order by feature number.

SUPPLIES

Ribbons: A cartridge ribbon, P/N 7032550, is available from IBM. P/N 7032550 or equivalent, is required. One cartridge is supplied with the printer.

5246 DISKETTE UNIT

[NO LONGER AVAILABLE]

PURPOSE

Provides additional diskette storage for the System/23 Datamaster (5322 or 5324).

MODELS

Model	Drives	Capacity	Function
011	1	1.1MB	Dedicated
012	2	2.2MB	Dedicated
021	1	1.1MB	Shared
022	2	2.2MB	Shared

Customer Setup (CSU): The 5246 is designated as Customer Setup. There is no setup publication shipped with the Diskette Unit. That information is included in *Setting Up Your System/23* (SA34-0107) shipped with the 5322 Computer, or *System/23 Setup Instructions* (SA34-0186) shipped with the 5324. The CSU allowance is one day.

Prerequisites: The 5322 or 5324 Computer(s) which will utilize the 5246 Diskette Unit must have 5246 Diskette Unit Controller (#3775) or Extended 5246 Controller (RPQ 8N5008) installed.

HIGHLIGHTS

- One or two diskette drives, up to 2.2MB total storage capacity.
- Either attached and dedicated to a single 5322 or 5324 Computer or shared between two computers under program control at either or both workstations.
- Direct access capability.
- Media exchange capability with other diskette devices that conform to basic interchange conventions.
- Self-contained tabletop unit.

Housed in its own covers, the 5246 measures 300mm x 330mm x 390mm (12 inches x 13 inches x 15 inches) and weighs 25kg (56 pounds).

Diskettes: The 5246 Diskette Units can read/write Diskette 1, 2, and 2D. The possible formats for the diskettes are shown below. The System/23 uses the 512 byte format; however, other formats may be selected for data interchange purposes.

Diskette 1

Format	Bytes/Sector	Capacity
1	128	243KB *
2	512	303KB

Diskette 2

3	128	486KB *
4	512	606KB

Diskette 2D

5	256	985KB
6	512	1136KB

* Basic Exchange format

For diskette data exchange with other systems, the following exchange types are supported: Basic Exchange (Formats 1 and 3 above) and H Exchange (Format 5 above). Diskettes can be interchanged with other IBM systems and devices which support a compatible diskette exchange type. Examples are the System/3, System/32, System/34, System/38, Series/1, S/370, 303X, 3540, 3740, 3747, 3790, 4300, 5110, 5120, 5230, 5260, and 8100.

The instantaneous data transfer rate using Diskette 1 or 2 is 31.2K bytes/second; for Diskette 2D, 62.5K bytes/second. Rotational speed of both types of drives is 360 rpm.

For further information on System/23 diskette operations, see *System/23 Customer Support Functions, Volume I* (SA34-0175).

File Sharing: The presence of two users is managed in such a way as to retain maximum usability of the system while still maintaining the integrity of shared data files. Applications written for a single 5322 or 5324 Computer can be shared in a dual configuration with no changes to the program. Transparent data file sharing between dual workstations is managed in the Read Only Storage (ROS) of each computer. Application transparency will also allow programs written for a dual system to operate on a single 5322 or 5324 with no modification required. The matrix for file sharing for files opened without prohibiting sharing is shown below.

		Data File Currently Open to: Read	or	Read/Write
Request to Open a Data File and:	Read	Yes		Yes
	Read/Write	Yes		No

See *System/23 Operator Reference* (SA34-0108) or *Learning System/23 BASIC* (SA34-0121 to SA34-0127) for further detail.

Customer Responsibilities: The marketing representative must advise customers of their responsibilities before receipt of the machine. Refer to the GI section for particulars.

SPECIFY

- Voltage (120V AC, 1-phase, 60 Hz): With nonlocking plug. Standard power cord is 2.4 meters (8 feet).
- Signal Cable (standard): Mdls 11 and 12 - one 4 meter (13 foot) cable is provided. Mdls 21 and 22 - two 4 meter (13 foot) cables are provided. For 1.8 meter (6 foot) cables for mdls 11, 12, 21, and 22, specify **#9987**.

SPECIAL FEATURES (None)

MODEL CONVERSIONS

Model upgrades are permitted and are field installable.

The upgrade purchase price for model conversion may be greater than the base machine purchase price differentials. Customers should carefully evaluate their requirements prior to purchasing a system.

Replaced parts from any model conversion become the property of IBM.

ACCESSORIES

Diskettes: Diskettes for the 5246 Diskette Unit are available from the Branch Office. See *Customer Support Functions, Volume I* (SA34-0175) to determine diskette type (1, 2, or 2D) required.

SUPPLIES (None)

RPQs

Extended Distance: [Mdls 21 or 22]

8N5009 - Plant Installation
8N5023 - Field Installation

This RPQ permits one of the 5322 or 5324 Computers in a multiple configuration to be located at a distance up to 60 meters (200 feet) from 5246 mdls 21 or 22. Individual IBM-supplied extension cables are available (see below). **Maximum:** One. **Field Installation:** Yes (**RPQ 8N5023**). **Prerequisites:** Extended 5246 Controller (**RPQ 8N5008**) required on the 5322 or 5324.

Individual IBM-supplied extension cables are:

RPQ	Name
SW2901	Extended Cable 15 meters (50 feet)
SW2902	Extended Cable 30 meters (100 feet)
SW2903	Extended Cable 60 meters (200 feet)

The 5246 is designated as Customer Setup; therefore, all cable installation and routing is the responsibility of the customer.

5247 DISK STORAGE UNIT

PURPOSE

Provides a high performance, shareable, fixed disk storage facility for the 5322 or 5324 Computer Processor Units.

MODELS

Model 11 011 15.4MB capacity.

Model 12 012 30.8MB capacity.

Prerequisite: Each 5322 or 5324 Computer which will utilize the 5247 Disk Storage Unit must have a 5247 Disk Unit Adapter (#3770) installed. The Computer attached to the standard 4 meter signal cable must have a diskette capability.

Standard Feature: The standard 5247, Model 11 and 12, may attach one or two 5322 or 5324 Computers. If you wish more than two computers to be attached, see "Special Features" below.

HIGHLIGHTS

- Compact, self-powered, floor-standing unit designed to operate in normal office environments.
- Average access time of 40ms.
- May be shared by up to four 5322 or 5324 Computers -- three may be up to 300m (1,000 feet) distant. One computer must be adjacent to the 5247 for servicing use.
- High-speed serial data link attachment.
- Transparent data file sharing managed by micro-processor control logic.
- File format compatibility with System/23 diskettes provides application flexibility.

Logical Organization:

Block Size -- 512 bytes

Number of Blocks -- Mdl 11 - 30,123

Number of Blocks -- Mdl 12 - 60,247

The first 2,040 blocks of the disk are reserved for system use, diagnostics, and Customer Support Functions.

File Sharing: The presence of multiple users is managed in a way to retain maximum usability of the system and still maintain the integrity of shared data files. Specification of the degree of file sharing is under control of the application program. Applications written for a single System/23 Computer can be shared in a multiple computer configuration with no changes to the program. For more detailed information on the file sharing capabilities of the 5247, see *Using Your 5247 Disk,* (SA34-0188). This publication is shipped with each 5247 Disk Unit Adapter (#3770) ordered for a 5322 or 5324 Computer.

Customer Setup (CSU): The 5247 is designated as customer setup. The marketing representative must advise the customer of their responsibilities before receipt of the machine. *5247 Customer Setup Instructions* (SA34-0187) are shipped with the machine.

CSU allowance is one day.

Physical Planning Information: Dimensions -- 660mm (26 in) H x 310mm (12 in) W x 493mm (20 in) D; Weight -- 47 kg (105 lb); Maximum KVA -- .3; Heat Output -- 1,025 BTU/Hour. Service clearances required -- 610mm (24 in) front and rear; 150mm (6 in) on both sides.

AAS Ordering Instructions: The 5247 is a Systems Component.

SPECIFY

- Voltage (120V AC, 1-phase, 60 Hz): Nonlock plug. Standard power cord is 2.4m (8 feet). Specify **#9986** for 1.8m (6 foot) power cord.
- Signal cable (standard) -- one 4m (13 foot) cable is provided. Specify **#9987** for 1.8m (6 foot) signal cable.
- Additional signal cables must be ordered if more than one Datamaster is to be attached to the 5247. See Cable Assemblies below.

SPECIAL FEATURES

Adapter Expansion (#3700): Provides the capability to attach a third and fourth 5322 or 5324 computer to the 5247. **Prerequisites:** Each 5322 or 5324 to be attached must have a 5247 Disk Unit Adapter (#3770) installed. Signal cables must be ordered for each 5322 or 5324 to be attached; see "Cable Assemblies" below. **Limitations:** One per 5247. **Field Installation:** Yes.

Cable Assemblies: One of the following cable assemblies is required for each 5322 or 5324 computer, after the first, to be attached to a 5247 Disk Storage Unit:

Feature Code	Cable Length
#3710	4m(13 feet)
#3715	15m (50 feet)
#3720	30m (100 feet)
#3725	150m (500 feet)
#3730	300m (1000 feet)

The 5247 is designated as customer setup; therefore all cable installation and routing is the responsibility of the customer. See *5247 Customer Setup Instructions* (SA34-0187) for cable connection instructions and procedures. These cables are designed only for use inside a building or structure and are not to be used in an exterior environment.

TERMS and CONDITIONS

Machine Group: D
Warranty: B
Per Call: 2
Educational Allowance: Yes
Customer Set-up: Yes
Pre-Installation Test Allowance: None
Volume Purchase Plan: Available
Pilot Test Plan: Available

Installation License: All IBM Licensed Programs for System/23 are determined as "Installation License" as specified in the Agreement for IBM Licensed Programs.

All System/23 computers (types 5322 and 5324) which are cable-connected to one 5247 in one customer location can share one Licensed Program for which a single installation license has been obtained.

One 5322 or 5324 must be designated as the machine to which the Licensed Program is assigned.

MODEL CONVERSIONS

Model upgrades are permitted. All model upgrades and features are field installable by Field Engineering.

The upgrade purchase price for model changes may be greater than the base machine purchase price differentials. Customers should carefully evaluate their requirements prior to purchasing a model that may require an upgrade.

Removed parts from any model upgrade become the property of IBM.

5251 DISPLAY STATION

PURPOSE

The 5251 is an advanced function display station for Series/1, System/34, System/36, and System/38 for entering, editing, and displaying alphameric data. A movable keyboard permits the operator to display, enter, and manipulate data on the screen in a highly flexible and efficient manner.

MODELS

Model 1 001 [NO LONGER AVAILABLE.] For special features, see below. Displays up to 960 characters with 12 lines of 80 characters each. Attaches to the 5251 models 2 or 12, 5340, 5381, or Series/1. Used as the system console with System/34.

Model 2 002 [NO LONGER AVAILABLE.] For special features, see below. Displays up to 960 characters with 12 lines of 80 characters each. Provides communication capability with System/34 and System/38 in SNA/SDLC mode. Optional features allow up to eight additional workstations.

Model 11 011 Displays up to 1,920 characters with 24 lines of 80 characters each. Attaches to the 5251 models 2 or 12, 5340, 5360, 5381, or Series/1. Used as the system console with System/34, and System/36. See model 999.

Model 12 012 Displays up to 1,920 characters with 24 lines of 80 characters each. Provides communication capability with System/34, System/36, and System/38 in SNA/SDLC mode. Optional features allow up to eight workstations to be attached.

Model 999 999 Available for ease of order entry. Identical functions to model 11. Includes as standard the following:

Specify **#9881** - Nonlocking line cord plug
Feature #4600 - Typewriter-style keyboard
Feature #2680 - Cable-Thru

No other specify or features are available on the model 999.

Prerequisites: For mdls 1 and 11: A 5251 mdl 2 or 12 with Cluster feature (#2550) or Dual Cluster feature (#2551), a 5340, 5360, 5381, or Series/1 with 5250 Information Display System Attachment feature (#1210).

For mdl 2: Transmission via common carrier facility to a 5340 or 5381 with a communications adapter, requires a modem or a DDS Adapter. See "Special Features" for communications adapters.

For mdl 12: Transmission via common carrier facility to a 5340, 5360, or 5381 with a communications adapter, requires a modem or a DDS Adapter. See "Special Features" for communications adapters.

Customer Setup (CSU): The 5251 is designated as a Customer Setup device, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, refer to the GI section. The IBM Marketing Representative must advise customers of their responsibilities before receipt of the machine. The CSU allowance is one day. Special features are not CSU.

HIGHLIGHTS

The standard character set includes 96 8x16 dot matrix characters including: 52 upper/lower case alphabetic, 10 numeric, and 34 special characters in addition to the space character. A 188-character Multinational Character Set (see "Special Features") is available, providing 112 alphabetic, 10 numeric, and 66 special displayable characters in addition to the space. See "Type Catalog" for character set and keyboard layout. Display functions in addition to normal intensity are high intensity, non-display, blink, underscore, column separator, and reverse image (dark characters on a light background) on a field basis. The operator can also reverse the image of the entire screen. An audible alarm, under program control, is provided to alert the operator to special conditions. The keyboard with 24 application-assigned command functions provides input and control flexibility. See "Special Features".

Security Enhancements: Data fields may be defined so data entered is accepted without being displayed on the screen. A Keylock (#4655) prevents operator usage of the display and keyboard when the key is in the locked position. The display is blanked and keyboard data entry is inhibited when the Keylock is locked. A Magnetic Stripe Reader (#4910) is available for entering user identification.

Field Editing: Individual data input fields may be edited as Alphameric, Alpha Only, Signed Numeric, Field Exit Required, Right Adjust, Mandatory Entry, Mandatory Fill, Bypass, Auto Enter, Dup Enable, Monocase, and Self-Check Modulus 10 and 11 (Self-Check is optional on the 5251 mdls 2 and 12).

Cabling: The cable attachments between 5250 Display System components and/or systems must be made with twinaxial cable. Maximum length of any one twinaxial cable is 1,525 meters (5,000 feet). Up to seven workstations may be attached to a twinaxial cable via a Cable-Thru feature (#2680) on each workstation.

See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

Clustering: Additional workstations may be attached to the 5251 mdl 2 or 12 with the Cluster (#2550) or the Dual Cluster (#2551) feature. The Cluster feature allows attachment of up to four workstations and the Dual Cluster feature allows attachment of up to eight workstations. See "Special Features".

Communications: The 5251 mdls 2 and 12 communicate with a System/34 or a System/38 equipped with compatible communications adapters operating in SDLC mode only. The 5251 mdl 12 can also communicate with System/36 equipped with a compatible communications adpter operating in SDLC mode. The mdls 2 and 12 communicate in half-duplex mode on nonswitched (leased) point-to-point and multipoint communication lines which may be duplex or half-duplex facilities (depending upon communication feature selected) at speeds up to 9600 bps, and on switched (dial) point-to-point communication lines at speeds up to 4800 bps. See M2700 pages for information on communications facilities. **Limitations:** The mdls 2 and 12 are not supported on the Series/1. Mdl 2 is not supported on System/36. A 1200 bps Integrated Modem (#5500, #5502), 2400 bps Integrated Modem (#5640, #5641), 4800 bps Integrated Modem (#5740, #5741), DDS Adapter (#5650, #5651), or Interface (#3701) is required. See "Specify" and "Special Features" for the required communication cable.

IBM Modems: One IBM modem may be attached to a 5251 mdl 2 or 12.

Modem	Speed (bps)
3863	2400
3868 mdl 1	2400
3872	2400/1200
3864	4800
3868 mdl 2	4800
3865	9600
3868 mdl 3/4	9600

Note: 5251 mdls 2 and 12 do not support Auto-Call Originate (#1091) on the 3872. For communications capabilities, product utilization, and special features, see M2700, 3863, 3864, 3865, and 3872 pages.

Prerequisites: EIA Interface (#3701).

IBM Data Encryption Devices: A 3845 or 3846 Data Encryption Device may be attached between the 5251 mdl 2 or 12 and the external modem.

Note: Refer to M2700, 3845, and 3846 pages for information on 3845 or 3846 configuration and communications capability. 3845 or 3846 devices operating with SDLC protocol will not operate with NRZI transmission mode.

Prerequisites: EIA Interface (#3701).

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided in the *IBM 5251 Operator's Guide* (GA21-9248). Also, see "Customer Responsibilities".

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking and placement of the 5251.
- Physical setup, connection of cables to TP lines/modems and IBM devices incorporating protected access areas, switch setting, and checkout in accordance with instructions supplied by IBM. Under certain conditions, when using integrated modems, an IBM CE may be required. Details of these conditions are described in the Customer Setup instructions.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5251.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packaging materials (if required) will be ordered by the branch office.
- Relocation of the 5251, if required, to allow IBM service access.
- Using and following the problem determination procedures for the 5251 prior to calling for IBM service.
- Providing a desk or tabletop to support the 5251.
- Installation and maintenance of signal cables and associated parts for attaching the 5251 mdl 1 or 11 to the 5251 mdl 2 or 12, 5340, 5381, or Series/1.

5251 Display Station (cont'd)

- The installation and maintenance of common carrier facilities/services. For further information, see M2700 pages and "Teleprocessing Systems" in the GI section.
- Obtaining a firm installation date for the start of transmission services (including any required modems). The IBM Marketing Representative must assure that a firm installation date is established prior to Order Confirmation.
- When adding additional display stations to Series/1, System/34, or System/38, the customer may have to modify the system configuration specifications. See *IBM System/34 Program Product Installation and Modification Reference Manual* (SC21-7689), *IBM System/38 Guide to Program Product Installation and Device Configuration* (GC21-7775), or *IBM Series/1 5250 Information Display System Attachment Feature Initialization and Configuration Operator's Guide* (GA34-0098).

Publications: *IBM 5250 Information Display System Introduction Manual* (GA21-9246) and *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9881** for a standard nonlocking plug (uses customer standard type receptacle) or **#9880** for a locking plug (requires customer locking type receptacle). **#9881** will be supplied on the mdl 999.
- Color: Pearl White only (no specify required).
- Keyboard: A keyboard must be selected (see "Special Features").
- Cables: See "Accessories" for 5251 mdls 1 and 11 cable ordering instructions. For cable specifications, see the *5250 Information Display System Planning and Site Preparation Guide* (GA21-9337).
- Power Cord: The standard power cord is 2.4 meters (8 feet) and no specify is required.
- Communication Cable (mdls 2 and 12 only): A 6 meter (20 foot) communication cable is provided as standard for attachment to an external modem, DDSA, or to a communication facility when an integrated modem is used. If a 12 meter (40 foot) cable is desired, specify **#9461**. (**#9461** is not available with #5641 or #5741.)
- DDSA (#5650, #5651) Transmission Speed: **#9822** for 2400 bps, **#9823** for 4800 bps, or **#9825** for 9600 bps.
- Default Order Entry: A default order entry procedure is available. Mdl 999 may be ordered in lieu of a mdl 11 and will automatically include a nonlocking line cord plug (**#9881**), a typewriter-style Keyboard (#4600), and Cable-Thru (#2680). No other specify nor special features may be ordered for a mdl 999. If a different configuration is desired, it must be ordered as a mdl 11 with the desired specify and special features.

  Field installation or removal of any specify or special feature on mdl 999 can be accomplished only as follows:

SPECIAL FEATURES

Cluster (#2550): Allows attachment of up to four workstations (5219, 5224, 5225, 5251 mdls 1 or 11, 5252, 5256, 5291, or 5292). Provides four cable connections. The maximum allowable length of each twinaxial cable is 1,525 meters (5,000 feet). To attach multiple workstations (up to four) to one twinaxial cable, see Cable-Thru feature (#2680) for the 5225, 5251 mdls 1 and 11, 5252, and 5256. **Limitations:** Available for mdls 2 and 12 only. Cannot be installed with Dual Cluster feature (#2551). A 5252 represents two workstations. **Maximum:** One. **Field Installation:** Yes.

Dual Cluster (#2551): Allows attachment of up to eight workstations (5219s, 5224s, 5225s, 5251 mdls 1 or 11, 5252s, 5256s, 5291s, and 5292s). Two sets of four cable connectors are provided and up to four workstations may be attached to each set. The maximum allowable length of each twinaxial cable is 1,525 meters (5,000 feet). To attach multiple workstations (up to four) to one twinaxial cable, see Cable-Thru feature (#2680) for the 5225s, 5251 mdls 1 and 11, 5252s, and 5256s. **Limitations:** Available for mdls 2 and 12 only. Cannot be installed with Cluster feature (#2550). A 5252 represents two workstations. **Maximum:** One. **Field Installation:** Yes.

Cable-Thru (#2680): Provides the capability of connecting multiple 5219s, 5224s, 5225s, 5251 mdls 1 and 11, 5252s, and 5256s to a single twinaxial cable. Each unit on the cable, except the last, requires this feature. **Notes:** For relocation flexibility, the customer should have Cable-Thru on all workstations. #2680 will be supplied as standard on mdl 999. **Limitations:** Available for mdls 1, 11, and 999 only. **Maximum:** One. **Field Installation:** Yes.

Expanded Function (#3600): Copy provides for the direct transfer and printing of a screen image from the 5251 mdl 2 or 12 or an attached 5251 mdl 1 or 11, 5252, 5291, or 5292 to a printer attached to the 5251 mdl 2 or 12. The selection and allocation of the printer is controlled by the system program. Not supported by System/34 or System/36.

Magnetic Stripe Reader Control provides control for Magnetic Stripe Readers feature (#4910) on the 5251 mdls 2 or 12 and on attached 5251 mdls 1 and 11 and 5252s.

Selector Light-Pen Control provides control for Selector Light-Pen feature (#6300) on the 5251 mdl 2 or 12 and on attached 5251 mdls 1 and 11. Not supported by System/34 or System/36.

Self-Check Number provides Modulus 10 and 11 checking to assure that all digits of a number have been correctly keyed from the 5251 mdl 2 or 12 keyboard or the attached 5251 mdl 1 or 11, 5252, 5291, or 5292 keyboards.

Limitations: Available for mdls 2 and 12 only. **Maximum:** One. **Field Installation:** Yes.

EIA Interface (#3701): Provides an interface for attachment of an IBM modem or non-IBM modem meeting RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Available for mdls 2 and 12 only. Cannot be installed with DDS Adapter (#5650, #5651), 1200 bps Integrated Modem (#5500, #5502), 2400 bps Integrated Modem (#5640, #5641), or 4800 bps Integrated Modem (#5740, #5741). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Specify **#9492**(Comm. Line Switch) when external modem has SNBU capability. **Notes:** **#9492** is not required if external modem is a 3863, 3864, or 3865. Internal Clock (#4703) is also required when the external modem does not provide its own clocking.

Keyboard (#4600, #4601, #4602): One of the following must be selected:

#4600 - An 83-key keyboard with the EBCDIC character set, typewriter-like layout, movable, with 49 alphameric keys, 24 control keys, and 10-key numeric pad. **Note:** #4600 will be supplied as standard on mdl 999.

#4601 - A 66-key data entry style keyboard, movable, with 36 alphameric keys, 23 control keys, and seven blank keys.

#4602 - A 66-key data entry style keyboard with proof arrangement, movable, with 36 alphameric keys, 23 control keys, and seven blank keys. The numeric keys are arranged similarly to those of an adding machine.

Limitations: #4601 and #4602 are not supported when 5251 is directly or remotely attached to the 5340, 5360, or Series/1, and are not available for mdl 999. **Maximum:** One of the above. **Field Installation:** Yes.

Keylock (#4655): Provides a lock and two keys, which prevents operator entry and display of data when in a locked position. **Limitations:** Not available for mdl 999. **Maximum:** One. **Field Installation:** Yes.

Internal Clock (#4703): Generates synchronizing and timing signals at 600 bps or 1200 bps when they are not provided by the modem.

Contact IBM for determination of this feature's requirement with planned modems. **Limitations:** Available for mdls 2 and 12 only. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3701, #5500, or #5502.

Multinational Character Set (#4905): Provides the capability of displaying the 188-character Multinational Character Set to facilitate the interchange of information between systems with different language groups. **Limitations:** The keyboards do not include the additional characters of the Multinational Character Set. All characters may be entered via a single or multiple key sequence. Not available for mdl 999. **Maximum:** One. **Field Installation:** Not recommended. **Prerequisites:** #4905 on the 5340 or 5360. All workstations attached to the System/34, System/36, and 5251 mdl 2 or 12 must have the same character set. All workstations attached to the same Series/1 5250 Information Display System Attachment must have the same character set. However, multiple attachments may be configured differently.

Magnetic Stripe Reader (#4910): Provides the capability of reading numeric encoded information from a magnetic stripe on a wide range of credit cards, identification cards, and documents. The magnetic stripe may be encoded with up to 128 ABA numeric characters, including control characters. This feature enhances system data security by providing the ability to read an operator identification card without being displayed. See "Supplies" for magnetically striped and encoded identification cards. **Limitations:** Not available for mdl 999. Valid for numeric-only data and single data fields. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3600 on 5251 mdls 2 and 12 or #4900 on the 5340 and 5360 when displays are directly attached.

1200 bps Integrated Modem (#5500, #5502): A modem for operating at 1200 bps over a nonswitched or switched network. Available in two versions: #5500 - nonswitched, and #5502 - switched with manual answer. Attachment to the nonswitched (4-wire only) facilities is via an IBM-provided cable directly to the line, type 3002. Attachment to the switched network is via an IBM-provided cable to FCC-registered protective circuitry of the CDT type (or equivalent) provided by the user.

5251 Display Station (cont'd)

The system communicating with the 5251 must also be equipped with a 1200 bps Integrated Modem. **Limitations:** Available for mdls 2 and 12 only. Cannot be installed with Interface (#3701), 2400 bps Integrated Modem (#5640, #5641), DDS Adapter (#5650, #5651), or 4800 bps Integrated Modem (#5740, #5741). #5500 and #5502 cannot be installed together. **Note:** 5251s with a #5500 or #5502 cannot be field upgraded to a 2400 bps Integrated Modem (#5640, #5641) or a 4800 bps Integrated Modem (#5740, #5741). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4703.

2400 bps Integrated Modem (#5640, #5641): A self-clocked integrated modem that operates in half-duplex mode at speeds of 2400/1200 bps. Speed selection is under host control. Equalization is automatic and continuously performed. Available in two versions: #5640 - nonswitched, operates over 4-wire nonswitched communication facilities in point-to-point or multipoint mode, and #5641 - switched, operates over 2-wire switched communication facilities. Manual originate and auto-answer procedures are used to establish connections. The protective coupler required for FCC registration (required for direct connection to the Public Switched Network) is included with this feature. (Conditional upon FCC approval and registration.) The system communicating with the 5251 must also be equipped with a compatible 2400 bps Integrated Modem, a 3863 or a 3868 mdl 1 modem. **Limitations:** Available for mdls 2 and 12 only. Not compatible with Integrated Modems (#5600, #5601, #5602, #5610, #6600, #6601, #6602, or #6610) on the 5340. Cannot be installed with EIA Interface (#3701), 1200 bps Integrated Modem (#5500, #5502), DDS Adapter (#5650, #5651), or 4800 bps Integrated Modem (#5740, #5741). #5640 and #5641 cannot be installed together. **Maximum:** One. **Field Installation:** No. Field conversion from #5640/#5641 to #5740/#5741 is available via RPQ. Field conversion to EIA Interface (#3701) is not available.

Digital Data Service Adapter (#5650, #5651): An integrated adapter for point-to-point data transmission at speeds of 2400, 4800, or 9600 bps over the AT&T nonswitched Data-Phone® Digital Service network. The DDSA interfaces to a DDS channel service unit, the customer site termination of the DDS network. For point-to-point (#5650), for multipoint tributary (#5651), see "Specify" for speed selection. **Limitations:** Available for mdls 2 and 12 only. Cannot be installed with EIA Interface (#3701), 1200 bps Integrated Modem (#5500, #5502), 2400 bps Integrated Modem (#5640, #5641), or 4800 bps Integrated Modem (#5740, #5741). **Maximum:** One. **Field Installation:** Yes.

4800 bps Integrated Modem (#5740, #5741): A self-clocked integrated modem that operates in half-duplex mode at speeds of 4800/2400 bps. Speed selection is under host control. Equalization is automatic and continuously performed. Available in two versions: #5740 - nonswitched, operates over 4-wire nonswitched communication facilities in point-to-point or multipoint mode ... #5741 - switched, operates over 2-wire switched communication facilities. Manual originate and auto-answer procedures are used to establish connections. The protective coupler required for FCC registration (required for direct connection to the Public Switched Network) is included with this feature. (Conditional upon FCC approval and registration.)

The system communicating with the 5251 must also be equipped with a 3684 compatible 4800 bps Integrated Modem, a 3864 or a 3868 mdl 2 Modem. **Limitations:** Available for mdls 2 and 12 only. Cannot be installed with Interface (#3701), 1200 bps Integrated Modem (#5500, #5502), 2400 bps Integrated Modem (#5640, #5641), or DDS Adapter (#5650, #5651). #5740 and #5741 cannot be installed together. **Maximum:** One. **Field Installation:** No. Field conversion from #5740/5741 to #5640/5641 is available via RPQ. Field conversion to EIA Interface (#3701) is not available.

Selector Light-Pen (#6300): A hand-held, pen-like device that permits the operator to select fields of data from the display screen for system input. **Limitations:** Not available for mdl 999. Not supported when the 5251 is directly or remotely attached to the 5340, 5360, or directly attached to the Series/1. **Maximum:** One. **Field Installation:** Not recommended. **Prerequisites:** #3600 on 5251 mdls 2 or 12.

MODEL CONVERSIONS

A mdl 999 may be changed to a mdl 11 in the field (see "Default Order Entry"). No other mdl changes are available.

ACCESSORIES

Keylock, Keys: The 5251 with Keylock (#4655) is shipped with two keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys to original purchaser.) Order additional keys on MES (your plant of manufacture). A letter of authorization with key identification number must accompany each order. Specify P/N 2546418. Allow six to eight weeks for delivery.

Display Screen Filter (#3225, #3226): #3225 for mdls 11 and 12, #3226 for mdls 1 and 2. A specially designed filter which attaches to the display screen, reducing reflected glare in those installations with adverse lighting conditions. Character contrast may also be enhanced. The filter is a CSU accessory. For 5251 mdls 11 and 12, B/M = 7361262. For 5251 mdls 1 and 2, B/M = 7361280.

Cables: The twinaxial cables and/or associated parts to interconnect the 5250 Information Display System components and attached systems may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the machine.

Twinax® Connector Kit (P/N 7362268): Includes two connectors. Twinax Wire and one Twinax Connector Kit are required for each attachment cable. (Individual connectors P/N 7362229 are available for replacement.)

Twinax Wire (P/N 7362211): Order must specify the desired length. Twinax Wire and one Twinax Connector Kit are required for each attachment cable. (This is an indoor/outdoor cable.)

Twinax Cable Assembly (P/N 7362267): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinax Adapter (P/N 3762230): Permits two Twinax Cables Assemblies to be joined together.

Twinax Station Protector Kit (B/M 7361807): Two protectors. One is required at each end of each Twinax Attachment Cable installed outdoors (either above or below ground level). Individual Twinax Station Protectors, P/N 7362426, are available for replacement purposes.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinax® Connector Kit: Includes two connectors. Twinax wire and one connector kit are required for each attachment cable. Order P/N 7362063 for Teflon-covered cable. Individual connectors P/N 7362229 are available for replacement.

Twinax Wire: Order must specify the desired length. Twinax wire and one connector kit are required for each attachment cable. Order P/N 7362061 for Teflon-covered cable.

Twinax Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N 7362062 for Teflon-covered cable assembly.

SUPPLIES (None)

Magnetic-Stripe Cards: For magnetically striped and encoded cards for Magnetic Stripe Reader (#4910) see IBM.

5252 DUAL DISPLAY STATION

[NO LONGER AVAILABLE]

PURPOSE

The 5252 is an advanced function dual display station which attaches to the 5251 models 2 and 12, Series/1, 5340 System Unit or 5381 System Unit for entering, editing and displaying alphameric data. It may be used as the system console with System/34. The 5252 displays up to 960 characters on each display with 12 lines of 80 characters each. Two movable keyboards permit both operators to display, enter and manipulate data in a highly flexible and efficient manner.

MODELS

Model 1 001

Customer Setup (CSU): The 5252 is designated as a customer setup device, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, refer to the GI section. The Marketing Representative must advise the customer of his responsibilities before receipt of the machine. The CSU allowance is one day.

HIGHLIGHTS

The 5252 functions as two independent display stations. The standard character set includes ninety-six 8x16 dot matrix characters - 52 upper/lower case alphabetic, 10 numeric, 34 special characters in addition to "space". A 188-character Multinational Character Set (see "Special Features") is available, providing 112 alphabetic, 10 numeric and 66 special displayable characters in addition to "space". See "Type Catalog" for character set and keyboard layouts. Each display provides functional characteristics which permit normal intensity, high intensity, non-display, blinking, underscore column separator, and reverse image (dark characters on a light background) on a field basis. The image of each display can be reversed independently. Audible alarms, under program control, are provided to alert each operator to special conditions. The keyboards with 24 application-assigned command functions provide input and control flexibility. See "Special Features".

Security Enhancements: Data fields can be defined allowing entered data to be accepted without being displayed on the screen. A Keylock (#4655) prevents operator usage of both displays and both keyboards when the key is in the locked position. The displays are blanked and keyboard data entry is inhibited when the keylock is locked. Two Magnetic Stripe Readers (#4910) are available for entering user identification.

Field Editing: Individual data input fields can be edited as Alphameric, Alpha Only, Signed Numeric, Field Exit Required, Right Adjust, Mandatory Entry, Mandatory Fill, Bypass, Auto Enter, Dup Enable, Monocase and Self-Check Modulus 10 and 11.

Cabling: The cable attachments between the 5250 Display System components and/or systems must be made with twinaxial cable. Maximum length of any one twinaxial cable is 1,525 meters (5,000 feet). Up to seven workstations may be attached to a twinaxial cable via a Cable-Thru feature (#2680) on each workstation. A second workstation may be attached via the Cable-Thru feature (#2680). Twinaxial cable must be used between the first and second workstation and the maximum allowable distance between these two workstations is 30 meters (100 feet). See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

Clustering: The 5252 may be attached to the 5251 mdl 2 or 12 with the Cluster (#2550) or the Dual Cluster (#2551) feature. The Cluster feature allows attachment of up to four workstations and the Dual Cluster feature allows attachment of up to eight workstations. The 5252 represents two workstations.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operators. The procedures are provided in the *IBM 5252 Operator's Guide* (GA21-9248). Also, see "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking and placement of the 5252.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting and checkout in accordance with instructions supplied by IBM.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5252.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packaging materials (if required) will be ordered by the branch office.
- Relocation of the 5252, if required, to allow IBM service access.
- Using and following the problem determination procedures for the 5252 prior to calling for IBM service.
- Providing a desk or table-top to support the 5252.
- Installation and maintenance of signal cables and associated parts for attaching the 5252 to the 5251 mdl 2 or 12, 5340, 5381 or Series/1.
- When adding additional display stations to Series/1, System/34 or System/38, the customer may have to modify the system configuration specifications. See *IBM System/34 Program Product Installation and Modification Reference Manual* (SC21-7689) or *IBM System/38 Guide to Program Product Installation and Device Configuration* (GC21-7775) or *IBM Series/1 5250 Information Display System Attachment Feature Initialization and Configuration Operator's Guide* (GA34-0098).

Publications: *IBM 5250 Information Display System Introduction Manual* (GA21-9246) and *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337).

AAS Ordering Instructions: The 5252 is a System Component.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9881** for a standard nonlocking plug (uses customer standard type receptacle) or **#9880** for locking plug (requires customer locking type receptacle). The standard power cord is 2.4 meters (8 feet)
- Color: Pearl white only (no specify required).
- Keyboards: Two must be selected. See "Special Features".
- Cables: See "Accessories". For cable specifications, see the *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337).

SPECIAL FEATURES

Cable-Thru (#2680): Provides the capability of connecting multiple 5225s, 5224s, 5219s, 5252s, 5251 mdls 1 and 11, and 5256s to a single twinaxial cable. Each unit on the cable, except the last, requires this feature. **Note:** For relocation flexibility, the customer should have Cable-Thru on all workstations. **Maximum:** One. **Field Installation:** Yes.

Keyboard (#4600, #4601, #4602): Two of the following must be selected:

#4600: 83-key keyboard with the EBCDIC character set, typewriter-like layout, movable, with 49 alphameric keys, 24 control keys and 10-Key numeric pad.

#4601: 66-key data entry style keyboard, movable with 36 alphameric keys, 23 control keys and seven blank keys.

#4602: 66-key data entry style keyboard with proof arrangement, movable, with 36 alphameric keys, 23 control keys and seven blank keys. The numeric keys are arranged similar to those of an adding machine.

Limitations: #4601 and #4602 are not supported when the 5252 is directly attached to the 5340 or Series/1. **Maximum:** Two of the above. **Field Installation:** Yes.

Keylock (#4655): Provides a lock and two keys which prevents operator entry and display of data on either workstation when in a locked position. **Maximum:** One. **Field Installation:** Yes.

Multinational Character Set (#4905): Provides the capability of displaying the 188-character Multinational Character Set to facilitate the interchange of information between systems with different language groups. **Limitations:** The keyboards do not include the additional characters of the Multinational Character Set. All characters may be entered via a single or multiple key sequence. **Maximum:** One. **Field Installation:** Not recommended. **Prerequisites:** Multinational Control (#4905) on 5340. All workstations attached to the System/34 and 5251 mdl 2 or 12, must have the same character set. All workstations attached to the same Series/1 5250 Information Display System Attachment must have the same character set. However, multiple attachments may be configured differently.

Magnetic Stripe Reader (#4910): Provides the capability of reading numerically encoded information from a magnetic stripe on a wide range of credit cards, identification cards and documents. The magnetic stripe may be encoded with up to 128 ABA numeric characters, including control characters. This feature may be used to enhance system data security by providing the ability to read an operator identification card without being displayed. Contact IBM for magnetically striped and encoded identification cards. **Limitations:** Valid for numeric-only data and single data field. **Maximum:** Two. **Field Installation:** Yes. **Prerequisites:** #3600 on 5251 mdls 2 or 12, or #4900 on 5340 when 5252 is directly attached.

MODEL CONVERSIONS (None)

5252 Dual Display Station (cont'd)

ACCESSORIES

Keylock and Keys: The 5252 with Keylock #4655 is shipped with two keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys to original purchaser). A letter of authorization with key identification number must accompany each order. Specify P/N 2546418. Allow six to eight weeks for delivery.

Cables: Twinaxial cables and/or associated parts to attach the 5252 to other components or systems of the 5250 Information Display System, may be purchased from IBM or a from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts refer to *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) or *IBM 5280 Cable Assembly Manual* (GH21-9341). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the machine.

Twinax® Adapter (P/N 7362230): For connecting two cable assemblies.

Twinax Cable Assembly (P/N 7363367): Cable with two connectors attached to bulk wire. The required length must be specified on the order.

Twinax Connector Kit (P/N 7362268): Two loose connectors. Individual connectors (P/N 7362229) are available for replacement. One Twinax Connector Kit and Twinax Wire are required for each attachment cable.

Twinax Wire (P/N 7362211): Bulk wire. Length must be specified. This is an indoor/outdoor cable.

Twinax Station Protector Kit (P/N 7361807): A kit Includes two protectors. One is required at each end of each Twinax attachment cable installed outdoors (either above or below ground level). Individual Twinax station protectors (P/N 7362426) are available for replacement purposes.

SUPPLIES (None)

5253 DISPLAY STATION

PURPOSE

The 5253 Display Station is an advanced function display station for the 5520 Administrative System which provides for entering, editing, and displaying word processing information. The 5253 displays up to 1,920 characters with 24 lines of 80 characters each. Dual text and attribute buffers allow vertical scrolling and horizontal segmenting of stored pages. See M5525 pages for limitations on operation when attached to the 5525 System Unit, supported by the 5520 Administrative Processing Program. A movable keyboard permits the operator to display, enter, and manipulate information on the screen in a highly flexible and efficient manner.

MODELS

Model 1 001

Customer Setup (CSU): The 5253 is designated as a Customer Setup device, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, refer to the GI section. The marketing representative must advise customers of their responsibilities before receipt of the machine. The CSU allowance is one day.

HIGHLIGHTS

The displayable character set includes 187 8 x 16 dot matrix characters. See "Type Catalog" for character set and keyboard layouts. Display functions include: non-display, blinking, underscore, and reverse image (dark characters on a light background). Each of the above highlights may occur on a character, word, or line basis. In addition, individual character positions may be superimposed with a slash, dash, or double underscore. See M5525 pages for limitations on operation when attached to the 5525 System Unit, supported by the 5520 Administrative Processing Program.

Contextual cursor control is provided by four outboard keys on the keyboard. The cursor is positioned forward or backward on a character, word, line, page, etc., by the depression of a single key when using the contextual cursor. An additional ten outboard keys provide special function control.

Security Enhancements: Character positions may be defined so that entered data is accepted without being displayed on the screen. A Keylock (#4655) helps prevent operator usage of the display and keyboard when the key is in the locked position. The display is blanked and keyboard text entry is inhibited when the keylock is locked.

Attachment to the 5520 Administrative System: Twinaxial cable connectors are provided on the 5525 System Unit for attachment of the 5253 Display Stations (and the 5254 Dual Display Stations). The cumulative maximum length of any one twinaxial cable is 1,524 meters (5,000 feet). Up to seven display stations can be attached to any one cable via the Cable-Thru feature (#2680). The 5254 represents two display stations. See *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011) for additional cabling information.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided with each 5253. Also see "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking, and placement of the 5253.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting, and checkout in accordance with instructions provided by IBM.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5253.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the branch office.
- Relocation of the 5253, if required, to allow IBM service access.
- Using and following the problem determination procedures for the 5253 prior to calling for IBM service.
- Providing a desk or table-top to support the 5253.
- Installation and maintenance of signal cables and associated parts for attaching the 5253 to the 5525 System Unit.
- When adding additional display stations on the 5520 Administrative System, the customer may have to modify the system configuration specifications; refer to the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011).

Publications: Refer to M5525 pages for the available publications.

SPECIFY

- Voltage: 115V AC, 1-phase, 60 Hz (no specify required).
- Color: Pearl White only (no specify required).
- Power Cord and Plug: Standard power cord is 2.4 meters (8 feet) and no specify is required. Some localities restrict power cord length to 1.8 meters (6 feet); if this is required, specify **#9986**. Specify **#9881** for a standard nonlocking plug (uses customer standard type receptacle) or **#9880** for a locking plug (requires customer locking type receptacle).
- Keyboard: A keyboard must be selected (see "Special Features").
- Cables: See "Accessories" for 5253 cable ordering instructions. For cable specifications, see the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011). Specify **#9050** if cable is ordered from IBM or **#9055** if cable is ordered from another source.

SPECIAL FEATURES

Cable-Thru (#2680): Provides the capability of connecting multiple 5253s and 5254s to a single cable. Each unit on the cable, except the last, requires this feature. **Note:** For relocation flexibility, the customer should consider including #2680 on all display stations. **Maximum:** One. **Field Installation:** Yes.

Function Extension Feature (#3270): This feature is a prerequisite for the 5520 Administrative System 3270 Emulation Capability. See M5525 pages for limitations on operation when attached to the 5525 System Unit, supported by the 5520 Administrative Processing Program. Refer to 5520 in "Programming" and M5525 pages for additional information. **Maximum:** One. **Field Installation:** Yes.

Keyboard (#4610, #4611): One of the following keyboards must be selected:

#4610: 92-character text keyboard with a typewriter-like layout, movable, with 46 alphameric keys and 36 control keys. **Maximum:** One. **Field Installation:** Yes.

#4611: 96-character text keyboard with a typewriter-like layout, movable, with 48 alphameric keys and 36 control keys. **Maximum:** One. **Field Installation:** Yes.

Keylock (#4655): Provides a lock and two keys which helps prevent operator entry and display of data when in a locked position. **Maximum:** One. **Field Installation:** Yes.

Symbol Display (EC #835667): Standard on all 5253s shipped from the plant after February, 1984. Without this EC symbols emanating from keyboard #202 and #204 are displayed on the screen as equivalent non-symbol characters, video-reversed. With this EC all symbols are displayed as fully-formed graphics. See 5520 programming for further details. **Maximum:** One. **Field Installation:** No.

MODEL CONVERSIONS (None)

ACCESSORIES

Keylock Keys: The 5253 with Keylock (#4655) is shipped with two keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys to original purchaser of the keys only.) Key Identification Number must accompany each order. Specify P/N **2546418**. Allow six to eight weeks for delivery.

Display Screen Filter (#3225): A specially designed filter which attaches to the display screen reducing reflected glare in those installations with adverse lighting conditions. Character contrast may also be enhanced. The filter is a Customer Setup accessory. For shipment with the 5253, order by feature number. For shipment to the field, order by bill of material number. Specify B/M **7361433**.

Palm Rest (#7796): This accessory is an extension to the keyboard providing increased operator comfort. Customers must be advised that it is a customer-attachable option only. All attachment hardware is provided and no tools are required. **Limitations:** Not available for 5253s with serial numbers 03550 and below.

Cables: The cables and/or associated parts to attach the 5253 to the 5525 may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5253.

Twinaxial Connector Kit (P/N **7362268**): Includes two connectors. Twinaxial Wire and one connector kit are required for each attachment cable. (Individual connectors, P/N **7362229**, are available for replacement.)

Twinaxial Wire (P/N **7362211**): Order must specify the desired length. Twinaxial Wire and one connector kit are required for each attachment cable. (This is an indoor/outdoor cable.)

Twinaxial Cable Assembly (P/N **7362267**): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be

5253 Display Station (cont'd)

added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (P/N **7362230**): Permits two Twinaxial Cable Assemblies to be joined together.

Twinaxial Station Protector (P/N **7362426**): One is required at each end of each twinaxial attachment cable installed outdoors (either above or below ground level). **Note:** This station protector is different from that used for printers or a System Unit attached via a printer line.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362063** for Teflon-covered cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362061** for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N **7362062** for Teflon-covered cable assembly.

SUPPLIES (None)

5254 DUAL DISPLAY STATION

[NO LONGER AVAILABLE]

PURPOSE

The 5254 Dual Display Station is an advanced function dual display station for the 5520 Administrative System which provides for entering, displaying, and editing word processing information. The 5254 displays up to 960 characters on each display with 12 lines of 80 characters each. Dual 8,000-character text and attribute buffer for each station allow vertical scrolling and horizontal segmenting of stored pages. See M5525 pages for limitations on operation when attached to the 5525 System Unit, supported by the 5520 Administrative Processing Program. Two movable keyboards permit both operators to display, enter, and manipulate information in a highly flexible and efficient manner.

MODELS

Model 1 001

Customer Setup (CSU): The 5254 is designated as a Customer Setup device, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, refer to the GI section. The marketing representative must advise customers of their responsibilities before receipt of the machine. The CSU allowance is one day.

HIGHLIGHTS

The 5254 functions as two independent display stations. The displayable character set includes 187 8 x 16 dot matrix characters. See "Type Catalog" for character set and keyboard layouts. Display functions include: non-display, blinking, underscore, and reverse image (dark characters on a light background). Each of the above highlights may occur on a character, word, or line basis. In addition, positions may be superimposed with a slash, dash, or double underscore. See M5525 pages for limitations on operation when attached to the 5525 System Unit, supported by the 5520 Administrative Processing Program.

Contextual cursor control and directional cursor are provided by four outboard keys on the keyboard. The cursor is positioned forward or backward on a line, page, word, character, etc., by the depression of a single key when using contextual cursor. An additional ten outboard keys provide special function control.

Security Enhancements: Character positions may be defined so that entered data is accepted without being displayed on the screen. A Keylock (#4655) helps prevent operator usage of both displays and both keyboards when the key is in the locked position. The displays are blanked and keyboard text entry is inhibited when the keylock is locked.

Attachment to the 5520 Administrative System: Connectors are provided on the 5525 System Unit for attachment of the 5254 Dual Display Stations (and the 5253 Display Stations). The cumulative maximum length of any one twinaxial cable is 1,524 meters (5,000 feet). Up to seven 5253/5254 display stations can be attached to any one cable via the Cable-Thru feature (#2680). The 5254 represents two display stations. See *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011) for additional cabling information.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operators. The procedures are provided with each 5254. Also see "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking, and placement of the 5254.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting, and checkout in accordance with instructions provided by IBM.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5254.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the branch office.
- Relocation of the 5254, if required, to allow IBM service access.
- Using and following the problem determination procedures for the 5254 prior to calling for IBM service.
- Providing a desk or table-top to support the 5254.
- Installation and maintenance of signal cables and associated parts for attaching the 5254 to the 5525 System Unit.
- When adding additional display stations on the 5520 Administrative System, the customer may have to modify the system configuration specifications; refer to the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011).

Publications: Refer to M5525 pages for the available publications.

SPECIFY

- Voltage: 115V AC, 1-phase, 60 Hz (no specify required).
- Color: Pearl White only (no specify required).
- Power Cord and Plug: Standard power cord is 2.4 meters (8 feet) and no specify is required. Some localities restrict power cord length to 1.8 meters (6 feet); if this is required, specify **#9986**. Specify **#9881** for a standard nonlocking plug (uses customer standard type receptacle) or **#9880** for a locking plug (requires customer locking type receptacle).
- Keyboard: Two keyboards must be selected (see "Special Features").
- Cables: See "Accessories" for 5254 cable ordering instructions. For cable specifications, see the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011). Specify **#9050** if cable is ordered from IBM or **#9055** if cable is ordered from another source.

SPECIAL FEATURES

Cable-Thru (#2680): Provides the capability of connecting multiple 5253s and 5254s to a single cable. Each unit on the cable, except the last, requires this feature. **Note:** For relocation flexibility, the customer should consider including #2680 on all display stations. **Maximum:** One. **Field Installation:** Yes.

Keyboard (#4610, #4611): Two of the following keyboards must be selected:

#4610: 92-character text keyboard with a typewriter-like layout, movable, with 46 alphameric keys and 36 control keys. **Maximum:** Two. **Field Installation:** Yes.

#4611: 96-character text keyboard with a typewriter-like layout, movable, with 48 alphameric keys and 36 control keys. **Maximum:** Two. **Field Installation:** Yes.

Keylock (#4655): Provides a lock and two keys which helps prevent operator entry and display of data when in a locked position. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Keylock Keys: The 5254 with Keylock (#4655) is shipped with two keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys to original purchaser of the keys only.) Key Identification Number must accompany each order. Specify P/N 2546418. Allow six to eight weeks for delivery.

Palm Rest (#7796): This accessory is an extension to the keyboard providing increased operator comfort. Customers must be advised that it is a customer-attachable option only. All attachment hardware is provided and no tools are required. **Limitations:** Not available for 5254s with serial numbers 00085 and below.

Cables: The cables and/or associated parts to attach the 5254 to the 5525 System Unit may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5254.

Twinax® Connector Kit (P/N 7362268): Includes two connectors. Twinax Wire and one connector kit are required for each attachment cable. (Individual connectors, P/N 7362229, are available for replacement.)

Twinax Wire (P/N 7362211): Order must specify the desired length. Twinax Wire and one connector kit are required for each attachment cable. (This is an indoor/outdoor cable.)

Twinax Cable Assembly (P/N 7362267): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinax Adapter (P/N 7362230): Permits two Twinax Cable Assemblies to be joined together.

Twinax Station Protector (P/N 7362426): One is required at each end of each twinaxial attachment cable installed outdoors (either above or below ground level). **Note:** This station protector is different from that used for printers or a System Unit attached via a printer line.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

5254 Dual Display Station (cont'd)

Twinax® Connector Kit: Includes two connectors. Twinax wire and one connector kit are required for each attachment cable. Order P/N 7362063 for Teflon-covered cable. Individual connectors P/N 7362229 are available for replacement.

Twinax Wire: Order must specify the desired length. Twinax wire and one connector kit are required for each attachment cable. Order P/N 7362061 for Teflon-covered cable.

Twinax Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N 7362062 for Teflon-covered cable assembly.

SUPPLIES (None)

5256 PRINTER

PURPOSE

The 5256 provides printed output for the 5280, Series/1, System/34, System/36, and System/38. It is a bidirectional impact matrix printer with dual 256 byte buffers and full buffer formatting capabilities.

MODELS

Model 1	001	40 cps maximum
Model 2	002	80 cps maximum
Model 3	003	120 cps maximum

Customer Setup (CSU): The 5256 is designated as Customer Setup, thereby offering the customer early availability and relocation flexibility. Customer responsibilities are set forth in *Information Bulletin for Customers - Customer Setup* (G120-2743). CSU instructions are included with the 5256.

CSU allowance is as follows:

5280 System (with initial system installation) - 2 days
5280 System (subsequent installation) - 1 day
Series/1 (initial and subsequent installation) - 1 day
System/34 (initial and subsequent installation) - 1 day
System/36 (initial and subsequent installation) - 1 day
System/38 (initial and subsequent installation) - 1 day

The marketing representative must advise customers of their responsibilities before receipt of the machine.

When adding additional printers to the 5280, Series/1, System/34, System/36, or System/38, the customer may have to modify the system configuration specifications. See *IBM 5280 System Control Programming Reference Manual* (GC21-7824), *IBM Series/1 5250 Information Display System Attachment Feature Initialization and Configuration Operator's Guide* (GA34-0098), *IBM System/34 Program Product Installation and Modification Reference Manual* (SC21-7689), *IBM System/36 - Changing Your System Configuration* (SC21-9052), or *IBM System/38 Guide to Program Product Installation and Device Configuration* (GC21-7775).

HIGHLIGHTS

Maximum printer throughput is obtained with bidirectional serial matrix printing and indexing without unnecessary print head movement. Matrix characters are formed by eight vertical wires printing dots in up to four of seven possible horizontal positions, giving high legibility with character spacing at 10 characters to the inch for the standard upper/lower case 95-character set. A 184-character Multinational Character Set is available. See "Specify" below. The maximum print line is 132 print positions.

The operator can select six or eight lines per inch (lpi) vertical spacing. Overlapped printing may result when printing at eight lpi. A variable width forms tractor provides for feeding continuous forms. Single cut forms may be processed in typewriter fashion. For optimum handling of continuous forms, a Forms Stand (#4450) is recommended. See "Accessories". Refer to *Form-Design Printers Reference Guide* (GA24-3488) for forms design considerations and limitations. See "Type Catalog" for character set arrays.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided in the *IBM 5256 Operator's Guide* (GA21-9260).

For Direct Attachment to the 5280: The 5280 Distributed Data System provides cable connectors for attachment of the 5256 Printer to the 5285 Programmable Data Station and to the 5288 Programmable Control Unit. The 5285 Programmable Data Station will allow local attachment of the 5256 Printer to the Twinaxial Printer Attachment (#1150). The 5288 Programmable Control Unit will allow local attachment of the 5256 Printer to the Single Twinaxial Printer Attachment (#1155), the Multiple Twinaxial Printer Attachment (#1160), or the Multiple start/Stop-Twinaxial Printer Attachment (#1162). If multiple printers are attached to one port (see M5285, 5288 pages), each printer except the last requires Cable-Thru (#2680) on the 5256. All connections use twinaxial cable only. The maximum length of the cable is 1,525 meters (5,000 feet). See *IBM 5280 Cable Assembly Manual* (GA21-9341) for cabling information. See the M5288 pages for description of these special features.

For Direct Attachment to Series/1: The Series/1 5250 Information Display System Attachment (#1210) provides four ports for attachment of the 5251 mdl 1 or 11, 5252, 5256, 5291, and 5292, and supports up to eight of these workstations. The 5252 represents two workstations. The Series/1 5250 Information Display System Attachment Cable (#5760) enables attachment to be made with twinaxial cable. Maximum length of twinaxial cable attached to any one port is 1,525 meters (5,000 feet). Up to seven workstations may be attached to a twinaxial cable via Cable-Thru (#2680) on each workstation. See *IBM Series/1 Customer Site Preparation Manual* (GA34-0050) and *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

For Direct Attachment to System/34: The 5340 System Unit provides four cable connectors for attachment of the 5219, 5224, 5225, 5251 mdl 1 and 11, 5252, 5256, 5291, and 5292. One cable connector is dedicated to the exclusive attachment of a display station utilized as the system console. No other devices may be attached to this cable. The three additional cable conectors on the 5340 are provided for attachment of additional workstations (5219, 5224, 5225, 5251 mdl 1 or 11, 5252, 5256, 5291, or 5292). Up to eight workstations, including the system console, may be attached to the 5340 without special features. Optional features on the 5340 allow up to 16 workstations to be directly attached. The 5252 represents two workstations. The maximum length of any one twinaxial cable is 1,525 meters (5,000 feet). Up to three such cables may be attached to the 5340. Multiple workstations (up to seven) may be attached to one cable via Cable-Thru (#2680) with each workstation. If a 5256 Printer is designated as the system printer, a 6 meter (20 foot) cable is provided with the 5340. Specify **#9306** on the 5340. See "Specify" in the M5340 pages. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for additional cabling information.

For Direct Attachment to System/36: The 5256 Printer may be attached to the System/36 in a manner similar to 5250 Information Display Station devices. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for additional cabling information.

For Direct Attachment to System/38: The 5381 System Unit provides eight cable connectors for attachment of the 5219, 5224, 5225, 5251 mdl 1 and 11, 5252, 5256, 5291, and 5292, and supports up to 12 of these workstations. Optional features on the 5381 allow up to 80 workstations to be attached. The 5252 represents two workstations. The cable attachment is made with twinaxial cable. Maximum length of any one twinaxial cable is 1,525 meters (5,000 feet). Up to seven workstations may be attached to a twinaxial cable via Cable-Thru (#2680) on each workstation. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

Clustering: The 5256 may be attached to the 5251 mdl 2 or 12 with the Cluster (#2550) or the Dual Cluster (#2551). The Cluster feature allows attchment of up to four workstations (5219, 5224, 5225, 5251 mdl 1 or 11, 5252, 5256, or 5292), and the Dual Cluster feature allows attachment of up to eight workstations. The 5252 represents two workstations. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

Publications: *IBM 5250 Information Display System Introduction* (GA21-9246) and *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): Specify **#9881** for a standard nonlocking plug (uses customer standard type receptacle) or **#9880** for a locking plug (requires customer locking type receptacle).
- Color: Pearl White only (no specify required).
- Print Spanish N: Specify **#9570**. See "Type Catalog" for details.
- Character Set: The 95-character EBCDIC character set is provided as standard. If the 184-character Multinational Character Set is desired, specify **#9470**. All workstations and printers attached to a System/34, System/36, and a 5251 mdl 2 or 12 must have the same character set. All workstations attached to the same Series/1 5250 Information Display System Attachment must have the same character set. However, multiple attachments may be configured differently.
- Cables: See "Accessories" for cable ordering instructions. For cable specifications, see the *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337). Specify **#9050** if cable is ordered from IBM, **#9055** if cable is ordered from another supplier, **#9060** if the 5256 is used with System/34 as the system printer (no cable order required), or **#9065** if existing cable will be used (no cable order required).
- System Attachment: Specify the unit to which the 5256 is attached: **#9559** for 5251 mdl 2, **#9560** for 5251 mdl 12, **#9561** for 5340, **#9565** for 5360, **#9562** for 5381, **#9563** for Series/1, or **#9564** for 5280.

SPECIAL FEATURES

Audible Alarm (#1470): Provides an audible indication to the operator when manual intervention is required. **Maximum:** One. **Field Installation:** Yes.

Cable-Thru (#2680): Provides the capability of connecting multiple 5219s, 5224s, 5225s, 5251 mdls 1 or 11, 5252s, and 5256s to a single twinaxial cable. Each unit on the cable, except the last, requires this feature. **Note:** For relocation flexibility, the customer should have Cable-Thru on all workstations. **Maximum:** One. **Field Installation:** Yes.

5256 Printer (cont'd)

MODEL CONVERSIONS

Model conversions are field installable.

ACCESSORIES

Forms Stand (#4450): Permits feeding of continuous forms from a carton and provides for forms stacking on a single shelf after printing. This accessory is a one-shelf forms stand. For field installation, order by feature number on MES.

Cables: The twinaxial cables and/or associated parts to attach the printers to the 5251 mdl 2 or 12, 5285, 5288, 5340, 5360, 5381, or the Series/1 5250 Information Display System Attachment Cable (#5760) may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5256.

Twinaxial Connector Kit (P/N **7362268**): Includes two connectors. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. (Individual connectors, P/N **7362229**, are available for replacements.)

Twinaxial Wire (P/N **7362211**): Order must specify the desired length. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. This is an indoor/outdoor cable.

Twinaxial Cable Assembly (P/N **7362267**): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (P/N **7362230**): Permits two Twinaxial Cable Assemblies to be joined together.

Twinaxial Station Protector Kit (B/M **7361807**): A kit includes two protectors. One is required at each end of each twinaxial attachment cable installed outdoors (either above or below ground level). Individual Twinaxial Station Protectors, P/N **7362426**, are available for replacement purposes. The station protector is a CSU accessory.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362063** for Teflon-covered cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362061** for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N **7362062** for Teflon-covered cable assembly.

SUPPLIES

Ribbons: A black ribbon, P/N **1136653** or equivalent, is required. A black cartridge ribbon, P/N **7034535** or equivalent, is required for all machines shipped on or after September 19, 1980 or on machines having RPQ D09005 installed. Contact IBM.

5258 PRINTER

PURPOSE

An ink jet printer providing high-quality printer output for the 5520 Administrative System. A selection of print fonts is available to provide 10 pitch, 12 pitch, or proportional spacing of an international set of graphics.

MODELS

Model 1 001

Prerequisites: In the 5525 System Unit, Local Device Control feature (#4710, #4711, #4712); LDC Attachment feature #4715; and either feature #1105, #1700, #1701, #1702, or #1704. See M5525 pages for details.

HIGHLIGHTS

- Automatic feeding of cut sheet paper from two drawers (e.g., letterhead and plain) and envelopes from a hopper.
- Rated burst print speed of up to 92 characters per second (12 pitch).
- Horizontal spacing of 10 pitch, 12 pitch, or proportional.
- Vertical spacing is 5-1/3 and 6 lines per inch and half-line spacing for superscripts and subscripts (single level).
- One type style font standard, two more selectable (at time of manufacture), and a further two optional (possible five in total); each supports 187 characters from English and eight other language character sets (Artisan 10 U/C English only). Optional print font supports Greek alphabet and other symbol characters.
- Type style and format may be chosen by the user and then automatically changed under program control.
- Standard Cable-Thru capability to allow multiple printers (5219s and 5258s) to be multidropped up to a cumulative total of 1,524 cable-meters (5,000 cable-feet) radially from the 5525 System Unit on a single twinaxial cable.
- The printer is equipped with an envelope hopper and two paper drawers. The envelope hopper holds 600 75 g/sq.m (20 pound) bond envelopes. The envelope stacker holds 500 envelopes of the same weight. The paper drawers hold 600 sheets of 75 g/sq.m (20 pound) bond or 500 sheets of 90 g/sq.m (24 pound) bond each. The paper stacker holds 700 sheets of 75 g/sq.m (20 pound) bond.

Paper Specifications:

Paper sizes include:

178mm x 267mm (7 inches x 10.5 inches) *
184mm x 267mm (7.25 inches x 10.5 inches) *
191mm x 267mm (7.5 inches x 10.5 inches) *
203mm x 267mm (8 inches x 10.5 inches)
203mm x 330mm (8 inches x 13 inches)
216mm x 279mm (8.5 inches x 11 inches)
216mm x 330mm (8.5 inches x 13 inches)
216mm x 356mm (8.5 inches x 14 inches)

* Feed lengthwise only

Paper weights include:

60 g/sq.m (16 pound) bond
75 g/sq.m (20 pound) bond
90 g/sq.m (24 pound) bond

Envelope Specifications:

Envelope sizes include:

Number 7-3/4	98.4mm x 190.5mm (3.874 inches x 7.5 inches)
Number 9	98.4mm x 225.4mm (3.874 inches x 8.87 inches)
Number 10	104.8mm x 241.3mm (4.125 inches x 9.5 inches)

Envelope weights include:

48 g/sq.m (13 pound)
60 g/sq.m (16 pound)
75 g/sq.m (20 pound)
90 g/sq.m (24 pound)

Problem Determination Procedures: Problem determination (and recovery) procedures are provided by IBM with the 5258 Printer, and extended when attached to the 5525 System Unit using Licensed Program 5611-SS1 or 5611-SS2 to help provide increased availability of the printer, and other parts of the system, to the user.

These procedures are described in the reference cards accompanying the printer, in the HELPs and Messages facilities of the licensed program, and in *IBM 5258 Printer Operators Guide* (GA23-1005) and *IBM 5520 Administrative Systems Messages and Recovery Aids* (SC23-0733 or SC23-0748).

These procedures are designed to be easy to follow and use by the customer, and it is the customer's responsibility to use them prior to calling for IBM service.

Publications: *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011), and *IBM 5258 Operator Guide* (GA23-1005).

Customer Responsibilities: The customer is responsible for providing and installing requisite cabling and for providing paper and envelopes as appropriate prior to the installation of the printer by the CE; also for following the problem determination procedures prior to calling for the CE.

Operator intervention is required for replenishing the ink supply, paper, and envelopes, and handling exceptional conditions such as feed jams, stacker full, power on/off, and invalid format requests.

When adding additional printers to the 5520 Administrative System, the customer may have to modify the system configuration specifications. See *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011).

Cabling: When used with the 5520 Administrative System, the 5258 is connected via a twinaxial cable to local device attachment connectors in a protected customer access area on the 5525 System Unit. Depending on the 5525 mdl, up to eight printers can be multidropped on the same cable up to a maximum length of 1,524 cable-meters (5,000 cable-feet). Depending on the mdl, up to eight cables (maximum of 12 printers) can be attached to the 5525. See M5525 pages.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): With a standard nonlocking plug (uses customer standard type receptacle). No specify required.
- Print Fonts: Available at time of manufacture only. Prestige Elite (12 pitch) is standard on every machine. Two additional fonts must be selected using specify numbers from the following. See "Type Catalog" for character set arrays.

Font (select two)

Pitch	Style	Feature Number	Specify Number
12	Letter Gothic	#7809	**#9809**
10	Courier	#7811	**#9811**
12	Courier	#7810	**#9810**
10	Courier Italic	#7825	**#9825**
12	Courier Italic	#7826	**#9826**
10	Prestige Pica	#7812	**#9812**
10	Artisan	#7813	**#9813**
10	Artisan (U/C)	#7822	**#9822**
10	Bookface Academic	#7824	**#9824**
PSM	Essay	#7814	**#9814**
PSM	Arcadia	#7815	**#9815**
PSM	Boldface	#7816	**#9816**
10/12	Symbol	#7830	**#9830**

The symbol font allows printing of symbol characters supported by keyboard IDs #202 and #204. See "Type Catalog" for details of these keyboards.

- Color: Pearl White with Pebble Gray accents. (No specify required.)
- Cables: Customer-supplied; see "Accessories" and the *IBM 5520 Administrative Systems Installation Manual - Physical Planning* (GA23-1002 or GA23-1011) for ordering information. Specify **#9050** if cable is ordered from IBM or **#9055** if cable is ordered from another supplier.
- Data Rate: The data transfer rate is determined by the Local Device Control feature and the 5525 System Unit mdl. Specify **#9300** for printers attaching through feature #4710 on the 5525 mdl 020 or 021; **#9305** for printers attaching through feature #4710 on the 5525 mdl 030, 031, or 032; and **#9315** for printers attaching through feature #4711 or #4712 on any mdl 5525.

SPECIAL FEATURES

Optional Additional Print Fonts: Up to two optional print fonts may be ordered from the font list given in "Specify". Purchase only. Order by feature number. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: The cables and/or associated parts to attach the 5258 to the 5525 may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see the *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM,

5258 Printer (cont'd)

specify a shipping date at least four weeks in advance of receiving the 5525.

Twinax® Connector Kit (P/N 7362268): Includes two connectors. Twinax Wire and one connector kit are required for each attachment cable. (Individual connectors P/N 7362229 are available for replacement.)

Twinax Wire (P/N 7362211): Order must specify the desired length. Twinax Wire and one connector kit are required for each attachment cable. (This is an indoor/outdoor cable.)

Twinax Cable Assembly (P/N 7362267): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinax Adapter (P/N 7362230): Permits two Twinax Cable Assemblies to be joined together.

Twinax Station Protector (P/N 6819750): One is required at each end of each twinaxial attachment cable installed outdoors (either above or below ground level). **Note:** This station protector is different from that used with the displays.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinax® Connector Kit: Includes two connectors. Twinax wire and one connector kit are required for each attachment cable. Order P/N 7362063 for Teflon-covered cable. Individual connectors P/N 7362229 are available for replacement.

Twinax Wire: Order must specify the desired length. Twinax wire and one connector kit are required for each attachment cable. Order P/N 7362061 for Teflon-covered cable.

Twinax Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N 7362062 for Teflon-covered cable assembly.

SUPPLIES

Ink: IBM Office System Ink (P/N 1354320) or equivalent. Contact IBM for ordering information. One bottle is included with the shipment of the machine.

5265 POINT OF SALE TERMINAL

PURPOSE

A Point of Sale Terminal which serves the cash register and data logging (store and forward) functions in sales-oriented establishments. Contains diskette assembly for recording detailed sales transaction information. The diskette is removable and can be transported to a host system for processing of the stored data. Communicating models allow direct batch communication of stored data to Series/1, System/3 models 4, 6, 8, 10, 12 and 15, System/32, System/34, System/36, S/370 models 115 through 195, 3031, 3032, 3033, 3741 models 2 and 4, 3747, 4331, 4341, 4361, 4381, 5110, 5280.

B82	64K	64	2D	Yes	Yes

Note: The user of a 5265 model X3X, X4X, X5X, X6X, X7X or X8X should review the host diskette support to ensure that Diskette 2D capability exists. See *IBM 5260 Retail System-Systems Planning Guide* (GA21-9390), for additional information.

Customer Setup (CSU): The 5265 is designated as a customer setup device thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM. The CSU Allowance is one day.

HIGHLIGHTS

- 34-key or 64-key keyboard. See "Models".
- Personalization of function at each terminal allows customers to modify operations performed to meet their requirements.
- Easily readable transaction display.
- Automatic prompting for operator guidance.
- Diskette assembly to record sales transactions.
- Total Accumulations:
  - Up to 86 personalizable machine totals (including realtime and machine totals). With Extended Protected Totals (#3650), all of these are protected from external power interruptions. If the controlling 5265 terminal has #3650 installed, it is recommended that all attached 5266 terminals have #3650 installed also. 5265 mdls X5X, X6X, X7X and X8X have extended protected totals and do not require #3650.
  - Up to 256 auxiliary totals.
  - Non-resettable machine grand total.
- Cash Receipt/Document/Transaction Journal printing.
- Store Logo Printer available. See "Special Features".
- Up to two cash drawers available: Both attached, both remote, or one attached and one remote. See "Special Features".
- Time-of-day clock.
- Capability to attach up to five 5266 terminals (mdls X2X, X4X, X6X and X8X only) or up to four 5266 terminals and a 5265 which can provide backup if required. An additional five terminals can also be installed via special features on mdls X4X, X6X and X8X.

Information from up to five 5266 Point of Sale Terminals (attached via twinaxial cable) can also be stored on the 5265 diskette assembly (mdls X2X, X4X, X6X, and X8X only). By special feature, up to ten 5266s can be attached (mdls X4X, X6X and X8X). One 5265 will collect data from all the attached terminals.

- Communications to host system available. See "Models".
- Formatted data entry with optional totals accumulation, by field within format.
- Price look-up (with override capability) and Negative Credit files.
- Additional memory available, up to a total of 128K (mdls X7X and X8X only).
- Sharing of data files by all terminals in the cluster (mdls X6X and X8X only).
- Central site control file (mdls X5X, X6X, X7X and X8X only).
- Administrative message support (mdls X5X, X6X, X7X and X8X only).

Features

Keyboard: Allows key entry of cash register (sales) information, as well as entry of administrative data, non-sales oriented data and specification of non-sales function. All 5265 AXX mdls are equipped with 34 keys; all BXX mdls are equipped with 64 keys (basic 34 keys plus additional function keys) to simplify specifying of operater functions. Available with either Touch-Tone® style or adding machine style numeric keyboard arrangement. Function key arrangement may be modified by personalization to meet customer's needs. Key identifiers appear on a plastic overlay which can be modified to indicate keyboard layout as assigned by the customer. Use of unique function keys (salesperson and merchandise ID) requires Storage Increment (#4902) or mdl X5X, X6X, X7X or X8X.

Personalization: Allows customers to modify the functional operations performed at a given point of sale. By answering a series of questions (found in the Personalization Questionnaire) customers can alter functions and tailor the operation to match their requirements. Answers to personalization questions need only be entered once via the 5265 keyboard (at time of initial installation) and are stored on a diskette for use until a change is desired. Personalization is loaded from the 5265 diskette to the storage of the same 5265 or any attached 5266 or 5265. Values are assigned as defaults (preset values) for many questions; if no answer is given by the customer for a personalization question its default value is assumed. This allows the user to implement many functions as supplied by IBM, thus saving time in answering personalization questions, and in key entry of the answer.

Transaction Display: Shows details of sales transactions. An 8-position LED display shows transaction details as entered for such things as department, class, stock, quantity, total, amount due and change. Nine indicator lights identify AMOUNT DUE, SUBTOTAL, CHANGE, and REFUND, or call attention to machine status.

Operator Guidance Unit: Leads the salesperson through sales and non-sales transactions by offering a prompt for each action in sequence. The prompting drum has up to 24 prompts visible (one at a time) to the salesperson.

Totals: A non-resettable Grand Total is automatically maintained. Through personalization, the following types of totals can be selected for accumulation: Control totals (basic accounting totals), transaction type, tender type, salesperson, and merchandise totals. These totals, referred to as realtime totals, are maintained in machine storage and can be accessed individually or in groups at any time. Up to 52 realtime totals can be accumulated in the basic machine mdls X1X, X2X, X3X, and X4X and up to 86 if Storage Increment (#4902) is installed. All machine mdls X5X, X6X, X7X and X8X support up to 86 realtime totals.

Ten totals are protected from loss in the event of external power interruption on mdls X1X, X2X, X3X and X4X. With Extended Protected Totals (#3650) or machine mdls X5X, X6X, X7X or X8X, all totals are protected. Auxiliary Totals can be generated from data stored on the diskette transaction log. These totals are calculated, typically at the end of the sales day, by processing the diskette in the 5265. Three groups of Auxiliary Totals are predetermined: Auxiliary control, transaction type and tender type. Three other groups can be personalized: Salesperson, merchandise group and merchandise item totals.

Transaction Log Data Entry: Provides the capability of entering formatted data onto the diskette transaction log. Field entry requirements are personalized, as well as the capability of accumulating subtotals and totals by field within formats.

Cash Receipt/Document/Transaction Journal Printing: Uses 80 cps bidirectional matrix printer. Can generate up to 31-character print line on either a cash receipt or a customer-inserted document (sales check form or document to be endorsed), and on the transaction journal roll.

Time-of-Day-Clock: Used to automatically record on the transaction log the time each transaction occurs. Initially set by salesclerk via sign-on procedure.

5265 Point of Sale Terminal (cont'd)

Diskette Storage Capacity: Is available in two capacities of the standard removable Diskette 1 (.24MB) and Diskette 2D (.98MB). See "Models" for a list of mdls supporting each capacity. Either capacity diskette provides storage for operational (sales and non-sales) instructions, personalization tables, customer transaction log, and customer files. Diagnostic/exercisers are also resident on the diskette.

Binary Synchronous Communications (BSC): Capability on all XX2 machine mdls allows sales transaction log data collected at the 5265 to be forwarded to a system. Allows transmission of price look-up files and/or negative credit files from a system to the 5265. Requires one of the following on the 5265:

- External Modem Adapter feature.
- 1200 bps Integrated Modem, Switched Network, Auto-Answer feature.

Mdls X52, X62, X72 and X82 have the capability of receiving personalization updates, data file updates and administrative messages via the central file. An option is provided to automatically update personalization and the files and print the messages immediately following the transmission.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided in the *IBM 5260 Retail System Display Prompts and Problem Determination Procedures* (GA21-9399). Also, see "Customer Responsibilities" below.

Customer Responsibilities:

Physical Setup:

- Receipt at the customer's receiving dock, unpacking, and placement of the 5265.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting and checkout in accordance with instructions supplied by IBM.
- Providing a counter or table-top to support the 5265.
- Installation and maintenance of twinaxial cables and associated parts for attaching a 5266 to the 5265 or to other 5266s.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5265.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packaging materials (B/M 7365845) (if required) will be ordered from IBM.

The customer must be advised that:

- The customer is responsible for making arrangements for installation, pricing, charges of the data communication facility, and attachment of selected data sets.
- Toll charges, if required for installation and/or maintance or BSC, are to be paid by the customer.
- The IBM Marketing Representatives must have the customer obtain a firm installation date for transmission services (including modems and/or data coupler, if required) before the order for a communicating mdl of 5265 can be confirmed. For further information, refer to "Teleprocessing Systems" in the GI section, M2700 pages, and *IBM 5260 Retail System Planning and Site Preparation Guide* (GA21-9391).

Personalization: The customer must personalize the 5265 to obtain output compatible with any application programs.

Maintaining Operations:

- Using and following the Problem Determination Procedures for the 5265 prior to calling for IBM service.
- Relocation of the 5265, if required, to allow IBM service access.
- Implementation and incorporation of diskette changes into their store procedures. This includes:
  - Ensuring that the implementor at the central machine site has and is using the current level diskette.
  - Planning and coordinating the activities required for updating their store(s) to the new level diskettes.
  - Distribution of current level diskettes with their correct personalization to noncentral machine sites. Timely installation of these diskettes.

The following statement is to be included in proposals:

> "It is agreed that IBM will have no responsibility to provide warranty or maintenance service on an IBM 5265 Point of Sale Terminal when cash is contained in the unit. It shall be the purchaser's (customer's) responsibility to remove, control, and replace cash so that IBM can fulfill its warranty and maintenance obligations.
>
> The exception to the above shall be when a failure occurs in the cash drawer and it cannot be opened prior to CE maintenance. In those cases the customers shall assign one of their personnel to assume responsibility for removal of the cash once the drawer has been opened."

In addition, each Agreement for Lease or Rental, and Maintenance Agreement which includes a 5265 or 5266 must be amended and Special Provisions added as provided in the Agreement and Customer Document Section of the Branch Office Manual.

Environment: The 5265 Point of Sale Terminal is designed to operate in the following environment:

Temperature	10°C to 37.8°C (50°F to 100°F)
Relative Humidity	8 to 80%
Maximum Wet Bulb	22.8°C (73°F)

This machine is designed to operate in the normal retail environment. This assumes a building which is not air conditioned, but which has normal winter heat and normal ventilation. The 5265 is not recommended for outdoor usage. If it is occasionally used outdoors, it must be within the above conditions. Care must be taken to protect it from precipitation, dust, and direct sunlight.

Communications Facilities: Attachments for the 5265 BSC are designed to operate on transmission facilities such as:

- Common carrier leased telephone line services (Voice Grade); AT&T or Western Union Class 3002 (to 2400 bps).
- Private customer owned communications facilities equivalent to the above common carrier facilities.
- Common carrier switched network telephone (Voice Grade) service at 600, 1200, or 2400 bps.

  Reference: See M2700 pages for additional information concerning modems, communications, facilities, machine attachment requirements, terminal intermix, operating capabilities, and customer responsibilities.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9880** for locking plug or **#9881** for nonlocking plug.
- Color: Pearl White only (no specify required).
- Numeric Pad: **#9480** for adding machine style numeric pad or **#9481** for Touch-Tone style numeric pad.
- Diskette Assembly Door Lock: A group of 11 unique lock types has been reserved to allow a customer to specify identical lock types for each terminal's Diskette Assembly Door Lock. One of the following must be specified:

  #9101 Type A
  #9102 Type B
  #9103 Type C
  #9104 Type D
  #9105 Type E
  #9106 Type F
  #9107 Type G
  #9108 Type H
  #9109 Type I
  #9110 Type J
  #9111 Type K

  Note: If a Cash Drawer (special feature) is installed and if it is desired that the same key operate the Diskette Assembly Door Lock and the cash drawer lock, *identical lock types* must be specified for each.
- Cash Drawer: If a Cash Drawer(s) is ordered, a Cash Till and a Lock Type must be specified. See "Cash Drawer" under "Special Features".

5265 Point of Sale Terminal (cont'd)

- Central Machine (**#9438**) or Non-Central Machine (**#9439**) Designation: A central machine is one intended for use in personalizing and testing diskettes. In a multiple store environment, a central machine would be used in preparing diskettes for a group of other 5265s. Every 5265 must be designated as either a Central Machine (**#9438**) or a Non-Central Machine (**#9439**) based on this use criteria. In order to successfully complete personalization and testing of diskettes for a group of 5265s, the central machine must at least be equal to the highest level 5265 in the group. See the *IBM 5260 Retail System-Systems Planning Guide* (GA21-9390), for additional information. A Master Diskette(s) selected from the table that follows must be available at the central machine to provide the starting point in the personalization process for all 5265s in the group. The master diskette shipped with each 5265 is to remain with the 5265 for future use by the CE. Master diskette engineering changes may be sent only to the central machine. At least one 5265 per enterprise must be designated as a Central Machine (**#9438**) to ensure proper notification and distribution of all diskette changes. All other 5265s in the enterprise, not designated as central machines, must be designated as Non-Central Machines (**#9439**). This designation does not involve hardware. It is used to provide a location identifier for distribution of IBM-provided Master Diskette releases.
- Master Diskette Specify Code: Selection of one or more Master Diskette Specify Codes provides for the shipment of the required Master Diskette(s) to the designated central machine, plus the shipment of future Master Diskette engineering changes for the diskette(s) selected. At least one Master Diskette Specify Code from the following table, consistent with the configuration of the central machine, must be selected.

  5265 Configuration:

	Diskette Specify Codes	
5265 Mdls	Storage Increment #4902 Installed	Master Diskette Specify Code
X1X	No	**#9440**
X1X	Yes	**#9442**
X2X	No	**#9444**
X2X	Yes	**#9446**
X3X, X4X	Yes or No	**#9448**
X5X, X6X	N/A	**#9450**
X7X, X8X	N/A	**#9450**

Prerequisites: #9438.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

OCR-A Wand Reader Attachment (#1050:) Provides the facility and support to allow attachment of a customer-supplied OCR-A Wand reader which meets the National Retail Merchants Association (NRMA) "Voluntary Optical Character Recognition - A Font Standard" for Universal Vendor Marking (UVM) and the *IBM 5260 Retail System OCR-A Wand Attachment* document available from IBM. **Limitations:** Cannot be installed with EAN/UPC Attachment (#1055) or if #1055 is installed on any 5265 or 5266 in the same cluster. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** 16K Storage Increment (#4902) or mdl X5X, X6X, X7X or X8X.

EAN/UPC Attachment (#1055): Provides the facility and support to allow attachment of a customer-supplied EAN/UPC Reader. This feature will accommodate the digital transfer of the data translation of symbols (UPC Versions A and E) that meet the "UPC Symbol Specifications" dated August 1978 available from Uniform Product Code Council, Inc., 7061 Corporate Way, Suite 106, Dayton, OH 45459, U.S. The EAN/UPC Reader must comply with the *IBM 5260 Retail System EAN/UPC Attachment* document available from IBM . **Limitations:** Cannot be installed with OCR-A Wand Reader Attachment (#1050) or if #1050 is installed on any 5265 or 5266 in the same cluster. **Field Installation:** Yes. **Prerequisites:** 16K Storage Increment (#4902) or mdl X5X, X6X, X7X or X8X.

Customer Display (#1200): Provides a 6-digit, top-mounted, rotatable display for displaying Amount Due; Subtotal, Change, and Refund. **Field Installation:** Yes.

Second 5266 Attachment (#1300): [Mdls X4X, X6X and X8X]. Provides capability to attach a second string of up to five additional compatible 5266 Point of Sale Terminals (the last of which may be a compatible 5265 which can be used as a backup). **Maximum:** One. **Field Installation:** Yes.

Cash Drawer(s)(#1511, #1512, #1521, #1522): Provides for up to two cash drawers both attached, or both remote, or one attached and one remote. Each cash drawer consists of a housing, drawer, opening mechanism, lock, and two keys. The attached cash drawer(s) is mounted directly below the terminal and becomes an integral part of the machine. The remote cash drawer(s) consists of the same hardware plus brackets and cable for mounting under the counter. Remote cash drawers are not designed for stacked installation. The customer is responsible for installation of remote cash drawer units. When two cash drawers are installed, it is recommended that Extended Protected Totals (#3650) is also installed (except on mdls X5X, X6X, X7X and X8X) to provide protection for the Cash Drawer #2 totals.

Notes:
1. Each attached cash drawer adds approximately 12cm (4.75 inches) to the height of the terminal.
2. A top cover is not provided with the remote cash drawer feature; therefore, the customer must provide (by appropriate under-counter mounting) security against unauthorized access from the drawer top.

Order by the following codes:

#1511 First Cash Drawer-Attached. **Limitations:** Cannot be installed with First Cash Drawer-Remote (#1521).
#1512 Second Cash Drawer-Attached. **Prerequisites:** First Cash Drawer-Attached (#1511) and Storage Increment (#4902) or mdl X5X, X6X , X7X or X8X.
#1521 First Cash Drawer-Remote. **Limitations:** Cannot be installed with First Cash Drawer-Attached (#1511).
#1522 Second Cash Drawer-Remote. **Prerequisites:** First Cash Drawer-Attached (#1511), or First Cash Drawer-Remote (#1521) and Storage Increment (#4902), or mdl X5X, X6X, X7X or X8X.

Specify:

Cash Tills: One cash till (accessory) is supplied with each cash drawer special feature. Multiple compartment tills are available with fixed or adjustable bill and coin slots. The customer is responsible for assembly of tills with adjustable bill and coin compartments. For additional tills and lockable till covers see "Accessories". For each cash drawer ordered, specify one of the following:

#9180 Till with fixed bill and coin slots
#9181 Till with adjustable bill and coin slots

Cash Drawers: For each cash drawer ordered, the *type* of lock desired must be specified. A group of 11 unique lock types is reserved to allow a customer to specify either identical lock types or unique lock types. **Note:** If it is desired that the key(s) to the cash drawer(s) also operate the Diskette Assembly Door Lock, *identical lock types* must be specified for each. See "Accessories". One of the following *must* be specified for each cash drawer ordered:

#9121 Type A
#9122 Type B
#9123 Type C
#9124 Type D
#9125 Type E
#9126 Type F
#9127 Type G
#9128 Type H
#9129 Type I
#9130 Type J
#9131 Type K

Limitations: The cable from the terminal to a remote cash drawer is 3m (9.84 feet) long. **Maximum:** Two. **Field Installation:** Yes.

Extended Protected Totals (#3650): Must be ordered or installed on mdls X1X, X2X, X3X or X4X *before* ordering upgrades to mdls X5X, X6X, X7X or X8X. Provides protection from external power interruptions for realtime totals. This feature increases the number of protected totals from ten to the maximum number of realtime totals available in a given machine configuration. See "Totals" under "Highlights". With this feature, all realtime totals reflect voids of current transactions; without this feature, only the first ten realtime totals are net of void current transactions (mdls X5X, X6X, X7X and X8X do not apply; totals are protected on these mdls without requiring #3650). It is recommended that this feature be included in all machine configurations, having two cash drawers or requiring more than ten totals. **Limitations:** Not available on mdls X5X, X6X, X7X or X8X. **Field Installation:** Yes.

Journal Cover and Lock (#4675): Provides a lock and key for the journal. Limits access to the journal tape. Shipped with two keys. **Limitations:** Must be unlocked to replace paper rolls and/or ribbon. **Field Installation:** Yes.

16K Storage Increment (#4902): Provides 16K of additional storage for a total of 32K on mdls X1X, X2X, X3X, and X4X. Certain functions require this feature. See "Functional Dependencies" below. With the 16K storage increment feature installed, 11K of storage is available for price look-up and negative credit files and sales tables. The price look-up and negative credit files are packed as they are loaded into the 11K of storage. It is recommended that (#4902) be installed on all X1X, X2X, X3X, and X4X machine mdls. All machines in an X2X cluster must have the same amount of storage. See the *IBM 5260 Retail System Planning and Site Preparation Guide* (GA21-9391) for details. **Limitations:** Not available on mdls X5X, X6X, X7X or X8X. When upgrading a purchased installed mdl X1X, X2X, X3X or X4X with this feature installed to a mdl X5X, X6X, X7X or X8X consult IBM for appropriate action.

5265 Point of Sale Terminal (cont'd)

Functional Dependencies

The features and functions listed below are available only on mdls X5X, X6X, X7X, X8X and on mdls X1X, X2X, X3X, and X4X with the 16K storage increment feature:

- OCR, EAN, or UPC wand.
- Price look-up and/or negative credit files.
- Second cash drawer.
- Second set of machine control totals.
- Individual cashier security codes.
- More than 52 personalized totals.
- Unique salesperson and merchandise keys.
- Check tender floor limits.
- Combined modulus checking on merchandise IDs 1, 2, and 3.
- Temporary cashier close.
- Account number entry for Cash 1 and Cash 2 transactions.
- Account or document number entry for tender types 2 through 8.
- Expanded quantity of up to five digits.
- Optional receive on transmit/receive function.
- Personalization copy procedure involving a minimum of diskette handling.

The features and functions listed below are available only on mdls X5X, X6X, X7X and X8X:

- Price look-up enhancements.
  - Field length specifications.
  - Use of ID 4; up to 30-digit key field.
  - Look-up on voids and returns.
  - Optional bypass of Amount prompt.
  - Item look-up key.
  - Merchandise ID pickup.
- Central control file.
  - Personalization and personalization control number updates.
  - Price look-up, negative credit and duplicate descriptor file updates.
  - Administrative messages.
- Account number length up to 21 digits.
- Floor limit for tender types 3 through 8.
- Authorization code up to six digits.
- Tender type descriptors.
- Copy personalization enhancements.
  - Entry of multiple copy options.
  - Personalized copy procedures.

Mdls X5X and X6X have 8K of storage available for price look-up and negative credit files and sales tables. The data files can be shared with all terminals in the cluster .

Base mdls X7X and X8X have 8K of storage available for sales tables and price look-up and negative credit files, and an additional 32K of storage available for price look-up and negative credit files. (A 32K or 64K storage increment feature can be added on mdls X7X and X8X to increase the storage available for data files). The data files can be shared with all terminals in the cluster . **Field Installation:** Yes.

32K Storage Increment (#4903): Provides 32K of additional storage for a total of 96K on mdls X7X and X8X. On X8X mdls, data files residing in storage can be shared with all terminals in the cluster. **Limitations:** Available only on 5265 mdls X7X and X8X. Cannot be installed with 64K Storage Increment (#4904). **Field Installation:** Yes.

64K Storage Increment (#4904): Provides 64K of additional storage for a total of 128K on mdls X7X and X8X. On X8X mdls, data files residing in storage can be shared with all terminals in the cluster. **Limitations:** Available only on 5265 mdls X7X and X8X. Cannot be installed with 32K Storage Increment (#4903). **Field Installation:** Yes.

Security Lock and Key (#6300): Provides an additional level of security with key lock control over the customer-personalizable security functions. A group of 11 unique lock types is reserved to allow a customer to specify identical lock types or unique lock types for each terminal. Shipped with two keys. **Note:** The key for the Security Lock is *not* interchangeable with the key for the Diskette Assembly Door, nor the key for any installed cash drawer lock. **Field Installation:** Yes.

Specify: One of the following must be specified:

#9201 Type A	**#9207** Type G
#9202 Type B	**#9208** Type H
#9203 Type C	**#9209** Type I
#9204 Type D	**#9210** Type J
#9205 Type E	**#9211** Type K
#9206 Type F	

Store Logo Printer (#6500): Provides the capability to print, from a stamp type impact print device, a store logo, slogan, or other graphic at the top of the cash receipt. The maximum size of the logo, slogan, or graphic is 1.27cm (0.5 inches) vertically by 6.35cm (2.5 inches) wide. The pre-inked stamp for this print device is customer-supplied. See *IBM 5260 Retail System Planning and Site Preparation Guide* (GA21-9391) for details. Stamp ink life is dependent on ink color, lines of print, total amount of character surface, and customer acceptance of readability. **Field Installation:** Yes.

Diskette Type 1 Compatibility (#7850): Allows the following functions to be performed while using a Diskette 1. which was intended for use in the mdl A11, A12, B11, B12: Communications, Transaction Log Erase, Transaction Log Print, Auxiliary Totals, Personalization Copying, System Personalization. Allows all functions to be performed while using a Type 1 diskette which was intended for use in the mdl A21, A22, B21, B22. **Limitations:** Available only for mdls X3X, X4X, X5X, X6X, X7X, and X8X. **Field Installation:** Yes.

COMMUNICATIONS FEATURES

The Binary Synchronous Communications facilities of the 5265 mdls X12, X22, X32, X42, X52, X62, X72 and X82 operates in half-duplex mode over facilities C4, C4M, C5, C5M, D3, D3M, D4, D4M, or X1M. For information concerning these facilities, see M2700 pages.

Binary Synchronous Transmission: Permits all 5265 XX2 mdls to function as a terminal emulating either System/3 or 3741 line protocol on a switched or nonswitched point-to-point communications line.

Functions include the batch transmission of transaction information and batch receipt of certain data files. It is possible to set the terminal in Data Communication mode, and have the data communications take place unattended. The terminal will then automatically power down. There are restrictions in the ability to operate unattended. See the *IBM 5260 Retail System - Systems Planning Guide* (GA21-9390) for additional information.

Communications may be established with the following using System/3 BSC line protocol:

- Series/1
- System/3 (mdl 4, 6, 8, 10, 12, and 15) RPG II, MLMP, or CCP
- System/32 RPG II
- System/34 RPG II or BSCEL subsystem under SSP-ICF
- System/36 RPG II or BSCEL subsystem under SSP-ICF

Communication may be established with the following using 3741 BSC line protocol:

- 3741 (mdls 2 and 4)
- 3747
- 5110
- 5120
- 5280
- Series/1
- System/38 RPG III or COBOL
- S/370 (mdls 115 through 195, 3031, 3032, 3033, 4331, 4341, 4361, or 4381 via 3704, 3705 or ICA as appropriate).
- Communication with a 3741 mdl 2 or mdl 4, or with a 3747 with Communication Adapter (#1660).
- Communications with System/370, 3031, 3032, 3033, 4331, 4341, or 4381 via 3704, 3705, or ICA as appropriate. Emulating 3741 line protocol, support is provided under DOS/VS or DOS/VSE operating systems by CICS/VS and BTAM or BTAM-ES, under OS/VS1 and OS/VS2 operating systems by TCAM or ACF/TCAM or by CICS/VS and BTAM. 3704 and 3705 support is via a BSCA and appropriate subfeatures, under EP/VS, NCP/VS or ACF/NCP/VS as appropriate.
- Communications with the Series/1 is via the single-line or multiline BSCA of the Series/1. Emulating System/3 BSC or 3741 BSC line protocol, support is provided using Realtime Programming System (RPS) V3 or V4 or EDX.

All 5265 XX2 mdls will operate with any of the above systems capable of communicating at the following nominal transmission rates on a point-to-point data link: 1200/600, 2000, and 2400 bps. Operation will be in half-duplex mode over dial (switched network) facilities, and

5265 Point of Sale Terminal (cont'd)

in half-duplex mode over nonswitched point-to-point communications lines which may be half- or full-duplex facilities.

BSC units at each termination of a data link to which the 5265 is attached must be set to operate at the same transmission rate, and to use EBCDIC transmission code. 5265 communicating mdls support the transmission and reception of blocked records. Switched network versions include the support of Manual Dial, and Manual or Auto-Answer (where the attached modem supports this capability). Where auto-call is supported at the host, modem compatibility between the host and the 5265 will require the use of the EIA feature on the 5265.

The internal clock will generate synchronizing and timing signals for BSC operation when they are not provided by the attached modem. The decision to use, or not use, the internal clock is made during personalization time. When the internal clock is used, all other devices attached to the same data link must also be equipped with similar internal clocking capability. Transmission rates of 600 or 1200 bps with internal clock are selectable at personalization time. One of two IBM modems, 3863 or 3872 mdl 1 (2400/1200 bps) may be attached to 5265 communicating mdls. For more information on the capabilities of these modems refer to the appropriate "Machines" pages.

Modem and Data Set interface to the BSC facilities of communicating mdls of 5265 are:

Facility	Speed	Type of Service	Type of Modem
C4	1200/600	Switched	Integrated
C4M	1200/600	Switched	Stand-alone
C5	2400/1200	Switched	3872
C5	2400/1200	Switched	3863
C5M	2000/2400	Switched	Stand-alone
D3M	1200/600	Nonswitched	Stand-alone
D4	2400/1200	Nonswitched	3872
D4	2400/1200	Nonswitched	3863 or 3868 mdl 1
D4M	2000/2400	Nonswitched	Stand-alone
X1M	2400	Private	Stand-alone

In addition to the basic functions of Binary Synchronous Communications provided by 5265 communicating mdls, one of the following special features must be added: Integrated Modem (1200/600 bps) or EIA Interface. **Field Installation:** Yes. **Prerequisites:** Systems must be equipped with an adapter from the following:

Feature Code of Communications Adapter

	#2500, #3500, or #4500	#2074	#2084	#4645 and #6202	#1501,2 and #2001,3 and #3200
System/3					
-4		X			
-6		X			
-8		X		X

EIA Interface (#3701): [Mdls XX2 only] Provides a cable and interface for the attachment of an IBM or non-IBM modem meeting RS-232-C characteristics . Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. The cable is 3 meters (9.84 feet) in length. **Limitations:** Cannot be installed with 1200 bps Integrated Modem (#5500 or #5501). **Maximum:** One. **Field Installation:** Yes.

Modem, 1200 bps Integrated (#5501): [Mdls XX2 only] A modem for BSC data transmission at 1200 bps over switched facilities. Supports Manual Dial, and Manual or Auto-Answer. Attachment to the switched C4 facility is via an IBM-provided cable directly to a customer-provided FCC Registered Protective Device of the Programmed Type. The cable is 3m (9.84 feet) in length. For additional details see the *IBM 5260 Retail System Planning and Site Preparation Guide* (GA21-9391). **Limitations:** Cannot be installed with Interface (#3701). **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

Any model may be field converted to any other model. Caution should be taken when upgrading models to ensure that the requirements of Central Machine Specify Codes are being met. See "Central Machine" under "Specify". When upgrading installed models X1X, X2X, X3X or X4X to models X5X, X6X, X7X or X8X, note the description associated with 5265 feature code, 16K Storage Increment (#4902). Extended Protected Totals (#3650) must be ordered or installed *before* ordering the upgrade.

Electronic parts, with the exception of memory, removed during a model upgrade to a purchased machine become the property of IBM. All other parts removed when upgrading purchased machines remain the property of the customer.

When a storage change is made to a purchased machine, any removed parts become the property of the customer.

The upgrade purchase prices for Storage Increment Features installed in the field may be greater than the difference in price between features as installed at the factory. The customers should carefully evaluate their future requirements when purchasing a terminal.

ACCESSORIES

Cash Tills: One cash till is shipped with the Cash Drawer special feature. Additional multiple compartment cash tills with either fixed or adjustable bill and coin slots are available.

- Till with fixed bill and coin slots (without cover), B/M **1612499.**
- Till with adjustable bill and coin slots (without cover), B/M **1612500.** Note: Assembly of the till with adjustable slots is a customer responsibility.
- Lockable Till Cover including two keys, B/M **1612501.**
- Additional key for lockable till cover, P/N **1851268.**

Replacement Locks and Keys: The 5265 is equipped with a lock on the diskette assembly cover. The machine is shipped with two keys for the lock. Any cash drawer (special feature) on the 5265 is equipped with the *same lock type* as the diskette assembly cover lock. Additional or replacement keys may be purchased from a local locksmith.

Use the following part numbers when ordering replacement locks and keys:

Lock Type	Diskette Assembly Cover	Cash Drawer	Security Lock *
A	**1612369**	**1612386**	**1612412**
B	**1612370**	**1612387**	**1612413**
C	**1612371**	**1612388**	**1612414**
D	**1612372**	**1612398**	**1612415**
E	**1612373**	**1612399**	**1612416**
F	**1612374**	**1612403**	**1612417**
G	**1612376**	**1612405**	**1612418**
H	**1612378**	**1612406**	**1612419**
I	**1612379**	**1612407**	**1612420**
J	**1612382**	**1612409**	**1612421**
K	**1612383**	**1612410**	**1612422**

* The Security Lock and Key (#6300) must be installed *before* a replacement can be ordered. The security key is not interchangeable with the diskette assembly cover key or the cash drawer key.

Journal Lock Key: Order by machine type and P/N **1612439.**

KEYBOARD OVERLAYS

Standard Overlay: The standard keyboard overlay can be modified to identify the function of the keys as defined during personalization. This overlay is initially shipped with the 5265. To order additional or replacements, order by part number.

Standard Overlay P/Ns

	34 Key		64 Key	
Language	Touch-Tone® Keyboard	Adding Machine Keyboard	Touch-Tone Keyboard	Adding Machine Keyboard
English US	**1610411**	**1610431**	**1610451**	**1610471**

® Trademark of American Telephone & Telegraph Co.

Blank Overlay: Blank keyboard overlays are available for those customers with multiple machine installations who desire to have a local vendor silk screen them to match the personalized function. order by part number.

Blank Overlay, 34 Key, P/N **5559882**
Blank Overlay, 64 Key, P/N **5559883**

Personalization Overlay: The personalization overlay fits over the keyboard and is used to identify the function of the keys during personalization. This overlay is initially shipped with the 5265.

Personalization Overlay, Touch-Tone Style Keyboard, P/N **1610371.**
Personalization Overlay, Adding Machine Style Keyboard, P/N **1610391.**

Keyboard Overlay Nomenclature Kit: One kit of die-cut self-adhesive labels is shipped with each 5265. Used to modify keyboard to customer requirements.

5265 Point of Sale Terminal (cont'd)

To order additional or replacements, order by part number.

CABLES

Cables: Cables, connector, and adapters (to attach a 5266 to a 5265 or to other 5266s in the cluster) may be purchased from IBM or a customer-selected source. See *IBM 5260 Retail System Planning and Site Preparation Guide* (GA21-9391), for cable, connector, and adapter specifications. The customer is responsible for installation and maintenance of these cables. Assembled cables may be ordered from IBM. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5266s.

Twinaxial Connector Kit P/N **7362268**: Includes two connectors. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. (Individual connectors P/N **7362229** are available for replacements.)

Twinaxial Wire P/N **7362211**: Order must specify the desired length. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. This is an indoor/outdoor cable.

Twinaxial Cable Assembly P/N **7362267**: Includes a Connector Kit (2 connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter P/N **7362230**: Permits two Twinaxial Cable Assemblies to be joined together.

Twinaxial Station Protector Kit P/N **7361807**: Includes two protectors. One is required at each end of attachment cable installed outdoors (either above or below ground level).

Twinaxialial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362063** for Teflon-covered cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362061** for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N **7362062** for Teflon-covered cable assembly.

SUPPLIES

For ordering information, contact IBM.

Ribbons: Cash Receipt/Journal Roll Printer: Black P/N **1299285**, Purple P/N **1299286**. **Note:** Black is recommended.

Roll Paper: Cash Receipt and Journal Roll, P/N **432767** (Carton of 50 rolls).

Diskettes:

IBM Diskette 1	P/N **2305830**
IBM Diskette 2D	P/N **1766872**

Forms: Single and Multipart cut form sales slips may also be ordered.

5266 POINT OF SALE TERMINAL

PURPOSE

A point of sale terminal which serves as a cash register. It is attached via twinaxial cable to a controlling 5265 Point of Sale Terminal, which provides the data logging functions and personalization load capability.

MODELS

Model A01 34 keys
Model B01 64 keys

Customer Setup (CSU): The 5266 is designated as a customer setup device thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM. The CSU Allowance is one day.

HIGHLIGHTS

- 34-key or 64-key keyboard. See "Models".
- Personalization of function (at controlling 5265) allows customers to modify 5266 operations performed to meet their requirements.
- Easily readable transaction display.
- Prompting for operator guidance.
- Total Accumulations:
  - Up to 86 personalizable machine totals (including realtime and machine totals). With Extended Protected Totals (#3650), all of these are protected from external power interruptions. If the controlling 5265 terminal has #3650 installed it is recommended that all attached 5266 terminals have #3650 installed also.
  - Non-resettable machine grand total.
- Cash Receipt/Document/Transaction Journal printing.
- Store Logo Printer available. See "Special Features".
- Up to two cash drawers available: Both attached, both remote or one attached and one remote. See "Special Features".
- Time-of-day clock.
- Formatted data entry with optional totals accumulation, by field within format.
- Price look-up (with override capability) and negative credit files.
- When attached to a 5265 mdl X6X or X8X, the 5266 has access to files contained in the shared memory of the 5265. This capability enhances the price look-up and the negative credit functions of the 5266 to match that of the 5265 mdls X5X, X6X, X7X and X8X.

  Note: 5266 terminals attached to 5265 mdls X6X or X8X require both Storage Increment (#4902) and Extended Protected Totals (#3650).

Features

Keyboard: Allows key entry of cash register (sales) information, as well as entry of administrative data, non-sales oriented data and specification of non-sales function. Mdl A01 is equipped with 34 keys ; mdl B01 is equipped with 64 keys (basic 34 keys plus 30 additional function keys) to simplify specifying of operator functions. Available with either Touch-Tone® style or adding machine style numeric keypad. Function key arrangement may be modified by personalization to meet customer's needs. Key identifiers appear on a plastic overlay which can be modified to indicate keyboard layout as assigned by the customer. Use of unique function keys (salesperson and merchandise ID) requires Storage Increment (#4902).

Personalization: Allows customers to tailor the functional operations to be performed at a given point of sale. By answering a series of questions (found in the Personalization Questionnaire) customers can alter functions and tailor the operation to match their requirements. Answers to personalization questions need only be entered once (at time of initial installation). They are entered at the controlling 5265 keyboard and are stored on the diskette at that 5265. Personalization is loaded from the diskette at the 5265 into storage at the 5266. Different 5266s within the store cluster may have different personalization. Values are assigned as defaults (preset values) for many questions; if no answer is given, the default value is assumed. This allows the user to implement many functions as supplied by IBM, thus saving time in answering personalization.

Transaction Display: Shows details of sales transactions. An 8-position LED display which shows transaction details as entered for such things as department, class, stock, quantity, total, amount due and change. Nine indicator lights identify AMOUNT DUE, SUBTOTAL, CHANGE, and REFUND, or call attention to machine status.

Operator Guidance Unit: Leads the salesperson through sales and non-sales transactions by offering a prompt for each succeeding action in sequence. The prompting drum has up to 24 prompts visible (one at a time) to the salesperson.

Totals: A non-resettable Grand Total is automatically maintained. Through personalization, the following types of totals can be selected for accumulation: Control totals (basic accounting totals), transaction type, tender type, salesperson, and merchandise totals. These totals, referred to as realtime totals, are maintained in machine storage and can be accessed individually or in groups at any time. Up to 52 realtime totals can be accumulated in the basic machine and up to 86 if Storage Increment (#4902) is installed.

Ten totals are protected from loss in the event of external power interruption. With Extended Protected Totals (#3650), all totals are protected. 5266 terminals attached to 5265 mdl X6X or X8X require both the Storage Increment (#4902) and Extended Protected Totals (#3650).

Transaction Log Data Entry: Provides the capability of entering formatted data onto the diskette transaction log. Field entry requirements are personalized, as well as the capability of accumulating subtotals and totals by field within formats.

Cash Receipt/Document/Transaction Journal Printing: Uses 80 cps bidirectional matrix printer. Can generate up to 31-character print line on either a cash receipt or a customer-inserted document (sales check form or document to be endorsed), or on the transaction journal roll.

Time-of-Day Clock: Used to automatically record on the transaction log the time each transaction occurs. Initially set by salesclerk via sign-on procedure (at 5265).

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided in the *IBM 5260 Retail System Display Prompts and Problem Determination Procedures* (GA21-9399). Also, see "Customer Responsibilities" below.

Customer Responsibilities:

Physical Setup:

- Receipt at the customer's receiving dock, unpacking, and placement of the 5266.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting and checkout in accordance with instructions supplied by IBM.
- Providing a counter or table-top to support the 5266.
- Installation and maintenance of twinaxial cables and associated parts for attaching a 5266 to the 5265 or to other 5266s.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5266.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packaging materials (B/M 7365845) (if required) will be ordered from IBM.

Personalization: The customer must personalize the 5266 to obtain output compatible with any application programs.

Maintaining Operations:

- Using and following the Problem Determination Procedures for the 5266 prior to calling for IBM service.
- Relocation of the 5266, if required, to allow IBM service access.
- Implementation and incorporation of diskette changes into their store procedures. This includes:
  - Ensuring that the implementor at the central machine site has and is using the current level diskette.
  - Planning and coordinating the activities required for updating their store(s) to the new level diskettes.
  - Distribution of current level diskettes with their correct personalization to noncentral machine sites. Timely installation of these diskettes.

The following statement is to be included in proposals:

> "It is agreed that IBM will have no responsibility to provide warranty or maintenance service on an IBM 5266 Point of Sale Terminal when cash is contained in the unit. It shall be the purchaser's (customer's) responsibility to remove, control, and replace cash so that IBM can fulfill its warranty and maintenance obligations.
>
> The exception to the above shall be when a failure occurs in the cash drawer and it cannot be opened prior to CE maintenance. In those cases the customers shall assign one of their personnel to assume responsibility for removal of the cash once the drawer has been opened."

In addition, each Agreement for Lease or Rental and Maintenance Agreement which includes a 5265 or 5266 must be amended and Special Provisions added as provided in the Agreement and Customer Document Section of the Branch Office Manual.

5266 Point of Sale Terminal (cont'd)

Environment: The 5266 Point of Sale Terminal is designed to operate in the following environment:

Temperature	10°C to 37.8°C (50°F to 100°F)
Relative Humidity	8 to 80%
Maximum Wet Bulb	22.8°C (73°F)

The 5266 is designed to operate in the normal retail environment. This assumes a building which is not air conditioned, but which has normal winter heat and normal ventilation. The machine is not recommended for outdoor usage. If it is occasionally used outdoors, it must be within the above conditions. Care must be taken to protect it from precipitation, dust, and direct sunlight.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9880** for locking plug or **#9881** for nonlocking plug.
- Color: Pearl White only (no specify required).
- Numeric Pad: **#9480** for adding machine style numeric pad or **#9481** for Touch-Tone style numeric pad.
- Cash Drawer: If a Cash Drawer(s) is ordered, a Cash Till and a Lock Type must be specified. See "Cash Drawer" under "Special Features".

SPECIAL FEATURES

OCR-A Wand Reader Attachment (#1050): Provides the facility and support to allow attachment of a customer-supplied OCR-A Wand reader which meets the National Retail Merchants Association (NRMA) Voluntary Optical Character Recognition - A Font Standard for Universal Vendor Marking (UVM) and the *IBM 5260 Retail System OCR-A Wand Attachment* document available from IBM. **Limitations:** Cannot be installed with EAN/UPC Attachment (#1055) or if #1055 is installed on any 5265 or 5266 in the same cluster. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4902.

EAN/UPC Attachment (#1055): Provides the facility and support to allow attachment of a customer-supplied EAN/UPC Reader. This feature will accommodate the digital transfer of the data translation of symbols (UPC Versions A and E) that meet the "UPC Symbol Specification" dated August, 1978 available from Uniform Product Code Council, Inc., 7061 Corporate Way, Suite 106, Dayton, OH 45459, U.S. The EAN/UPC Reader must comply with the *IBM 5260 Retail System EAN/UPC Attachment* document available from NMD OEM Marketing Representatives or Corporate Industry Relations/Product Information. **Limitations:** Cannot be installed with OCR-A Wand Reader Attachment (#1050) or if #1050 is installed on any 5265 or 5266 in the same cluster. **Field Installation:** Yes. **Prerequisites:** #4902.

Customer Display (#1200): Provides a 6-digit, top-mounted, rotatable display for displaying; Amount Due, Subtotal, Change, and Refund. **Field Installation:** Yes.

Cash Drawer(s) (#1511, #1512, #1521, #1522): Provides for up to two cash drawers both attached, or both remote, or one attached and one remote. Each cash drawer consists of a housing, drawer, opening mechanism, lock, and two keys. The attached cash drawer(s) is mounted directly below the terminal and becomes an integral part of the machine. The remote cash drawer(s) consists of the same hardware plus brackets and cable for mounting under the counter. Remote cash drawers are not designed for stacked installation. The customer is responsible for installation of remote cash drawer units. When two cash drawers are installed, it is recommended that Extended Protected Totals (#3650) is also installed to provide protection for the Cash Drawer 2 totals.

Notes:

1. Each attached cash drawer adds approximately 12cm (4.75 inches) to the height of the terminal.
2. A top cover is not provided with the remote cash drawer feature; therefore, the customer must provide (by appropriate under-counter mounting) security against unauthorized access from the drawer top.

Order by the following codes:

- #1511 First Cash Drawer-Attached. **Limitations:** Cannot be installed with First Cash Drawer-Remote (#1521).
- #1512 Second Cash Drawer-Attached. **Prerequisites:** #1511 and #4902.
- #1521 First Cash Drawer-Remote. **Limitations:** Cannot be installed with First Cash Drawer-Attached (#1511).
- #1522 Second Cash Drawer-Remote. **Prerequisites:** #1511, or #1521 and #4902.

Limitations: The cable from the terminal to a remote cash drawer is 3m (9.8 feet) long. **Maximum:** Two. **Field Installation:** Yes.

Specify:

Cash Tills: One cash till (accessory) is supplied with each cash drawer special feature. Multiple compartment tills are available with fixed or adjustable bill and coin slots. For each cash drawer ordered, specify one of the following:

#9180 Till with fixed bill and coin slots
#9181 Till with adjustable bill and coin slots

The customer is responsible for assembly of tills with adjustable bill and coin compartments. For additional tills and lockable till covers see "Accessories".

Cash Drawers: For each cash drawer ordered, the *type* of lock desired *must* be specified. A group of 11 unique lock types is reserved to allow a customer to specify either identical lock types or unique lock types. One of the following *must* be specified for each cash drawer ordered:

#9121 Type A	**#9127** Type G
#9122 Type B	**#9128** Type H
#9123 Type C	**#9129** Type I
#9124 Type D	**#9130** Type J
#9125 Type E	**#9131** Type K
#9126 Type F	

Note: If it is desired that the key(s) to the cash drawer(s) also operate the Diskette Assembly Door Lock, *identical lock types* must be specified for each. See "Accessories".

Extended Protected Totals (#3650): Required on 5266 terminals attached to 5265 mdls X6X or X8X. Provides protection from external power interruptions for realtime totals. This feature increases the number of protected totals from ten to the maximum number of realtime totals available in a given machine configuration. See "Totals" under "Highlights". With this feature, all realtime totals reflect voids of current transactions; without this feature, only the first ten realtime totals are net of void current transactions. It is recommended that this feature be included in all machine configurations having two cash drawers or requiring more than ten totals. **Field Installation:** Yes.

Journal Cover and Lock (#4675): Provides a lock and key for the journal. Limits access to the journal tape. Shipped with two keys. **Limitations:** Must be unlocked to replace paper rolls and/or ribbon. **Field Installation:** Yes.

16K Storage Increment (#4902): Required on 5266 terminals attached to 5265 mdls X6X or X8X. Provides 16K of additional storage for a total of 32K. Certain functions require this feature. See "Functional Dependencies" below. 5266 terminals with the 16K Storage Increment installed, that are attached to a 5265 mdl X2X or X4X, have 11K of storage available for price look-up, negative credit files and sales tables. The price look-up and negative credit files are packed as they are loaded into the 11K of storage. 5266 terminals attached to a 5265 mdl X6X or X8X have 8K of storage available for sales tables. The price look-up and negative credit files stored in the 5266 mdl X6X or X8X are shared with the attached 5266 terminals. It is recommended that (#4902) be installed on all 5266 terminals. All machines in an X2X cluster must have the same amount of storage. See the *IBM 5260 Retail System Planning and Site Preparation Guide* (GA21-9391) for details.

Functional Dependencies: The features and functions listed below are available only on 5266 terminals with the 16K storage increment feature:

- OCR, EAN, or UPC wand.
- Price look-up and/or negative credit files.
- Second cash drawer.
- Second set of machine control totals.
- Individual cashier security codes.
- More than 52 personalized totals.
- Unique salesperson and merchandise IDs 1, 2, and 3.
- Check tender floor limits.

5266 Point of Sale Terminal (cont'd)

- Combined modulus checking on merchandise IDs 1, 2, and 3.
- Temporary cashier close.
- Account number entry for Cash 1 and Cash 2 transactions.
- Account or document number entry for tender types 2-8.
- Expanded quantity of up to five digits.
- Optional receive on transmit/receive function.
- Personalization copy procedure involving a minimum of diskette handling.

The features and functions listed below are available only on 5266 terminals (with features #4902 and #3650 installed) attached to a 5265 mdl X6X or X8X:

- Price look-up enhancements.
  - Field length specifications.
  - Use of ID 4; up to 30-digit key field.
  - Look-up on voids and returns.
  - Optional bypass of Amount prompt.
- Account number length up to 21 digits.
- Floor limit for tender types 3 through 8.
- Authorization code up to six digits.
- Tender type descriptors.

Field Installation: Yes.

Security Lock and Key (#6300): Provides an additional level of security with key lock control over the customer personalizable security functions. A group of 11 unique lock types is reserved to allow a customer to specify identical lock types or unique lock types for each terminal. Shipped with two keys. One of the following must be specified:

Specify:

#9201 Type A
#9202 Type B
#9203 Type C
#9204 Type D
#9205 Type E
#9206 Type F
#9207 Type G
#9208 Type H
#9209 Type I
#9210 Type J
#9211 Type K

Note: The key for the Security Lock is *not* interchangeable with the key for the Cash Drawer Lock(s) (if installed). **Field Installation:** Yes.

Store Logo Printer (#6500): Provides the capability to print, from a stamp type impact print device, a store logo, slogan, or other graphic at the top of the cash receipt. The maximum size of the logo, slogan, or graphic is 1.27cm (0.5 inches) vertically by 6.35cm (2.5 inches) wide. The pre-inked stamp for this print device is customer-supplied. See *IBM 5260 Retail System Planning and Site Preparation Guide* (GA21-9391) for details. Stamp ink life is dependent on ink color, lines of print, total amount of character surface, and customer acceptance of readability. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES

Cash Tills: One cash till is shipped with the Cash Drawer special feature. Additional multiple compartment cash tills with either fixed or adjustable bill and coin slots are available.

- Till with fixed bill and coin slots (without cover), B/M 1612499.
- Till with adjustable bill and coin slots (without cover), B/M 1612500. Note: Assembly of the till with adjustable slots is a customer responsibility.
- Lockable Till Cover including two keys, B/M 1612501.
- Additional key for lockable till cover, P/N 1851268.

Replacement Locks and Keys: The 5265 is equipped with a lock on the diskette assembly cover. The machine is shipped with two keys for the lock. Any cash drawer (special feature) on the 5265 is equipped with the *same lock type* as the diskette assembly cover lock. Additional or replacement keys may be purchased from a local locksmith.

Use the following part numbers when ordering replacement locks and keys:

Lock Type	Diskette Assembly Cover	Cash Drawer	Security Lock *
A	1612369	1612386	1612412
B	1612370	1612387	1612413
C	1612371	1612388	1612414
D	1612372	1612398	1612415
E	1612373	1612399	1612416
F	1612374	1612403	1612417
G	1612376	1612405	1612418
H	1612378	1612406	1612419
I	1612379	1612407	1612420
J	1612382	1612409	1612421
K	1612383	1612410	1612422

* The Security Lock and Key (#6300) must be installed *before* a replacement can be ordered. The security key is not interchangeable with the diskette assembly cover key or the cash drawer key.

Journal Lock Key: Order by machine type and P/N 1612439.

Keyboard Overlays

Standard Overlay: The standard keyboard overlay can be modified to identify the function of the keys as defined during personalization. This overlay is initially shipped with the 5265. To order additional or replacements, order by part number.

Blank Overlay: Blank keyboard overlays are available for those customers with multiple machine installations who desire to have a local vendor silk screen them to match the personalized function. order by part number.

Blank Overlay, 34 Key, P/N 5559882
Blank Overlay, 64 Key, P/N 5559883

Personalization Overlay: The personalization overlay fits over the keyboard and is used to identify the function of the keys during personalization. This overlay is initially shipped with the 5265.

Personalization Overlay, Touch-Tone Style Keyboard, P/N 1610371.
Personalization Overlay, Adding Machine Style Keyboard, P/N 1610391.

Keyboard Overlay Nomenclature Kit: One kit of die-cut self-adhesive labels is shipped with each 5265. Used to modify keyboard to customer requirements.

To order additional or replacements, order by part number.

Cables: Cables, connector, and adapters (to attach a 5266 to a 5265 or to other 5266s in the cluster) may be purchased from IBM or a customer-selected source. See *IBM 5260 Retail System Planning and Site Preparation Guide* (GA21-9391), for cable, connector, and adapter specifications. The customer is responsible for installation and maintenance of these cables. Assembled cables may be ordered from IBM. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5266s.

Twinax Connector Kit P/N 7362268: Includes two connectors. Twinax Wire and one Twinax Connector Kit are required for each attachment cable. (Individual connectors P/N 7362229 are available for replacements.)

Twinax Wire P/N 7362211: Order must specify the desired length. Twinax Wire and one Twinax Connector Kit are required for each attachment cable. This is an indoor/outdoor cable.

Twinax Cable Assembly P/N 7362267: Includes a Connector Kit (2 connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinax Adapter P/N 7362230: Permits two Twinax Cable Assemblies to be joined together.

Twinax Station Protector Kit P/N 7361807: Includes two protectors. One is required at each end of attachment cable installed outdoors (either above or below ground level).

5266 Point of Sale Terminal (cont'd)

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinax® Connector Kit: Includes two connectors. Twinax wire and one connector kit are required for each attachment cable. Order P/N 7362063 for Teflon-covered cable. Individual connectors P/N 7362229 are available for replacement.

Twinax Wire: Order must specify the desired length. Twinax wire and one connector kit are required for each attachment cable. Order P/N 7362061 for Teflon-covered cable.

Twinax Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N 7362062 for Teflon-covered cable assembly.

SUPPLIES

For ordering information, Contact IBM.

Ribbons: Cash Receipt/Journal Roll Printer: Black P/N 1299285, Purple P/N 1299286. **Note:** Black is recommended.

Roll Paper: Cash Receipt and Journal Roll, P/N 432767 (Carton of 50 rolls).

Forms: Single and Multipart cut form sales slips may also be ordered.

5271 SYSTEM UNIT

PURPOSE

The 5271 System Unit operates with the 3270-PC Control Program (1837-434) and IBM Personal Computer DOS 2.0 to provide the user with multiple concurrent host sessions and one IBM Personal Computer DOS 2.0 session. The 5271 provides for the attachment of a 5271 keyboard and a display unit. The display may be either a 5151 Monochrome Display or a 5272 Color Display. The 5271 System Unit attaches to the 3274 Control Unit as a Category "A" terminal.

MODELS

Model 002 Includes: 256KB RAM (expandable to 640KB), 5151/5272 Display adapter, 5271 keyboard, 3270-PC Keyboard/Timer adapter, one Dual-Sided Diskette Drive and adapter, 3270 system adapter. 3270-PC Control Program, IBM PC DOS 2.0,

Model 004 Includes: Standard Model 002 features plus: Second Dual-Sided Diskette Drive, 64/256KB Memory Expansion Option (with 64KB for 320KB total), Printer Adapter for a 5152 Graphics Printer.

Model 006 Includes: Standard Model 002 features plus: One 10MB Fixed Disk and adapter, 64/256KB Memory Expansion Option (with 64KB for 320KB total), Printer Adapter for a 5152 Graphics Printer.

Customer Setup (CSU): Yes. (IBM setup is available at hourly rate and minimum charges.

HIGHLIGHTS

- The 5271 attaches to a 3274, 4321, 4331, or 4361 in Control Unit Terminal mode. In Distributed Function Terminal mode, it attaches to a 3274 using one physical port and up to four logical addresses. Up to 32 5271s can be attached to a 3274, depending on the application and the 3274 mdl used. The 5271 attaches via the same type coax cable used with other 3270 terminals.

Customer Responsibilities:
- Adequate site, system and other vendor preparations.
- Receipt at customer's receiving dock, unpacking, and placement of the unit.
- Physical setup, connection of cables in customer access areas, switch settings, and checkout.
- Contacting an IBM customer service coordinator for attachment of the 5271 communication cable to an on-site serviced IBM control unit where customer access area is not provided.
- Customizing the 3270-PC and 3274 (see *3274 Customizing Guide*, GA23 -0065).
- Determination of the required number of spares.
- Performing Customer Problem Analysis and Resolution (CPAR).
- Testing other IBM Personal Computer options not included with the 3270-PC to assure viability. IBM does not accept any responsibility for them.
- Spare blank diskettes must be ordered by the customer as required.

Mdls and Configuration Support: Table A identifies the 3274 mdls and configuration support required for the 3270-PC.

Table A. 3274 Mdls and Configuration Support.

Mode/Mdl/Storage			
5271 Mode			
1B	1A, C, D	1A, C, D	
21B	21A, C, D	31A, C, D	31A, C, D
		51C	51C
64KB	64KB	128KB	192KB
Control Unit Terminal Mode			
A	A, B	A, B, C, T*	D
64KB	64KB	128KB	192KB
Control Unit Terminal or Distributed Function Terminal Mode			
		T*	D*
		128KB	192KB

*Configuration Support T must be at release level 31 or higher and configuration support D at release level 61 or higher.

Note: The following RPQs in the 3274 Control Unit are not allowed when a 3270-PC operating in Control Unit Terminal mode is attached, they relate to keyboard changes: **8K0809, 8K0931, 8K0949, 8K0988, 8K1011, 8K1012, 8K1013, 8K1037, 8K1056, 8K1057, 8K1134, 8K1159, 8K11160 8K1162, 8K1163, 8K1169, 8K1170, 8K1195, 8K1198.**

Maximum number of 3274 attached terminals: The multiple logical terminal facility of the 3270-PC allows the user to designate up to four terminal addresses in a single 3270-PC. This requires one physical and four logical addresses for one physical port in the 3274 Control Unit. When planning installation of the 3270=PC, consideration must be given to the number of logical and physical addresses that are to be used compared to the maximum number of addresses and ports that are available. The number of addresses and ports available is dependent on the mdl of 3274, the method of system attachment, and the particular configuration of the 3274. When the 3274 has 3270-PCs attached that are operating in Distributed Function Terminal mode, table B specifies the maximum number of logical terminals that can be attached to the 3274.

Table B. Maximum number of Logical Terminals on a 3274

3274 Mdl	System Attachment	Max. No. Terminals
1A	Channel, SNA	128
1C	TP SDLC	128
	TP BSC	32
1D	Channel, non-SNA	32
31A	Channel, SNA	128
31C	TP SDLC	128
	TP BSC	32
31D	Channel, non-SNA	32
41A	Channel, SNA	128
41C	TP SDLC	128
	TP BSC	32
41D	Channel, non-SNA	32
51C	TP SDLC	36
	TP BSC	32
61C	TP SDLC	76
	TP BSC	32

Category "B" Terminal Restrictions: Category "B" terminals (e.g., 3277 Display Stations) cannot be used on the same 3274 when the 3274 is customized to support 3270-PCs operating in Distributed Function Terminal mode.

Bibliography: See KWIC index or specific system bibliography.

SPECIFY

- Voltage (120V AC, 60 Hz, 1-phase, 3-wire): No specify required.
- Line Cord: 1.8m (6 ft.), with no locking plug: No specify required.
- 5271 Keyboard and keyboard overlay: No specify required.
- Specify 5151 Monochrome or 5272 Color Display.

SPECIAL FEATURES

5152 Graphics Printer: Mdls 4 and 6. **Field Installation:** Yes.

PC FEATURES: The 5271 System Unit, when used with the IBM PC DOS 2.0, is capable of using many 5150/5160 Personal Computer options. The number of expansion slots available for these options are identified in the following table:

Slot	Option	Standard Mdl 2	4	6
1	3270 System adapter	X	X	X
2	64/256KB expansion		X	X
3				
4	Display adapter	X	X	X
5	Fixed Disk adapter			X
6	Diskette Drive adapter	X	X	X
7	Printer adapter		X	X
8	Keyboard adapter	X	X	X

Note: Slots 1 through 6 are long slots; 7 and 8 are short.

The following 5150/5160 Personal Computer options may be ordered with the 5271:

64KB Memory Module Kit (#1003).

64/256KB Memory Expansion Option (#1013).

Communications Adapter Cable (#2067).

Asynchronous Communications Adapter (#2074).

10MB Fixed Disk (#2500).

5271 System Unit (cont'd)

Fixed Disk Adapter (#2501).

Dual-Sided Diskette Drive (#3810).

Printer Adapter (#5200).

Printer Cable (#5612).

Although the Dual-Sided Diskette Drive and the 10MB Fixed Disk and Fixed Disk Adapter are 5150/5160 Personal Computer options that may be ordered with the 3270-PC, it is expected that new unit orders will be placed for appropriate configurations.

ORDERING AND SCHEDULING:

The 5271 is stocked in quantity at the IBM FE Distribution Center. Raleigh. Ordering is simplified because the 5271 standard mdls include most of the features; some options can be ordered with the 5271. When an order is placed, it is initially entered for a 5271. All orders are shipped from the FE Distribution Center.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Each 5271 shipment to a customer will include the following: Basic reference manual and binder ... *3270-PC Guide To Operations* ... *3270-PC Maintenance Information.*

5272 COLOR DISPLAY

PURPOSE

A 14-inch color cathode-ray tube (CRT) used with the 5271 System Unit for displaying data to the professional user. A tilt and rotate mechanism is included in the 5272 Color Display Stand.

MODELS

Model 001

Prerequisites: 5271 System Unit.

Customer Setup: Yes.

HIGHLIGHTS

Displays 720 by 350 picture elements which in host-interactive mode provides a 1920-character screen of 80-characters by 24 lines. A 25th line is available for an operator information area. When the 5271 operates in 3270 PC stand-alone mode, 2,000-characters are displayed as 80-characters by 25 lines. The character cell is 9 x 14.

- The following feature are automatically shipped with the 5272:

  5272 Line Cord (P/N 1836166): Provides 120V input power to the 5272 Color Display.

  5272 Color Display Stand (P/N 6871672): Provides a base for the 5272 Color Display and allows +/- 50 degrees of swivel and +15/-4 degrees tile.

Customer Responsibilities:

- Adequate site, system, and other vendor preparation.
- Receipt at customers receiving dock, unpacking and placement of the unit.
- Physical setup, connection of cables, switch settings, and checkout.
- Determination of required number of spares.
- Performing customer problem analysis and resolution.
- Calling a toll-free number for service.

Bibliography: See KWIC Index or specific system bibliography.

SPECIFY

- Voltage: 120V AC, 1-phase 60 Hz, (no specify required).

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

5281 DATA STATION

PURPOSE

A single, table-top, auxiliary keyboard/display for use in the 5280 Distributed Data System. Attaches to the 5285 Programmable Data Station, the 5286 Dual Programmable Data Station or the 5288 Programmable Control Unit.

MODELS

Model Z00

Prerequisites: The 5281 requires a 5285, 5286, or 5288 with appropriate auxiliary data station attachment special feature. A cable is required. If the 5281 contains one or two disk or diskette drives, the 5285, 5286, or 5288 requires an appropriate Remote Disk/Diskette Drive Attachment (special feature) ... see M5285, 5286, or 5288 pages. An additional cable is required if the 5281 contains one or two disk or diskette drives. See "Accessories" below.

Device Attachments: Appropriate special features are required to attach auxiliary data stations (5281, 5282) and some I/O units to a 5285, 5286, or 5288. See M5285, 5286, or 5288 "Special Features."

For physical planning information, see *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

HIGHLIGHTS

- Functions as an independent data station.
- Attaches via cable(s) to a 5285 Programmable Data Station, a 5286 Dual Programmable Data Station, or a 5288 Programmable Control Unit at a distance of up to 61m (200 feet).
- Obtains control, logic and main storage from the attaching 5285, 5286, or 5288. Each keyboard/display in a 5280 system operates independently and has identical access to system resources.
- Movable keyboard has palm rest for operator efficiency and comfort.
- Display sizes of 480, 960, and 1,920 characters.
- Disk storage capacity of 10M bytes or 20M bytes.
- Diskette storage capacity of 0.25M bytes to 2.4M bytes.

Display: Display sizes are: 480 characters (six lines of 80 characters), 960 characters (12 lines of 80 characters), and 1,920 characters (24 lines of 80 characters). The display size is determined by the auxiliary data station attachment feature on the controlling device to which the 5281 is attached. See M5285, 5286, or 5288 "Special Features".

Display characters are presented within an 8X16 dot matrix. The standard, upper/lower case, 94-character EBCDIC character set,94-character ASCII character set,and the 185-character Multinational Character Set are included. The character set is user-selectable. See "Type Catalog" for available character sets.

Extended highlighting provides screen attributes such as reverse image, high intensity, blink, underline, non-display, and column separator. Screen attributes are under program control and can be applied on a field basis. Brightness and contrast controls are provided to meet individual requirements.

Keyboard: A choice of three keyboard types provide input flexibility to meet individual user requirements; data entry, data entry with proof arrangement, and typewriter (see "Special Features" below). See Type Catalog for keyboard layout.

Each keyboard has cursor movement keys, special function keys, field exit keys and data keys (alphabetic and numeric). All data keys are typamatic. The keyboard is movable and has a palm rest for operator comfort and efficiency.

The keyboards contain only a subset of the characters in the Multinational Character Set. When the Multinational Character Set is used, the additional characters may be entered via multiple key sequence.

Typewriter keyboards provide for direct entry of upper and lowercase characters. Data entry keyboards provide for direct entry of uppercase only. Lowercase characters may be entered via multiple key sequence.

Disk: When attached to a 5285 or 5288, the 5281 can contain one or two 10MB disk storage drives ... see "Special Features". The disk storage is a physically non-removable, direct access storage medium. See M5285 or 5288 pages for characteristics and capacities. A cable is required ... see " Accessories".

Diskette: Two types of compact diskette drives are available for the 5281. A diskette drive which can read/write Diskette 1 and a diskette drive which can read/write Diskette 1, 2, and 2D ... see "Special Features" and M5285, 5286, or 5288 pages for diskette drive characteristics, capacities and diskette data exchange information. A cable is required ... see "Accessories" below.

Security: A non-display input mode allows data to be entered from the keyboard without being displayed on the screen. A security keylock (special feature on the 5285, 5286, and 5288) prevents keyboard entry or display of data, and on a communicating 5285 or 5288 system, prevents initiation of communications. A Magnetic Stripe Reader (special feature) is available which may be used to enter user identification. This allows user program routines to audit and control operator access to data.

Customer Setup (CSU): The 5281 is designated Customer Setup, and offers customers ease of setup and relocation flexibility. The Customer Setup Allowance is two days . For additional information on CSU, refer to the GI section. One copy of *IBM 5280 User's Setup Procedures* (GA21-9365), is included with each 5281.

Customer Responsibility: The customer is responsible for;

- Adequate site, system, and other vendor preparation.
- Providing a desk, counter, or table-top to support the 5281.
- Receipt, unpacking, and placement of the 5281.
- Installation and maintenance of signal cables and associated parts for attaching the 5281 to a 5285, 5286, or 5288.
- Physical setup, switch setting, and checkout in accordance with instructions supplied by IBM.
- Using and following the 5280 problem determination procedures prior to calling for IBM service.
- Relocation of the 5281 if required, to allow IBM service access.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5281.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the Branch Office.
- When adding a 5281 to a 5285, 5286, or 5288, the customer may have to modify the system configuration specifications. See *IBM 5280 System Control Programming Reference/Operation Manual* (GC21-7824).

Publications: *IBM 5280 General Information* (GA21-9350) and *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

AAS Ordering Instructions: The 5281 is a System Component.

SPECIFY

- Voltage (115 V AC, 1-phase, 60 Hz): Specify **#9881** for a standard non-locking plug (uses customer standard type receptacle) or **#9880** for a locking plug (requires customer locking type receptacle).
- Color: Pearl white only (no specify required).
- Signal Cables: Special, purchase-only, multi-wire cables are required. See "Accessories" for 5281 cable information and ordering instructions. **Specify: #9050** if cable is ordered from IBM, or **#9055** if cable is ordered from another source.
- A keyboard must be selected (see "Special Features").

SPECIAL FEATURES

Replaced parts from any special feature installation or removal remain the property of the customer.

Disk/Diskette (#3401, #3402, #3410): Two physical positions are available for optional disk and diskette drives. The 5281 can contain 0, 1, or 2 drives. Any combination of disk/diskette drives is allowed. **Note:** When attached to a 5286, only diskette drives can be installed on the 5281.

Diskette 1 Drive (#3401): A diskette drive which can read/write IBM diskette 1. **Field Installation:** Yes. **Prerequisites:** The controlling device to which the 5281 is attached requires an appropriate Remote Disk/Diskette Drive Attachment (#1240 on the 5285, 5286) ... (#1300, #1301, #1302 on the 5288).

Diskette 2D Drive (#3402): A diskette drive which can read/write IBM diskette 1, 2, and 2D. **Prerequisites:** The controlling device to which the 5281 is attached requires an appropriate Remote Disk/Diskette Drive Attachment (#1240 on the 5285, 5286) ... (#1300, #1301, #1302 on the 5288). **Field Installation:** Yes.

Disk Storage Drive (#3410): A 10MB non-removable direct access storage device. **Prerequisites:** The controlling device to which the 5281 is attached requires an appropriate Remote Disk/Diskette Drive Attachment (#1240 on the 5285), (#1300, #1301, #1302 on the 5288) and Remote Disk Prerequisite (#4400 on the 5285, 5288). **Limitations:** Cannot be installed on a 5281 which is attached to a 5286. **Note:** If a Disk Storage Drive and a diskette drive (#3401 or #3402) are installed in a 5281, the Disk Storage Drive must be installed in the right-most position of the 5281. **Field Installation:** Yes.

Maximum: Two of the above.

5281 Data Station (cont'd)

Keyboard (#4600, #4601, #4602, #4603): One of the following must be selected.

#4600: 83-key keyboard with the EBCDIC character set, typewriter-like layout, movable, with 49 alphameric keys, 24 function keys, and 10-key numeric keypad.

#4601: 66-key data entry style keyboard, movable, with 36 alphameric keys, and 30 function keys.

#4602: 66-key data entry style keyboard with proof arrangement, movable, with 36 alphameric keys, and 30 function keys. The numeric keys are arranged similar to those of an adding machine.

#4603: 83-key keyboard with ASCII character set, typewriter-like layout, movable, with 49 alphameric keys, 24 function keys, and 10-key numeric keypad. **Maximum:** One of the above. **Field Installation:** Yes.

Magnetic Stripe Reader (#4950): Provides the capability of reading numeric encoded information from a magnetic stripe on a wide range of credit cards, identification cards, and documents. The magnetic stripe may be encoded with up to 128 ABA numeric characters, including control characters. This feature enhances system data security by providing the ability to read an operator identification card without being displayed. See "Supplies" for magnetically striped and encoded identification cards. **Limitations:** Valid for numeric-only data. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** The 5285, 5286, or 5288 requires a Magnetic Stripe Reader Adapter/Elapsed Time Counter (special feature).

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: Cables to attach the 5281 to a 5285, 5286, or 5288 may be purchased from IBM or a customer-selected source. For a description of these cables and parts, see *IBM 5280 Cable Assembly Manual* (GA21-9341). The customer is responsible for the installation and maintenance of these cables and their associated parts. Cables and parts which may be purchased from IBM are shown below. Order via MES. Specify bulk number, cable assembly number, or part number as appropriate. Allow a lead time of nine weeks.

Data Station Cable: Required to attach the 5281 to a 5285, 5286, or 5288.

Data Station Wire (B/N 7364108): Order must specify the desired length. Maximum length is 61m (200 feet). Data Station Wire and one Wire Connector Kit are required for each attachment cable.

Wire Connector Kit (P/N 4177800): Includes two connectors and associated hardware. One connector and Data Station Wire are required for each attachment cable.

Data Station Cable Assembly: Includes a connector kit (2 connectors) attached to bulk wire. A/N **7364212**. The reqiured length of wire must be specified on the order. Maximum length is 61m (200 feet).

Disk/Diskette Drive Cable: A single cable is required to attach either one or two disk/diskette drives housed within the 5281 or to a 5285, 5286 (diskette only), or 5288.

Disk/Diskete Drive Wire (B/N 7364109): Order must specify the desired length. Maximum length is 61m (200 feet). Disk/Diskette Drive Wire and one Wire Connector Kit are required for each attachment cable.

Wire Connector Kit (P/N 4177800): Includes two connectors and associated hardware. One connector kit and Disk/Diskette Drive wire are required for each attachment cable.

Disk/Diskette Drive Cable Assembly: Includes a connector kit (2 connectors) attached to a bulk wire.

A/N **7364208**. The required length of wire must be specified on the order. Maximum length is 61m (200 feet).

Display Screen Filter (#3300): An optically coated glass filter which attaches to the display, specifically designed to aid operator comfort by reducing reflected glare and providing improved display readability. Character contrast may also be enhanced. The filter is a CSU accessory. Order by feature number.

SUPPLIES

For IBM diskettes and magnetically striped and encoded identification cards contact IBM.

5282 DUAL DATA STATION

PURPOSE

A dual, table-top, auxiliary keyboard/display station for use in the 5280 Distributed Data System. Attaches to the 5285 Programmable Data Station, the 5286 Dual Programmable Data Station or the 5288 Programmable Control Unit.

MODELS

Model Z00

Prerequisites: The 5282 requires a 5285, 5286, or 5288 with appropriate auxiliary data station attachment (special feature). A cable is required. If the 5282 contains one or two diskette drives, the 5285, 5286, or 5288 requires an appropriate Remote Disk/Diskette Drive Attachment (#1240). See M5285, 5286, or 5288 pages.

Device Attachments: Appropriate special features are required to attach auxiliary data stations (5281, 5282) and some I/O units to a 5285, 5286, or 5288. See M5285, 5286, or 5288 "Special Features".

For physical planning information, see *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

An additional cable is required if the 5282 contains one or two diskette drives. See "Accessories" below.

HIGHLIGHTS

- Single, split screen CRT display with two keyboards.
- Functions two independent data stations.
- Attaches via cable(s) to a 5285 Programmable Data Station, a 5286 Dual Programmable Data Station, or a 5288 Programmable Control Unit at a distance of up to 61 meters (200 feet).
- Obtains control, logic and main storage from the attaching 5285, 5286, or 5288. Each keyboard/display in a 5280 system operates independently and has identical access to system resources.
- Display sizes of 480 and 960 characters.
- Movable keyboard has palm rest for operator efficiency and comfort.
- Diskette storage capacity of 0.25M bytes to 2.4M bytes.
- Provides two operator positions, each with keyboard, diskette (optional), and display area.

Display: Display sizes are: 480 characters (six lines of 80 characters), 960 characters (12 lines of 80 characters). Both positions have the same display size. The display size is determined by the auxiliary data station attachment feature on the controlling device to which the 5282 is attached. See M5285, 5286, or 5288 "Special Features".

Display characters are presented within an 8x16 dot matrix. The standard, upper/lower case, 94-character EBCDIC character set, 94-character ASCII character set, and the 185-character Multinational character set are included. The character set is user-selectable. . See "Type Catalog" for available character sets. Both operator positions must use the same character set.

Extended highlighting provides screen attributes such as reverse-image, high-intensity, blink, underline, non-display, and column separator. Screen attributes are under program control and can be applied on a field basis. Brightness and contrast controls are provided to meet individual requirements. Each control affects both operator positions.

Keyboard: A choice of three keyboard types provide input flexibility to meet individual user requirements; data entry, data entry with proof arrangement, and typewriter (see "Special Features" below). Both 5282 keyboards must be the same type. See Type Catalog for keyboard layout. Each keyboard has cursor movement keys, special function keys, field exit keys and data keys (alphabetic and numeric). All data keys are typamatic. The keyboards are movable and have a palm rest for operator comfort and efficiency.

The keyboards contain only a subset of the characters in the Multinational Character Set. When the Multinational Character Set is used, the additional characters may be entered via multiple key sequence.

Typewriter keyboards provide direct entry of upper and lowercase characters. Data entry keyboards provide for direct entry of uppercase only. Lowercase characters may be entered via multiple key sequence.

Diskette: Two types of compact diskette drives are available for the 5282. A diskette drive which can read/write Diskette 1 and a diskette drive which can read/write Diskette 1, 2, and 2D. See "Special Features", and M5285, 5286, or 5288 pages for diskette drive characteristics, capacities and diskette data exchange information. A cable is required ... see "Accessories" below.

Security: A non-display input mode allows data to be entered from the keyboard without being displayed on the screen. A security keylock (special feature on the 5285, 5286, and 5288) prevents keyboard entry or display of data, and, on a communicating 5285 or 5288 system, prevents initiation of communications. A Magnetic Stripe Reader (special feature) is available which may be used to enter user identification. This allows user program routines to audit and control operator access to data.

Customer Setup (CSU): The 5282 is designated Customer Setup, and offers customers ease of setup and relocation flexibility. . For additional information on CSU, refer to the GI section. One copy of *IBM 5280 User's Setup Procedures* (GA21-9365), is included with each 5282.

Customer Responsibility: The customer is responsible for;

- Adequate site, system, and other vendor preparation.
- Providing a desk, counter, or table-top to support the 5282.
- Receipt, unpacking, and placement of the 5282.
- Installation and maintenance of signal cables and associated parts for attaching the 5282 to a 5285, 5286, or 5288.
- Physical setup, switch setting, and checkout in accordance with instructions supplied by IBM.
- Using and following the 5280 problem determination procedures prior to calling for IBM service.
- Relocation of the 5282 if required, to allow IBM service access.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5282.
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the Branch Office.
- When adding a 5282 to a 5285, 5286, or 5288, the customer may have to modify the system configuration specifications. See *IBM 5280 System Control Programming Reference/Operation Manual* (GC21-7824).

Publications: *IBM 5280 General Information* (GA21-9350) and *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

AAS Ordering Instructions: The 5282 is a System Component.

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): Specify **#9881** for a standard nonlocking plug (uses customer standard type receptacle) or **#9880** for a locking plug (requires customer locking type receptacle).
- Color: Pearl White only (no specify required).
- Signal Cables: Special, purchase-only, multi-wire cables are required. See "Accessories" for 5282 cable information and ordering instructions. **Specify: #9050** if cable is ordered from IBM, or **#9055** if cable is ordered from another source.
- Two keyboards must be selected (see "Special Features").

SPECIAL FEATURES

Diskette Drives (#3401, #3402): Two physical positions are available for optional diskette drives. The 5282 can contain 0, 1, or 2 drives.

Diskette 1 Drive (#3401): A diskette drive which can read/write Diskette 1. **Maximum:** Two. **Field Installation:** Yes. **Prerequisites:** The controlling device to which the 5282 is attached requires an appropriate #1240 on the 5285, 5286, or #1300, #1301, #1302 on the 5288.

Diskette 2D Drive (#3402): A diskette drive which can read/write Diskette 1, 2, and 2D. **Maximum:** Two. **Field Installation:** Yes. **Prerequisites:** The controlling device to which the 5282 is attached requires an appropriate #1240 on the 5285, 5286, or #1300, #1301, #1302 on the 5288.

Keyboard (#4600, #4601, #4602, #4603): Two of the following must be selected. Both must be the same type.

#4600: 83-key keyboard with the EBCDIC character set, typewriter-like layout, movable, with 49 alphameric keys, 24 function keys, and 10-key numeric keypad.

#4601: 66-key data entry style keyboard, movable, with 36 alphameric keys, and 30 function keys.

#4602: 66-key data entry style keyboard with proof arrangement, movable, with 36 alphameric keys, and 30 function keys. The numeric keys are arranged similar to those of an adding machine.

#4603: 83-key keyboard with ASCII character set, typewriter-like layout, movable, with 49 alphameric keys, 24 function keys, and 10-key numeric keypad.

Maximum: Two of the above. **Field Installation:** Yes. **Prerequisites:** Keyboard Language (see "Specify").

5282 Dual Data Station (cont'd)

Magnetic Stripe Reader (#4950): Provides the capability of reading numeric encoded information from a magnetic stripe on a wide range of credit cards, identification cards, and documents. The magnetic stripe may be encoded with up to 128 ABA numeric characters, including control characters. This feature enhances system data security by providing the ability to read an operator identification card without being displayed. See "Supplies" for magnetically striped and encoded identification cards. **Limitations:** Valid for numeric-only data. If only one Magnetic Stripe Reader is used with the 5282, it will be assigned to and can only be used in conjunction with the keyboard located on the side of the 5282 which has the power switch. **Maximum:** Two. **Field Installation:** Yes. **Prerequisites:** The 5285, 5286, or 5288 requires a Magnetic Stripe Reader Adapter/Elapsed Time Counter (special feature).

Replaced Parts: Replaced parts from any special feature installation or removal remain the property of the customer.

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: Cables to attach the 5282 to a 5285, 5286, or 5288 may be purchased from IBM or a customer-selected source. For a description of these cables and parts, see *IBM 5280 Cable Assembly Manual* (GA21-9341). The customer is responsible for the installation and maintenance of these cables and their associated parts. Cables and parts which may be purchased from IBM are shown below. Order via MES. Specify bulk number, Cable assembly number, or part number as appropriate. Allow a lead time of nine weeks.

Data Station Cable: Required to attach 5282 to a 5285, 5286, or 5288.

Data Station Cable Assembly: Includes a connector kit (2 connectors) attached to bulk wire.

Data Station Wire (B/N 7364108): Order must specify the desired length. Maximum length is 60m (198 feet). Data Station Wire and one Wire Connector Kit are required for each attachment cable.

Disk/Diskette Drive Cable: A single cable is required to attach either one or two diskete drives housed within the 5282 to a 5285, 5286, or 5288.

Disk/Diskette Drive Cable Assembly: Includes a connector kit (2 connectors) attached to a bulk wire.

A/N 7364208. The required length of wire must be specified on the order. Maximum length is 60m (198 feet).

Disk/Diskete Drive Wire (B/N 7364109): Order must specify the desired length. Maximum length is 60m (198 feet). Disk/Diskette Drive Wire and one Wire Connector Kit are required for each attachment cable.

Wire Connector Kit (P/N 4177800): Includes two connectors and associated hardware. One connector kit and wire are required for each attachment cable.

SUPPLIES

For IBM diskettes and magnetically striped and encoded identification cards contact IBM.

5285 PROGRAMMABLE DATA STATION

PURPOSE

A single, table-top, programmable keyboard/display station with standard controller and diskette capability for data entry, associated processing and/or data communications. Part of the 5280 Distributed Data System.

MODELS

5285 models are available depending on main storage capacity and the type of diskette drive included in the base machine (one drive is standard).

Model	Main Storage Capacity	Diskette
A01*	32K	1
A05*	32K	2D
B01*	48K	1
B05*	48K	2D
C01	64K	1
C05	64K	2D
D01	96K	1
D05	96K	2D
E01	128K	1
E05	128K	2D

* Not available as of July 31, 1983.

Customer Setup (CSU): The 5285 is designated Customer Setup, and offers customers ease of setup and relocation flexibility. The customer Setup Allowance is two days . One copy of *IBM 5280 User's Setup Procedures* (GA21-9365) is included with each 5285.

HIGHLIGHTS

- Multiple microprocessors provide independent processing and I/O control.
- Stored program function.
- Multiprogramming capability with multiple main storage partitions.
- Powerful and extensive data editing function.
- Multi-chip technology and compact disk and diskette drives allow compact table-top system packaging.
- 10MB disk storage drive available.
- Two types of compact diskette drives, housed within the 5285, support either Diskette 1 or Diskette 1, 2, and 2D and provide up to 2.4M bytes of storage capacity.
- Front-loading diskette drives provide convenience and ease of access.
- Movable keyboard with palm rest for operator comfort.
- Display size of 480, 960, or 1,920 characters.
- Multiple data station capability and additional disk and diskette capacity with attachment of one 5281 Data Station or one 5282 Dual Data Station.
- Attachment capability for up to seven printers.
- Security features for data asset protection.
- Independent data station operation through multiprogramming and system resource sharing.
- Communications adapters provide both SDLC and BSC capability.
- Communications programming support available for RJE, batch, and interactive communications via SNA/SDLC or BSC.

Controller: Provides processing capability, control, main storage, and optional I/O attachments and communications features. Controls all functions of the 5285 and an optionally attached 5281 Data Station or 5282 Dual Data Station. Multiple microprocessor architecture allows processing and I/O operations (e.g., disk, diskette, keyboard/display, communications) to operate independently. The 5285 provides 64K of main storage that can be expanded to a maximum of 128K. Multiprogramming capability is available through partitioned memory. The number of partitions and their size (6K minimum) are user-specified with a facility provided in 5280 System Control Programming (5708-SC1). Special features provide for the attachment of an auxiliary data station (5281 or 5282), 5217, 5222, 5224, 5225, 5242, or 5256 printers and the communications adapters which each provide both SDLC and BSC communications under stored program control.

Display: Displays up to 480 characters on six lines of 80 characters each. Optional display sizes are 960 characters (12 lines of 80 characters) or 1,920 characters (24 lines of 80 characters). Characters are presented within an 8x16 dot matrix. The standard, upper/lower case, 94-character EBCDIC character set,94-character ASCII character set, and the 185-character Multinational Character Set are included. The character set is user-selectable. See "Type Catalog" for available character sets.

Extended highlighting provides screen attributes such as reverse image, high intensity, blink, underline, non-display, and column separator. Screen attributes are under program control and can be applied on a field basis. Brightness and contrast controls are provided to meet individual requirements.

Keyboard: A choice of three keyboard types provide input flexibility to meet individual user requirements: data entry, data entry with proof arrangement, and typewriter (see "Special Features" below). See "Type Catalog" for keyboard layout. Each keyboard has cursor movement keys, special function keys, field exit keys, and data keys (alphabetic and numeric). All data keys are typamatic. The keyboard is movable and has a palm rest for operator comfort. The keyboards contain only a subset of the characters in the Multinational Character Set. When the Multinational Character Set is used, the additional characters may be entered via multiple key sequence. Typewriter keyboards provide for direct entry of upper and lower case characters. Data entry keyboards provide for direct entry of uppercase only. Lowercase characters may be entered via multiple key sequence.

Disk/Diskette: One diskette drive is standard, and its type is determined by the 5285 mdl number. An additional diskette drive or a Disk Storage Drive can be added. See "Special Features".

Disk: One 10MB Disk Storage Drive can be installed in a 5285. The disk storage is a physically non-removable, direct access medium. Capacity and access times are:

Bytes/Sector	256
Bytes/Cylinder	32,768
Cylinders *	303
Capacity * (bytes)	9,928,704
Access Time (ms)	
Minimum (cyl to cyl)	16.6
Average (102 cyl)	85
Maximum	205
Rotation Speed (rpm)	3,600

* Available to the user for programs and data.

Diskette: Two types of compact diskette drives are available with the 5285: A diskette drive which can read/write Diskette 1 and a diskette drive which can read/write Diskette 1, 2, and 2D. Capacity per drive ranges from 0.25M bytes to 1.2M bytes. The formats for the diskettes are:

Diskette 1

Format	Bytes/Sector	Capacity
1	128	246KB*
2	256	284KB
3	512	303KB

*243KB when used for Basic Exchange

Diskette 2

Format	Bytes/Sector	Capacity
4	128	492KB
5	256	568KB
6	512	606KB

Diskette 2D

Format	Bytes/Sector	Capacity
7	256	985KB
8	512	1136KB
9	1024	1212KB

For diskette data exchange with other systems, the following exchange types are supported: Basic Exchange (Formats 1 and 4 above), H Exchange (Format 7 above), and I Exchange (all of the above formats). Diskettes can be interchanged with other IBM systems and devices which support a compatible diskette exchange type. Examples are the Series/1, System/3, System/32, System/34, System/36, System/38, S/370, 303X, 4300, 3540, 3740, 3747, 3770, 3790, 5110, 5230, 5260, and 8100.

The instantaneous data transfer rate using Diskette 1 or 2 is 31.2K bytes/sec and for Diskette 2D it is 62.5K bytes/sec. Rotational speed of both types of drives is 360 rpm. Diskette read or write is overlapped with seek. Diskette operations are overlapped with processing and other I/O device operations.

Auxiliary Data Station: One 5281 Data Station or 5282 Dual Data Station can be attached to the 5285. See "Special Features" below. The 5281 or 5282 is cable attached at a maximum distance of 61m (200 feet). The 5285 provides control and main storage in support of the auxiliary data station. Each keyboard/display (including the 5285) is assigned to a separate partition and operates independently. Each disk and diskette drive on the 5285 and an attached data station is available to any program and any keyboard/display.

The auxiliary data station must have the same display size(s) as the 5285. The auxiliary data station display size(s) is determined by the Auxiliary Data Station Attachment (special feature) on the 5285.

5285 Programmable Data Station (cont'd)

Printers: The 5217, 5222, 5224, 5225, 5242, and 5256 Printers are available for attachment to the 5285. One 5217, 5222, 5242 or a maximum of seven 5224, 5225, and/or 5256 Printers can be attached. See "Special Features". **Note:** Printer speeds may be affected by the customer's program, application load, forms design, and/or the number of printers attached to the system.

Security: A non-display input mode allows data to be entered from the keyboard without being displayed on the screen. A Security Keylock (special feature) prevents keyboard entry or display of data, and on a communicating 5285, prevents initiation of communications. In addition, a communicating 5285 can exchange identification sequences with the host, which assists the user in controlling access to data. A Magnetic Stripe Reader (special feature) is available which may be used to enter user identification. This assists user program routines in auditing and controlling operator access to data. Also, diskette media can be removed from the system and secured separately.

Communications: The Communications Adapter (#2500) operates under stored program control and allows for either SDLC or BSC data link control over a single communications line. The feature allows the 5285 to communicate on a switched point-to-point or nonswitched point-to-point or multipoint line at speeds up to 4800 bps. On a multipoint line, the 5285 operates as a tributary station.

The 3270 Emulation Communications Adapter (#3270) provides the same function as #2500 (above) and in addition, provides support for the 5280-3270 Emulation (5708-EM1) licensed program.

Connection to the line is supported by a Line Interface feature. Operation is half-duplex mode over a switched network on half-duplex facilities or half-duplex mode over nonswitched (or equivalent private) communications lines on duplex or half-duplex facilities. Switched network support includes manual dial and manual or auto-answer (where the attached modem supports this capability). The 5285 at each termination (drop point) of a communications line must use the same clocking source (modem or business machine). Units must be set to operate at the same transmission rate, use the same transmission code, and the same 2- or 4-wire connection to the line. Compatible modems must be used at all terminations on a network.

The 5285 using stored program control communicates using BSC protocol with:

- A Series/1 equipped with #2074, #2075, #2093/#2094.
- A System/3 equipped with #2074, #2084, or #2094.
- A System/32 equipped with #2074.
- A System/34 equipped with #2500, #3500, or #4500.
- A System/36 equipped with #2500 or #4500.
- A System/38 with appropriately configured BSC Adapter and subfeatures (point-to-point only).
- A S/370 via an Integrated Communications Adapter, a 4331 via a Communications Adapter, or a S/370, 303X, or 4300 via a 2701 Data Adapter Unit, or a 3704, 3705, or 3725 Communications Controller with the Network Controller Program (ACF/NCP) or the Partitioned Emulation Program (PEP), any of which are equipped with a binary synchronous communications adapter and appropriate subfeatures.
- A 3741 mdl 2 or 4.
- A 3747 Data Converter equipped with #1660.
- A 5265 communicating mdl XX2.
- A 5280 equipped with #2500 or #3270.

The 5285 using stored program control communicates in SNA/SDLC mode with a 4331 via a Communications Adapter, a S/370 via an Integrated Communications Adapter, an 8100 with DPPX/BASE, or a S/370, 303X, or 4300 via a 3704, 3705, or 3725 Communications Controller equipped with appropriate features. The 5285, using the 3270 Emulation Communications Adapter, communicates in SNA/SDLC mode with an 8100 Information System. See M3704, 3705, or 3725 pages.

See the 5280 programming pages for a description of the communications program support available, and any special feature requirements. The communications adapters are mutually exclusive and cannot be installed on a 5285 with the Second Application Microprocessor (#6800).

IBM Modems: One IBM modem can be attached to the Communications Adapter (#2500) or 3270 Emulation Communications Adapter (#3270). **Prerequisites:** #3701.

Modem	Speed (bps)	Facility
3863	2400	Switched, nonswitched
3868 mdl 1	2400	Nonswitched
3864	4800	Switched, nonswitched
3868 mdl 2	4800	Nonswitched
3872 mdl 1	2400/1200	Nonswitched

Note: The 5285 does not support Automatic Call Originate (#1091) on the 3872. For communication capabilities, product utilization and special features, see M2700, 3863, 3864, 3872 pages.

IBM Data Encryption Devices: An 3845 or 3846 Data Encryption Device may be attached between the 5285 communications adapter and the external modem. **Note:** Refer to M2700, 3845, and 3846 pages for information on 3845 or 3846 configuration and communication capability. The 3845 or 3846 device operating with SDLC will not operate with NRZI transmission mode. **Prerequisites:** #3701.

Communications References:

- See the Programming pages for possible restrictions with some products.
- See M2700 pages for additional information concerning modems, communications facility, machine attachment requirements, terminal intermix, operating capabilities, and customer responsibilities.
- For information concerning external modems attachable to the Adapter, contact IBM.
- Refer to the *IBM 5280 Planning and Site Preparation Guide* (GA21-9351) for physical planning information.

Communications Cable: A communications cable length is required. See "Specify".

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of the problem determination procedures and recovery routines that are easily understood and used by the operator. The procedures are described in the *IBM 5280 Machine Verification Manual* (GA21-9357).

Customer Responsibilities: The customer is responsible for:

- Adequate site, system, and other vendor preparation.
- Obtaining a firm installation date for the start of communications facilities and services (including any required modems). The marketing representative must assure that a firm installation date is established prior to Order Confirmation.
- Providing a desk, counter, or table-top to support the 5285.
- Receipt, unpacking, and placement of the 5285.
- Installation and maintenance of signal cables and associated parts for attaching a 5217, 5222, 5224, 5225, 5242, 5256, 5281, or 5282 to the 5285.
- Physical setup, connection of cables to communications lines/modems and IBM devices incorporating protected access areas, modem attenuation setting and checkout in accordance with instructions supplied by IBM.
- To provide an FCC registered protective circuit when attaching an integrated modem to the public switched telephone network. This registered protective circuit should be equivalent to either the CBS type coupler (for manual/automatic answering) or the CDT type coupler (for manual only answering).
- Using and following the 5280 problem determination procedures prior to calling for IBM service.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5285.
- Relocation of the 5285, if required, to allow IBM service access.
- When adding a 5281 or 5282 to the 5285, the customer may have to modify the system configuration specifications. See *IBM 5280 System Control Programming Reference/Operation Manual* (GC21-7824).
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the branch office.
- The customer must be advised, in writing, of certain responsibilities related to the installation and maintenance of common carrier facilities/services as well as the IBM equipment. For further information, see M2700 pages.

Publications: *IBM 5280 General Information* (GA21-9350) and *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

Notes:

1. Device Attachments: Appropriate special features are required to attach auxiliary data stations (5281, 5282) and some I/O units. See "Special Features".
2. IBM 5280 System Control Programming (5708-SC1) should be ordered at equipment order entry time.
3. For physical planning information, see *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

5285 Programmable Data Station (cont'd)

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9881** for a standard non-locking plug (uses customer standard type receptacle) or **#9880** for a locking plug (requires customer locking type receptacle).
- Color: Pearl white only (no specify required).
- A keyboard must be selected (see "Special Features").
- Primary host system that will process the data captured by the 5285:

Series/1	**#9505**
System/3	**#9501**
System/32	**#9502**
System/34	**#9503**
System/36	**#9503**
System/38	**#9504**
Other Small IBM System	**#9506**
S/360	**#9507**
S/370:	
- Mdl 138 and below	**#9508**
- Mdl 145 and above	**#9509**
3031, 3032, 3033	**#9510**
4331, 4341	**#9511**
8100	**#9512**
Other Large IBM System	**#9513**
Non-IBM System	**#9514**
Host System Unknown	**#9515**
Non-Host System	**#9516**

- Communications Cable Length (with #2500 or #3270): Required when attaching the 5285 to the communications facility. **#9010** for a 6m (20 foot) cable or **#9015** for a 12m (40 foot) cable. Specify this cable length only once per system.
- **Mandatory Specify Codes for Communications:** One selection must be specified from each of the following tables. Entries selected from Tables D, E and F will be used to preset hardware functions during manufacture. Selection from each of the other tables should be based on prime usage.

Table A - Line Control

BSC	**#9400**
SDLC	**#9401**

Table B - Transmission Code

EBCDIC	**#9060**

SPECIAL FEATURES

Replaced parts from any special feature installation or removal remain the property of the customer.

NON-COMMUNICATIONS FEATURES

Twinaxial Printer Attachment (#1150): Provides for the attachment of 5224 mdl 1 or 2, 5225 mdl 1, 2, 3, or 4 and/or 5256 mdl 1, 2, or 3 Printers to a single twinaxial port. A maximum of seven printers can be attached. Attachment is by twinaxial cable. The maximum cable length is 1,525 meters (5,000 feet). **Limitations:** Cannot be installed with Start/Stop Printer Attachment (#1152). **Prerequisites:** If multiple printers are attached, each printer on the cable, except the last, requires a Cable-Thru feature. **Maximum:** One. **Field Installation:** Yes.

Start/Stop Printer Attachment (#1152): To attach one 5217, 5222, or 5242 mdl 2 Printer. Attachment is by double twisted pair cable. A 6m (20 foot) cable is provided with the printer. For the 5222 Printer, an extension cable accessory is available to provide a total cable length of up to 61m (200 feet) ... see M5222 "Accessories". **Limitations:** Cannot be installed with Twinaxial Printer Attachment (#1150). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** If feature #1152 was shipped before April 1, 1983, the 5285 also requires EC #467318 for attachment of the 5217 or 5242.

Auxiliary Data Station Attachment (#1200, #1205, #1210, #1215, #1220 : To attach one 5281 Data Station or one 5282 Dual Data Station. This feature also determines the display size of the auxiliary data station. The 5281 or 5282 must have the same display size(s) as the 5285. Attachment is by cable ... see M5281 or 5282 "Accessories". The maximum cable length is 61m (200 feet). Select one feature from the following:

Data Station	Display Sizes	Order Feature Number
5281	480	#1200 *

Limitations: Cannot be installed with the 3270 Emulation Communications Adapter (#3270), Optional 960-Character Display Size (#3500), or Optional 1,920-Character Display Size (#3505).

5281	960	#1205*

Limitations: Cannot be installed with the 3270 Emulation Communications Adapter (#3270). **Prerequisites:** Optional 960-Character Display Size (#3500).

5281	1,920	#1210

Prerequisites: Optional 1,920-Character Display Size (#3505).

5282	480	#1215

Limitations: Cannot be installed with the 3270 Emulation Communications Adapter (#3270), Optional 960-Character Display Size (#3500), or Optional 1,920-Character Display Size (#3505).

5282	960	#1220*

Limitations: Cannot be installed with the 3270 Emulation Communications Adapter (#3270). **Prerequisites:** Optional 960-Character Display Size (#3500).

* Not available as of July 31, 1983.

Maximum: One. **Field Installation:** Yes.

Remote Disk/Diskette Drive Attachment (#1240): Required if an attached 5281 Data Station has a diskette drive(s) (#3401, #3402) and/or a Disk Storage Drive(s) (#3410). Required if an attached 5282 Dual Data Station has either one or two diskette drives (#3401, #3402). A cable is required ... see M5281 or 5282 "Accessories". **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Auxiliary Data Station Attachment (#1200, #1205, #1210, #1215, or #1220). #4400, if an attached 5281 Data Station has either one or two #3410 disk storage drive(s).

Diskette 1 Drive (#3401): An additional diskette drive which can read/write Diskette 1. **Limitations:** Cannot be installed with the optional Diskette 2D Drive (#3402) or the Disk Storage Drive (#3410). **Maximum:** One. **Field Installation:** Yes.

Diskette 2D Drive (#3402): An additional diskette drive which can read/write Diskette 1, 2, and 2D. **Limitations:** Cannot be installed with the optional Diskette 1 Drive (#3401) or the Disk Storage Drive (#3410). **Maximum:** One. **Field Installation:** Yes.

Disk Storage Drive (#3410): A 10MB non-removable direct access storage device. **Limitations:** Cannot be installed with the optional Diskette 1 Drive (#3401) or Diskette 2D Drive (#3402). Must be

5285 Programmable Data Station (cont'd)

installed in the right-most disk/diskette position of the 5285. **Maximum:** One. **Field Installation:** Yes.

Optional 960-Character Display Size (#3500): [Not available as of July 31, 1983.] Provides a maximum display capacity of 960 characters with 12 lines of 80 characters each. This feature or the Optional 1,920-Character Display Size (#3505) is required for the 5280 Communications Utilities Licensed Program (5708-DC1). **Limitations:** Cannot be installed with Optional 1,920-Character Display Size (#3505) or with Auxiliary Data Station Attachment (#1200, #1210, or #1215). **Maximum:** One. **Field Installation:** Yes.

Optional 1,920-Character Display Size (#3505): Provides a maximum display capacity of 1,920 characters with 24 lines of 80 characters each. This feature or the Optional 960-Character Display Size (#3500) is required for the 5280 Communications Utilities Licensed Program (5708-DC1). **Limitations:** Cannot be installed with Optional 960-Character Display Size (#3500) or with Auxiliary Data Station Attachment (#1200, #1205, #1215, or #1220). **Maximum:** One. **Field Installation:** Yes.

Elapsed Time Counter (#3610): Used to measure elapsed real time. It is required for SNA operations under the 5280 Communications Utilities (5708-DC1) and 5280-3270 Emulation (5708-EM1) Licensed Programs. It is required by DE/RPG (5708-DE1) and the Key Entry Utility (part of the 5280 Utilities, 5708-UT1) if the user desires to maintain the elapsed time production statistic. **Limitations:** Cannot be installed with the Magnetic Stripe Reader Adapter/Elapsed Time Counter (#4955 or #4960). **Maximum:** One. **Field Installation:** Yes.

Remote Disk Prerequisite (#4400): Provides control function required to accommodate either one or two #3410 disk storage drive(s) in an attached 5281 Data Station. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1240.

Keyboard (#4600, #4601, #4602, #4603): One of the following must be selected:

#4600: 83-key keyboard with the EBCDIC character set, typewriter-like layout, movable, with 49 alphameric keys, 24 function keys, and 10-key numeric pad.

#4601: 66-key data entry style keyboard, movable, with 36 alphameric keys, and 30 function keys.

#4602: 66-key data entry style keyboard with proof arrangement, movable, with 36 alphameric keys, and 30 function keys. The numeric keys are arranged similar to those of an adding machine.

#4603: 83-key keyboard with ASCII character set, typewriter-like layout, movable, with 49 alphameric keys, 24 function keys, and 10-key numeric pad.

Maximum: One of the above. **Field Installation:** Yes.

Magnetic Stripe Reader (#4950): Provides the capability of reading numeric encoded information from a magnetic stripe on a wide range of credit cards, identification cards and documents. The magnetic stripe may be encoded with up to 128 ABA numeric characters, including control characters. This feature enhances system data security by providing the ability to read an operator identification card without being displayed. See "Supplies" for magnetically striped and encoded identification cards. **Limitations:** Valid for numeric-only data. Cannot be installed with the Elapsed Time Counter (#3610). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4955 or #4960.

Magnetic Stripe Reader Adapter/Elapsed Time Counter (#4955, #4960): Provides the Elapsed Time Counter and control for from one to three Magnetic Stripe Readers (#4950). The Elapsed Time Counter is used to measure elapsed real time.

#4955: For a non-communicating 5285, provides the Elapsed Time Counter and control for up to three Magnetic Stripe Readers (#4950) on the 5285 and on an attached 5281 Data Station or 5282 Dual Data Station. The Elapsed Time Counter is required by DE/RPG (5708-DE1) and the Key Entry Utility (part of 5280 Utilities, 5708-UT1) if the user desires to maintain the elapsed time production statistic. **Limitations:** Cannot be installed with the Elapsed Time Counter (#3610), the Communications Adapter (#2500) or the 3270 Emulation Communications Adapter (#3270).

#4960: For a communicating 5285, provides the Elapsed Time Counter and control for one Magnetic Stripe Reader (#4950). The Elapsed Time Counter is required for SNA operations under the 5280 Communications Utilities (5708-DC1) and 5280 - 3270 Emulation (5708-EM1). It is required by DE/RPG (5708-DE1) and the Key Entry Utility (part of 5280 Utilities, 5708-UT1) if the user desires to maintain the elapsed time production statistic. **Limitations:** Cannot be installed with the Elapsed Time Counter (#3610). **Maximum:** One of the above. **Field Installation:** Yes. **Prerequisites:** #2500 or #3270.

Security Keylock (#6340): Provides a single, key-operated switch with three positions for controlling operations on the 5285 and on an attached 5281 Data Station or 5282 Dual Data Station: "Lock" position prevents operator entry and display of data and prevents initiation of communications. "Local" position allows operator entry and display of data. "Normal" position allows initiation of communications in addition to operator entry and display of data. Two unique keys are provided: One allows selection of "Lock"/"Local". The other allows selection of "Lock"/"Normal". On a noncommunicating 5285, both operating positions ("Local" and "Normal") provide "Local" position operation. **Maximum:** One. **Field Installation:** Yes.

Second Application Microprocessor (#6800): A microprocessor which performs identical function and operates concurrently with the first (base) application microprocessor. This feature provides more processing power and is designed as an aid to performance improvement in a multiprogramming environment which has heavy processor utilization. **Limitations:** Cannot be installed with the Communications Adapter (#2500) or the 3270 Emulation Communications Adapter (#3270). **Maximum:** One. **Field Installation:** Yes.

Communications Features

Communications Adapter (#2500): Required to attach a communications line via appropriate interface or modem. In conjunction with stored program control, this feature permits the 5285 to function on a switched or nonswitched public, or private communications line. The adapter provides both BSC and SDLC. The proper line protocol is enabled at program execution time. The adapter also provides a 1200 bps clocking capability for use with the 1200 bps Integrated Modem (#5500, #5501 , #5502, #5507, #5508) or an external modem. A Communications Utilities (5708-DC1) parameter activates this capability. **Limitations:** Cannot be installed with the Second Application Microprocessor (#6800) or the 3270 Emulation Communications Adapter (#3270). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5500, #5501, #5502, #5507, #5508, #3701, or #5650 or #5651. See the Programming section for 5280 Communications Utilities Licensed Program (5708-DC1) minimum system and feature requirements. See "Specify" for required communications cable length and "Additional Communications Information" for mandatory specify codes.

3270 Emulation Communications Adapter (#3270): Supports the 5280 - 3270 Emulation (5708-EM1) licensed program, and in conjunction with stored program control, permits the 5285 to function on a switched or nonswitched public or private communications line. This adapter is required to attach to a communications line via the appropriate interface or modem and provides both BSC and SDLC. The proper line protocol is enabled at program execution time. The adapter also provides a 1200 bps clocking capability for use with the 1200 bps Integrated Modem (#5500, #5501 , #5502, #5507, #5508) or an external modem. A Communications Utilities (5708-DC1) parameter activates this capability. Keyboard interpretation functions are provided in support of the 5280–3270 Emulation licensed program. **Limitations:** Cannot be installed with Communications Adapter (#2500), Auxiliary Data Station Attachment (#1200, #1205, #1215, or #1220), or the Second Application Microprocessor (#6800). **Maximum:** One **Field Installation:** Yes. **Prerequisites:** #5500, #5501, #5502, #5507, #5508, #3701, or #5650 or #5651. #3505 (optional). See the programming section of the sales manual for 5280 Communications Utilities (5708-DC1) and 5280-3270 Emulation (5708-EM1) minimum system and feature requirements. See "Specify" for required communications cable length and mandatory specify codes.

EIAInterface (#3701): Provides the appropriate cable and interface logic necessary to attach an external modem (either an IBM or non-IBM modem meeting RS-232-C characteristics . Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with Digital Data Service (DDS) Adapter feature (#5650 or #5651) or 1200 bps Integrated Modem [#5500, #5501, #5502, #5507, or #5508]. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500 or #3270 and #5810.

1200 bps Integrated Modem (#5500, #5501, #5502, #5507, #5508): [#5500, #5502, #5507 not available as of July 31, 1983.] A modem for SDLC or BSC data transmission at 600/1200 bps over nonswitched or switched facilities. Half-speed operation at 600 bps is indicated via a 5280 Communications Utilities (5708-DC1) parameter. Available in five different versions: #5500 for nonswitched, #5501 for switched with auto-answer, #5502 for switched without auto-answer, #5507 for nonswitched with switched network backup manual answer capability, and #5508 for nonswitched with switched network backup auto-answer capability. The nonswitched versions (#5500, #5507, and #5508) provide a cable for attachment directly to a nonswitched 2- or 4-wire line, Type 3002. The switched with auto-answer versions (#5501 and #5508) provide a cable for attachment to the switched network via an FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. The switched with manual answer versions (#5502 and #5507) provide a cable for attachment to the switched network via an FCC registered protective circuitry of the CDT type (or equivalent) provided by the user. The devices communicating with the 5285 must also be equipped with a compatible 1200 bps modem. **Limitations:** Cannot be installed with EIA interface (#3701) or Digital Data Service (DDS) Adapter (#5650 or #5651). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500 or #3270. #5810 is required for #5501 and #5508.

Digital Data Service (DDS) Adapter (#5650, #5651): #5650 for Point-to-Point Operation ... #5651 for Multipoint Operation. An adapter for SDLC or BSC data transmission at speeds of 2400 or 4800

5285 Programmable Data Station (cont'd)

bps over AT&T nonswitched Data-Phone® digital data service. The DDS Adapter provides the appropriate cable and interface to the DDS channel service unit, the customer site termination of the DDS network. The DDS Adapter may also be used to locally connect a 5285 to another supported device which has a compatible DDS Adapter. This connection requires a special DDS Adapter Connector (see "Accessories") and supports point-to-point connections only. The maximum length of the connection is the sum of the modem cable lengths supported by the two devices. No modem or channel service unit is required. **Limitations:** Cannot be installed with EIA Interface (#3701) or 1200 bps Integrated Modem [#5500, #5501, #5502, #5507, or #5508]. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500 or #3270.

Power Supply Expansion (#5810): Additional power for communications. Required for EIA Interface (#3701) and 1200 bps Integrated Modem (#5501 and #5508). **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

Field installable.

The upgrade purchase prices for model conversions may be greater than the purchase price differentials. The customers should carefully evaluate their future requirements when purchasing a system.

Replaced parts from any model conversion become the property of IBM.

ACCESSORIES

Display Screen Filter (#3300): An optically coated glass filter which attaches to the display, specifically designed to aid operator comfort by reducing reflected glare and providing improved display readability. Character contrast may also be enhanced. The filter is a CSU accessory. Order by feature number.

Keylock Keys: The 5285 with Security Keylock (#6340) is shipped with two unique keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys only to original purchaser.) A letter of authorization with key identification numbers must accompany each order. With each order of quantity of one, the customer receives two keys (one key of each type). **Specify:** P/N **4177799** or, if EC 868325 is installed, specify P/N **6044248.** Allow six to eight weeks for delivery.

DDS Adapter Connector (P/N 4236967): A specially designed connector allows the cable from a 5285 DDS Adapter (#5650or #5651) to be connected to the cable of another supported device which has a compatible DDS Adapter. This provides for the local connection of two devices without the use of any modems or channel service units. Only one DDS Adapter Connector is required per connection. The maximum length of the connection is the sum of the modem cable lengths of the two devices. This is a purchase only item. . Allow six to eight weeks for delivery. **Maximum:** One per connection. **Field Installation:** Yes. **Specify:** P/N **4236967.**

SUPPLIES

Diskettes and Magnetic Cards: For diskettes and magnetically striped and encoded identification cards, consult IBM.

5286 DUAL PROGRAMMABLE DATA STATION

PURPOSE

A dual table-top, programmable keyboard/display station with standard controller and diskette capability for data entry and associated processing. Part of the 5280 Distributed Data System.

MODELS

Model	Main Storage	Diskette Number of Drives Diskette 1	Diskette 2D
A02*	32K	2	0
A10*	32K	0	2
B02*	48K	2	0
B10*	48K	0	2
C02	64K	2	0
C10	64K	0	2
D02	96K	2	0
D10	96K	0	2

* Not available as of July 31, 1983.

Customer Setup (CSU): The 5286 is designated Customer Setup, and offers customers ease of setup and relocation flexibility. The Customer Setup Allowance is two days . One copy of *IBM 5280 User's Setup Procedures* (GA21-9365) is included with each 5286.

HIGHLIGHTS

- Single, split-screen CRT display with two keyboards.
- Functions as two independent programmable data stations.
- Provides two operator positions; each with keyboard, diskette, and display area.
- Multiple microprocessors provide processing and independent I/O control.
- Stored program function.
- Multiprogramming capability with multiple main storage partitions.
- Powerful and extensive data editing function.
- Multi-chip technology and compact diskette drives allow compact table-top system packaging.
- Diskette drives housed within the 5286 support either Diskette 1 or Diskette 1, 2, and 2D and provide up to 2.4M bytes of storage capacity.
- Movable keyboards have palm rest for operator comfort.
- 480-character display size at each operator position.
- Additional data station capability and diskette capacity available with attachment of a 5281 Data Station or a 5282 Dual Data Station.
- Security features for data asset protection.
- Independent data station operation through multiprogramming and system resource sharing.

5286 Components

Controller: Provides processing capability, control, main storage, and optional auxiliary data station capability. Controls all functions of the 5286 and an optionally attached 5281 Data Station or 5282 Dual Data Station. Multiple microprocessor architecture allows processing and I/O operations (diskette, keyboard/display) to operate independently.

The 5286 provides 64K of main storage that can be expanded to a maximum of 96K. Multiprogramming capability is available through partitioned memory. The number of partitions and their size (6K minimum) are user-specified with a facility provided in 5280 SCP (5708-SC1).

Display: Displays up to 480 characters at each operator position ... six lines of 80 characters. Characters are presented within an 8 x 16 dot matrix. The standard, upper/lower case, 94-character EBCDIC character set,94-character ASCII character set,and the 185-character Multinational Character Set are included. The character set is user-selectable. . See "Type Catalog" for available character sets. Both operator positions must use the same character set.

Extended highlighting provides screen attributes such as reverse image, high intensity, blink, underline, non-display, and column separator. Screen attributes are under program control and can be applied on a field basis. Brightness and contrast controls are provided. Each control affects both operator positions.

Keyboards: A choice of three keyboard types provide input flexibility to meet individual user requirements: data entry, data entry with proof arrangement, and typewriter. See "Special Features" below. Both 5286 keyboards must be the same type. The keyboards are movable and have a palm rest for operator comfort. See "Type Catalog" for keyboard layout. Each keyboard has cursor movement keys, special function keys, field exit keys, and data keys (alphabetic and numeric). All data keys are typamatic. The keyboards contain only a subset of the characters in the Multinational Character Set. When the Multinational Character Set is used, the additional characters may be entered via multiple key sequence. Typewriter keyboards provide for direct entry of upper and lowercase characters. Data entry keyboards provide for direct entry of upper case only. Lowercase characters may be entered via multiple key sequence.

Diskette: Two types of compact diskette drives are available with the 5286: A diskette drive which can read/write Diskette 1 and a diskette drive which can read/write Diskette 1, 2, and 2D. Capacity per drive ranges from 0.25M bytes to 1.2M bytes. The formats for the diskettes are:

Diskette 1

Format	Bytes/Sector	Capacity
1	128	246KB*
2	256	284KB
3	512	303KB

*243KB when used for Basic Exchange

Diskette 2

Format	Bytes/Sector	Capacity
4	128	492KB
5	256	568KB
6	512	606KB

Diskette 2D

Format	Bytes/Sector	Capacity
7	256	985KB
8	512	1136KB
9	1024	1212KB

For diskette data exchange with other systems, the following exchange types are supported: Basic Exchange (Formats 1 and 4 above), H Exchange (Format 7 above), and I Exchange (all of the above formats). Diskettes can be interchanged with other IBM systems and devices which support a compatible diskette exchange type. Examples are the Series/1, System/3, System/32, System/34, System/38, S/370, 303X, 4300, 3540, 3740, 3747, 3770, 3790, 5110, 5230, 5260, and 8100. The instantaneous data transfer rate using Diskette 1 or 2 is 31.2K bytes/sec ... for Diskette 2D, 62.5K bytes/sec. Rotational speed of both types of drives is 360 rpm. Diskette read or write is overlapped with seek. Diskette operations are overlapped with processing and other I/O device operations.

Auxiliary Data Station: One 5281 Data Station or 5282 Dual Data Station can be attached to the 5286. See "Special Features" below. The 5281 or 5282 is cable attached at a maximum distance of 61 meters (200 feet). The 5286 provides control and main storage in support of the auxiliary data station. Each keyboard/display (including the 5286) is assigned to a separate partition and operates independently. Each diskette drive on the 5286 and an attached data station is available to any program and any keyboard/display. The auxiliary data station must have the same display size(s) (480-character) as the 5286. The auxiliary data station display size(s) is determined by the Auxiliary Data Station Attachment (special feature) on the 5286.

Security: A non-display input mode allows data to be entered from the keyboard without being displayed on the screen. A Security Keylock (#6340) prevents keyboard entry or display of data. A Magnetic Stripe Reader (#4950) is available which may be used to enter user identification. This assists user program routines in auditing and controlling operator access to data.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of the problem determination procedures and recovery routines that are easily understood and used by the operator. The procedures are described in the *IBM 5280 Machine Verification Manual* (GA21-9357).

Customer Responsibilities: The customer is responsible for:

- Adequate site, system, and other vendor preparation.
- Providing a desk, counter, or tabletop to support the 5286.
- Receipt, unpacking, and placement of the 5286.
- Installation and maintenance of signal cables and associated parts for attaching a 5281, or 5282 to the 5286.
- Physical setup, switch setting, and checkout in accordance with instructions provided by IBM.
- Using and following the 5280 problem determination procedures prior to calling for IBM service.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5286.
- Relocation of the 5286, if required, to allow IBM service access.

5286 Dual Programmable Data Station (cont'd)

- When adding a 5281 or 5282 to the 5286, the customer may have to modify the system configuration specifications. See *IBM 5280 System Control Programming Reference/Operation Manual* (GC21-7824).
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the branch office.

Publications: *IBM 5280 General Information* (GA21-9350) and *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

Notes:

1. Device Attachments: Appropriate special features are required to attach an auxiliary data station (5281, 5282) and some I/O units see "Special Features".
2. IBM 5280 System Control Programming (5708-SC1) should be ordered at equipment order entry time.
3. For physical planning information, see *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9881** for a standard non-locking plug (uses customer standard type receptacle) or **#9880** for a locking plug (requires customer locking type receptacle).
- Color: Pearl White only (no specify required).
- Two keyboards must be selected (see "Special Features").
- Primary host system that will process the data captured by the 5286:

Series/1	**#9505**
System/3	**#9501**
System/32	**#9502**
System/34	**#9503**
System/36	**#9503**
System/38	**#9504**
Other Small IBM System	**#9506**
System/360	**#9507**
System/370:	
– Mdl 138 and below	**#9508**
– Mdl 145 and above	**#9509**
3031, 3032, 3033	**#9510**
4331, 4341	**#9511**
8100	**#9512**
Other Large IBM System	**#9513**
Non-IBM System	**#9514**
Host System Unknown	**#9515**
No Host System	**#9516**

SPECIAL FEATURES

Replaced parts from any special feature installation or removal remain the property of the customer.

Auxiliary Data Station Attachment (#1200, #1215): To attach one 5281 Data Station or one 5282 Dual Data Station. Attachment is by cable. See M5281 or 5282 "Accessories". The maximum cable length is 61m (200 feet). Select one feature from the table below.

Data Station	Display Size	Order Feature Number
5281	480	#1200 *
5282	480	#1215

* Not available as of July 31, 1983.

Maximum: One. **Field Installation:** Yes.

Remote Diskette Drive Attachment (#1240): Required if an attached 5281 Data Station or 5282 Dual Data Station has either one or two diskette drives. A cable is required. See M5281 or 5282 "Accessories". **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1200 or #1215.

Elapsed Time Counter (#3610): Used to measure elapsed real time. It is required by DE/RPG (5708-DE1) and the Key Entry Utility (part of the 5280 Utilities, 5708-UT1) if the user desires to maintain the elapsed time production statistic. **Limitations:** Cannot be installed with the Magnetic Stripe Reader Adapter/Elapsed Time Counter (#4955). **Maximum:** One. **Field Installation:** Yes.

Keyboard (#4600, #4601, #4602 , #4603): Two of the following must be selected ... both must be the same type:

#4600: 83-key keyboard with the EBCDIC character set, typewriter-like layout, movable, with 49 alphameric keys, 24 function keys, and 10-key numeric pad.

#4601: 66-key data entry style keyboard, movable, with 36 alphameric keys, and 30 function keys.

#4602: 66-key data entry style keyboard with proof arrangement, movable, with 36 alphameric keys, and 30 function keys. The numeric keys are arranged similar to those of an adding machine.

#4603: 83-key keyboard with ASCII character set, typewriter-like layout, movable, with 49 alphameric keys, 24 function keys, and 10-key numeric pad.

Maximum: Two of the above. **Field Installation:** Yes.

Magnetic Stripe Reader (#4950): Provides the capability of reading numeric encoded information from a magnetic stripe on a wide range of credit cards, identification cards and documents. The magnetic stripe may be encoded with up to 128 ABA numeric characters, including control characters. This feature enhances system data security by providing the ability to read an operator identification card without being displayed. See "Supplies" for magnetically striped and encoded identification cards. **Limitations:** Valid for numeric-only data. If only one Magnetic Stripe Reader is used with the 5286, it will be assigned to and can only be used in conjunction with the keyboard located on the side of the 5286 which has the power switch. **Maximum:** Two. **Field Installation:** Yes. **Prerequisites:** #4955.

Magnetic Stripe Reader Adapter/Elapsed Time Counter (#4955): The Magnetic Stripe Reader Adapter provides control for up to four Magnetic Stripe Readers (#4950) on the 5286 and an attached 5281 Data Station or 5282 Dual Data Station. The Elapsed Time Counter is used to measure elapsed real time. It is required by DE/RPG (5708-DE1) and the Key Entry Utility (part of 5280 Utilities, 5708-UT1) if the user desires to maintain the elapsed time production statistic. **Limitations:** Cannot be installed with the Elapsed Time Counter feature (#3610). **Maximum:** One. **Field Installation:** Yes.

Security Keylock (#6340): Provides a single, key-operated switch for controlling operations on the 5286 and an attached 5281 Data Station or 5282 Dual Data Station. Prevents operator entry and display of data when in a locked position. **Maximum:** One. **Field Installation:** Yes.

Second Application Microprocessor (#6800): A microprocessor which performs identical function and operates concurrently with the first (base) application microprocessor. This feature provides more processing power and is designed as an aid to performance improvement in a multiprogramming environment which has heavy processor utilization. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

Field installable.

The upgrade purchase prices for model conversions may be greater than the purchase price differentials. The customers should carefully evaluate their future requirements when purchasing a system.

Replaced parts from any model conversion become the property of IBM.

ACCESSORIES

Keylock, Keys: The 5286 with Security Keylock (#6340) is shipped with two unique keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys only to original purchaser.) With each order of quantity of one, the customer receives two keys (one key of each type). A letter of authorization with key identification numbers must accompany each order. **Specify:** P/N **4177799** or, if EC 868325 is installed, specify P/N **6044248**. Allow six to eight weeks for delivery.

SUPPLIES

For IBM diskettes and magnetically striped and encoded identification cards, consult IBM.

5288 PROGRAMMABLE CONTROL UNIT

PURPOSE

Provides processing, control, main storage, diskette storage, communications features, and device attachment capabilities for the 5280 Distributed Data System. Allows attachment of multiple 5281 Data Stations and/or 5282 Dual Data Stations and 5217, 5222, 5224, 5225, 5242, and 5256 Printers.

MODELS

5288 models are available depending on main storage capacity and the type of diskette drive included in the base machine. One drive is standard.

Model	Main Storage Capacity	Diskette
A01 *	32K	1
A05 *	32K	2D
C01	64K	1
C05	64K	2D
D01	96K	1
D05	96K	2D
E01	128K	1
E05	128K	2D
F01	160K	1
F05	160K	2D
H01	224K	1
H05	224K	2D
J01	288K	1
J05	288K	2D

* Not available after July 31, 1983.

Prerequisites:

1. Device Attachments: Appropriate special features are required to attach auxiliary data stations (5281, 5282) and some I/O units ... see "Special Features".
2. 5280 System Control Programming (5708-SC1) should be ordered at equipment order entry time.
3. For physical planning information, see *IBM 5280 Planning and Site Preparation Guide* (GA21-9351).

Minimum Configuration: Any mdl of the 5288 with one 5281 Data Station or one 5282 Dual Data Station.

Customer Setup (CSU): The 5288 is designated Customer Setup, and offers customers ease of setup and relocation flexibility. The customer setup allowance is two days . One copy of *IBM 5280 User's Setup Procedures* (GA21-9365) is included with each 5288.

HIGHLIGHTS

- System flexibility allows specification of configuration to meet specific user requirements for data entry, associated processing, and communications.
- Base unit contains controller, main storage, and diskette drive capability.
- Multiple microprocessors provide processing and independent I/O control.
- Stored program function.
- Multiprogramming capability with up to eight main storage partitions.
- Powerful and extensive data editing function.
- 10MB disk storage drives available.
- Compact diskette drives housed within the 5288 support Diskette 1 or Diskette 1, 2, and 2D providing up to 4.8M bytes of storage capacity.
- Addition of optional disk and/or diskette storage drives within attached 5281 Data Stations and/or 5282 Dual Data Stations (diskette only) provide a total system capacity of eight drives ... one diskette and seven disk or diskette drives in any combination.
- Maximum of four keyboard/displays with attachment of 5281 and/or 5282 data stations.
- Attachment capability for up to eight printers.
- Security features for data asset protection.
- Independent data station operation through multiprogramming and system resource sharing.
- Communications adapters provide both SDLC and BSC capability.
- Communications programming support available for RJE, batch, and interactive communications via SNA/SDLC or BSC.

5288 Components

Controller: Provides processing capability, control, main storage, and optional I/O attachments and communications features. Controls all functions of the 5288 and attached 5281 Data Stations, 5282 Dual Data Stations, and 5217, 5222, 5224, 5225, 5242, and 5256 Printers. Multiple microprocessor architecture allows processing and I/O operations (e.g., diskette, keyboard/display, communications) to operate independently. The 5288 provides 64K of main storage that can be expanded to a maximum of 288K. Multiprogramming capability is available through a partitioned memory. The number of partitions (up to eight) and their size (6K to 64K) are user-specified with a facility provided in 5280 System Control Programming (5708-SC1). Special features provide for the attachment of 5281 and 5282 data stations (maximum, four keyboards), and 5217, 5222, 5224, 5225, 5242, and 5256 Printers (maximum, eight printers). The communications adapters (special features) each provide both SDLC and BSC communications under stored program control.

Disk/Diskette: One diskette drive is standard, and its type is determined by the 5288 mdl number. Three physical drive positions are available on the 5288 for optional disk and/or diskette drives ... see "Special Features". For the optional drives, any combination (up to three) of disk and/or diskette drives is allowed. For a 5288 system, including auxiliary data stations, the maximum number of optional disk/diskette drives is seven.

Disk: In addition to one diskette drive, the 5288 can contain up to three 10MB Disk Storage Drives ... see "Special Features". The disk storage is a non-removable direct access medium. Capacity and access times are as follows:

Bytes/Sector	256
Bytes/Cylinder	32,768
Cylinders *	303
Capacity * (bytes)	9,928,704
Access Time (ms)	
Minimum (cyl to cyl)	16.6
Average (102 cyl)	85
Maximum	205
Rotation Speed (rpm)	3,600

* Available to the user for programs and data.

Diskette: Two types of compact diskette drives are available with the 5288: a diskette drive which can read/write Diskette 1 and a diskette drive which can read/write Diskette 1, 2, and 2D. Capacity per drive ranges from 0.25M bytes to 1.2M bytes. The formats for the diskettes are:

Diskette 1

Format	Bytes/Sector	Capacity
1	128	246KB *
2	256	284KB
3	512	303KB

* 243KB when used for Basic Exchange

Diskette 2

4	128	492KB
5	256	568KB
6	512	606KB

Diskette 2D

7	256	985KB
8	512	1136KB
9	1024	1212KB

For diskette data exchange with other systems, the following exchange types are supported: Basic Exchange (Formats 1 and 4 above), H Exchange (Format 7 above), and I Exchange (all of the above formats). Diskettes can be interchanged with other IBM systems and devices which support a compatible diskette exchange type. Examples are the System/3, System/32, System/34, System/38, Series/1, S/370, 303X, 4300, 3540, 3740, 3747, 3770, 3790, 5110, 5230, 5260, and 8100.

The instantaneous data transfer rate using Diskette 1 or 2 is 31.2K bytes/sec; for Diskette 2D, 62.5K bytes/sec. Rotational speed of both types of drives is 360 rpm. Diskette read or write is overlapped with seek. Diskette operations are overlapped with processing and other I/O device operations.

Auxiliary Data Stations: The 5281 Data Station and the 5282 Dual Data Station can be attached to the 5288 in any combination to provide a maximum of four keyboards. In Chart A below, all possible combinations are presented. Each vertical column represents a valid combination of machine type quantities. At least one 5281 or 5282 must be attached.

5288 Programmable Control Unit (cont'd)

Chart A

Machine	Quantity							
5281	1	2	3	4	1	2	0	0
5282	0	0	0	0	1	1	1	2

For maintenance purposes, one auxiliary data station (designated as the "First Auxiliary Data Station") must be installed within sight of, and have easy access to, the 5288. This data station is attached via the First Auxiliary Data Station Attachment (special feature). All other data stations are attached via an Auxiliary Data Station Attachment, Additional (special feature). *Each data station requires a separate attachment.* Each data station is cable attached (see M5281 or 5282 "Accessories"). The maximum cable length is 60 meters (198 feet).

The display size (480, 960, or 1920 characters) of attached data stations is determined by the 5288 auxiliary data station attachment (special feature). *All data stations must have the same display size(s).* The 5280 Communications Utilities licensed program (5708-DC1) requires a display size(s) of 960 or 1920 characters.

An attached 5281 can have zero, one or two disk or diskette drives. An attached 5282 can have zero, one, or two diskette drives. These drives are designated "remote" (from the 5288). Remote drives are attached via a Remote Disk/Diskette Drive Attachment to the 5288 ... see "Special Features". A cable is required ... see M5281 or 5282 "Accessories".

Printers: The 5217, 5222, 5224, 5225, 5242, and 5256 printers are available for attachment to the 5288. A maximum of eight printers acn be attached ... see 'Special Features".

Security: A non-display input mode on attached 5281 Data Stations and 5282 Dual Data Stations allows data to be entered from the keyboard without being displayed on the screen. A Security Keylock (special feature) prevents keyboard entry or display of data on all auxiliary data stations and, on a communicating 5288, prevents initiation of communications. In addition, a communicating 5288 can exchange identification sequences with the host, which assists the user in controlling access to data. A Magnetic Stripe Reader (special feature) is available for the 5281 and 5282 which may be used to enter user identification. This assists user program routines in auditing and controlling operator access to data.

Communications: The Communications Adapter (#2500) operates under stored program control and allows for either SDLC or BSC data link control over a single communications line. This feature allows the 5288 to communicate on a switched point-to-point, nonswitched point-to-point, or multipoint line at speeds up to 4800 bps. On a multipoint line, the 5288 operates as a tributary station. The 3270 Emulation Communications Adapter (#3270) provides the same function as #2500 (above) and, in addition, provides support for the 5280 - 3270 Emulation (5708-EM1) licensed program. Connection to the line is supported by a Line Interface feature. Operation is half-duplex mode over a switched network on half-duplex facilities, or half-duplex mode over nonswitched (or equivalent private) communications lines on duplex or half-duplex facilities. Switched network support includes manual dial and manual or auto-answer (where the attached modem supports this capability). The 5288 at each termination (drop point) of a communications line must use the same clocking source (modem or business machine). Units must be set to operate at the same transmission rate, use the same transmission code, and the same 2- or 4-wire connection to the line. Compatible modems must be used at all terminations on a network. The 5288, using stored program control, communicates using BSC protocol with:

- A Series/1 equipped with #2074, #2075, or #2093/#2094.
- A System/3 equipped with #2074, #2084, or #2094.
- A System/32 equipped with #2074.
- A System/34 equipped with #2500, #3500, or #4500.
- A System/36 equipped with #2500 or #4500.
- A System/38 with appropriately configured BSC adapter and sub-features (point-to-point only).
- A S/370 via an Integrated Communications Adapter, a 4331 via a Communications Adapter, or a S/370, 303X, or 4300 via a 2701 Data Adapter Unit, or a 3704, 3705, or 3725 Communications Controller with the Network Control Program (ACF/NCP) or the Partitioned Emulation Program (PEP), any of which are equipped with a binary synchronous communications adapter and appropriate sub-features.
- A 3741 mdl 2 or 4.
- A 3747 Data Converter equipped with #1660.
- A 5265 communicating mdl (XX2).
- A 5280 equipped with #2500 or #3270.

The 5288, using stored program control, communicates in SNA/SDLC mode with a 4331 via a Communications Adapter, a S/370 via an integrated communications adapter, an 8100 with DPPX/BASE, or a S/370, 303X, or 4300 via a 3704, 3705, or 3725 Communications Controller equipped with appropriate features. See M3704, 3705, or 3725 pages. The 5288, using the 3270 Emulation Communications Adapter, communicates in SNA/SDLC mode with an 8100 Information System. See the 5280 programming pages for a description of the communications program support available and any special feature requirements.

Note: A line interface feature must be ordered for the type of communication facility and modem to be used.

IBM Modems: One IBM modem can be attached to the Communications Adapter (#2500) or the 3270 Emulation Communications Adapter (#3270). **Prerequisites:** #3701.

Modem	Speed (bps)
3863	2400
3864	4800
3872	2400/1200

Note: The 5288 does not support Automatic Call Originate (#1091) on the 3872. For communication capabilities, product utilization, and special features see M2700, 3863, 3864, and 3872 pages.

Communications References:

- See the SCP pages for possible restrictions.
- See M2700 pages for additional information concerning modems, communications facilities, machine attachment requirements, terminal intermix, operating capabilities and customer responsibilities.
- Refer to the
- Refer to the *IBM 5280 Planning and Site Preparation Guide* (GA21-9351) for physical planning information.

Communications Cable: A communications cable length is required. See "Specify".

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of the problem determination procedures and recovery routines that are easily understood and used by the operator. The procedures are described in the *IBM 5280 Machine Verification Manual* (GA21-9357).

Customer Responsibilities: The customer is responsible for:

- Adequate site, system, and other vendor preparation.
- Obtaining a firm installation date for the start of communications facilities and services (including any required modems). The IBM Marketing Representative must assure that a firm installation date is established prior to Order Confirmation.
- Receipt, unpacking, and placement of the 5288.
- Installation and maintenance of signal cables and associated parts for attaching a 5217, 5222, 5224, 5225, 5242, 5256, 5281, or 5282 to the 5288.
- The customer must be advised, in writing, of certain responsibilities related to the installation and maintenance of common carrier facilities/services as well as the IBM equipment. For further information, see M2700 pages.
- Physical setup, connection of cables to communications lines/modems and IBM devices incorporating protected access areas, modem attenuation setting and checkout in accordance with instructions supplied by IBM.
- Using and following the 5280 problem determination procedures prior to calling for IBM service.
- Notifying IBM of intent to relocate and following IBM instructions for relocation of the 5288.
- Relocation of the 5288, if required, to allow IBM service access.
- When adding a 5281 or 5282 to the 5288, the customer may have to modify the system configuration specifications. See *IBM 5280 System Control Programming Reference/Operation Manual* (GC21-7824).
- Disconnecting, packing, and removal to the customer's shipping dock at the time of discontinuance. Removal instructions and packing materials (if required) will be ordered by the branch office.

Publications: *IBM 5280 General Information* (GA21-9350), *IBM 5280 Planning and Site Preparation Guide* (GA21-9351), *IBM 5280 User's Setup Procedures* (GA21-9365), *IBM 5280 Machine Verification Manual* (GA21-9357), *IBM 5280 System Control Programming Reference/Operation Manual* (GC21-7824).

Replaced Parts: Replaced parts from any special feature installation or removal remain the property of the customer.

5288 Programmable Control Unit (cont'd)

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): **#9881** for a standard nonlocking plug (uses customer standard type receptacle), or **#9880** for a locking plug (requires customer locking type receptacle).
- Color: Pearl White only (no specify required).
- Primary host system that will process the data captured by the 5288:

System/3	**#9501**
System/32	**#9502**

SPECIAL FEATURES

Non-Communications Features

Printers: Attachment of the 5217, 5222, 5224, 5225, 5242, and 5256 Printers is provided by one of four special features. Up to eight printers, in any combination, may be attached consistent with special feature limitations. Printer speeds may be affected by the customer's program, application load, forms design and/or the number of printers attached to the system.

Single Twinax® Printer Attachment (#1155): Provides a single port for the attachment of 5224 (mdl 1 or 2), 5225 (mdl 1, 2, 3, or 4) and/or 5256 (mdl 1, 2, or 3) Printers to a single twinaxial port. A maximum of seven printers can be attached. The maximum cable length is 1,525 meters (5,000 feet). **Limitations:** Cannot be installed with the Multiple Twinax Printer Attachment (#1160), the Single 5222 Printer Attachment (#1157), or the Multiple Start/Stop-Twinax Printer Attachment (#1162). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** If multiple printers are attached, each printer on the cable, except the last, requires a Cable-Thru feature.

Single 5222 Printer Attachment (#1157): [Not available after July 31, 1983] Provides a single port for the attachment of one 5222 Printer. Attachment is by a double twisted pair cable. A 6 meter (20 foot) cable is provided with the printer. An extension cable accessory is available to provide a total cable length of up to 61 meters (200 feet) (see M5222 "Accessories"). **Limitations:** Cannot be installed with the Multiple Start/Stop-Twinax Printer Attachment (#1162), the Single Twinax Printer Attachment (#1155), or the Multiple Twinax Printer Attachment (#1160). **Maximum:** One. **Field Installation:** Yes.

Multiple Twinax Printer Attachment (#1160): [Not available after July 31, 1983] Provides four ports for attaching, via twinaxial cable, 5224 (mdl 1 or 2), 5225 (mdl 1, 2, 3, or 4) and/or 5256 (mdl 1, 2, or 3) Printers. A maximum of eight printers can be attached. The maximum cable length is 1,525 meters (5,000 feet). **Limitations:** Cannot be installed with the Single Twinax Printer Attachment (#1155), the Single 5222 Printer Attachment (#1157), or the Multiple Start/Stop-Twinax Printer Attachment (#1162). A maximum of seven printers can be attached to a single port (using Cable-Thru feature). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** If multiple printers are attached to one port, each printer on the cable, except the last, requires a Cable-Thru feature.

Multiple Start/Stop-Twinax Printer Attachment (#1162): Attaches up to eight printers. Provides four Start/Stop (5217, 5222, 5242) Printer ports and one Twinax Printer (5224/5225/5256) port. A single 5217, 5222, or 5242 mdl 2 Printer can be attached to each Start/Stop port. Each Start/Stop Printer is attached by a double-twisted pair cable. A 6 meter (20 foot) cable is provided with each printer. For the 5222, an extension cable accessory is available to provide a maximum cable length of up to 61 meters (200 feet) ... see M5222 "Accessories". From one to seven twinaxial printers (5224 mdl 1 or 2 and/or 5225 mdl 1, 2, 3, or 4 and/or 5256 mdl 1, 2, or 3) can be attached to the twinaxial port, using a single twinaxial cable. The maximum cable length is 1,525 meters (5,000 feet). **Limitations:** Cannot be installed with the Single Twinax Printer Attachment (#1155), the Single 5222 Printer Attachment (#1157), or the Multiple Twinax Printer Attachment (#1160). A maximum of seven printers can be attached to the twinaxial port (using Cable-Thru feature). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** If multiple printers are attached to the twinaxial printer port, each printer on the cable, except the last, requires a Cable-Thru feature. If #1162 was shipped before April 1, 1983, the 5288 also requires EC 467318 for attachment of the 5217 or 5242.

First Auxiliary Data Station Attachment (#1245, #1250, #1255, #1260, #1265 : To attach the first 5281 Data Station or 5282 Dual Data Station. This feature also determines the display size of the auxiliary data station. All data stations on the 5280 system must have the same display size(s). Attachment is by cable ... see "Accessories". The maximum cable length is 61 meters (200 feet). Select one feature from the table below.

Data Station	Display Size	Order Feature Number
5281	480	#1245 *

Limitations: Cannot be installed with the Auxiliary Data Station, Add'l (#1275, #1280, #1290).

5281	960	#1250 *

Limitations: Cannot be installed with the Auxiliary Data Station, Add'l (#1270, #1280, #1285).

5281	1920	#1255

Limitations: Cannot be installed with Auxiliary Data Station, Add'l (#1270, #1275, #1285, #1290).

5282	480	#1260 *

Limitations: Cannot be installed with the Auxiliary Data Station, Add'l (#1275, #1280, #1290).

5288 Programmable Control Unit (cont'd)

5282	960	#1265 *

Limitations: Cannot be installed with Auxiliary Data Station, Add'l (#1270, #1280, #1285).

* Not available after July 31, 1983.

Maximum: One of the above. **Field Installation:** Yes.

Auxiliary Data Station Attachment, Add'l (#1270, #1275, #1280, #1285, #1290): To attach one 5281 Data Station or one 5282 Dual Data Station. This feature also determines the display size of the auxiliary data station. All data stations on the 5280 system must have the same display size(s). Attachment is by cable ... see "Accessories". The maximum cable length is 61 meters (200 feet). Select the appropriate features from the table below.

Data Station	Display Size	Order Feature Number
5281	480	#1270 *

Limitations: Cannot be installed with the Auxiliary Data Station, Add'l (#1275, #1280, #1290). **Prerequisites:** #1245 or #1260.

5281	960	#1275 *

Limitations: Cannot be installed with the Auxiliary Data Station, Add'l (#1270, #1280, #1285). **Prerequisites:** #1250 or #1265.

5281	1920	#1280

Limitations: Cannot be installed with Auxiliary Data Station, Add'l (#1270, #1275, #1285, #1290). **Prerequisites:** #1255.

5282	480	#1285 *

Limitations: Cannot be installed with the Auxiliary Data Station, Add'l (#1275, #1280, #1290). **Prerequisites:** #1245 or #1260.

5282	960	#1290 *

Limitations: Cannot be installed with Auxiliary Data Station, Add'l (#1270, #1280, #1285). **Prerequisites:** #1250 or #1265.

* Not available after July 31, 1983.

Maximum: The 5281 and 5282 can be attached in any combination to provide a maximum of four keyboards ... see Chart A above for valid combinations. **Field Installation:** Yes.

Remote Disk/Diskette Drives: Disk and diskette drives housed within a 5281 or 5282 Dual Data Station (diskette only) are designated as "remote" (from the 5288). The drives can be any combination of disk or diskette. Remote drives require the 5288 attachment special features (#1300, #1301, #1302) described in Chart B below. An attachment can service two disk or diskette drives, and the drives may be in the same or different data stations. A cable is required ... see M5281 or 5282 "Accessories".

If the base 5288 contains one or two disk or diskette drives, the maximum number of remote drives is six. If the base 5288 contains three or four drives, the maximum number of drives is four.

Chart B below presents all valid disk/diskette drive quantities and location combinations with respective special feature requirements.

Chart B

These Combinations		Require These Special Features *		
Number of Drives Base 5288	Remote	#1300	#1301	#1302
1 or 2	0			
1 or 2	1	X		
1 or 2	2	X		
1 or 2	3	X	X	
1 or 2	4	X	X	
1 or 2	5	X	X	X
1 or 2	6	X	X	X
3 or 4	0			
3 or 4	1		X	
3 or 4	2		X	
3 or 4	3		X	X
3 or 4	4		X	X

* Note: If an attachment services two drives, the drives may be in the same or different data stations.

Remote Disk/Diskette Drive Attachment, 1st (#1300): Required to attach disk, Diskette 1 or Diskette 2D drives housed within a 5281 or 5282 (diskette only for 5282). When the base 5288 contains one or two drives, this feature is required to attach the first and second remote drives. **Maximum:** One. **Field Installation:** Yes. **Corerequisites:** #4400 , if one or more #3410s are installed in one or more attached 5281s.

Remote Disk/Diskette Drive Attachment, 2nd (#1301): Required to attach disk, Diskette 1 or Diskette 2D drives housed within a 5281 or 5282 (diskette only for 5282). When the base 5288 contains one or two drives, this feature is required to attach the third and fourth remote drives. When the base 5288 contains three or four drives, this feature is required to attach the first and second remote drives. **Maximum:** One. **Field Installation:** Yes. **Corequisites:** #4400 , if one or more #3410s are installed in one or more attached 5281s.

Remote Disk/Diskette Drive Attachment, 3rd (#1302): Required to attach disk, Diskette 1, or Diskette 2D drives housed within a 5281 or 5282 (diskette only for 5282). When the base 5288 contains one or two drives, this feature is required to attach the fifth and sixth remote drives. When the base 5288 contains three or four drives, this feature is required to attach the third and fourth remote drives. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1301.

Disk/Diskette Drives (#3401, #3402, #3410):

Diskette 1 Drive (#3401): An additional diskette drive which can read/write Diskette 1.

Diskette 2D Drive (#3402): An additional diskette drive which can read/write Diskette 1, 2, and 2D.

Disk Storage Drive (#3410): A 10MB non-removable direct access storage device. **Note:** The disk storage drive(s) must be installed to the right of the diskette drive(s).

Maximum: The maximum number of optional disk and/or diskette drives housed within a 5288 is three. The maximum number of optional drives on a 5288 system, including auxiliary data stations, is seven. The drives may be any combination of disk and diskette. **Field Installation:** Yes.

Elapsed Time Counter (#3610): Used to measure elapsed real time. It is required for SNA operations under the 5280 Communications Utilities (5708-DC1) and 5280 - 3270 Emulation (5708-EM1). It is required by DE/RPG (5708-DE1) and the Key Entry Utility, which is part of 5280 Utilities (5708-UT1), if the user desires to maintain the elapsed time production statistic. **Limitations:** Cannot be installed with the Magnetic Stripe Reader Adapter/Elapsed Time Counter (#4955). **Maximum:** One. **Field Installation:** Yes.

Remote Disk Prerequisite (#4400): Provides control function required to accomodate on or more Disk Storage Drive (#3410) installed in one or more attached 5281 Data Stations. **Maximum:** One. **Field Installation:** Yes. **Corequisites:** #1300 and/or #1301.

Magnetic Stripe Reader Adapter/Elapsed Time Counter (#4955): Provides the following: The Magnetic Stripe Reader Adapter provides control for up to four Magnetic Stripe Readers (#4950) on attached 5281 Data Stations and/or 5282 Dual Data Stations. The Elapsed Time Counter is used to measure elapsed real time. It is required for SNA operations under the 5280 Communications Utilities (5708-DC1) and 5280 - 3270 Emulation (5708-EM1). It is required by DE/RPG (5708-DE1) and the Key Entry Utility, which is part of 5280 Utilities (5708-UT1), if the user desires to maintain the elapsed time production statistic. **Limitations:** Cannot be installed with the Elapsed Time Counter feature (#3610). **Maximum:** One. **Field Installation:** Yes.

Security Keylock (#6340): Provides a single, key-operated switch with three positions for controlling operations on all attached 5281 Data Stations and 5282 Dual Data Stations: "Lock" position prevents operator entry and display of data and prevents initiation of communications. "Local" position allows operator entry and display of data. "Normal" position allows initiation of communications in addition to operator entry and display of data. Two unique keys are provided: one allows selection of "Lock"/"Local", the other allows selection of "Lock"/"Normal". On a non-communicating 5288, both operating positions ("Local" and "Normal") provide "Local" position operation. **Maximum:** One. **Field Installation:** Yes.

2nd Application Microprocessor (#6800): A microprocessor which performs identical functions and operates concurrently with the first (base) application microprocessor. This feature provides more processing power and is designed as an aid to performance improvement in a multiprogramming environment which has heavy processor utilization. **Maximum:** One. **Field Installation:** Yes.

Communications Features

Communications Adapter (#2500): Required to attach a communications line via appropriate interface or modem. In conjunction with stored program control, this feature permits the 5288 to function on a switched or nonswitched public or private communications line. The adapter provides both BSC and SDLC. The proper line protocol is enabled at program execution time. The adapter also provides a 1200 bps clocking capability for use with the 1200 bps Integrated Modem (#5500, #5501, #5502, #5507, #5508) or an external modem. A Communications Utilities (5708-DC1) parameter activates this capability. **Limitations:** Cannot be installed with the 3270 Emulation Communications Adapter (#3270). See "Specify" for required communications cable length and mandatory specify codes. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] A line

5288 Programmable Control Unit (cont'd)

interface special feature consisting of one of the 1200 bps Integrated Modems (#5500, #5501, #5502, #5507, #5508), Interface (#3701), or DDS Adapter (#5650or #5651) must be ordered; [2] See the Programming section for 5280 Communications Utilities (5708-DC1) minimum system and feature requirements.

3270 Emulation Communications Adapter (#3270): Supports the 5280 - 3270 Emulation (5708-EM1) licensed program and, in conjunction with stored program control, permits the 5288 to function on a switched or nonswitched public or private communications line. This adapter is required to attach to a communications line via the appropriate interface or modem and provides both BSC and SDLC. The proper line protocol is enabled at program execution time. The adapter also provides a 1200 bps clocking capability for use with the 1200 bps Integrated Modem (#5500, #5501, #5502 , #5507, #5508) or an external modem. A Communications Utilities (5708-DC1) parameter activates this capability. Keyboard interpretation functions are provided in support of the 5280 - 3270 Emulation licensed program. **Limitations:** Cannot be installed with Communications Adapter (#2500). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** [1] A line interface special feature consisting of one of the 1200 bps Integrated Modems (#5500, #5501 , #5502, #5507, #5508), Interface (#3701), or DDS Adapter (#5650or #5651) must be ordered; [2] Attached 5281 Data Station(s) with a display size of 1920 characters (5288 feature #1255, #1280); [3] See the Programming section for 5280 Communications Utilities (5708-DC1) and 5280 - 3270 Emulation (5708-EM1) minimum system and feature requirements. See "Specify" for required communications cable length and for mandatory specify codes.

EIA Interface (#3701): Provides the appropriate cable and interface logic necessary to attach an external modem (either an IBM or non-IBM modem meeting RS-232-C characteristics). Refer to M2700 pages. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with Digital Data Service (DDS) Adapter feature (#5650or #5651) or 1200 bps Integrated Modem (#5500, #5501, #5502, #5507, #5508). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500 or #3270.

IBM Data Encryption Devices (#3845, #3846): A 3845 or 3846 Data Encryption Device may be attached between the 5288 Communications Adapter and the external modem. **Note:** Refer to M2700, 3845, and 3846 pages for information on 3845 or 3846 configuration and communication capability. The 3845 or 3846 device operating with SDLC will not operate with NRZI transmission mode. **Prerequisites:** #3701.

1200 bps Integrated Modem (#5500, #5501, #5502, #5507, #5508): [#5500, #5502, #5507 not available after July 31, 1983] A modem for SDLC or BSC data transmission at 600/1200 bps over nonswitched or switched facilities. Half-speed operation at 600 bps is indicated via a 5280 Communications Utilities (5708-DC1) parameter. Available in five different versions: #5500 - nonswitched, #5501 - switched with auto-answer, #5502 - switched without auto-answer, #5507 - nonswitched with switched network backup manual answer capability, and #5508 - nonswitched with switched network backup auto-answer capability. The nonswitched versions (#5500, #5507, and #5508) provide a cable for attachment directly to a nonswitched (2- or 4-wire) line, Type 3002. The switched with auto-answer versions (#5501 and #5508) provide a cable for attachment to the switched network via an FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. The switched with manual answer versions (#5502 and #5507) provide a cable for attachment to the switched network via an FCC registered protective circuitry of the CDT type (or equivalent) provided by the user. The devices communicating with the 5288 must also be equipped with a compatible 1200 bps modem. **Limitations:** Cannot be installed with EIA Interface (#3701) or Digital Data Service (DDS) Adapter (#5650 or #5651). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500 or #3270.

Digital Data Service (DDS) Adapter (#5650 for Point-to-Point Operation ... #5651 for Multipoint Operation): An adapter for SDLC or BSC data transmission at speeds of 2400 or 4800 bps over AT&T nonswitched Data-Phone® digital data service. The DDS Adapter provides the appropriate cable and interface to the DDS channel service unit, the customer site termination of the DDS network. The DDS Adapter may also be used to locally connect a 5288 to another supported device which has a compatible DDS Adapter. This connection requires a special DDS Adapter Connector (see "Accessories") and supports point-to-point connections only. The maximum length of the connection is the sum of the modem cable lengths supported by the two devices. No modem or channel service unit is required. **Limitations:** Cannot be installed with Interface (#3701) or 1200 bps Integrated Modem (#5500, #5501, #5502, #5507, #5508). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500 or #3270.

MODEL CONVERSIONS

Field installable. Replaced parts from any model conversion become the property of IBM.

Purchase Considerations: The upgrade purchase prices for model conversions may be greater than the purchase price differentials. The customers should carefully evaluate their future requirements when purchasing a system.

ACCESSORIES

Keylock Keys: The 5288 with Security Keylock (#6340) is shipped with two unique keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys only to original purchaser.) With each order of quantity of one, customer receives two keys (one key of each kind). Key identification numbers must accompany each order. Specify P/N 4177799. Allow six to eight weeks for delivery.

DDS Adapter Connector: A specially designed connector allows the cable from a 5288 DDS Adapter to be connected to the cable of another supported device which has a compatible DDS Adapter. This provides for the local connection of two devices without the use of any modems or channel service units. Only one DDS Adapter Connector is required per connection. The maximum length of the connection is the sum of the modem cable lengths of the two devices. This is a purchase-only item. Specify P/N 4236967. Allow 6 to 8 weeks for delivery. **Maximum:** One per Digital Data Service (DDS) Adapter. **Field Installation:** Yes.

SUPPLIES

For IBM diskettes, see IBM.

5291 DISPLAY STATION

PURPOSE

The 5291 Display Station is a member of the 5250 Information Display System and can be used with Series/1, System/34, System/36, and System/38 for entering, editing and displaying alphameric data. A movable keyboard permits the operator to enter, display, and manipulate data on the screen in a highly flexible and efficient manner. This display station performs the same basic functions as the 5251 model 11, in a compact package with a low profile keyboard and a tiltable display screen. Displays up to 1,920 characters with 24 lines of 80 characters each. The display station status, including cursor location (row/column), is shown on the 25th line.

MODELS

Model 1 001

Prerequisites: A 5251 mdl 2 or 12 with #2550 or #2551, or a 5340 (System/34 must be at SSP release 7 level or greater, and if the 5291 is to be used as a console, the System/34 must be at diagnostic release level 9.2 or greater), or a System/36, 5381, or Series/1 with #1210.

HIGHLIGHTS

The standard character set includes 96 characters: 52 upper/lower case alphabetic, 10 numeric, and 33 special characters in addition to "space". Cable-Thru is a standard capability. A Display Screen Glare Reduction Filter is also provided as a standard feature. See "Type Catalog" for keyboard layout. Display functions in addition to normal intensity are: high intensity, nondisplay, blinking, underscore, column separator, and reverse image (dark characters on a color background) on a field basis. The operator can reverse the image of the entire screen. An operator-adjustable audible alarm, under program control, is provided to alert the operator to special conditions. The low profile keyboard with adjustable slope and 24 application assigned command functions provides input and control flexibility.

Security Enhancements: Data fields can be defined allowing entered data to be accepted without being displayed on the screen.

Field Editing: Individual data input fields can be edited as Alphameric, Alpha Only, Numeric Only, Signed Numeric, Field Exit Required, Right Adjust, Mandatory Entry, Mandatory Fill, Bypass, Auto Enter, Dup Enable, Monocase and Self-Check Modulus 10 and 11.

Cabling: The cable attachment between the 5291 and other 5250 system components and/or systems must be made with twinaxial cable. Cable connection: Maximum length of any one twinaxial cable is 1,525m (5,000 feet). Up to seven workstations may be attached to a twinaxial cable via the Cable-Thru capability of the 5291. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information.

Clustering: The 5291 may be attached to the 5251 mdl 2 or 12 with the Cluster (#2550) or the Dual Cluster (#2551) feature. The Cluster feature allows attachment of up to four workstations and the Dual Cluster feature allows attachment of up to eight workstations.

Communications: The 5291 can communicate with a System/34, System/36, or System/38 via a 5251 mdl 12. The 5291 can also communicate with a System/34 or System/38 via a 5251 mdl 2. See M5251 pages for communicating capability of the mdl 2 or 12.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided in the *IBM 5291 Display Station Operator's Guide* (GA21-9409). Also, see "Customer Responsibilities" below.

Customer Setup (CSU): The 5291 is designated as a customer setup device, thereby offering the customer early availability and relocation flexibility. The Marketing Representative must advise the customer of his responsibilities before receipt of the machine. The CSU allowance is one day.

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking and placement of the 5291.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting and checkout in accordance with instructions supplied by IBM. Details of these conditions are described in the Customer Setup instructions.
- Relocation of the 5291, if required, to allow IBM service access.
- Using and following the problem determination procedures for the 5291 prior to calling for IBM service.
- Providing a desk or table-top to support the 5291.
- Installation and maintenance of signal cables and associated parts for attaching the 5291 to the 5251 mdl 2 or 12, 5340, 5360, 5381, or Series/1.
- When adding additional direct or remote display stations to Series/1, System/34, System/36, or System/38, the customer may have to modify the system configuration specifications. See *IBM System/34 Program Product Installation and Modification Reference Manual* (SC21-7689), *IBM System/36 Changing Your System Configuration* (SC21-9052), *IBM System/38 Guide to Program Product and Device Configuration* (GC21-7775), or *IBM Series/1 5250 Information Display System Attachment Feature Initialization and Configuration Operator's Guide* (GA34-0098).

Documentation: *IBM 5250 Information Display System Introduction Manual* (GA21-9246), *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337), *IBM 5291 Display Station Operator's Guide* (GA21-9409), and *IBM 5291 Set-up Procedures* (GA21-9408) (shipped with the product).

AAS Ordering Instructions: The 5291 is a System Component.

SPECIFY

- Default Order Entry: Specify Codes are not required when ordering a 5291. Associated system ID must be indicated on the order.
- Power Default (100-127V AC, 1-phase, 50/60 Hz): A standard non-locking plug (uses customer standard type receptacle) will be furnished. Standard Power cord is 2.4m (8 feet), no specify is required.
- Color Default: Pearl White only.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Power Cable: A 1.8m (6 foot) power cable with standard non-lock plug is available. The power cable is pluggable at the machine.

Cables: The twinaxial cables and/or associated parts to interconnect the 5250 Information Display System components and attached systems may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the machine.

Twinaxial Wire (P/N 7362211): Order must specify the desired length. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. This is an indoor/outdoor cable.

Twinaxial Connector Kit (P/N 7362268): Includes two connectors. Twinaxial wire and one Twinaxial Connector Kit are required for each attachment cable. Individual connectors P/N 7362269 are available for replacement.

Twinaxial Cable Assembly (P/N 7362267): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (P/N 3762230): Permits two Twinaxial Cables Assemblies to be joined together.

Twinaxial Station Protector Kit (B/M 7361807): Two protectors. One is required at each end of each Twinaxial Attachment Cable installed outdoors (either above or below ground level). Individual Twinaxial Station Protectors, P/N 7362426, are available for replacement purposes.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code Requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N 7362063 for Teflon-covered cable. Individual connectors P/N 7362229 are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N 7362061 for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N 7362062 for Teflon-covered cable assembly.

SUPPLIES (None)

5292 COLOR DISPLAY STATION

PURPOSE

The 5292 is an advanced color display station for use in 5250 Information Display System networks. It is attachable to System/34, System/36, System/38, and 5251 model 2 or 12.

Model 1: The 5292 model 1 is a 7-color display station plug compatable in 5250 Information Display System networks. It can be used with System/34, System/36, and System/38 for entering, editing and displaying alphameric data. Displayable colors are red, green, turquoise, yellow, pink, blue and white. A low profile, typewriter-style movable keyboard permits the operator to enter, display, and manipulate data on the screen in a highly flexible and efficient manner. This display station performs the same basic functions as the 5251 model 11, but utilizes a color display screen. Displays up to 1,920 characters with 24 lines of 80 characters each. The display station status is shown on a 25th line. Optionally, the user can also display the cursor location (row/column) on this status line.

Model 2: In addition to being able to operate exactly like a model 1 in alphameric mode (described above), the 5292 model 2 provides the capability of producing business graphics utilizing up to eight colors (black plus seven from a palette of 512 colors -- requires host system programming support). Examples of graphic images which can be displayed include bar charts, pie charts, line graphs, and surface graphs. High flexibility in creating graphic images is achieved by the inclusion of an All Points Addressable (APA) display and a customized vector-to-raster conversion processor. Also included in the model 2 are three standard output ports: IEEE 488 (requires host system programming support), parallel printer (requires RPQ for 5292 mdl 2 microcode support), and video. These ports allow the direct attachment of various plotters, printers, and electronic film cameras, monitors, or projectors.

MODELS

Model 1 001

Model 2 002

Prerequisites: A 5251 mdl 2 or 12 with Cluster (#2550) feature or Dual Cluster (#2551) feature, or a 5340 (System/34 must be at SSP release 7 level or greater), 5360, or a 5381 (Release 4.1 or higher). For the mdl 2, programming graphics support is provided on System/36 via System/36 Business Graphics Utilities, 5799-BNW, (PRPQ P84056). The 5292 mdl 2 will attach to the System/34 and System/38 and operate as a mdl 1 but graphics programming support is not available. An RPQ is required to provide the microcode to support a parallel printer attachment to the 5292 mdl 2.

HIGHLIGHTS

Mdls 1 and 2 Alphameric Mode: The standard character set includes 96 dot-matrix characters: 52 upper/lower case alphabetic, 10 numeric, and 33 special characters in addition to "space". The display of colors is achieved through the use of already existing attribute codes and can be used without program modification. (For example, the high intensity attribute code will result in white color; the blink attribute code will result in red color, etc.) For optimum use of color, changes may be desired in existing programming support for the customer 5251 or 5252 Display Stations. See *IBM 5292 Color Display Station Programmer's Guide to Using Color* (GA21-9413). Cable-Thru and Screen Glare Reduction are provided as standard features. See "Type Catalog" for keyboard layout. Display functions include: nondisplay, blinking, underscore, column separator, and reverse image (dark characters on a color background) on a field basis. An operator-adjustable audible alarm is provided to alert the operator to special conditions. The low profile keyboard with adjustable slope and 24 application assigned command functions provides input and control flexibility. Easy-to-use select options, provided from the keyboard, allow the operator to utilize a block or underscore cursor, cursor blink or non-blink, limit line space and limited use of color. The operator can also elect to display the cursor location (row/column) and the screen attribute codes being utilized as well as set the audible alarm volume.

Mdl 2 in Graphics Mode: Inclusion of the vector-to-raster conversion processor provides for host offload, area fill of complex shapes, flexible line styles, and double width line generation. The All Points Addressable (APA) capability gives access to 480 addressable points in the horizontal direction by 288 points in the vertical direction utilizing eight colors (black plus seven colors from a palette of 512 colors). Color selection is a function of host system graphics software support. Three output ports are provided on the mdl 2: The IEEE output port provides for attachment of various plotters (requires host system programming support), the parallel printer output port allows attachment of various mono/color printers for screen copy (requires RPQ for 5292 mdl 2 microcode support), the video output port provides RGB (red, green, blue) plus synchronization signals to provide for attachment of various electronic film cameras, monitors, or projectors (host programming support is not required). Also provided on the mdl 2 when used in graphics mode are additional operator controls including graphics on/off, erase graphics display, terminate graphics processing, and screen copy (local hard copy via the parallel printer port). When in graphics mode the mdl 2 utilizes limited line space.

Security Enhancements: Data fields can be defined so entered data is accepted without being displayed on the screen.

Field Editing: Individual data input fields can be edited as Alphameric, Alpha Only, Numeric Only, Signed Numeric, Field Exit Required, Right Adjust, Mandatory Entry, Mandatory Fill, Bypass, Auto Enter, Dup Enable, Monocase and Self-Check Modulus 10 and 11.

Cabling: The cable attachment between 5250 system components and/or systems must be made with twinaxial cable. Maximum length of any one twinaxial cable is 1,525m (5,000 feet). Up to seven workstations may be attached to a twinaxial cable via the Cable-Thru capability of the 5292. See *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337) for cabling information. See "Accessories" for twinaxial cable and associated accessories.

Clustering: The 5292 Color Display Station may be attached to the 5251 mdl 2 or 12 with the Cluster (#2550) or the Dual Cluster (#2551) feature. The Cluster feature allows attachment of up to four workstations and the Dual Cluster feature allows attachment of up to eight workstations. See "Special Features" in M5251 pages.

Communications: The 5292 Color Display Station can communicate with a System/34, System/36, or System/38 via a 5251 mdl 12. The 5292 can also communicate with a System/34 or System/38 via a 5251 mdl 2. See M5251 pages for communicating capability of the mdl 2 or 12.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided in the *IBM 5292 Color Display Station Color Alignment and Problem Determination Procedures* (GA21-9420) which is shipped with the machine. Also, see "Customer Responsibilities" below.

Customer Setup (CSU): The 5292 Color Display Station is designated as a customer setup device, thereby offering the customer early availability and relocation flexibility. The Marketing Representative must advise the customer of his responsibilities before receipt of the machine. The CSU allowance is one day.

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking and placement of the 5292.
- Physical setup, connection of cables to IBM devices incorporating protected access areas, switch setting and checkout in accordance with instructions supplied by IBM. Details of these conditions are described in the Customer Setup instructions.
- Relocation of the 5292, if required, to allow IBM service access.
- Using and following the problem determination procedures for the 5292 prior to calling for IBM service.
- Providing a desk or table-top to support the 5292.
- Installation and maintenance of signal cables and associated parts for attaching the 5292 to other components of the 5250 Information Display System or other attached system. The customer is also responsible for providing and installing cables from any of the output ports of the mdl 2 to the output device if not supplied with the device.
- When adding display stations to System/34, System/36, or System/38, the customer may have to modify the system configuration specifications. See *IBM System/34 Program Product Installation and Modification Reference Manual* (SC21-7689), *IBM System/36 Changing Your System Configuration* (SC21-9052), or *IBM System/38 Guide to Program Product and Device Configuration* (GC21-7775).

Publications: *IBM 5250 Information Display System Introduction Manual* (GA21-9246), *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337), *IBM 5292 Color Display Station Operator's Guide* (GA21-9416), and, *IBM 5292 Color Display Station Programmer's Guide to Using Color* (GA21-9413), *IBM 5292 Color Display Station Color Alignment and Problem Determination Procedures* (GA21-9420). The *IBM 5250 Functions Reference Manual* (SA21-9247), containing mdl 2 output port interface description, will be available in September, 1983.

AAS Ordering Instructions: The 5292 is a System Component.

SPECIFY

- Default Order Entry: Specify Codes are not required when ordering a 5292. Associated system ID must be indicated on the order. Default parameters are shown below.
- Power Default (100-127V AC, 1-Phase, 60 Hz): A standard non-locking plug (uses customer standard type receptacle) will be furnished. Standard power cord is 2.4m (8 feet). See also "Accessories" for alternate cord.
- Color Default: Pearl White only.

5292 Color Display Station (cont'd)

SPECIAL FEATURES: None

MODEL CONVERSIONS: None

ACCESSORIES

Cables: The twinaxial cables and/or associated parts to interconnect the 5292 and attached systems may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *IBM 5250 Information Display System Planning and Site Preparation Guide* (GA21-9337). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the machine.

Twinaxial Connector Kit (**P/N 7362268**): Includes two connectors. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. (Individual connectors **P/N 7362229** are available for replacement.)

Twinaxial Wire (**P/N 7362211**): Order must specify the desired length. Twinaxial Wire and one Twinaxial Connector Kit are required for each attachment cable. (This is an indoor/outdoor cable.)

Twinaxial Cable Assembly (**P/N 7362267**): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (**P/N 3762230**): Permits two Twinaxial Cables Assemblies to be joined together.

Twinaxial Station Protector Kit (**B/M 7361807**): Two protectors. One is required at each end of each Twinaxial Attachment Cable installed outdoors (either above or below ground level). Individual Twinaxial Station Protectors, **P/N 7362426**, are available for replacement purposes.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order **P/N 7362063** for Teflon-covered cable. Individual connectors **P/N 7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order **P/N 7362061** for Teflon-covered cable.

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order **P/N 7362062** for Teflon-covered cable assembly.

Power Cord: A 1.8m (6 foot) power cord with standard non-locking plug is available. The power cord is pluggable at the machine.

SUPPLIES (None)

5320 SYSTEM UNIT

[NO LONGER AVAILABLE]

Special features, accessories, RPQs, and MESs may be obtained on an "as available" basis only.

PURPOSE

The System/32 is a compact commercial data processing system designed primarily for small businesses.

MODELS

Model	Printing Speed	Disk Storage Capacity (Bytes)
A01	40 cps unidirectional	3,210,240
A02	40 cps unidirectional	5,053,440
A03	40 cps unidirectional	9,169,920
A04	40 cps unidirectional	13,777,920
A11	40 cps bidirectional	3,210,240
A12	40 cps bidirectional	5,053,440
A13	40 cps bidirectional	9,169,920
A14	40 cps bidirectional	13,777,920
A21	80 cps bidirectional	3,210,240
A22	80 cps bidirectional	5,053,440
A23	80 cps bidirectional	9,169,920
A24	80 cps bidirectional	13,777,920
A31	120 cps bidirectional	3,210,240
A32	120 cps bidirectional	5,053,440
A33	120 cps bidirectional	9,169,920
A34	120 cps bidirectional	13,777,920
B11	50 lpm	3,210,240
B12	50 lpm	5,053,440
B13	50 lpm	9,169,920

B24	100 lpm	13,777,920
B31	155 lpm	3,210,240
B32	155 lpm	5,053,440
B33	155 lpm	9,169,920
B34	155 lpm	13,777,920
C41	285 lpm	3,210,240
C42	285 lpm	5,053,440
C43	285 lpm	9,169,920
C44	285 lpm	13,777,920

Note: All models have 16,384 bytes of main storage standard.

Limitations: See the appropriate host system programming pages for possible restrictions.

HIGHLIGHTS

- Operator-oriented data processing.
- Direct keyboard data entry.
- Display screen.
- Batch processing with stored job stream procedures.
- RPG II programming support.
- Communications capability via SDLC or BSC.
- Word processing functions.
- Metal Oxide Semiconductor Field Effect Transistor (MOSFET) main storage.
- 600-nanosecond main storage cycle time.
- Main storage available in 16K, 24K, or 32K bytes with 2K bytes reserved for SCP functions.
- Internal structure is EBCDIC 8-bit byte.

Keyboard: Used for data entry and operator/system communication. It features a familiar typewriter layout plus a 10-key proof keyboard and function keys. The top row of typewriter keys are dual-defined, providing 24 command keys. In addition to the standard alphameric keys, the keyboard has record, field, character advance, backspace, repeat, and printer control keys. A Dual Case Keyboard and Display feature provides upper/lower case and special character/graphic support and a code key used by application programs to simulate the Mag Card (Selectric, II, A, and Executive) Typewriter code key.

Display Screen: Provides operator guidance and prompting and auxiliary output under program control. Up to 240 characters can be displayed, six rows of 40 characters each. All data entered through the keyboard is displayed on the screen by the programming system.

Disk Storage: Capacity of 3.2, 5.0, 9.1, or 13.7 million bytes of nonremovable high-speed direct access storage. The disk rotates at 2,964 rpm, yielding a data rate of up to 889,000 bytes per second, and so permitting efficient sequential and random access processing. The following table provides corresponding capacity data and access times.

For more specific access times, refer to timing charts. Average latency is 10.1 milliseconds.

	3.2MB	5.0MB	9.1MB	13.7MB
Bytes/Sector	256	256	256	256
Sectors/Track	60	60	60	60
Tracks/Cylinder	2	2	2	3
Bytes/Cylinder	30,720	30,720	30,720	46,080
Cylinders	104.5	164.5	298.5	299.0
Access Time (ms)				
Minimum	13.0	13.0	14.2	14.2
Average	50.4	70.0	72.5	72.5
Maximum	121.0	180.0	166.9	166.9

Line Printing: B and C mdls with a 48-character print belt provide printed output at nominal rated speeds of 50, 100, 155, or 285 lpm depending upon mdl. Included as standard is one engraved font print belt. See "Specify" for proper ordering. Nominal printing speeds are as follows:

	Character Set Size		
Mdl	48	64	96
B1X	50 lpm	50 lpm	50 lpm
B2X	100 lpm	100 lpm	80 lpm
B3X	155 lpm	120 lpm	80 lpm
C4X	285 lpm	225 lpm	160 lpm

Mdl C4X, 96-character set prints at 80 lpm when used with Word Processor/32 (5725-XX1) PP.

Horizontal spacing is 10 characters to the inch with a 132-position print line. Vertical spacing is six lines to the inch. For eight lines to the inch vertical spacing and programming support, see RPQ S40127. A variable width forms tractor provides for feeding continuous forms. Refer to *Forms-Design Printers Reference Guide* (GA24-3488) for forms design considerations and limitations. Forms jam detection is standard. See "Type Catalog" for character set arrays and styles.

Serial Printing: The A mdls print at a maximum rate of 40 cps in a unidirectional mode or 40, 80, or 120 cps in a bidirectional mode depending on mdl. Matrix characters are formed by eight vertical wires. Horizontal spacing is 10 characters to the inch with a 132-position print line. Vertical spacing is six lines to the inch. A variable width forms tractor provides for feeding continuous forms. Refer to *Forms-Design Printers Reference Guide* (GA24-3488) for forms design considerations and limitations. Single form/ledger cards may be processed typewriter-fashion. See "Type Catalog" for character set arrays.

Notes:

- Differences between line and serial printing are transparent to RPG II object code for continuous forms and recompilation is not required when changing printer mdls.
- System/32 printed output is not recommended for optical character reading.
- A forms stand, providing for the feeding and stacking of continuous forms, is provided with the system.
- Printed output utilizing Artisan or Modified Courier print belts should not be expected to compare in quality to the Selectric typewriter.

Diskette Drive: Provides the capability of entering data recorded offline and also is a load/dump backup facility via the Diskette 1. The diskette also provides compatible media for interchange with other systems utilizing Diskette 1 (up to 242,944 byte capacity). For System/32 use, Diskette 1 capacity is 246,272 bytes in standard interchange format and 303,104 bytes in 512-byte extended format. 128-byte records are processed at rates of up to 3,400 per minute reading and up to 1,800 per minute writing. "Read" and "Write" are not overlapped with processing or other devices. However, "one track forward seek" is overlapped.

Card I/O: Utilizing the 129 Card Data Recorder (80-column) provides reading up to 50 cards per minute and punching or punching and printing from 12 to 50 cards per minute. In punch mode, throughput may vary. When two or more adjacent columns are blank, the equivalent of read speed is achieved until a non-blank column is encountered. Utilizing the 5496 Data Recorder (96-column) provides reading, punching, and printing speeds of up to 21 cards per minute. Cannot be installed with 5321 Mag Card Unit Attachment (#4900) and Half-Line Space Printing (#4530). Card I/O operation within the same program as the diskette drive, BSCA, or SDLC is not supported. . .

Mag Card I/O: Utilizing the 5321 Mag Card Unit provides reading and recording of information up to 102 characters per track and 50 tracks per card. Reading is at the rate of 230 milliseconds per track; recording is at the rate of 450 milliseconds per track. The 5321 Mag Card Unit uses the same card and recording discipline as the Mag Card products. Operation of the Mag Card Unit within the same program as the diskette drive, BSCA, or SDLC is not supported.

5320 System Unit (cont'd)

Magnetic Character Reading: Utilizing the 1255 Magnetic Character Reader provides reading and sorting of MICR-inscribed documents at 500 documents per minute for mdl 1 and 750 documents per minute for mdls 2 and 3. Six stackers are provided on mdls 1 and 2, and 12 stackers on mdl 3. Operation of the 1255 within the same program as the diskette drive, BSCA, or SDLC is not supported.

Customer Responsibilities: The customer must be advised, in writing, of certain responsibilities related to the installation and maintenance of common carrier facilities/services as well as the IBM equipment. For further information, see M2700 pages and "Teleprocessing Systems" in the GI section.

The marketing representative must have the customer obtain a firm installation date for the start of transmission services (including any required modems) prior to processing the Order Confirmation card.

Publications: *System/32 Bibliography* (GC20-0032). Refer to *IBM System/32 Installation Manual - Physical Planning* (GA21-9177) for physical installation requirements.

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): Specify **#9884** for 208V or **#9886** for 230V.
- Color: Specify **#9041** for red, **#9042** for yellow, **#9043** for blue, or **#9045** for light gray.
- Print Belt (B and C mdls): Available at time of manufacture only, except when upgrading an installed A mdl. Specify one of the following:

Belt Description	Specify Code .079 Inches	Specify Code .095 Inches
48-character EBCDIC	**#9491** *	**#9497**
48-character FORTRAN	N/A	**#9492**
64-character ASCII	**#9493** *	**#9498**
64-character EBCDIC	**#9490** *	**#9496**
96-character Artisan	N/A	**#9487**
96-character Modified Courier	N/A	**#9499**

* Recommended for use with six or eight lpi RPQ S40127.

- ASCII Key Tops and Display Screen Graphics: Specify **#9370**. **Note:** Includes ASCII graphics on serial printing (A mdls).
- Modem Cable (SDLC or BSCA only): Required for attaching System/32 to the communications facility regardless of whether an IBM integrated modem or an external modem is used. Specify **#9460** for a 6 meter (20 foot) cable or **#9461** for a 12 meter (40 foot) cable.
- Upending: If required, upending may be accomplished by following the instructions shipped with the system.

SPECIAL FEATURES

Non-Communications Features

Additional Storage (#1005): Provides an additional 8,192 bytes of main storage. **Maximum:** Two. **Field Installation:** Yes.

1255 Attachment (#1100): To attach a 1255 Magnetic Character Reader mdl 1, 2, or 3 equipped with a System/3/32/34 Adapter (#6303). See *IBM System/32 Installation Manual - Physical Planning* (GA21-9177) for cabling information. **Limitations:** Cannot be installed with Data Recorder Attachment (#3200) or 5321 Mag Card Unit Attachment (#4900). **Maximum:** One. **Field Installation:** Yes.

Control Storage Increment (#1500): Provides additional control storage and access to a Scientific Instruction Set, a group of additional instructions which perform functions commonly required in scientific programs. Required for execution of FORTRAN IV (5725-F01) generated object programs. #1500 is not required for compiling programs. **Maximum:** One. **Field Installation:** Yes.

Data Recorder Attachment (#3200): To attach either a 129 Card Data Recorder mdl 2 equipped with a 3741/5320 Attachment (#8201) or a 5496 Data Recorder mdl 1 equipped with a 2772/3741/5320 Attachment (#7850). A 3 meter (10 foot) cable and connector required to attach a 129 or 5496 to the 5320 is included. Card I/O operation within the same program as the diskette drive, BSCA, or SDLC is not supported. **Limitations:** Cannot be installed with 1255 Attachment (#1100) or 5321 Mag Card Unit Attachment (#4900). **Maximum:** One. **Field Installation:** Yes.

Dual Case Keyboard and Display (#3400): [B, C mdls] Provides upper and lower case characters and new graphics and redefines the character/graphic arrangement of the System/32 keyboard and display. See "Type Catalog" for character/graphic arrangements supported. One set of prompt templates (ten keyboard arrangements) is supplied with #3400. See "Accessories" for additional sets. **Limitations:** Not compatible with ASCII Key Tops and Display Screen Graphics (**#9370**), RPQ GG0339 (additional print belt -- 96-character) or RPQ S40127 (six or eight lines per inch spacing). **Field Installation:** Yes.

Half-Line Space Printing (#4530): [B, C mdls] Provides half-line vertical spacing for printing. This feature supports superscript and subscript requirements normally associated with the character sets provided by Artisan and Modified Courier print belts. **Limitations:** Application programs using half-line spacing must include repositioning to the next full vertical space where full space alignment is required. Cannot be installed with RPQ S40127 (eight lines per inch spacing) or Data Recorder Attachment (#3200). **Field Installation:** Yes.

Keylock (#4655): Replaces on/off power switch to protect against unauthorized use. See "Accessories" for additional information. **Field Installation:** Yes.

5321 Mag Card Unit Attachment (#4900): [B, C mdls] To attach a 5321 Mag Card Unit Mdl 1 to a System/32. A 4.5 meter (15 foot) cable and connector required to attach the 5321 is included. **Limitations:** Cannot be installed with Data Recorder Attachment (#3200) or 1255 Attachment (#1100). **Maximum:** One. **Field Installation:** Yes.

Communications Features

Binary Synchronous Communications Adapter (BSCA) (#2074): In conjunction with stored program control, this feature permits System/32 to function on a switched, nonswitched, or private communications line as a processor/terminal communicating in binary synchronous mode with:

- Another System/32 equipped with #2074.
- A System/34 equipped with a communication adapter.
- A System/38 with appropriately configured BSC adapter and sub-features (point-to-point only).
- A 6640 Document Printer equipped with BSC/EBCDIC feature. Requires communicating features #3700 and #3701 or #5501, #5508, or #5510. System/32 requires SCP (#6002) with WPCU.
- Office System 6/430, 6/440, and 6/450 equipped with BSC/EBCDIC feature. Requires communicating features #3700 and #3701 or #5501, #5508, or #5510. System/32 requires SCP (#6002) with WPCU.
- A Mag Card II Typewriter - Communicating.
- A System/3 equipped with #2074 or #2084.
- A System/360 mdl 20 equipped with #2074.
- A System/360 or System/370 (which is supported by OS or DOS BTAM, OS TCAM, OS/VS1 or OS/VS2 BTAM, TCAM or VTAM, DOS/VS BTAM, or VTAM) via an Integrated Communications Adapter, a 2701 Data Adapter Unit, or a 3704/3705 Communications Controller with the Network Control Program (NCP) or the Partitioned Emulation Program (PEP), any of which are equipped with a binary synchronous adapter and appropriate sub-features.
- A 3741 Data Station mdl 2 or 3741 Programmable Workstation mdl 4.
- A 3747 Data Converter equipped with Communications Adapter (#1660).
- A 5110 Computer equipped with BSCA #2074 (as a 3741 mdl 2 or 4).
- A 5231 mdl 2 equipped with BSCA (#2074) (point-to-point unidirectional transmission only).
- A 5280 Distributed Data System equipped with Communications Adapter (#2500).
- A System/7 equipped with BSCA (#2074).

See the System/32 programming pages for a description of the program support provided on System/32 for this feature.

The BSCA feature is designed to operate at speeds between 600 and 7200 bps over common carrier switched or nonswitched facilities or equivalent privately-owned communication facilities.

The BSCA feature (#2074) will allow System/32 to communicate on a nonswitched point-to-point or multipoint line at speeds of up to 7200 bps and on a switched point-to-point line at speeds of up to 4800 bps. See M2700 pages for information on communication facilities.

On a multipoint line System/32 operates as a tributary station. No support is provided for System/32 to operate as a control station on a multipoint line. Therefore, communication with other devices which do not provide control station capability must be done on a point-to-point line only.

This feature, Binary Synchronous Communications Adapter, will operate in half-duplex mode over dial (switched network) facilities, and in half-duplex mode over nonswitched (or equivalent private) communication lines which may be duplex or half-duplex facilities. Operation of this feature on System/32 will be overlapped at all transmission rates with processing and/or I/O device operations including disk. BSC units at each termination or drop point of a data link to which the System/32 is attached must use the same clocking source (modem or

5320 System Unit (cont'd)

business machine) and must be set to operate at the same transmission rate and to use the same transmission code.

Switched network versions include as a basic capability support of manual dial and manual or auto-answer operations (where the attached modem supports this capability).

ASCII, EBCDIC or EBCDIC Text Transparency are standard. One of the above transmission codes is selected at program compilation time.

Limitations: Cannot be installed with SDLC (#6301). Card I/O, the 5321 Mag Card Unit, the 1255 Magnetic Character Reader, and the diskette drive cannot be operated within the same program as the BSCA. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3701, #5500, #5501, #5600, #5602, or #5610. **Specify:** Modem cable (see "Specify").

EIA Interface (#3701): Provides a cable and interface for the attachment of an IBM modem or non-IBM data set meeting RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Note:** This feature may also require Internal Clock (#4703) if the external modem does not provide its own clocking. **Limitations:** Cannot be installed with 1200 bps Integrated Modem (#5500, #5501) or 2400 bps Integrated Modem (#5600, #5602 , #5610). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074 or #6301.

Internal Clock (#4703): Generates synchronizing and timing signals for SDLC or BSC operation when they are not provided by the modem. Clocking speeds available with this feature are 600 bps and 1200 bps. Selection of speed is indicated via a system utility program (SCP). When this feature is installed on System/32, all other SDLC or BSC stations attached to the same data link must also be equipped with a similar Internal Clock feature. **Limitations:** Cannot be installed with 2400 bps Integrated Modem (#5600, #5602, #5610). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074 or #6301 and #3701, #5500, or #5501.

1200 bps Integrated Modem (#5500, #5501): A modem for SDLC or BSC data transmission at 1200 bps over nonswitched facilities or switched network. Half-speed operation at 600 bps is indicated via a system utility program (SCP). Available in two different versions: #5500 - nonswitched and #5501 - switched with auto-answer. Attachment to the nonswitched (2- or 4-wire) facilities is via an IBM-provided cable directly to the line, Type 3002. Attachment to the switched network is via an IBM-provided cable to FCC-registered protective circuitry of the CBS Type (or equivalent) provided by the user. The device communicating with System/32 must also be equipped with 1200 bps integrated modem/line adapter. **Limitations:** Cannot be installed with EIA Interface (#3701) or 2400 bps Integrated Modem (#5600, #5602, #5610). #5500 and #5501 cannot be installed together. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074 or #6301 and #4703.

2400 bps Integrated Modem (#5600, #5602): A modem for SDLC or BSC data transmission at 2400 bps over nonswitched facilities, equivalent to and compatible with similarly featured 3872 modems. Half-speed operations at 1200 bps is indicated via a system utility program (SCP). Available in two different versions: #5600 - nonswitched point-to-point and #5602 - nonswitched multipoint tributary. Attachment to nonswitched (2- or 4-wire) facilities is via an IBM-provided cable directly to the line, Type 3002. Attachment to the switched network is via an IBM-provided cable to FCC-registered protective circuitry of the CBS Type (or equivalent) provided by the user. The device communicating with System/32 must also be equipped with 2400 bps integrated modem/line adapter or 3872 modem. **Limitations:** Cannot be installed with EIA Interface (#3701) or 1200 bps Integrated Modem (#5500, #5501). 2400 bps Integrated Modems (#5600, #5602 , #5610) cannot be installed together. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074 or #6301 and #5733.

2400 bps Integrated Modem (#5610): A modem for SDLC or BSC data transmission at 2400 bps over the switched network with automatic answer capability. This modem is equivalent to and compatible with similarly featured 3872 modems. Half-speed operation at 1200 bps is indicated via a system utility program (SCP). Attachment to the switched network is via an IBM-provided cable to FCC-registered protective circuitry of the CBS Type (or equivalent) provided by the user. The device communicating with System/32 must also be equipped with a 2400 bps integrated modem/line adapter or 3872 modem. **Limitations:** Cannot be installed with EIA Interface (#3701) or 1200 bps Integrated Modem (#5500, #5501). #5600, #5602, and #5610 cannot be installed together. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074 or #6301 and #5733.

Processing Unit Expansion (#5733): Provides for mounting of one 2400 bps Integrated Modem (#5600, #5602, #5610). **Limitations:** Cannot be installed with EIA Interface (#3701) or 1200 bps Integrated Modem (#5500, #5501). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074 or #6301 and #5600, #5602, or #5610.

Synchronous Data Link Control Communications (SDLC) (#6301): In conjunction with stored program control, this feature provides communications capability with S/370 mdls 115, 125, 135, 145, 155II, 158, 158MP, 165II, 168, and 168MP via a 3704 or 3705 Communications Controller equipped with appropriate features. See M3704 and 3705 pages. The S/370 must be operating under control of DOS/VS, OS/VS1, or OS/VS2 VTAM and the 3704/3705 under control of the Network Control Program/VS (NCP/VS). See the System/32 programming pages for a description of the program support provided on System/32 for this feature.

The SDLC feature is designed to operate at speeds between 600 and 7200 bps over common carrier switched or nonswitched facilities or equivalent privately-owned communication facilities.

SDLC (#6301) will allow System/32 to communicate on a nonswitched point-to-point or multipoint line at speeds of up to 7200 bps and on a switched point-to-point line at speeds of up to 4800 bps. See M2700 pages for information on communication facilities.

This SDLC feature will operate in half-duplex mode over dial (switched network) facilities, and in half-duplex mode over nonswitched (or equivalent private) communication lines which may be duplex or half-duplex facilities. Operation of this feature on System/32 will be overlapped at all transmission rates with processing and/or I/O device operations including fixed disk. SDLC units at each termination or drop point of a data line to which the System/32 is attached must use the same clocking source (modem or business machine), the same transmission encoding option (NRZ or NRZI), and must be operating at the same transmission rate.

Switched network versions include as a basic capability support of manual dial and manual or auto-answer operations (where the attached modem supports this capability).

The System/32 operates as an SDLC secondary station and can operate on a communication line with other IBM SDLC terminals.

Limitations: Cannot be installed with BSCA (#2074). Card I/O, the 5321 Mag Card Unit, the 1255 Magnetic Character Reader, or the diskette drive cannot be operated within the same program as SDLC. SDLC supported by SCP (5723-SC1) requires 24K bytes of main storage. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3701, #5500, #5501, #5600, #5602, or #5610. **Specify:** Modem cable (see "Specify").

Switched Network Backup (SNBU) (#7951): Provides for backup attachment of System/32 to the public switched network when the 2400 bps Integrated Modem (#5600, #5602, #5610) is used on a nonswitched line as the primary facility. It can communicate with another 2400 bps Integrated Modem or a 3872 modem when either is equipped with switched network capability. Selection of the primary or backup facility is via an operator-invoked system utility program (SCP). Attachment to the switched network is made via FCC-registered protective circuitry of the CDT Type (or equivalent) provided by the user. Calls must be established and answered manually. Operator intervention, program modification, or both may be required on the using system/terminal. This feature can be used with BTAM programs for DOS, DOS/VS, OS, OS/VS1, and OS/VS2 in certain configurations or with TCAM/VTAM under OS/VS1 or OS/VS2. Additional customer program routines will be required, in existing BTAM programming, to fully utilize the capabilities of Switched Network Backup. For additional information, see the *3872 Modem User's Guide* (GA27-3058). **Limitations:** Cannot be installed with SDLC (#6301) or Switched Network Backup with Auto-Answer (#7952). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074, #5600 or #5602, and #5733.

Switched Network Backup with Auto-Answer (SNBU/AA) (#7952): Same as Switched Network Backup (#7951) plus the added capability of automatically answering incoming calls when attached to FCC-registered protective circuitry of the CBS Type (or equivalent) provided by the user. Selection of the primary or backup facility is via an operator-invoked system utility program (SCP). Operator intervention, program modification, or both may be required on the using system/terminal. This feature can be used with BTAM programs for DOS, DOS/VS, OS, OS/VS1 or OS/VS2 in certain configurations or with TCAM/VTAM under OS/VS1 or OS/VS2. Additional customer program routines will be required, in existing BTAM programming, to fully utilize the capabilities of the Switched Network Backup feature. For additional information, see the *3872 Modem User's Guide* (GA27-3058). **Limitations:** Cannot be installed with SDLC (#6301) or Switched Network Backup (#7951). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074, #5600 or #5602, and #5733.

IBM Modems:

Modem	Speed (bps)
3863	2400
3864	4800
3865	9600
3872	2400/1200

Note: System/32 does not support Auto-Call Originate (#1091) on the 3872. For communications capabilities, product utilization, and special features, see M2700, 3863, 3864, 3865, and 3872 pages.

5320 System Unit (cont'd)

To verify the proper integrated modem or external modem interface configuration, refer to the following chart. Select one of the categories numbered from 1 to 3 and follow across for the required and optional special features.

Modem/Interface Feature Configurator

Modem/Interface	Internal Clock (#4703)	Processing Unit Expansion (#5733)	SNBU (#7951) or SNBU/AA (#7952)
EIA Interface (#3701)	Optional	-	-
1200 bps Integrated Modem:			
Nonswitched (#5500)	Required	-	-
Switched with Auto-Answer (#5501)	Required	-	-
2400 bps Integrated Modem:			
Nonswitched Point-to-Point (#5600)	-	Required	Optional
Nonswitched Multipoint Tributary (#5602)	-	Required	Optional
Switched Network Auto-Answer (#5610)	-	Required	-

Maximum: One IBM modem can be attached to a System/32. **Field Installation:** Yes. **Prerequisites:** #2074 or #6301 and #3701.

References:

Contact IBM for information concerning external modems attachable to the System/32 SDLC or BSCA features.

See M2700 pages for additional information concerning modems, communications facilities, machine attachment requirements, terminal intermix, and operating capabilities.

Refer to SCP (#6002) for Word Processing Communications Utility support of 6640 Document Printer, Office Systems 6/430, 6/440, 6/450, a second Word Processing System/32, and a Mag Card II Typewriter - Communicating.

MODEL CONVERSIONS

Model conversions are field installable.

Any model conversion that involves a disk storage capacity requires replacement of the disk storage mechanism. Adequate provision must be made for retaining the data contained on the replaced disk mechanism and elimination of user proprietary information.

Model conversions between A, B, and C models require replacement of the print mechanism and may require replacement of the power supply. A0X, A1X, or A2X models, when converted to A31, A32, A33, or A34 models, must be at EC level 828749 or the print mechanism must be replaced.

When upgrading from model A, a print belt must be specified. See "Specify".

The upgrade purchase prices for model conversions may be greater than the purchase price differentials. Customers should carefully evaluate their future requirements when purchasing a system.

Replaced parts from any model conversion become the property of IBM.

ACCESSORIES

Locks and Keys: The 5320 with Keylock (#4655) is shipped with two keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys to original purchaser.) Key identification number and P/N **2546418** must accompany each order. Allow six to eight weeks for delivery.

Additional Print Belts: [B, C mdls] Permits the customer to print more than one character set for various applications. Can be interchangeably used with the belt provided with the machine. Order by feature number with the machine or by MES for field installation.

Belt Description	Feature Code .079 Inches	Feature Code .095 Inches
48-character EBCDIC	**#5906** *	**#5911**
48-character FORTRAN	N/A	**#5552**
64-character ASCII	**#5907** *	**#5912**
64-character EBCDIC	**#5905** *	**#5910**
96-character Artisan	N/A	**#5914**
96-character Modified Courier	N/A	**#5913**

* Recommended for use with six or eight lpi RPQ S40127.

Dual Case Keyboard Prompt Templates (P/N 2773082): A set of ten keyboard redefine prompt templates support the keyboard options as identified in the "Type Catalog". One set is provided with Dual Case Keyboard and Display (#3400).

Cables: A modem cable is required. See "Specify". No other cable order is required for the System/32.

SUPPLIES

Ribbons: A black ribbon is required: P/N **1136653** or equivalent for A mdls, P/N **1136634** or equivalent for B mdls, and P/N **1136670** or equivalent for C mdls.

Diskettes: For Diskette 1, contact IBM.

Mag Cards: For Mag Cards and related supply items, contact IBM.

5321 MAG CARD UNIT

PURPOSE

The 5321 provides magnetic card input and output for System/32 and allows reading and recording to magnetic cards for the 5520 Administrative System.

MODELS

Model 1 001

Limitations: Cannot be installed on 5320 A models. Cannot be installed on 5320 B or C models with 1255 Attachment (#1100) or Data Recorder Attachment (#3200) installed.

Maximum: Only one 5321 may be attached to a system.

Prerequisites: For System/32, the 5321 Mag Card Unit Attachment (#4900) and System Control Program (SCP) (5725-SC1) with #6002. For attachment to the 5525, the 5321 Mag Card Unit Attachment (#1100) and the 5520 Administrative Processing Program (5611-SS1) Release 2.

HIGHLIGHTS

The 5321 reads and records information using 50 track magnetic cards. Reading is at the maximum rate of 20 seconds per card (102 characters per track). Recording is at the maximum rate of 30 seconds per card (102 characters per track). Mag Card products may be used to prepare the cards to be read by the 5321. Playback of the cards recorded by the 5321 can be on Mag Card Selectric Typewriters, Mag Card II, 6640 Document Printer, Mag Card/A, 6240 Communicating Mag Card Typewriter, and the 6670 Information Distributor. Character sets and command codes are supported by application programming under licensed programs such as Word Processor/32 (5725-XX1) on System/32. For the 5520 Administrative System, however, see 5520 Programming pages for operating characteristics and restrictions in this area. The input hopper holds a maximum of 50 cards and the output stacker a maximum of 60 cards.

Publications: *System/32 Bibliography* (GC20-0032).

SPECIFY

- Voltage (115V AC, 1-phase, 60 Hz): No specify required.
- Color: Cloud White (no specify required).
- Attachment: Specify **#9457** for attachment to the 5320 or **#9458** for attachment to the 5525. Note that **#9458** must also be specified when changing attachment of an existing Mag Card Unit from the 5320 to the 5525.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: The 5321 is shipped with a 4.6 meter (15 foot) cable and connector.

SUPPLIES

Magnetic Cards: Only diagnostic magnetic cards are shipped with the 5321. Magnetic cards for customer applications must be ordered separately. For magnetic cards and erase magnets, contact IBM.

5322 COMPUTER

[NO LONGER AVAILABLE]

PURPOSE

The System/23 Datamaster is a compact, desk-top, data processing system designed with many functions intended to simplify use by first time computer users. It is a distributed logic system architecturally structured to support file sharing by multiple workstations. Function-oriented hardware combined with licensed programs provide the additional capabilities of word processing and a flexible communications facility.

The 5322 Computer is a processor unit for the System/23. It contains main storage, arithmetic and logical processing circuits, control functions for I/O units on System/23 and also the keyboard/CRT. Most models have integrated diskette drive(s). A significant standard function of System/23 processors is an interpretive BASIC language processor which provides an integrated, high level, interactive language designed for commercial data processing applications.

MODELS

The model number of the 5322 is determined by the function, memory size, and integrated diskette capability as follows:

Model	Main Storage	Diskette Capacity	Number of Drives
Data Processing Models			
110*	32KB	0MB	0
111*	32KB	.3MB	1
112*	32KB	.6MB	2
113*	32KB	1.1MB	1
114*	32KB	2.2MB	2
120	64KB	0MB	0
121	64KB	.3MB	1
122*	64KB	.6MB	2
123*	64KB	1.1MB	1
124	64KB	2.2MB	2
130*	96KB	0MB	0
131*	96KB	.3MB	1
132*	96KB	.6MB	2
133*	96KB	1.1MB	1
134*	96KB	2.2MB	2
140	128KB	0MB	0
141	128KB	.3MB	1
142*	128KB	.6MB	2
143*	128KB	1.1MB	1
144	128KB	2.2MB	2
*Data Processing and Word Processing** Models*			
420	64KB	0MB	0
421	64KB	.3MB	1
422*	64KB	.6MB	2
423*	64KB	1.1MB	1
424	64KB	2.2MB	2
430*	96KB	0MB	0
431*	96KB	.3MB	1
432*	96KB	.6MB	2
433*	96KB	1.1MB	1
434*	96KB	2.2MB	2
440	128KB	0MB	0
441	128KB	.3MB	1
442*	128KB	.6MB	2
443*	128KB	1.1MB	1
444	128KB	2.2MB	2

* These models are no longer available.
** See System/23 Word Processing requirements under "Standard Features".

The first digit of the mdl number indicates Data Processing function only (1XX) or Data Processing and Word Processing (4XX). The second digit of the mdl number indicates main storage size, and the third digit indicates the number of diskette drives and their capacity.

Maximum Configuration:

Attachable to the 5322 are:

- Up to two printers 5217, 5241, or 5242.
- Single or dual additional diskette drives with the 5246 Diskette Unit.
- High performance, fixed disk storage with the 5247 Disk Storage Unit.

Up to two 5322 Computers can be included in a configuration by attachment to a shared function model of the 5246 Diskette Unit (mdls 21 or 22) or the 5247 Disk Storage Unit.

Prerequisites: Every System/23 must have a diskette storage facility available for system support and maintenance diagnostic support purposes. Therefore, each 5322 must have either the Integrated Diskette Controller (#3780), the 5246 Diskette Unit Controller (#3775), the Extended 5246 Controller (RPQ 8N5008), or the 5247 Disk Unit Adapter Controller (#3770).

Word Processing system configurations must have at least .6MB of diskette capacity available in order to use the word processing licensed program (5715-WP1). See "Special Features" for a description of limitations and prerequisites.

HIGHLIGHTS

- User-oriented system design.
- Wide choice of main memory and diskette storage options provide configuration flexibility to satisfy specific customer requirements.
- Integrated high level interactive language - BASIC.
- Easy-to-use, adjustable typewriter-like keyboard with numeric keypad and control keys.
- Full screen processing ability with 1920-character CRT display screen.
- Customer Support Function diskettes provide easy start-up and simplified diskette data handling.
- Optional word processing capability.
- Dual workstation capability.
- Flexible communications adapter feature and licensed program for either asynchronous or binary synchronous operations.
- Field upgrades provide for future system growth.

Standard Features

Processor: Main storage is available in 32K, 64K, 96K, or 128K bytes (12K bytes of which are permanently allocated for use by the BASIC language interpreter, display, printer and diskette buffers). Main storage cycle time is 975 nanoseconds with internal parity checking. All features and mdl upgrades (see "Model Conversions") are field installable. One printer attachment is standard on all mdls and three special feature slots are provided on the Data Processing mdls (1XX). Two special feature slots are provided on the combined Data and Word Processing mdls (4XX).

Diskette Capability: Two types of diskette drives are supported by the 5322 Computer; a diskette that can read/write IBM Diskette 1 (5322 mdls XX1 and XX2) and a diskette drive which can read/write IBM Diskette 1, 2, and 2D (5322 mdls XX3 and XX4 or the 5246 Diskette Drive). The 5322 uses the 512 byte format when operating under the BASIC language. However, the Customer Support Functions can use other formats to copy files for data interchange purposes. The possible formats for the diskettes are:

Diskette	Format	Bytes/ Sector	Capacity
1	1	128	*243KB
1	2	512	303KB
2	3	128	*486KB
2	4	512	606KB
2D	5	256	985KB
2D	6	512	1136KB

* Basic Exchange format

For diskette data exchange with other systems, the following exchange types are supported: Basic Exchange (Formats 1 and 3 above) and H Exchange (Format 5 above). Diskettes can be interchanged with other IBM systems and devices which support a compatible diskette exchange type. Data exchange with other system types may require code translation for character set integrity.

Examples are the System/3, System/32, System/34, System/36, System/38, Series/1, S/370, 303X, 4300, 3540, 3740, 3747, 3790, 5110, 5120, 5230, 5260, and 8100.

The instantaneous data transfer rate using IBM Diskette 1 or 2 is up to 31.2K bytes/sec, and for IBM Diskette 2D is up to 62.5K bytes/sec. Rotational speed of both types of drives is 360 rpm.

For information on System/23 diskette operations, see *System/23 Customer Support Functions Volume I* (SA34-0175), *BASIC Language Reference Manual* (SA34-0109), or *System/23 Operator Reference* (SA34-0108).

BASIC Language: The System/23 BASIC Language Interpreter provides convenient and powerful facilities and features for the development and execution of application programs. Among these facilities are:

- Residence in read-only storage requiring no control program load.
- Improved program diagnostic tools, such as the TRACE statement.
- Several new functions, statements and commands to simplify:

5322 Computer (cont'd)

- Character String Processing
- Error Recovery
- File Processing and Management
- Printer Control
- Display/Keyboard Processing
- Procedure Control

- File sharing between two 5322 computers.
- Fully overlapped printing and program execution.
- Encyclopedia format reference manual with extensive cross referencing, examples and in-depth description of system function.

Word Processing (WP): The Word Processing mdls consist of additional logic and microcode hardware to be used in conjunction with one of the System/23 Word Processing licensed programs to provide word processing capabilities. Word processing requires a minimum of 64K of main storage and .6MB of diskette storage. See the programming pages for Word Processing systems requirements.

Some functions supported by the Word Processing hardware and licensed programs to create, edit, print, etc., are:

Word Processing II (5715-WP2) Licensed Program provides all of the functions shown for Word Processing (5715-WP1) plus those shown in the WPII column.

WP (5715-WP1)	WP II (5715-WP2)
• **Input**	
-Create document	-Get page/display
-Formats	
-Automatic word wrap	
• **Edit**	
-Delete	-Spelling verification
-Find	-Spelling Assistance
-Indent	-Automatic hyphenation
-Block operations	-Synonym assistance
-Word underscore glossary	-Phrase glossary
-Page delete/restore	-Column alignment right, center, and decimal
	-Page GOTO
	-Page split
• **Merge**	
-DP/WP merge	-DP/WP merge with multiple record types
	-Basic language operations
	-Display files
• **Pagination**	
-Character and line count	-Widow line control
-Syllable hyphen control	-Keep
-Page end control	
• **Document**	
-Copy document	-Operator personalization
-Delete document	-Change document profiles
-Change document profiles	
-List drive contents	

For further information on Word Processing, see the System/23 programming pages (5715-WP1 , 5715-WP2) or the *Word Processing Operator Reference Manual* (SA34-0613).

The keyboard has a familiar typewriter-like layout plus a numeric keypad. Four arithmetic function keys (+, -, *, /) located above the numeric pad provide convenient entry of data in desk calculator mode. Many of the keys in the top row provide system commands when depressed in connection with the COMMAND key. Special BASIC command words can be entered via the keys in conjunction with the COMMAND key. Thus, the COMMAND key can be used to reduce keying time. The keys on the 10-key keypad can also be defined by the user to perform special functions and may be activated with the COMMAND key under program control.

A variety of different language keyboard layouts may be specified when the machine is ordered. For user reference, a Keyboard Aid (SX34-0051) (language and keyboard dependent) is supplied with each 5322. This aid is a set of plasticized printed cards that will lie above the top row of keys, and contain:

- Selected BASIC keywords.
- Operator Commands and user-defined function keys.
- Operator messages for each action code.
- Non-native language characters and block graphics.

See "Keyboard/Keyboard Aid/Publications Set" in the "Specify" section. A single specify code is used to order the desired Keyboard/Keyboard Aid.

Display: The screen (CRT) displays keyed input, output, and provides user guidance. Up to 1840 characters can be displayed, 23 lines of 80-characters each. The 24th line is used to report status and system information. The user is permitted full screen management and display of upper/lower case characters. The size of a full screen display is 205mm (8.1 inches) by 160mm (6.3 inches). At any time, 128 different character images may be displayed in addition to 11 block graphics for presentation of blocks, bar charts, frames, etc. User-controlled field attributes are underline, blink, reverse image, high intensity, and non-display. The cursor can be positioned at any input field and optional field attributes of automatic advance and automatic enter are also available.

Character Sets: Any one of five Display Character Subsets may be selected from the keyboard (using ALTERNATE keying) because they are all stored within the system. This selection has no effect on internal data representation but, affects only the set of displayed graphics. This "internally stored" language capability is significant because any 5322 can utilize all five Display Character Subsets. The stored character sets are:

1. US, Canada-English
2. Canada-French
3. European countries (except Spain)
4. Nordic (including Iceland)
5. Spain and Spanish speaking countries

The primary set of display graphics at "Power On" is set at the plant of manufacture based upon the keyboard specified. See the *Basic Language Reference* (SA34-0109) for further details. For character sets that may be printed, see the appropriate printer pages.

Printers: Each 5322 may attach up to two 5241 or 5242 table-top impact matrix printers. The first printer attachment is standard and the Second Printer Attachment (#6350) is optional. The optional Second Printer Attachment (#6350) must be installed if the 5217 printer is attached. Either attachment may be used with the 5217, 5241, or 5242 Printers. The 5241 provides printing speeds of 80 characters per second and the 5242 provides 160 characters per second. In addition, the 5242 mdl 2 provides the capability of quality printing at 40 cps. Quality print provides additional matrix dots per character and is suitable for applications such as letter writing which require typewriter-like quality. See the pages for operating characteristics.

Communications

System Communications: System/23 may communicate with the following systems:

Systems	BSC	Asynchronous
Series/1 (EDX, RPS)	X	X
System/3	X	
System/23	X	X
System/34	X	
System/36	X	
System/38	X	
5110/5120	X	
5280	X	
5265	X	

Using Asynchronous Communications, System/23 can communicate with S/370, mdls 135-168, 3031, 3032, 3033, 3081, 4331 and 4341 via 3704/3705-EP Release 3.0 to VM/370, using the American National Standard Code for Information Interchange (ASCII) translate table and the Asynchronous Communication Terminal function of the licensed program. The 3135 and 3138 attach via ICA to VM/370 and the 4331 attaches via CA to VM/370. System/23 attachment to VM/370 is provided through VM/System Product, VM/Basic Systems Extension and VM/System Extensions Program Products with VM/370 Release 6 PLC 4 level or higher.

System/23 is supported for attachment to S/370 mdls 115-168, 3031, 3032, 3033, 3081, 4331 and 4341 through CICS/VS using BTAM under VSE, VS1 or MVS. 3741 BSC protocol is provided for communications using point-to-point leased or switched facilities via ICA or CA (where applicable), or 3704/3705. In particular, support is provided for the following CICS/VS release/versions:

-CICS/DOS/VS	Version 1.5	On VSE/AF	Release 2
-CICS/OS/VS	Version 1.5	On VS1	Release 7
-CICS/OS/VS	Version 1.5	On MVS	Release 3.8

Asynchronous Communications: Asynchronous communication is provided by the licensed program (5715-AC1). The physical interface is EIA RS-232-C/CCITT V24-V28. Transfer of data is via American National Standard Code for Information Interchange (ASCII). Auto-answer is supported in a switched network.

The ASCII code and the asynchronous communication interface allows System/23 to communicate with the above mentioned processors using a capability that is commonly referred to as TTY-compatible. Various communications options, such as line speed and parity bits, can be selected by the customer.

The communications are via start/stop on point-to-point facilities. For communications to VM/370, the facilities are full duplex, switched up to 300 bps. Series/1 support is half duplex, switched facilities up to 300 bps. For communication to another System/23, the facilities are full or half duplex, switched or nonswitched, up to 1200 bps.

5322 Computer (cont'd)

Binary Synchronous Communications: The licensed program (5715-BC1) supports data transmission rates up to 4800 bps and is implemented to support the line protocol of the 3741. This protocol is supported for point-to-point on switched or nonswitched lines. For communication to another System/23 or 5265 in point-to-point configurations, one System/23 is required to act as a primary station. For all other configurations, the System/23 is the secondary station. Transfer of data is in EBCDIC in either non-transparent or transparent mode. The physical interface is EIA RS-232-C/CCITT V.24-V.28 with clocking supplied by modem.

One of the IBM modems, 3863 (2400 bps), 3864 (4800 bps), 3872 (2400 bps), or 3874 (4800 bps) may be attached to the Communications Adapter Feature (#2550). For more information on the capabilities of these modems refer to M3863 or 3864 and 3872 pages.

Additional Information: Communications facilities attachments for the Communication Adapter Feature (#2550) are designed to operate on transmission facilities such as:

- Common carrier leased telephone line service (voice grade) .
- Voice grade (common carrier or private) lines supporting a 4800 bps transmission rate. Channel requirements may vary according to the data circuit terminating equipment selected. The data circuit terminating equipment manufacturer should be consulted by the customer for this information.
- Common carrier switched network telephone (voice grade) service at up to 4800 bps.
- Private (customer-owned) communications facilities equivalent to the above common carrier facilities.

References:

See M2700 pages for additional information concerning communication facilities, machine attachment requirements, operating capabilities, and customer responsibilities.

Refer to *System/23 Communications Guide* (SA34-0111) for further details.

See appropriate programming pages for requirements relating to System/23 licensed programs (5715-AC1, 5715-BC1).

Customer Responsibilities: The marketing representative must advise the customers of their responsibilities before receipt of the machine:

- They are responsible for making arrangements for installation, pricing and charges for the data communication facility and attachment of selected data sets.
- They are responsible for paying toll charges, if required for installation and/or maintenance of the Communications Adapter Feature (#2550).
- The IBM Marketing Representative must have the customer obtain a firm installation date for transmission services (including modems) before the order for Communications Adapter Feature (#2550) can be confirmed.
- The customer is responsible for providing a desk or table to support System/23 table-top units.

For further information, refer to the M2700 pages.

Customer Support Functions: Customer Support Functions are commonly used system functions distributed with the 5322 on diskette and are also utilized as part of power-up procedures. The functions provided include:

- A loader for machine updates.
- Diskette preparation.
- Alternative collating sequences.
- Diskette-to-diskette copy.
- Diskette compression to another diskette.
- Diskette recovery.
- Index file generation.
- Label display.
- An Audible Alarm to signal operator attention required and, under program control, operator messages such as "end of job."
- Twenty-four Hour Time Clock and Date functions that are set by the operator when starting up the system.
- A sort function is also provided on the CSF diskette as a special feature.

See "Special Features" section and *System/23 Customer Support Functions* (SA34-0175 and SA34-0176) for more details.

Customer Set-Up (CSU): The 5322 is designated for Customer Set-up. Setup details can be found in *System/23 Set-Up Instructions* (GA34-0107). The CSU allowance is two days.

SPECIFY

- Power (120V AC, 1-phase, 60 Hz): Non-locking plug.
- Color: Pearl White.
- Power Cables: Standard power cord is 2.4m (8 feet).
- Adapter Cables: A 6m (19.8 foot) modem cable for communications features is standard.
- Keyboard/Keyboard Aid/Publications Set: Publication Set includes;
  - Set-up Instructions.
  - Learning to Use System/23.
  - Operator Reference.
  - Messages.
  - Customer Support Function Volumes I and II.
  - Diskette(s) containing Customer Support Functions.
  - Diskette(s) containing Operator Training

  (Machine-readable material above may be combined in one or more diskettes).

Keyboard	Keyboard Aid	Publication Aid	Specify
US	English US	English US	Std

- Word Processing Publications: For Word Processing mdls (4XX), or MES upgrades to a 4XX mdl, specify: **#9850** for publications supporting 5715-WP1, or **#9851** for publications supporting 5715-WP2.
  If no specify is entered, default will be to **#9850**.
  Upgrades from **#9850** to **#9851** may be ordered via MES.
- **Codes:** SIU = 5322 ID = P30
- **AAS Ordering Instructions:** The 5322 is a Computer System.

SPECIAL FEATURES

Communications Adapter Feature (#2550): Communications interface hardware and System/23 Licensed Programs (5715-BC1 for BSC and/or 5715-AC1 for ASC) have been combined to provide a flexible, easy-to-use communications facility for System/23.

The hardware feature provides the communications interface logic and circuitry, an installation test diskette and cable wrap connector, the *System/23 Communications Guide* (SA34-0111), and a 6m (19.8 foot) modem cable assembly.

The licensed programs give the user the ability to tailor the communications function to meet their specific requirements through the use of a step-by-step prompting procedure. These programs also provide a user-programmable interface through BASIC language statements and commands. These interactive programs and the accompanying documentation are available only in English and Japanese. For further information see "Communications", the appropriate programming pages (5715-BC1 or 5715-AC1), or *System/23 Communications Guide* (SA34-0111). **Maximum:** One. **Field Installation:** Yes. **Prerequisite:** One available feature slot on the 5322. **Specify:**

5246 Diskette Unit Controller (#3775): Provides direct connection and control function of any mdl of 5246 to any mdl of the 5322. It also provides the function of the Integrated Diskette Controller (#3780) for integrated diskette drives. Either this feature or the Extended 5246 Controller (RPQ 8N5008) is required on mdls with no integrated diskettes. No feature slot required. **Limitation:** Mutually exclusive with #3780 and RPQ 8N5008. **Maximum:** One. **Field Installation:** Yes.

Integrated Diskette Controller (#3780): Provides control function for diskette drives that are integral to mdls XX1, XX2, XX3 or XX4 of the 5322. Either this feature or the 5246 Diskette Unit Controller (#3775) or the Extended 5246 Controller (RPQ 8N5008) is required with every 5322. No feature slot required. **Limitation:** Mutually exclusive with #3775 and RPQ 8N5008. **Maximum:** One. **Field Installation:** Yes.

Disk(ette) Sort Feature (#6300): Provides the 5322 Computer user with the ability to sort disk(ette) data files. Both full record sorts and address out (ADDROUT) sorts are possible. This function is shipped on the Customer Support Functions diskette when ordered with the 5322. See *Customer Support Functions* (SA34-0175) for details. **Limitations:** This feature or the No Disk(ette) Sort (**#9300**) feature must be ordered for every 5322. **Maximum:** One. **Field Installation:** Yes.

5322 Computer (cont'd)

Second Printer Attachment (#6350): This feature allows the attachment of a second printer which may be either a 5241 or 5242 mdl 1 or 2, and is required for attachment of the 5217. The hardware attachment is identical for all three printers. Output may be directed to a second printer by specifying it in a PRINT statement following a FILE OPEN statement for that printer. This feature is attractive for specific applications in that no physical changing of forms, etc., is required to run a priority interim job such as a management summary report or a short job requiring quality print using a 5242 mdl 2. **Maximum:** One. **Field Installation:** Yes. **Prerequisite:** One available feature slot in the 5322.

Extended 5246 Controller (RPQ 8N5008): Provides the function of the 5246 Diskette Unit Controller (#3775) plus the capability to locate one 5322 (in a Dual Configuration only) up to 60m (200 feet) from the attached 5246. The standard cable length supplied with the 5246 is 4m (13 feet). **Limitation:** Not available on XX0 mdls. Mutually exclusive with 5246 Diskette Unit Controller (#3775) or Integrated Diskette Controller (#3780). **Maximum:** One. **Prerequisite:** RPQ 8N5009 or 8N5023 on the attached 5246 and Extended Cable RPQ SW2901, SW2902 or SW2903, or equivalent. Requires one available feature slot on the 5322.

MODEL CONVERSIONS

Any model processor may be field upgraded to any other model through addition of main storage or diskette drives or diskette drive capacity. Changing a model 1X2 or 4X2 to a model 1X3 or 4X3 respectively is not considered an upgrade.

All features may be field installed.

No model conversion features are CSU.

The upgrade purchase price for model conversion may be greater than the purchase price differentials. Customers should carefully evaluate their requirements prior to purchasing a system.

All replaced parts from model conversions become the property of IBM.

ACCESSORIES

Diskettes: For Diskettes see IBM. See *Customer Support Function Vol. I* (SA34-0175) to determine diskette type (1, 2, 2D) required.

5324 COMPUTER

PURPOSE

The System/23 is a compact data processing system designed with many functions intended to simplify use by first-time computer users. It is a distributed logic system architecturally structured to support file sharing by multiple workstations. Function-oriented hardware combined with licensed programs provide the additional capabilities of word processing and a flexible communications facility. A significant standard function of System/23 processors is an interpretive BASIC language processor which provides an integrated, high level, interactive language designed for commercial data processing applications. The 5324 Computer is a processor unit for the System/23. It is a compact, floor-standing unit convenient for office environments, and contains the processor, integrated diskette units (optional), power supply, and space for optional attachments.

The Display Module (#1000) and Keyboard Module (#1020) are compact, table-top units which are cable-connected to the 5324 computer. This modularity allows flexible unit positioning and, when combined with the adjustments on these modules, provides maximum individual workstation convenience considering variations in system use, operator size, posture, furniture dimensions, or lighting conditions.

MODELS

The model number of the 5324 Computer is determined by the function, memory size, and integrated diskette capability as follows:

Model	Main Storage	Diskette Capacity	Number of Drives
Data Processing Models			
120	64KB	0MB	0
123	64KB	1.1MB	1
124	64KB	2.2MB	2
140	128KB	0MB	0
143	128KB	1.1MB	1
144	128KB	2.2MB	2
Data Processing and Word Processing Models*			
420	64KB	0MB	0
423	64KB	1.1MB	1
424	64KB	2.2MB	2
440	128KB	0MB	0
443	128KB	1.1MB	1
444	128KB	2.2MB	2

* See Word Processing System Requirements in the programming pages.

The first digit of the model number indicates Data Processing function only (1XX) or Data Processing and Word Processing (4XX). The second digit of the model number indicates main storage size, and the third digit indicates the number of diskette drives and their capacity.

One diskette drive is required in a system configuration for Customer Support Functions and maintenance.

Maximum Configuration:

Attachable to the 5324 are:

- Up to two Printers (5217, 5241, or 5242 in any combination).
- High performance, fixed disk storage with the 5247 Disk Storage Unit.

Multiple 5324 or 5322 Computers can be included in a configuration by attachment to the 5247 Disk Storage Unit.

HIGHLIGHTS

- Flexible modular structure for maximum operator convenience.
- Wide choice of main memory and diskette storage options provide configuration flexibility to satisfy specific customer requirements.
- Integrated high level interactive language - BASIC.
- Easy-to-use, adjustable typewriter-like keyboard module with numeric keypad and control keys.
- Full screen processing ability with 1,920-character CRT display module screen.
- Customer Support Function diskettes help provide easy start-up and simplified diskette data handling.
- Optional word processing capability.
- Multiple workstation capability.
- Flexible communications adapter feature and licensed program for either asynchronous or binary synchronous operations.
- Field upgrades provide for future system growth.

Components

Processor: Main storage is available in 64K, or 128K bytes (12K bytes of which are permanently allocated for use by the BASIC language interpreter, display, printer and diskette buffers). Main storage cycle time is 975 nanoseconds with internal parity checking. All features and mdl upgrades (see "Model Conversions") are field installable. One printer attachment is standard on all mdls and three special feature slots are provided on the Data Processing mdls (1XX). Two special feature slots are provided on the combined Data and Word Processing mdls (4XX).

Every System/23 5324 or 5322 Computer must have a disk or diskette storage facility available for system support and maintenance diagnostic support purposes. Therefore, each 5324 or 5322 must have either the Integrated Diskette Controller (#3780), the 5246 Diskette Unit Controller (#3775), the Extended 5246 Controller (RPQ 8N5008), or the 5247 Disk Unit Adapter (#3770). See "Special Features" for a description of limitations and prerequisites.

Diskette Capability: The type of diskette drive supported by the 5324 Computer can read/write IBM Diskette 1, 2, and 2D (5324 mdls XX3 and XX4). The System/23 uses the 512 byte format when operating under the BASIC language. However, the Customer Support Functions can use other formats to copy files for data interchange purposes. The possible formats for the diskettes are:

Diskette	Format	Bytes/ Sector	Capacity
1	1	128	*243KB
1	2	512	303KB
2	3	128	*486KB
2	4	512	606KB
2D	5	256	985KB
2D	6	512	1136KB

* Basic Exchange format

For diskette data exchange with other systems, the following exchange types are supported: Basic Exchange (Formats 1 and 3 above) and H Exchange (Format 5 above). Diskettes can be interchanged with other IBM systems and devices which support a compatible diskette exchange type. Data exchange with other system types may require code translation for character set integrity.

Examples are the System/3, System/32, System/34, System/38, Series/1, S/370, 303X, 4300, 3540, 3740, 3747, 3790, 5110, 5120, 5230, 5260, and 8100.

The instantaneous data transfer rate using IBM Diskette 1 or 2 is up to 31.2K bytes/sec, and for IBM Diskette 2D is up to 62.5K bytes/sec. Rotational speed of both types of drives is 360 rpm.

For information on System/23 diskette operations, see *System/23 Operator Reference* (SA34-0108), *System/23 Customer Support Functions, Volume I* (SA34-0175), or *BASIC Language Reference Manual* (SA34-0109).

BASIC Language: The System/23 BASIC Language Interpreter provides convenient and powerful facilities and features for the development and execution of application programs. Among these facilities are:

- Residence in read-only storage requiring no control program load.
- Program diagnostic tools, such as the TRACE statement, status line, and split-screen mode for operator intervention in error situations.
- Several new functions, statements and commands to help simplify:
  - Character String Processing
  - Error Recovery
  - File Processing and Management
  - Printer Control
  - Display/Keyboard Processing
  - Procedure Control
- File sharing between multiple System/23 processors.
- Overlapped printing and program execution.
- Encyclopedia format reference manual with extensive cross referencing, examples and in-depth description of system function.

Word Processing (WP): The Word Processing mdls provide additional logic and microcode hardware to be used in conjunction with one of the System/23 Word Processing licensed programs to provide word processing capabilities. See the programming sales pages for Word Processing systems requirements.

Some functions supported by the Word Processing hardware and licensed programs to create, edit, print, etc., are shown below. Word Processing II (5715-WP2) licensed program provides all of the functions shown for Word Processing (5715-WP1), plus those shown in the Word Processing II column.

5324 Computer (cont'd)

WP (5715-WP1)	WP II (5715-WP2)
• **Input**	
-Create document	-Get page/display
-Formats	
-Automatic word wrap	
• **Edit**	
-Delete	-Spelling verification
-Find	-Spelling assistance
-Indent	-Automatic hyphenation
-Block operations	-Synonym assistance
-Word underscore glossary	-Phrase glossary
-Page delete/restore	-Column alignment right, center, and decimal
	-Page GOTO
	-Page split
• **Merge**	
-DP/WP merge	-DP/WP merge with multiple record types
	-BASIC language operations
	-Display files
• **Pagination**	
-Character and line count	-Widow line control
-Syllable hyphen control	-Keep
-Page end control	
• **Document**	
-Copy document	-Operator personalization
-Delete document	-Change document profiles
-Change Document profiles	
-List drive contents	

For further information on Word Processing function, and system requirements, see the System/23 programming sales pages or the *Word Processing Operator Reference Manual* (SA34-0613).

Keyboard Module: The Keyboard Module (#1020) is connected to the 5324 Computer by a 1.8m (6 foot) cable, which may be routed under the Display Module. The keyboard has a palm rest beneath the keys and space for the Keyboard Aids above the keys. A slope adjustment mechanism at the top of the keyboard allows positioning for individual comfort and convenience. One Keyboard Module is required for each 5324.

The keyboard has a familiar typewriter-like layout plus a numeric keypad. Many of the keys in the top row provide system commands when depressed in connection with the COMMAND key. Special BASIC command words can be entered via the keys in conjunction with the COMMAND key. Thus, the COMMAND key can be used to reduce keying time. The keys on the 10-key keypad can also be defined by the user to perform special functions and may be activated with the COMMAND key under program control.

For user reference, a Keyboard Aid (language and keyboard dependent) is supplied with each 5324 Computer. This aid is a set of plasticized printed cards that will lie above the top row of keys, and contain:

- Programmer Commands.
- Operator Commands.
- Operator action codes.
- Additional language characters and other symbols.

See "Keyboard/Keyboard Aid/Publications Set" in the "Specify" section. See Appendix A in *System/23 Operator Reference* (SA34-0108) for keyboard layouts.

Display Module: The Display Module (#1000) is a compact, desk-top unit connected to the 5324 Computer by two 1.8m (6 foot) cables. With a minimum of effort, vertical height and screen angle may be adjusted for variations in workstation layout, display usage, lighting conditions, and operator preference.

The screen displays keyed input, output, and provides user guidance. Up to 1840 characters can be displayed, 23 lines of 80-characters each. The 24th line is used to report status and system information. The user is permitted full screen management and display of upper/lower case characters. At any time 127 different character images may be displayed in addition to 11 block graphics for presentation of blocks, bar charts, frames, etc. User-controlled field attributes are underline, blink, reverse image, high intensity, and non-display. The cursor can be positioned at any input field and optional field attributes of automatic advance and automatic enter are also available.

Character Sets: Any one of five Display Character Subsets may be selected from the keyboard (using ALTERNATE keying) because they are all stored within the system. This selection has no effect on internal data representation but, affects only the set of displayed graphics. This "internally stored" language capability is significant because any 5324 can utilize all five Display Character Subsets. The stored character sets are:

1. US, Canada-English
2. Canada-French
3. European countries (except Spain)
4. Nordic (including Iceland)
5. Spain and Spanish speaking countries

The primary set of display graphics at "Power On" is set at the plant of manufacture based upon the keyboard specified. See the *Basic Language Reference* (SA34-0109) for further details. For character sets that may be printed, see the appropriate printer pages.

Printers: Each 5324 Computer may attach up to two printers. The first printer attachment is standard and the Second Printer Attachment (#6350) is optional. The optional Second Printer Attachment must be installed if the 5217 Printer is attached. The 5217 may then be attached to either printer attachment. The 5241 or 5242 may be attached to either attachment without restriction. (See the M5217, 5241, and 5242 pages for operating characteristics.)

Communications

System Communications: System/23 may communicate with the following systems:

Systems	BSC	Asynchronous
Series/1 (EDX, RPS)	X	X
System/3	X	
System/23	X	X
System/34	X	
System/36	X	
System/38	X	
5110/5120	X	
5265	X	
5280	X	

Using Asynchronous Communications, System/23 can communicate with S/370, mdls 135-168, 3031, 3032, 3033, 3081,4331 and 4341 via 3704/3705-EP Release 3.0 to VM/370, using the American National Standard Code for Information Interchange (ASCII) translate table and the Asynchronous Communication Terminal function of the licensed program. The 3135 and 3138 attach via ICA to VM/370 and the 4331 attaches via CA to VM/370. System/23 attachment to VM/370 is provided through VM/System Products, VM/Basic System Extensions and VM/System Extensions Program Products with VM/370 Release 6 PLC 4 level or higher.

System/23 is supported for attachment to S/370 Models 115-168, 3031, 3032, 3033, 3081, 4331 and 4341 through CICS/VS using BTAM under VSE, VS1 or MVS. 3741 BSC protocol is provided for communications using point-to-point leased or switched faciiities via ICA or CA (where applicable), or 3704/3705. In particular, support is provided for the following CICS/VS release/versions:

-CICS/DOS/VS	Version 1.5	On VSE/AF	Release 2
-CICS/OS/VS	Version 1.5	On VS/1	Release 7
-CICS/OS/VS	Version 1.5	On MVS	Release 3.8

Asynchronous Communications: Asynchronous communication is provided by the licensed program (5715-AC1). The physical interface is EIA RS-232-C/CCITT V24-V28. Transfer of data is via American National Standard Code for Information Interchange (ASCII). Autoanswer is supported in a switched network.

The ASCII code and the asynchronous communication interface allows System/23 to communicate with the above mentioned processors using a capability that is commonly referred to as TTY-compatible. Various communications options, such as line speed and parity bits, can be selected by the customer.

The communications are via start/stop on point-to-point facilities. For communications to VM/370, the facilities are full-duplex, switched up to 300 bps. Series/1 support is half-duplex, switched facilities up to 300 bps. For communication to another System/23, the facilities are full- or half-duplex, switched or nonswitched, up to 1200 bps.

Binary Synchronous Communications: The licensed program (5715-BC1) supports data transmission rates up to 4800 bps and is implemented to support the line protocol of the 3741. This protocol will be supported for point-to-point on switched or nonswitched lines. Autoanswer is supported on a switched line. Transfer of data is in EBCDIC in either non-transparent or transparent mode. The physical interface is EIA RS-232-C/CCITT V24-V28 with clocking supplied by modem.

One of the IBM modems, 3863 (2400 bps), or 3864 (4800 bps), 3872 (2400 bps) or 3874 (4800 bps), may be attached to the Communications Adapter (#2550). For more information on the capabilities of these modems refer to M3863, 3864, and 3872 pages.

Customer Responsibilities: The customers must be advised that:

- They are responsible for making arrangements for installation, pricing and charges for the data communication facility and attachment of selected data sets.

5324 Computer (cont'd)

- Toll charges, if required for installation and/or maintenance of the Communications Adapter (#2550), are to be paid by the customer.
- The IBM Marketing Representative must have the customer obtain a firm installation date for transmission services (including modems) before the order for Communications Adapter (#2550) can be confirmed.

For further information, refer to the M2700 pages.

Additional Information: Communications facilities attachments for the Communication Adapter (#2550) are designed to operate on transmission facilities such as:

- Common carrier leased telephone line service (voice grade) .
- Voice grade (common carrier or private) lines supporting a 4800 bps transmission rate. Channel requirements may vary according to the data circuit terminating equipment selected. The data circuit terminating equipment manufacturer should be consulted by the customer for this information.
- Public switched network telephone (voice grade) service at up to 4800 bps.
- Private (customer-owned) communications facilities equivalent to the above common carrier facilities.

References:

See M2700 pages for additional information concerning communication facilities, machine attachment requirements, operating capabilities, and customer responsibilities.

Refer to *System/23 Communications Guide* (SA34-0111) for further details.

See appropriate programming pages for requirements relating to System/23 licensed programs (5715-AC1, 5715-BC1).

Customer Support Functions: Customer Support Functions are commonly used system functions distributed with the 5324 Computer on diskette and are also utilized as part of power-up procedures. The functions provided include:

- A loader for machine updates.
- Volume preparation (disk or diskette).
- Alternative collating sequences.
- Diskette-to-diskette copy.
- Backup-restore disk.
- Data recovery (disk or diskette).
- Index file generation.
- Label display.
- An Audible Alarm to signal operator attention required and, under program control, operator messages such as "end of job."
- Twenty-four Hour Time Clock and Date functions that are set by the operator when starting up the system.
- A sort function is also provided on the CSF diskette as a Special Feature.

See "Special Features" section and, *System/23 Customer Support Functions* (SA34-0175 and SA34-0176) for more details.

Customer Setup (CSU): The 5324 Computer is designated for Customer Setup. The marketing representative must advise the customers of their responsibilities before receipt of the machine. Setup instructions are shipped with the 5324. The customer is responsible for providing a desk or table to support System/23 table-top units. The CSU Allowance is two days.

AAS Ordering Instructions: The 5324 is a Computer System.

SPECIFY

- Power (120V AC, 1-phase, 60 Hz): Nonlock plug.
- Color: Pearl White.
- Power Cables: Standard power cord is 2.4m (8 feet). A 6m (19.8 foot) modem cable for communications feature is standard.
- Keyboard/Keyboard Aid/Publications Set: Publication Set includes:
  - Setup Instructions.
  - Learning to Use System/23.
  - Operator Reference.
  - Messages.
  - Customer Support Function Volumes I and II.
  - Diskette(s) containing Customer Support Functions.
  - Diskette(s) containing Operator Training (Machine-readable material above may be combined in one or more diskettes).

Keyboard	Keyboard Aid	Publication Aid	Specify
US	English US	English US	Std

- Word Processing Publications: For Word Processing mdls (4XX), or MES upgrades to a 4XX mdl, specify: **#9850** for publications supporting 5715-WP1, or **#9851** for publications supporting 5715-WP2. If no specify is entered, default will be to **#9850**. Upgrades from **#9850** to **#9851** may be ordered via MES.
- **Codes:** SIU = 5324 ID = P30

SPECIAL FEATURES

Display Module (#1000): Provides a free-standing display screen for the 5324 Computer. One required for each 5324 Computer. No feature slot required. **Limitations:** Not available for MES orders. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes. Customer setup instructions are included with the 5324.

Keyboard Module (#1020): Provides the keyboard for attachment to the 5324 Computer. One required for each 5324 Computer. No feature slot required. **Limitations:** Not available for MES orders. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes. Customer setup instructions are included with the 5324.

Communications Adapter (#2550): Communications interface hardware and System/23 Licensed Programs (5715-BC1 for BSC and/or 5715-AC1 for ASC) have been combined to provide a flexible, easy-to-use communications facility for System/23. The hardware feature provides the communications interface logic and circuitry, an installation test diskette and cable wrap connector, the *System/23 Communications Guide* (SA34-0111), and a 6m (19.8 foot) modem cable assembly.

The licensed programs give the user the ability to tailor the communications function to meet their specific requirements through the use of a step-by-step prompting procedure. These programs also provide a user-programmable interface through BASIC language statements and commands. These interactive programs and the accompanying documentation are available only in English, German, and Japanese. For further information see "Communications", the appropriate programming pages (5715-BC1 or 5715-AC1), or *System/23 Communications Guide* (SA34-0111). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** One available feature slot on the 5324.

5247 Disk Unit Adapter (#3770): Provides direct connection and control function for any mdl of the 5247 to any mdl of the 5324 or 5322 Computer. **Limitations:** If this attachment is for the first or only 5324 or 5322 attached to the 5247, the 5324 or 5322 must have a diskette capability, be attached to the 5247 via the standard 4m cables and be located adjacent to the 5247. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** One available feature slot in the 5324 or 5322.

Integrated Diskette Controller (#3780): Provides control function for diskette drives that are integral to mdls XX3 or XX4 of the 5324 Computer. Either this feature or the 5247 Disk Unit Adapter (#3770) is required with every 5324. No feature slot required. **Maximum:** One. **Field Installation:** Yes.

Disk(ette) Sort Feature (#6300): Provides the 5324 Computer user with the ability to sort disk(ette) data files. Both full-record sorts and address-out (ADDROUT) sorts are possible. This function is shipped on the Customer Support Functions diskette when ordered with the 5324. See *Customer Support Functions* (SA34-0175) for details. **Limitations:** This feature or the No Disk(ette) Sort (**#9300**) feature must be ordered for every 5324. **Maximum:** One. **Field Installation:** Yes.

Second Printer Attachment (#6350): This feature allows the attachment of a second printer which may be either a 5241 or 5242 mdls 1 or 2 and is required for attachment of the 5217. The hardware attachment is identical for all three printers. Output may be directed to a second printer by specifying it in a PRINT statement following an OPEN statement for that printer. This feature is attractive for specific applications in that no physical changing of forms, etc., is required to run a priority interim job such as a management summary report or a short job requiring quality print using a 5242 mdl 2. **Maximum:** One.

5324 Computer (cont'd)

Field Installation: Yes. **Prerequisites:** One available feature slot in the 5324.

MODEL CONVERSIONS

Any model processor may be field upgraded to any other model through addition of main storage or diskette drives or diskette drive capacity.

All features may be field installed.

Model conversion features are not CSU.

The upgrade purchase price for model conversion may be greater than the purchase price differentials. Customers should carefully evaluate their requirements prior to purchasing a system.

All replaced parts from model conversions become the property of IBM.

ACCESSORIES

Diskettes: For Diskettes see IBM. See *Customer Support Function Vol. I* (SA34-0175) to determine diskette type (1, 2, 2D) required.

5340 SYSTEM UNIT

PURPOSE

Contains main storage, disk storage, diskette drive, facilities for addressing main storage, and logical processing circuits and control for I/O units on System/34.

MODELS

Model	Main Storage	Diskette	Disk Storage Capacity (MB)

Minimum System Configuration: A 5340 System Unit, a display/console (5251 mdl 1, 11, or 999, 5252, 5291, or 5292), and printer (serial -- 5219, 5256, ... line -- 5211, 5224, 5225, or 3262). A system printer must be provided to satisfy IBM maintenance requirements when using System Support Program (5726-SS1) or Preconfigured System Support Program (5726-SS2). Special microcode for the Preconfigured System Support Program (5726-SS2) must also be specified.

HIGHLIGHTS

- Multiple workstation system capability
- Multiprogramming and printer spooling provided with System Support Licensed Program (5726-SS1)
- Multiprogramming and printer spooling for entry level systems with Preconfigured System Support Program (5726-SS2)
- Extension of System/32 capabilities
- Local and remote workstation attachment flexibility:
  - 5219 Printer
  - 5224 Printer
  - 5225 Printer
  - 5251 Display Station
  - 5252 Dual Display Station
  - 5256 Printer
  - 5291 Display Station
  - 5292 Color Display Station
- I/O units:
  - 1255 Magnetic Character Reader
  - 3262 Printer
  - 5211 Printer
  - 5219 Printer
  - 5224 Printer
  - 5225 Printer
- Diskette Magazine Drive
- Communications capability via BSC or SDLC through attachment of one to four lines
- Easy-to-use workstation utility programming support available
- Facilities to provide high-level of system availability
- Main Storage Failure Recovery
- Scientific Instruction Set
- Fixed interval timer
- Address Translation Registers
- Storage protection
- MICR document processing capability
- 5211/3262 translation tables for character substitution

Processor Unit: The main storage processor represents a hardwired System/3 language processor with 32K, 48K, 64K, 96K, 128K, or 256K bytes of main storage. A microprocessor, with 16K words of control storage, operates in parallel with the main storage processor, and supports a microcoded control function and each of the I/O devices. The processor unit uses a combination of LSI/MSI - large and medium scale integration for the logic circuitry. Memory technology is Metal Oxide Semiconductor Field Effect Transistor (MOSFET). Data and instructions are stored as EBCDIC characters. Each EBCDIC character is stored in an 8-bit byte. A ninth bit is added for parity checking. Main storage internal cycle time is 600 nanoseconds.

Workstation Controller: The 5250 Information Display System devices (5251 mdls 1, 11, and 999 Displays, 5252 Dual Displays, 5291 Displays, 5292 Color Displays, 5219 Printer, 5224 Printer, 5225 Printer and the 5256 Printer), used as locally attached System/34 workstations, attach to a controller in the 5340 System Unit via four twinaxial cable connectors on the 5340.

One cable connector must be dedicated to attachment of a 5251 mdl 1, 11, or 999, or 5252, or 5291, or 5292 to be used as the system console. **Note:** If the 5291 or 5292 is to be attached to the System/34, the system must be at SSP Release 7 level or higher. Also, if the 5291 or 5292 is to be used as the console the System/34 must be at Diagnostic Release Level 9.2 or higher. For maintenance reasons, only one of the above machine types 5251, 5252 or 5291 should be attached to this cable. A 6 meter (20 foot) twinaxial cable is provided with the 5340 for attachment of the system console.

Up to three additional cables may be connected to the 5340 for attachment of additional workstation devices. A maximum of 16 display stations and printers (the 5252 counts as two display stations), including the console, may be attached when the optional Workstation Control Expansion B (#4901) is installed. The maximum length of any one twinaxial cable attached to the 5340 cable connector is 1,525 meters (5,000 feet). Multiple workstations (up to seven) may be attached to one cable via the Cable-Thru on the display station or printer (Cable-Thru is a standard capability on the 5291 Display

5340 System Unit (cont'd)

Station). See *IBM System/34 Installation Manual - Physical Planning* (GA21-9242).

Diskette: Included in the mdls X1X of the System Unit is the Diskette 1 drive, mdls X2X incorporate the Diskette 2D drive, and the mdls X3X use the Diskette Magazine drive.

The Diskette 1 drive is capable of reading and writing the Diskette 1 in Basic format or Extended format. The Diskette 2D drive can read and write either the Diskette 1 (Basic or Extended format) or the 2-sided double density Diskette 2D (Basic or Extended format).

The Diskette Magazine drive can process individual diskettes or magazines. The magazine holds up to ten operator accessible diskettes. The magazine drive can accommodate two magazines and three individual diskettes. The selecting of diskettes within a magazine, and proceeding from the first magazine to the second, is automatic (under program control). The magazines will typically be used for Save/Restore functions. The three individual slots may be used for smaller jobs. Selection of up to three individual diskettes is automatic (under program control). Both Diskette 1 (Basic or Extended format) or the 2-sided double density Diskette 2D (Basic or Extended format) can be used in the Diskette Magazine. The select cycle time (eject diskette, move to next diskette, load diskette) is approximately three seconds.

The compatible media for data exchange with other devices such as 3740 is the Diskette 1 in Basic format or the 5280 is the Diskette 1 or 2D in Basic format. The formats for diskettes are:

	Diskette 1	Diskette 2D
Data Tracks/Diskette	74	148 (74 Cylinders)
Capacity		
Basic Format		
Bytes/Sector	128	256
Sectors/Track	26	26
Tracks/Cylinder	1	2
Data Bytes/Diskette	246,272	985,088
Extended Format		
Bytes/Sector	512	1,024
Sectors/Track	8	8
Tracks/Cylinder	1	2
Data Bytes/Diskette	303,104	1,212,416

The data transfer rate for the Diskette 1 drive is 31.2KB/sec; for Diskette 2D drive it is 62.5KB/sec (using Diskette 2D); and for the Diskette Magazine drive it is 125.0KB/sec (using Diskette 2D).

"Read or Write" of diskettes is overlapped with processing and other device functions except disk storage data transfer. All diskette seek operations are overlapped with processing and I/O devices.

Disk Storage: The 5340 System Unit can contain one of seven disk storage capacities. The disk storage is physically non-removable, high speed, direct access media, and the primary processing file in the system. Programs and data are stored on the disk for processing. Data can be stored off-line for security or backup purposes by first copying the data from disk storage to either of the two diskette media. The System/34 with the Diskette 1 drive, the Diskette 2D drive, or the Diskette Magazine drive, plus a multiprogramming capability provide flexible combinations to optimize diskette functions with system disk storage. Disk storage capacities available to the users may be reduced by the installation of optional features.

Disk Storage Specifications:

	8.6MB	13.2MB	27.1MB	63.9MB
Bytes/Sector	256	256	256	256
Bytes/Cylinder	46,080	46,080	46,080	180,224
Disk Spindles	1	1	2	1
Cylinders	187	288	589.33	354.5
Capacity *	8,616,960	13,271,040	27,156,480	63,905,792
Access Time (ms)				
Cyl-to-Cyl	10	10	10	9
Average **	33	38	38	27
Maximum	55	70	70	46
	(201 cyl/ spindle)	(302 cyl/ spindle)	(302 cyl/ spindle)	(359 cyl/ spindle)
Rotational Speed (rpm)	2,964	2,964	2,964	3,125
Data Transfer Rate (MB/sec)	.889	.889	.889	1.031

	128.4MB	192.9MB	257.4MB
Bytes/Sector	256	256	256
Bytes/Cylinder	180,224	180,224	180,224
Disk Spindles	2	3	4
Cylinders	712.5	1,070.5	1,428.5
Capacity *	128,425,984	192,946,176	257,466,368
Access Time (ms)			
Cyl-to-Cyl	9	9	9
Average **	27	27	27
Maximum	46	46	46
	(359 cyl/ spindle)	(359 cyl/ spindle)	(359 cyl/ spindle)
Rotational Speed (rpm)	3,125	3,125	3,125
Data Transfer Rate (MB/sec)	1.031	1.031	1.031

* These capacities (available to the user) may be reduced by installation of optional features. See "Limitations" under optional feature MLCA (#4500), and Workstation Control Expansion C (#4902).

** Average of all possible disk accesses.

System Console: A system console is not a component of the 5340 System Unit. The system console may be a 5251 Display Station, mdl 1, 11, or 999 a 5252 Dual Display Station, a 5291 Display Station, or a 5292 Color Display Station which is physically attached to the System Unit similar to other locally attached workstation devices. When using the 5291 or 5292 as the system console, the System/34 must be at SSP Release 7 or higher and Diagnostic Release Level 9.2 or higher. For system operation and service reasons, the console is required to be located within 6 meters (20 feet) of the System Unit. Its primary use is to facilitate operator control of the system via operator commands and to allow the operator to respond to system messages presented on the display. It may also be used as a data entry/inquiry workstation, interacting with a user application. The mode of operation is easily switched from workstation mode to console mode for servicing system requests.

Customer Responsibilities: The customer must be advised, in writing, of certain responsibilities related to the installation and maintenance of common carrier facilities/services as well as the IBM equipment. For further information see M2700 pages.

The marketing representative must have the customer obtain a firm installation date for the start of transmission services (including any required modems) prior to processing Order Confirmation.

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): Specify **#9902** for 208V or **#9904** for 230V.
- Color: Pearl white only (no specify code required).
- Communications Cable (with #2500, #3500): Required for attaching System/34 to the communications facility regardless of whether an IBM integrated modem, an external modem, or DDSA is used. Specify **#9460** for a 6 meter (20 foot) cable or **#9461** for a 12 meter (40 foot) cable. Specify this cable only once per system. If two Communications Adapters are installed, the cable length will be the same on both.

  The communications cable for MLCA (#4500) will be 12 meters (40 feet) for each line. No specify for cable length is required nor can one be made. The cable for the 4800 bps Integrated Modem with Auto-Answer and Integrated Protective Coupler (#536X) will be 5.5 meters (18 feet).
- Twinaxial Cable: A 6 meter (20 foot) twinaxial cable is included with the system unit for the system console [5251 mdl 1, 11, or 999, 5252, 5291, or 5292]. A 6 meter (20 foot) cable is also included if a 5224, 5225 or 5256 Printer is used as the system printer . See M5251, 5252, 5291, 5292, 5224, 5225, and 5256 pages for additional workstation cable order information.
- System Printer: Specify **#9301** if 5211 mdl 1 is attached; **#9302** if 5211 mdl 2 is attached; **#9303** if 3262 mdl B1 is attached; **#9306** or if a 5256 is the system printer (no 5211 or 3262); **#9308** if a 5224 is the system printer, or **#9307** if a #5225 is the system printer (no 5211 or 3262).
- Up-Ending Kit: (**#9845**) enables the 5340 to be up-ended for installation or moving purposes. This kit is furnished only as necessary and remains the property of IBM.

Notes:

1. I/O Unit Attachments: Appropriate special features are required to attach some I/O units. See "Special Features".
2. System Support Licensed Program (5726-SS1): Should be ordered at equipment order entry time. See System Support Program (5726-SS1) for additional information.
3. Refer to *IBM System/34 Installation Manual - Physical Planning* (GA21-9242) for physical installation requirements.

SPECIAL FEATURES

Non-Communications Features

1255 Attachment (#1100): Required to attach 1255 Magnetic Character Reader mdls 1, 2, or 3. **Limitations:** The 1255 attachment cannot operate with the Communications Adapter (#2500, #3500) which has been assigned as the low-priority line. therefore, only the Communications Adapter (#2500, #3500) with the high-priority address can be used while operating the 1255. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Processor Unit Expansion A and/or E may be required on certain mdls. See "Processor Unit Expansion

5340 System Unit (cont'd)

Feature Configurator" and *IBM System/34 Installation Manual - Physical Planning* (GA21-9242) for cabling information.

1255 Attachment Expansion (#1105): Required when using the System/34 Assembler Macros to provide 1255 stacker logic programs. This feature provides an additional 28K of user programmable storage. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1100.

5211/3262 Base Printer Attachment (#1110): Required when attaching either the 3262 or the 5211 Printer. **Maximum:** One. **Field Installation:** Yes.

Keylock (#4655): Replaces on/off power switch to protect against unauthorized use. See "Accessories" for information concerning additional keys. **Maximum:** One. **Field Installation:** Yes.

Internal Clock (#4703): Generates synchronizing and timing signals for BSC or SDLC operation when they are not provided by the modem on either Communications Adapter (#2500 or #3500). Clocking speeds available with this feature are 600 bps and 1200 bps. Selection of full or half-speed is indicated via a system utility program. When this feature is installed on System/34, all other BSC or SDLC stations attached to the same data link must also be equipped with a similar IBM Internal Clock feature. See IBM, for determination of the feature's requirement with planned modems. **Maximum:** One per system; will handle either or both lines. **Field Installation:** Yes. **Prerequisites:** Communications Adapter (#2500 or #3500), Interface (#3701 or #3702) or 1200 bps Integrated Modem (#5500, #5501, #6500, or #6501).

Workstation Control Expansion A (#4900): Required if Magnetic Stripe Reader (#4910) is installed on any 5251 or 5252 that is locally attached to the 5340. Also required when using the 3270 Device Emulation Licensed Program (5726-EM1). **Limitations:** May not be installed with Workstation Control Expansion B (#4901). **Maximum:** One. **Field Installation:** Yes.

Workstation Control Expansion B (#4901): Required when attaching nine to sixteen 5250 workstations and/or printers locally to the 5340 System Unit. This feature also contains the control necessary if Magnetic Stripe Readers (#4910) are installed on any 5251 or 5252 that is locally attached to the 5340. Also required when using the 3270 Device Emulation Licensed Program (5726-EM1). **Limitations:** May not be installed with Workstation Control Expansion A (#4900). **Maximum:** One. **Field Installation:** Yes.

Multinational Control (#4905): Required if Multinational Character Set (#4905) is installed on any 5251 or 5252 attached to the 5340 or if #9470 is installed on any 5224, 5225 or 5256. **Maximum:** One. **Field Installation:** Not recommended for field installation.

Internal Clock (#5321): Generates synchronizing and timing signals for BSC or SDLC operation when they are not provided by the modem used with any of the Line Base Adapters on the Multiline Communications Adapter (#4500). Clocking speeds available with this feature are 600 and 1200 bps. Selection of full or half-speed and the appropriate line is indicated via a system utility program. When this feature is installed on System/34, all other BSC or SDLC stations attached to the same data link must also be equipped with a similar IBM Internal Clock feature. See IBM, for determination of the feature's requirement with planned modems. **Maximum:** One per system; will handle one to four lines. **Field Installation** Yes. **Prerequisites:** #4500 and EIA Interface or 1200 bps Integrated Modem for the MLCA.

Processor Unit Expansion A (#5732): This is a feature I/O board required for 1255 Attachment (#1100). Not required on XX3 (27.1MB) mdls. **Limitations:** See "Processor Unit Expansion Feature Configurator". **Maximum:** One. **Field Installation:** Yes.

Processor Unit Expansion B (#5733): Additional power for communications. Required for 2400 bps Integrated Modem (#5600, #6600, #5601, #6601, #5602, #6602, #5610, #6610). Not required on XX4, XX5, XX6 and XX7 mdls. **Limitations:** See "Processor Unit Expansion Feature Configurator". **Maximum:** One. **Field Installation:** Yes.

Processor Unit Expansion C (#5734): I/O modem regulator required for Interface (#3701 or #3702), or 1200 bps Integrated Modem, (#5500, #5501, #6500, #6501). Not required on XX4, XX5, XX6, and XX7 mdls. Not required if Processor Unit Expansion B (#5733) is already installed. **Limitations:** Not used with the MLCA (#4500). See "Processor Unit Expansion Feature Configurator". **Maximum:** One. **Field Installation:** Yes.

Processor Unit Expansion D (#5735): Gate Assembly required for 2400 bps Integrated Modem (#5600, #6600, #5601, #6601, #5602, #6602, #5610, #6610). See "Processor Unit Expansion Feature Configurator". **Maximum:** One. **Field Installation:** Yes.

Processor Unit Expansion E (#5736): Additional power required for 1255 Attachment (#1100) on certain mdls. See "Processor Unit Expansion Feature Configurator". **Maximum:** One. **Field installation:** Yes.

EIA/1200 IM *	C **	C **	-	C **	C **
2400 IM *	B, D	B, D	D	B, D	B, D

* These IM (Integrated Modem) features apply only to the First or Second Communications Adapter (#2500 or #3500).

** C is not required if both B and 2400 IM are installed.

Notes: Processor Unit Expansion Features required for communications features (EIA Interface or Integrated Modems) are required only once per system regardless of whether one or two Communications Adapters (#2500 or #3500) are installed. If 2400 bps Integrated Modem is installed on either Communication Adapter (#2500, #3500), order Processor Unit Expansion Feature B and D. If 2400 bps Integrated Modem is not installed on either Communications Adapter, order Processor Unit Expansion C for EIA or 1200 bps Integrated Modem. No Processor Unit Expansion Feature is required if DDSA is installed on both Communications Adapters.

5211 Printer Attachment (#5811): Required to attach a 5211 Printer mdl 1 or 2. A translation capability provides for use of translation tables for substituting characters when the characters to be printed are not contained on the print belt. **Limitations:** Cannot be installed with 3262 Printer Attachment (#5815). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "System Printer" in "Specify" above. 5211/3262 Base Printer Attachment (#1110).

3262 Printer Attachment (#5815): Required to attach a 3262 mdl B1 Printer. A translation capability provides for use of translation tables for substituting characters when the characters to be printed are not contained on the print belt. **Limitations:** Cannot be installed with 5211 Printer Attachment (#5811). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "System Printer" in "Specify" above. 5211/3262 Base Printer Attachment (#1110).

Communications Features

Communications Adapters - General: System/34 can attach up to four communications lines depending upon the adapters selected. Three separate adapters are available. The First and Second Communications Adapters (#2500 and #3500) allow one line each to be attached to the system. When these adapters are used, a total of two communications lines can be attached. The Multiline Communications Adapter (MLCA - #4500) can provide for attachment of from one to four communications lines but is mutually exclusive with the First and Second Communications Adapters. The MLCA has up to four Line Base Adapters, each allowing attachment of one line.

Below is a discussion of the communications hardware support: (1) common to both BSC and SDLC, (2) specific to BSC support, and (3) specific to SDLC support.

1. Support Common to Both BSC and SDLC:

   Communications Adapters #2500 and #3500 will allow System/34 to communicate on a nonswitched point-to-point or multipoint line at speeds up to 9600 bps and on a switched point-to-point line at speeds up to 4800 bps. Each adapter operates independently under program control; however, the maximum aggregate bit rate for adapters #2500 and #3500 operating concurrently is 9600 bps. The maximum aggregate bit rate for all lines for adapter #4500 is 65,600 bps. When one line operates at 19,200, 48,000, 50,000, or 56,000 bps, the remaining lines are restricted to a total aggregate rate of 9600 bps. See M2700 pages for information on communication facilities.

   The System/34 operates as a control station on a multipoint line for the 5251 mdl 2 or 12, 3601, 3694, 4701, System/36, and another System/34, all under SDLC. If the other device on a multipoint line is a control station, the System/34 operates as a tributary station for BSC or a secondary station for SDLC. Otherwise, communication with other devices must be on a point-to-point line only.

   Each communications adapter will operate in half-duplex mode over dial (switched network) facilities, and half-duplex mode over nonswitched (or equivalent private) communications lines which may be duplex or half-duplex facilities. Operation of each feature will be overlapped at all transmission rates with processing and/or I/O device operations. See tables below. Units at each termination, or drop point, of a communications line to which the System/34 is attached must use the same clocking source (modem

5340 System Unit (cont'd)

or business machine) and must be set to operate at the same transmission rate and to use the same transmission code. Compatible modems must be used at all terminations on a network and must use the same mode of attachment (2- or 4-wire). Switched network versions include, as a basic capability, support of Manual Dial and Manual or Auto-Answer (where the attached modem supports this capability) operations.

2. Support Specific to BSC Operations:

   The communication adapter allows operation in BSC mode as requested by the executing program.

   See the System/34 programming pages for a description of the program support provided for this feature. ASCII, EBCDIC, or EBCDIC Text Transparency are standard. ASCII or EBCDIC transmission codes are selected at program compilation time. In conjunction with stored program control, this feature permits System/34 to function on a switched or nonswitched communications line as a processor/terminal communicating in binary synchronous mode with:

   - A Series/1 equipped with BSCA (#2074, #2075, #2093, or #2094) (as a System/3).
   - A System/3 equipped with #2074, #2084, or #2094.
   - A System/7 equipped with BSCA (#2074) (as a System/3).
   - A System/32 equipped with #2074.
   - Another System/34 equipped with #2500, #3500, or #4500.
   - A System/36 equipped with #2500 or #4500.
   - A System/38 with appropriately configured BSC adapter and subfeatures, (point-to-point only).
   - An S/360 mdl 20 equipped with #2074.
   - An S/370 via an Integrated Communications Adapter, a 4331 Communications Adapter, a 2701 Data Adapter Unit, a 2703 Transmission Control Unit, or a 3704/3705 Communications Controller with the Network Control Program (NCP) or the Partitioned Emulation Program (PEP), any of which are equipped with a binary synchronous adapter and appropriate sub-features.
   - A 3741 Data Station mdl 2 or 3741 Programmable Workstation mdl 4.
   - A 3747 Data Converter equipped with Communications Adapter (#1660).
   - A 5110 Computer equipped with BSCA #2074 (as a 3741 mdl 2 or 4).
   - A 5231 mdl 2 equipped with BSCA (#2074) (as a 3741 mdl 2 or 4 in transmit mode only).
   - A 5265 communicating mdl (point-to-point, batch transmission only).
   - A 5280 Distributed Data System equipped with #2500.

3. Support Specific to SDLC Operations:

   The communications adapter allows operation in SDLC mode as requested by the executing program. The System/34 provides SDLC communications support for multipoint line control when the 5251 mdl 2 or 12 Display Stations, 3601 Finance Communications Controller, 3694 Document Processor, 4700 Finance Communications System, System/36, or another System/34 are attached to the communications adapter. In conjunction with stored program control, this feature provides communications capability with 4331 Communications Adapter or a S/370, 303X, or 4300 via a 3704 or 3705 Communications Controller equipped with appropriate features. See M3704, 3705, or 4331 pages. Switched network backup and speed select modem features are not supported under program control when communicating with 5251 mdl 2, 12. See the System/34 programming pages for a description of the program support provided on System/34 for SNA/SDLC operations. ASCII support for 5251 mdl 2 or 12 is by RPQ only.

First Communications Adapter - BSC/SDLC (#2500): Required to attach a communications line via appropriate interface or modem. In conjunction with stored program control, this feature permits System/34 to function on a switched, nonswitched public or private communications line. The adapter provides both BSC and SDLC. The proper line protocol is loaded into the control processor at program execution time. The communications adapters (#2500 and #3500) operate at speeds up to 9600 bps on a nonswitched point-to-point or multipoint common carrier facility or equivalent privately owned communication facility and up to 4800 bps on a switched point-to-point facility. However, the aggregate bit rate when both adapters (#2500 and #3500) are operating concurrently is 9,600 bps. **Limitations:** Cannot be installed with Multiline Communications Adapter (#4500). SDLC support by System Support Program (5726-SS1) requires at least 48K bytes of main storage (5340 mdl BXX or larger). The 1255 attachment cannot operate concurrently with the Communications Adapter (#2500, #3500) which has been assigned as the low-priority line. Therefore only the Communications Adapter (#2500, #3500) with the high-priority address can be used while operating the 1255. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** One of the Integrated Modems, EIA Interface, or DDSA for this adapter. See "Specify" for required modem cable and attachment codes.

Second Communications Adapter - BSC/SDLC (#3500): Required to attach a second communications line via appropriate interface or modem. In conjunction with stored program control, this feature permits System/34 to function on a switched, nonswitched public or private communications line. The adapter provides both BSC and SDLC. The proper line protocol is loaded into the control processor at program execution time. The Communications Adapter features (#2500 and #3500) operate at speeds up to 9600 bps on a nonswitched point-to-point or multipoint common carrier facility or equivalent privately owned communication facility and up to 4800 bps on a switched point-to-point facility. However, the aggregate bit rate when both adapters (#2500 and #3500) are operating concurrently is 9600 bps. The Second Communications Adapter (#3500) may be physically attached to System/34 which also has the 1255 Attachment (#1100), but these two attachments (#1100 and #3500) cannot operate concurrently. **Limitations:** Cannot be installed with Multiline Communications Adapter (#4500). SDLC support by System Support Program (5726-SS1) requires at least 48K bytes of main storage (5340 mdl BXX or larger). The 1255 attachment cannot operate concurrently with the Communications Adapter (#2500, #3500) which has been assigned as the low-priority line. Therefore only the Communications Adapter (#2500, #3500) with the high-priority address can be used while operating the 1255. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500, one of the Integrated Modems, EIA Interface, or DDSA for this adapter. See "Specify" for required modem cable and attachment codes.

EIA Interface (#3701): Provides a cable and interface for attachment of an IBM modem or non-IBM modem meeting RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with 1200 bps Integrated Modem (#5500, #5501), or 2400 bps Integrated Modem (#5600, #5601, #5602, #5610), or DDSA (#5650, #5651). Maximum speed is 9600 bps. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500 and may require #5734. See "Processor Unit Expansion Feature Configurator". **Note:** This feature may also require Internal Clock (#4703) if the external modem does not provide its own clocking. See "Modem/Interface Feature Configurator".

EIA Interface (#3702): Provides a cable and interface for attachment of an IBM modem or non-IBM modem meeting RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with 1200 bps Integrated Modem (#6500, #6501) or 2400 bps Integrated Modem (#6600, #6601, #6602, #6610) or DDSA (#5652, #5653). Maximum speed is 9600 bps. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3500 and may require #5734. See "Processor Unit Expansion Feature Configurator". **Note:** This feature may also require Internal Clock (#4703) if the external modem does not provide its own clocking. See "Modem/Interface Feature Configurator".

IBM Data Encryption Device (#3845, #3846): A 3845 or 3846 Data Encryption Device may be attached between the System/34 communications adapter and the external modem. **Limitations:** The 3845 or 3846 device operating with SDLC will not operate with NRZI transmission mode. **Prerequisites:** #3701, #3702, or #531X. **Note:** Refer to M2700, 3845, and 3846 pages for information on 3845 or 3846 configuration and communication capability.

Multiline Communications Adapter - MLCA (#4500): Four communications lines can be attached to System/34 using the MLCA. The MLCA is a microprocessor that operates in parallel with the main storage processor and other microprocessors in the system. Each communications line provides either BSC or SDLC protocol. The proper line protocol is loaded into the control processor at program execution time. This feature permits, in conjunction with stored program control, System/34 to function on a switched, nonswitched public or private communications line. Each communications line operates independently up to 9600 bps concurrently with the other lines. One line may operate at high-speed (above 9600 bps) independent of the other lines. However, the aggregate rate of the remaining lines must not exceed 9600 bps and the aggregate rate of all four lines must not exceed 65,600 bps. For BSC multipoint tributary operation, an auto-monitoring function is provided that allows the line to be monitored without a main storage program being required. In this mode, a negative response is sent to all polls and selects received from the host. For BSC processing to become active in main storage the operator must activate BSC data management. An SDLC auto-response mode is implemented in MLCA for secondary SDLC. The MLCA will handle some redundant supervisory responses, thus eliminating the need to always utilize the SDLC task is main storage for nonproductive activity. The MLCA in a primary SDLC environment off-loads from the main storage processor, the majority of the work required for nonproductive polling. In either case, an SNA/SDLC task must be active in main storage. The Multiline Communications Adapter (#4500) may be installed in place of the First and Second Communications Adapters (#2500 and #3500) providing for up to four communications lines. The maximum aggregate bit rate when all four lines of the MLCA are operating concurrently is 65,600 bps. One line may operate at 19,200, 50,000, or 56,000 bps, but the remaining lines must not exceed a total aggregate bit rate of 9600 bps. **Limitations:** When installed will reduce the disk storage available to the user by 80,640 bytes. Cannot be installed with First or Second

5340 System Unit (cont'd)

Communications Adapter (#2500 or #3500). SDLC support by System Support Program (5726-SS1) requires at least 48K bytes of main storage (5340 mdl BXX or larger). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Specify" for mandatory attachment codes. A Line Base Adapter must be configured for each line. **Note:** The units position of features #53XX and #54XX corresponds to the line number position; e.g., #5301 refers to the Line Base Adapter for line 1.

Line Base Adapter (#5301, #5302, #5303, #5304): Required for attachment of communication lines to the MLCA. Each line is independent of the others and may be ordered in any sequence. However, it is recommended that lines be ordered and installed in sequence. **Limitations:** See "Multiline Communications Adapter Configurator" for possible combinations of features. **Maximum:** Four. **Field Installation:** Yes. **Prerequisites:** #4500 and an Integrated Modem, DDS Adapter, Wideband Adapter, Auto-Call Adapter, or EIA Interface.

EIA Interface (#5311, #5312, #5313, #5314): Provides a cable and interface for attachment of an IBM modem or non-IBM modem meeting RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with an Integrated Modem, Analog Wideband Adapter, Auto-Call Adapter, or DDS Adapter on the same Line Base Adapter. Maximum speed is 9600 bps. See "Multiline Communications Adapter Configurator" for possible combinations of features. **Maximum:** One per Line Base Adapter (four total). **Field Installation:** Yes. **Prerequisites:** The Line Base Adapter corresponding to line using the EIA Interface. This feature may also require Internal Clock (#5321) if the external modem does not provide its own 1200 bps clocking.

1200 bps Integrated Modem (#5331, #5332, #5333, #5334, #5341, #5342, #5343, #5344): A modem integrated into the system for SDLC or BSC data transmission at 1200 bps over nonswitched or switched facilities. Half-speed operation at 600 bps is indicated via system utility program. It is available in two different versions: #533X for nonswitched and #534X for switched with auto-answer. Attachment to the nonswitched (2- or 4-wire) facilities is via an IBM-provided cable directly to the line, type 3002. Attachment to the switched facilities is via an IBM-provided cable or to an FCC registered protective circuitry provided by the user. **Limitations:** Cannot be installed with EIA Interface, Analog Wideband Adapter, Auto-Call Adapter, another integrated modem, or DDS Adapter on the same Line Base Adapter. #533X and #534X cannot be installed together on the same Line Base Adapter. See "Multiline Communications Adapter Configurator" for possible combinations of features. **Maximum:** One per Line Base Adapter (four total). **Field Installation:** Yes. **Prerequisites:** Line Base Adapter corresponding to the line using the 1200 bps Integrated Modem and #5321. **Note:** The device communicating with System/34 must also be equipped with a 1200 bps Integrated Modem using the same 2-wire or 4-wire mode of attachment to the line.

4800 bps Integrated Modem (#5351, #5352, #5353, #5354, #5361, #5362, #5363, #5364): A modem integrated into the system for SDLC or BSC data transmission at 4800 bps over nonswitched facilities or switched network. Half-speed operation at 2400 bps is possible via a systems utility program. Configuration options such as "local speed control" or "remote speed control" are performed by Field Engineering at install time. For additional information on configuration options refer to M3864 pages. The 4800 bps modem is available in two different versions: #535X for nonswitched and #536X for switched with auto-answer and Integrated Protective Coupler (contingent upon FCC registration). Attachment to nonswitched (4-wire) facilities is via an IBM-provided cable directly to the line, type 3002 . Attachment to the switched network is directly to the line for the Integrated Protective Coupler . The 4800 bps Integrated Modem is equivalent to and compatible with the 3864 Modem. The device communicating with the System/34 must also be equipped with a 3864 compatible integrated 4800 bps modem or a stand-alone 3864 using the same 2- or 4-wire mode of attachment to the line. For additional information on the 3864, refer to *IBM 3863, 3864, 3865 Introduction and Site Preparation Guide* (GA27-3200).

Communications Facilities - Nonswitched Lines: Nonswitched modems attach to a 4-wire voiceband line, type 3002 (or equivalent). Special conditioning is not necessary. Attachment to the line is by a cable that is terminated with a 4-prong plug (WE 283B or equivalent). A 12 meter (40 foot) cable is furnished. The plug mates with a receptacle (WE 404B or 549A surface mount or 493A flush mount, or equivalent) which is connected to the line. The receptacle is a conventional item of communications equipment and is, upon customer request, ordinarily furnished by the telecommunications service supplier. Communications Facilities - Switched Lines: Switched modems attach to a 2-wire voiceband line. Attachment to the line is by a cable that is terminated with an 8-pin mini plug (USOC 45A or 41S). A 5.5 meter (18 foot) cable is furnished. The mini plug mates with a programmed data jack that is provided by the telecommunications service supplier.

Limitations: Cannot be installed with EIA Interface, 1200 bps Integrated Modem, Analog Wideband Adapter, Auto-Call Adapter, or DDS Adapter on the same Line Base Adapter. See "MLCA Feature Configurator" for possible combination of features. **Maximum:** One per Line Base Adapter; two per MLCA. **Field Installation:** Yes. **Prerequisites:** Line Base Adapter corresponding to the line using the 4800 bps Integrated Modem.

Digital Data Service (DDS) Adapter (#5391, #5392, #5393, #5394): An integrated adapter for BSC or SDLC data transmission at speeds of 2400, 4800, 9600, and 56,000 bps over the AT&T nonswitched Data-Phone® digital service network. The DDS Adapter interfaces to a channel service unit (not a Data Service Unit), the customer site termination of the DDS network. **Note:** This service is available only in certain cities within the U.S. The DDS Adapter may also be used to locally connect a System/34 to another supported device with a DDS Adapter. This connection requires a special accessory adapter cable and supports point-to-point connections only. No modem or channel service unit is required. See "DDS Adapter Connector" under "Accessories". **Limitations:** Cannot be installed with an Integrated Modem, Analog Wideband Adapter, Auto-Call Adapter, or EIA Interface on the same Line Base Adapter. When a DDS Adapter is operating at 56,000 bps, the other lines cannot exceed an aggregate rate of 9600 bps. See "Multiline Communications Adapter Configurator" for possible combinations of features. **Maximum:** One per Line Base Adapter (four total) **Field Installation:** Yes. **Prerequisites:** Line Base Adapter corresponding to the line using the DDS Adapter.

Analog Wideband Adapter (#5401, #5402, #5403, #5404): Provides a cable and interface for attachment of a WE 303 type modem or equivalent operating at 19,200 bps or 50,000 bps. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with an Integrated Modem, EIA Interface, Auto-Call Adapter, or DDS Adapter on the same Line Base Adapter. Other lines cannot exceed an aggregate speed of 9600 bps when operating in conjunction with the Analog Wideband Adapter. See "Multiline Communications Adapter Configurator" for possible combinations of features. **Maximum:** One per MLCA. **Field Installation:** Yes. **Prerequisites:** The Line Base Adapter corresponding to line using the Analog Wideband Adapter.

Auto-Call Adapter (#5411, #5412, #5413, #5414): Permits the System/34 when attached to a switched network facility via an appropriate external modem and Auto-Call unit, (meeting EIA Standard RS-366) to initiate a data link connection to a remote device. Provides automatic dialing under program control. An Auto-Call Adapter (#541X) must always be installed in conjunction with an Interface (#531X) on another line , thus utilizing two line positions on the MLCA. Therefore, the use of auto-call will reduce the total number of lines available. **Limitations:** Cannot be installed with an EIA Interface, Integrated Modem, Analog Wideband Adapter, or DDS Adapter on the same Line Base Adapter as the Auto-Call feature. See "Multiline Communications Adapter Configurator" for possible combination of features. **Maximum:** One per Line Base Adapter, two per MLCA. **Field Installation:** Yes. **Prerequisites:** Line Base Adapter corresponding to the line using the Auto-Call Adapter.

1200 bps Integrated Modem (#5500, #5501): A modem for SDLC or BSC data transmission at 1200 bps over nonswitched facilities or switched network. Half-speed operation at 600 bps is indicated via a system utility program. Available in two different versions: #5500 for nonswitched or #5501 for switched with auto-answer. Attachment to the nonswitched (2- or 4-wire) facilities is via an IBM-provided cable directly to the line, type 3002 . Attachment to the switched network is via an IBM-provided cable to an FCC registered protective circuitry of the CBS type (or equivalent) provided by the user . The device communicating with System/34 must also be equipped with a 1200 bps Integrated Modem. **Limitations:** Cannot be installed with Interface (#3701) or 2400 bps Integrated Modem (#5600, #5601, #5602, #5610), or DDSA (#5650, #5651). #5500 and #5501 cannot be installed together. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500, #4703, and may require #5734. See "Processor Unit Expansion Feature Configurator" and "Modem/Interface Feature Configurator".

2400 bps Integrated Modem (#5600, #5601, #5602): A modem for SDLC or BSC data transmission at 2400 bps over nonswitched facilities, equivalent to and compatible with similarly featured 3872 Modems. Available in three different versions: #5600 for nonswitched, point-to-point, #5601 for nonswitched, multipoint control and #5602 for nonswitched, multipoint tributary. Attachment to nonswitched (2- or 4-wire) facilities is directly to the line, type 3200 via an IBM-provided cable. The 2400 IM is equivalent to and compatible with the 3872 Modem. The device communicating with the System/34 must also be equipped with a 3872 compatible integrated 2400 bps modem or a stand-alone 3872 Modem. **Limitations:** Cannot be installed with Interface (#3701) or another Integrated Modem (#5500, #5501, #5610), or DDSA (#5650, #5651). #5600, #5601, and #5602, or #5610 cannot be installed together. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500, #5733 and/or #5735. See "Processor Unit Feature Expansion Configurator" and "Modem/Interface Feature Configurator".

5340 System Unit (cont'd)

2400 bps Integrated Modem (#5610): A modem for SDLC or BSC data transmission at 2400 bps over a switched network with automatic answer capability. This modem is equivalent to and compatible with similarly featured 3872 Modems. Half-speed operation at 1200 bps is indicated via a system utility program. Attachment to the switched network is via an IBM-provided cable to an FCC registered protective circuitry provided by the user, type CBS or equivalent. The 2400 IM is equivalent to and compatible with the 3872 Modem. The device communicating with the System/34 must also be equipped with a 3872 compatible integrated 2400 bps modem or a stand-alone 3872 Modem. **Limitations:** Cannot be installed with Interface (#3701) or another Integrated Modem #5500, #5501, #5600, #5601, #5602), or DDSA (#5650, #6551). **Maximum:** One. **Note:** This feature is not compatible with the 2400 bps Integrated Modem available on the 5251. **Field Installation:** Yes. **Prerequisites:** #2500, #5733 and/or #5735. See "Modem/Interface Feature Configurator" and "Processor Unit Expansion Feature Configurator". (

Digital Data Service (DDS) Adapter (#5650, #5651): An integrated adapter for BSC or SDLC data transmission at speeds of 2400, 4800 or 9600 bps over the AT&T nonswitched Data-Phone® digital service network. The DDSA interfaces to a DDS channel service unit (not a Data Service Unit), the customer site termination of the DDS network. Available at three speeds: 2400, 4800, or 9600 bps. For point-to-point or multipoint control (#5650), for multipoint tributary (#5651). **Notes:** This service is available only in certain cities within the U.S. The DDS Adapter may also be used to locally connect a System/34 to another supported device with a DDS Adapter. This connection requires a special accessory adapter cable and supports point-to-point connections only. No modem or channel service unit is required. See "DDS Adapter Connector" under "Accessories". **Limitations:** Cannot be installed with EIA interface (#3701) or 1200 bps Integrated Modem (#5500, #5501) or 2400 bps Integrated Modem (#5600, #5601, #5602, #5610). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500.

Digital Data Service (DDS) Adapter (#5652, #5653): An integrated adapter for BSC or SDLC data transmission at speeds of 2400, 4800,or 9600 bps over the AT&T nonswitched Data-Phone® digital service network. The DDSA interfaces to a DDS channel service unit (not a Data Service Unit), the customer site termination of the DDS network. Available at three speeds: 2400, 4800, or 9600 bps. For point-to-point or multipoint control (#5652), for multipoint tributary (#5653). **Note:** This service is available only in certain cities within the U.S. The DDS Adapter may also be used to locally connect a System/34 to another supported device with a DDS Adapter. This connection requires a special accessory adapter cable and supports point-to-point connections only. No modem or channel service unit is required. See "DDS Adapter Connector" under "Accessories". **Limitations:** Cannot be installed with EIA Interface (#3702) or 1200 bps Integrated Modem (#6500, #6501) or 2400 bps Integrated Modem (#6600, #6601, #6602, #6610). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3500.

1200 bps Integrated Modem (#6500, #6501): A modem for SDLC or BSC data transmission at 1200 bps over nonswitched facilities or switched network. Half-speed operation at 600 bps is indicated via a system utility program. Available in two different versions: #6500 for nonswitched, #6501 for switched with auto-answer. Attachment to the nonswitched (2- or 4-wire) facilities is via an IBM-provided cable directly to the line, type 3002 . Attachment to the switched network is via an IBM-provided cable to an FCC registered protective circuitry provided by the user type CBS or equivalent. . The device communicating with System/34 must also be equipped with a 1200 bps Integrated Modem. **Limitations:** Cannot be installed with Interface (#3702) or 2400 bps Integrated Modem (#6600, #6601, #6602, #6610), or DDSA (#5652, #5653). #6500 and #6501 cannot be installed together. **Maximum:** One. **Prerequisites:** #3500, #4703, and may require #5734. See "Modem/Interface Feature Configurator" and "Processor Unit Expansion Feature Configurator".

2400 bps Integrated Modem (#6600, #6601, #6602): A modem for SDLC or BSC data transmission at 2400 bps over nonswitched facilities, equivalent to and compatible with similarly featured 3872 Modems. Available in three different versions: #6600 for nonswitched, point-to-point, #6601 for nonswitched multipoint control, and #6602 for nonswitched multipoint tributary. Attachment to nonswitched (2- or 4-wire) facilities is directly to the line, type 3002 via an IBM-provided cable. The 2400 IM is equivalent to and compatible with the 3872 Modem. The device communicating with the System/34 must also be equipped with a 3872 compatible integrated 2400 bps modem or a stand-alone 3872 Modem. **Limitations:** Cannot be installed with Interface (#3702) or another Integrated Modem (#6500, #6501, #6610), or DDSA (#5652, #5653). #6600, #6601, #6602, and #6610 cannot be installed together. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #6500, #5733 and/or #5735. See "Processor Unit Expansion Feature Configurator".

2400 bps Integrated Modem (#6610): A modem for SDLC or BSC data transmission at 2400 bps over a switched network with automatic answer capability. This modem is equivalent to and compatible with similarly featured 3872 Modems. Half-speed operation at 1200 bps is indicated via a system utility program. Attachment to the switched network is via an IBM-provided cable to an FCC registered protective circuitry provided by the user type CBS. The 2400 IM is equivalent to and compatible with the 3872 Modem. The device communicating with the System/34 must also be equipped with a 3872 compatible integrated 2400 bps modem or a stand-alone 3872 Modem. **Limitations:** Cannot be installed with Interface (#3702) or another Integrated Modem (#6500, #6501, #6600, #6601, #6602). **Note:** This feature is not compatible with the 2400 bps Integrated Modem available on the 5251. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3500, #5733 and/or #5735. See "Modem/Interface Feature Configurator" and "Processor Unit Expansion Feature Configurator".

Switched Network Backup (SNBU) (#7951): Provided for backup attachment of System/34 to the public switched network when the 2400 bps Integrated Modem (#5600, #5601, #5602) is used on a nonswitched line as the prime facility. It can communicate with a compatible 2400 bps Integrated Modem or a 3872 Modem when either is equipped with switched network capability. Selection of the primary or backup facility is via an operator invoked system utility program. Attachment to the switched network is made via an FCC registered protective circuitry provided by the user type CDT or equivalent. Calls must be established and answered manually. Operator intervention, program modification, or both may be required on the using system/terminal. Additional customer program routines will be required, in existing BTAM programming, to fully utilize the capabilities of the Switched Network Backup feature. For additional information, see the *IBM 3872 Modem User's Guide* (GA27-3058). **Limitations:** Cannot be installed with Switched Network Backup with Auto-Answer (#7952). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500 and #5600, #5601, or #5602, and appropriate Processor Unit Expansion Features for 2400 bps Integrated Modem.

Switched Network Backup with Auto-Answer (SNBU/AA) (#7952): Same as Switched Network Backup (#7951) plus the added capability of automatically answering incoming calls when attached to an FCC registered protective circuitry provided by the user of the CBS type (or equivalent). Selection of the prime or backup facility is via an operator invoked system utility program. Operation intervention, program modification, or both may be required on the using system or terminal. Additional customer program routines will be required, in existing BTAM programming, to fully utilize the capabilities of Switched Network Backup. For additional information see the *IBM 3872 Modem User's Guide* (GA21-3058). **Limitations:** Cannot be installed with Switched Network Backup (#7951). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2500, #5600, #5601, or #5602, and appropriate Processor Unit Expansion Features for 2400 bps Integrated Modem.

Switched Network Backup (SNBU) (#7953): Provided for backup attachment of System/34 to the public switched network when the 2400 bps Integrated Modem (#6600, #6601, #6602) is used on a nonswitched line as the prime facility. It can communicate with a compatible 2400 bps Integrated Modem or a 3872 Modem when either is equipped with switched network capability. Selection of the primary or backup facility is via an operator invoked system utility program. Attachment to the switched network is made via an FCC registered protective circuitry provided by the user type CDT or equivalent. Calls must be established and answered manually. Operator intervention, program modification, or both may be required on the using system/terminal. Additional customer program routines will be required, in existing BTAM programming, to fully utilize the capabilities of the Switched Network Backup feature. For additional information, see the *IBM 3872 Modem User's Guide* (GA21-3058). **Limitations:** Cannot be installed with Switched Network Backup with Auto-Answer (#7954). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3500 and #6600, #6601, or #6602.

Switched Network Backup with Auto-Answer (SNBU/AA) (#7954): Same as Switched Network Backup (#7953) plus the added capability of automatically answering incoming calls when attached to an FCC registered protective circuitry provided by the user type CDT or equivalent. Selection of the prime or backup facility is via operator invoked system utility program. Operation intervention, program modification, or both may be required on the using system/terminal. Additional customer program routines will be required, in existing BTAM programming, to fully utilize the capabilities of the Switched Network Backup feature. For additional information see the *3872 Modem User's Guide* (GA21-3058). **Limitations:** Cannot be installed with Switched Network Backup (#7953). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3500 and #6600, #6601, or #6602.

IBM Modems: One IBM Modem can be attached to each Communications Adapter. **Prerequisites:** Communications Adapter (#2500, #3500); Interface (#3701, #3702), Processor Unit Expansion (#5734) or Multiline Communications Adapter (#4500), Line Base Adapter (#5301, #5302, #5303, #5304), and Interface (#5311, #5312, #5313, #5314).

5340 System Unit (cont'd)

Modem	Speed (bps)
3863	2400
3868 mdl 1	2400
3864	4800
3863 mdl 2	4800
3865	9600
3868 mdl 3,4	9600
3872	2400/1200

Note: For communications capabilities, product utilization, and special features, see M2700, 3863, 3864, 3865, and 3872 pages. To verify the proper integrated or external modem interface configuration to #2500 and #3500, refer to "Modem/Interface Feature Configurator" below. Select one of the categories and follow across for the required and optional special features. To verify the proper integrated or external modem interface configuration to #4500, refer to "Multiline Communications Adapter Configurator" below.

Modem/Interface Feature Configurator: (#2500 or #3500) only.

Modem/ Interface	Internal Clock (#4703)	Processor Unit Expansion (1) B (#5733)	C (#5734)	D (#5735)	SNBU, SNBU/AA (#7951, #7952, #7953, #7954)
EIA Interface (#3701, #3702)	Optional	-	Required (2)	-	-
1200 bps Integrated Modem:					
Nonswitched (#5500, #6500)	Required	-	Required (2)	-	-
Switched with Auto-Answer (#5501, #6501)	Required	-	Required (2)	-	-
2400 bps Integrated Modem:

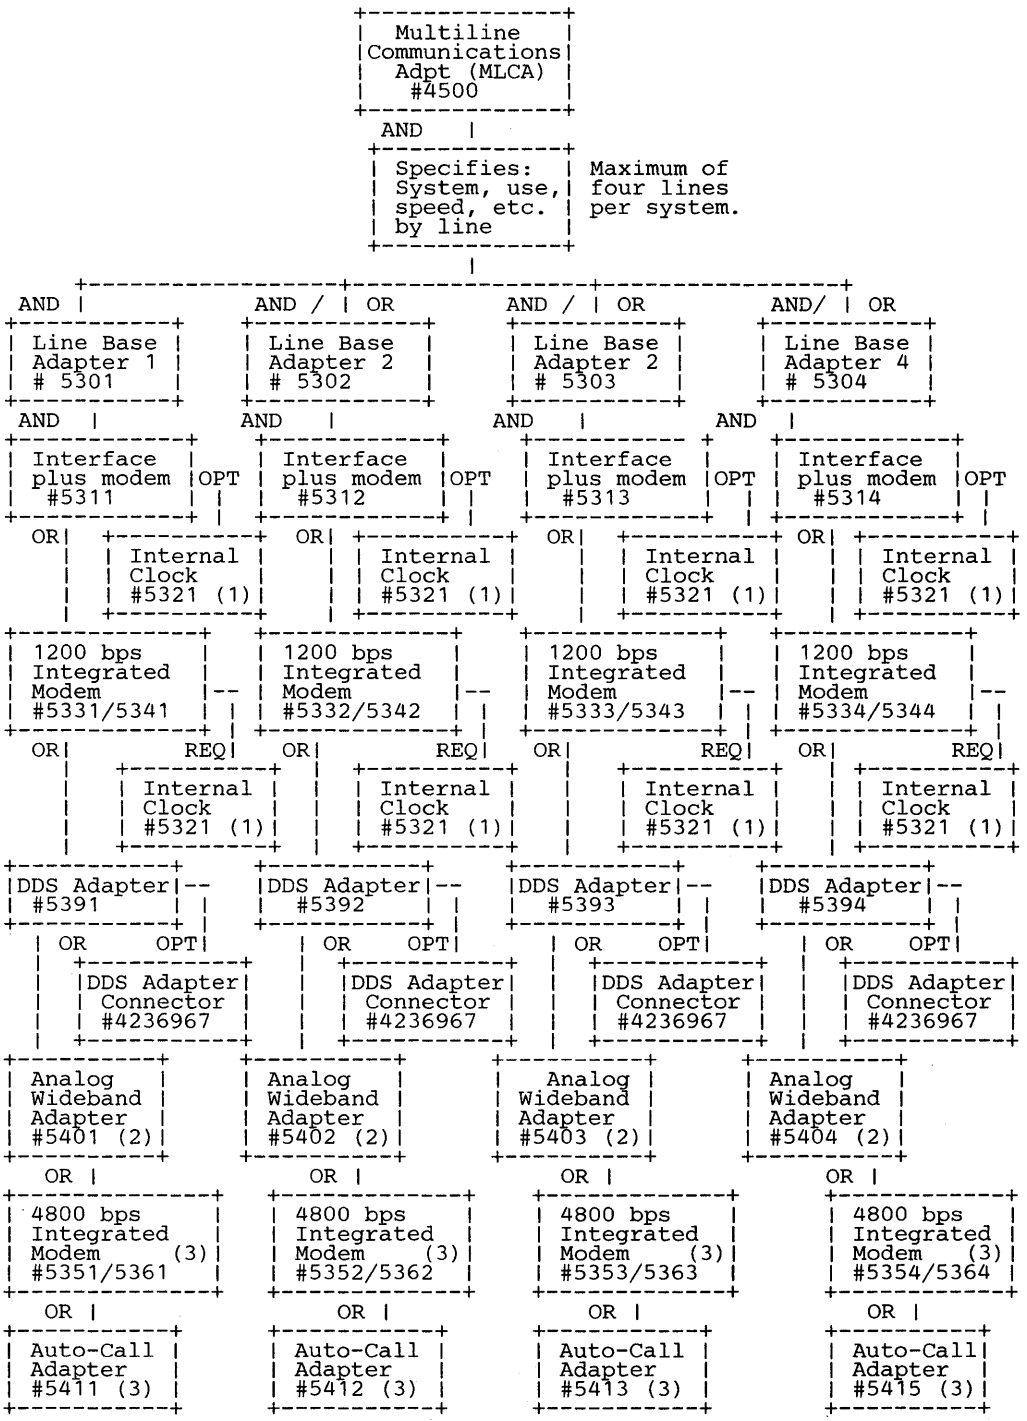
5340 System Unit (cont'd)

Multiline Communications Adapter (#4500) Configurator:



Notes:

(1) Total of one per system, one will handle any or all lines.

(2) One only per system.

(3) Two only per system.

5340 System Unit (cont'd)

System Utility Support: A system utility program is used for the selection of certain data communications characteristics such as: full-speed or half-speed, internal or external modem clocking, line type, station address, etc. See the *System/34 System Support Reference Manual* (SC21-5155) for a complete description of $SETCF utility.

References: See the appropriate host system programming pages for possible restrictions.

See M2700 pages for additional information concerning modems, communications facilities, machine attachment requirements, terminal intermix, operating capabilities, and customer responsibilities.

Refer to *System/34 Installation Manual - Physical Planning* (GA21-9242) for physical installation requirements.

Replaced Parts: Replaced parts from any special feature installation or removal remain the property of the customer.

MODEL CONVERSIONS

All conversions may be field installed.

Any model upgrade that involves a disk storage capacity change may require replacement of the disk storage mechanism. Adequate provision must be made for retaining the data contained on the replaced disk mechanism and elimination of user proprietary information.

The upgrade purchase prices for model conversions may be greater than the purchase price differentials. The customer should carefully evaluate his future requirements when purchasing a system.

Replaced parts from any model conversion that includes a disk storage capacity change become the property of IBM.

Replaced parts from any model conversion which changes the diskette remain the property of the customer.

ACCESSORIES

Keys: The 5340 with Keylock (#4655) is shipped with two keys. Additional keys may be purchased from IBM. (Vendor will supply additional keys only to the original purchaser). Order , specifying P/N 2546418. A letter of authorization with key identification number must accompany each order. Allow six to eight weeks for delivery.

DDS Adapter Connector: A specially designed connector allows the cables from a System/34 DDS Adapter to be connected to another supported device with a DDS Adapter. This provides for the local connection of two devices without the use of any modems or channel service units. This is a purchase only item. Order , specifying P/N 4236967. Allow six to eight weeks for delivery. **Maximum:** One per Digital Data Service (DDS) Adapter (four per system total). **Field Installation:** Yes.

Cables: Required, see "Specify".

SUPPLIES

For Diskettes and Diskette Magazines see IBM.

5360 SYSTEM UNIT

PURPOSE

Contains main storage, disk storage, diskette drive, communications features, logical processing circuits and control for I/O units on System/36.

MODELS

Model	Main Storage*	Diskette Drive	Disk Storage**
A11	128K	Single	30MB
A21	128K	Magazine	30MB
A12	128K	Single	60MB
A22	128K	Magazine	60MB
B13	256K	Single	200MB
B23	256K	Magazine	200MB
B14	256K	Single	400MB
B24	256K	Magazine	400MB

* Additional main storage (up to a maximum of 256K on AXX models and 512K on BXX models) is available as features.

** The actual capacity of the first disk on each system is reduced by 1.67MB. This area is required for microcode, service aids, error logs, and diagnostics, and is not available to the user.

Disk Storage	Actual Capacity	User Capacity
30MB	30.84MB	29.17MB
60MB	61.69MB	60.02MB
200MB	200.20MB	198.53MB
400MB	400.40MB	398.73MB

Standard Mdls: The 5360 mdls B23 and B24 have been designated as standard mdls for this machine type. The three standard 5360 B24 mdls are comprised of a "Base Configuration" plus one of the three configuration options. A standard 5360 mdl B24 is ordered by simply specifying the three standard mdl configuration options below.

Basic Configuration:

5360 B24 256K, Magazine, 400MB
#1006 Additional 256K Storage
#4900 Workstation Controller Expansion

Configuration Options:

1. #5830 3262 Printer Attachment
#9876 3262 is mdl B01 (Previously Attached to a System/34)
#4500 MLCA
#5301 Line Base Adapter
#9701 Line Position (Line-1) for #5301
#5301 Line Base Adapter
#9702 Line Position (Line-2) for #5301
#3701 EIA RS-232-C Adapter
#9711 Line Position (Line-1) for #3701
**#9111 Network Type (Line-1) Switched
**#9221 Line Speed (Line-1) 4800 bps
**#9014 Remote Device Type - Other IBM
#3701 EIA RS-232-C Adapter
#9712 Line Position (Line-2) for #3701
**#9112 Network Type (Line-2) Switched
**#9222 Line Speed (Line-2) 4800 bps

2. #4500 MLCA
#5301 Line Base Adapter
#9701 Line Position (Line-1) for #5301
#5301 Line Base Adapter
#9702 Line Position (Line-2) for #5301
#3701 EIA RS-232-C Adapter
#9711 Line Position (Line-1) for #3701
**#9111 Network Type (Line-1) Switched
**#9221 Line Speed (Line-1) 4800 bps
**#9014 Remote Device Type - Other IBM
#3701 EIA RS-232-C Adapter
#9712 Line Position (Line-2) for #3701
**#9112 Network Type (Line-2) Switched
**#9222 Line Speed (Line-2) 4800 bps

3. #5830 3262 Printer Attachment
#9876 3262 is mdl B01 (Previously Attached to a System/34)

**Included for record purposes only. On EIA, these can be altered using software procedure at installation time.

A standard 5360 mdl B23 can be ordered by specifying 5360 mdl B23 and selecting the standard mdl option. The base configuration for a mdl B23 is 256K, magazine, and 200MB. There are no additional features on this standard mdl configuration. **Note:** No accessories, special features (other than shown above), RPQs, or other alterations can be ordered or shipped with standard mdls.

Minimum System Configuration: A 5360 System Unit, a system console (5251 mdl 11, 5291, or 5292), and a printer (3262, 5224, 5225, or 5256). A system printer (not a 5219) must be identified to satisfy IBM maintenance requirements when using the System Support Program (5727-SS1).

Customer Setup: The 5360 is designated Customer Setup (CSU) and offers customers ease-of-setup and relocation flexibility. The Customer Setup Allowance is one day. One copy of *Setting Up Your Computer* (SA21-9430), is included with each 5360.

HIGHLIGHTS

- Multiple workstation system with multiprogramming capability provided by the System Support Licensed Program (5727-SS1).
- Extension of System/34 capabilities.
- Local and remote workstation devices (up to 30 Local, 64 Remote):

  Printers:
  5219 - D01, D02
  5224 - 001, 002
  5225 - 001, 002, 003, 004
  5256 - 001, 002, 003

  Displays:
  5150 Personal Computer
  5251 - 011
  5251 - 012 (remote only)
  5291 - 001
  5292 - 001
  5292 - 002

- Other I/O devices:

  1255 Magnetic Character Reader mdls 1,2,3 (available 2Q84)
  3262 Printer mdls B1, C1
  8809 Magnetic Tape Units mdls 1C, 2C (available 2Q84)

- Customer setup to offer earlier availability and relocation flexibility.
- Customer Problem Determination aids are provided to assist users in correcting problems or deciding who to call if service is required.
- High level of system availability
- Data error checking and correction for disk and main storage
- Fixed interval timer
- Storage protection
- Security keylock
- Communications: Communication lines may be attached to System/36 using either a Single Line Communications Adapter or a Multiline Communications Adapter.

  The Single Line Communications Adapter permits half-duplex operation at speeds from 600 bps to 9600 bps. The following interface adapters are available for use with the SLCA.

  - EIA RS-232-C
  - 1200 bps integrated modem (switched and nonswitched)
  - Digital Data Service Adapter
  - X.21 (nonswitched operation only)

  The Multiline Communications Adapter (MLCA) permits attachment of up to four communication lines, each of which is capable of half-duplex operation at speeds from 600 bps to 9600 bps. In addition, one line is capable of operating at speeds up to 57.6K bps in half-duplex mode, provided the aggregate of the remaining three lines does not exceed 9600 bps, or one line can operate at 50K bps in half-duplex mode and the remaining lines (up to three) at speeds up to 4800 bps each, or one line can operate at 19.2K bps and the remaining lines (up to three) at speeds up to 9600 bps each. Operation at speeds greater than 9600 bps is limited to Line-4 of the MLCA. The following interface adapters are available for use with the MLCA. See the communications configurator for possible combinations of adapters.

  - EIA RS-232-C
  - V.35
  - Autocall
  - 1200 bps integrated modem (switched and nonswitched)
  - Digital Data Service
  - X.21 (switched and non-switched)

  Both communications adapters support Binary Synchronous Communications (BSC) and Synchronous Data Link Control (SDLC) protocols. In BSC mode, switched, nonswitched point-to-point and multipoint tributary operation is supported. ASCII, EBCDIC, or EBCDIC Text Transparency is standard and is program selectable by line. In SDLC mode, switched, nonswitched, and multipoint operation is supported. The System/36 can operate as either a

5360 System Unit (cont'd)

primary or a secondary station on a multipoint line. Refer to the M2700 pages for a description of attachment capability.

5360 System Unit Components

Processors: The 5360 has a multiple processor architecture. The main storage processor is an enhanced System/34 instruction processor with 128K, 256K, 384K, or 512K bytes of main storage. A control processor operates in parallel with the main storage processor, and provides microcoded control function for the I/O processors and interfaces. A file processor is added when 8809 Magnetic Tape Attachment (#7960) is installed. This processor will then manage the device-to-device data transfers between disk, diskette, and tape. Additional processors are included to control other I/O functions. The processors use LSI (Large Scale Integration) for the logic circuitry. Storage technology is MOSFET (Metal Oxide Semiconductor Field Effect Transistor). Data and instructions are stored as EBCDIC characters. Each EBCDIC character is stored in an 8-bit byte. ECC (Error Correction Code) is maintained in main storage. Single-bit error correction and double-bit error detection is performed on every two bytes. Parity is added for all data transfers to and from main storage.

Workstation Controller: All displays and printers used as locally attached workstations connect to a controller in the 5360 System Unit via twinaxial cable connectors on the 5360. One cable connector must be dedicated to attachment of a display to be used as the system console. Up to five additional cables can be connected to the 5360 for attachment of additional workstations. Up to seven workstations may be attached to one cable via the Cable-Thru feature on displays and printers. The maximum aggregate length of twinaxial cable attached to one 5360 cable connector is 1,525 meters (5,000 feet). **Maximum:** A maximum of six [30 with Workstation Controller Expansion (#4900)] workstations, including the system console, may be locally attached via twinaxial cable to the 5360. See *Preparing a Place for Your Computer* (SA21-9444), for physical planning information.

Diskette Drive: Mdls X1X of the 5360 have a single diskette drive incorporated. Mdls X2X have a diskette magazine drive incorporated. Both drives can read and write either the Diskette 1 (Basic or Extended format) or the 2-sided double density Diskette 2D (Basic or Extended format).

Diskette Specifications:

	Diskette 1	Diskette 2D
Data Tracks/Diskette	74	148 (74 Cylinders)
Capacity		
Basic Format		
Bytes/Sector	128	256
Sectors/Track	26	26
Tracks/Cylinder	1	2
Data Bytes/Diskette	246,272	985,088
Extended Format		
Bytes/Sector	512	1,024
Sectors/Track	8	8
Tracks/Cylinder	1	2
Data Bytes/Diskette	303,104	1,212,416

The reading, writing, and seek operations of diskettes are overlapped with processing and I/O device operations. The diskette magazine drive can process individual diskettes or magazines. A magazine holds up to ten operator accessible diskettes. The magazine drive can accommodate two magazines and three diskettes. The selection of diskettes within a magazine, and processing from the first magazine to the second, is under program control. The select cycle time (eject diskette, move to next diskette, load diskette) is approximately three seconds. In addition to the two magazines, the magazine drive contains three diskette slots which can be used for loading one to three diskettes. The data transfer rate for the single diskette drive is 62.5K B/sec (using Diskette 2D); and for the diskette magazine drive, it is 125.0K B/sec (using Diskette 2D).

Disk Storage: The 5360 can contain one of four disk storage capacities: 30MB, 60MB, 200MB, or 400MB. Disk storage is high-speed, direct access media and is not physically removable from the system. Programs and data are stored on the disk for processing. Data can be stored offline for security or backup purposes by copying the data to diskettes or magnetic tape.

Disk Storage Specifications:

	30/60MB	200/400MB
Bytes/Sector	256	2x256
Bytes/Cylinder	69,632	351,232
Blocks/Cylinder	27.2	137.2
Cylinders/Drive	443	570
Capacity/Drive(bytes)	30,845,440	200,202,240
Capacity/Two Drives (bytes)	61,690,880	400,404,480
Access Time (ms)		
Cyl-to-Cyl	*7	7
Average	**38	25
Maximum	**75	45
Rotational Speed (rpm)	3,151	2964
Instantaneous Data Rate (MB/sec)	1.25	1.50

Notes:
* Seven or less.
** Less than shown.

System Control Panel: The system control panel contains controls and indicators required for system operation. This panel combines the hardware/programming service representative and operator functions that serve as diagnostic aids for locating hardware and programming problems. The system control panel, in conjunction with the system console, provides the primary interface between the system and the operator or hardware/programming service representative. A 3-position keylock switch, located on the panel, can be used to prevent unauthorized personnel from accessing storage through the panel or turning on the system power.

System Console: The system console is not a component of the 5360 System Unit. The console may be any one of the supported display station devices except the 5150 Personal Computer, that can be locally attached to the 5360 System Unit. For servicing reasons, the primary system console (alternative may be assigned through programming) is required to be located within 6 meters (20 feet) of the System Unit. It is used to facilitate operator control of the system via operator commands and to allow the operator to respond to system messages presented on the display. It can also be used as a data entry/inquiry workstation, interacting with a user-application.

Customer Responsibilities: The customer is responsible for:

- Adequate site and system planning and preparation. Customers who request CSD personnel to perform these activities are subject to a charge.
- Receipt, unpacking, and placement of the 5360.
- Ordering, installation, and maintenance of signal cables and associated parts for attaching devices to the 5360 twinaxial ports.
- Physical setup, connection of cables to communications lines/modems and IBM devices, incorporating protected access areas, and checkout in accordance with instructions supplied by IBM.
- Using and following the System/36 problem determination procedures before calling IBM for service.
- Relocation of the 5360, if required, to allow IBM service access.
- Disconnecting and moving of the 5360 to the customer's shipping dock at the time of discontinuance.

Publications: *Guide to Publications* (GC21-9015).

SPECIFY

Non-Communications Specify Codes

Unless indicated, otherwise, these specify codes are available only at time of manufacture.

- Voltage (180-254V, 1-phase, 3-wire, 60 Hz): 250V locking-type plug provided. No specify code required.
- Color: Pearl White with Pebble Gray accent ... end covers only. No specify code required or permitted.
- Attaching 3262 mdl B1: Specify **#9876** only if attaching a 3262 mdl B1 that was previously attached to a System/34. Do not use this code if attaching a 3262 mdl C1. Also, if attaching a 3262 mdl B1, refer to the M3262 mdl B1 pages for additional ordering information.
- System Character Set: Specify **#2990** for Multinational * Character Set.

  * **Prerequisites:** #4900. Also, all displays and printers must be equipped with the Multinational Character Set.
- Twinaxial cables: Cables for the system console and system printer are *Not* supplied with the 5360 System Unit. See "Accessories" and the 5219, 522X, 525X, or 529X pages for cable ordering information.
- I/O Unit Attachments: Appropriate special features are required to attach any I/O device that does not have twinaxial connection capability. See "Special Features".
- For physical planning information, refer to *Preparing a Place for Your Computer* (SA21-9444).

Mandatory Specify Codes for Communications

- Specify Codes for Remote Device Types: Enter a specify code from the following list for each type of device with which the System/36 communicates. Codes are for record purposes only and do not affect the operation of the communication hardware or programming.

Code	System/Terminal Type

5360 System Unit (cont'd)

#9000	S/370, 303X, 308X, 43XX
#9001	System/34
#9002	System/36
#9003	System/38
#9004	Series/1
#9005	5250
#9006	5260
#9007	5280
#9008	5322 Datamaster
#9009	5520
#9010	6580 Displaywriter
#9011	OS/6, 6670
#9012	3601, 4701
#9013	3694
#9014	Other IBM
#9015	Non-IBM

- Line Position: Use the following table to specify where line interfaces are to be installed. For each line interface, select the desired interface type from the first column of the table. The second column shows the features that need to be ordered for each type of interface, and the third section of the table indicates the specify codes that are required to indicate line position. For example, to order an X.21 adapter on Line-2 of the MLCA, order feature #5301 and feature #5655 and specify **#9702** and **#9782**.

For each line using the interface shown below	Order the Feature Below Note (1)	AND		Specify Line Position with Position Specify Codes			
		SLCA	OR	MLCA Line-1	MLCA Line-2	MLCA Line-3	MLCA Line-4
Interface Note (2)	#5301 #3701	**#9697** **#9711**		**#9701** **#9711**	**#9702** **#9712**	**#9703** **#9713**	**#9704** **#9714**
CCITT V.35 Interface	#5301 #5401						**#9704** **#9804**
Autocall Interface Note (3)	#5301 #5411				**#9702** **#9722**		**#9704** **#9724**
1200 bps Int. Modem Nonswitched Note (4)	#5301 #5500	**#9697** **#9731**		**#9701** **#9731**	**#9702** **#9732**	**#9703** **#9733**	**#9704** **#9734**
1200 bps Int. Modem Switched/AA Note (4)	#5301 #5501	**#9697** **#9741**		**#9701** **#9741**	**#9702** **#9742**	**#9703** **#9743**	**#9704** **#9744**

CCITT X.21 Interface Note (5)	#5301 #5655	**#9697** **#9781**		**#9701** **#9781**	**#9702** **#9782**	**#9703** **#9783**	**#9704** **#9784**

Notes:
(1) Maximum quantity of each feature is one.
(2) Interface EIA RS-232-C
(3) Interface EIA RS-366-A
(4) #5321 is a prerequisite.
(5) X.21 switched operation is mutually exclusive with Autocall.

- Internal Clocking: If internal (business machine) clocking is required for use with an external modem, specify the lines which require internal clocking using the following specify codes. The internal clocking specify code applies only to lines using Adapter (#3701). Clocking speed is 1200 bps only. **Prerequisites:** #5321 is a prerequisite for the following codes.

Single Line	OR	MLCA Line-1	MLCA Line-2	MLCA Line-3	MLCA Line-4
#9261		**#9261**	**#9262**	**#9263**	**#9264**

- Network Type: Specify the type of network to which each communication interface attaches. The network type should be described as seen by the System/36. The network type specified will be supplied to the customer on a system description listing that will be shipped with the system.

	Single Line	OR	MLCA Line-1	MLCA Line-2	MLCA Line-3	MLCA Line-4
Point-to-Point Nonswitched	**#9101**		**#9101**	**#9102**	**#9103**	**#9104**
Point-to-Point Switched	**#9111**		**#9111**	**#9112**	**#9113**	**#9114**
Multipoint Tributary	**#9121**		**#9121**	**#9122**	**#9123**	**#9124**
Multipoint Control	**#9131**		**#9131**	**#9132**	**#9133**	**#9134**
Local Attach. via DDSA	**#9141**		**#9141**	**#9142**	**#9143**	**#9144**

- Line Speed: Specify the communication line speed to be used with each communication interface on the System/36. The line speed specified will be supplied to the customer on a system description listing that will be shipped with the system.

Speed (bps)	Single Line	OR	MLCA Line-1	MLCA Line-2	MLCA Line-3	MLCA Line-4
1200	**#9201**		**#9201**	**#9202**	**#9203**	**#9204**
2400	**#9211**		**#9211**	**#9212**	**#9213**	**#9214**
4800	**#9221**		**#9221**	**#9222**	**#9223**	**#9224**
9600	**#9231**		**#9231**	**#9232**	**#9233**	**#9234**
Greater than 9600 bps						**#9244**

SPECIAL FEATURES

Replaced parts from any special feature installation on a purchased 5360 remain the property of the customer.

Non-Communications Features

Add'l Storage - 128K (#1005): Provides an additional 128K bytes of main storage. **Limitations:** Mutually exclusive with Add'l Storage - 256K (#1006). **Maximum:** One. **Field Installation:** Yes.

Add'l Storage - 256K (#1006): Provides an additional 256K bytes of main storage. **Limitations:** BXX mdls only, and mutually exclusive with Add'l Storage - 128K (#1005). **Maximum:** One. **Field Installation:** Yes.

1255 Attachment (#1100): Required to attach 1255 Magnetic Character Reader mdls 1, 2, or 3. **Limitations:** Not available until 2Q84. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None on BXX mdls. AXX mdls require #5732. #5733 is required if #5830 is installed.

1255 Attachment Expansion (#1105): Required when using the System/36 Assembler Macros to provide 1255 stacker logic programs. This feature provides an additional 28K of user-programmable storage. **Limitations:** Not available until 2Q84. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1100.

Workstation Controller Expansion (#4900): Required when attaching seven to 30 displays and/or printers locally to the 5360. This feature also supports: Hex Key operation, the 3270 Device Emulation program, the Multinational Character Set (**#2990**) installed on displays or printers, and the Magnetic Stripe Reader on displays. **Maximum:** One. **Field Installation:** Yes.

Processor Unit Expansion A (#5732): This is a feature I/O board required on AXX mdls for the 1255 Attachment (#1100), 3262 Printer Attachment (#5830), or the 8809 Magnetic Tape Attachment (#7960). **Limitations:** AXX mdls only. **Maximum:** One. **Field Installation:** Yes.

Processor Unit Expansion B (#5733): Additional power feature required on AXX mdls for the 8809 Magnetic Tape Attachment (#7960) or if attaching both the 1255 and 3262. **Limitations:** AXX mdls only. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5732.

3262 Printer Attachment (#5830): Required when attaching a 3262 mdl B1 or C1 Printer. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None on BXX mdls, AXX mdls require #5732, #5733 if #1110 is installed. **#9876** if 3262 mdl B1 is to be attached.

8809 Magnetic Tape Attachment (#7960): Required when attaching the 8809 mdl 1C Magnetic Tape Unit (8809 mdl 2C attaches to the mdl 1C). **Limitations:** Not available until 2Q84. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None on BXX mdls, AXX mdls require #5732 and #5733.

Communications Special Features

Single Line Communications Adapter - SLCA (#2500): Provides for attachment of a single communication line to the System/36. It permits half-duplex operation at speeds from 600 bps to 9600 bps using either BSC or SDLC protocols. Both switched and nonswitched operation is supported. **Note:** Only nonswitched operation is supported when using an X.21 interface. **Limitations:** Cannot be installed with the MLCA (#4500). **Maximum:** One. **Field Installation:** Yes. **Specify:** Network type line speed and remote station type for line attached to SLCA. See "Mandatory Specify Codes for Communications".

EIA Adapter (#3701): Provides a cable and interface for attachment of an IBM modem or a non-IBM modem meeting RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed with another EIA Adapter, V.35 Adapter, Autocall Adapter, integrated modem, Digital Data Service Adapter or X.21 Adapter on the same

5360 System Unit (cont'd)

Communications Line Base Adapter (#5301). Maximum speed is 9600 bps. See the "Communications Configurator" for possible combination of features. **Maximum:** One per Communications Line Base Adapter (#5301). **Field Installation:** Yes. **Prerequisites:** #5301 corresponding to the line using the EIA Adapter. This feature may also require #5321 if the external modem does not provide its own 1200 bps clocking. **Specify:** Network type, line speed, line position and remote station type. See "Mandatory Specify Codes for Communications".

Multiline Communications Adapter - MLCA (#4500): Four communication lines can be attached to System/36 using the MLCA. The MLCA is a microprocessor that operates in parallel with the main storage processor and other microprocessors in the system. Each communications line uses either BSC or SDLC protocol. The proper line protocol is loaded into the MLCA microprocessor at program execution time. This feature, in conjunction with stored program control, permits System/36 to function on a switched or nonswitched, public or private communications line. For BSC multipoint tributary operation, an auto-monitoring function is provided that allows the line to be monitored without a user's main storage program being required. In this mode, a negative response is sent to all polls and selects received from the control station. For BSC processing to become active in main storage, the operator must activate BSC data management. An SDLC auto-response mode is implemented in MLCA for secondary SDLC. The MLCA will handle some redundant supervisory responses, thus, eliminating the need to always utilize the SDLC task in main storage for nonproductive activity. The MLCA in a primary SDLC environment offloads from the main storage processor the majority of the work required for nonproductive polling. In either case, a SNA/SDLC task must be active in main storage. **Limitations:** Each line is capable of half-duplex operation at speeds from 600 bps to 9600 bps. In addition, one line may operate at speeds up to 57.6K bps in half-duplex mode provided the aggregate of the remaining three lines does not exceed 9600 bps, or one line can operate at 50K bps and the remaining lines at speeds up to 4800 bps each, or one line can operate at 19.2K bps and the remaining lines at speeds up to 9600 bps each. Operation at speeds greater than 9600 bps is limited to Line-4 of the MLCA. Cannot be installed with SLCA (#2500). **Maximum:** One. **Field Installation:** Yes. **Specify:** Network type, line speed, line position and remote station type for lines attached to MLCA. See "Mandatory Specify Codes for Communications".

Multiline Communications Adapter Expansion (#4501): A storage expansion for the MLCA microprocessor which allows switched operation of X.21 lines attached to the MLCA. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4500.

Communications Line Base Adapter (#5301): Required for attachment of line interface adapters to the MLCA or the SLCA. **Maximum:** One per communication line. Four total when using the MLCA or a total of one when when using the SLCA. **Field Installation:** Yes. **Prerequisites:** #4500 when using multiline attachment option. #2500 when using single line option.

Communications Internal Clock (#5321): Generates synchronizing and timing signals for BSC or SDLC operation when they are not provided by the modem used with Adapter (#3701). #5321 is required for use with the 1200 bps Integrated Modem (#5500, #5501). Clocking speeds available with this feature are 600 and 1200 bps. Selection of full- or half-speed and the appropriate line is indicated via a system utility program. When this feature is installed on System/36, all other BSC or SDLC stations attached to the same data link must also be equipped with a similar IBM Internal Clock feature. **Maximum:** One per system. One clock can control all lines on system. **Field Installation:** Yes. **Prerequisites:** At least one line with #3701 or with #5500 or #5501 installed. **Specify:** Lines for which internal clocking is to be used with external modem. See "Mandatory Specify Codes for Communications".

V.35 Adapter (#5401): Provides a cable and interface for attachment of an external modem meeting CCITT V.35 characteristics. The V.35 Adapter will operate at speeds of 20.4K bps, 24K bps, 40.8K bps, 48K bps, and 56K bps. The adapter will also operate at 57.6K bps for local 3705 attachment. **Limitations:** Restricted to Line-4 of MLCA (#4500). Cannot be installed with another V.35 Adapter, EIA Adapter, integrated modem, Digital Data Service Adapter or X.21 Adapter on the same Communications Line Base Adapter (#5301). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5301 installed on Line-4 of #4500. **Specify:** Network Type, line speed, line position and remote station type. See "Mandatory Specify Codes for Communications".

Autocall Adapter (#5411): Provides a cable and interface for attachment to an external automatic calling unit. This adapter allows automatic dialing under program control. The remote device must have auto answer capability. Automatic calling equipment which complies with EIA RS-266-A may be attached under the provisions of the IBM Multiple Supplier Systems Policy. **Limitations:** Available only on Line-2 and -4 of the MLCA (#4500). An EIA Adapter must be installed on Line-1 for operation with an Autocall Adapter on Line-2 or on Line-3 for operation with an Autocall Adapter on Line-4. Cannot be installed with another Autocall Adapter, EIA Adapter, V.35 Adapter, integrated modem, Digital Data Service Adapter or X.21 Adapter on the same Communications Line Base Adapter (#5301). The Autocall Adapter cannot be used on a System/36 that has X.21 switched lines. See the "Communication Configurator" for possible combination of features. **Maximum:** Two per system. **Field Installation:** Yes. **Prerequisites:** #5301 corresponding to the Line-2 or -4 using the Autocall Adapter. #4500 is required. See "Mandatory Specify Codes for Communications".

1200 bps Integrated Modem (#5500, #5501): A modem integrated into the system for SDLC or BSC data transmission at 1200 bps over nonswitched or switched facilities. Half-speed operation at 600 bps is controlled by a system utility program. It is available in two different versions: #5500--nonswitched and #5501--switched with auto-answer. Attachment to the nonswitched (4-wire) facility is via an IBM-provided cable directly to the line Type 3002. Attachment to the switched facilities is via an IBM-provided cable to an FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. **Note:** The device communicating with System/36 must also be equipped with a 1200 bps integrated modem. **Limitations:** Cannot be installed with another integrated modem, EIA Adapter, V.35 Adapter, Autocall Adapter, Digital Data Service Adapter, or X.21 Adapter on the same Communications Line Base Adapter (#5301). See the "Communication Configurator" for possible combination of features. **Maximum:** Four per system when using MLCA (#4500). One per system when using SLCA (#2500). **Field Installation:** Yes. **Prerequisites:** #5301 corresponding to the line using the integrated modem, Internal Clock (#5321). **Specify:** Network type, line speed, line position, and remote station type. See "Mandatory Specify Codes for Communications".

Digital Data Service Adapter (#5650): An integrated adapter for BSC or SDLC data transmission at speeds of 2400, 4800, 9600, and 56,000 bps over the AT&T nonswitched Data-Phone® digital service network. The Digital Data Service Adapter interfaces to a channel service unit (not a Data Service Unit) which is the customer site termination of the digital network. **Note:** This service is available only in certain cities within the US. The Digital Data Service Adapter may also be used to locally connect a System/36 to another supported device with a Digital Data Service Adapter. This connection requires a special accessory adapter cable and supports point-to-point connections only. No modem or channel service unit is required. See DDS Adapter Connector under "Accessories". **Limitations:** Operation at speeds greater than 9600 bps is limited to Line-4 of the MLCA (#4500). See the "Communication Configurator" for possible combination of features. **Maximum:** Four per system when using MLCA (#4500). One per system when using SLCA (#2500). **Field Installation:** Yes. **Prerequisites:** #5301 corresponding to the line using the Digital Data Service Adapter. **Specify:** Network type, line speed, line position, and remote station type. See "Mandatory Specify Codes for Communications". ® Trademark of AT&T.

X.21 Adapter (#5655): This feature provides an interface for attachment to either an X.21 switched or an X.21 nonswitched network. Both BSC and SDLC communications are supported. The network establishes the data rate and supplies the clock. The System/36 can communicate via the X.21 Adapter with devices that do not have native X.21 Adapters. These devices must be attached to the network via an X.21bis DCE. This method of attachment uses the EIA RS-232-C interface. Refer to Chart K (switched) and Chart M (nonswitched) in the M2700 pages for the list of devices that can be attached via an X.21bis DCE. On switched networks: Communications at 2400, 4800, 9600 and 48K bps are supported. Autocall function is provided for switched lines. On nonswitched networks: Transmission may be at speeds of 2400, 4800, 9600, or 48K bps for point-to-point operations and 2400, 4800, or 9600 bps for multipoint operations. Some X.21 networks may not support multipoint operations. The installation of these features is dependent on the availability of an X.21 network that is compatible with IBM's implementation of X.21 as described in *IBM Implementation of X.21 General Information Manual* (GA27-3287). **Limitations:** The X.21 Adapter cannot be configured to support switched lines on a System/36 that has an Autocall Adapter (#5411) installed. Operation at speeds greater than 9600 bps is limited to Line-4 of the MLCA (#4500). Switched operation is limited to the MLCA. Cannot be installed with another X.21 Adapter, Adapter, V.35 Adapter, Autocall Adapter, integrated modem, or Digital Data Service Adapter on the same Communication Line Base Adapter. See the "Communication Configurator" for possible combination of features. **Maximum:** One per Communications Line Base Adapter (#5301). Four per system when using MLCA (#4500) or one per system when using SLCA (#2500). **Field Installation:** Yes. **Prerequisites:** #5301 corresponding to the line using the X.21 Adapter. #4501 is required for switched operation. **Specify:** Network type, line speed, line position and remote station type. See "Mandatory Specify Codes for Communications".

ADDITIONAL COMMUNICATIONS INFORMATION

IBM Modems: One IBM modem can be attached to each Adapter. **Prerequisites:** #3701 and #5301 used with either #2500 or #4500.

Modem	Speed (bps)
3863	2400
3864	4800
3865	9600
3872	2400/1200

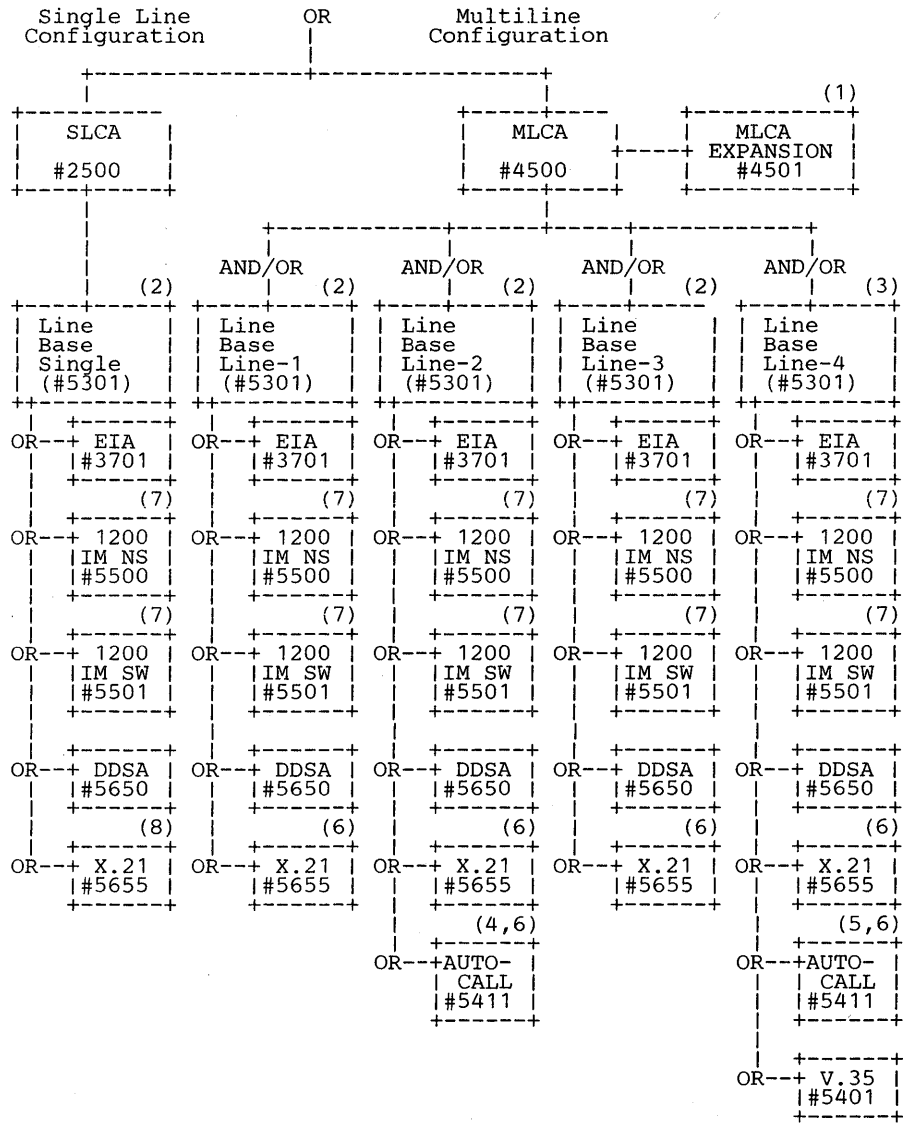
5360 System Unit (cont'd)

IBM Data Encryption Devices: A 3845 or 3846 Data Encryption Device may be attached between the System/36 #3701 Adapter and the external modem. Refer to M2700, 3845, and 3846 pages for information on 3845 or 3846 configuration and communication capability.

References: See the appropriate host system programming pages for possible restrictions. Refer to *Preparing to Receive Your Computer* (SA21-9442) for physical installation requirements. See IBM for additional information concerning modems, communications facilities, machine attachment requirements, terminal intermix, operating capabilities, and customer responsibilities.

5360 System Unit (cont'd)

Communication Configurator:



Notes:

(1) Required for X.21 switched operation.
(2) Half-duplex operation at speeds from 600 bps to 9600 bps allowed.
(3) Half-duplex operation at speeds from 600 bps to 57.6K bps allowed. See MLCA (#4500) description for allowable aggregate data rate considerations.
(4) Must be used in conjunction with EIA Adapter (#3701) on line 1 of MLCA.
(5) Must be used in conjunction with EIA Adapter (#3701) on line 3 of MLCA.
(6) X.21 switched operation is mutually exclusive with Autocall.
(7) Communications Internal Clock (#5321) required.
(8) Nonswitched operation only.

5360 System Unit (cont'd)

MODEL CONVERSIONS

Any model can be converted to another model. All model conversions are field installable. Conversions from model AXX to model BXX require replacement of the base main storage card and the disk storage device(s). Adequate provision must be made for retaining the data contained on the replaced disk storage device(s) and elimination of user-proprietary information. Customer Price quotations and customer order acknowledgment letters for purchased model conversion from model AXX to model BXX or from model X1X to X2X, must state: "Installation of this model upgrade involves the removal of parts which become the property of IBM".

Purchase Considerations: An additional charge has been added to the purchase price for certain model conversions. Users should carefully evaluate their future requirements before final selection of a 5360 System Unit.

ACCESSORIES

Cables: The twinaxial cables and/or associated parts to interconnect the 5360 and components may be purchased from IBM or from a customer-selected source. The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the machine.

Twinax® Connector Kit (**P/N 7362268**): Includes two connectors. Twinax Wire and one Twinax Connector Kit are required for each attachment cable. Individual connectors **P/N 7362229** are available for replacement.

Twinax Wire (**P/N 7362211**): Order must specify the desired length. Twinax Wire and one Twinax Connector Kit are required for each attachment cable. This is an indoor/outdoor cable.

Twinax Cable Assembly (**P/N 7362267**): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinax Adapter (**P/N 3762230**): Permits two Twinax Cables Assemblies to be joined together.

Twinax Station Protector Kit (**B/M 7361807**): Two protectors. One is required at each end of each Twinax Attachment Cable installed outdoors (either above or below ground level). Individual Twinax Station Protectors, **P/N 7362426**, are available for replacement purposes.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinax® Connector Kit: Includes two connectors. Twinax wire and one connector kit are required for each attachment cable. Order **P/N 7362063** for Teflon-covered cable. Individual connectors **P/N 7362229** are available for replacement.

Twinax Wire: Order must specify the desired length. Twinax wire and one connector kit are required for each attachment cable. Order **P/N 7362061** for Teflon-covered cable.

Twinax Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order **P/N 7362062** for Teflon-covered cable assembly.

DDS Adapter Connector: A specially designed connector allows the cables from a System/36 DDS Adapter to be connected to another supported device with a DDS Adapter. This provides for the local connection of two devices without the use of any modems. This is a purchase-only item. Allow eight weeks for delivery. **Maximum:** One per Digital Data Service (DDS) Adapter. **Field Installation:** Yes. **Specify: P/N 4236967.**

Keylock Keys: The 5360 is shipped with two keys. Additional keys may be purchased from IBM. Vendor will supply additional keys only to the original purchaser. A letter of authorization with Key Identification Number must accompany each order. Allow 6-8 weeks for delivery. **Specify: P/N 2546418.**

SUPPLIES

Diskettes and Diskette Magazines: For diskettes and diskette magazines, see IBM.

5381 SYSTEM UNIT

PURPOSE

Contains main storage, control storage, workstation controllers, communications controller (optional), disk storage, diskette magazine drive, system console keyboard/display, operator/service panel, facilities for addressing main storage, arithmetic and logical processing circuits and control functions for I/O units on System/38.

MODELS

5381 Model Designation: A B C Where:

A = System Unit Model* (Nominal Internal Cycle per 4-Byte Access)
3 = 1100 Nanoseconds
4 = 1100 Nanoseconds
5 = 600 Nanoseconds

B = 129.0MB	X	X	X	X	X

* In relationship to the mdl 3XX, the mdl 4XX has approximately 1.35 times the internal performance; the mdl 5XX has approximately 1.75 times the internal performance; and the mdl 7XX and mdl 8XX have approximately 3.5 times the internal performance. (This may not have a corresponding relationship to throughput.) It is not advisable to field upgrade a 4MB mdl 7 to a 4MB mdl 8 if performance is a primary objective, because no performance improvement should be expected.

** These mdls do not include the expansion enclosure.

Notes:

- Mdls XXA and XXB are required when the user only requires 64.5MB or 129.0MB of integrated disk storage and any one of the following:
  - Workstation Controller, 3rd (#5303) or Workstation Controller - Extended, 3rd (#5403)
  - Workstation Controller, 4th (#5304) or Workstation Controller - Extended, 4th (#5404)
  - Communication Attachment, 2nd (#1502)
- Mdl 8: The Workstation Controller - Extended is standard in controller position 1 of the base mdl 8, the Workstation Controller is standard in controller position 1 of the base mdls 3, 4, 5, and 7.

Minimum Configuration: Any model of the 5381 System Unit. **Note:** The minimum amount of auxiliary storage required to support IBM-supplied program products will exceed 64.5MB.

Although a customer may order a System/38 without a line printer, he must be made aware that IBM's ability to diagnose the system without an attached line printer may be impaired and thus have an adverse effect on the system's availability.

Note: To order cables, see *IBM System/38 Installation Manual - Physical Planning* (GA21-9293) for cable order requirements.

HIGHLIGHTS

- Interactive workstation system.
- System architecture oriented to workstation environment.
- Virtual storage for efficient management of main storage.

System Architecture: A primary feature of System/38 is the 5381 unit advanced instruction set which embodies many basic supervisory, resource and data base management functions. As an example of the power, the instruction set includes data base operations that retrieve, update, and logically order data records.

The 5381 has an object-oriented architecture fundamental to its overall design. Objects are structures such as programs, processes, and data base files, which are manipulated at a logical level through the unit's instruction set. The 5381 manages storage on an object basis, thereby reducing user dependence on main storage size, physical disk location, and internal implementation.

Access to objects is machine controlled providing a high level of integrity, automatic serialization of concurrent operations on an object, and effective authority enforcement.

Units of work are managed as independent processes (tasks) which share the machine resources (processor, storage, devices). Interprocess communication is accomplished through queues and event signals. Objects can be locked to control and serialize concurrent access to them by several processes.

All objects reside in virtual storage which is managed by the 5381 processing unit. Objects are allocated space on permanent disk storage and are brought into main storage (as needed) where they may be shared by all processes. Although system performance may be affected by main storage size, applications are not limited in the number or size of objects used. This allows additional disk or main storage to be added without a need to restructure applications.

Input/output operations offer improved device independence through the use of the 5381 device support (source/sink) functions which manage the channel, communications, and other asynchronous hardware operations. This high level of function is standard on all System/38 mdls.

Microcode Main Storage Utilization: The System/38 accomplishes much of its advanced function using main storage resident microcode. The amount of main storage used depends on system size and configuration, and the number of system functions active at any specific time.

Hardware Features

- Main storage capacity: 1024K, 1536K, 2048K, 3072K, 4096K, 5120K, 6144K, 7168K, and 8192K bytes. Main storage capacities vary by System Unit mdl; see Table B above for specific capacity.
- Single level storage management: Manages main storage and disk storage as one logical storage resource which contains all programs and data.
- Main storage internal cycle time per 4-byte access (nominal):
  - Mdl 3XX - 1100 nanoseconds
  - Mdl 4XX - 1100 nanoseconds
  - Mdl 5XX - 600 nanoseconds
  - Mdl 7XX - 400 nanoseconds
  - Mdl 8XX - 400 nanoseconds
- Control storage capacity (32-bit word):
  - Mdl 3XX - 8K words
  - Mdl 4XX - 8K words
  - Mdl 5XX - 8K words
  - Mdl 7XX - 12K words
  - Mdl 8XX - 12K words
- Control storage instruction cycle time (minimum):
  - Mdl 3XX - 400 nanoseconds
  - Mdl 4XX - 200 nanoseconds
  - Mdl 5XX - 200 nanoseconds
  - Mdl 7XX - 133 nanoseconds
  - Mdl 8XX - 133 nanoseconds
- From one to six spindles of disk storage (64.5MB - 387.1MB). Two to six (129.0MB - 387.1MB) on mdl 3XX.
- From one to eight spindles of 3370 disk storage (571.3MB to 5,838.8MB).
  - One to four spindles on mdls 4XX, 5XX, and 7XX (571.3MB to 2,919.4MB)
  - One to eight spindles on mdl 8XX (571.3MB to 5,838.8MB)
  - Not available on mdl 3XX

5381 System Unit (cont'd)

- Direct attachment capability of 5250 workstation devices:
  - Mdl 3XX, 4XX, 5XX, and 7XX ... 116 maximum
  - Mdl 8XX ... 128 maximum
- 5424 MFCU mdl A1/A2.
- Maximum of two adapter-attached printers in any speed combination.
- 3410/3411 Magnetic Tape Unit and Control mdls 1, 2, or 3.
- 3430 Magnetic Tape Subsystem:
  - Mdl A01, Tape Unit and Control
  - Mdl B01, Tape Unit.
- Diskette magazine drive is standard.
- System console/keyboard display is standard.
- Up to a maximum of eight SNA/SDLC and/or BSC communication lines, in any combination.
- Main storage error checking and correction.
- Instruction retry capability (except where "results" field is also an operand field).
- I/O controller retry.
- Reliability, Availability, and Serviceability (RAS) features are implemented throughout the system and are all supported by new and improved diagnostic aids.

Note: In device operations, the nominal or rated throughputs represented in this publication may not be achieved in an actual customer environment when used with the customer's control program or application load.

System Unit Components

Processor Unit: Main storage capacities and internal cycle times as well as control storage capacities and instruction cycle times are detailed under "Hardware Features" above. For performance comparisons, see the chart above.

Virtual Address Translation (VAT) is a standard facility on the 5381. Virtual Address Translation converts virtual addresses to real addresses.

The VAT facilities include:

- Primary Directory (PD) - indicates the virtual address and status information of a page stored in a block of real storage called a page frame.
- Hash Table (HT) - a list of entries used to index the Primary Directory.
- Lookaside Buffer (LB) - a high-speed buffer storage which contains certain information specified in the primary directory. The translation process time is reduced if the referenced virtual address is listed in the LB.

Main storage technology is dynamic Metal Oxide Semiconductor Field Effect Transistor (MOSFET). The processor unit uses LSI (Large Scale Integration) for the logic circuitry.

The processor provides overlap operation of instruction fetch and execution functions. The time-of-day clock provides a measure of time suitable for elapsed time measurements and time-of-day indications.

The high-speed integrated channel has an instantaneous character transfer rate of up to 2.5 million bytes per second in byte mode, or up to 5.0 million bytes per second in half-word mode. The 3370 Direct Access Storage device on the 5381 operates in half-word mode. The other devices on the 5381 operate in byte mode.

The System Control Adapter (SCA) provides the capability to initiate a power-on off sequence and also provides a central serviceability point to all system units. The SCA provides a dual interface between the operator/service panel and the console to the system. At initial power-on or Initial Microprogram Load (IMPL) time, the SCA performs functional testing of the processor and diagnostic check-out of main storage prior to loading the control store with microcode. Execution of the microcode initializes the system and control is then transferred to the operator. The SCA is an integral part of the hardware system.

The operator/service panel is located on the system where it is easily accessible to the operator and service personnel. The operator/service panel contains 24 indicators (LEDs), one LOAD pushbutton switch, one power-on pushbutton switch, one display intensity switch, and two rotary switches. Three optional features may be included on the panel: An audible alarm and attention indicator, a power keylock switch, and an automatic IMPL switch.

System Console/Keyboard Display: System console functions are invoked by the standard CRT display and keyboard. They are physically integrated into the right top section of the system. The console display uses a 12-inch CRT, and contains 1024 character positions, 16 lines of 64 character positions each. The large characters improve readability for the operator. Upper/lower case characters are standard , as well as four display indicators (attention, input inhibited, reset required, and upper shift).

Display attributes include protected fields, underscore, and non-display. The keyboard has a typewriter-like layout with 24 Command Function keys and a HEX key. The Multinational character set provides the overstrike function. Overstrike is the capability to create, process, and output national usage characters. In addition, the Multinational character set provides the capability for multi-country processing. See "Type Catalog" for character sets and keyboard layout. A display station of the 5250 Information Display System can be attached to serve as an alternate console should the user desire the console in a different location or require a desk-top sitting position.

Diskette Magazine Drive: A diskette drive is standard on the System/38 and provides three significant functions: save/restore, diskette I/O, and CE servicing. The diskette drive is designed to accept two 10-diskette magazines which can be used for save/restore and other diskette I/O operations. In addition to the two magazines, the diskette drive contains three diskette slots which can be used for loading one to three diskettes manually. Diskette types 1, 2, and 2D may be read or written.

Disk Storage: The System Unit can contain from one to six spindles (two to six for 3XX mdls) of integrated nonremovable disk storage. The following table provides capacity and access times.

Bytes/Sector	512
Bytes/Cylinder	180,224
Capacity (bytes)	64,520,192
Access Time	
Minimum (Cyl to Cyl) Seek (ms)	9
Maximum Average Seek (ms)	27
Maximum Seek (ms)	46
Average Rotational Delay (ms)	9.6
Rotational Speed (rpm)	3,125
Data Transfer Rate (Nominal) (MB/sec)	1.031

Data can be stored offline for security or backup purposes by writing the data to diskettes or magnetic tape.

Workstation Controller: Direct local attachment of 5250 Information Display System devices as well as the 5219 Printer (i.e., 5219 Printer, mdls D01 and D02, 5224 Printer mdls 1 and 2, 5225 Printer mdls 1, 2, 3, and 4, 5251 Display Station mdls 1, 11, 999, 5252 Dual Display Station mdl 1, 5256 Printer mdls 1, 2, and 3, 5291 Display Station mdl 1, and 5292 Color Display Station mdl 1 or 2), is provided by the Workstation Controller. One Workstation Controller is standard on mdls 3XX, 4XX, 5XX, and 7XX, of System/38. It provides eight ports for attaching up to 12 workstations (keyboard displays and/or printers) directly to the system in any combination.

Workstation Controller - Extended: Direct local attachment of 5250 Information Display System devices and the 5219 Printer (i.e., 5219 Printer, mdls D01 and D02, 5224 Printer mdls 1 and 2, 5225 Printer mdls 1, 2, 3, and 4, 5251 Display Station mdls 11, 999, 5256 Printer mdls 1, 2, and 3, 5291 Display Station mdl 1, and 5292 Color Display Station mdl 1 or 2), is provided by the Workstation Controller - Extended. Up to three Workstation Controller - Extended features, along with the standard Workstation Controller in the base (position 1), can be installed on mdls 3XX, 4XX, 5XX, and 7XX. Mdl 8 can have up to four Workstation Controller - Extended features, including the standard feature in position one of the base. Each provides eight ports for attaching up to 32 workstations (keyboard displays and/or printers) directly to the system in any combination.

Publications: *IBM System/38 Guide to Publications* (GC21-7726).

Customer Responsibilities: See M2700 pages for customer responsibilities regarding communications facilities and services.

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): Specify **#9903** for 208V or **#9905** for 230V.
- Accent Panel Color (one must be specified): **#9060** for Willow Green, **#9061** for Garnet Rose, **#9062** for Sunrise Yellow, **9063** for Classic Blue, **#9064** for Charcoal Brown, or **#9065** for Pebble Gray. (**Note:** The color for the base enclosure is Pearl White.)
- Console Character Sets: Specify **#9540** for the English US character set. **#9535** provides the Multinational character set. See "Type Catalog" for details. **Maximum:** One. **Field Installation:** Yes.
- I/O Attachments: Appropriate special features are required to attach most I/O units. See "Special Features".
- 3370 Direct Access Storage Device Attached: Select only one specify code from each group (as applicable) to designate the 3370 units to be attached.

5381 System Unit (cont'd)

CPU Mdl 4XX, 5XX, 7XX and 8XX (1-4 3370s):

Mdl A11	**#9560**
Mdl A11 and one B11	**#9561**
Mdl A11 and two B11s	**#9562**
Mdl A11 and three B11s	**#9563**

CPU Mdl 8XX Only (5-8 3370s):

Mdl A11	**#9564**
Mdl A11 and one B11	**#9565**
Mdl A11 and two B11s	**#9566**
Mdl A11 and three B11s	**#9567**

Note: It is not required that the first 3370 Disk Storage Attachment (#1130) have a maximum number of 3370 Direct Access Storage (DAS) units (four) attached before the second 3370 Disk Storage Attachment (#1132) is attached. For example, the first 3370 attachment feature could have only two 3370 DAS units attached, and the second 3370 attachment feature could have from one to four 3370 DAS units attached.

- Feature code **#3000** is required when the first 3770 mdl A12 or B12 is added to an installed 5381.
- Diagnostic and Analysis Support:

  Systems that will use Control Program Facility (CPF) must specify **#9995**. This will ensure that the customer receives the Diagnostic and Analysis Support. For systems that will not use CPF, the customer must submit a PRPQ to obtain diagnostic and analysis support relative to his needs.
- When attaching previously installed 5251 mdl 11s to a System/38, a no charge RPQ S40213 may be needed. Review the RPQ description for S40213

  to determine if applicable to the previously installed 5251 mdl 11s.
- When designating a 5225 as a system printer, specify **#9817**.

SPECIAL FEATURES

Processor Unit

5211/3262 Printer Attachment, 1st (#1100): To attach the first 5211/3262 Printer, one of the following feature codes must also be specified: 5211-2 (#1204), or 3262-B1 (#1208). **Limitations:** Attachment #1100 is mutually exclusive with Printer Attachment #1135. **Maximum:** One. **Field Installation:** Yes.

5211/3262 Printer Attachment, 2nd (#1110): To attach a second 5211/3262 Printer, one of the following feature codes must also be specified: 5211-2 (#1232) or 3262-B1 (#1234). **Limitations:** Attachment #1110 is mutually exclusive with Printer Attachment #1136. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator" to determine requirements.

3370 Disk Storage Attachment, 1st (#1130): To attach the first 3370 mdl A11 or A12 disk storage drive. **Limitations:** Not available on the mdl 3XX. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

3370 Disk Storage Attachment, 2nd (#1132): To attach the second 3370 mdl A11 or A12 Disk Storage Drive. **Note:** It is not required that the first 3370 Disk Storage Attachment (#1130) have a maximum number of 3370 Direct Access Storage (DAS) units (four) attached before the second 3370 Disk Storage Attachment (#1132) is attached. For example, the first 3370 attachment feature could have only two 3370 DAS units attached, and the second 3370 attachment feature could have from one to four 3370 DAS units attached. **Limitations:** Not available on mdls 3XX, 4XX, 5XX, or 7XX. **Maximum:** One on mdl 8XX only. **Prerequisites:** #1130. See "Processor Unit Expansion Feature Configurator".

3203 Mdl Printer Attachment, 1st (#1135): Required to attach one or two 3203-5s to the 5381. Specify code **#9550** must be specified for the second 3203-5. **Limitations:** Attachment #1135 is mutually exclusive with Printer Attachment, 1st (#1100). The second 3203-5 **(#9550)** is mutually exclusive with Printer attachments #1100, #1110, and #1136. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator" to determine overall requirements.

3203 Mdl 5 Printer Attachment, 2nd (#1136): Required to attach the 3203-5 when a 3262/5211 is the first printer attached to the 5381. **Limitations:** Attachment #1136 is mutually exclusive with #1135 and #1110. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator" to determine overall requirements. **Note:** A second printer attachment should not be installed without a first printer attachment. If two attachments exist on a System/38 and the first is removed, then the second should be removed and installed as the first.

Multifunction Card Unit Attachment 250/60/60 CPM (#1220): To attach a 5424 MFCU mdl A1. **Maximum:** One 5424 per system. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator". #6500 is required on the 5424.

Multifunction Card Unit Attachment 500/120/120 CPM (#1221): To attach a 5424 MFCU mdl A2. **Maximum:** One 5424 per system. **Field Installation:** Yes. **Prerequisites:** Multifunction Card Unit Attachment - 250/60/60 (#1220). See "Processor Unit Expansion Feature Configurator". #6500 is required on the 5424.

Automatic Initial Microprogramming Load (#1300): Auto-IMPL enables the system to automatically initiate a power-on sequence following the restoration of commercial (utility) AC power after a commercial power failure. The primary use is for unattended operations; therefore, manual intervention is not required. A manually controlled toggle switch located on the operator/service panel permits the user to enable or disable the feature. **Maximum:** One. **Field Installation:** Yes.

Note: When Power Keylock (#3210) and Automatic Initial Microprogramming Load (#1300) are jointly installed, the AIMPL (#1300) has priority over the Power Keylock (#3210) setting in the event of a commercial power failure and subsequent return.

Audible Alarm And Attention Indicator (#2100): Provides, in addition to the attention indicator on the display, a backlighted indicator, an audible alarm, and a volume control to alert the operator of an outstanding message requiring attention. **Maximum:** One. **Field Installation:** Yes.

Power Keylock (#3210): A key-controlled switch, in series with the power-on pushbutton, will inhibit the power-on cycle if the keylock switch is off. The keylock cannot power the system down. The keylock is located on the operator/service panel. See "Accessories" for key ordering information. **Limitations:** When Power Keylock (#3210) and Automatic Initial Microprogramming Load (#1300) are jointly installed, the AIMPL (#1300) has priority over the Power Keylock (#3210) setting in the event of a commercial power failure and subsequent return. **Maximum:** One. **Field Installation:** Yes.

Power Warning Feature (#3220): Provides the capability to accept an Uninterruptible Power Supply (UPS) signal when commercial power has failed or has been restored. This feature also provides the capability to log each power failure/restoration occurrence. The System/38 Program System (VMC/CPF) support enables the user to select one of three options to respond to a power outage: (1) handle the power outage on a manual basis, (2) handle the power outage/restoration via a user-written program, or (3) if the user does not select one of the first two options, an immediate power-down command will be initiated. The time required to accomplish a power-down sequence is approximately 60 seconds per megabyte of main storage. **Maximum:** One per 5381 System Unit. **Field Installation:** Yes. **Prerequisites:** A user-provided Uninterruptible Power Supply (UPS) equipped with adequate battery reserve time to support the user's operational environment. **Publication:** *System/38 Uninterruptible Power Supply Planning Guide* (GA21-9421) contains the operating and programming characteristics and specifications for the System/38 Power Warning Feature.

Processor Unit Expansion 1 (#6300): This feature is an I/O board/power supply and is required for attaching either of the following I/O devices: (1) Communication Attachment (#1501) ... (2) Workstation Controller, 2nd (#5302) or Workstation Controller - Extended, 2nd (#5402). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

Processor Unit Expansion 2 (#6301): This feature is an I/O board/power supply and is required for attaching any of the following I/O devices: (1) the 5424 Multifunction Card Unit (#1220, #1221) ... (2) attaching the 3411 Magnetic Tape Unit (#7960) and/or the 3430 Magnetic Tape Unit (#7970) ... (3) the 5211/3262 as a second printer (#1110) ... (4) the 3203-5 as a second printer (#1136) when the first printer is a 5211 or 3262. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

Processor Unit Expansion 3 (#6302): This feature is an air circulating/cable assembly and is required for attaching any of the following I/O devices: (1) Communication Attachment (#1501) ... (2) Workstation Controller, 2nd (#5302) or Workstation Controller - Extended, 2nd (#5402) ... (3) the 5424 Multifunction Card Unit (#1220, #1221) ... (4) the 3411 Magnetic Tape Unit (#7960) and/or the 3430 Magnetic Tape Unit (#7970) ... (5) the 5211/3262 as a second printer (#1110) ... (6) the 3203-5 as a second printer (#1136) when the first printer is a 5211 or 3262. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

Processor Unit Expansion 4 (#6303): This feature is a power expansion assembly required to attach: (1) 3411 Magnetic Tape Unit (#7960) and/or the 3430 Magnetic Tape Unit (#7970), ... (2) 3370 Disk Storage (#1130 and #1132 - mdl 8XX only) ... (3) 3203-5 Printer, as first printer (#1135 or #1136). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

Processor Unit Expansion 5 (#6304): This feature is a gate/AC power supply and is required for attaching any of the following features: (1) Communication Attachment, 2nd (#1502) ... (2) Workstation Controller, 3rd (#5303) or Workstation Controller - Extended, 3rd (#5403) ... (3) Workstation Controller, 4th (#5304) or Workstation Controller -

5381 System Unit (cont'd)

Extended, 4th (#5404). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

Processor Unit Expansion 6 (#6305): This feature is a board/power supply and is required for attaching either of the following features: (1) Communication Attachment, 2nd (#1502) ... (2) Workstation Controller, 3rd (#5303) or Workstation Controller - Extended, 3rd (#5403). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

Processor Unit Expansion 7 (#6306): This feature is a board/power supply and is required for attaching Workstation Controller, 4th (#5304) or Workstation Controller - Extended, 4th (#5404). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

3411 Magnetic Tape Attachment (#7960): To attach a 3411 Magnetic Tape Unit and Control. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** (1) See "Processor Unit Expansion Feature Configurator" ... (2) the System/3, System/38 Attachment (#7003) is required on the 3411. Can be installed with 3430 Magnetic Tape Attachment (#7970).

3430 Magnetic Tape Attachment (#7970): To attach 3430 mdl A01 Magnetic Tape Unit and Control. **Maximum:** One. **Prerequisites:** See "Processor Unit Expansion Feature Configurator". Can be installed with 3411 Magnetic Tape Attachment (#7960).

Processor Unit Expansion Feature Configurator (maximum required - one each)

I/O Function Required	Required Processor Unit Expansion						
	#1 #6300	#2 #6301	#3 #6302	#4 #6303	#5 #6304	#6 #6305	#7 #6306
2nd 5211/3262 Printer Attachment (#1110)		X	X				
3370 Disk Storage (#1130/#1132)				X			
3203-5 as 1st printer (#1135) (Two 3203-5s may be attached via this feature)				X			
3203-5 as 2nd printer (#1136) (Required only when 5211 or 3262 is attached as 1st printer)		X	X	X			
5424 MFCU (#1220/#1221)		X	X				
Communication Attachment, 1st (#1501)	X		X				
Communication Attachment, 2nd (#1502) *					X	X	
Workstation Controller, 2nd (#5302) or Workstation Controller - Extended, 2nd (#5402)	X		X				
Workstation Controller, 3rd (#5303) * or Workstation Controller - Extended, 3rd (#5403)					X	X	
Workstation Controller, 4th (#5304) * or Workstation Controller - Extended, 4th (#5404)					X		X
3411 Magnetic Tape (#7960) and/or 3430 Magnetic Tape (#7970)		X	X	X			

* Requires mdls XX3 through XX6, XXA and XXB (includes expansion enclosure)

Local Workstation Controller

Workstation Controller: Provides direct local attachment of supported workstation devices to System/38. One Workstation Controller is standard on System/38 mdls 3XX, 4XX, 5XX, and 7XX. It provides eight ports for attaching workstations (keyboard displays and/or printers) directly to the system in any combination. These eight ports permit attachment of up to 12 devices with twinaxial cabling using the Cable-Thru feature on the 5250 devices. With the selection of an appropriate expansion feature, the Workstation Controller will support a maximum of 20 devices. The System/38 can be featured with three additional Workstation Controllers. With a total of four Workstation Controllers and the appropriate expansion features, a maximum of 80 devices can be attached.

Devices supported via the Workstation Controller are:

Displays:
- 5251 Display Station, mdl 11 (1,920 characters)
- 5251 Display Station, mdl 999 (1,920 characters)
- 5291 Display Station, mdl 1 (1,920 characters)
- 5292 Color Display Station, mdl 1 or 2 (1,920 characters)
- 5150 Personal Computer (with Display Station Emulation Adapter and the 5250 Emulation program)

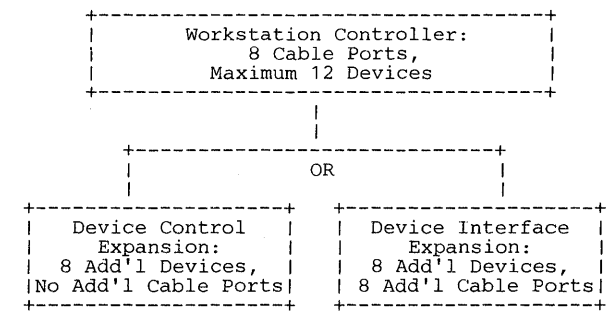
Printers:
- 5219 Printer, mdl D01 (40 cps)
- 5219 Printer, mdl D02 (60 cps)
- 5224 Printer, mdls 1 and 2 (matrix line printer)
- 5225 Printer, mdls 1, 2, 3, and 4 (matrix line printer)
- 5256 Printer, mdl 1 (40 cps)
- 5256 Printer, mdl 2 (80 cps)
- 5256 Printer, mdl 3 (120 cps)

The Workstation Controller contains translation tables that map a keyboard configuration to data that is passed to the host system and/or workstation. Each Workstation Controller can support any two combinations (keyboard/character sets) from the following list:

Character Set	Keyboard Type
Standard 96-Character Set	83-Key
Standard 96-Character Set	66-Key (both styles)
Multinational 188-Character Set	83-Key
Multinational 188-Character Set	66-Key (both styles)

The Workstation Controller provides support for device attachment cabling via 5250 twinaxial cable. Twinaxial cable provides for multipoint cable connections at distances up to 1,524 meters (5,000 feet). Up to seven devices may be attached to a single port via twinaxial cable. The Right-to-Left Display RPQ (8T0358) provides the capability of scanning characters in the right-to-left sequence for those countries where this support is a language requirement. This RPQ is not available on the Workstation Controller - Extended at this time. For attachment of additional devices, see Device Interface Expansion (#5321, #5322, #5323, #5324), Device Control Expansion (#5331, #5332, #5333, #5334), Workstation Controller, 2nd (#5302), Workstation Controller, 3rd (#5303), and Workstation Controller, 4th (#5304).

Workstation Controller Configuration



- Maximum of 20 devices per controller
- Maximum of four Workstation Controllers
- Maximum of 80 devices per system
- Up to seven devices may be attached to a single cable port via twinaxial cabling using device Cable-Thru feature

Note: The 5252 mdl 1 is counted as two devices.

Workstation Controller, 2nd (#5302): Provides direct local attachment of additional devices (5219 mdls D01 and D02, 5224 mdls 1 and 2, 5225 mdls 1, 2, 3, and 4, 5251 mdls 1, 11, and 999, 5252 mdl 1, 5256 mdls 1, 2, and 3, 5291 mdl 1, 5292 mdl 1 or 2, and 5150 Personal Computer), in any combination. This feature (#5302), with expansion features described below, extends the system maximum of locally attached devices to 40. #5302 includes basic control and eight cable interfaces for attaching additional workstations. Up to 12 workstations can be attached using the Cable-Thru features on the devices.

Cabling provisions are the same as the basic Workstation Controller described above. For further expansion of devices (maximum of 20 for this controller), see Device Interface Expansion (#5322), or Device Control Expansion (#5332). Programming support for the attached devices is provided by the Control Program Facility Licensed Program. (**Note:** The 5252 represents two devices.) **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

Workstation Controller, 3rd (#5303): Provides the same function as Workstation Controller, 2nd (#5302). This feature (#5303), with Device Interface Expansion (#5323) or Device Control Expansion (#5333), extends the system maximum of locally attached devices to 60. This feature is installed in the System Unit Expansion Enclosure, therefore, it can only be installed on System/38 mdls XX3 through XX6, XXA, and XXB. **Limitations:** Cannot be installed on System/38 mdls XX1 and XX2. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5302. Also see "Processor Unit Expansion Feature Configurator".

Workstation Controller, 4th (#5304): Provides the same function as Workstation Controller, 2nd (#5302). This feature (#5304), with Device Interface Expansion (#5324) or Device Control Expansion (#5334), extends the system maximum of locally attached devices to 80. This feature is installed in the System Unit Expansion Enclosure; therefore, it can only be installed on System/38 mdls XX3 through XX6, XXA, and XXB. **Limitations:** Cannot be installed on System/38 mdls XX1 and XX2. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5303. Also see "Processor Unit Expansion Feature Configurator".

Device Interface Expansion (#5321, #5322, #5323, #5324): Provides the necessary control and eight twinaxial cable connectors for

5381 System Unit (cont'd)

attachment of eight additional devices (5219 mdls D01 and D02; 5224 mdls 1 and 2; 5225 mdls 1, 2, 3, and 4; 5251 mdls 1, 11, and 999; 5252 mdl 1; 5256 mdls 1, 2, and 3; 5291 mdl 1; and 5292 mdl 1 or 2) in any combination. This feature is always installed in conjunction with a Workstation Controller.

#5321 - for 1st Workstation Controller (component of base system)
#5322 - for Workstation Controller, 2nd (#5302)
#5323 - for Workstation Controller, 3rd (#5303)
#5324 - for Workstation Controller, 4th (#5304)

Refer to sales pages for information pertaining to device features, accessories, and cabling requirements. (**Note:** The 5252 represents two devices.) **Limitations:** Cannot be installed with Device Control Expansion (#5331, #5332, #5333, #5334) on the same Workstation Controller. #5321 cannot be installed on a mdl 8. **Maximum:** One per Workstation Controller. **Field Installation:** Yes. **Prerequisites:** #5302 for #5322, etc.

Device Control Expansion (#5331, #5332, #5333, #5334): Permits Workstation Controllers to support up to eight additional devices (5219 mdls D01 and D02; 5224 mdls 1 and 2; 5225 mdls 1, 2, 3, and 4; 5251 mdls 1, 11, and 999; 5252 mdl 1; 5256 mdls 1, 2, and 3; 5291 mdl 1; and 5292 mdl 1 or 2). This feature does not provide any additional cable connectors, but provides the necessary control storage to support additional devices attached via the cable connectors provided by Workstation Controllers.

#5331 - for 1st Workstation Controller (component of base system)
#5332 - for Workstation Controller, 2nd (#5302)
#5333 - for Workstation Controller, 3rd (#5303)
#5334 - for Workstation Controller, 4th (#5304)

See M5219, 5224, 5225, 5251, 5252, 5256, 5291, or 5292 pages for selection of appropriate features which permit multidropping of devices on twinaxial cable facilities. (**Note:** The 5252 represents two devices.) **Limitations:** Cannot be installed with Device Interface Expansion (#5321, #5322, #5323, #5324) on the same Workstation Controller. #5331 cannot be installed on a mdl 8. **Maximum:** One per Workstation Controller. **Field Installation:** Yes. **Prerequisites:** #5302 for #5332, etc.

Local Workstation Controller - Extended

Workstation Controller - Extended: Provides direct local attachment of 5250 Information Display System devices and the 5219 Printer (see below for list of supported devices and mdls) to System/38. An orderable feature on all mdls of System/38. Each controller provides eight ports for attaching workstations (keyboard displays and/or printers) directly to the system in any combination.these eight ports permit attachment of up to 32 devices with twinaxial cabling using the Cable-Thru feature on 5250 devices. The System/38 with mdls 3XX, 4XX, 5XX, and 7XX, can be featured with three Workstation Controller - Extended features, along with the standard Workstation Controller in the base (position 1), providing up to a maximum attachment of 116 local devices. The System/38 mdl 8 can be featured with four Workstation Controller - Extended features, including the standard Workstation Controller -Extended in the base (position 1), providing up to a maximum of 128 local devices.

Devices supported via the Workstation Controller - Extended are:

Displays:
- 5251 Display Station, mdl 11 (1,920 characters)
- 5251 Display Station, mdl 999 (1,920 characters)
- 5291 Display Station, mdl 1 (1,920 characters)
- 5292 Color Display Station, mdl 1 or 2 (1,920 characters)
- 5150 Personal Computer (with Display Station Emulation Adapter and the 5250 Emulation program)

Printers:
- 5219 Printer, mdl D01 (40 cps)
- 5219 Printer, mdl D02 (60 cps)
- 5224 Printer, mdl 1 (140 lpm)
- 5224 Printer, mdl 2 (240 lpm)
- 5225 Printer, mdl 1 (280 lpm)
- 5225 Printer, mdl 2 (400 lpm)
- 5225 Printer, mdl 3 (490 lpm)
- 5225 Printer, mdl 4 (560 lpm)
- 5256 Printer, mdl 1 (40 cps)
- 5256 Printer, mdl 2 (80 cps)
- 5256 Printer, mdl 3 (120 cps)

The Workstation Controller - Extended supports the same devices and has the same translate capabilities as the base Workstation Controller, with the exception of the 960-character displays which the Workstation Controller - Extended does not support. Each Workstation Controller - Extended can support any two combinations (keyboard/character sets) from the following list:

Character Set	Keyboard Type
Standard 96-Character Set	83-Key
Standard 96-Character Set	66-Key (both styles)
Multinational 188-Character Set	83-Key
Multinational 188-Character Set	66-Key (both styles)

The Workstation Controller -Extended provides for device attachment cabling via 5250 twinaxial cable. Twinaxial cable provides for multipoint cable connections at distances up to 1,524 meters (5,000 feet). Up to seven devices may be attached to a single port via twinaxial cable, however the total number of devices per adapter must not exceed 32.

Workstation Controller - Extended, 2nd (#5402): Provides local attachment of an additional 32 devices for a maximum total of 52 devices (for mdls 3, 4, 5, and 7) or 64 devices (for mdl 8). **Limitations:** Mutually exclusive with base Workstation Controller , Second. **Maximum:** One. **Prerequisites:** Base Workstation Controller or base Workstation Controller - Extended.

Workstation Controller - Extended, 3rd (#5403): Provides local attachment of an additional 32 devices and extends the system maximum of locally attached devices to 84 (for mdls 3, 4, 5, and 7) and 96 (for mdl 8). This feature is installed in the System Unit Expansion Enclosure, therefore it can only be installed on System/38 mdls having the Processor Unit Expansion Feature (mdls XX3 through XX6, XXA, and XXB). **Limitations:** Cannot be installed on System/38 mdls XX1 and XX2. Mutually exclusive with base Workstation Controller, Third. **Maximum:** One. **Prerequisites:** #5402 or #5302 (if presently installed). See also "Processor Unit Expansion Feature Configurator".

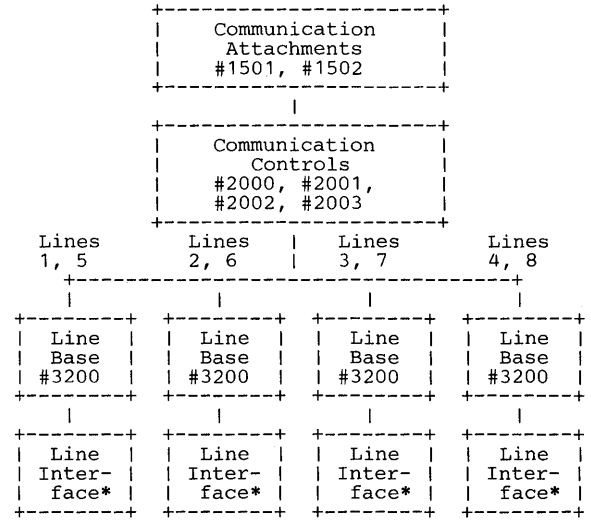
Workstation Controller - Extended, 4th (#5404): Provides local attachment of an additional 32 devices and extends the system maximum of locally attached devices to 116 (for mdls 3, 4, 5, and 7) and 128 (for mdl 8). This feature is installed in the System Unit Expansion Enclosure, therefore it can only be installed on System/38 mdls having the System Unit Expansion Enclosure (mdls XX3 through XX6, XXA, and XXB). These system mdls are identified in the 5381 System Unit description with an asterisk(*) by the mdl numbers. **Limitations:** Cannot be installed on System/38 mdls not having the System Unit Expansion Enclosure (mdls XX1 and XX2). Mutually exclusive with base Workstation Controller, Fourth. **Maximum:** One. **Prerequisites:** #5403 or #5303. See "Processor Unit Expansion Feature Configurator".

Communications

Communications capability is provided by a multi-line facility integrated in the 5381 System Unit. It is made up of several features to allow flexibility to best satisfy various communication application requirements. There are four basic building blocks (features), each being one or more features which can be selected to provide the function desired (see Communications Configurator diagram below). These are:

- Communication Attachments (#1501, #1502)
- Communication Controls (#2000, #2001, #2002, #2003)
- Line Base(s) (#3200)
- Line Interfaces (#3701, etc.; see below)

Communications Configurator



* See Table A

Following is a discussion of the communications hardware support: (1) common to both BSC and SDLC, (2) specific to BSC support, (3) specific to SDLC support, and (4) for local communications connections.

1. Support Common To Both BSC And SDLC: Communication Attachments 1st (#1501) and 2nd (#1502), when featured with appropriate sub-features, will allow the System/38 to communicate on

5381 System Unit (cont'd)

nonswitched lines up to 56K bps and on switched lines at speeds up to 9600 bps. A maximum of eight lines can be featured and each line operates independently under System/38 CPF program control. The System/38 operates as a control station on a multipoint line for the 5251 mdl 2 or 12 and as a secondary SDLC station to a host S/370. For BSC, the System/38 operates on a point-to-point line (switched or nonswitched) and as a tributary (secondary) on a multipoint network.

Each communications line will operate in half-duplex mode over dial (switched network) facilities, and half-duplex mode over nonswitched (or equivalent private) communications lines which may be duplex or half-duplex facilities. Units at each termination, or drop point, of a communications line to which the System/38 is attached must use the same clocking source (modem or business machine) and must be set to operate at the same transmission rate and to use the same transmission code. (No special features required for: clocking, transmission code, or line speed.) Compatible modems must be used at all terminations on a network.

System/38 supports, as a basic capability, manual dial, manual, or auto-answer (where the attached modem supports this capability) operation.

2. Support Specific To BSC Operations: The Communication Attachment features, when appropriately featured, allow operation (by line) in BSC mode as requested by the System/38 CPF program.

In conjunction with stored program control, these features permit the System/38 to function on switched or nonswitched point-to-point and multipoint lines communicating in binary synchronous mode. System/38 can function as a tributary when connected to a multipoint network controlled by a Series/1, System/370, 30XX, or 43XX, and System/3 with CCP. In BSC mode, communications attachment can be with:

- A System/3 equipped with #2074, #2084, or #2094.
- A System/23 equipped with #2550.
- A System/32 equipped with #2074.
- A System/34 equipped with #2500, #3500, or #4500.
- A System/36 equipped with #2500 or #4500.
- Another System/38 equipped with #1501 or #1502.
- A S/370 via an integrated communications adapter, a 4331 Communications Adapter, a 2701 Data Adapter Unit, or a 3704/3705 Communications Controller with the Network Control Program (NCP) or the Partitioned Emulation Program (PEP), any of which are equipped with a binary synchronous adapter and appropriate sub-features.
- A Series/1 equipped with BSCA (#2074, #2075, #2093, or #2094) (as a System/3).
- A 3741 Data Station mdl 2 or 4.
- A 5110/5120 Computer equipped with BSCA #2074 (as a 3741 mdl 2 or 4).
- A 5231 mdl 2 equipped with BSCA (#2074) (as a 3741 mdl 2 or 4 in transmit mode only).
- A 5265 communicating mdl (point-to-point, batch transmission only).
- A 5280 Distributed Data System equipped with #2500.
- A 5520 Administrative System.
- An OS/6 Office System/6.
- A 6670 Information Distributor.
- A 6640 Document Printer.
- A 6580 Displaywriter System.
- A 6240 Communicating Magnetic Card Typewriter.
- A CMCII Communicating Magnetic Card Typewriter II.

See the System/38 programming pages for more description of program support provided for this feature.

ASCII, EBCDIC, or EBCDIC Text Transparency are standard support. Transmission codes are selectable via System/38 CPF command parameters.

Note: 3270 emulation requires Workstation Controller EC 841441 on System/38s shipped prior to Jan. 1983.

3. Support Specific To SDLC Operation: The Communication Attachment features, when featured with appropriate sub-features, will allow operation in SDLC mode as requested via System/38 CPF command parameters.

The System/38 provides SDLC communication support for multipoint line control when the 5251 mdl 2 or 12 display stations are attached. With these features, the System/38 can operate as an SDLC secondary, switched or nonswitched, attached to a host S/370 with IMS/VS and CICS/VS applications. See the System/38 programming pages for more detail of the program support provided for SNA/SDLC operations.

4. Local Communications Attachments:

- Local DDS Attachment Feature (#5650)

  Utilizing the local DDS Adapter cable described in "Accessories", a System/38 with a DDSA interface can be connected locally to another System/38 or to a System/34 with a DDSA interface. Using this connection and the BSC support, the systems can communicate at nominal line speeds of 2400, 4800, 9600, or 56K bps. Connection is point-to-point only.

  Restrictions:

  - When operating at 56K bps, only one high-speed line may be active per Communication Attachment (#1501 or #1502). The three remaining lines can be connected (at 9600 bps or less), but cannot run concurrently with the high-speed line.
  - A maximum of two high-speed lines are permitted per system (one per each Communication Attachment). This feature cannot be installed on a Communication Attachment with any other high-speed line feature (#5650 at 56K bps, #5660 or #5680) already installed.
  - Maximum distance between systems is approximately 24 meters (80 feet with 40-foot cable on each system).
  - Maximum block size for System/38 is 8K bytes; for System/34, 4K bytes.

- Local High-Speed Attachment Feature (#5680)

  This feature permits System/38 with CPF to be locally connected to a Series/1 which has EDX or RPS and RPQ D02349 (Direct BSC Attachment) and RPQ D02492 (Direct BSC Attachment Cable) installed. Using the BSC support, data can be transferred between the systems at a nominal line speed of 56K bps. Connection is point-to-point only and requires two cables (System/38 Cable Group Number 3422 and the Series/1 RPQ cable listed above).

  Restrictions:

  - When operating at 56K bps, only one line may be active per Communication Attachment (#1501 or #1502). The three remaining lines can be connected (at 9600 bps or less), but cannot be run concurrently with the high-speed line.
  - A maximum of two high-speed lines are permitted per system (one per each Communication Attachment). This feature cannot be installed on a Communication Attachment with any other high-speed line feature (#5650 at 56K bps, #5660 or #5680) already installed.
  - Maximum cabling distance with this feature is approximately 122 meters (400 feet), including Series/1 cable length.
  - Maximum block size is 8K bytes.

5. Remote Communications Attachments:

- High-Speed Line Remote Attachment (#5660):

  This feature allows System/38 with CPF to communicate locally or remotely with a 3705 Communications Controller at nominal speeds of 57.6K bps (locally) or 56K bps (remotely), communicate remotely with a 4331 Communications Adapter or another System/38 at nominal speed up to 56K bps . For the local attachment, two cables are required, the System/38 cable (Cable Group Number 3423) and the 3705 Local Attach Cable. The attachment provides local half-duplex, point-to-point communication to a host system (S/370, 30XX, and 434X), and requires #5660 on System/38 and 3705 Line Set, Type 1W (#4727) and 3705 Business Machine Clock (#4651) at 57.6K bps ... specify **#9622**. For the remote connection, the System/38

  cable attaches to a modem and can communicate with the host system at rates up to 56K bps with the clocking provided by the modem. The 3705 requires Line Set, Type 1S (#4720). The 4331 Communications Adapter requires High-Speed Modem Adapter (#4720), specify **#9501**. System/38 requires #5660.

  Restrictions:

  - When operating at line speeds greater than 9600 bps, only one line may be active per Communication Attachment (#1501 or #1502). The three remaining lines can be connected (at 9600 bps or less), but cannot be run concurrently with the high-speed line.
  - A maximum of two high-speed lines are permitted per system (one per each communications attachment). This feature cannot be installed on a communications attachment with any other high-speed line feature (#5650 at 56K bps, #5660 or #5680) already installed.

5381 System Unit (cont'd)

- Maximum cabling distance with this feature to a local 3705 attachment is approximately 58 meters (190 feet, 150 feet for 3705 cable and 40 feet for System/38 cable).
- Maximum block size is 8K bytes for BSC and 32K bytes for SNA/SDLC.

Limitations: Use discretion when proposing high-speed lines. Depending upon the system mdl, high-speed lines (when operating at 56K bps) can require a significant portion of the CPU resources. A dedicated mdl 3 operating two high-speed lines concurrently, using 512-byte blocks and including all data base operations, could require nearly 100% of the CPU resources (depending upon the partner system and transmission parameters). A mdl 5 doing the same job might only require 60% of its CPU resources. A mdl 7 would use less than 30% of its CPU. Increasing the block size to 2K bytes in each case will further reduce CPU utilization (by as much as 35% in some instances). As with any added application, high-speed lines operating concurrently with other applications can result in degradation of data throughput or response times.

Recommendations:

- When operating these features at 56K bps, it is recommended that the user transmit in large blocks (e.g., 2K bytes) of uncompressed EBCDIC data to optimize CPU utilization and line throughput.

Communication Attachment, 1st (#1501): Provides the basic control and common circuits for direct attachment of up to four communication lines. This feature, in conjunction with the appropriate sub-features, allows System/38 to communicate on four lines concurrently, each operating at data rates up to 9600 bps utilizing either SDLC or BSC data link control or operating one line at 56K bps (nominal). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processor Unit Expansion Feature Configurator".

Communication Attachment, 2nd (#1502): Provides the basic control and common circuits for a second group of four communication lines. This feature, in conjunction with the appropriate sub-features, allows System/38 to communicate on four lines concurrently, using the SDLC or BSC data link control. Each line can operate at data rates of 600 to 9600 bps or operate one line at 56K bps (nominal). This feature is installed in the System Unit Expansion Enclosure; therefore, it can only be installed on System/38 mdls XX3 through XX6, XXA, and XXB. **Limitations:** Cannot be installed on System/38 mdls XX1 and XX2. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1501. See "Processor Unit Expansion Feature Configurator".

Communication Control, SDLC (#2000, #2002): Provides the basic control storage and common circuits for SDLC data link control. When Communication Attachment, 1st (#1501) is featured with Communication Control, SDLC (#2000) all four attachable lines will support SDLC data link control. Communication Control, SDLC (#2002) provides the same SDLC data link control function for Communication Attachment, 2nd (#1502). **Limitations:** Supports SDLC only. **Maximum:** One per Communication Attachment. **Field Installation:** Yes. **Prerequisites:** #1501 for #2000 and #1502 for #2002.

Communication Control, SDLC/BSC (#2001, #2003): Provides the basic control storage and common circuits for both SDLC and BSC data link control. When Communication Attachment, 1st (#1501) or Communication Attachment, 2nd (#1502) is featured with Communication Control, SDLC/BSC (#2001 or #2003), any line interface can be optioned via CPF parameter for either SDLC or BSC. This feature provides SDLC support for point-to-point switched or nonswitched and also multipoint control. The BSC support is for point-to-point switched or nonswitched and multipoint tributary attachment. BSC multipoint control is not supported. **Maximum:** One per Communication Attachment feature. **Field Installation:** Yes. **Prerequisites:** #1501 for #2001 and #1502 for #2003.

Line Base (#3200): This feature provides the interface and control between the line interface features and the Communication Control features. This feature is required for each line appearance and provides the necessary control required for each of the unique line interface types. Line interfaces supported via this feature are: EIA (#3701), DDSA (#5650, #5651), 1200 bps Integrated Modems (#5500, #5501, #5502, #5508), 2400 bps Integrated Modems (#5640, #5641), 4800 bps Integrated Modems (#5740, #5741), High-Speed Line Remote Attachment (#5660), Local High-Speed Attachment (#5680), and Auto-Call Adapter (#5760). **Limitations:** None. **Maximum:** One per line position. **Field Installation:** Yes. **Prerequisites:** #2000, #2001, #2002, or #2003. Line Position 1 (**#9001**) must be occupied for Communication Attachment, 1st (#1501), and Line Position 5 (**#9005**) must be occupied for Communication Attachment, 2nd (#1502) if installed. **Specify:** Line position code for installation (see Table A).

Line Interfaces

One of the following line interface features must be ordered for each Line Base depending on the type of communication facility and modem to be used.

EIA Interface (#3701): Provides an interface for attachment of an IBM modem or non-IBM modem meeting RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. **Limitations:** Cannot be installed on same line position with any other line interface type. **Maximum:** One per line position. **Field Installation:** Yes. **Prerequisites:** #3200. Requires appropriate cable order. See *IBM System/38 Installation Manual - Physical Planning* (GA21-9293). **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), Line Protocol (Table D), and Host Application (Table E).

1200 bps Integrated Modem (#5500, #5501, #5502, #5508): A modem for data transmission at 1200 bps over switched or nonswitched facilities. Half-speed operation at 600 bps is optional via a Control Program Facility command. Available in four different versions: #5500 - nonswitched, #5501 - switched with auto-answer, #5502 - switched with manual answer, and #5508 - nonswitched (primary mode) with switched network backup auto-answer capability. The nonswitched version (#5500) provides for a cable attachment directly to a non-switched facility, Type 3002. The switched with auto-answer versions (#5501 and #5508) provide for a cable attachment to FCC-registered protective circuitry of the CBS Type (or equivalent) provided by the user. The switched network manual answer version (#5502) provides for a cable attachment to FCC-registered protective circuitry of the CDT Type (or equivalent) provided by the user. The devices communicating with System/38 must also be equipped with a 1200 bps Integrated Modem. **Limitations:** Cannot be installed on the same line position with any other line interface feature. **Maximum:** One per line position. **Field Installation:** Yes. **Prerequisites:** #3200. Requires appropriate cable order. See *IBM System/38 Installation Manual - Physical Planning* (GA21-9293). **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), Line Protocol (Table D), and Host Application (Table E).

2400 bps Integrated Modem, Nonswitched (#5640): This integrated modem operates in half-duplex mode over normal quality 4-wire, nonswitched duplex communications facilities at speeds of 2400/1200 bps. The following operational modes are selectable by specify codes in Table A. These codes determine the network operational mode of the modem and also determine how the speed selection in the modem will function. These modes are: (1) Multipoint Control -- Operates as control station in a multipoint network and also provides for "local speed control" via a Control Program Facility command. Equalization to the line is automatic and adaptive to the received signal. (2) Multipoint Tributary -- Operates as a tributary station in a multipoint network and provides for "remote speed control" that will automatically adjust its data rate to the rate it is receiving. Equalization to the line is adaptive to its received signal. (3) Point-to-Point -- For point-to-point operation and provides "local speed control" via a Control Program Facility command. Point-to-point can also be configured for "remote speed control" by the Customer Engineer at time of installation. Equalization to the line is adaptive to its received signal. **Limitations:** Cannot be installed on the same line position with any other line interface feature. **Maximum:** One per line position. **Field Installation:** Yes. **Prerequisites:** #3200. Requires appropriate cable order. See *IBM System/38 Installation Manual - Physical Planning* (GA21-9293). **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), Line Protocol (Table D), and Host Application (Table E). **Related Equipment:** This feature (#5640) will operate with System/38-supported communication products equipped with the 3863, mdl 1 modem or products featured with integrated modem compatible with 3863, mdl 1.

2400 bps Integrated Modem, Switched (#5641): This integrated modem operates in half-duplex mode over 2-wire, switched communications facilities at speeds of 2400/1200 bps. Speed selection is under local or remote operator control. Manual originate, manual answer, and auto-answer procedures are used to establish connections. Equalization to the line is automatic and is performed each time a switched connection is established. An external cable 6.3 meters (21 feet) in length for attaching to the public switched network is supplied with this feature. No cable order required. **Limitations:** Cannot be installed on the same line position with any other line interface feature. **Maximum:** One per line position. **Field Installation:** Yes. **Prerequisites:** #3200. **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), Line Protocol (Table D), and Host Application (Table E). **Related Equipment:** This feature (#5641) will operate with System/38-supported communication products equipped with the 3863, mdl 2 modem or products featured with integrated modem compatible with 3863, mdl 2.

The Integrated Protective Coupler (FCC registration requirement for direct connection to the public switched network) is included with this feature.

5381 System Unit (cont'd)

Digital Data Service Adapter (DDSA) (#5650, #5651): An integrated data link adapter for data transmission over the AT&T nonswitched Data-Phone® Digital Service network and for local connections between System/38 and another System/38 or a System/34. #5650 provides local (point-to-point only) and remote (point-to-point and multipoint control) support and operates at nominal speeds of 2400 bps, 4800 bps, 9600 bps or 56K bps (multipoint control is not supported at 56K bps). For remote connections, the DDSA interfaces via a DDS adapter cable to a DDS Channel Service Unit (not a DDS Data Service Unit). For local connections, the DDS Adapter Connector accessory cable provides the interface between the DDS Adapter cables on the two systems. #5651 provides remote multipoint tributary support at speeds of 2400 bps, 4800 bps, and 9600 bps. **Limitations:** Cannot be installed on same line position with any other line interface type. Cannot be installed on same attachment with #5660 or #5680. **Maximum:** One per line position; one per attachment at 56K bps. **Field Installation:** Yes. **Prerequisites:** #3200. Requires appropriate cable order. See *IBM System/38 Installation Manual - Physical Planning* (GA21-9293). **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), Line Protocol (Table D), and Host Application (Table E). **Recommendations:** When operating this feature locally at 56K bps, it is recommended that the user transmit in large blocks (2K bytes BSC, 1792 bytes SDLC) of uncompressed EBCDIC data to optimize CPU utilization and line throughput.

® Data-Phone is a registered trademark of AT&T.

High-Speed Line Remote Attachment (#5660): This feature allows System/38 with CPF to communicate locally or remotely with a 3705 Communications Controller at nominal speeds of 57.6K bps (locally) or 56K bps (remotely), communicate remotely with a 4331 Communications Adapter or another System/38 at nominal speeds up to 56K bps . **Limitations:** Cannot be installed on same line position with any other interface type. Cannot be installed on same attachment with another high-speed line feature (#5650 at 56K bps or #5660 or #5680). **Maximum:** One per communications attachment, two per system. **Field Installation:** Yes. **Prerequisites:** System/38 requires #3200, #2001 or #2003, and CPF at Release 5.0 or later. The 3705-II or 3705-80 must have #4727, and #4651 at 57.6K bps, specify **#9622** for local connection or Line Set, Type 1S (#4720) for remote connection. The 4331 Communications Adapter requires High-Speed Modem Adapter (#4720) and **#9501**. The System/38 requires #5660. For local connections two cables are required, the System/38 cable and the 3705 local attachment cable. For remote connections, the System/38 and the 3705 must be connected to compatible modems. See *IBM System/38 Installation Manual - Physical Planning* (GA21-9293) for cabling information. **Specify:** One code must be specified from each of the following tables: Line Bases and Line Interfaces Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), and Line Protocol (Table D). **Recommendations:** When operating #5660 at 56K bps (57.6K bps locally), it is recommended that the user transmit in large blocks of uncompressed EBCDIC data to optimize CPU utilization and line throughput. For SDLC protocol, the maximum pacing count allowed by the 3705 NCP should be specified.

Local High-Speed Attachment (#5680): Permits a Series/1 to be locally attached to a System/38 at a nominal line speed of 56K bps. Communications is point-to-point BSC and program-to-program. **Limitations:** Cannot be installed on same line position with any other interface type. Cannot be installed on same attachment with another high-speed line feature (#5650 at 56K bps or #5660 or #5680). **Maximum:** One per Communication Attachment, two per system. **Field Installation:** Yes. **Prerequisites:** System/38 requires Line Base (#3200), SDLC/BSC controller feature (#2001 or #2003) and their prerequisites, and CPF at Release 4.0 or later. Series/1 must have EDX or RPS and RPQ D02349 (Direct BSC Attachment) and RPQ D02492 (Direct BSC Attachment Cable) installed. Requires appropriate cable order. See *IBM System/38 Installation Manual - Physical Planning* (GA21-9293). **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), and Line Protocol (Table D). **Recommendations:** When operating this feature at 56K bps, it is recommended that the user transmit in large blocks (e.g., 2K bytes) of uncompressed EBCDIC data to optimize CPU utilization and line throughput.

4800 bps Integrated Modem, Nonswitched (#5740): This integrated modem operates in half-duplex mode over normal quality 4-wire, nonswitched duplex communications facilities at speeds of 4800/2400 bps. The following operational modes are selectable by specify codes in Table A. These codes determine the network operational mode of the modem and also determine how the speed selection in the modem will function. These modes are: (1) Multipoint Control -- Operates as control station in a multipoint network and also provides for "local speed control" via a Control Program Facility command. Equalization to the line is automatic and adaptive to the received signal. (2) Multipoint Tributary -- Operates as a tributary station in a multipoint network and provides for "remote speed control" that will automatically adjust its data rate to the rate it is receiving. Equalization to the line is adaptive to its received signal. (3) Point-to-Point -- For point-to-point operation and provides "local speed control" via a Control Program Facility command. Point-to-point can also be configured for "remote speed control" by the Customer Engineer at the time of installation. Equalization to the line is adaptive to its received signal. **Limitations:** Cannot be installed on the same line position with any other line interface feature. **Maximum:** One per line position. **Field Installation:** Yes. **Prerequisites:** #3200. Requires appropriate cable order. See *IBM System/38 Installation Manual - Physical Planning* (GA21-9293). **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), Line Protocol (Table D), and Host Application (Table E). **Related Equipment:** This feature (#5740) will operate with System/38-supported communication products equipped with the 3864, mdl 1 modem or products featured with integrated modem compatible with 3864, mdl 1.

4800 bps Integrated Modem, Switched (#5741): This integrated modem operates in half-duplex mode over 2-wire switched communications facilities at speeds of 4800/2400 bps. Speed selection is under local or remote operator control. Manual originate, manual answer, and auto-answer procedures are used to establish connections. Equalization is automatic and is performed each time a switched connection is established. An external cable 6.3 meters (21 feet) in length for attaching to the public switched network is supplied with this feature. No cable order required. **Limitations:** Cannot be installed on the same line position with any other line interface feature. **Maximum:** One per line position. **Field Installation:** Yes. **Prerequisites:** #3200. **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), Device Attachment Codes (Table C), Line Protocol (Table D), and Host Application (Table E). **Related Equipment:** This feature (#5741) will operate with System/38-supported communication products equipped with the 3864, mdl 2 modem or products featured with integrated modems compatible with 3864, mdl 2. The Integrated Protective Coupler (FCC requirement for direct connection to the public switched network) is included with this feature.

Auto-Call Adapter (#5760): Permits the System/38, when attached to a switched network facility via an appropriate modem and auto-call unit, to initiate a data link connection to a remote station. Provides automatic dialing under program control. An Auto-Call Adapter (#5760) must always be installed in conjunction with an EIA Interface (#3701) for each line to automatically originate calls on switched network facilities. Each line featured with Auto-Call Adapter (#5760) takes two line positions, thereby reducing the maximum number of lines which can be supported. **Limitations:** Cannot be installed on same line position with any other line interface type. Installable in Line Position 2, 3, 4, 6, 7, or 8 only. **Maximum:** Two per Communication Attachment feature (#1501 or #1502). Maximum of four per system. **Field Installation:** Yes. **Prerequisites:** #3200. Requires appropriate cable order. See *IBM System/38 Installation Manual - Physical Planning* (GA21-9293). **Specify:** It is required that one code be specified from each of the following tables: Line Bases and Line Interface Codes (Table A), Line Speed Codes (Table B), and Device Attachment Codes (Table C). The line position code specified must be the next higher order position relative to the modem it is associated with.

5381 System Unit (cont'd)

Other	#9761	#9762	#9763	#9764	#9765	#9766	#9767	#9768

Communications Facilities: See M2700 pages for communications facility requirements for these features.

IBM Data Encryption Devices: A 3845 or 3846 Data Encryption Device may be attached between the System/38 communication attachment line interface and the external modem. **Prerequisites:** #3701.

IBM Modems: Each line position featured with EIA Interface (#3701) requires an external modem which meets the requirements desired. IBM modems which can be attached to System/38 via EIA Interface (#3701) are as follows:

Data Rate (bps)	Modem
2400	3863
4800	3864
9600	3865
2400/1200	3872

See M2700, 3863, 3864, 3865, and 3872 pages for information on modem features, communication capabilities, and product utilization.

MODEL CONVERSIONS

The upgrade purchase prices for model changes may be greater than purchase price differentials. The customer should carefully evaluate his future requirements when purchasing a system.

Replaced parts from any model upgrade become the property of IBM.

Note: Refer to *IBM System/38 Installation Manual - Physical Planning* (GA21-9293) for physical installation requirements.

ACCESSORIES

Keylock Keys: The 5381 with Power Keylock (#3210) is shipped with two keys. Additional keys (P/N 2546418) may be purchased from IBM. (Vendor will supply additional keys only to the original purchaser.) Key identification number must accompany each order. Allow 6-8 weeks for delivery.

Cables: To order cables see *IBM System/38 Installation Manual - Physical Planning* (GA21-9293) for cable order requirements.

DDS Adapter Connector: A specially designed connector which allows the cables from a System/38 DDS Adapter to be connected to the cables from another DDS Adapter. This provides for the local connection of two devices without the use of modems or channel

5381 System Unit (cont'd)

service units. This is a purchase-only item. Allow 6-8 weeks for delivery. **Note:** Only one of these connectors is required per local connection. If already ordered with the mating adapter, do not order a second one. **Maximum:** One per DDS Adapter. **Specify:** P/N 4236967.

SUPPLIES

Diskettes And Diskette Magazines: For diskettes and diskette magazines, contact IBM. Two diskette magazines are required for installation of the Control Program Facility Licensed Program. 2D diskettes are required for Control Program Facility (CPF) save/restore operations. Diskette magazines and 2D diskettes are not included with the system. They may be ordered from IBM. 2D Diskette - P/N 1669045, Diskette magazine - P/N 2462521.

5412 PROCESSING UNIT

[NO LONGER AVAILABLE]

PURPOSE

The 5412 contains main storage and facilities for addressing main storage, arithmetic and logical processing of data, and controlling I/O units for System/3 model 12. Also includes the attachment for 3340 Direct Access Storage Facility model C2.

MODELS

Model	Processor Storage (Bytes)
B16	32,768
B17	49,152
B18	65,536
C19	81,920
C20	98,304

Maximum: Only one 5412 can be attached to a System/3 mdl 12.

Prerequisites: IBM Programming Systems support for the 5412 mdl C19 and mdl C20 requires the Dual Program (#3500). IBM's ability to service a mdl C19 or mdl C20 without the Dual Program feature will be impaired with an effect on systems availability.

When the mdl 12 SCP option of print spooling is used, either Dual Program (#3500) or the 5471 Printer-Keyboard (#4110) must be ordered.

Minimum Configuration: In addition to the 5412, a System/3 mdl 12 requires:

- 5203 or 1403 Printer
- 3340 Direct Access Storage Facility mdl C2
- Two 3348 mdl 70 Data Modules
- One of the following:
  - 1424 Multifunction Card Unit
  - 1442 Card Read Punch
  - 3741 Data Station directly attached

HIGHLIGHTS

CPU uses highly integrated Monolithic Systems Technology (MST) for logical circuitry. Memory is Metal Oxide Semiconductor Field Effect Transistor (MOSFET). Data and instructions are stored as EBCDIC characters. Each EBCDIC character is stored in an 8-bit byte, and a ninth bit is added for parity checking. Main storage cycle time is 1.52 microseconds. Instruction execution and I/O handling utilizes the "Cycle-Steal" technique, providing overlap of I/O and processing.

The direct attachment of the 3741 Data Station or 3741 Programmable Workstation provides input and output via magnetic media. This feature may reside with or without card I/O.

The Local Display Adapter provides local attachment of any mix of up to twelve 3277 mdl 1 or 2, 3284 mdl 1 or 2, 3286 mdl 1 or 2, 3287 mdl 1 or 2, and 3288 mdl 2. The 3271 Control Unit is not required if the devices are attached via the Local Display Adapter.

Communication with remotely located systems or terminals may be performed through the use of the Integrated Communications Adapter (ICA) or the Binary Synchronous Communications Adapter (BSCA) over data communications transmission facilities.

The system console uses a message display unit for simplified direct operator/system communication.

Customer Responsibilities: Customers must be advised that:

- They are responsible for making arrangements for installation, pricing, charges of the data communications facility, and attachment of selected data sets (modems).
- Toll charges, if required for installation and/or maintenance of the BSCA or ICA, are to be paid by the customer.
- The marketing representative must have from the customer a firm installation date for transmission services (including modems) before the order can be confirmed. For further information, see "Teleprocessing" in the GI section and the M2700 pages.

Publications: *System/3 Bibliography* (GC20-8080).

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): Specify **#9903** for 208V or **#9905** for 230V.
- Color: Specify **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Print Position Attachment: Specify **#9495** for a 5203 with 120 print positions or **#9496** for a 5203 with 132 print positions.
- I/O Unit Attachments: Appropriate special features are required to attach most I/O units. See "Special Features".
- System Control Programming: 5705-SC1 should be ordered at equipment order entry time.
  See the System/3 programming for additional information.
- System Attachment Adapter: Specify **#9180** for a 5203 mdl 1 or **#9181** for a 5203 mdl 2.
- 3741 Direct Attachment: Specify **#9500** if either a 5424 or a 1442 is present or **#9501** if neither is present.
- Upending Kit: Specify **#9840**. This kit is furnished only as necessary and remains the property of IBM.
- 5412/5415 Frame Separation Kit: Specify **#9190**. Frame separation may be required at installation time at those locations where building dimensions (doorways, hallways, stairways, etc.) do not allow movement of the central processor as one unit. The local IBM Installation Planning Representative can determine if this kit is required. The Frame Separation Kit is not to be ordered when the Upending Kit (**#9840**) will suffice.
- 5410 to 5412 Conversion: For 5410 to 5412 conversion where an installed 5424 is to be moved to the new system, an MES must be submitted to remove the 5444(s) from the 5424. This MES must also delete **#9400**, and if a second 5444 is installed, **#9401** or **#9402** (all from the 5424).

SPECIAL FEATURES

Non-Communications Features

Dual Feed Carriage Control (#3480): Required for Dual Feed Carriage (#3475) on a 5203 Printer. **Field Installation:** Yes. **Prerequisites:** #3960, and #3970 or #3972.

Dual Program (#3500): Provides the capability to independently load and process two programs concurrently. Independent operator control of each program is provided so that either program may be initiated, restarted after a program halt, run to completion, or terminated without regard to the other program other than availability of main storage and I/O units. **Field Installation:** Yes.

5203 Printer Base Attachment (#3960): Required to attach a 5203 Printer mdl 1, 2, or 3. **Limitations:** Cannot be installed with 1403 Printer Base Attachment (#4160). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #9224 on the 5203.

5203 Printer Attachment, 100/200 lpm (#3970): To attach a 5203 Printer mdl 1 or 2. **Limitations:** Cannot be installed with 5203 Printer Attachment, 300 lpm (#3972). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3960.

5203 Printer Attachment, 300 lpm (#3972): To attach a 5203 Printer mdl 3. **Limitations:** Cannot be installed with 5203 Printer Attachment, 100/200 lpm (#3970). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3960.

Multifunction Card Unit Attachment, 250/60/60 cpm (#4100): To attach a 5424 Multifunction Card Unit mdl A1. **Limitations:** Cannot be installed with 1442 Mdl 6/7 Card Read Punch Attachment (#4130). **Maximum:** One. **Field Installation:** Yes.

Multifunction Card Unit Attachment, 500/120/120 cpm (#4101): To attach a 5424 Multifunction Card Unit mdl A2. **Limitations:** Cannot be installed with 1442 Mdl 6/7 Card Read Punch Attachment (#4130). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4100.

5471 Printer-Keyboard Attachment (#4110): To attach a 5471 Printer-Keyboard. **Maximum:** One. **Field Installation:** Yes.

1442 Mdl 6/7 Card Read Punch Attachment (#4130): To attach a 1442 mdl 6 or 7. **Limitations:** Cannot be installed with Multifunction Card Unit Attachments (#4100, #4101). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3950 on the 1442 and #5502 on the 5412.

1403 Mdl 5 Printer Attachment, 465 lpm (#4135): To attach a 1403 Printer mdl 5. **Limitations:** Cannot be installed with other 1403 printer attachments (#4140, #4150). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4160 on the 5412 and **#9185** on the 5421.

1403 Mdl 2 Printer Attachment, 600 lpm (#4140): To attach a 1403 Printer mdl 2. **Limitations:** Cannot be installed with other 1403 printer attachments (#4135, #4150). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4160 on the 5412.

1403 Mdl N1 Printer Attachment, 1,100 lpm (#4150): To attach a 1403 Printer mdl N1. **Limitations:** Cannot be installed with other 1403 printer attachments (#4135, #4140). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4160.

1403 Printer Base Attachment (#4160): To attach a 1403 Printer mdl 2, 5, or N1 (#4135, #4140, or #4150 must be specified). **Maximum:** One. **Field Installation:** Yes. **Limitations:** Cannot be installed with 5203 Printer Base Attachment (#3960). **Prerequisites:** A 5421 Printer Control Unit.

Basic Attachment (#4701): To attach either the Local Display Adapter (#4702) or 3411 Magnetic Tape Attachment (#7960) or both (#4702

5412 Processing Unit (cont'd)

and #7960 must be specified). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5732. See "Processing Unit Expansion Configurator" for possible requirements for additional expansion features.

Local Display Adapter (#4702): Permits direct local attachment (up to 2,000 feet) of up to three 3277 mdl 1 Display Stations, 3284 mdl 1 Printers, 3286 mdl 1 Printers, or 3287 mdl 1 and 2 Printers (with 480-character buffer) in any combination. A 3271 Control Unit is not required. The 3270 device cables will be attached directly to the Local Display Adapter. For attachment of additional 3270 devices (maximum of 12), see Display Increment (#4704). For attachment of the 3270 mdl 2 (1,920-character buffer) devices, see Mdl 2 Attachment (#4705). **Limitations:** Cannot be installed with the Integrated Communications Adapter (#4645) or with the Binary Synchronous Communications Adapter, Second (#2084). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4701.

Display Increment (#4704): Permits attachment of up to three more devices to the Local Display Adapter. **Maximum:** Three. **Field Installation:** Yes. **Prerequisites:** #4702.

Mdl 2 Attachment (#4705): Required if any 3277 mdl 2 Display Stations and/or any 3284/3286/3288 mdl 2 Printers and/or 3287 mdl 1 or 2 Printers (with 1,920-character buffer) are to be attached to the Local Display Adapter. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4702.

Power Supply Expansion I (#5501): Provides additional processing unit 6V power. Required when an MLTA RPQ is desired. **Maximum:** One. **Field Installation:** Yes.

Power Supply Expansion II (#5502): Provides additional processing unit 24V power. Required when 5424 is not attached. **Maximum:** One. **Field Installation:** Yes.

Processing Unit Expansion A (#5732): Provides additional processing unit power supply, connectors, and mounting space when required. May be required when certain RPQs are ordered. Contact IBM for details. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Refer to "Processing Unit Expansion Configurator" to determine requirements.

Processing Unit Expansion B (#5733): Provides additional processing unit power supply and connections. May be required when certain RPQs are ordered. Contact IBM for details. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5732. Refer to "Processing Unit Expansion Configurator" to determine requirements.

Processing Unit Expansion C (#5734): Provides additional processing unit power supply and connections. May be required when certain RPQs are ordered. Contact IBM for details. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5732 and #5733. Refer to "Processing Unit Expansion Configurator" to determine requirements.

Processing Unit Expansion D (#5735): Provides additional processing unit power supply and connections. May be required when certain RPQs are ordered. Contact IBM for details. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5732, #5733, and #5734. Refer to "Processing Unit Expansion Configurator" to determine requirements.

Serial I/O Channel (#7081): To attach a 1255 Magnetic Character Reader or a 3881 Optical Mark Reader. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5732. See "Processing Unit Expansion Configurator" for possible requirement for additional expansion features.

3411 Magnetic Tape Attachment (#7960): To attach a 3411 Tape Unit and Control. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4701. See "Processing Unit Expansion Configurator" for possible requirement for additional expansion features.

3741 Attachment (#8220): To attach a 3741 mdl 1, 2, 3, or 4. **Limitations:** For 3741 mdl 3 or 4, System/3 does not support the Application Control Language (ACL). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5502 is required if the 5424 is not installed on the system. If attached with the 5424 Multifunction Card Unit or the 1442 Card Read Punch, #5732 is required. See "Processing Unit Expansion Configurator" for possible requirements for additional expansion features. **Specify: #9500** if either a 5424 or a 1442 is present or **#9501** if neither is present.

Universal Character Set Control (#8642): Required if any Interchangeable Train Cartridge with more than 48 different characters is to be used on the 5203 Printer. **Note:** This feature is not required if a 1403 mdl 2, 5, or N1 with UCS feature is attached to the 5412 through a 5421 Control Unit. **Prerequisites:** #8639 on the 5203.

Communications Features

Auto-Call (#1315, #1325): Permits the System/3 mdl 12, when attached to a switched network (**#9483** or **#9583**) via an appropriate modem and auto-call unit, to initiate (dial) through stored program control a data link connection to a remote BSC station (#1315 for #2074 and #1325 for #2084). Available with medium-speed adapters only. **Limitations:** Cannot be installed with Station Selection (#7477, #7487) or 1200 bps Integrated Modem (#4781, #4782). **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** Appropriate BSCA (#2074 or #2084), one Voice Grade Transmission Rate from 600 to 4800 bps, and **#9483** or **#9583**. Requires appropriate cable order. See *Installation Planning Manual* (GA21-9084).

Binary Synchronous Communications Adapter (BSCA 1) (#2074): This feature, in conjunction with program control, permits System/3 mdl 12 to communicate in binary synchronous mode with other IBM systems and terminals. System/3 mdl 12 can operate on a multipoint line as either a control station or a tributary station, or on a point-to-point switched or leased communications line. Transmission rates are available from 600 to 50,000 bps. Auto-answer capability is standard in switched network version. To be effective, the modem must also have this capability. Any version can be selected to operate in EBCDIC or ASCII transmission code, but not both. A 1200 bps Integrated Modem is available as a special feature. Also see "IBM Modems". See the System/3 programming section for devices supported by IBM programming.

The BSCA 1 is designed to operate on transmission facilities such as:

- Common carrier leased telephone services (voice grade):

  AT&T or Western Union Class 3002 - 600 bps (1200 bps with 1200 bps Integrated Modem).

  AT&T or Western Union Class 3002 with C1 conditioning to 4800 bps.

  AT&T or Western Union Class 3002 with C2 conditioning to 7200 bps.

- Private (customer-owned) communications facilities equivalent to the above common carrier facilities.
- Common carrier switched network telephone (voice grade) service at 600 to 4800 bps.
- Common carrier wideband communications services at 19,200 bps, 40,800 bps, or 50,000 bps.
- Private carrier organizations providing equivalent to above data transmission services.

Maximum: One per 5412. **Field Installation:** Yes. **Prerequisites:** #5732. See "Processing Unit Expansion Configurator" for possible requirement for additional expansion features. **Specify:** See "Optional Specifications" for device attachment codes.

Binary Synchronous Communications Adapter, Second (BSCA 2) (#2084): Permits operation of two BSCAs simultaneously on System/3 mdl 12 and/or in two different configurations (speed, network attachments, line facility attachments, codes, etc.). This second adapter (#2084) is functionally identical to the first adapter (#2074). It will support the same sub-features, which require the same prerequisites as BSCA 1. The same options and limitations also apply to BSCA 2, with the following exception: #2084 is provided only in the medium-speed version (600 to 9600 bps) and does not support attachment to a wideband data link (**#9755**). Provision of a second adapter does not limit in any way the options on the first adapter.

The BSCA 2 is designed to operate on transmission facilities such as:

- Common carrier leased telephone services (voice grade):

  AT&T or Western Union Class 3002 - 600 bps (1200 bps with 1200 bps Integrated Modem).

  AT&T or Western Union Class 3002 with C1 conditioning to 4800 bps.

  AT&T or Western Union Class 3002 with C2 conditioning to 7200 bps.

- Private (customer-owned) communications facilities equivalent to the above common carrier facilities.
- Common carrier switched network telephone (voice grade) service at 600 to 4800 bps.
- Common carrier wideband communications services at 19,200 bps, 40,800 bps, or 50,000 bps.
- Private carrier organizations providing equivalent to above data transmission services.

Limitations: Cannot be installed with Local Display Adapter (#4702) or ICA (#4645). There is no wideband attachment capability. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2074. See "Processing Unit Expansion Configurator" for possible requirement for additional expansion features. **Specify:** See "Optional Specifications" for device attachment codes.

EIA Local Attachment (#3601, #3602): Permits attachment of one binary synchronous IBM control unit or terminal (EIA RS-232-C Type Interface) to System/3 mdl 12 without the use of a data communications line and modems at either device. This attachment may be used where the device is located within a distance to the 5412 that is reached by the device's EIA attachment cable (i.e., the cable normally used to attach to an external modem). This feature provides the

5412 Processing Unit (cont'd)

clocking signals for the System/3 mdl 12's BSCA and for the attached control unit's adapter; therefore, the System/3's Internal Clock (#4703, #4723) cannot be installed on the same adapter with this feature. Data transfer rates of 2400, 4800, and 8000 bps are supported by this feature. #3601 is for #2074, and #3602 is for #2084. Available with medium-speed adapters only. **Limitations:** Cannot be installed with Internal Clock (#4703, #4723) or Auto-Call (#1315, #1325). Specification of Transfer Rates (**#9750, #9751, #9752, #9757, #9851, #9853, #9857**) is not permitted. **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** Appropriate BSCA (#2074 or #2084); **#9753, #9754, #9758, #9853, #9854,** or **#9858**; **#9484** or **#9584**; and **#9391** or **#9381**. See appropriate machine pages for attached device prerequisites.

Integrated Communications Adapter (ICA) (#4645): This feature, in conjunction with its sub-features, provides up to three communications interfaces, two local and one remote. When more than one interface is present, only one can be active at a time as selected by the operator through a manual switch control.

The ICA is designed to operate on transmission facilities such as:

- Common carrier leased telephone services (voice grade):

  AT&T or Western Union Class 3002 - 600 bps (1200 bps with 1200 bps Integrated Modem).

  AT&T or Western Union Class 3002 with C1 conditioning to 4800 bps.

  AT&T or Western Union Class 3002 with C2 conditioning to 7200 bps.

- Private (customer-owned) communications facilities equivalent to the above common carrier facilities.
- Common carrier switched network telephone (voice grade) service at 600 to 4800 bps.
- Common carrier wideband communications services at 19,200 bps, 40,800 bps, or 50,000 bps.
- Private carrier organizations providing equivalent to above data transmission services.

Limitations: Cannot be installed with Local Display Adapter (#4702) or BSCA 2 (#2084). **Maximum:** One per 5412. **Field Installation:** Yes. **Prerequisites:** #5732. See "Processing Unit Expansion Configurator" for possible requirement for additional expansion features. **Specify: #9070** for EBCDIC transmission code or **#9071** for ASCII. See description of interface features (#4801, #4802, and #6202) below. At least one must be specified.

Internal Clock (#4703, #4723): Generates synchronizing and timing signals for BSCA operation when they are not provided by the attached modem. When this feature is installed on System/3 mdl 12, all other BSC stations attached to the same data link must also be equipped with a similar Internal Clock feature. Contact IBM for determination of this feature's requirement with planned modems. #4703 is for #2074, and #4723 is for #2084. Will service rates 600, 1200, 2000, or 2400 bps. Available with medium-speed adapters only. **Limitations:** Cannot be installed with Transfer Rates (**#9754, #9757**). **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** Appropriate BSCA (#2074 or #2084) and one of the above-serviced transmission rate options.

1200 bps Integrated Modem (#4781, #4782): A modem for BSC data transmission at 1200 bps over nonswitched facilities or switched network. Available in two different versions: #4781 - nonswitched and #4782 - switched with auto-answer. Attachment to nonswitched (2- or 4-wire) facilities is via an IBM-provided cable directly to the line, Type 3002 facility. Attachment to the switched network is via an IBM-provided cable to FCC-registered protective circuitry of the CBS type (or equivalent) provided by the user. The device communicating with System/3 mdl 12 must also be equipped with a 1200 bps integrated modem/line adapter. Available with medium-speed adapters only. **Limitations:** Cannot be installed with sub-features Auto-Call (#1315, #1325) or EIA Local Attachment (#3601, #3602). #4781 and #4782 cannot be installed together on the same BSCA. **Maximum:** Two; one per BSCA. **Field Installation:** Yes. **Prerequisites:** Appropriate BSCA (#2074 or #2084); #5201 or #5202; #4703 or #4723; and **#9751** or **#9851**.

8000 bps Local Interface (#4801): Permits local attachment of one binary synchronous IBM control unit or terminal (EIA RS-232-C Type Interface) to the 5412 without use of communications line or modems. The external modem cable of the attached terminal connects directly to the 5412 when this feature is installed. The feature provides clocking for the 8000 bps data transfer rate. **Limitations:** Data transfer rate is 8000 bps only. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4645. See appropriate machine pages for attached device prerequisites. **Specify:** See "Optional Specifications" for device attachment codes.

2400 bps Local Interface (#4802): Permits local attachment of one binary synchronous IBM terminal (EIA RS-232-C Type Interface) to the 5412 without the use of communications line or modems. The external modem cable of the attached terminal connects directly to the 5412 when this feature is installed. The feature provides clocking for the 2400 bps data transfer rate. **Limitations:** Data transfer rate is 2400 bps only. See the System/3 programming section for devices supported by IBM programming. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4645. See appropriate machine pages for attached device prerequisites. **Specify:** See "Optional Specifications" for device attachment codes.

Modem Base (#5201, #5202): Provides for mounting of one 1200 bps Integrated Modem (#4781, #4782). #5201 is for #2074, and #5202 is for #2084. **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** Appropriate BSCA (#2074 or #2084).

Synchronous Line, Medium-Speed (#6202): Provides one medium-speed BSC line interface to an external modem. The communications network attachment may be point-to-point (switched), point-to-point (nonswitched), or multipoint (control station). Maximum transmission rate is 4800 bps for switched operation and 9600 bps for nonswitched operation. The attached modem must provide the necessary data clocking. See "IBM Modems". Devices attached to the Synchronous Line, Medium-Speed have the same requirements as when attached to System/3 via BSCA 1 (#2074) with equivalent communications facilities and line speeds. **Limitations:** Half-duplex only. Cannot function as a multipoint tributary station. Modem clocking only. See the System/3 programming section for devices supported by IBM programming. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4645. See appropriate machine pages for device prerequisites. **Specify:** See "Optional Specifications" for device attachment codes.

Station Selection (#7477, #7487): Permits the System/3 mdl 12 to operate as a compatible member of the IBM family of BSC terminals on a multipoint communications line as a tributary station. #7477 is for #2074, and #7487 is for #2084. Control station operation on a System/3 mdl 12 BSCA with Station Selection installed is possible, but such operation cannot be performed concurrently with tributary station operation on that adapter. Additionally, a change in modems or in modem operation may be required to utilize the same adapter (at different periods of time) as a tributary station and as a control station adapter. Also, the network attachment option (**#9484** or **#9584**) must be specified when control station operation is to be performed whether Station Selection (#7477, #7487) is installed or not. Available with medium-speed adapters only. **Limitations:** Cannot be installed with Auto-Call (#1315, #1325) or Line Facility Attachment (**#9391**). **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** Appropriate BSCA (#2074 or #2084), **#9382** or **#9392**, and one of the Voice Grade Transmission Rates 600 to 9600 bps.

Text Transparency (#7850, #7851): Permits the System/3 mdl 12 to transmit or receive 8-bit binary data and EBCDIC-coded data. #7850 is for #2074, and #7851 is for #2084 or #4645. Available with medium-speed (600 to 9600 bps) and with wideband attachments (19,200 to 50,000 bps). **Limitations:** Cannot be installed with ASCII Transmission Code (**#9061, #9071**). Other limitations on the use of this facility exist and are described in *General Information - Binary Synchronous Communication* (GA27-3004). **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** Appropriate BSCA (#2074 or #2084) or ICA (#4645) and **#9060** or **#9070**.

IBM Modems: One IBM modem can be attached to BSCA 1 (#2074) and/or one to BSCA 2 (#2084) or ICA (#4645) with Synchronous Line, Medium-Speed (#6202) as follows:

Modem	Nominal Speed (bps)
3872	2400/1200
3863 mdl 1 or 2	2400
3868 mdl 1	2400
3864 mdl 1 or 2	4800
3868 mdl 2	4800
3865 mdl 1 or 2	9600
3868 mdl 3 or 4	9600

See M2700, 3863, 3864, 3865, and 3872 pages for information on modem features, communications capabilities, and product utilization.

Note: Configuration requirements for IBM programming support must satisfy the minimum machine requirements. See the System/3 programming section.

See M2700 pages for additional information concerning communications facilities, machine attachment requirements, terminal intermix, and operating capabilities.

4800 bps	**#9754**	**#9854**	**#9854**
7200/3600 bps	**#9757**	**#9857**	**#9857**
8000 bps	**#9758**	**#9858**	N/A
9600 bps	**#9759**	**#9859**	**#9859**
High-speed (19,200 to 50,000 bps)	**#9755**	N/A	N/A

* Contact IBM for information concerning modems attachable to the System/3 BSCA. Refer to M2700 pages for data on communication facilities.

**See *General Information - Binary Synchronous Communication* (GA27-3004) for potential problem areas and possible restrictions to application data when using certain modems at this or higher speeds.

3. Network Attachment

Point-to-point (nonswitched)	**#9481**	**#9581**	**#9581**
Point-to-point (switched)	**#9483**	**#9583**	**#9583**
Multipoint tributary	**#9482**	**#9582**	N/A
Multipoint control station *	**#9484**	**#9584**	**#9584**

* If multipoint tributary station use (with #7477/#7487) is to be implemented alternately with multipoint control station use on the same adapter, specify code **#9484/#9584** must be used.

4. Line Facility Attachment *

Duplex (4-wire only)	**#9391**	**#9381**	**#9381**
Half-duplex	**#9392**	**#9382**	**#9382**

* Where BSCA is used as a control station adapter, or when attached to a point-to-point (nonswitched) data link, the facility may be duplex (4-wire only) or half-duplex. Half-duplex facility must be specified for switched network attachments and for adapters implementing multipoint tributary station only operation.

5412 Processing Unit (cont'd)

5. One (or more if necessary) optional selection code must be specified from the following list, contingent upon planned device attachments:

	#2074	#2084	#4645
1130 System	#9572	#9672	#9672

MODEL CONVERSIONS

Model conversions are field installable.
Replaced parts from any model upgrade become the property of IBM.

ACCESSORIES

Cables: BSCA (#2074, #2084) always requires an appropriate cable order unless EIA Local Attachment (#3601, #3602) is ordered.
ICA (#4645) requires a cable order only when #6202 is also ordered.
See *Installation Manual - Physical Planning* (GA21-9084).

SUPPLIES (None)

5415 PROCESSING UNIT

[No longer Available]

PURPOSE

The 5415 is no longer available. Model changes and special features may still be ordered. All other information is for reference only.

Contains main storage and facilities for addressing main storage, arithmetical and logical processing of data, and controlling I/O units for System/3 model 15.

MODELS

Models	Processor Storage (bytes)
B17	49,152
B18	65,536
B19	98,304
B20	131,072
C21	163,840
C22	196,608
C23	229,376
C24	262,144
D19	98,304
D20	131,072
D21	163,840
D22	196,608
D23	229,376
D24	262,144
D25	393,216
D26	524,288

Minimum Configuration:

System/3 mdl 15 with a 5415 mdl AXX, requires:
- 3277 Display Station mdl 1 with 78-key Operator Console Keyboard (#4632),
- 1403 mdl 2, 5, or N1 Printer,
- 5421 Printer Control Unit,
- A minimum of one 5444 Disk Storage Drive mdl A2,
- Either
  5424 Multi-Function Card Unit, or
  1442 Card Read Punch mdl 6 or 7, or
  2560 Multi-function Card Machine.

System/3 mdl 15s with 5415 mdl BXX through DXX, require:
- 3277 Display Station mdl 1 with 78-key Operator Console Keyboard (#4632),
- 1403 mdl 2, 5, or N1 Printer,
- 3340 Direct Access Storage Facility,
- 5421 Printer Control Unit,
- Either
  5424 Multi-Function Card Unit, or
  1442 Card Read Punch mdl 6 or 7, or
  2560 Multi-Function Card Machine.

Cardless System/3 mdl 15As require:
- 3277 Display Station mdl 1 with 78-key Operator Console Keyboard (#4632),
- 1403 mdl 2, 5, or N1 Printer,
- 5421 Printer Control Unit,
- 5422 Disk Enclosure,
- Maintenance Support Package (**#9440**),
- Channel Terminator (#1601).

Cardless System/3 mdls 15B or 15C require:
- 3277 Display Station mdl 1 with 78-key Operator Console Keyboard (#4632),
- 1403 mdl 2, 5, or N1 Printer,
- 3741 mdl 1, 2, 3, or 4 with #3265 or #3266,
- 3741 Attachment (#8220),
- Power Supply Expansion B (#5502),
- 5421 Printer Control Unit,
- Maintenance Support Package (**#9441**),
- Channel Terminator (#1601).

Cardless System/3 mdl 15Ds require:
- 3277 Display Station mdl 1 with 78-key Operator Console Keyboard (#4632),
- 1403 mdl 2, 5, or N1 Printer,
- 3741 mdl 1, 2, 3, or 4 with #3265 or #3266,
- 3741 Attachment (#8220),
- Power Supply Expansion B (#5502),
- 5421 Printer Control Unit,
- Maintenance Support Package (**#9445**),
- Channel Terminator (#1601).

Note: Configuration requirements for IBM programming support must satisfy the minimum machine requirements. See the System/3 programming pages for additional information.

Maximum Configuration: Only one 5415 can be attached to a System/3 mdl 15.

HIGHLIGHTS

CPU uses Monolithic Systems Technology (MST) for logical circuitry. Memory is Metal Oxide Semiconductor Field Effect Transistor (MOSFET) with error correction and checking. Data and instructions are stored as EBCDIC characters. Each EBCDIC character is stored in an 8-bit byte. A ninth bit is added for parity checking. Main cycle time is 1.52 microseconds (on mdl 15D, instruction cycle time for certain non-I/O instructions is faster). Instruction execution and I/O data handling uses the cycle-steal technique. 5415 mdl A processors support attachment of 5444 Disk Storage Drives. 5415 mdl B or C processors support attachment of the 3340 Direct Access Storage Facility. 5415 mdl D processors support attachment of the 3340 Direct Access Storage Facility and the 3344 Direct Access Storage.

Additional standard features supporting a multiprogramming environment include:

- Three additional instructions.
- 512K memory addressing using Address Translation Table (ATT).
- Write/Fetch CPU storage protection in 2K byte segments.
- Program check Interrupt.
- Interval timer.
- Eight levels of interrupt.
- Mask interrupt capability.
- Privileged mode operation.
- Memory error correction:
  Corrects single bit errors,
  Detects double bit errors.
- Dual-byte data channel for disks.
- Operation-end interrupt for all I/O.
- Complete overlap of I/O operation.
- Additional Field Engineer controls.

The required 3277 Display Station with 78-key Operator Console Keyboard (#4632) provides enhanced operator-machine communications. An optional console printer (3284 mdl 1 or 3287 mdl 1, 2) is also available via 3284 attachment (#7901). The Display Adapter (#4601) provides direct local attachment of up to 30 3270 devices (CRTs and printers). Communications with remotely located systems or terminals may be performed through the use of binary synchronous communications. See BSCA (#2074, #2084) and BSCC (#2094) under "Special Features". On the 5415 mdl A, B, or C, two lines maximum. On the 5415 mdl D, four lines maximum. The Local Communications Adapter provides direct local attachment of one binary synchronous IBM control unit or terminal with EIA RS-232-C type interface.

Customer Responsibilities: The customer must be advised of certain responsibilities related to the installation and maintenance of common carrier facilities/services as well as the IBM equipment. See M2700 pages and "Teleprocessing Systems" in the GI section.

He is responsible for making arrangements for installation, pricing and charges of the data communications facility and attachment of selected modems.

Toll charges, if required for installation and/or maintenance of the BSCA, are to be paid by the customer.

The IBM Marketing Representative must obtain from the customer a firm installation date for transmission services (including modems) before the order can be confirmed. For further information see M2700 pages and "Teleprocessing" in the GI section.

Publications: *System/3 Bibliography* (GC20-8080).

SPECIFY

- Voltage (AC, 3-phase, 4-wire, 60 Hz): **#9903** for 208V, or **#9905** for 230V.
- Color: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, or **#9046** for white.
- Disk Configuration: If a second 5444 is ordered, specify **#9207** for 5444 mdl A3, or **#9208** for 5444 mdl A2.
- 3340/3344 Specify Configurator:

	Mdls Attached			Storage (MB) Main Data	Simulation	
5415	3340	3344	Total Drives	Area	Area	Specify Features
B,C,D	A2	--	2	81.59	19.66	**#9781**
B,C	A2 & B1	--	3	122.39	29.49	**#9781** & **#9782**
D	A2 & B1	--	3	122.39	24.58	**#9781** & **#9782**
B,C	A2 & B2	--	4	162.18	39.32	**#9781** & **#9783**
D	A2 & B2	--	4	162.18	29.49	**#9781** & **#9783**
D	A2	B2	4	447.23	58.98	**#9781** & **#9784**

- I/O Attachments: Appropriate special features are required to attach most I/O units. See "Special Features".
- Configuration Codes: Required on the 5422 or 5424 dependent upon the 5444 configuration. See "Specify" in M5424 or 5422 pages.

5415 Processing Unit (cont'd)

- System Control Programming: 5704-SC1 or 5704-SC2, should be ordered at equipment order entry time. See the System/3 programming pages for additional information.
- Upending Kit: Specify **#9840** is furnished only as necessary and remains the property of IBM.
- 5412/5415 Frame Separation Kit: **#9190** if frame separation is required at installation time at those locations where building dimensions (doorways, hallways, stairways, etc.) do not allow movement of the central processor as one unit. The local Installation Planning Representative can determine if this kit is required. The Frame Separation Kit is not to be ordered when the Upending Kit (**#9840**) will suffice.

SPECIAL FEATURES

Auto-Call (#1315, #1325): Permits the System/3 mdl 15 when attached to a switched network (option **#9483** or **#9583**) via an appropriate modem and Auto-Call Unit to initiate (dial) through stored program control, a data link connection to a remote BSC station. #1315 for #2074 and #1325 for #2084. **Limitations:** Cannot be installed with Station Selection (#7477, #7487), or 1200 bps Integrated Modem (#4781, #4782). Available with medium speed adapters only. **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** #2074 or #2084, one voice grade transmission rate from 600 to 4800 bps, and **#9483** or **#9583**. Requires appropriate cable order. See *Installation Manual - Physical Planning* (GA21-9084).

Card Print Control (#1580): Controls necessary for an attached 2560 Multi-Function Card Machine mdl A1 equipped with Card Print (#1575, #1576, #1577). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #8100 on the 5415, plus #1575 on the 2560.

Channel Terminator (#1601): Terminates Channel Bank No. 1 which eliminates the requirement for a 1442, 2560, or 5424. Provides cardless capability for mdl 15. **Limitations:** Cannot be installed with #4100, #4101, #4130, or #8100. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Cardless mdl 15 A, B, C, or D.

Binary Synchronous Communications Adapter (#2074):

This feature in conjunction with program control permits System/3 mdl 15 to communicate in binary synchronous mode with other IBM systems and terminals. System/3 mdl 15 can operate on a multipoint line as either a control station or a tributary station, or on a point-to-point switched or leased communications line. Transmission rates are available from 600 bps to 50,000 bps. Auto-answer capability is standard (to be effective, the modem must also have this capability) in switched network version. Any version can be selected to operate in EBCDIC or ASCII transmission code, but not both. A 1200 bps Integrated Modem is available as a special feature. Also, see "Modems" below. See the System/3 programming pages for devices supported by IBM programming.

The BSCA is designed to operate on transmission facilities such as:

- Common Carrier leased telephone services (voice grade):

  AT&T or Western Union Class 3002-600 bps (1200 bps with 1200 bps Integrated Modem).

  AT&T or Western Union Class 3002 with C1 conditioning to 4800 bps.

  AT&T or Western Union Class 3002 with C2 conditioning to 7200 bps.
- Private (customer-owned) communications facilities equivalent to the above common carrier facilities.
- Common carrier switched network telephone (voice grade) service at 600 to 4800 bps.
- Common carrier wideband communications services at 19,200 bps, 40,800 bps, or 50,000 bps.
- Private carrier organizations providing equivalent to above data transmission services.

Limitations: Cannot be installed with Local Communications Adapter (#4765). **Maximum:** One per 5415. **Cables:** See "Accessories" and *Installation Manual - Physical Planning* (GA21-9084). **Field Installation:** Yes. **Prerequisites:** Refer to "Processing Unit Expansion Features Configurator" for possible requirement for additional Processing Unit Expansion features. **Specify:** See "BSCA-1 and BSCA-2 Optional Specify Codes" below for applicable specify codes.

See M2700 pages for additional information concerning modems, device speeds, communications facilities, machine attachment requirements, terminal intermix, operating capabilities, and customer responsibilities.

Binary Synchronous Communications Adapter, Second (#2084): Permits operation of two BSCAs simultaneously on System/3 mdl 15 and/or in two different configurations (speed, network attachments, line facility attachments, codes, etc.). This second adapter (#2084) is functionally identical to the first adapter (#2074). It will support the same sub-features, which require the same prerequisites as the first BSCA. The same options and limitations also apply to the second BSCA, with the following exception: #2084 is provided only in the medium-speed version (600 to 9600 bps) and does not support attachment to a wideband data link, option **#9755**. Provision of a second adapter does not limit in any way the options on the first adapter. **Limitations:** No wideband attachment capability. Cannot be installed with Display Adapter (#4601). **Maximum:** One per System/3 mdl 15. **Cables:** See "Accessories" and *Installation Manual - Physical Planning* (GA21-9084). **Field Installation:** Yes. **Prerequisites:** #2074 or #4765. See "Processing Unit Expansion Features Configurator" for possible requirement of additional Processing Unit Expansion features. **Specify:** See below and "Specify" section for applicable specify codes.

Modems: One IBM modem can be attached to the BSCA (#2074) and/or one to the BSCA, Second (#2084) as follows:

Modem	Nominal Rate (bps)
3863 mdl 1 or 2	2400
3868 mdl 1	2400
3872	2400/1200
3864 mdl 1 or 2	4800
3868 mdl 2	4800
3865 mdl 1 or 2	9600
3868 mdl 3 or 4	9600

See M2700, 3863, 3864, 3865, and 3872 pages for information on modem features, communications capabilities, and product utilization.

BSCA-1 and BSCA-2 Optional Specify Codes: One selection must be specified from each of the following five categories for each adapter.

	#2074	#2084
1. Transmission Code:		
EBCDIC	**#9060**	**#9070**
ASCII	**#9061**	**#9071**
2. Transfer Rate: *		
600 bps	**#9750**	**#9850**
1200 bps	**#9751**	**#9851**
2000 bps	**#9752**	**#9852**
2400 bps **	**#9753**	**#9853**
4800 bps	**#9754**	**#9854**
7200/3600 bps	**#9757**	**#9857**
8000 bps	**#9758**	**#9858**
High Speed (19,200 to 50,000 bps)	**#9755**	N/A
9600 bps	**#9759**	**#9859**

Notes:

* Refer to M2700 pages for data on communications facilities. For information concerning modems attachable to the System/3 BSCA, contact IBM.

** See SRL (GA27-3004) for potential problem areas and possible restrictions to application data when using certain modems at this or higher speeds.

3. Network Attachment:		
Point-to-point (nonswitched)	**#9481**	**#9581**
Point-to-point (switched)	**#9483**	**#9583**
Multipoint Tributary	**#9482**	**#9582**
Multipoint Control Station *	**#9484**	**#9584**

Note:

* If Multipoint Tributary Station with #7477 or #7487 is to be implemented alternately with Multipoint Control Station use on the same adapter, specify code **#9484** or **#9584** must be used.

4. Line Facility Attachment: *		
Duplex (4-wire only)	**#9391**	**#9381**
Half-Duplex	**#9392**	**#9382**

Note:

* Where BSCA is used as a Control Station adapter or when attached to a point-to-point (nonswitched) data link, the facility may be duplex (4-wire only) or half-duplex. Half-duplex facility must be specified for switched network attachments and for adapters implementing Multipoint Tributary Station only operation.

5. One (or more if necessary) optional selection codes must be specified from the following list, contingent upon planned device attachments:

1130 System	**#9572**	**#9672**
2770 System	**#9573**	**#9673**
2780	**#9574**	**#9674**
2980	**#9576**	**#9676**
3270 System	**#9577**	**#9677**
3600 *	**#9595**	**#9695**
3735	**#9578**	**#9678**
3741 mdl 2, mdl 4	**#9579**	**#9679**
5231 mdl 2	**#9592**	**#9692**
5280	**#9598**	**#9698**
6670 (as a 2770) *	**#9596**	**#9696**
Series/1	**#9594**	**#9694**
System/3	**#9580**	**#9680**
System/7	**#9590**	**#9690**

5415 Processing Unit (cont'd)

System/32	#9591	#9691
System/34	#9593	#9693
System/38	#9599	#9699
S/360 or S/370 (mdl 22 and up)	#9570	#9670
S/360 mdl 20	#9571	#9671

Note:
* Requires a no-charge RPQ.

Binary Synchronous Communications Controller (#2094): [System/3 mdl 15D] Provides the controller base for attachment of two additional binary synchronous communications lines. One or two additional lines are ordered as separate features (see under #4891 and #4892 below). BSCC can also provide the terminal polling function (depending on the terminal type attached) for the 1 or 2 lines and thereby reduce CPU loading. The BSCC can handle polling functions outboard of the mdl 15D CPU. Both lines operate independently in either a point-to-point or multipoint control station mode over nonswitched communication facilities at speeds up to 9600 bps. Point-to-point or multipoint control station mode of operation is selected during CCP generation. See the System/3 programming section for additional information. Text transparency is standard but applicable to EBCDIC coded data only.

BSCC Optional Specify Codes: One selection must be specified for each of the following four categories for each Line Base:

	#4891	#4892
1. Transmission Code:		
EBCDIC	#9080	#9090
ASCII	#9081	#9091
2. Line Speed:		
600 bps	#9300	#9400
1200 bps	#9301	#9401
2000 bps	#9302	#9402
2400 bps	#9303	#9403
4800 bps	#9304	#9404
7200 bps	#9305	#9405
9600 bps	#9306	#9406
3. Line Facility Attachment:		
2-Wire	#9310	#9410
4-Wire	#9311	#9411
4. Device Attachment (1 or more):		
3270	#9320	#9420
3600 *	#9321	#9421
3735	#9322	#9422
3740	#9323	#9423
5230	#9324	#9424
5280	#9332	#9432
5285	#9332	#9432
5288	#9332	#9432
Series/1	#9331	#9431
System/3	#9325	#9425
System/7	#9326	#9426
System/32	#9327	#9427
System/34	#9330	#9430
System/38	#9342	#9442
Other IBM	#9328	#9428
Other Non-IBM	#9329	#9429

Note:
* Requires no-charge RPQ.

Modems: One IBM modem can be attached to each Line Base (#3703 or #3704 required).

Modem	Data Rate (bps)
3863 mdl 1 or 2	2400
3868 mdl 1	2400
3872	2400
3864 mdl 1 or 2	4800, 9600
3868 mdl 2	4800

See M2700, 3863, 3864, 3865, and 3872 pages for information on modem features, communications capabilities and product utilization.

Communication Facility Attachments: The BSCC is designed to operate on communication facilities such as:

- Common carrier leased telephone services (voice grade).

  Class 3002 (600 bps)
  1200 bps with Integrated Modem (#5803, #5804)
  2400 bps with IBM 3863 mdl 1 or 3872

  Class 3002 with C1 conditioning (4800 bps)

  Class 3002 with C2 conditioning (7200 bps)
- Private or private carrier facilities equivalent to the above.
- AT&Ts Private Line Data-Phone® Digital Service (#5813, #5814) to 9600 bps.

Reference: For additional information concerning modems and communications facilities, see M2700 pages. See also machines pages for devices planned for attachment.

Limitations: Cannot be installed with the MLTA RPQ (S40028). Operation on nonswitched facilities only. **Maximum:** One per 5415 mdl D. **Field Installation:** Yes. **Cables:** See "Accessories" and *Installation Manual - Physical Planning* (GA21-9084). **Prerequisites:** See "Processing Unit Expansion Features Configurator" for possible expansion feature requirements.

EIA Local Attachment (#3601, #3602): Permits attachment of one binary synchronous IBM system, control unit, or terminal with EIA RS-232-C type interface to System/3 mdl 15 without the use of a data communications line and modems at either device. This attachment may be used where the device is located within a distance to the 5415 that is reached by the device's EIA attachment cable (i.e., the cable normally used to attach to an external modem). This feature provides the clocking signals for the System/3 mdl 15's BSCA and for the attached device's communications adapter therefore, the System/3's Internal Clock (#4703, #4723) cannot be installed on the same adapter with this feature. Data transfer rates of 2400, 4800, and 8000 bps are supported by this feature. See "Transfer Rate" above. #3601 for #2074 or #3602 for #2084. **Limitations:** Cannot be installed with Internal Clock (#4703, #4723), or Auto-Call (#1315, #1325). **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** #2074 or #2084, **#9753**, **#9754**, **#9758** or **#9853**, **#9854**, **#9858**, **#9484** or **#9584**, and **#9391** or **#9381**. See appropriate machines pages for attached device prerequisites.

EIA Local (#3603, #3604): Permits local attachment of one binary synchronous IBM system, control unit, or terminal with EIA RS-232-C type interface to the 5415 without the use of communications line or modem. The external modem cable of the attached device connects directly to the 5415 when this feature is installed. Data clocking for transfer rates of 2400 bps, 4800 bps, 7200 bps and 9600 bps is provided by this feature for both the 5415 and the attached device. The device must be capable of functioning as either a point-to-point or a multipoint tributary station at the transfer rate provided by this feature. **Limitations:** Cannot be installed on the same Line Base with EIA Interface (#3703, #3704) or 1200 bps Integrated Modem (#5803, #5804) or DDS Adapter (#5813, #5814). **Maximum:** One per Line Base. **Prerequisites:** #4891 for #3603, #4892 for #3604. One of four transfer rates: 2400 bps, 4800 bps, 7200 bps, or 9600 bps must be specified on the applicable Line Base.

EIA Interface (#3703, #3704): Provides an interface for attachment of an external modem meeting EIA RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy.

Modems: One IBM modem can be attached to each Line Base (#3703, #3704 required):

Modem	Data Rate (bps)
3863 mdl 1 or 2	2400
3868 mdl 1	2400
3872	2400
3864 mdl 1 or 2	4800
3868 mdl 2	4800
3865 mdl 1 or 2	9600

Limitations: Cannot be installed on the same Line Base with the 1200 bps Integrated Modem (#5803, #5804) or DDSA (#5813, #5814) or EIA Local (#3603, #3604). **Maximum:** One per Line Base. **Field Installation:** Yes. **Prerequisites:** #4891 for #3703 or #4892 for #3704. See "Cables" under "Accessories".

5415 Processing Unit (cont'd)

Multi-Function Card Unit Attachment 250/60/60 cpm (#4100): To attach a 5424 Multi-Function Card Unit mdl A1. **Limitations:** Cannot be installed with #1601, #4130, or #8100. **Maximum:** One. **Field Installation:** Yes.

Multi-Function Card Unit Attachment 500/120/120 cpm (#4101): To attach a 5424 Multi-Function Card Unit mdl A2. **Limitations:** Cannot be installed with #1601, #4130, or #8100. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4100.

1442 Mdl 6/7 Card Read Punch Attachment (#4130): To attach a 1442 mdl 6 or 7. **Limitations:** Cannot be installed with #1601, #4100, #4101, or #8100. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** A 5422 with 5415 mdls A17 through A20. #3950 on the 1442. #5502 must be ordered with mdl B, C, or D.

1403 Mdl 5 Printer Attachment 465 lpm (#4135): To attach a 1403 Printer mdl 5. **Limitations:** Cannot be installed with #4140 or #4150. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4160 and a 5421 with **#9185**.

1403 Mdl 2 Printer Attachment 600 lpm (#4140): To attach a 1403 Printer mdl 2. **Limitations:** Cannot be installed with #4135 or #4150. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4160 and a 5421.

1403 Mdl N1 Printer Attachment 1100 lpm (#4150): To attach a 1403 Printer mdl N1. **Limitations:** Cannot be installed with #4135 or #4140. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #4160 and a 5421.

1403 Basic Attachment Control (#4160): To attach all mdls of a 1403 Printer. **Maximum:** One. **Field Installation:** Yes.

Display Adapter (#4601): For direct local attachment of 3270 devices (3277 mdls 1, 2, 3284 mdls 1, 2, 3286 mdls 1, 2, 3287 mdls 1, 2, 3288 mdl 2) in any combination. Includes the basic control and interface for three devices. The 3270 device cables, maximum length 600m (2,000 feet) plug directly into the 5415 when this feature is installed. For attachment of additional 3270 devices (maximum of 30), see Device Interface (#4602). Programming support for the attached devices is provided by the Multiline/Multipoint interface and the Communication Control Program feature of the SCP. **Limitations:** Cannot be installed with BSCA-2 (#2084). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5733. See "Processing Unit Expansion Features Configurator" for possible requirements for additional expansion features. **#9089** required on attached 3270 devices. See applicable machines pages for 3270 device ordering details.

Device Interface (#4602): Provides for attachment of three additional 3270 devices (3277 mdls 1, 2, 3284 mdls 1, 2, 3286 mdls 1, 2, 3287 mdls 1, 2, 3288 mdl 2) in any combination to the Display Adapter (#4601). **Maximum:** Nine, for a maximum of 30 attached devices. **Field Installation:** Yes. **Prerequisites:** #4601.

Internal Clock (#4703, #4723): Generates synchronizing and timing signals for BSCA operation when they are not provided by the attached modem. When this feature is installed on System/3 mdl 15, all other BSC stations attached to the same data link must also be equipped with a similar Internal Clock feature. See IBM, for determination of requirements with planned modems. #4703 for #2074 and #4723 for #2084. Will service rates 600 bps, 1200 bps, 2000 bps, or 2400 bps. **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** #2074 or #2084, and one of the rate options listed above, see "Transfer Rate".

Internal Clock (#4733, #4734): Provides business machine clocking at 1200 bps for the external or integrated modem operating at that line speed. This feature is always required for the 1200 bps Integrated Modem (#5803, #5804). **Limitations:** 1200 bps only. For use only when modem does not provide clocking. **Maximum:** One per Line Base. **Field Installation:** Yes. **Prerequisites:** #4891 for #4733, #4892 for #4734.

Local Communications Adapter (#4765): Permits local attachment of one binary synchronous IBM control unit or terminal with EIA RS-232-C type interface to a System/3 mdl 15. The external modem cable of the device will attach directly to the 5415 when this feature is installed. Data transfer rate is 2400 bps only. EBCDIC transmission code must be specified when applicable on the attached device. See the System/3 programming pages for devices supported by IBM programming. **Limitations:** Cannot be installed with BSCA-1 (#2074). Data exchange with attached device is non-transparent only. For data-transparent operation contact IBM. **Maximum:** One per 5415. **Field Installation** Yes. **Prerequisites:** Requires the same Processing Unit Expansion Features as BSCA-1 (#2074). See "Processing Unit Expansion Features Configurator" for possible requirements for additional expansion features. See appropriate machines pages for attached device prerequisites. **Specify:** See "BSCA-1 and BSCA-2 Optional Specify Codes" above for applicable device attachment codes.

1200 bps Integrated Modem (#4781, #4782): A modem for BSC data transmission at 1200 bps over nonswitched facilities or switched network. Available in two different versions: #4781 Nonswitched and #4782 Switched with Auto-Answer. Attachment to nonswitched (2- or 4-wire) facilities is via an IBM-provided cable directly to the line, Type 3002 facility. Attachment to the switched network is via an IBM provided cable to FCC registered protective circuitry of the CBS Type (or equivalent) provided by the user. The device communicating with System/3 mdl 15 must also be equipped with a 1200 bps Integrated Modem or line adapter. **Limitations:** Cannot be installed with sub-features Auto-Call (#1315, #1325) or EIA Local Attachment (#3601, #3602). #4781 and #4782 cannot be installed together on the same BSCA. **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** #2074, #5201, #4703 and **#9751**, or #2084, #5202, #4723 and **#9851**.

Line Base, 1st (#4891): For attachment of the first communications line to the BSCC (#2094) through one of the line interface features. One of the line interface features #3603, #3604, #3703, #3704, #5803, #5804, #5813, #5814, must be ordered for each Line Base depending on the type of communication facility and modem to be used. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2094. **Specify:** See "BSCC Optional Specify Codes" above for selection of transmission codes, line speeds, etc.

Line Base, 2nd (#4892): For attachment of the second communications line to the BSCC (#2094) through one of the line interface features. One of the line interface features #3603, #3604, #3703, #3704, #5803, #5804, #5813, #5814, must be ordered for each Line Base depending on the type of communication facility and modem to be used. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #2094 and #4891. **Specify:** See "BSCC Optional Specify Codes" above for selection of transmission codes, line speeds, etc.

Modem Base (#5201, #5202): Provides for mounting of one 1200 bps Integrated Modem (#4781, #4782). #5201 for #2074 and #5202 for #2084. **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** #2074 for #5201 or #2084 for #5202.

Power Supply Expansion A (#5501): Provides additional processing unit 6 volt power. Required when certain RPQs are attached. Contact IBM for details. **Maximum:** One. **Field Installation:** Yes.

Power Supply Expansion B (#5502): Provides additional processing unit 24 V power. Required on mdls B, C, and D when 5424 is not attached, or if Channel Terminator Feature #1601 is installed. **Maximum:** One. **Field Installation:** Yes.

Processing Unit Expansion 1 (#5733): Provides additional processing unit power supply and connections. Refer to the "Processing Unit Expansion Features Configurator" below to determine requirements. May be required when certain RPQs are ordered. Contact IBM for details. **Maximum:** One. **Field Installation:** Yes.

Processing Unit Expansion 2 (#5734): Provides additional processing unit power supply and connections. May be required when certain RPQs are ordered. Contact IBM for details. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5733.

Processing Unit Expansion 3 (#5735): Provides additional processing unit power supply and connections. May be required when certain RPQs are ordered. Contact IBM for details. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5733 and #5734.

Note: If RPQs are on the 5415, contact IBM.

1200 bps Integrated Modem (#5803, #5804): A modem for data transmission at 1200 bps over nonswitched (2- or 4-wire) facilities. Attachment to the communication facility is via an IBM-provided cable directly to the common carrier Type 3002 channel or equivalent. All devices communicating with System/3 must be equipped with a compatible IBM 1200 bps Integrated Modem/Line Adapter. **Maximum:** One per Line Base. **Field Installation:** Yes. **Limitations:** Cannot be installed on the same Line Base with the EIAInterface (#3703, #3704) or DDSA (#5813, #5814) or EIA Local (#3603, #3604). Nonswitched facilities only. **Prerequisites:** #4733 for #5803 or #4734 for #5804. #4891 for #5803 or #4892 for #5804. See "Cables" under "Accessories".

DDS Adapter (#5813, #5814): An integrated adapter for attachment to the AT&T nonswitched Data-Phone® Digital Service network. The DDSA interfaces to a DDS channel service unit at the customer-site termination of the DDS network. Line speeds of 2400 bps, 4800 bps, and 9600 bps are available. **Limitations:** Cannot be installed on the same Line Base with Interface (#3703, #3704) or 1200 bps Integrated Modem (#5803, #5804) or EIA Local (#3603, #3604). **Maximum:** One per Line Base. **Field Installation:** Yes. **Prerequisites:** #4891 for #5813 or #4892 for #5814. One of the three line speeds: 2400 bps, 4800 bps, or 9600 bps, must be specified on the applicable Line Base. **#9311** or **#9411**. See "Cables" under "Accessories".

Serial I/O Channel (#7081): To attach a 1255 Magnetic Character Reader or a 3881 Optical Mark Reader. **Maximum:** One. **Field Installation:** Yes.

Station Selection (#7477, #7487): Permits the System/3 mdl 15 to operate as a compatible member of the IBM family of BSC terminals on a multipoint communications line as a tributary station. #7477 is for #2074 and #7487 is for #2084. Will service rates of 600 - 9600 bps. **Limitations:** Cannot be installed with Auto-Call (#1315, #1325). **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** #2074 or #2084, **#9382** or **#9382**, and one of the rate selections, 600 to 9600 bps. **Note:** Control station operation on a System/3 mdl 15 BSCA with Station Selection installed is possible, but such operation cannot be performed concurrently with tributary station operation on that adapter. Additionally, a change in modems or in modem operation may be required to utilize the same adapter (at different periods of time) as a tributary station and as a control station adapter. **#9484** or **#9584** must be specified when control station operation is to be performed whether or not Station Selection (#7477, #7487) is installed.

Text Transparency (#7850, #7851): Permits the System/3 mdl 15 to transmit or receive 8-bit binary data and EBCDIC coded data. #7850 for #2074 and #7851 for #2084. **Limitations:** Cannot be installed with ASCII Transmission Code (**#9061**, **#9071**). Available with medium-speed (600 to 9600 bps) and with wideband attachments (19,000 to 50,000 bps). Limitations on the use of this facility are described in SRL (GA27-3004). **Maximum:** One per BSCA. **Field Installation:** Yes. **Prerequisites:** #2074 or #2084, and **#9060** or **#9070**.

3284 Attachment (#7901): To attach a 3284 Printer mdl 1 or a 3287 Printer mdl 1 or 2. **Maximum:** One. **Field Installation:** Yes.

3411 Magnetic Tape Attachment (#7951): To attach a 3411 Magnetic Tape Unit and Control. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5733, #5734, or #5735 may be required dependent upon other features. Refer to "Processing Unit Expansion Features Configurator" to determine requirements.

2501 Attachment (#8090): To attach a 2501 Card Reader mdl A1 or A2. **Limitations:** 2501 and 5424, 2560, 1442, or Channel Terminator Feature #1601. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #5733, #5734, or #5735 may be required dependent upon other features. #3630 on the 2501. Refer to "Processing Unit Expansion Features Configurator" to determine requirements.

2560 Multi-Function Card Machine Attachment (#8100): To attach a 2560 Multi-Function Card Machine. **Limitations:** Cannot be installed with #1601, #4100, #4101, or #4130. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** 5422 with 5415 mdls A17 through A20. #5502 must be ordered with mdl B, C, or D. **Specify: #9801** if 2560 mdl A1 is to be attached.

3741 Attachment (#8220): To directly attach a 3741 mdl 1, 2, 3, or 4. **Limitations:** For 3741 mdls 3 and 4, System/3 does not support the Application Control Language (ACL). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** See "Processing Unit Expansion Features Configurator" for possible requirements for additional expansion features. #3265 or #3266 on 3741. #1601 on Cardless mdl B, C, or D.

MODEL CONVERSIONS

All model conversions are field installable. For a 5410 or 5415 mdl A to 5415 mdl B, C, or D conversion where an installed 5424 is to be moved to the new system, an MES must be submitted to remove the 5444(s) from the 5424. This MES must also delete **#9400**, and if a second 5444 is installed, **#9401** or **#9402** (all from the 5424). Replaced parts from any model conversion become the property of IBM.

ACCESSORIES

Cables: BSCA (#2074, #2084) and BSCC (#2094) require an appropriate cable order unless EIA Local Attachment (#3601, #3602) is ordered, see *Installation Manual - Physical Planning* (GA21-9084).

SUPPLIES (None)

5424 MULTI-FUNCTION CARD UNIT
Models A1, A2

PURPOSE

A multi-function card input/output unit for the 4331 Model Group 1 or 2 Processor or System/3 model 10, 12, 15 or System/38 ... uses the 96-column card.

MODELS

	Speed (Read/Punch/Print)
Model A1	250/60/60* cpm
Model A2	500/120/120* cpm

* **Print Speed:** Is at the maximum rate of 60 or 120 cards per minute when printing on any or all of the first three lines. Printing on the fourth (lower) line will cause reduction in throughput regardless of whether or not printing occurs on any or all of the first three lines. Resultant throughput is 48 cpm for a mdl A1 and 96 cpm for a mdl A2. Uses a cassette ribbon replaceable by the customer.

Limitations: Detailed disclosure specifications describing the 96-column card are available from the IBM Corp., Commercial Development Office, Armonk, New York. Card configurations or card stocks which do not conform to these specifications may result in unsatisfactory machine performance.

Cannot be attached to a System/3 Mdl 10 or Mdl 12 when a 1442 Card Read Punch is attached.

Cannot be converted to a System/3 Mdl 15 when a 1442 Card Read Punch or a 2560 MFCM is attached on the System/3 Mdl 15.

OCR type fonts for use with current line IBM Optical Character Reading equipment are not available.

Maximum: One 5424 can be attached to a 4321 or 4331 Processor. or a System/3 mdl 10, 12, 15 or System 38.

Prerequisites: A Multi-Function Card Unit Attachment (#3901) on the 4321 or 4331 Mdl Group 1 or 2 Processor, 4331 Attachment (#6510) on the 5424. A Multi-Function Card Unit Attachment (#4100 or #4101) on the 5410, 5412 or 5415 Processing unit. On System/38 an MFCU Attachment (#1220 or #1221) is required.

HIGHLIGHTS

Provides the combined functions of a card reader, punch, collator and interpreter in one unit. Permits collating, gangpunching, reproducing, summary punching, punching of calculated results, printing, and classifying of cards in a single pass of the cards. Card sorting is also possible using a multiple pass method under program control. In a disk oriented System/3 mdl 10 or mdl 15A, the 5444 Disk Storage Drives are housed in drawers beneath the front of the 5424 ... see "Specify."

Input Section: Separate primary and secondary card hoppers, each with a 2000 card capacity, feed cards independently to a common read station and on into separate wait stations. Depending upon the model, rated serial reading is at 250 or 500 cards/minute from either hopper. The common reading unit is checked for proper functioning on each read cycle. The card code read is 6 rows consisting of B, A, 8, 4, 2, 1 punches representing a 64-character set.

Output Section: From separate wait stations, cards are fed to a common punch station, through the punch and cornering stations to the print station, where up to 4 lines with up to 32 characters per line can be printed on the card. Line designation is determined by the stored program. Characters represented are the standard 64-character set corresponding to the 96-column card code. Printing is by engraved typewheel. Cards are then selected into any one of the 4 stackers, each with a 600-card capacity. Depending upon the model, rated serial punching is at 60 or 120 cards/minute.

Multi-Function: With the ability to move cards from either hopper under independent control to the punching station and with complete stacker selection flexibility, the common card functions of collating, reproducing, gangpunching, summary punching and selective stacking can be accomplished.

Bibliography: GA21-9167

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (AC, 1-phase, 60 Hz): **#9902** for 208V or **#9904** for 230V ... must be consistent with system voltage.
- Color: **#9066** (Pearl White) must be specified.

  For System/3, specify **#9041** for red, **#9042** for yellow, **#9043** for blue **#9045** for gray, or **9046** for white ... must be consistent with 5410, 5412, or 5415 color. For 5424 ordered with System/38, #9066 (Pearl White) must be ordered.
- Lower covers: System/3 mdl 10 or a System/3 mdl 15 only is if a 5444 is to be installed): **#9400** if one 5444 is to be installed ... **#9401** if two 5444s are to be installation ... **#9402** if a second 5444 is to be added to an installed system.

  Note: **#9400** or **#9401** can be plant or field installed ... **#9402** is for field installation only. MES orders for **#9400**, **#9401**, or **#9402** is for field installation only. MES orders for **#9400**, **#9401**, or **#9402** on a System/3 mdl 10 require the serial no. of the 5410 Processing Unit.

  Removal: If two 5444s are installed and one is to be removed from the system, the MES must indicate deletion of **#9401** or **#9402** and installation of **#9400** (one disk drive only). For conversion of a 5415A mdl CPU to a 5415B, 5415C, or 5415D mdl, or for conversion from a 5410 CPU, to a 5412 or 5415 the MES must indicate deletion of **#9400**, and if a second 5444 is installed, deletion of **#9401** or **#9402**.

SPECIAL FEATURE

System/38 Attachment (#6500): To attach a 5424 to System/38, **Field Installation:** No **Prerequisites:** MFCU Attachment (#1220/#1221) is required on System/38.

4331 Attachment (#6510): To attach a 5424 mdl A1 or A2 to a 4331. **Field Installation:** No. **Prerequisites:** #3901 on 4331.

MODEL CONVERSIONS

Model changes are field installable.

ACCESSORIES (None)

SUPPLIES (None)

5525 SYSTEM UNIT

PURPOSE

The 5520 Administrative System is a shared logic system designed to support text processing, file processing, and electronic document distribution services for a wide variety of organizations. Text-oriented hardware and a licensed program have been combined to provide facilities for document (including file) creation, revision, storage, retrieval, and printing as well as optional local and/or remote document distribution.

MODELS

Model 20	020
Model 21	021
Model 30	030
Model 31	031
Model 32	032
Model 40	040
Model 50	050
Model 51	051

Configuration Overview: [Mdls 20, 30, 40, and 50]

	20	30	40	50	Notes
Using Program 5611-SS1					1
# Display Station Lines	1-4	1-4	1-8	1-8	
# Display Stations Attachable	1-6	1-12	1-18	1-18	2, 3
Disk Storage Capacity (MB)	29	29	65	130	4
Online Diskettes	1	1	1	23	5
# Printer/ Communication Lines	0-2	0-4	0-8	0-16	6, 7, 8
# Printers Attachable *	0-3	0-6	0-10	0-12	6, 7, 8, 9
# Mag Card Units	0-1	0-1	0-1	0-1	10

* May include a single (in exceptional cases more than one) 6670.

Notes:

1. Licensed Program 5611-SS1 supports mdls 20, 30, 40, and 50. See 5520 programming pages for details.
2. One 5253 Display Station, to be designated as the primary display station, must be located within 6.1 meters (20 feet) of the System Unit and in the same room.

   Not more than seven 5253 display stationsor 5150 Personal Computers per line. 5254 Dual Display Stations count as two each. May be multidropped up to 1,524 cable-meters (5,000 cable-feet) from the System Unit.A 5150 should not be used as the 5520 primary or alternate display station. The customer service representative must use the 5253 as the master display station to perform diagnostics. See also the "Special Note" following.
3. When attached to the 5525 System Unit under control of licensed program 5611-SS1, the following characteristics apply to the 5150 emulating a 5253 or 5254:

Maximum line length	172 characters
Maximum page length	125 lines
Overall page character count maximum of approximately	7,000 characters

   Double underscore is obtainable under keyboard emulation. Blinking, reverse image, and non-display are under control of the program and not directly available to the operator.
4. Disk storage is used to hold the licensed program, a library of documents available for text processing functions, and transient storage of documents in process of distribution. The total document capacity will be influenced by a number of factors. See "Special Note" following.
5. The diskette drive supports Diskette 2D. Each customer-supplied diskette (2D) holds approximately one million bytes of information. However, since the diskettes are removable, the total offline storage is limited only by the number of diskettes available.
6. Each line must be designated as one of these types:
   - Local Device Control (LDC) (for attachment of 5219, 5257, 5258, 6670, and/or another 5525), no more than eight LDC lines per 5525.
   - Attachment to switched communication lines.
   - Attachment to nonswitched communication lines.

   Note: A dedicated nonswitched SDLC communications line may also be used to attach a 6670 Information Distributor as a remote printer.

   See 5520 programming pages for details of devices supported for remote attachment via communication lines.
7. For multi-line configuration, the lines are controlled by a distribution controller (except on mdl 50, which requires a second controller for optional lines 9 to 16).
8. The distribution controllers operate at specific numbers of bits per second and with specific number of receive buffers per line. The aggregate concurrent bps and concurrent buffer allocation requirements of devices attached to each controller should not exceed its specific capacities; see the "Special Note" below.
9. Printers may be multidropped up to 1,524 cable-meters (5,000 cable-feet) radially from the System Unit on an LDC line. Maximum eight on one line (5525 mdl-dependent). 5219, 5257, 5258, 6670 may be mixed on a single line. A 5525 System Unit may be substituted for a printer on any LDC line where the printer attaches via feature #1702 or #1704. In such a configuration the primary system unit controls the printers. . See also the "Special Note" following.
10. The Mag Card Unit may be up to 4.6 meters (15 feet) from the System Unit. It is supported by Release 2 or 3 of Licensed Program 5611-SS1.

Configuration Overview: [Mdls 21, 31, 32, and 51]:

	21	31	32	51	Notes
Using Program 5611-SS2					1
# Display Station Lines	1-4	1-4	1-4	1-8	
# Display Stations Attachable	1-8	1-12	1-15	1-36	2, 3, 12
Disk Storage Capacity (MB)	29	29	58	130	4
Online Diskettes	1	1	1	23	5
# Printer/ Communication Lines	0-2	0-4	0-8	0-16	6, 7, 8, 11
# Printers Attachable *	0-3	0-6	0-8	0-12	6, 7, 8, 9
# Mag Card Units	0-1	0-1	0-1	0-1	10

* May include a single (in exceptional cases more than one) 6670.

Notes:

1. Licensed Program 5611-SS2 supports mdls 21, 31, 32, and 51 with the functions of text processing and system management functions, electronic document distribution, and files processing and stored procedures. Also, document distribution support to a host S/370 (BSC), 3270 emulation and printer support for a 6670 Information Distributor (SDLC). See 5520 programming pages for details.
2. One 5253 Display Station, to be designated as the primary display station, must be located within 6.1 meters (20 feet) of the System Unit and in the same room.

   Not more than seven 5253 Display Stations, 5150 or 5160 Personal Computers per line. 5254 Dual Display Stations count as two each. May be multidropped up to 1,524 cable-meters (5,000 cable-feet) from the System Unit. A 5150 or 5160 should not be used as the 5520 primary or alternate display station. See also the "Special Note" following.
3. When attached to the 5525 System Unit under control of Licensed Program 5611-SS2, the following characteristics apply to the 5150 or 5160 emulating a 5253 or 5254:

Maximum line length	255 characters
Maximum page length	125 lines
Overall page character count maximum of approximately	8,000 characters

5525 System Unit (cont'd)

Double underscore is obtainable under keyboard emulation. Blinking, reverse image, and non-display are under control of the program and not directly available to the operator.

4. Disk storage is used to hold the licensed program, a library of documents available for text processing functions, and transient storage of documents in process of distribution. The total document capacity will be influenced by a number of factors. See "Special Note" following.
5. The diskette drive supports Diskette 2D. Each customer-supplied diskette (2D) holds approximately one million bytes of information. However, since the diskettes are removable, the total offline storage is limited only by the number of diskettes available.
6. Each line must be designated as one of these types:
   - Local Device Control (LDC) (for attachment of 5219, 5229, 5257, 5258, 6670, and another 5525 System Unit), no more than eight LDC lines per 5525 (mdl-dependent).
   - Attachment to switched communication lines.
   - Attachment to nonswitched communication lines.

   Note: A dedicated nonswitched SDLC communications line may also be used to attach a 6670 Information Distributor as a remote printer.

   See 5520 programming pages for details of devices supported for remote attachment via communication lines.
7. For multi-line configuration, the lines are controlled by a distribution controller (except on mdl 51, which requires a second controller for optional lines 9 to 16).
8. The distribution controllers operate at specific numbers of bits per second and with specific number of receive buffers per line. The aggregate concurrent bps and concurrent buffer allocation requirements of devices attached to each controller should not exceed its specific capacities; see the "Special Note" below.
9. Printers may be multidropped up to 1,524 cable-meters (5,000 cable-feet) radially from the System Unit on an LDC line. Maximum eight on one line (5525 mdl-dependent). 5219, 5229, 5257, 5258, and 6670 may be mixed on a single line. See "Special Note" following.
10. The Mag Card Unit may be up to 4.6 meters (15 feet) from the System Unit. It is supported by Licensed Program 5611-SS2.
11. 5525 System Units may be attached to other 5525 System Units on any LDC line via features #1702 and #1704. See following "Special Note".
12. It is strongly recommended that the 5520 Performance Estimator be run whenever more than 18 5253 displays or Personal Computers or a combination thereof are attached to a mdl 51. Out of the 36 display stations that can be attached, 24 can be concurrently active. (18 active if all are performing 3270 functions.) Displays can be designated as "reserved" or "contention". To reduce sign-on contention, displays should not be designated as reserved unless absolutely necessary.

Special Note:

The 5525 System Unit provides a large degree of configuration flexibility as already described, but there are some physical limitations as noted which must be applied, and also some practical limitations which must be respected for optimum performance of the system. System capacity and performance will be influenced by the nature of the work being undertaken, the format and content of documents being processed, and the incidence of concurrent activity.

Use of the Performance Estimator (AN5520) available under DBS is highly recommended for guidance as to the viability of a given configuration in a described workload environment.

Configuration consistency and guidance may be obtained by use of the 5520 Administration System Online Configurator (CF5520), also available under DBS.

Minimum Configuration:

- 5525 System Unit (mdl 20, 21, 30, 31, 32, 40, 50, or 51).
- 5253 Display Station or 5254 Dual Display Station.
- #4610 (92-character) Keyboard or #4611 (96-character) Keyboard.

HIGHLIGHTS

The 5525 System Unit is the heart of the 5520 Administrative System and all other devices are attachable to it. It contains the circuitry for controlling and processing information flowing through the system, and internal storage for holding the licensed program and active documents.

Attachable to the 5525 are:

- Multiple 5150 or 5160 Personal Computers (with the 5520 Administrative System's Personal Computer Attachment). If the 5150s or 5160s are connected to the 5525, the Personal Computer/Display Station Emulation Adapter (#2880) must be provided by the user.
- Multiple 5219s, 5229s (on mdls 21, 31, 32, and 51), 5257s (impact printers), 5258s (ink jet printers), and 6670 Information Distributors.
- Multiple 5253 Display Stations and 5254 Dual Display Stations. (The 5254 Dual Display Station has been withdrawn from marketing.)
- A single 5321 Mag Card Unit.
- A single 6670 Information Distributor (SDLC) used as a printer (may also be remotely located). Note: In exceptional cases multiple 6670s may be attached.
- Other 5525 System Units on an LDC line.

In addition, optional attachments and controls for communication lines are provided and the licensed programs (5611-SS1 for mdls 20, 30, 40, and 50; 5611-SS2 for mdls 21, 31, 32, and 51) are available to support the system.

Highlights include:

- Choice of eight mdls giving wide range of attachment capability, internal storage, and processing power.
- Multiple integrated processors and controllers to enhance performance and facilitate overlap capability.
- Integrated nonremovable disk storage standard on all mdls.
- Configuration flexibility through multiple local attachment lines and optional attachment of remote devices via communications lines for document distribution.
- Diskette read/write capability standard on all mdls to archive/retrieve documents for document distribution.
- Optional attachment for document distribution to switched and/or nonswitched communication lines operating at up to 4800 bps switched or up to 9600 bps nonswitched (with either BSC or SNA/SDLC protocols per line supported by Licensed Program 5611-SS1 for mdls 20, 30, 40, and 50 and by Licensed Program 5611-SS2 for mdls 21, 31, 32, and 51).
- Keylock option.
- Optional attachment of the 5321 Mag Card Unit (see 5520 programming pages for limitations).
- Modem flexibility:
  - Optional 1200 bps integrated modems both switched and nonswitched.
  - Optional EIA RS-232-C or CCITT V.24/V.28 recommended interface.
  - Optional business machine clocks to support modems which do not have clocking facility (1200 bps).
  - Auto-answer standard.
  - Auto-call feature option on all switched communication lines meeting the EIA RS-366 or CCITT V.24-200 series/V.25/V.28 recommended interface (not using the 1200 bps integrated modems).

Problem Determination Procedures: Problem determination and recovery procedures are provided by IBM with the 5525 supported by the 5520 Administrative Processing Programs (5611-SS1 and 5611-SS2), and include the use of the 5219, 5229, 5253, 5254, 5257, and 5258. These procedures help provide increased availability of the System Unit and of the system itself by assisting with problem determination and either recovery or work-around procedures for certain types of device or system problems. The procedures are described in material accompanying the attached units (see relevant sales manual pages for details) and in the HELPs and message facilities of the program as well as the following manuals:

IBM 5219/5229 Printer Operators Guide (GA23-1009)
IBM 5257 Printer Operators Guide (GA23-1004)
IBM 5258 Printer Operators Guide (GA23-1005)
IBM 5520 Administrative System:
- *Messages & Recovery Aids Manual* (SC23-0733) for 5611-SS1
- *Recovery Aids Manual* (SC23-0756) for 5611-SS2
- *Messages Manual* (SC23-0749) for 5611-SS2

IBM 5520/Personal Computer Attachment Program User's Guide (P/N **7033705**)

These procedures are designed to be easy to follow and use by the customer, and it is the customer's responsibility to follow them prior to calling for IBM service.

5525 System Unit (cont'd)

5525 System Unit: The System Unit consists of frames, covers, power supplies, cable, logic circuits, and processors. It is composed of a processing unit, disk storage, memory, a diskette drive, facilities for addressing storage and performing processing, standard I/O control, optional additional I/O control, and optional communications control.

Processing Unit:

- Multiple processors and controllers operate in parallel.
- Data and instructions are stored as EBCDIC characters (8-bit byte plus ninth bit for parity checking) in storage.
- I/O and processing are overlapped except for diskette and disk data transfer with other disk read/write operation.

Disk Storage:

- Integrated, nonremovable disk storage.
- Access time 27 millisecond average, excluding rotational delay.
- Up to 1.031 megabytes/second data transfer rate.

Diskette Drive: The diskette drive supporting Diskette 2D.

- Standard on mdls 20, 21, 30, 31, 32, and 40.
- Facilitates offline transfer of documents between 5525s.
- Archive/retrieve facility for offline storage, backup, or security of document library.
- Diskette affords the use of removable, economical high capacity reusable media.
- Read/write operations are overlapped with processing and other device functions except disk storage data transfer.
- Stores up to one million bytes of data per diskette in double-density recording.

Diskette Magazine Drive: The diskette drive supporting Diskette 2D.

- Standard on mdls 50 and 51.
- Transfers data at speeds up to 125KB per second.
- Accepts two 10-diskette magazines.
- Up to three diskettes may be manually loaded in addition to the magazines.
- Same functional benefits as for diskette drive.

Display Station Control:

- Standard on all mdls.
- Provides for 3270 Emulation for mdls 21, 31, 32, and 51 with Function Extension (#3270) on the 5253 Display Stationor on 5150 or 5160 Personal Computers emulating a 5253. **Note:** The only supported keyboard language group is English US (**#2956**).
- Provides for direct attachment of the 5150 or 5160 to the 5253 and the 5254.
- Up to 36 display stations are attachable (mdl-dependent).
- Four cable ports on mdls 20, 21, 30, 31, and 32 and eight on mdls 40, 50, and 51 are standard for the attachment of the display stations.
- Twinaxial cabling allows up to seven display stations to be connected to a single port (mdl-dependent).
- Maximum allowable cumulative length of each cable is 1,524 meters (5,000 feet).

Printer Attachment:

- Special features allow attachment of up to 12 printers (5525 mdl-dependent).
- 5219 and 5257 Printers providing high-quality impact print wheel printing.
- 5229 Printer provides high-quality impact print wheel printing requiring paper sizes up to 19 inches wide with a 17-inch writing line (mdls 21, 31, 32, and 51 only).
- 5258 Printer providing high-quality non-impact ink jet printing.
- 6670 Information Distributor (SDLC) providing high-quality non-impact laser printing. **Note:** Some means of creating Mag Cards is required to support this attachment.
- Twinaxial cabling allows up to eight intermixed 5219s, 5229s, 5257s, 5258s, and 6670s to be attached to a single port (mdl-dependent). **Note:** It is not recommended to intermix a 6670 with another printer on the same line where printer performance is a key concern.
- Maximum allowable accumulative length of each cable is 1,524 meters (5,000 feet). **Note:** A 5525 System Unit may be substituted for a printer on a line attached via features #1702 or #1704. This is an alternative to attaching a 5525 via communications line for document distribution. In such a configuration, the primary system unit controls any printers on that line. Note also that a 6670 Information Distributor (SDLC) may be remotely located as a printer to the system via a dedicated nonswitched SDLC communications line. Line speed options will normally be 4800 bps for the 6670 mdl 1 and 9600 bps for the 6670 mdl 2.

System Unit Attachment: 5525 System Units may be attached to other 5525 System Units on any LDC line via features 1702 or #1704 by using 5525 Cable-Thru (#2680). These features will also allow attachment of 5525 System Units on LDC lines shared with printers. However, in such a configuration the primary system unit controls any printers on that line.

Mag Card Attachment:

- Special feature allows attachment of a 5321 Mag Card Unit, cable-connected up to 4.6 meters (15 feet) from the 5525.
- Mag cards may be read or recorded (within limits) to assist, for example, with the conversion of existing mag card libraries. See 5520 programming pages for limitations.

Document Distribution: Control for Document Distribution Communications Facilities is provided by optional special features on the 5525 System Unit with Licensed Programs 5611-SS1 and 5611-SS2. Up to 16 communication lines are supported depending upon the mdl of the System Unit and number of lines allocated for printers. BSC and SNA/SDLC line protocols are provided.

- Point-to-point switched or nonswitched.
- Multipoint (nonswitched and SDLC only).
- Transmission rate up to 9600 bps (nonswitched) or 4800 bps (switched).
- 1200 bps integrated modems.
- Auto-answer or manual answer (modem-dependent).
- Optional Auto-Call feature for external modems meeting the EIA RS-366 or CCITT V.24-200 series/V.25/V.28 recommended interface.
- Optional EIA RS-232-C or CCITT V.24/V.28 recommended interface.
- BSC support to a variety of communicating IBM office machines and to a S/370 host.
- SNA/SDLC support to other 5525s or a S/370 host remotely attached (also to 5219s, 5229s, 5257s, 5258s, 6670s, and other 5525s locally attached).

Customer Responsibilities: The customer must be advised in writing of certain responsibilities related to the installation and maintenance of communications facilities/services as well as the IBM equipment. For further information, see M2700 pages and "Teleprocessing" in the GI section.

The marketing representative must have the customer obtain a firm installation date for the start of transmission services (including any required modems) prior to Order Confirmation.

Customers should be reminded that they are responsible for conforming the use of the system to applicable statutes and regulations relating to the distribution of information both within the U.S. and also to, from, or between other countries.

Customers should be advised of their responsibility for problem determination of the 5150 or 5160 when using hardware feature #2887, or software features #2880, #2884, or #2888 for attaching the 5150 or 5160.

Publications: *IBM 5520 Administrative System Introduction* (GC23-0702), *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 for mdls 20, 30, 40, and 50; or GA23-1011 for mdls 21, 31, 32, and 51), *IBM 5520 Administrative System Messages* (SC23-0749), and *IBM 5520 Administrative System Recovery Aids* (SC23-0756 for mdls 21, 31, 32, and 51; or SC23-0733 for mdls 20, 30, 40, and 50).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): Specify **#9884** for 208V, **#9886** for 230V. A locking plug is provided (requires customer locking type receptacle).
- Power Cord: Standard power cord is 2.4 meters (8 feet), no specify required. Some localities restrict power cord length to 1.8 meters (6 feet). If this length is required, specify **#9986**.
- Color: Pearl White (no specify required).
- Cables: One modem cable is required for attaching the 5525 to each switched or nonswitched communications line when an external modem is used. Specify **#9152** for a 6 meter (19.7 foot)

5525 System Unit (cont'd)

EIA Interface cable, and **#9153** for a 12 meter (39.4 foot) EIA Interface cable.

One auto-call cable is required for each pair of auto-call lines attaching the 5525 with Auto-Call to each communication facility. Specify **#9154** for a 6 meter (19.7 foot) cable, and **#9155** for a 12 meter (39.4 foot) cable.

- Attachment: Attachment of 5219, 5229, 5257, 5258, 5321, 6670, and another 5525 requires special features. See "Special Features".

SPECIAL FEATURES

Non-Communications Features

5321 Mag Card Unit Attachment (#1100): Required to attach the 5321 Mag Card Unit mdl 1 to the 5525. A 4.6 meter (15 foot) attachment cable and connector is included with the 5321. **Maximum:** One. **Field Installation:** Yes.

Local Printer Attachment (#1105): [Mdls 20, 21, 30, 31, 32] Provided to attach 5219, 5229 (mdls 21, 31, and 32 only), 5257, 5258, and/or 6670 through a single port to a 5525 where document distribution is not required. Customer-supplied twinaxial cable and connector is required to attach the printers. **Note:** Due to speed limitations, this attachment is not recommended for the 6670 where printer performance is a key concern. **Limitations:** For mdls 20, 21, 30, 31, and 32 only. On mdls 20 and 21, the rated speed of the feature is 1200 bps and a maximum of three printers can be attached. On mdls 30, 31, and 32 the rated speed of the feature is 2400 bps and a maximum of six (eight on mdl 32) printers can be attached. Requires Local Device Control (#4710) and LDC Attachment (#4715) to attach the printers. **Maximum:** One. **Field Installation:** Yes.

Keylock (#4650): Replaces on/off power switch to help protect against unauthorized use. Two keys are shipped with this feature. Additional keys may be purchased from IBM (vendor will supply additional keys only to original purchaser of the keys). See "Accessories" for order information. **Maximum:** One. **Field Installation:** Yes.

Local Device Control (#4710): [Mdls 20, 21, 30, 31, 32] Required to attach 5219, 5229 (mdls 21, 31, or 32 only), 5257, 5258, and/or 6670 to a 5525 System Unit. Requires LDC Attachment (#4715) and Local Printer Attachment (#1105). **Maximum:** One. **Field Installation:** Yes.

LDC Attachment (#4715): Cable and connector assembly for connecting 5219, 5229, 5257, 5258, and 6670 to the Local Device Control. See "Distribution Controllers" for specifics. **Maximum:** Two. **Field Installation:** Yes.

Communications Features

The communications features are designed to operate at line speeds up to 9600 bps (nonswitched) or 4800 bps (switched, point-to-point) on a common carrier facility or equivalent privately-owned communication facility.

In conjunction with licensed programs (5611-SS1 and 5611-SS2), optional distribution controllers and features permit the 5520 Administrative System to function for document distribution host communications and/or 3270 emulation on switched or nonswitched, either public or private, communications lines. The 5219, 5229 (for mdls 21, 31, 32, and 51), 5257, 5258, and 6670 or 5525 System Units are also attached via a twinaxial cable to the 5525 through these same controllers. These lines interface to the distribution controllers through line adapters. A single adapter provides both BSC and SDLC capability (each adapter can accommodate two lines and can function in any combination of BSC or SDLC) to a selected set of devices (defined by program control).

Each distribution controller (maximum of one in each of 5525 mdls 20, 21, 30, 31, 32, and 40, and maximum of two in each of 5525 mdls 50 and 51) has an aggregate data rate capability of 19.2K bps. This aggregate data rate allows flexibility in configuring the devices and communications facilities that attach to these controllers.

The distribution controllers will allow the 5520 Administrative System to communicate on nonswitched and/or switched point-to-point lines at speeds up to 4800 bps or 9600 bps if nonswitched. See M2700 pages for information on communication facilities. These distribution controllers will operate in half-duplex mode over dial (switched network) facilities, and in half-duplex mode over nonswitched (or equivalent private) communication lines which may be 2- or 4-wire half- or full-duplex facilities. Operation of the features will be overlapped at all transmission rates with processing and I/O device operations. Units at each termination or drop point of a data link to which the 5520 Administrative System is attached must use the same clocking source (modem or business machine clock) and must operate at the same transmission rate and use the same transmission code. Compatible modems must be used at all terminations. The switched network environment includes support for manual dial or Auto-Call (optional feature) and manual or auto-answer (where the attached modem supports this capability) operations.

The 5525 supports attachment of the following devices in remote environments for the purpose of document distribution only, as supported by Licensed Programs 5611-SS1 and 5611-SS2. See programming pages for more details.

- Another 5525 - SNA/SDLC.
- Office System/6 (6/420, 6/430, 6/440, 6/442, 6/450, 6/452) - BSC. *
- 6580 Displaywriter System - BSC. *
- 6640 Document Printer - BSC. *
- 6670 Information Distributor - BSC. *
- Mag Card II Typewriter - BSC. *
- 6240 Mag Card Typewriter - BSC. *
- Series/1 (suitably programmed) BSC. *
- System/32 with Word Processing (#6002) - BSC.
- System/34 (suitably programmed) BSC. *
- System/38 (suitably programmed) - BSC.
- Host S/370 (suitably programmed) - SNA/SDLC or BSC.

* See 5520 programming pages for limitations.

The 5525 can communicate via the EIA RS-232-C or CCITT V.24/V.28 recommended interface to external modems. The line protocol is BSC or SDLC as provided in the complementary communication feature at the remote device. Transmission speeds of up to 4800 bps (if switched) and up to 9600 bps (if nonswitched) are possible. These communications may be over switched or nonswitched facilities (point-to-point), and the switched lines can be manual or optionally auto-dial, manual, or auto-answer. For 1200 bps communications, 1200 bps Integrated Modems may be utilized in appropriate circumstances. They may attach to nonswitched facilities or the switched network.

Auto-Call (#1315, #1316): Provides for unattended initiation of transmission on the switched network communications lines. Provides functions for four lines. #1316 is for #1702 only. See "Specify" for cable ordering. **Maximum:** See "Feature Configurator". **Field Installation:** Yes.

Distribution Controllers: The Communication/Printer-One (#1704) distribution controller is mutually exclusive with the Local Printer Attachment (#1105). #1702 provides an additional controller and additional ports for mdls 50 and 51 only, and requires Expansion Gate (#3600). These distribution controllers provide a variable number of printer/communication ports as shown in the table below, which also indicates the prerequisite controller features.

5525 System Unit (cont'd)

Distribution Controller Configurator

Feature	Available on 5525 Mdls								Number of Lines per System with Feature (Plus Prereqs.)	
	20	21	30	31	32	40	50	51	Min.	Max.
Local Print Attach (#1105)	X	X	X	X	X				1	1
Power Expansion (#5550) *				X	X	X	X	X		
Comm. Printer-One (#1704)	X	X	X	X	X	X	X **	X **	2	2
Line Adapters, Add'l (#4700)			X	X	X	X	X	X	4	8 ***
Expansion Gate (#3600)							X	X		
Dist. Controller, 2nd (#1702)							X	X	8	12
Line Adapters, Add'l (#4701)							X	X	10	16 ****

Notes:

* #5550 is a prerequisite for #1704 on mdls 31, 32, 50, 51. #5550 is required on mdl 40 for the second #4700.

** These mdls require one #4700 with #1704.

*** Maximum number of lines is mdl dependent. Each #4700 provides for attachment of 2 lines via #1704 (maximum of three #4700).

**** Each #4701 provides for attachment of 2 lines via #1702 (maximum of two #4701).

Those ports not used for printer attachment may be used for communications, except on #1105.

Distribution Controller, 2nd (#1702): Provides four additional printer/communication ports on the 5525 mdls 50 and 51. The number of ports may be expanded in increments of two to a maximum of eight by the inclusion of Line Adapters, Add'l (#4701). For printers (and/or another 5525) line attachment requires Local Device Control (#4712). For communication line attachment requires the EIA Interface (#3702) or a 1200 bps Integrated Modem (#5502, #5503). **Limitations:** A maximum of eight ports per 5525 may be allocated for printer attachment. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1704, #3600, three #4700s, and #5500.

Communications/Printer-One (#1704): Provides two printer or communications ports on all mdls of the 5525. Used on mdl 50 or 51 as a prerequisite to #4700 only. For printer (and/or another 5525) line attachment requires Local Device Control (#4711). For communication line attachment requires the EIA Interface (#3701) or a 1200 bps Integrated Modem (#5500, #5501). **Maximum:** One. **Field Installation:** Yes.

For features attachable to the distribution controllers, see "Feature Configurator" and the descriptions which follow.

Business Machine Clock (#1750, #1751): Provides communications clocking (timing) for two modems which do not provide the function. #1751 is for #1702 only. **Maximum:** See "Feature Configurator". **Field Installation:** Yes.

5525 Cable-Thru (#2680): Allows one or more 5525 System Units to be connected on an LDC line along with 5219, 5229 (for mdls 21, 31, 32, and 51), 5257, 5258, and 6670. This feature provides for connecting up to eight printers or 5525s in any sequence on a single LDC line. **Maximum:** One. **Field Installation:** Yes. **Note:** If the 5525 System Unit connected via this feature is the last in a line, a Screw-On Terminator is required (see "Accessories").

Expansion Gate (#3600): Required for the installation of the second distribution controller (#1702) on mdls 50 and 51 only. **Maximum:** One. **Field Installation:** Yes.

EIA Interface (#3701, #3702): Provides a cable (see "Specify") and interface for connecting low-/medium-speed modems meeting RS-232-C characteristics. Non-IBM modems may be attached subject to the Multiple Supplier Systems Policy. #3702 is for #1702 only. **Maximum:** See "Feature Configurator". Maximum number of EIA plus LDCs per controller is mdl-/feature-dependent. **Field Installation:** Yes.

Line Adapters, Add'l (#4700, #4701): Provides for attachment of additional pairs of lines on several 5525 mdls. #4700 provides for #1704 on mdls 30, 31, 32, 40, 50, and 51. #4701 provides for #1702 on mdls 50 and 51. Mdls 50 and 51 require a minimum of one #4700 with #1704. **Maximum:** See "Feature Configurator". **Field Installation:** Yes.

Local Device Control (#4711, #4712): Required to attach 5219, 5229 (mdl 21, 31, 32, or 51), 5257, 5258, 6670, and/or 5525 System Units to a distribution controller (#4712 is for #1702 only). One per line. Requires LDC Attachment (#4715), one per up to four printer lines. **Maximum:** See "Feature Configurator". **Field Installation:** Yes.

LDC Attachment (#4715): Cable and connector assembly required for connecting 5219, 5229 (mdls 21, 31, 32, or 51), 5257, 5258, 6670, and/or 5525 System Units to the Local Device Control (#4711, #4712). One serves up to four printer lines. **Maximum:** See "Feature Configurator". **Field Installation:** Yes.

Modem (#5500, #5501, #5502, #5503): An integrated modem for SDLC or BSC data transmission at 1200 bps over nonswitched facilities or switched networks. Available in two different versions: #5500 and #5502 nonswitched, and #5501 and #5503 switched. #5502 and #5503 are for #1702 only. **Field Installation:** Yes. **Prerequisites:** #1750 or #1751 as appropriate.

Power Expansion (#5550): Provides additional power for communications on mdls 31, 32, 40, 50, 51. This feature is a prerequisite for #1704 on mdls 31, 32, 50, 51. #5550 is required on mdl 40 for the second #4700. **Maximum:** One. **Field Installation:** Yes.

5525 System Unit (cont'd)

Feature Configurator

Feature	Local Printer Attachment (#1105) Feature #	Max.	2nd Distribution Controller (#1702) (1) Feature #	Max.	Comm./Printer-One (#1704) (2) Feature #	Max.
Auto-Call (4 lines)			#1316	2	#1315	2

1200 bps Integrated Modem, Switched (3)			#5503	3	#5501	3
EIA 6 meter (19.7 foot) Cable (7)			**#9152**		**#9152**	
EIA 12 meter (39.4 foot) Cable (7)			**#9153**		**#9153**	
Auto-Call 6 meter (19.7 foot) Cable (7)			**#9154**		**#9154**	
Auto-Call 12 meter (39.4 foot) Cable (7)			**#9155**		**#9155**	

Notes:

(1) Requires Expansion Gate (#3600). #1702 is shipped with four lines.

(2) Requires Power Expansion (#5550) as a prerequisite on mdls 31, 32, 50, 51, and on mdl 40 with second #4700. #1704 is shipped with two lines.

(3) Mutually exclusive (per line).

(4) The sum of the Local Device Controls and EIA Interfaces cannot exceed the number of available lines.

(5) Requires LDC Attachment (#4715). No more than eight LDC lines per 5525.

(6) Maximum two per system.

(7) Each line requires one if feature installed.

(8) One #4700 is required with #1704 on mdls 50 and 51.

Licensed Programs: Licensed Program 5611-SS1 (for mdls 20, 30, 40, and 50) and Licensed Program 5611-SS2 (for mdls 21, 31, 32, and 51) should be ordered at equipment order entry time. See Licensed Programs 5611-SS1 or 5611-SS2 for additional information.

The 5520 Administrative Processing Programs (5611-SS1 and 5611-SS2) are used for the selection of certain data communications characteristics such as answer tone control, line type, station address, etc.

References: See M2700 pages for additional information concerning modems, communications facilities, machine attachment requirements, terminal intermix, and operating capabilities. Refer to *IBM 5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011) for physical installation requirements.

MODEL CONVERSIONS

Model conversions are field installable.

When the 5525 model changes, the licensed program must be reordered since it contains mdl-dependent code variations.

Any model upgrade that involves a disk storage capacity change may require replacement of the disk storage mechanism. Adequate provision must be made for retaining the data contained on the replaced disk mechanism and elimination of user proprietary information.

The upgrade purchase prices for model conversions may be greater than the purchase price differentials. The customer should carefully evaluate future requirements when purchasing a system.

Replaced parts from any model conversion that includes disk storage capacity change become the property of IBM. Replaced or purchased parts from any special feature installation or removal remain the property of the customer.

ACCESSORIES

Cables: The cables and/or associated parts to attach a 5525 to a printer line on a primary 5525 may be purchased from IBM or from a customer-selected source. For the description of these cables and parts, see the *5520 Administrative System Installation Manual - Physical Planning* (GA23-1002 or GA23-1011). The customer is responsible for the installation and maintenance of these cables and their associated parts. When cabling is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the 5525.

A modem cable is required for modems other than the 1200 bps Integrated Modem (#5500, #5501, #5502, #5503). See "Specify".

Twinaxial Connector Kit (P/N **7362268**): Includes two connectors. Twinaxial Wire and one connector kit are required for each attachment cable. (Individual connectors P/N **7362229** are available for replacement.)

Twinaxial Wire (P/N **7362211**): Order must specify the desired length. Twinaxial Wire and one connector kit are required for each attachment cable. (This is an indoor/outdoor cable.)

Twinaxial Cable Assembly (P/N **7362267**): Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly.

Twinaxial Adapter (P/N **7362230**): Permits two Twinaxial Cable Assemblies to be joined together.

Twinaxial Station Protector (P/N **6819750**): One is required at each end of each twinaxial attachment cable installed outdoors (either above or below ground level). **Note:** This station protector is different from that used with the displays.

Screw-On Terminator (P/N **7362188**): One is required on the last 5525 System Unit on a shared LDC line for the last display station on a line if it is a 5150 or 5160.

Twinaxial T-Connector (P/N **6851187**): One is required for each 5150 or 5160 that is to be attached to the 5525. The use of this connector is discussed in the *IBM Personal Computer/Display Station Emulation Adapter Installation and Problem Determination Procedures Manual* (P/N **7033710**). A cable (P/N **7362267**), maximum length 30.5cm (1 foot) and minimum length 20.3cm (8 inches), must be supplied with the T-connector.

Twinaxial Cable is available with Teflon® covering. Teflon-covered cable complies with the National Electrical Code requirements for low smoke-producing, plenum-installed cables.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362063** for Teflon-covered cable. Individual connectors P/N **7362229** are available for replacement.

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one connector kit are required for each attachment cable. Order P/N **7362061** for Teflon-covered cable.

5525 System Unit (cont'd)

Twinaxial Cable Assembly: Includes a connector kit (two connectors) attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order P/N **7362062** for Teflon-covered cable assembly.

Installation Convenience Kit: May be ordered for connecting 5150 (#2890 P/N **6092541**) or 5160 (#2882 P/N **6109564**) Personal Computers to the 5525. The kit contains:

- Personal Computer/Display Station Emulation Adapter
- 5520/Personal Computer Attachment Program
- Twinaxial T-Connector P/N **6851187**
- Cable P/N **7362267**
- Plus all necessary manuals and 5-1/4 inch diskettes to install, diagnose, and use the 5520/PC attachment program.

These kits may be ordered as stand-alone feature codes or as features associated with personal computer orders. These kits are not to be associated with 5520 orders.

SUPPLIES

For ordering information, contact IBM.

Diskettes: Only diagnostic diskettes are shipped with the 5525. Diskettes for customer uses must be ordered separately.

Diskette Magazines: Diskette magazines may be ordered, P/N **2462521**. Diskettes are not shipped with the magazine.

IBM ISG

MACHINES

6126 CORRECTING SELECTRIC® RIGHT-TO-LEFT TYPEWRITER

PURPOSE

Any organization with right-to-left typing requirements can have the proven efficiency of the 6126 typewriter. It tabs and spaces the way Farsi, Hebrew, and Arabic are written.

MODELS

MODEL 856

Dimensions

Width: 520 mm (20.5 in.)
Depth: 396 mm (15.6 in.)
Height: 177 mm (7.0 in.)
Weight: 17 kg (38 lbs.)

HIGHLIGHTS

- Types the way the language is written, from right to left, and corrects errors at the time they are made.

SPECIFY

- Voltage: 115V AC, 60 Hz, 1.2 Amps.
- Keyboard Group:

Language	Code
Arabic	**#K481**
Farsi	**#K441**
Hebrew	**#K480**
Maghreb	**#K551**

- Color: Raven Black **(#C030)**
- Paper Feeds (1, 1-1/2, 2):

48-Tooth **#0083**
51-Tooth **#0085**
54-Tooth **#0070**

6128 MEMORY 100 TYPEWRITER

PURPOSE

The 6128 Memory Typewriter has a built-in action file that enables storage of typed material. A dial on the keyboard gives access to the action file. The operator can store and recall up to 100 pages of typed material. By employing the memory capability, the operator can make revisions in typed documents with a minimum of retyping.

MODELS

Model 575 Maximum Operating Speed: 15.5 cps

Dimensions:

Width: 679.5mm (26.75 in.)
Depth: 457.2mm (18 in.)
Height: 190.5mm (7.5 in.)
Weight: 29.25kg (65 lbs.)

HIGHLIGHTS

- Copy correction capability speeds original typing.
- 4,000-character (1-page) memory simplifies complex typing tasks and revision.
- 100-page storage eliminates repetitive typing.
- Dual pitch.
- Standard Features are as follows:
  - Automatic Decimal Tabulation: Allows entry of nonaligned numerals in random length numeric fields. On playout, the logic behind an encoded decimal tab causes alignment of the numerals on their decimal points.
  - Acoustical Filter Hood: A plastic hood placed over the filter which greatly reduces the sound of the machine as it operates.
  - Automatic End-of-Ribbon Shutoff: A sensor incorporated into the ribbon mechanism helps prevent accidental playout of text when the ribbon end is reached. The ribbon end condition is sensed when there are from 50 to 700 character print positions left on the ribbon.
  - Automatic Paragraph Indent: Handles indented formats in adjusted playback. 14 levels of indention are standard.
  - Automatic Word Underscore: Eliminates time-consuming character-by-character underscoring. Allows the operator to underscore a complete word with only one recorded code. This helps to increase throughput speed and conserve space in the buffer.
  - Automatic Centering: Allows automatic centering, even on first draft.
  - Interchangeability of Type Style Elements: Interchangeable elements can be snapped on and off to give a new, fresh appearance to correspondence.
  - Selective Ribbon System: Designed to accept two types of ribbon systems: IBM High Yield Correctable Film Ribbon and IBM Tech III Ribbon System.
  - Electronic Right Margin and Tabs.

SPECIFY

- Voltage: 115V, 60 Hz, 1.3 Amps.
- Keyboard (88 characters unless otherwise specified):

  US **#K101**

- Color: Beige (no specify required).

SPECIAL FEATURES

Pin Feed Platen:

48-tooth ratchet **#0101**
54-tooth ratched **#0102**
24-tooth ratched **#0103**

Roll Paper Holder (#2480)

Security Lock Key (#6775)

Note: Effective January 1, 1983, features will be subject to availability and limited to field installation.

6208 AUDIO TYPING UNIT

PURPOSE

The 6208 Audio Typing Unit is an audio typing aid for the use of persons with impaired vision. It is a field attachable unit which may be connected to an 6128 Memory 100 Typewriter. This typing aid enables a person to actually listen to what the typewriter is doing and saying, and to review and revise what the operator has accomplished. The unit provides audio support from the moment the keyboard is turned on until an error-free document is taken out of the typewriter.

MODELS

Model 001 Console and Key Pad

Dimensions:

Width: 660mm (26 in.)
Length: 825mm (32.5 in.)
Height: 846mm (33.25 in.)
Weight: 43kg (96 lbs)

HIGHLIGHTS

- Standard Features are as follows:
  - Two Headset Jacks - Allows both operator and supervisor to hear the Audio Typing Unit with speaker off.
  - Headset Volume Control.
  - Speech Rate Control.
  - Audio Modes Button - Selects the pronounce, spell, or punctuation mode of audio response.
  - Keyboard Modes Button - Controls the "echoing" of keys on the host machine.
  - Playback Button - Controls whether audio is off or on during playback.
  - Print Button - Controls whether the element strikes the platen or not.
  - Line Button - Initiates audio review of a line.
  - Word Button - Initiates audio review of a word.
  - Character Button - Initiates audio review of a character.
  - Line Back Button - Positions audio review to the beginning of the line.
  - Word Back Button - Positions audio review to the beginning of the previous word.
  - Character Back Button - Positions audio review to the beginning of the character.
  - Line Number - Indicates vertical position on the page.
  - Position - Tells the location of the element from the left margin and where the last buffer review point is.
  - Move Button - Aligns element position and buffer review point for corrections.
  - Expand - Initiates audio review of a character by speaking a keyword E.g., in the US A=ALPHA .

SPECIFY

- Voltage: 115 V AC, 60 Hz, 1.5 Amps.
- Keyboard Group:

  US **#K101**

- Color: Console -- specify **#C030** for Raven Black, **#C043** for Pebble Gray ... Key Pad -- specify **#C043** for Pebble Gray, **#C028** for Charcoal Gray.

6212 MAG CARD COMPOSER READER/RECORDER

PURPOSE

The 6212 is a low console that uses standard 5,000 character magnetic cards for reading information from, or reading it to the composer memory. The 6212 will accept singly fed cards or a pack feed of up to 50 cards.

MODELS

Model 001

Prerequisites: Must be connected to a 6625 Mag Card Composer Printer

Dimensions:

Width: 30.5cm (12 in.)
Depth: 48.3cm (19 in.)
Height: 67.3cm (26.5 in.)
Weight: 34 kg (75 lbs.)

HIGHLIGHTS

- Low Profile Card Console with Pack Feed.
- Pack Feed - 50 cards.
- Unlimited Offline Storage.
- Single Card Feed Slot with Stacker.
- Reads Cards at 240 CPS.
- Records Cards at 200 CPS.
- Standard Features are as follows:
  - MC Console: The 6212 is cable-connected to the 6625 Mag Card Composer Printer. It houses the high speed pack-feed card deck, the control electronics, and the power supply. The unit can feed cards from a stack of up to 50 cards in the hopper or accept a card through the single card slot. It can read or record a card, eject it into the card stacker, or eject it out the card slot under control of the electronics.

SPECIFY

- Voltage: 115V AC, 60 Hz, 3.5 Amps.
- Color: Charcoal Black with Pearl White faceplate **#C041**

6360 DISKETTE UNIT

PURPOSE

The Diskette Unit is used for loading programs into memory and for housing work diskettes for the 6580 Displaywriter. It is available with either one or two diskette drives for use with either Displaywriter Diskette 1 or 2D. Information created at the keyboard can be read onto the diskette.

MODELS

Model	**010**	Single Diskette Unit - uses Diskette 1 only
Model	**011**	Dual Diskette Unit - uses Diskette 1 only
Model	**020**	Single Diskette Unit - uses Diskette 1 or 2D
Model	**022**	Dual Diskette Unit - uses Diskette 1 or 2D

Limitations: The data formats of these diskettes are not compatible with other IBM diskettes.

Prerequisites: The customer must have at least Textpack 2 to use the Diskette 2D.

HIGHLIGHTS

Diskette Characteristics:

- Diskette 1 provides 284,160 bytes of customer-usable characters and control codes; up to 144 2,000-character pages.
- Diskette 2D provides 985,088 bytes of customer-usable characters and control codes.

Diskette Unit Configurations:

- Diskette 1 configuration - one or two diskette drives, 284,160 byte capacity per diskette.
- Diskette 2D configuration - one or two diskette drives, 985,088 bytes per diskette.

Benefits:

- Modular design accommodates left- or right-handed operators.
- Modular packaging provides for easy upgrading.
- Single-drive model provides low - cost option.
- Dual-drive model helps reduce diskette handling.
- Diskette 2D provides larger storage capactiy.

Physical Specifications:

Width: 254mm (10 in.)
Depth: 398mm (15.7 in.)
Height: 292mm (11.5 in.)
Weight (Single): 11kg (24 lb.)
(Dual): 16kg (35 lb.)
Cable Length: 1 meter (3.3 feet)

Customer Setup: Yes (Single or Dual Diskette Unit).

SPECIFY

- Color: Pearl White (no specify required).

SPECIAL FEATURES

Non-Communications Features

Modification Feature for Single Diskette Unit (#6990) and for Dual Diskette Unit (#6993): Available with 50 Hz or 60 Hz power. Designed to help protect the security of information being processed. Available for sales, delivery, installation and maintanance in the United States and to agencies of the United States Government located outside the US, and to governments of NATO countries plus Australia and New Zealand. There are no functional or operational differences between standard Displaywriter and those equipped with the modification. Information regarding Modification Features must not be released, reproduced or distributed outside the United States or divulged to non-US citizens other than those authorized by the US govenment. **Maximum:** One per device. **Field Installation:** No. (The power selected must match the electronics module power.)

Communications Features

Local Device Controller (LDC) (#1630): Allows limited distance Attachment up to 5,000 feet of Twinaxial® Cable to one other Displaywriter System on the 6670, for communication with Binary Synchronous Protocol at 2400 bps only. Both units must be equipped with an LDC. Customer is responsible for supplying, installing and maintaining the Twinaxial® cable and station protectors (if required). **Maximum:** One. **Field Installation:** Yes.

Add'l EIA Interface for External Modem (#3704): Provides an additional EIA interface for an external modem for either Binary Synchnonous, Asynchronous or SDLC (3270 Data Stream Compatibility) communications. **Limitations:** This device is for use only with the Local Device Controller (#1630) and cannot be used with the Single on Dual EIA Interface for external modems (#3705 or #3707). **Maximum:** One. **Field Installation:** Yes.

Dual EIA Interface for Two External Modems (#3707): Provides communications capability for Binary Synchronous, Asynchronous or SDLC (3270) Data Stream Compatability communications in one workstation. Similar to the single EIA interface, but includes an additional EIA interface to allow for two modems. See M6580 pages for information on the Single EIA interface (#3705). **Maximum:** One per workstation. **Field Installation:** Yes.

Modification Feature for Communication Interface (#4964): Designed to help protect the security of information being processed. Available for sales, delivery, installation and maintanance in the United States and to agencies of the United States Government located outside the US, and to governments of NATO countries plus Australia and New Zealand. There are no functional or operational differences between standard Displaywriter and those equipped with the Modification Feature. Information regarding Modification Features must not be released, reproduced or distributed outside the United States or divulged to non-US citizens other than those authorized by th US government. **Limitations:** Order one of these features in place of other communications interfaces. **Maximum:** One per device. **Field Installation:** No.

MODEL CONVERSIONS

20			Y

ACCESSORIES (None)

SUPPLIES

IBM Displaywriter Diskette 1: Reorder No. 4498905. The diskette consists of a thin, flexible disk and a protective plastic jacket. The diskette is protected by a plasticized envelope when it is not in use. **Size:** Approximately 203.2mm x 203.2mm (8" x 8"). **Packaging:** Permanently enclosed in a protective envelope identified by a permanent gray label with a bold numeral 1. **Recording/Storage Capability:** 284,000 customer usable characters.

IBM Displaywriter Diskette 2D: Reorder No. 4498959. The diskette consists of a thin, flexible disk and a protective plastic jacket. The diskette is protected by a plasticized envelope when it is not in use. **Size:** Approximately 203.2mm x 203.2mm (8" x 8"). **Packaging:** Permanently enclosed in a protective envelope identified by a permanent terra cotta (burnt orange) label with a bold numeral 2D. **Recording/Storage Capability:** 985,000 customer usable characters.

Note: The IBM Displaywriter Diskettes 1 and 2D are pre-intialized diskettes for the IBM Displaywriter. Initialization is the prerecording of data which organizes a diskette into fields, tracks and sectors conforming to the unique logic of the IBM Displaywriter. If the customer desires un-intialized Diskettes 1 and 2D, which are commonly used in various IBM Products. See IBM.)

6361 MAG CARD UNIT

PURPOSE

Provides magnetic card input and output for the 6580 Displaywriter System.

MODELS

Model 001

Limitations: 50 magnetic card capacity.

Maximum: One Mag Card unit per 6580 System.

Prerequisites: Require Minimum of 192KB memory and Textpack 2.

Dimensions:

Width: 305mm (12 in.)
Depth: 483mm (19 in.)
Height: 673mm (27 in.)
Weight: 30kg (65 lbs.)
Cable Length: 4.5m (15 feet)

Note: The 6361 is a reconditioned product (not in new production) that does not qualify for new investment tax credit.

HIGHLIGHTS

Reads and records information using 50 track magnetic cards. Reading is at the maximum rate of 20 seconds/card (102 char/track). Recording is at the maximum rate of 30 seconds/card (102 char/track). Mag card products may be used to prepare the cards to be read by the 6361. Playback of the cards recorded by the 6361 can be on Mag Card Selectric® Typewriters, Mag Card 11, 6640 Document Printer, Mag Card/A, 6240 Communicating Mag Card Typewriter, and the 6670 Information Distributor. The input hopper holds a maximum of fifty cards and the output stacker a maximum of 200 cards.

Information on magnetic cards can be read and recorded on the 6580 Displaywriter System diskette for revision, printing, or storage. In some cases, information from magnetic cards may need to be edited before information is revised or printed.

Bibliography: See *KWIC Index* (G320-1621).

SPECIFY

- Voltage: 115V AC, 1-phase, 60 Hz (no specify required).
- Power Cord: 2.4 meters
- Color: Pearl White Covers with Black Face Plate (no specify required).

SPECIAL FEATURES

Modification Feature for Mag Card Unit (#6989): Order in addition to a Mag Card Unit. Available with 60 Hz 110V power only. The Modification Features are designed to help protect information being processed. These features are applicable to 6580 Displaywriter Systems equipped with 60 Hz power supplies and are available for sales, delivery, installation and maintenance in the United States, and to agencies of the United States Government located outside the US, and to governments of NATO countries plus Australia and New Zealand. Information regarding Modifications Features must not be released, reproduced, distributed outside the United States or divulged to non-US citizens other than those authorized by the US government.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Magnetic Cards: Only diagnostic magnetic cards are shipped with the 6361. Magnetic cards for customer applications must be separately ordered. For IBM magnetic cards and erase magnetics, see IBM.

6375 ELECTRONIC SELECTRIC® COMPOSER

PURPOSE

One-time typing with a "memory typewriter" can prove productive and convenient. The 6375 contains electronic modules that make up a working memory. This memory holds everything that's keyboarded, up to 8,000 characters and codes. While held in memory, text can be manipulated, and formats can be changed. Then, at the touch of a button, an error free, formatted final proof can be played out with little or no manual intervention.

MODELS

Model 001 Maximum Operating Speed: 14 cps

Dimensions:

Width: 62.5cm (24-5/8 in.)
Depth: 45.7cm (18 in.)
Height: 19.0cm (7-1/2 in.)
Weight: 26.7kg (59 lbs)

HIGHLIGHTS

- Self-contained device small enough to fit on a typing stand.
- Maximum paper width of 39.4 cm (15-1/2 in.).
- Typing line of 31.7 cm (12-1/2 in.).
- Easy and convenient typesetting with the help of electronics.
- Professional quality appearance of final printed material.
- Standard Features are as follows:
  - 8,000 Character Memory: A solid state memory that can store 8,000 characters, including all codes. The useful limit for the operator is slightly less because a 126-character buffer is reserved to guarantee correct operation in case additional carrier returns are created during entry mode playing of text.
  - Expanded Ribbon Supply: The 6375 is provided with an expanded ribbon mechanism. The 2122 type ribbon and the high-density deposit ribbon enclosed in an expanded cartridge are the two types of ribbon for use on the 6375.
  - End-of-Ribbon Shutoff: A sensor incorporated into the ribbon mechanism functions to prevent accidental playout of text when the ribbon end is reached. The ribbon end condition is sensed when there are from 50 to 700 character print positions left on the ribbon.
  - Language Capability: Whenever power is turned on, the composer will be automatically set to use the type font that is standard for the country where the composer is primarily used. If a foreign-language font or other non-standard font is to be used for some purpose, the composer can be electronically adjusted appropriately by typing Code-F plus the two-digit font identifier.

    Acoustical Filter Hood: A plastic hood placed over the acoustical filter which greatly reduces the sound of the machine as it operates. It must be removed by the operator in order to use the font tray option feature.
  - Ruling Feature: Ruling font RX-12 and Copperplate Gothic font CG-10-M may be used to make vertical and horizontal lines, of various weights, when devising forms or simply boxing a piece of text. As noted in the "Language Capability" paragraph, the composer operator adjusts the machine electronically so that (1) "vertical keys" do not advance the carrier, and (2) the typing head strikes the paper just hard enough.

SPECIFY

- Voltage: 115V AC, 60 Hz, 2 Amps.
- Color Charcoal Black with Charcoal Gray Keybuttons **(#C041)**.
- Keyboard Group:

  US **#K501**

SPECIAL FEATURES

Font Tray (#5523): Attaches to top of composer; holds nine fonts for extra convenience and accessibility.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Each 6375 is shipped with one 2122 Solvent Ribbon, P/N 1136480. See SSD sales manual. Contact IBM.

6580 DISPLAY STATION

PURPOSE

The 6580 is the Display Station for the 6580 Displaywriter System. It consists of an Electronic Module (contains specified bytes of random access memory), a Display Module (either a 25-line display or a 66-line large display) and a Keyboard (either 96 or 92 characters).

The 25-line display has 80 characters per line. The 66-line large display has 100 characters per line.

Attachable to the 6580 Display Station are:

5215 Selectric® Element (15 cps) Printer, 5218 Printwheel Printer (40 or 60 cps) or 5228 Printwheel Printer - Wide Carriage (60 cps).

6360 Single or Dual Diskette Unit.

One 6361 Mag Card Unit per 6580.

Up to two other Display Stations may be attached to the master Display Station and thereby share one Printwheel printer.

HIGHLIGHTS - 6580 DISPLAYWRITER SYSTEM

Displaywriter System consists of at least one workstation. Each workstation has a display station (a display module, a keyboard module, and an electronics module) and a diskette unit for reading and recording information on data diskettes. A printer is recommended for a full text processing system, but is not required. A Mag Card Unit is also available for organizations that already have mag card typewriters.

The Displaywriter System is a family of software-driven, key-to-display products, with several important concepts incorporated in its design:

- Shared resource system - Up to three workstations may share a single, high-speed printwheel printer, thus increasing throughput and reducing the cost per typing station.
- Designed to be easy-to-learn and use - Simple-language labelling, logical leading prompts, and straightforward presentation of menus all add to ease of learning and use, and help increase operator productivity.
- Modular architecture - Hardware components and software programs are packaged individually, allowing customers to select programs as needed.
- Ergonomically designed - Applying the science of adapting work and working conditions to the worker helps to reduce operator fatigue, make the system easier to use, and contribute to its attractive look.
- Designed to provide excellent price performance - The user buys only the hardware components and software programs needed, and expands the system as needs change.

Customer Objectives and Applications:

- Heavy original typing production
- Repetitive text production
- Heavy revision production
- Columnar and math operations
- Foreign-language spelling check
- Enhancement of IBM products
- Participation in a communications network
- Low cost per workstation
- Designed to provide excellent price performance
- Proofreading aid

Hardware:

The Displaywriter System hardware consists of several modules, cable-connected by the user:

- Workstation
  - Electronics Module
  - Display
  - Keyboard
  - Diskette Unit
- Printers
  - Selectric Element (15 cps)
  - Printwheel (40 or 60 cps)
  - Printwheel - Wide Carriage (60 cps)
- Optional equipment
  - Sheet-Feed Paper Handler - Available for the Printwheel Printers
  - Tractor Feed - Available for the Printwheel Printers
  - Mag Card Unit

Software:

Tasks are performed through licensed programs, available for a license fee. Programs are packaged on program diskettes, and may be obtained as the customer needs them. Although the programs themselves cannot be modified by the customer, formatting defaults and the Spelling Dictionary may be personalized.

Benefits:

The highly modular nature of the hardware and software offers several user benefits:

- Logical configuring to meet current needs
- Flexible system upgrading and expansion in the field as customer needs change
- Fast and convenient field hardware maintenance
- Good system price performance
- Convenient placement of system modules

COMMUNICATIONS

Communications on the 6580 System is available with the following licensed programs:

- Asynchronous Communication, 5608-SR1
- Binary Synchronous Communication, 5608-SR2
- IBM 3270 Data Stream Compatibility, 5608-SR6

Using one of the licensed programs and the communications feature, the 6580 System can send information from another 6580 System workstation or other compatible communication equipment, including a suitably programmed host computer. The equipment involved in the 6580 System communication process can be located in the office next door or on another continent.

Communications on the 6580 System is an important capability because:

- Documents that are typed and stored can be translated into electronic signals sent over telephone lines at transmission speeds up to 9600 bps.
- Documents that are received at a 6580 System workstation can be stored and printed or can be revised by the operator. (Documents received from compatible communication equipment may need additional editing or reformatting if revisions are necessary.)
- With the Asynchronous, Binary Synchronous, and communication programs, text and control codes can be created and edited offline on the 6580 System. This ensures faster, more accurate transmission and can reduce line and computer connect charges. (The 3270 Data Stream Compatibility licensed program allows the operator to communicate while directly connected and online to a host computer.)
- When the communication program is not needed, the 6580 System can be used to perform other word processing applications.

Equipment Required

The communication function requires a:

- Licensed text program
- Communication adapter on the 6580 System (includes a 3.8 meter/12.5 foot EIA cable)
- Licensed communication program

6580 Display Station (cont'd)

- An external modem (depending on the modem selected, a data coupler may be required)
- Communication line

The 6580 System can optionally support two external modems. The modem is selected by menus provided by the licensed program. Each modem can support a different linespeed and/or protocol. Only one modem and communication licensed program can be active at one time.

Security Capabilities

An optional security keylock may be installed to prevent unauthorized access to the communication function.

The 3845/3846 encryption devices support the 6580 System. When connected between the 6580 System and the external modem at each end of a communication line, these devices secure the privacy of the data transmitted by automatically encrypting (scrambling) and decrypting (unscrambling) the data.

In addition to these optional security features, a terminal identifier (terminal ID) may be preset by the customer. Depending on the licensed product, user IDs are also available and may be assigned for additional communication security.

Communication Protocols

Three communication protocols, Asynchronous, Binary Synchronous, and SNA/SDLC Communications, are available.

The Asynchronous Communication licensed program uses the asynchronous protocol. The Binary Synchronous Communication licensed program uses binary synchronous protocol. The 3270 Data Stream Compatibility licensed program uses the SNA/SDLC protocol.

Asynchronous Communication

In most applications, Asynchronous Communication is used for interactive terminal operations; however, it can also be used for batch communications because data can be stored in advance on diskette and received to diskette. During an active communication session, both interactive and batch communications can be intermixed.

The 6580 System provides three operating modes that emulate the characteristics of the following asynchronous devices:

- IBM Communicating Mag Card Selectric Typewriter
- IBM 2741 Communications Terminal
- Teletypewriters similar to the Teletype 33, 35, or 43 KSR (Keyboard Send-Receive) mdls.

Binary Synchronous Communication

In Binary Synchronous Communication (BSC) protocol, the 6580 System emulates the characteristics of either a 2770/3780 or 2780 terminal. This communication function enables the 6580 System to communicate with the following:

- Mag Card II Typewriter - Communicating
- 6240 Mag Card Typewriter - Communicating
- 6640 Document Printer - Communicating
- Office System/6 - Communicating
- 6670 Information Distributor
- 5520 Administrative System
- 6580 Displaywriter System - Communicating
- System/36
- A suitably programmed computer.

Binary Synchronous Communication licensed program utilizes batch transmission of data. All information, including any necessary control language, is prepared before beginning the communication session. After the session has begun, the information is sent and received with minimal operator intervention.

3270 Data Stream Compatibility

The 3270 Data Stream Compatibility licensed program allows a 6580 System to access suitably programmed IBM host computer systems using 3270 application programs. (In most cases, no changes to the computer application programs are required.) Communications to the suitably programmed IBM host is through SNA/SDLC communication protocol.

A communicating 6580 System using the 3270 Data Stream Compatibility licensed program appears as a 3270 Information Display System to the following suitably programmed IBM host systems:

- System/370
- 3031/3032/3033/3081 Processor Complexes
- 4300 Processors

The 3270 Information Display System emulated consists of a single 3278 mdl 2 or 4 Display, a 3274 mdl 51C Controller, and, optionally, a single 3287 Printer.

HIGHLIGHTS - 6580 DISPLAY STATION

STANDARD FEATURES

Electronic Module:

The Electronics Module, a component of the Display Station, contains most of the logic for the Displaywriter System. This module includes replaceable plug-in cards which provide the system with specific functional capabilities. Some of these cards are:

- Microprocessor - The powerful high-speed microprocessor provides each workstation with independent intelligence. Its technology allows sophisticated system architecture and true foreground/background concurrency. This means that printing can take place in the background, while keyboarding or revising occur in the foreground.
- ROS Memory - The Basic Assurance Test and the logic necessary to load programs into memory from program diskettes are contained in Read-Only Storage (ROS).

Main Storage Memory Card:

This card contains the Random Access Memory (RAM) for the system. Minimum RAM capacity is 128K bytes, and it is expandable in 64K-byte increments. RAM is used for storage of both program instructions and customer information. RAM is a volatile memory; its contents are lost when the power is turned off.

Highlights of the Electronic Module

- Processing capability provides good performance and the capability for system expansion.
- Logic is at the workstation level, independent of other stations.
- Concurrency of foreground and background tasks to increase operator productivity.
- ROS memory provides system checkout functions and start-up procedures, to help reduce setup time.
- RAM accommodates programs and customer information.
- Ergonomic design provides low levels of heat and noise.
- Flexibility accommodates a variety of hardware modules and software licensed programs.

Specifications of Electronic Module

Width: 483mm (19 in.)
Depth: 356mm (14 in.)
Height: 178mm (7 in.)
Weight: 14kg (30 lbs.)

Display:

A display is the primary means of visual interaction between the operator and the system. There are two models available: a 25-line display and a 66-line large display. The 6580 Display's ergonomic design and functional features help to enhance the system's effectiveness and minimize operator fatigue. The Display, a component of the 6580 is used to:

- Present menus
- Prompt the operator
- Give messages
- Provide system status information
- Display information

Functional Characteristics:

- Horizontal segmentation up to 255 characters, with 20-character overlap
- Vertical scrolling across page boundaries
- One level of Half Index
- Character brightening when cursored
- Video-reversing of unrecognized words following spelling checking

Physical Characteristics of Display Station:

- 25-line capacity, 80 characters per line or 66-line capacity, 100 characters per line
- Operator-adjustable contrast and brightness (25-line display)
- Operator-adjustable brightness (66-line display)
- 30-degree rotate range

6580 Display Station (cont'd)

- 20-degree vertical tilt
- 8x16 dot character box
- Monopitch
- Symbol graphics displayed

Specifications of 25-Line Display:

Width: 381mm (15 in.)
Depth: 348mm (13.7 in.)
Height: 292mm (11.5 in.)
Weight: 6.6kg (15 lbs.)
Cable Length: 610mm (24 in.)

Specifications of 66-Line Large Display:

Width: 316mm (12.4 in.)
Depth: 404mm (15.9 in.)
Height: 404mm (15.9 in.)
Weight: 17.55kg (39 lbs.)
Cable Length: 483mm (19 in.)

Keyboard:

The Keyboard, a component of the 6580 is the primary means of entering new information into the system. The 6580 Keyboard's logical layout is designed to be easily learned and productively used.

Physical Characteristics:

- Standard 96-character, optional 92-character
- Minimal inboard coding
- Function keys grouped and labelled logically

Keyboard Specifications:

Width: 538mm (21 in.)
Depth: 213mm (8 in.)
Height: 101mm (4 in.)
Weight: 5kg (11 lbs.)
Cable Length: 1m (3.3 ft.)

ATTACHABLE COMPONENTS

DISKETTE UNIT

The Diskette Unit is used for loading programs into memory and for housing work diskettes for the 6580 Displaywriter. It is available with either one or two diskette drives for use with either Displaywriter Diskette 1 or 2D. Information created at the keyboard can be read onto the diskette. See M6360 pages for details.

PRINTERS

Selectric Element Printer

- Rated burst speed of up to 15.5 cps.
- Well suited for standalone workstation configuration.
- Compatible with many Selectric Typewriter 10 and 12 pitch elements.
- System software provides "Trail Printing" capability allowing playout of one job, while another is being keyed.
- The Selectric Element Printer is a reconditioned product and may not qualify for new investment tax credit. This statement should be included in all proposals.

See M5215 pages for details.

Printwheel Printers

- Rated burst speeds of up to 40 or 60 cps (in 10 pitch).
- Prints with 10 pitch, 12 pitch, PSM, or 15 pitch printwheels.
- System software and a hardware prerequisite allow a "shared resource" arrangement with up to three workstations.
- Snap-in ribbon cartridge and printwheel cartridges are designed for easy insertion and removal of printwheels and ribbons.
- Bidirectional printing.

See M5218 and M5228 pages for details.

Mag Card Unit

- 50 magnetic card capacity.
- Serves as added information resource by taking information from magnetic cards.
- Functions as a media link with compatible IBM mag card products.
- The Mag Card Unit is a reconditioned product that does not qualify for new investment tax credits. This statement should be included in all proposals.

See M6361 pages for details.

Customer Setup Responsibilities for CSU designated products:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement.
- Physical setup, connection of cables to TP lines/modems.
- Notify IBM of intent to relocate, advise IBM of the new location and follow IBM instructions for relocation.
- Other specific responsibilities as outlined in the IBM Planning and Site Preparation Guide.
- Attend Customer Orientation Seminar for demonstration setup.
- Notify IBM in advance if setup assistance is required.

Bibliography: See *KWIC Index* (G320-1621).

SPECIFY

- Voltage: 110V 60 Hz, grounded receptacle, 15 amp, single phase. Power cord: 3 meter (9.8 ft).
- Color: Pearl White with Pebble Gray (no specify required).

The Display and Keyboard Module which are available above as a feature for the Display Station need not be installed on the same terms as the Electronics Module and are available separately. See 6580 Displaywriter System elements in Country Keyboards section.

SPECIAL FEATURES

Non-Communications Features

Communication Keylock (#6500): Allows a level of security to help prevent unauthorized personnel from using the communication feature. **Maximum:** One. **Field Installation:** Yes.

Chartpack Display Adapter (#6955): Required to support Chartpack licensed program (PP 5608-SRA) with either 25-line or large display. **Maximum:** One per displaystation. **Field Installation:** Yes, by CSD. **Customer Setup:** Yes, if shipped with the display station.

Modification Feature for Electronics Module Mdls A0(x) (#7022) and for 25-Line Display Module (#4961): Order in addition to an Electronics Module. Available with 50 Hz or 60 Hz power. Designed to help protect the security of information being processed. These features are available for sales, delivery, installation and maintenance in the United States, and to agencies of the United States Government located outside the US, and to governments of NATO countries plus Australia and New Zealand. There are no functional or operational differences between standard Displaywriters and those equipped with Modification Feature. Information regarding Modification Features must not be released, reproduced, or distributed outside the United States or divulged to non-US citizens other than those authorized by the US government. **Maximum:** One per device. **Field Installation:** No.

Note: It is IBM's opinion based upon test data filed with the US Government*, that the Keyboard Module (features #5330, #5331, or #5349), Printer Sharing Feature, and its associated cables do not require modification for use in an environment requiring Modification Features.

* It is IBM's opinion and not a warranty that these components do not require modification. This shall be communicated orally and in writing prior to accepting an order from the customer. If a customer does not have access to the US Government classified test data, IBM may be unable to sell the Modification Features because the customer cannot obtain the necessary data that is required to support a buying decision.

Printer Sharing Prerequisite (#7997): A logic card that is placed in a designated master 6580 Display Station that will assume control of the printer in a shared printer configuration with up to three workstations. **Specify: #7998** for a 60 meter (196.8 ft) cable, and **#7992** for a 30 meter (98.4 ft) cable, and **#7999** for a 5 meter (16.4 ft) cable to connect the second or third workstation to the designated master workstation in a printer sharing environment. **Maximum:** For printer sharing only, one prerequisite in the master workstation is required. A second prerequisite may be installed as backup if desired in one of the other two Display Stations. **Field Installation:** Yes. **Customer Setup:** Yes.

3274/3276 Attached Workstation Adapter (#8332): Permits dual coaxial cable attachment of the Displaywriter workstation to a 3274 or 3276 Control Unit, in order to emulate the 3278 Display and 3287 Printer. Refer to the 3270 Attached Workstation licensed program (PP 5608-SR9) for description of the capabilities. May coexist with feature #3705 in display station and feature #3707 in diskette unit, but can *not* coexist with printer sharing feature (#7997) or DW-3277-DE RPQ (#8D0098). **Maximum:** One per display station ,but not in master display station in printer sharing environment. **Field Installation:** Yes, by CSD. **Customer Setup:** Yes, if shipped with display station.

Communications Features

Single EIA Interface for External Modem (#3705): Provides communication capability in either Asynchronous, Binary Synchronous or SDLC (3270 Data Stream Compatibility) modes. It includes an EIA interface attachment for an external modem. This attachment requires a customer provided modem. **Maximum:** One. **Field Installation:** Yes. **Customer Setup:** Yes.

6580 Display Station (cont'd)

MODEL CONVERSIONS

Electronic Module: Field upgradeable in size of RAM (in 32K byte or 64K byte increases) and from model A to model B.

ACCESSORIES

Display Station Platform (#3000): Facilitates installation of Displaywriter workstations on desks with limited space (minimum 18 in. depth). Incorporates cable raceway and includes rear cover for electronics module to conceal external cables and connectors. Keyboard can be tilted and locked up when not in use. **Color:** Pebble Gray. The Display Station Platform may be ordered with initial machine order. **Field Installation:** Yes. **Customer Setup:** Yes. For pricing and followon order contact IBM.

Displaywriter Work Station Standard Configuration (#3001-#3003): This configuration consist of an adjustable terminal base, a rectangular extension, and a printer stand. The configuration may be ordered with the initial machine order. Specify **#3001** for Pearl White, **#3002** for Oak, or **#3003** for Walnut coloring. **Adjustable Terminal Base:** Has separate platforms for the Displaywriter unit and keyboard. Each platform can be raised or lowered individually by simple controls. In addition the keyboard can be moved toward or away from the operator. **Rectangular Extension:** This height adjustable extension attaches to the Adjustable Terminal Base for extra work-space and is used to support the Displaywriter Diskette Drive. **Printer Stand:** Supports any of the 6580 attachable printers. The stand is designed so that the operator can operate the printer and view printed output from a seated position. **Field Installation:** Yes. **Customer Setup:** Yes.
Workstations are also available with triangular extensions. For variations, individual P/N, specifications, prices and followon orders contact IBM.

SUPPLIES

Starter Pac (#5879): 6580 "Selectric" Element Printer/Low Density Diskette Unit. Each starter Pac contains 30 diskettes (6580 Diskette 1) with protective envelopes packaged in sturdy diskette "Fiftifile" with durable tab dividers and job identifier labels. It also includes 1/2 dozen IBM Tech III Ribbons.

Starter Pac (#5884): 6580 "Selectric" Element Printer/High Density Diskette Unit. Each starter Pac contains 30 diskettes (6580 Diskette 2D) with protective envelopes packaged in sturdy diskette "Fiftifile" with durable tab dividers and job identifier labels. It also includes 1/2 dozen IBM Tech III Ribbons.

Starter Pac (#5885): 6580 Printwheel Printer/Low Density Diskette Unit. Each starter Pac contains 30 diskettes (6580 Diskette 1D) with protective envelopes packaged in sturdy diskette "Fiftifile" with durable tab dividers and job identifier labels. It also includes one dozen 463 Ribbons.

Starter Pac (#5886): 6580 Printwheel Printer/High Density Diskette Unit. Each starter Pac contains 30 diskettes (6580 Diskette 2D) with protective envelopes packaged in sturdy diskette "Fiftifile" with durable tab dividers and job identifier labels. It also includes one dozen 463 Ribbons.

Contact IBM.

6625 MAG CARD COMPOSER PRINTER

PURPOSE

The 6625 is an automated typesetting machine with an attached external storage device.

MODELS

Model 001 Maximum Operating Speed: 14 cps

Prerequisites: Must be connected to a 6212 Mag Card Composer Reader/Recorder.

Dimensions:
Width: 67.6 cm (26-5/8 in.)
Depth: 45.7 cm (18 in.)
Height: 19.0 cm (7-1/2 in.)
Weight: 25 kg. (55 lbs.)

HIGHLIGHTS

- Three Pitch Composer Printer.
- Page-sized Memory Unit 8,000 characters.
- Electromechanical Keyboard.
- Field Effect Transistor Electronic Control Logic to perform automated typesetting functions.
- Power Supply and Special Circuits.
- Standard Features are as follows:
  - Scan: This function permits the rearrangement of text in memory to incorporate revisions, provide copyfitting capability, and alternate text formats.
  - Minimum Interword Space: For some special applications and as an alternative to the standard 3 unit minimum interword space, the operator has the ability to set the minimum space at a value between 3 and 9 units.
  - Decimal Period/Comma Tabulation: This capability provides for numeric alignment on decimal or comma positions. Entry copy is formatted similar to final copy providing for easier proofing.
  - Automatic Centering About A Point: A second method of centering provides for centering at a specific point or when it would be advantageous to have entry copy appear centered similar to final copy.
  - Verify Print: This capability serves as a diagnostic aid to both the operator and Customer Engineer. It provides printed copy of all the characters and code in memory.
  - Page-sized Memory: A solid state memory that can store 8,000 characters including all codes. The useful limit for operator keying is 7,899 characters. The 101 character difference is reserved to guarantee correct operation in case additional carrier returns are created during entry mode playing of text.
  - Alternate Section: The alternate section capability allows the memory to be divided into two independent segments. The separator code defines the floating boundary between the sections, and the only restriction on capacity is that total text in both sections cannot exceed the memory capacity.
  - Ribbon Supply: The Composer cartridge is used on the MC Composer. The high deposit ribbon is also available for special applications.
  - End-of-Ribbon Shutoff: A sensor incorporated into the ribbon mechanism functions to prevent accidental playout of text when the ribbon end is reached. The ribbon end condition is sensed when there are from 50 to 700 character print positions left on the ribbon.
  - Required Tab: The required tab-code command by a 6625 operator causes the carrier to automatically indent to the tab position at the start of each new line until the operator dissolves the command.
  - Electronic Tab Memory: When a tab has been set, the 6625 "remembers" that the tab is a certain distance from the left margin, regardless of how much the operator may adjust that margin to handle varying kinds of work.
  - Language Capability: Whenever power is turned on, the 6625 will be automatically set to use the type font that is standard for the country where the 6625 is primarily used. If a foreign-language font or other non-standard font is to be used for some purpose, the 6625 can be electronically adjusted appropriately by typing Code-F plus the two-digit font identifier.
  - Acoustical Filter Hood: A plastic hood placed over the acoustical filter which greatly reduces the sound of the machine as it operates. It must be removed by the operator in order to use the font tray option feature.
  - Ruling Feature: Ruling font RX-12 and Copperplate Gothic font CG-10-M may be used to make vertical and horizontal lines, of various weights, when devising forms or simply boxing a piece of text. As noted in the "Language Capability" paragraph, the 6625 operator adjusts the machine electronically so that (1) "vertical keys" do not advance the carrier, and (2) the typing head strikes the paper just hard enough.

SPECIFY

- Voltage: 115V AC, 60 Hz, 3.5 Amps. **(#7906)**
  Note: The 6625 is cable-connected to the 6212 for it's power supply.
- Keyboard Group:
  US **#K501**
- Color: Specify **#C041** for Charcoal Black with Charcoal Gray keybuttons

SPECIAL FEATURES

Font Tray (#5523): Attaches to top of the 6625. Holds 9 fonts for extra convenience and accessibility.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Contact IBM.

6670 INFORMATION DISTRIBUTOR

PURPOSE

The 6670 Information Distributor is a multi-function machine which can operate as a text formatter, text printer, communications terminal, and a convenience copier (Models 001 and 002 only).

MODELS

Model 001 Communication speeds up to 4,800 bps for BSC and 7,200 bps for SNA/SDLC. Must specify US or World Trade version. Includes convenience copy function.

Model 002 Communication speeds up to 9,600 bps for BSC and SNA/SDLC. Includes font availability function which supports font downloading, and convenience copy function.

Model 003 Communication speeds up to 9,600 bps for BSC and SNA/SDLC. Includes font availability function which supports font downloading. No convenience copy function.

Limitations: Font availability function is only available on model 002 and model 003. Optional collator, semi-automatic document feed, and convenience copier are only available on model 001 and 002.

Dimensions: (All Models)

Width: 198cm (78 in.)
Depth: 70cm (27.5 in.)
Height: 102cm (40 in.)
Weight: 653kg (1,440 lbs.)

HIGHLIGHTS

The 6670 Information Distributor operates as a remote batch terminal when communicating with a host system. It cannot be channel attached. Host systems input may be read into the 6670 from magnetic cards for communication to a host system. Output from the host system may be sent directly to the printer, or to the internal diskette for later recording on magnetic cards.

Standard 11 x 14-1/2 inch computer reports can be printed on 8-1/2 x 11 inch paper. Specially designed fonts print lines 132 characters wide (13.3 cpi) and 66 lines per page (8.57 lpi). With suitable programming in the host system, the 6670 can be an intelligent remote printer providing duplex printing, multiple font selection, multiple sets of output documents, and other printing functions which can be invoked by 6670 Operator Control Language (OCL). Documents formatted by a host system text formatting program, such as the ATMS III formatter or the SCRIPT/VS component of the Document Composition Facility, can be readily printed by the 6670.

The 6670 also operates as a printer for compatible Word Processing systems. Additionally, information may be communicated from a 6670 to another 6670 or to a compatible Word Processing system.

Printer: (All Models)

- Prints from magnetic cards or communications line.
- Utilizes stored formats (see "internal storage diskette").
- Laser printhead directs proper imaging on photoconductor.
- Print exit pocket, capacity 2,700 sheets/20 pound bond (or 75g/sq.m).
- Jobs or sets within jobs may be selectively offset 1/2 inch for easy separation.
- Duplexed printing (printing on both sides of the page).
- Primary paper drawer, 2,100 sheets/20 pound paper (or 75g/sq.m).
- Alternate paper drawer, 600 sheets/20 pound paper (or 75g/sq.m).
- Both paper drawers support a variety of paper sizes, but only one size at a time.
- Duplex tray capacity, 75 sheets.
- Four hardware fonts are standard; two additional hardware fonts or software fonts are optional.
- An optional Font Library is available for selected host operating systems for downloading fonts to mdl 002 and 003.
- Up to four type styles per page, and up to six per document.
- Self-advancing photoconductor.

Internal Storage Diskette: (All Models except as noted)

- Mdl 001 provides for approximately 210,000 characters of temporary storage for user data. Mdl 002 and 003 provide approximately 241,000 characters of temporary buffered storage for user data and downloaded fonts.
- Customer Engineer diagnostics.
- Contains control program.
- Contains stored formats (defined by customer) to control text formatting and communications.
- Eight text processing formats
- Two communications formats.

Magnetic Card Reader/Recorder: (All Mdls.)

- Identical to reader/recorder on Mag Card II Selectric Typewriter.
- Reads at up to 240 cps.
- Records at up to 200 cps.
- Data to be recorded can be from mag cards or from communications.

Copier: (Mdls 001 and 002 only)

- Similar to Series III mdl 10.
- First copy speed - 7.5 seconds.
- Subsequent copies - 1.65 seconds each (36 copies/minute).
- Exit tray capacity - 300 sheets.

Optional collator: Available [mdls 001, 002] (see "M6671 page")

Control Panel: (All Models except as noted)

- Used to control copy functions (Models 001 and 002 only).
- Used in conjunction with OCL and magnetic cards to control printing and communication.
- Lighted pushbuttons, lighted messages and LED display.

Font (Type Styles):

- **Group I Fonts:** These are hardware fonts, which are paired as shown in Group I listing in the "SPECIFY" section. Four type styles (two per font card) resident as standard with the 6670. Two additional type styles may be selected as an option at an extra charge (at time of order or via MES). Selection is made from the Group I font pairings, shown in the "SPECIFY" section below.

* **Group II Fonts:** These are software fonts, and may be ordered individually, as an option at extra charge, by numbers shown in the "SPECIAL FEATURES" section below. **Prerequisites:** Font Storage #8400 and Font Storage Microcode #8401.

- **Group III Fonts:** [Mdl 002 and 003 only]. These are host downloadable fonts. **Prerequisites:** Font Storage #8400 and Font Storage Microcode #8401. See "SPECIAL FEATURES" section below for fonts provided.

Communications Facilities: (All Models except as noted). Support is provided for BSC (Binary Synchronous Communications) or SDLC (Synchronous Data Link Control). These protocols are not co-resident; only one is installed per machine and must be specified at order entry. In addition, one of the communications Special Features must be ordered. An MES is available for converting from BSC to SDLC (and vice versa). This MES is field installable by the Customer Service Representative. To order,use the RTOE system and the appropriate code number for the protocol required, found in the "Speciy Section" below.

- **BSC Capabilities:**
  - 6670 BSC support is as a 2770, 3770, or 3780.
  - The following host systems and processors support the 6670: S/360, S/370, 30XX, 43XX, System/3, System/32, System/34, System/36, System/38, and Series 1.
  - The communications adapter on the 4331 may be used.
  - 6670 to 6670 and Displaywriter.
  - Can transmit or receive data without interruption while copying, (copying only on mdl 001 and 002).
  - Communication line speeds for mdl 001 are 600 to 4,800 bps. For Mdl 002 and 003, line speeds supported are 600 to 9,600 bps.
  - Switched communication line operation, which includes the capability for the 6670 to automatically answer and disconnect via a suitable modem.
  - Non-switched communication line operation, which includes the capability for the 6670 to operate in switched network backup mode with appropriate modems.
  - Synchronous clocking, which provides the 6670 with its own timing signals for operating at 1,200 or 600 bps in case the modem used does not provide signals.
  - Half-speed operation, which, with the appropriate modem, enables the 6670 to operate at half the normal transmission speed.
  - Transparency, which enables the 6670 to send and receive all EBCDIC control and graphic codes.
  - Space expansion, which allows the 6670 to insert the specified number of spaces in compressed data as it is received.
  - Variable block size which is specified through OCL as 128, 256 or 512 bytes.
  - Buffered send, which allows the 6670 to transmit data from internal storage.
- **SDLC Capabilities:**
  - SDLC support is as a logical unit type 4 under SNA. The following host systems and processors support 6670 as an SDLC device: S/370, 30XX, 43XX, 8100 and 5520.
  - The communications adapter on the 4331 may be used.
  - SDLC communications requires a 3705 communications controller.
  - 6670 to 6670 may be SDLC.
  - Can transmit or receive data without interruption while copying, (copying only on mdls 001 and 002).

6670 Information Distributor (cont'd)

- Switched communication line operation which includes the capability for the 6670 to automatically answer and disconnect via a suitable modem.
- Non-switched communication line operation, which includes the capability for the 6670 to operate in switched network backup mode with appropriate modems.
- Synchronous clocking, which provides the 6670 with its own timing signals for operating at 1,200 or 600 bps in case the modem used does not provide signals.
- Half-speed operation, which, with the appropriate modem, enables the 6670 to operate at half the normal transmission speed.
- Space and character expansion, which allows the 6670 to insert the specified number of spaces or characters compressed data as it is received.
- Block size fixed at 256 bytes.
- Buffered send, which allows the 6670 to transmit data from internal storage.

- **Transmission Codes:** The 6670 communication facility operates with any of two transmission codes, depending on the application. These are: the Extended Binary Coded Decimal Interchange Code (EBCDIC), and the American National Standard Code for Information Interchange (ASCII).

Bibliography: G544-1006.

SPECIFY

- Voltage: 208V 60 Hz, two or three phase, 30 amp, dedicated line, 4-wire including ground and neutral ... 240V 60 Hz, single phase, 30 amp, dedicated 4-wire including ground and neutral.

- Control Panel Group:
  English Language **#A135**
  International Symbol **#A136**

- Communication Protocol:
  Binary Synchronous (BSC) **#1525**
  Synchronous Data Link Control (SDLC) **#1526**
  In order to use the communications capabilities of the 6670, one of the communication special features must be ordered. See "SPECIAL FEATURES" for details. For Protocol Conversion on Installed Machines: To convert from one protocol to the other (BSC to SDLC, or vice versa), specify the appropriate code shown above. Conversions are field installable by the Customer Service Representative through an MES.

- Color: Pebble Gray and Pearl White (no specify required).

- Paper Group:
  Group 1 **#P876** *
  203 x 267mm (8.0 x 10.5 in.)
  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)
  Group 2 **#P877**
  210 x 297mm (8.2 x 11.6 in.)
  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)
  Group 3 **#P878**
  203 x 254mm (8.0 x 10.0 in.)
  203 x 330mm (8.0 x 13.0 in.)
  210 x 297mm (8.2 x 11.6 in.)
  216 x 356mm (8.5 x 14.0 in.)
  Group 4 **#P879**
  210 x 270mm (8.2 x 10.6 in.)
  210 x 297mm (8.2 x 11.6 in.)
  210 x 310mm (8.2 x 12.2 in.)
  216 x 356mm (8.5 x 14.0 in.)
  * Supplied as standard if no other paper group is specified.
  Non US paper sizes will not be supported on mdl 003.

- Font Selection: Hardware fonts, select two pairs from Group I fonts in listing shown below. All mdls of the 6670 provide four fonts (type styles) as standard. These fonts are resident in hardware and are paired in pre-determined sets. They are shown below as Group I fonts.

  Group I Type Styles: (US character sets)

1.	Courier Prestige Elite	10-pitch 12-pitch	**#A490**
2.	Data 1 Rotated Symbol	13.3-pitch, dual case 12-pitch	**#A491**
3.	Prestige Pica Letter Gothic	10-pitch 12-pitch	**#A492**
4.	Essay Standard Essay Italic	PSM PSM	**#A493**
5.	Essay Standard Essay Bold	PSM PSM	**#A494**

  Group I Type Styles: (World Trade Character Sets)

1.	Courier Data 1 Rotaded	10-pitch 13.3 pitch	**#A495**
2.	Prestige Elite Symbol	12-pitch 12-pitch	**#A496**
3.	Essay Standard Essay Italic	PSM PSM	**#A497**
4.	Essay Bold Letter Gothic	PSM 12-pitch	**#A498**
5.	Prestige Pica Data 1 Rotaded	10-pitch 13.3 pitch	**#A499**
6.	Essay Bold Essay Standard	PSM PSM	**#A500**

SPECIAL FEATURES

Communication Facilities

Limited Distance Control (LDC) (#3711): Provides capability to locally attach a 6670 (all mdls) to a 5520 operating under SNA/SDLC protocol or to a 6580 Displaywriter operating under BSC.

Integrated Modem Interface (#5501, #5508, #5510): Provides for an integrated modem to be installed within the 6670 to allow operation at 1,200 bps or 600 bps (half-speed operation). Specify #5501 for Integrated Modem, switched line with automatic answer or, #5508 for Integrated Modem, non-switched line and switched line backup with automatic answer or, #5510 for Integrated Modem, non-switched line. **Field Installation:** An MES must be submitted through IBM.

External Modem Interface (#9420, #9421): Provides the ability to attach the 6670 to an external modem. This feature is RS-232-C/CCITT V.24 interface. There are two cable specify codes: (#9420) for a 6.1m (20 ft.) cable or (#9421) for a 12.2m (40 ft.) cable. **Field Installation:** An MES must be submitted through IBM .

Digital Data Service Adapter (DDSA) (#9422, #9423): Provides the ability to attach the 6670 (all mdls) to the AT&T Dataphone ® digital service non-switched network for operation at speeds of 2,400 bps or 4,800 bps. There are two cable specify codes: a 6.1m (20 ft.) cable (#9422) and a 12.2m (40 ft.) cable (#9423). **Field Installation:** An MES must be submitted through IBM .

None Communication Facilities

Collator Attachment (#A132): [Mdl 001, 002] Provides the ability to attach a 6671 Collator to the 6670. See M6671 page for details.

Fonts - Optional Hardware Type Styles: Four type styles can be selected and installed as a standard feature. Two additional type styles can be selected and installed in another pair of hardware fonts with the Optional Type Style Feature. Any of the pairs of the US and World Trade type styles shown in the "Group I Fonts" in the "SPECIFY" section above may be ordered for either a US or a World Trade 6670. Use the Feature Code numbers shown with the requested pairing to order the Optional Type Style.

Note: RPQ 977008 or 977888 is a prerequisite for use of the World Trade fonts. (See RPQs below for details).

Group II Fonts (#3456-#3483, #8362-#8393, #8400-#8401:) All mdls of the 6670 may support with the proper prerequisite features installed (see below), an additional one or two software fonts. These Group II fonts are an Option and take the place of the Optional Group I font pair. Any Group I font may be ordered as a Group II font. **Prerequisites:** Font Storage (#8400): Provides the memory for the software fonts; Font Storage Microcode (#8401): Provides one or more media which contain the requested Group II fonts. **Field installation:** Yes.

Group II Type Styles:

Type Style	Code	Type Style	Code
Orator	#3456	Courier 12 Extended UK	#3481
Orator Bold	#3457	Courier 10 Extended Belgian	#3482

Font Library - Group III Fonts: These fonts are supported only by mdl 002 and 003 (which support the host download capability). These fonts are provided on various media for loading on a variety of host operating systems. The following Group II fonts are provided along with the Group III fonts (listed below) when the appropriate font library medium is ordered. **Prerequisites:** Font Storage (#8400), Font Storage Microcode (#8401). See above.

Group II Fonts included in the Font Library:

APL Extended	Courier 10 Overstrike Hyph.
Boldface	Data 1 Extended
Boldface Italic	Data 1 Extended Bold
Courier 10 Extended	Data 1 Extended Italic
Courier 12 Extended	Document

CB 12, 12 pitch **	Katakana, 10 pitch
Courier Bold, 10 pitch	Katakana, 12 pitch
Courier Italic, 10 pitch	Overstrike, 12 pitch
Courier Underscore, 10 pitch	Orator Presentor, 10 pitch
Cyrillic, 10 pitch	Prestige Elite Elongated Overstrike, 12 pitch
Format (FM 10), 10 pitch	Serif Overstrike, 12 pitch
Format (FM 12), 12 pitch	Serif Text Italic Medium, 12 pitch
Gothic Text Italic Medium, 12 pitch	Serif Text Roman Bold, 12 pitch
Gothic Text Roman Bold, 12 pitch	Serif Text Roman Medium, 12 pitch

Note: * Graph 241 and Graph 242 are fonts used in conjunction with Field Developed Program (FDP) **#5798-CRB**, Business Graphing on the 3800. For additional information, see Availability Notice GB21-2167-0, dated December 1977.

** CB12 is a font used in conjunction with Installed User Program (IUP) **#5796-PPA**, Panel2. See Availability Notice G320-6420, dated March 1981 for additional information.

The data stream from these two program offerings must be modified before it is sent to the 6670. There are two alternative methods to do this:

1. The customer can write a program to modify the data stream to include the necessary OCL for font switching and for a user-defined custom keyboard character set; or,
2. The customer can install and use the Field Developed Program (FDP) **#5798-DKB**, The 6670 Information Distributor Preprocessor, to modify the data stream. See Availability Notice GB21-2974-0, dated August 11, 1982, for additional information.

Field Installation: An MES must be submitted through IBM.

Operating Systems Supported for Font Library:

Operating System	Program Number	Feature No./Description
OS/VS2 (MVS)	5799-BGK	029/9 Track, 1,600 bpi 9031/9 Track, 6,250 bpi
VM/370	5799-BGQ	9029/9 Track, 1,600 bpi 9031/9 Track, 6,250 bpi
DOS/VSE	5799-BGL	9029/9 Track, 1,600 bpi 9031/9 Track, 6,250 bpi
System/34	5799-BGN	9041/Diskettes, T-1 Format
System/38	5799-BGN	9041/Diskettes, T-1 Format
8100	5799-BGN	9141/Diskettes, T-1 Format

Field Installation: An MES must be submitted through IBM.

MODEL CONVERSIONS

6670 MES upgrade to model 002 from a model 001. This feature provides the capability of an installed 6670 user to upgrade to a 6670 model 002 in order to satisfy the customer's application needs by utilizing the additional features and functions the model 002 offers. Order as a model upgrade 001 to 002.

PROTOCOL CONVERSIONS

A conversion from BSC to SDLC may be made by ordering new protocol required as an MES. Use the code numbers found in the "SPECIFY" section. The MES is field installable by the Customer Service Representative.

RPQs

External Modem Switch (RPQ 087056): Permits selection between one of two clocking signals; either the 1,200 bps signal generated by the 6670, or the signal that is generated by the external modem. This switch is located on the EIA cable, which is 3.7m (12 ft.) long for this configuration. Ordered through normal MES procedure using RPQ 087056.

Essay Bold/Essay Italic (ROS Fonts) (RPQ 100027): Provides a ROS font pairing of these two proportional fonts. Ordered through normal MES procedure using RPQ 100027.

Third Party Meter System Interface (RPQ 280002): [Mdl 001, 002 only] This feature is available for customers who wish to limit copy usage using meter systems not manufactured by IBM. This connector provides a cable interface that connects the meter system to the 6670. Ordered through normal MES procedure using RPQ 280002.

Front Door Lock (RPQ 773123): This feature provides a front door lock permitting access to the inside of the 6670 only to those people having the key to the lock. Ordered through normal MES procedure using RPQ 773123.

International Fonts (BSC) (RPQ 977008): Allows any of the international keyboard character sets (59) to be specified on a US 6670 mdl I BSC machine.

- –Provides a World Trade program diskette for a US mdl 001
- –Provides support for all 59 6670 keyboard character sets (US and W.T.)
- –Allows printing of W.T. characters from W.T. fonts without the need for the "keyboard" command.
- –Will be useful when the input device has a W.T. keyboard.
- –Eliminates the need to use the "keyboard" command.

Ordered through normal MES procedure using RPQ 977008.

Meter System (RPQ 977047): [Mdl 001, 002] With this feature, the copying function is inhibited until a meter is inserted into a receptacle. This system consists of any number of meters and one meter receptacle. Each meter automatically records the number of copies that are made while it is in the receptacle. (The printing function of the 6670 is not affected by this feature.) Ordered through normal MES procedure using RPQ 977047.

6670 Information Distributor (cont'd)

Up-Ending Kit (RPQ 977064): Allows the 6670 to be moved in a 90 degree vertical position. Ordered through normal MES procedure using RPQ 977064.

International Fonts (SNA) (RPQ 977888): Allows international fonts to be used on a 6670 mdl 001 SNA machine. Ordered through normal MES procedure using RPQ 977888.

Optional periods of maintenance service: Service for the 6670 beyond the normal working hours is available through CDS. CDS is responsible for order entry and control of these requests. (For information on administrative processing and procedures, see Information Only RPQ #8A5000.) The following are the prices for this maintnance service.

	Hours of coverage		
Days of service	9	18	24
Monday-Friday	-	$67	$123
Saturday	$26	$41	$51
Sunday	$31	$51	$67
Monday-Sunday	--	--	$200

Program Support

Field Developed Programs (FDP's):

1. **6670 Information Distributor Preprocessor (FDP 5798-DKB):** Supports all models of the 6670, bisync or SDLC. Provides an interface between DCF and the 6670 which offers faster processing of output, a simple font switching capability, eliminates device dependencies in source files, handles justification of proportional and mixed-pitch fonts, and provides virtual font capability. For additional information see Availability Notice GB21-2974, dated August 1982, and *Program Description/Operations Manual*, SB21-2975.

2. **File Conversion for Word Processors.** This FDP provides the capability of converting data processing data sets to a form that can be printed by the 6670, by performing the following functions: ... inserting OCL at the beginning of the data set ... qualifying records based on the contents of a field ... converting and editing packed decimal, EBCDIC, and binary fields ... converting uppercase fields to a mixture of uppercase and lowercase characters ... substituting data, based on the contents of a field ... deleting trailing blanks in an alphabetic field ... deleting leading zeroes in a numeric field ... and inserting delimiters, such as switch codes, between fields. For additional information, see Program No. 5798-DFY, and its *Program Description/Operations Manual*, SB21-2882.

3. **IBM Manyfont:** Users who format data containing many type style changes, especially those documents with equations, may want to make use of this Installed User Program. Manyfont extends the capabilities of SCRIPT/VS in two ways: ... it provides a simple means to change the font for a single character ... and it supports a wide variety of output devices for text that have many type styles. For additional information, see Program No. 5796-PPE, and its *Program Description/Operations Manual*, SH20-2607.

4. **Panel2:** This Installed User Program is a line art program that is used to develop flowcharts, HIPO charts, foils, and simple drawings. **Prerequisites:** This IUP requires the use of the 6670 font, CB12, which is available as a Group III font in the 6670 Font Library option. For additional information, see Availability Notice G320-6420 and PANEL2 Users Guide - Program No. 5796-PPA.

5. **Business Graphing on the IBM 3800:** This Field Developed Program provides the capability to use 6670 to print a variety of graphs, e.g., bar charts, histograms. **Prerequisites:** This program requires the use of the 6670 fonts Graph 241 and Graph 242, which are available as Group III fonts in the 6670 Font Library option. For additional information, see Availability Notice GB21-2167-0.

6. **Font Editing System:** This Field Developed Program provides the capability to create and/or edit fonts for the 6670. For additional information, see *Program Description/ Operations Manual*, SB11-5744) and Program No. 5785-FAW.

7. **System/38 OFFICE/38 Text Management Licensed Program:** This licensed program provides the capability for System/38 users to create, store, retrieve, revise and print documents. The 6670 is supported as an output device with the following formatting options able to be specified: headers and footers on a page, number of copies, page length, line numbering, flagging changes, and font downloading (mld 002 and 003 only). For additional information, see Program No. 5714-WP2, and Getting Started with System/38 Office/38 - Text Management.

8. **System/36 Text Management System Licensed Program:** This program provides the user with a library of programs that provide document creation, revision, viewing, merging, with user data files, spelling aids, and printing functions. The 6670 is supported as an output device. For additional information, see Program No. 5727-TX1, and *Text/Office Brochure* G580-0454.

SUPPLIES

IBM High Yield Toner: Reorder P/N 1669081.

6671 COLLATOR

PURPOSE

Collator for the 6670 [Models 001, 002]. It is designed to simplify paper handling by automatically assembling sets of copies in sequential order.

MODELS

Model 001 20 bin collator.

Dimensions:

Width: 69cm (27 in.)
Depth: 46cm (18 in.)
Height: 102cm (40 in.)
Weight: 61kg (135 lbs.)

HIGHLIGHTS

The collator sequences the copier output. It contains 20 bins, each of which can hold up to 100 sheets of 9 kg (20 pound) paper.

6700 SELECTRIC III TYPEWRITER

PURPOSE

The 6700 Selectric III Typewriter is a single pitch correcting typewriter, with a 343mm (13.5 in) paper capacity.

MODELS

Model A01

Dimensions:

Width: 470mm (18.5 in.)
Depth: 396mm (15.6 in.)
Height: 178mm (7.0 in.)
Weight: 16kg (36 lbs.)

HIGHLIGHTS

- Ribbon cassette mechanism resulting in high character yield per ribbon.
- The following features are standard:
  115V, 60 Hz motor, (double insulated with 2-wire cord); 92 character US Correspondence Keyboard; 12 Pitch machine; 54-Tooth Ratchet; Prestige Elite Element; Color: Topaz Bronze with Raven Black Bottom Cover

6701 SELECTRIC III TYPEWRITER

PURPOSE

The 6701 Selectric III Typewriter is a single pitch, non-correcting fabric ribbon typewriter, with a 343mm (13.5 in) paper capacity.

MODELS

Model 001

Dimensions:
Width: 470mm (18.5 in.)
Depth: 396mm (15.6 in.)
Height: 178mm (7.0 in.)
Weight: 16kg (36 lbs.)

HIGHLIGHTS

- Fabric Ribbon mechanism resulting in high character yield per ribbon.
- The following features are standard :

  115V, 60 Hz motor, (double insulated with 2-wire cord); 92-character US Correspondence Keyboard; 54-tooth ratchet; Element: Courier 10 on 10 pitch machine and Prestige Elite on 12 pitch machine; Color: Topaz Bronze with Raven Black Bottom Cover; for selection of Pitch see "Specify" below.

SPECIFY

- Pitch: Specify 10 or 12 pitch.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Each 6701 shipment to the customer will include the following: One Fabric Ribbon Cartridge, one Courier 10 Element for 10 pitch machine or Prestige Elite Element for 12 pitch machine.

6705 SELECTRIC III TYPEWRITER

PURPOSE

The 6705 Selectric III Typewriter is a dual-pitch, correcting typewriter, with a 394mm (15.5 in.) paper capacity.

MODELS

Model ANN Standard
Model A01 Standard
Model B01 *
Model K01 Custom

* Not for commercial sale, subject to sales restrictions in Product Announcement 382-098 and GSA contract GS-005-63046.

Dimensions:
Width: 521mm (20.5 in.)
Depth: 396mm (15.6 in.)
Height: 178mm (7.0 in.)
Weight: 17kg (39 lbs.)

HIGHLIGHTS

- The 6705 utilizes the Ribbon Cassette Mechanism resulting in high character yield per ribbon except for mdl B01 which utilizes the Selective Ribbon Mechanism.
- The following are standard features:
  - **Voltage:** 115V, 60 Hz motor for mdls A01, ANN, B01 and K01. Note: For mdl B01 and K01 this motor is for Federal Government only, for alternate motors see "Special Features". below.
  - **Keyboard:** 92-character US keyboard for mdls A01, ANN and B01.
  - **Linecord:** 2-wire double insulated for all mdls.
  - **Paper Feed:** 1, 1.5, 2 (54-tooth ratchet) for all mdls.
  - **Pitch:** Dual pitch (10 and 12) for all mdls.
  - **Element:** Prestige Elite and Courier 10 for mdls A01, ANN, and B01. Note: Mdl B01 is for Federal Government only, see "Specify" below for alternate elements.
  - **Sound Package:** For all mdls.
  - **Color:** Deep Charcoal for mdl ANN, Topaz Bronze for mdls A01 and B01. For mdl K01 see "Specify" below.

SUPPLIES

Each 6705 [Mdl B01] shipment to the customer will include the following:
- For Federal Government only: One Selective Ribbon Cartridge (Black), one lift-off tape and choice of 2 elements.
- For state, local and qualifying education per Product Announcement 382-098 only: One Selective Ribbon Cartridge , one lift-off tape, one Courier 10 element, and one Prestige element.

Each 6705 [Mdls ANN, A01] shipment to the customer will include the following:
- One Ribbon Cassette (black), one lift-off tape, a Prestige Element and a Courier 10 Element.

Each 6705 [Mdl K01] shipment to the customer will include the following:
- One Ribbon Cassette (black), one lift-off tape and two specified elements.

6713 ELECTRONIC TYPEWRITER 50/60/75

Orders accepted on ''as available'' basis only.

PURPOSE

The 6713 Electronic Typewriter mdls 50, 60 and 75 combine single-element (but interchangeable element) typing technology, correction capability, and electronic text management with a 393.7mm (15.5 in.) paper capacity.

MODELS

Model A50	Standard 50
Model K50	Custom 50
Model A60	Standard 60, 736-character memory
Model K60	Custom 60, 736-character memory
Model A75	Standard 75, 15,500-character memory
Model K75	Custom 75, 15,500-character memory

Dimensions:

Width: 536.0mm (21.1 in.)
Depth: 447.0mm (17.6 in.)
Height: 165.1mm (6.5 in.)
Weight: 22.7kg (50 lbs.)

HIGHLIGHTS

- Mdl 75 has a standard 15,500-character storage capacity to be shared by document and phrase storage.
- Document storage allows the typist to temporarily store documents for later revision, thus eliminating much retyping.
- Phrase storage allows phrases, sentences, paragraphs and documents to be stored and played out error free. 99 storage areas are available to store up to 15,500 characters.
- Proportional spacing in addition to 10 and 12 pitch.
- Format storage.
- Electronic column layout.
- Ribbon cassette system.

SPECIFY

- Voltage: 115V AC, 60 Hz, 2.3 Amps.
- Keyboard Group:

  US **#K660**

- Color: Specify **#C055** for Autumn Red, **#C052** for Cocoa Brown, **#C054** for Laurel Green, **#C053** for Marlin Blue, **#C043** for Pebble Gray, **#C030** for Raven Black, **#C051** for Sable Brown, **#C038** for Sandstone Beige, and **#C034** for Topaz Bronze.
- Paper Feeds:

  (1,2,3) Mdls A50/K50/A60/K60:

  46-Tooth **#0087**
  51-Tooth **#0089**
  54-Tooth **#0100**

6714 ELECTRONIC TYPEWRITER 65/85

PURPOSE

The 6714 Electronic Typewriters 65 and 85 are phrase/document typewriters with 393.7mm (15.5 inch) paper capacity.

MODELS

Model B65	Standard 65, 7,400 characters memory.
Model K65	Custom 65, 7,400 characters memory.
Model B85	Standard 85, 15,500 characters memory.
Model K85	Custom 85, 15,500 characters memory.
Model ANN	Standard 85, fiftieth anniversary (available until December 31, 1983)

Dimensions:

Width: 549.4mm (21.6 in.)
Depth: 453.2mm (17.8 in.)
Height: 177.8mm (7.0 in.)
Weight: 20.6kg (45.5 lbs.)

HIGHLIGHTS

- Mdls B65 and K65 contain 7,400 characters of memory, and mdls B85 and K85 contain 15,500 characters of memory which can be stored in 26 alpha and 99 numeric positions on the keyboard.
- Proportional spacing in addition to 10 and 12 pitch.
- Right margin justification on playout in any pitch.
- Electronic keyboard.
- Resident diagnostics.
- Communications:

  The 6714 mdls B85 and K85 may be upgraded to include asynchronous communication capability by installing the Typewriter Modularity Option and connecting the 6714 to a 6733 Typewriter Communication Module. See M6733 page for details.

SPECIFY

- Voltage (120V, 60 Hz, 1 phase): **#E001**
- Paper Feeds (1, 1.5, 2, 3):
  46-Tooth **#0120**
  51-Tooth **#0122**
  54-Tooth **#0123**
- Keyboards (96 characters unless otherwise specified):

	Keybutton Engraving	Code
Latin American Abbreviated	Spanish	**#K110**
US Correspondence	English	**#K001** *
US Correspondence	English	**#K443**

* standard 92 character

- Elements: [Mdls K65, K85] choice of two elements, including "Custom Element Program" (additional charge).
- Color: [Mdls K65, K85] Specify **#C026** for pearl white, **#C034** for topaz bronze, **#C043** for pebble gray, **#C053** for marlin blue, or **#C062** for deep charcoal. **#C043** (pebble gray) is standard.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

Motor (#E034, #E093): [Federal Government Only] 112.5V 50 Hz Motor **(#E034)**, 220V 50 Hz Motor **(#E093)**. **Field Installation:** Yes.

Memory Protection (#5931): [Mdl K65, K85] Provides battery backup with approximately 25 minutes protection power failure. **Field Installation:** Yes. (Mdls B65, B85 field installation only).

Typewriter 65/85 PC Attachment (#8566, #8569, #8570: Allows all mdls of the 6714, except mdls B85 and K85, that have the Modularity Option installed, to be attached to an IBM Personal Computer and used as a printer. The attachment does not allow direct keyboarding from the 6714 to the PC. When not being used as a printer, the 6714 will continue to operate as a standard electronic typewriter. The 65/85 PC attachment device (#8566) consist of a 6.5 foot cable and electronics board installed in the typewriter. **Prerequisites:** A 5150 Personal Computer or a 5160 Personal Computer XT with: a minimum of 64KB of of memory; one diskette drive; a 5151 Monochrome Display and Printer Adapter or printer adapter card; a 65/85 PC IPL/Diagnostic Diskette (#8569). The PC must operate under DOS version 1.0, 1.1 or 2.0. **Field Installation:** Only, and must be installed by IBM CSR. **Order Procedure:** Contact IBM.

COMMUNICATIONS FEATURES

Modularity Option (#8560) [Mdls B85, K85]: Provides the interface between the 6714 and the 6733 Typewriter Communication Module. **Field Installation:** [Mdl K85] Yes (MES 1305501). Mdl B85 field installable only.

MODEL CONVERSIONS

Field upgradable from model 65 to 85, specify **#8520**. Upgrading includes an additional 8,000 characters of memory, return and advance keybuttons, semi-automatic paper insert lever and lighted carrier position indicator. **Note:** Field upgrades require the removal of certain parts which becomes the property of IBM. Order through normal MES procedure.

ACCESSORIES (None)

SUPPLIES

Standard: Each 6714 shipment to the customer will include the following: One Correctable Film Cassette Ribbon, one Lift-off Cassette Tape, for mdls B65 and B85: One Title Element (P/N **1352902**), and one Prestige Elite Element (P/N **1352003**), for mdl K65, K85: two specified elements.

6723 ELECTRONIC TYPEWRITER 50/75

Orders accepted on ''as available'' basis only.

PURPOSE

The 6723 Electronic Typewriter mdls 50 and 75 combine single-element (but interchangeable element) typing technology, correction capability, and electronic text management with a 485.1mm (19.1 in.) paper capacity.

MODELS

Model A50 Standard 50
Model K50 Custom 50
Model B75 Standard 75, 15,500-character memory

* Standard 92 character

- Elements: Choice of two elements ,including "Custom Element Program" (additional charge).
- Color: Specify **#C026** for pearl white, **#C034** for topaz bronze, **#C043** for pebble gray, **#C053** for marlin blue, or **#C062** for deep charcoal. **#C043** (pebble gray) is standard.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

Motor (#E034, #E093): [Federal Government Only] 112.5V 50 Hz Motor **(#E034)**, 220V 50 Hz Motor **(#E093)**. **Field Installation:** Yes.

Memory Protection (#5931): [Mdl K65, K85] Provides battery backup with approximately 25 minutes protection against power failure. **Field Installation:** Yes.

6724 PC Attachment (#8566, #8569, #8570): Allows all mdls of the 6724, except mdl K85, that has the Modularity Option installed, to be attached to an IBM Personal Computer and used as a printer. The Attachment does not allow direct keyboarding from the 6724 to the PC. When not being used as a printer, the 6724 will continue to operate as a standard electronic typewriter. The PC attachment device (#8569) consist of a 6.5 foot cable and electronics board installed in the typewriter. **Prerequisites:** A 5150 Personal Computer or a 5160 Personal Computer XT with: A minimum of 64KB of of memory; one diskette drive; a 5151 Monochrome Display and Printer Adapter or printer adapter card; a 65/85 PC IPL/Diagnostic Diskette (#8569). The PC must operate under DOS version 1.0, 1.1 or 2.0. **Field Installation:** Only, and must be installed by IBM CSR. **Order Procedure:** Contact IBM.

COMMUNICATIONS FEATURES

Modularity Option (#8560): [Mdl K85] Provides the interface between the 6724 and the 6733 Communication Module. **Field Installation:** Yes (MES 1305501).

MODEL CONVERSIONS

Field upgradable from model K65 to K85, specify **#8521.** Upgrading includes an additional 8,000 characters of memory, return and advance keybuttons, semi-automatic paper insert lever and lighted carrier position indicator. Note: Field upgrades require the removal of certain parts which becomes the property of IBM. Order through normal MES procedure.

ACCESSORIES (None)

SUPPLIES

Each 6724 shipment to the customer will include the following: One Correctable Film Cassette Ribbon, one Lift-off Cassette Tape, and two specified elements.

6733 TYPEWRITER COMMUNICATION MODULE

PURPOSE

The 6733 adds asynchronous communication function to the Electronic Typewriters 6714 [models B85 and K85] and 6724 [model K85].

MODELS

Model 001 Operates asynchronously in CPT-TWX 33/35 or 128 character ASCII mode. It can use half-duplex or duplex data transmission over switched point-to-point public telephone networks or directly connected systems/terminals using a null modem.

Prerequisites: The 6714 or 6724 requires installation of Modularity Option **(#8560)**.

Dimensions:

Width: 13.1cm (5.2 in.)
Depth: 33.6cm (13.2 in.)
Height: 17.6cm (6.9 in.)
Weight: 4.6kg (10.15 lbs.)

HIGHLIGHTS

- The 6733 Typewriter Communication Module is a desk top unit which links the Electronic Typewriter 6714 or 6724 to a data communication facility via a modem. The 6733 can interface with the following customer-supplied Western Electric (or equivalent) 2-wire, duplex modems:
  - Western Electric Type 103J--dual (answer/originate) mode, with or without auto answer.
  - Western Electric Type 113C--originate mode only.
  - Western Electric Type 113D--answer only, with or without auto answer.
  - Western Electric Type 212A--dual speed (low speed up to 300 bps or high-speed at 1200 bps), with or without auto answer, answer or originate mode.

  The customer must ensure that the modem is compatible with the Communication Module.
- Asynchronous TTY line protocol.
- Full 128 ASCII character set.
- Modem interface: EIA RS-232-C.
- Operator-selectable transmission speed: 110, 150, 300 or 1200 bps.
- Auto answer and unattended document reception.
- Background reception to a 14,000 character buffer.
- Electronic Typewriter 6714/6724 offline operation including all word processing functions and quality printing while the 6733 auto answers and receives documents.
- Pacing by line and standard pacing under remote terminal or system control.
- Transfer documents from 6733 receive buffer directly to 6714/6724 document storage for delayed printing or print (and optionally store) while transferring.
- Transfer documents from the 6714/6724 storage to the communication facility with or without printing.
- Customer setup: Yes.
- Cables included: a link cable to the 6714 or 2724; an EIA RS-232-C modem cable.

Bibliography: *Installation and Operating Instruction*, S544-4011; *Technical Description for host systems and applications programmers*, S544-4013.

SPECIFY

- Voltage: 120V AC, 1-phase, 60 Hz **(#E001)**
- Power Cord: 3-wire grounded. (No specify required).
- Color: Pearl White. (No specify required).

6800 COPIER I

[NO LONGER AVAILABLE]

PURPOSE

With one control setting, the 6800 Copier I makes from 1 to 10 copies of a piece of text and/or artwork. The original to be copied may be one side of a loose sheet or one page in a bound document. This machine makes copies on letter-size or legal-size sheets automatically cut from a roll of good quality plain paper.

MODELS

Model 001

Dimensions:

Width: 88.9cm (35 in.)
Depth: 63.5cm (25 in.)
Height: 101.6cm (40 in.)
Weight: 229.3kg (665 lbs.)

HIGHLIGHTS

- Delivery Speed: First copy of an original in 15 seconds. Subsequent copies of same original in 6 seconds. Copies per hour -- 600 (rated speed).
- Reproduces (full size*) an image as large as 215.9 x 330.2mm (8-1/2 x 14 in.), approximately the size of the document glass.
  * No provision for photo-reduction.
- Provision for overhang of material to be copied enables the "copy-board" to accommodate an original measuring 355.6 x 431.8mm (14 x 17 in). Bound-document originals such as manuals or magazines may be as thick as 25.4mm (1 in).
- By simply pressing one of two buttons, the machine operator selects an output page size 215.9 x 279.4mm (8-1/2 x 11 in.) or 215.9 x 355.6mm (8-1/2 x14 in.).
- Document cover door latches down to hold material to be copied. Document cover automatically unlatches and springs up when last copy has been made.
- Has a sliding selector switch to set the machine to make from 1 to 10 copies.
- Exit Pocket Capacity: Approximately 75 copies.
- Copy paper is a roll of plain bond (watermark bond available) that yields approximately 600 letter-size copies.
- Machine warm-up is part of first copy cycle.

Bibliography: *Copier Key Operator Instructions*, S548-0501

SPECIFY

- Voltage: For standard requirement, specify code **#A881** which calls for a dedicated 115V, 60 Hz, 15 amp, with provision for grounding. The required receptacle is a Hubbell 5262 or equivalent, NEMA 5-15R. If the light document feature is installed, specify code **#A883** which calls for a 115V, 60 Hz, 20 amp, with provision for grounding. The required receptacle is a Hubbell 5361 or equivalent, NEMA 5-20R. **Field installation:** No.
- Color: Pearl White top, Charcoal Gray panels. (No specify required).

SPECIAL FEATURES

Light Document Feature: Pressing the light document button turns on, or turns off a mechanism that causes the machine to make darker than ordinary copies, a convenience when a copying task sometimes involves unusually light originals. The light-document button is illuminated when the feature is active. **Prerequsites:** Use special toner (the kind for Copier II), P/N 1162144, green label. **Field installation:** Yes.

Meter System (#A895): The copy meter mounts under the document glass and counts each copy cycle. The meter itself is a plug-in unit **(P/N 1245230)**, a number of which could be separately identified with various copier-user groups. A customer's key operator can substitute one meter for another in accordance with which group is making nearly exclusive use of the machine at a particular time. **Maximum:** one system per machine. Any number of meters may be used separately. **Prerequisires:** A meter must be plugged in to enable the copier to run. **Note:** The meter receptacle may or may not accept non-IBM meters that a customer may have on hand. Similarly, IBM meters may or may not be compatible with non-IBM copiers. **Field installation:** Yes.

Radio Frequency Interference Elimination Filter (RFI) (#A120 - #A121): This feature reduce radio frequency static that may be produced by the machine. Specify #A120 for 60 Hz current or #A121 for 50 Hz current. **Field installation:** Yes.

6802 SERIES III Mdl 10

PURPOSE

The 6802 Copier III model 10 is a high-speed plain-paper copier/duplicator that can print on both sides of a piece of paper automatically, and collate the output.

MODELS

Model 004 6802 Copier III

Dimensions:

Width: 106.7cm (42 in.)
Depth: 68.6cm (27 in.)
Height: 116.8cm (46 in.)
Weight: 463.5kg (1,030 lbs.)

HIGHLIGHTS

Single sheets are automatically fed on to the document glass, positioned, and after last copy is made, original is ejected into the original exit tray. No "A" button is required.

Copies are printed on both sides of a piece of paper through the use of a duplexing feature, thus saving on paper and storage cost. Duplexing is entirely automatic and does not require the operator to manually reverse the paper.

Single Original Automatic feed. Maximum size: 215.9mm x 355.6mm (8-1/2 x 14 in.) When Automatic Feed is not used maximum size is: 304.8 x 431.8mm (12 x 17 in.)

Exit Pocket Capacity: Approximately 400 sheets.

Automatic machine misfeed recovery, side one only.

Provides the ability to make copies lighter or darker.

Has a push button copy quantity selector ranging from 1 to 999 copies.

Copy paper is stored in two trays with a total capacity of about 2,700 sheets.

Delivery Speed: First copy 4.5 seconds (varies with special features selected). Subsequent copies at 1.6 second intervals. Copies per hour (rated speed) 4,500.

SPECIFY

- Voltage Dedicated 115 Volt, 30 amp.
  Voltage Dedicated 208-230 Volt, 30 amp.
  Note: When a collator is attached to a 115 volt 30 amp unit, the collator requires a separate additional outlet with 115 volt 15 amp dedicated circuit.

- Paper Group:

  Group 1 **#P876***
  203 x 267mm (8.0 x 10.5 in.)
  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 2 **#P877**
  210 x 297mm (8.2 x 11.6 in.)
  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 3 **#P878**
  203 x 254mm (8.0 x 10.0 in.)
  203 x 330mm (8.0 x 13.0 in.)
  210 x 297mm (8.2 x 11.6 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 4 **#P879**
  210 x 270mm (8.2 x 10.6 in.)
  210 x 297mm (8.2 x 11.6 in.)
  210 x 310mm (8.2 x 12.2 in.)
  216 x 356mm (8.5 x 14.0 in.)

  * Supplied as standard if no other paper group is specified.

- Language Group: The language group consist of preprinted instructions which appear on the machine such as "Lighter Copy", "Darker Copy", "Reduce"," Alternate Paper", "Duplex", etc.

  English US **#2265**

- Color: Charcoal Gray (no specify required).

SPECIAL FEATURES

Carpet Rails (#A134): Carpet rails for the base machine and the primary collator. **Note**: If selected, then feature code **#A137** must be chosen on the secondary collator. See M6852 pages for details. **Field Installation**: Yes.

Resetable Billing Meter (#A278): Allows the user to count number of copies. The meter can manually be set to zero. **Field Installation**: Yes.

Meter System and Receptacle (#5989): Enables the customer to allocate usage to various departmental programs or special projects within an organization or location. The meter system consist of a single receptacle mounted in a small cabinet, plus one or more pluggable meters. A meter must be inserted into the receptacle to initiate a copy cycle. Each meter automatically records the number of copies made. Any number of meters may be used. IBM meters are not compatible with competitive copying machines. **Field installation**: An MES must be submitted through Boulder CO, USA.

Radio Frequency Interference Elimination Filter (RFI)
Electromagnetic Compatibility (EMC): The RFI and/or EMC may be ordered only for field installation from Boulder CO, USA.

Collator: 20 bin or 40 bin. See M6852 pages for details. **Field Installation**: Yes.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

RPQs

14 Foot Line Cord (RPQ 073002): Allows the customer to locate the 6802 14 feet from the power supply. Ordered through normal MES procedure using RPQ 073002.

17 Foot Line Cord (RPQ 073003): Allows the customer to locate the 6802 17 feet from the power supply. Ordered through normal MES procedure using RPQ 073003.

20 Foot Line Cord (RPQ 073004): Allows the customer to locate the 6802 20 feet from the power supply. Ordered through normal MES procedure using RPQ 073004.

6 Foot Line Cord (RPQ 073005): Allows the customer to locate the 6802 6 feet from the power supply. Ordered through normal MES procedure using RPQ 073005.

A-4 Paper Size (RPQ 174011): Allows the 6802 to feed "A-4" size paper, 210 x 297mm (8.27 x 11.69 in.). Ordered through normal MES procedure using RPQ 174011.

Offset Masters (RPQ 176103): Allows offset masters to be more easily processed. Ordered through normal MES procedure using RPQ 176103.

Third Party Interface (RPQ 673027): Is available for customers who wish to limit copy usage using meter systems not manufactured by IBM. This connector provides a cable interface that connects the meter-system to the 6802. Ordered through normal MES procedure using RPQ 673027.

Front Door Lock (RPQ 773123): This feature provides a front-door lock permitting access to the inside of the 6802 only to those people having the key to the lock. Ordered through normal MES procedure using RPQ 773123.

SUPPLIES

Each 6802 shipment to the customer will include the following: One lens cloth; one cleaning cloth; one drop cloth; one key operator manual; one carton toner; one vacuum cleaner bag; one special cleaning cloth for the fuser hot roll.

6803 SERIES III MDL 20

PURPOSE

The 6803 Copier III model 20 is a high-speed plain-paper copier/duplicator that can print on both sides of a piece of paper automatically, reduce unwiedly documents to letter page size, and collate the output.

MODELS

Model 004 6803 Copier III model 20.

Dimensions:

Width: 116.8cm (46 in.)
Depth: 68.6cm (27 in.)
Height: 116.8cm (46 in.)
Weight: 513.0kg (1,140 lbs.)

HIGHLIGHTS

Single sheets are automatically fed on to the document glass, positioned, and after last copy is made, original is ejected into the original exit tray. No "A" button is required.

Copies are printed on both sides of a piece of paper through the use of a duplexing feature, thus saving on paper and storage cost. Duplexing is entirely automatic and does not require the operator to manually reverse the paper.

Single Original Automatic feed. Maximum size: 304.8mm x 381mm (12 x 15 in.) When Automatic Feed is not used maximum size is: 304.8 x 431.8mm (12 x 17 in.)

Exit Pocket Capacity: Approximately 400 sheets.

Automatic machine misfeed recovery, side one only.

Provides the ability to reduce originals 26% or 35%.

Provides the ability to make copies lighter or darker.

Has a push button copy quantity selector ranging from 1 to 999 copies.

Copy paper is stored in two trays with a total capacity of about 2,700 sheets.

Delivery Speed: First copy 4.5 seconds (varies with special features selected). Subsequent copies at 1.6 second intervals. Copies per hour (rated speed) 4,500.

SPECIFY

  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 3 **#P878**
  203 x 254mm (8.0 x 10.0 in.)
  203 x 330mm (8.0 x 13.0 in.)
  210 x 297mm (8.2 x 11.6 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 4 **#P879**
  210 x 270mm (8.2 x 10.6 in.)
  210 x 297mm (8.2 x 11.6 in.)
  210 x 310mm (8.2 x 12.2 in.)
  216 x 356mm (8.5 x 14.0 in.)

  * Supplied as standard if no other paper group is specified.

- Language Group: The language group consist of preprinted instructions which appear on the machine such as "Lighter Copy", "Darker Copy", "Reduce"," Alternate Paper", "Duplex", etc.

  English US #2265

- Color: Charcoal Gray (no specify required).

SPECIAL FEATURES

Carpet Rails (#A134): Carpet rails for the base machine and the primary collator. Note: If selected, then feature code **#A137** must be chosen on the secondary collator. See M6852 pages for details. **Field Installation:** Yes.

Copier Control Feature (#A238): Provides the capabilty of controlling copier access and allocating copier usage to the responsible indivdual and/or department. Authorized personnel are assigned an identification code number (a maximum of 5-digit code). This code must be entered through the numerical pad on the control panel to activate the copier. The number of copies for each user is counted and stored electronically in the copier. Periodically the Key Operator can retrieve the total number of copies for each assigned user. This information can be used for internal department billings. **Field Installation:** Yes.

Phase Adapter Plug (#A249): Provides for replacing none IBM plugs used with none IBM copiers. **Field Installation:** Yes.

Third Party Interface (#5988): This feature is available for customers who wish to limit copy usage using meter systems not manufactured by IBM. This connector provides a cable interface that connects the meter-system to the 6805. **Field installation:** Yes.

Meter System and Receptacle (#5989): Enables the customer to allocate usage to various departmental programs or special projects within an organization or location. The meter system consist of a single receptacle mounted in a small cabinet, plus one or more pluggable meters. A meter must be inserted into the receptacle to initiate a copy cycle. Each meter automatically records the number of copies made. Any number of meters may be used. IBM meters are not compatible with competitive copying machines. **Field installation:** An MES must be submitted through Boulder CO, USA.

Radio Frequency Interference Elimination Filter (RFI)
Electromagnetic Compatibility (EMC): The RFI and/or EMC may be ordered only for field installation from Boulder CO, USA. **Collator** 20 bin or 40 bin. See M6852 pages for details. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

RPQs

14 Foot Line Cord (RPQ 073002): Allows the customer to locate the 6805 14 feet from the power supply. Ordered through normal MES procedure using RPQ 073002.

17 Foot Line Cord (RPQ 073003): Allows the customer to locate the 6805 17 feet from the power supply. Ordered through normal MES procedure using RPQ 073003.

20 Foot Line Cord (RPQ 073004): Allows the customer to locate the 6805 20 feet from the power supply. Ordered through normal MES procedure using RPQ 073004.

6 Foot Line Cord (RPQ 073005): Allows the customer to locate the 6805 6 feet from the power supply. Ordered through normal MES procedure using RPQ 073005.

A-4 Paper Size (RPQ 174011): Allows the 6805 to feed "A-4" size paper, 210 x 297mm (8.27 x 11.69 in.). Ordered through normal MES procedure using RPQ 174011.

Offset Masters (RPQ 176103): Allows offset masters to be more easily processed. Ordered through normal MES procedure using RPQ 176103.

Resetable Billing Meter (RPQ 600604): Allows the user to count number of copies. The meter can manually be set to zero. Ordered through normal MES procedure using RPQ 600604.

Front Door Lock (RPQ 773123): This feature provides a front-door lock permitting access to the inside of the 6805 only to those people having the key to the lock. Ordered through normal MES procedure using RPQ 773123.

SUPPLIES

Each 6805 shipment to the customer will include the following: One lens cloth; one cleaning cloth; one drop cloth; one key operator manual; one carton toner; one vacuum cleaner bag; one special cleaning cloth for the fuser hot roll.

6806 SERIES III MDL 40

PURPOSE

The 6806 Copier III model 40 is a high-speed plain-paper copier/duplicator that can print on both sides of a piece of paper automatically, reduce unwiedly documents to letter page size, and collate the output.

MODELS

Model 001 6806 Copier III model 40.

Dimensions:

Width: 120.6cm (47-1/2 in.)
Depth: 74.9cm (29-1/2 in.)
Height: 118.1cm (46-1/2 in.)
Weight: 544.0kg (1,200 lbs.)

HIGHLIGHTS

Single sheets are automatically fed on to the document glass, positioned, and after last copy is made, original is ejected into the original exit tray. No "A" Button is required.

Copies are printed on both sides of a piece of paper through the use of a duplexing feature, thus saving on paper and storage cost. Duplexing is entirely automatic and does not require the operator to manually reverse the paper.

Single Original Automatic feed. Maximum size: 304.8mm x 381mm (8-1/2 x 14 in.) When Automatic Feed is not used maximum size is: 304.8 x 431.8mm (12 x 17 in.)

Exit Pocket Capacity: Approximately 250 sheets.

Automatic job recovery.

Provides the ability to reduce originals 26% or 35%.

Provides the ability to make copies lighter or darker.

Has a push button copy quantity selector ranging from 1 to 999 copies.

Copy paper is stored in two trays with a total capacity of about 2,700 sheets.

Delivery Speed: First copy 4.5 seconds (varies with special features selected). Subsequent copies at 1.6 second intervals. Copies per hour (rated speed) 4,200.

SPECIFY

- Voltage Dedicated 120/208 Volt, 30 amp.
- Paper Group:

  Group 1 **#P876***
  203 x 267mm (8.0 x 10.5 in.)
  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 2 **#P877**
  210 x 297mm (8.2 x 11.6 in.)
  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 3 **#P878**
  203 x 254mm (8.0 x 10.0 in.)
  203 x 330mm (8.0 x 13.0 in.)
  210 x 297mm (8.2 x 11.6 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 4 **#P879**
  210 x 270mm (8.2 x 10.6 in.)
  210 x 297mm (8.2 x 11.6 in.)
  210 x 310mm (8.2 x 12.2 in.)
  216 x 356mm (8.5 x 14.0 in.)

  * Supplied as standard if no other paper group is specified.

- Language Group: The language group consist of preprinted instructions which appear on the machine such as "Lighter Copy", "Darker Copy", "Reduce"," Alternate Paper", "Duplex", etc.

  English US **#2265**

- Color: Charcoal Gray (no specify required).

RPQs

14 Foot Line Cord (RPQ 073002): Allows the customer to locate the 6806 14 feet from the power supply. Ordered through normal MES procedure using RPQ 073002.

17 Foot Line Cord (RPQ 073003): Allows the customer to locate the 6806 17 feet from the power supply. Ordered through normal MES procedure using RPQ 073003.

20 Foot Line Cord (RPQ 073004): Allows the customer to locate the 6806 20 feet from the power supply. Ordered through normal MES procedure using RPQ 073004.

6 Foot Line Cord (RPQ 073005): Allows the customer to locate the 6806 6 feet from the power supply. Ordered through normal MES procedure using RPQ 073005.

A-4 paper size (RPQ 174011): Allows the 6806 to feed "A-4" size paper, 210 x 297mm (8.27 x 11.69 in.). Ordered through normal MES procedure using RPQ 174011.

Offset Masters (RPQ 176103): Allows offset masters to be more easily processed. Ordered through normal MES procedure using RPQ 176103.

Resetable Billing Meter (RPQ 600604): Allows the user to count number of copies. The meter can manually be set to zero. Ordered through normal MES procedure using RPQ 600604.

Front Door Lock (RPQ 773123): This feature provides a front-door lock permitting access to the inside of the 6806 only to those people having the key to the lock. Ordered through normal MES procedure using RPQ 773123.

SUPPLIES

Each 6806 shipment to the customer will include the following: One lens cloth; one cleaning cloth; one drop cloth; one key operator manual; one carton toner; one vacuum cleaner bag; one special cleaning cloth for the fuser hot roll.

6808 SERIES III MDL 60

PURPOSE

The Copier III is a high-speed plain-paper copier/duplicator that can print on both sides of a piece of paper automatically, reduce unwieldy documents to letter page size, and collate the output.

MODELS

Model 001

Prerequisites: Feature SADF (#A150) or ADF (#A151) and Non-Reduction Feature (#5977) or Reduction Feature (#5978) must be specified. See "Special Features".

Dimensions:

Width: 124.5cm (49 in.)
Depth: 74.9cm (29-1/2 in.)
Height: 120.0cm (47-1/4 in.)
Weight: 544.0kg (1,200 lbs.)

HIGHLIGHTS

- The 6808 represents a modular copier concept that is a significant addition to the Copier III family of copier products. It allows customers to add features to their basic machine, in their office, as they need them or remove features as their needs change.
- Single sheets are automatically fed on the document glass, positioned, and after last copy is made, original is ejected into the original exit tray. No "A" Button is required.
- Copies are printed on both sides of a piece of paper through the use of a duplexing feature, thus saving on paper and storage cost. Duplexing is entirely automatic and does not require the operator to manually reverse the paper.
- Single Original Automatic feed Maximum size: 304.8 x 381mm 8-1/2 x 14 in.) When Automatic Feed is not used maximum size is 304.8 x 431.8mm (12 x 17 in.)
- Exit Pocket Capacity : Approximately 250 sheets.
- Job Interrupt Feature allows the operator the convenience of interrupting a job for priority copies. At the completion of the priority job, machine recalls the instructions of the original job and resumes where it was interrupted.
- Automatic Checkout Capability allows the CE to quickly verify that the machine is working properly at the completion of a service call, which improves machine serviceability.
- Provides the ability to reduce originals 26% or 35%.
- Provides the ability to make copies lighter or darker.

  Has a push button copy quantity selector ranging from 1 to 999 copies.
- Copy paper is stored in two trays with a total capacity of about 2,700 sheets.
- Delivery Speed: First copy 4.5 seconds (varies with special features selected). Subsequent copies 1.6 seconds intervals copies per hour (rated speed) 4,200.

SPECIFY

- Voltage ... 120 Volt AC, 30 amp, grounded dedicated lines; 120/208 Volt AC, 30 amp, grounded; 120/240 Volt AC, 30 amp, grounded.

- Paper Group:

  Group 1 **#P876**
  203 x 267mm (8.0 x 10.5 in.)
  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 2 **#P877**
  210 x 297mm (8.2 x 11.6 in.)
  216 x 279mm (8.5 x 11.0 in.)
  216 x 330mm (8.5 x 13.0 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 3 **#P878**
  203 x 254mm (8.0 x 10.0 in.)
  203 x 330mm (8.0 x 13.0 in.)
  210 x 297mm (8.2 x 11.6 in.)
  216 x 356mm (8.5 x 14.0 in.)

  Group 4 **#P879**
  210 x 270mm (8.2 x 10.6 in.)
  210 x 297mm (8.2 x 11.6 in.)
  210 x 310mm (8.2 x 12.2 in.)
  216 x 356mm (8.5 x 14.0 in.)

- Language Group: The language groups consist of preprinted instructions which appear on the machine such as "Lighter Copy", "Darker Copy", "Reduce"," Alternate Paper", "Duplex", etc.

  English US **#2265**

- Color: Pearl White, Charcoal Gray end covers (no specify required).

SPECIAL FEATURES

Carpet Rails (#A134): Carpet rails for the base machine and the primary collator. Note: If selected then feature code **#A137** must be chosen on the secondary collator. See M6852 pages for details. **Field Installation:** Yes.

Semi-Automatic Document Feed (SADF) (#A150): The horizontal SADF entry tray provides enhanced application flexibility and improved reliability. **Field Installation:** Yes.

Automatic Document Feed (ADF) (#A151): The ADF automatically feeds a stack of up to 50 originals ranging in size from 203mm x 254mm (8 x 10 in.) to 297mm x 420mm (11.69 x 16.54 in.), and weight from 60 to 105g/sq.m (16-20 lbs) originals. However, each stack of originals placed in the ADF must be of the same size and weight. **Field Installation:** Yes.

Copier Control Feature (#A238): Provides the capabilty of controlling copier access and allocating copier usage to the responsible indivdual and/or department. Authorized personnel are assigned an identification code number (a maximum of 5 digit code). This code must be entered through the numerical pad on the control panel to activate the copier. The number of copies for each user is counted and stored electronically in the copier. Periodically the Key Operator can retrieve the total number of copies for each assigned user. This information can be used for internal department billings. **Field Installation:** Yes.

Phase Adapter Plug (#A249): Provides for replacing none IBM plugs used with none IBM copiers. **Field Installation:** Yes.

Non-reduction Feature (#5977): Field Installation: Yes.

Reduction Feature (#5978): Provides for reducing originals 26% or 35% in size. **Field Installation:** Yes.

Third Party Interface (#5988): This feature is available for customers who wish to limit copy usage using meter systems not manufactured by IBM. This connector provides a cable interface that connects the meter-system to the 6808. **Field installation:** Yes.

Meter System and Receptacle) (#5989): Enables the customer to allocate usage to various departmental programs or special projects within an organization or location. The Meter system consist of a single receptacle mounted in a small cabinet, plus one or more pluggable meters. A meter must be inserted into the receptacle to initiate a copy cycle. Each meter automatically records the number of copies made. Any number of meters may be used. IBM meters are not compatible with competitive copying machines. **Field installation:** An MES must be submitted through Boulder CO USA.

Radio Frequency Interference Elimination Filter (RFI)
Electromagnetic Compatibility (EMC): The RFI and/or EMC may be ordered only for field installation from Boulder CO USA.

Collator: 20 bin or 40 bin. See M6852 pages for details. **Field Installation:** Yes.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

RPQs

14 Foot Line Cord (RPQ 073002): Allows the customer to locate the 6808 14 feet from the power supply. Ordered through normal MES procedure using RPQ 073002.

17 Foot Line Cord (RPQ 073003): Allows the customer to locate the 6808 17 feet from the power supply. Ordered through normal MES procedure using RPQ 073003.

20 Foot Line Cord (RPQ 073004): Allows the customer to locate the 6808 20 feet from the power supply. Ordered through normal MES procedure using RPQ 073004.

6 Foot Line Cord (RPQ 073005): Allows the customer to locate the 6808 6 feet from the power supply. Ordered through normal MES procedure using RPQ 073005.

6808 Series III mdl 60 (cont'd)

A 4 Paper Size (RPQ 174011): Allows the 6808 to feed "A 4" size paper, 210 x 297mm (8.27 x 11.69 in.). Ordered through normal MES procedure using RPQ 174011.

Offset Masters (RPQ 176103): Allows offset masters to be more easily processed. Ordered through normal MES procedure using RPQ 176103.

Resetable Billing Meter (RPQ 600604): Allows the user to count number of copies. The meter can manually be set to 0. Ordered through normal MES procedure using RPQ 600604.

Front Door Lock (RPQ 773123): This feature provides a front-door lock permitting access to the inside of the 6808 only to those people having the key to the lock. Ordered through normal MES procedure using RPQ 773123.

SUPPLIES

Each 6808 shipment to the customer will include the following: One lens cloth; one cleaning cloth; one drop cloth; one key operator manual; one carton toner; one vacuum cleaner bag; one special cleaning cloth for the fuser hot roll.

6852 COLLATOR

PURPOSE

Collator for the copier III machines.

MODELS

Model 004 20 bin 60 Hz (Primary model)
Model 003 20 bin 60 Hz (Secondary model additional 20 bin)
Model 014 20 bin 50 Hz (Primary model)
Model 013 20 bin 50 Hz (Secondary model additional 20 bin)

Prerequisites: The 6802 or 6803 copiers must be equipped with the Collator Attachment Feature **#A132** to enable it to accept a collator.

Dimensions:

Primary (20 bins)	Secondary (for total of 40 bins)
Width: 46cm (18 in.)	Width: 46cm (18 in.)
Depth: 68cm (27 in.)	Depth: 68cm (27 in)
Height: 105cm (41-1/2 in.)	Height: 96.5cm (38 in.)
Weight: 81kg (180 lbs.)	Weight: 61kg (135 lbs.)

HIGHLIGHTS

The collator is designed to simplify paper handling by automatically assembling sets of copies in sequential order. Each collator bin holds approximately 100 sheets of 20 lb. bond paper.

SPECIFY

- **Collator Attachment Feature (#A132):** The 6802 or 6803 copiers must be equipped with this feature to enable it to accept a collator. This feature is ordered with the 6802 or 6803 collator.
- Color: Charcoal gray (no specify required).

SPECIAL FEATURES

Carpet Rails (#A137): Carpet rails for the secondary collator. Carpet rails (#A134) for base machine and the primery collator is a prerequisite. See appropriate machine pages for the base machine.

MODEL CONVERSIONS

Compatibility Feature (#C056): Allows conversion of a currently installed collator on 6802 or 6803 to be attached to the 6805 or 6806 copier.

Compatibility Feature (#C069): Allows conversion of a currently installed collator on 6805 or 6806 to be attached to the 6808 copier.

ACCESSORIES (None)

SUPPLIES (None)

7361 GRAPHICS PROCESSOR UNIT

PURPOSE

Provides the logic, memory, disk storage, and I/O control capabilities for the 7361 Fastdraft System. When loaded with the 7361 Fastdraft licensed program, enables and controls user's interaction with the 3251 model 2 Display Station and the 7374 or 7375 Color Plotter. As the key element, with the Fastdraft licensed program, of the 7361 Fastdraft System, offers graphics functions for use by drafting personnel untrained and inexperienced in computer or programming disciplines.

MODELS

Model 1 001

Prerequisites: There are no prerequisites for the 7361 GPU. The following elements are, however, required when using the 7361 as part of the 7361 Fastdraft System:

- The 7361 Fastdraft licensed program (5719-GP1).
- A 3251 mdl 2 Display Station with Alphameric Keyboard (#4621) and Light Pen (#4750).
- A 3101 mdl 100 or 23A Display Terminal, as a console [without 3m (10 foot) modem cable].

Customer Setup: No.

HIGHLIGHTS

A floor-standing unit mounted on casters for easy installation and service access.

Contains:

The processor.

256K bytes of storage.

A 13.9 megabyte disk file.

A diskette drive ... can accommodate up to 1.2 megabytes, dependent upon format.

Workstation controller

Power supplies.

A processor control panel.

Interfaces to one or two 3251 mdl 2 Display Stations, a 3101 mdl 100 or 23A Display Terminal console (without modem cable), and a 7374 or 7375 Color Plotter. Provides the logic, storage and I/O control capabilities to handle graphics application functions for drafting personnel.

Description: The 7361 Graphics Processor Unit (GPU), with the Fastdraft licensed program Version 1, Mod 1 installed, offers complete "menus" of functions to the drafter.

Some of these features/functions are:

Isometric drawing and assembly capabilities.

Circle/arc intersect and tangent.

Ability to draw lines tangent to circle/arc.

User-defined units of measure (millimeters and inches).

Scalable views.

Spline.

Dimensions in decimal inches and angles in degrees, minutes and seconds. Also decimal millimeters and degrees.

Addressability of eight pen positions.

Coordinate selection by light-pen and key entry.

Dynamic read-out of coordinates as the tracking-cross moves.

Feet/inch/fraction units to 1/64th inch.

Drawing construction at user defined scales.

Plot merge by view.

Plotting concurrently with graphic creation at both 3251 mdl 2s.

Chamfer

Cross-Hatch option for Pouche'.

See *IBM 7361 Fastdraft Workstation Reference* (SC34-0516), and related publications for a full explanation of the functions and features.

Usability: The 7361 user does not need computer or programming background. Users rapidly learn to use the system. Interaction with the logic and controlling application in the 7361 is via a 3251 mdl 2 Display Station equipped with a special keyboard and a light-pen. A training guide steps the user through the functions offered. The screen is analogous to the drafting table. The light-pen acts like a drafting pencil. Disk storage capability in the 7361 permits storage of the drawing in process for rapid access. Diskettes are the loading media for the program product and for drawings written in a previous work session or from other 7361 systems. The user selects the "Options" or functions required from a list of options displayed in menu form on the screen. Prompts direct the user to the next action required. No computer jargon is used. The 7361 has no dependency on host systems attachments or host systems programming support.

Customer Responsibilities: The customer is responsible for site preparation, for the provision of the required electrical service and facilities, and for installation of the 7361 Fastdraft licensed program (5791-GP1).

Installation: The 7361 will be installed by a Customer Engineer.

Physical Specifications:

Width	760 mm (29.92 inches)
Depth	722 mm (28.43 inches)
Height	1,525 mm (60.04 inches)
Weight	250 kg (550 pounds)

Operating Environment:

Temperature	15 to 32.2 degrees C (60 to 90 degrees F)
Relative Humidity	8% to 80%
Wet Bulb	22.8 degrees C (73 degrees F) max.
Altitude	0 to 2,135 meters (7,000 feet)

Publications: *IBM Fastdraft System Guide* (SC34-0514), *IBM Fastdraft Training Guide* (SC34-0515), *IBM 7361 Fastdraft Workstation Reference* (SC34-0516).

SPECIFY

- Voltage (AC, 1-phase, 60 Hz): **#9902** for 208V, **#9914** for 240V.
- Power Cord Length: 1.8 meters (6 feet).
- Power Plug: Standard "Eagle", or equivalent.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Diskettes: [Available December, 1983] Available from IBM.

7374 COLOR PLOTTER

PURPOSE

Provides large format, multicolor, high-resolution vector plotting capabilities. Can plot drawings created on the 7361 Fastdraft System on paper, vellum, or polyester sheets with highly accurate registration and repeatability.

MODELS

Model 1 001

Prerequisites: A 7361 Fastdraft System. The 7374 attaches to a standard EIA RS-232-C port in the 7361. **Note:** Because the 7374 has been tested for use only with the 7361 system, it is made available for use only in that specified environment.

Customer Setup: No.

HIGHLIGHTS

Multicolor Graphics Printing Capability:

- By programmed or manual selection of up to eight pens from one of three (each with pens of a specific type ... fiber tip, roller ball, or liquid ink drafting) manually interchangeable pen carousels.
- Each pen carousel type is electronically sensed to set default values for pen speed and writing force whenever the carousel is changed.
- User may plot working drawings and follow quickly with final liquid ink finished quality drawings by simply changing carousel type and final drawing media (e.g., paper to vellum, or to double matte polyester sheets).
- Pen types handled are:

  Fiber Tip (inexpensive, choice of widths, wear quality, etc.)

  Roller Ball (fine lines, fast drawing, hard wearing)

  Liquid ink drafting pens (highest quality for final work)
- Plotter senses which "stables", of the eight in a carousel, contain a pen. Subsequent checking whenever a pen-select command is received determines whether a pen was/was-not in that stable at carousel loading time, whether pen holder already has a pen and has been commanded to return it to the appropriate stable, whether the holder is empty and the selected pen is actually in position to be picked, and, finally, whether the newly selected pen has been picked and is in the holder.
- Automatic capping of pens unused for a predetermined time retards pen drying problems and increases the life of the pen.

Paper, Vellum, Polyester Media Control:

- Media is gripped between pressure wheel and aluminum oxide coated grit wheel (at back of media) for precise X-axis media motion.
- Thousands of minute grit impressions are made on the back of the media on the first pass of the drawing. As drawing moves along X-axis, each impression tends to realign itself with its originating grit particle. The effect is that of an ultra-precise, built-in miniature sprocket drive system.
- Media drapes over, and is vacuum drawn against, a platen to maintain resolution not only at the grit wheel pinched edges, but all along the media surface.
- Expensive sprocket hole media is not required.
- Plots on media sizes from 203.2 mm x 266.7 mm (8 inches x 10.5 inches) to 622.3 mm x 1231.9 mm (24.5 inches x 48.5 inches).

Controls: A front panel on the 7374 provides local, manual control facilities. A joystick controls pen movement at slow, medium, and fast speeds according to the pressure and inclination selected by the operator. Of the 22 keys on the panel, 13 control pen selection, up/down conditions, speed, and force. The pen selected, its speed, and its force values are displayed on a 3-digit display on the panel. Other indicators show the current operating mode of the plotter, I/O or graphics error indications, whether 90 degree rotation is in effect, etc. Refer to *IBM 7361 Fastdraft System Guide* (SC34-0514), for further information.

Customer Responsibility: The customer is responsible for site preparation and for the provision of appropriate power facilities ... see *IBM 7361 Fastdraft System Guide* (SC34-0514), for installation and physical planning information.

Installation: The 7374 will be installed by a Customer Engineer.

Physical Specifications:

Width	1,087 mm (42.8 inches)
Depth	557 mm (21.9 inches)
Height	1,188 mm (46.8 inches)
Weight	59 kg (130 pounds)

Operating Environment:

Temperature	0 to 55 degrees C (32 to 131 degrees F)
Relative Humidity	5% to 95% [0 to 40 degrees C (32 to 104 degrees F)]

Publications: *IBM Fastdraft System Guide* (SC34-0514), *IBM Fastdraft Training Guide* (SC34-0515), *IBM Fastdraft Workstation Reference* (SC34-0516).

SPECIFY

- Voltage (120V AC, 1-phase, 3-wire, 60 Hz): No specify required.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES

Supplies will be available from IBM.

7375 COLOR PLOTTER

PURPOSE

A floor-standing, multicolor, multimedia, high-resolution vector plotter. It provides the capability to plot up to E/AO size drawings on paper, vellum, or polyester sheets with highly accurate registration and repeatability. The 7375 connects via cable to the 7361 Fastdraft System.

MODELS

Model 1 001

Prerequisite Operating Environment: The 7375 cable-attaches to the 7361 Fastdraft System. The IBM Fastdraft Licensed Program Release 1.0 or later (Program 5719-GP1 R1.0 or R1.1) will support the 7375. However, Program 5719-GP1 can support only one plotter, either a 7375 or 7374, at any one time. The 7375 attaches to a standard EIA RS-232-C port or a IEEE488 standard port via a 6.1 meter (20 foot) cable.

Note: Because the 7375 has been tested for use only with the 7361 Fastdraft System, it will be supported only when attached to a 7361.

For further information on the use of the 7375 plotter with the Fastdraft System, see the *IBM Fastdraft System Guide* (SC34-0514-1 level or later).

HIGHLIGHTS

- Provides ability to plot up to E/AO size drawings 841mm x 1,189mm (34 inches x 44 inches). Other standard size drawings that can be accommodated are:

A 8-1/2 x 11 inches	A4	210 x 297mm
B 11 x 17 inches	A3	297 x 420mm
C 17 x 22 inches	A2	420 x 594mm
D 22 x 34 inches	A1	594 x 841mm

- The 7375 is an 8-pen plotter that allows the drafter to choose pens, colors and line widths to match application requirements.
- Three pen types are handled:

  Fiber Tip (inexpensive, choice of widths, wear quality, etc.)

  Roller Ball (fine lines, fast drawing, long wearing)

  Liquid ink drafting pens (highest quality for final work)
- Each pen type has its own 8-pen carousel and the three carousels are manually interchangeable.
- Pen speeds and force will automatically be set to default values appropriate for "just loaded" pen types whenever the carousel is changed.
- Automatic pen-capping is provided.
- Paper, vellum, or double-matte polyester sheets can be selected as the drawing media as application requires.
- Media size ranges are:

  Width 267mm (10.5 inches) to 298mm (11.75 inches), that include standard sizes A4/A and A3/B; and 546mm (21.5 inches) to 927mm (36.5 inches), which includes standard sizes A2/C, A1/D, A0/E, and architectural size E.

  Length 203mm (8 inches) to 1,231.9mm (48.5 inches)

  Paper size is electronically sensed to establish plot limits.
- Ultra-precise media control yields superior repeatability and accuracy.
- Simple and convenient pushbutton control is designed into the plotter.

Installation: The 7375 will be installed by an IBM Customer Service Representative.

Physical Specifications:

Width	1,392mm (54.8 inches)
Depth	557mm (21.9 inches)
Height	1,188mm (46.8 inches)
Weight	70.4kg (155 pounds)

Environmental Specifications:

Operating:

Temperature	15 to 32.2 degrees C (60 to 90 degrees F)
Relative Humidity	8% to 80%
Max Wet Bulb	22.8 degrees C (73 degrees F)]
Altitude	2,135 meters (7,000 feet) Maximum

Non-Operating:

Temperature	10 to 43 degrees C (50 to 110 degrees F)
Relative Humidity	8% to 80%
Max Wet Bulb	26.7 degrees C (80 degrees F)]

Shipping:

Temperature	-40 to 60 degrees C (-40 to 140 degrees F)
Relative Humidity	5% to 100%
Max Wet Bulb	29.4 degrees C (85 degrees F) No Condensation

Publications:

1. Two publications will be shipped with the 7375:
   - *IBM 7375 Color Plotter Maintenance Information* (SY34-0339)
   - *IBM 7375 Color Plotter Parts Catalog* (S134-0069)
2. General Fastdraft information:(At -1 level or later. Includes information relative to the 7375.)
   - *IBM Fastdraft System Guide* (SC34-0514)
   - *IBM Fastdraft Training Guide* (SC34-0515)
   - *IBM Fastdraft Workstation Reference* (SC34-0516)
3. Education: (No formal Classroom training is required.)
   - *IBM 7361 Fastdraft Training Guide* (SC34-0515), this self-study guide addresses the use of the 7375 when attached to a Fastdraft System, and will be available in December, 1983.

SPECIFY

ACCESSORIES (None)

SUPPLIES

Supplies will be available from IBM.

7426 TERMINAL INTERFACE UNIT

PURPOSE

An ASCII to SDLC protocol converter for attachment of 3101 display units and TTY compatible terminals to the S/370, 43XX, 30XX processors and the 8100 System.

MODELS

Model 1	001	Designed for connection to the 8100, 4321 and 4331 systems via a direct-attached or data link-attached loop.
Model 2	002	Designed for connection to the S/370, 43XX, 30XX or 8100 systems via SDLC communication link.

Prerequisites: The 7426 requires a downstream microcode load from the host processor to which it communicates. Therefore, the downstream load microcode data set (distributed via magnetic media) must be installed on the host processor.

When connected to the 8100 Processor, the 7426 operates under DPPX or DPCX using the same programming support as provided for the 3276 mdl 12. The 7426 cannot be used for installation of DPPX/DPCX programming system in lieu of the 3276.

When connected to the S/370, 43XX or 30XX processors, the 7426 requires the Downstream Load Utility program product (5668-006) to be installed on the processor.

Customer Setup (CSU): Machine only.

HIGHLIGHTS

Terminal attachment to the 7426 is via asynchronous EIA RS-232-C interface or EIA RS-422-A interface. Logical appearance of 7426 to processors is that of 3276-12 control unit with up to four 3278 displays and/or 3287 printers.

The 3276 emulation capability of the 7426 allows 3101 displays and TTY-compatible terminals to utilize the existing 3270 programming support. (Subject to the limitations of attached devices.) Terminal connection to the 7426 can be by direct connection, or via nonswitched or switched network. The 7426 provides auto-answer support for its downstream connected terminals.

In addition to protocol conversion, the 7426 provides a 4,800-byte storage area for storing of pre-formatted display information. The capability to store frequently used formats in the 7426 reduces the volume of data transfers between the 7426 and its host system.

Operation of the 7426 is dependent on downstream loading of microcode from the host system to the 7426. Microcode for the 7426 is distributed by IBM to the customer's host site on a magnetic media; IBM Diskette 2D is used for an 8100 processor, and IBM Distribution Tape Reel (DTR) is used for the S/370, 43XX or 30XX processors. The microcode is installed on the host system by transferring the contents of diskette/tape into permanent disk storage. A downstream load from the host to the 7426 is initiated automatically when the 7426 is powered on.

Attachable Devices: 3101 mdls 10 and 13, 3101 mdls 20 and 23 operating in character mode, 3102 printer (connected to 3101 port), 3101-837 Display RPQ 8J0002, 7485-531 RPQ display, IBM Personal Computer with 3101 Emulation Program (6024042) and Asynchronous Communications Adapter, 4975-01A Printer RPQ D09033, certain non-IBM TTY-compatible displays and printers. **Note:** An RPQ must be submitted for attachment of non-IBM, TTY-compatible terminal(s).

Device Attachment: The 7426 supports both EIA RS-232-C and RS-422-A interface for attaching devices. For direct connection, the distance between the 7426 and the attaching device is dependent on the device interface, up to 12 meters (40 feet) for EIA RS-232-C Connection, and up to 1,220 meters (4,000 feet) for EIA RS-422-A connection. TP attachment via nonswitched or switched lines requires an asynchronous external modem with RS-232-C interface. The data set ready signal from the modem alerts the 7426 to an incoming call.

Communications: The 7426 mdl 1 communicates with 8100, 4321 and 4331 direct-attached loops at transmission speeds of up to 38,400 bps, and data link attached loops at up to 9600 bps. The 7426 mdl 2 uses the SDLC communications link to operate in half-duplex point-to-point or multipoint mode on half-duplex or duplex facilities at transmission speeds of up to 9600 bps. Terminal communication with the asynchronous downstream ports of the 7426 is at speeds of up to 9600 bps. See M2700 pages for communication facilities.

Customer Problem Analysis and Resolution (CPAR): Self-test diagnostics has been designed into the 7426 to enhance availability to the customer. CPAR routines and procedures are documented in the *7426 Terminal Interface Unit Customer Setup, Customer Initialization, Customer Problem Analysis and Resolution Manual,* GA23-0078. See "Customer Responsibilities" below.

Customer Setup (CSU): The 7426 is designated a customer setup machine. Setup instructions are included with each machine.

Initialization: Initialization of the 7426 is performed after Customer Setup. A 3101 display or an IBM Personal Computer with 3101 emulation program and asynchronous communications adapter is required for initialization. During initialization, parameters such as loop carrier and data rates, parity selection and number of transmit bits are specified to customize the 7426 for a specific operational environment. See "Customer Responsibilities" below.

IBM Repair Center Service: The 7426 is eligible for IBM Maintenance Agreement coverage immediately following expiration of the warranty for an annual charge.

If maintenance agreement coverage is not contracted for immediately following expiration of the warranty and the customer subsequently wants maintenance coverage, the machine(s) must be inspected by IBM.

IBM repair center service is available under the terms and conditions of the Agreement for Purchase of IBM Machines and after warranty expiration under the IBM Maintenance Agreement and the IBM Repair Center Maintenance and Machine Element Replacement Service Amendment or on a Time-and-Material Basis.

On-Site Assistance: If the customer desires assistance to perform CPAR, the local FE branch office may be called for customer engineering assistance. The CE will respond to the customer site to aid the customer in performing CPAR procedures using the same documentation available to the customer. Customer-owned spare 7426s will be installed by the CE upon request. Shipping of defective 7426s to the repair center is a customer responsibility. CE assistance is available on a per-call basis at the applicable hourly rate.

Customer Responsibilities: the Customer is responsible for:

- Adequate site, system and other vendor preparation. *
- Obtaining communication cables.
- Receipt at customer's receiving dock, unpacking and placement of unit.
- Setup of unit, connection of cables to communication lines, modems and processors, switch settings, and checkout.
- Initialization of the 7426.
- Price quotations, installation and cost of common carrier equipment and service.
- Determination of the required number of spares.
- Performing Customer Problem Analysis and Resolution.
- Returning failing 7426 to repair center with a completed Repair Authorizations form.

* Each customer should order the *IBM 7426 Terminal Interface Unit Description, Site Planning and Programming Guide,* GA23-0077, for installation and planning work.

Spares: It is recommended that the customer order a sufficient number of spares to meet the operational requirements of his site. The recommended number of spares is:

Number of 7426s Installed	Recommended 7426 Spares
1-15	1
30	1
50	1
75	2
100	2
200	3
300	3
500	5
700	6
1000	7

The customer should be advised to test spares for correct operation before putting them on the shelf.

Warranty Service and Maintenance: The normal procedure will be for the customer to isolate the failure to a 7426 and ship it to the designated IBM Repair Center. All maintenance, parts replacement, adjustments, and repair shall normally by performed at the designated IBM Repair Center.

When maintenance is required, it shall be the customer's responsibility to determine the failing 7426, pack the 7426 in the designated shipping container and ship it prepaid to the designated IBM Repair Center. IBM will ship the repaired machine prepaid. There is no regularly scheduled preventive maintenance recommended by IBM on these machines.

Repair center service is available under the IBM Maintenance Agreement and the IBM Repair Center Maintenance and Machine Element Replacement Service Amendment (Z120-2240-5), or on a Time-and-Material basis.

Customers with machines not under an IBM Maintenance Agreement must have the option to ship the machines to the designated IBM

7426 Terminal Interface Unit (cont'd)

Repair Center for repair. The IBM Machine Repair Authorization Form is to be completed with all shipments to the repair center. Alternatively, upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling, inspection, cleaning, adjustments, testing, estimating of repair charges, and return shipping charges.

Publications:

IBM 7416 Terminal Interface Unit Description, Site Planning, and Programming Guide, GA23-0077.
IBM 7426 Terminal Interface Unit Customer Setup, Customer Initialization, Customer Problem Analysis and Resolution, GA23-0078. (Shipped with each unit.)

SPECIFY

Unless indicated otherwise, the following specify features are only available at time of manufacture.

- Voltage (120V AC, 1-phase, 3-wire, 60 Hz): Power cable 1.8 meters (6 foot), non-locking plug.
- **Magnetic Media**: One copy of magnetic media (i.e., downstream load microcode) is needed for each 8100, S/370, 43XX, or 30XX system to which the 7426 attaches; i.e., on a single system attaching multiple 7426s, only one 7426 must specify the magnetic media. An MES order will be processed for a 7426 that did not specify magnetic media on the original order.
- When ordering magnetic media, specify as follows:

  For the first 7426 on each 8100 Processor, specify **#9491** to order Diskette 2D.

  For the first 7426 on each S/370, 43XX or 30XX processor, specify **#9491** plus one of the following tape specify codes: **#9412** for 9/800 magnetic tape, **#9413** for 9/1600 magnetic tape, or **#9414** for 9/6250 magnetic tape.

  Supplemental specification is to be entered exactly as follows to indicate the shipping address to which the initial copy and any EC updates of the magnetic media will be sent. This may be either the 8100, S/370, 43XX, or 30XX processor address or any address designated by the customer for receipt of initial copy of magnetic media and any subsequent EC updates. EC updates will be sent only to customers with an IBM Maintenance Agreement -- others must submit an MES.

  For 8100 System:

  Line 1 - Name of Customer
  Line 2 - Street Address (or P.O. Box)
  Line 3 - City, State, Zip Code
  Line 4 - Attn: Data Processing Manager

  For S/370, 43XX or 30XX System:

  Line 1 - IBM Programming Center Representative
  Line 2 - c/o (Name of Customer)
  Line 3 - Street Address (or P.O. Box)
  Line 4 - City, State, Zip Code

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES

Cables: Device attachment cables are not provided with the 7426 and must be ordered separately. Order by part number and specify the desired cable length. Procurement of cables for non-IBM TTY compatible devices is a user responsibility.

P/N	Description
2720173	Direct connect 3101, EIA RS-232-C. Maximum Length: 12m (40 ft.)
2720150	Direct connect 3101, EIA RS-422-A. Maximum Length: 1,220m (4,000 ft.)
2720399	Direct connect 4975, EIA RS-232-C. Maximum Length: 12m (40 ft.)
2720174	Modem Connection EIA RS-232-C. Maximum Length: 12m (40 ft.)
6235645	Direct Connect IBM Personal Computer, EIA RS-232-C. Maximum Length: 12m (40 ft.)

SUPPLIES (None)

8101 STORAGE and I/O UNIT MDLS A10 - A13

[NO LONGER AVAILABLE]

PURPOSE

Provides additional disk storage and device attachment capability for the 8100 Information System.

MODELS

Model A10	Device attachment capability
Model A11	29MB (29,327,360 bytes) - movable heads only and device attachments
Model A13	64MB (64,520,192 bytes) - movable heads only and device attachments

Maximum: Two per 8100 Information System with an 8130-AXX, three with an 8130-BXX Processor. One of the 8101s may be configured with Communication or Display/Printer features Type I or Type II. Four with an 8140 or 8150 Processor. Two of the 8101s may be configured with Communication or Display/Printer features Type I or Type II for 8140 Mdls A3X to A7X. Only one with 8140 mdls B5X to B7X or C72 to C92 or 8150. The maximum is one if the 8809 Magnetic Tape Unit mdl 1B is attached to the 8130-AXX Processor, two for the 8130-BXX Processor or three if the 8809 Magnetic Tape Unit mdl 1B is attached to the 8140 or 8150 Processor. See Table 2 for 8100 System maximums.

Customer Setup (CSU): Machine only.

HIGHLIGHTS

The 8101 Storage and Input/Output Unit provides additional disk storage and device attachment capabilities for the 8100 Information System. The 8101 Storage and Input/Output Unit attaches to the I/O bus of the 8130, 8140 or 8150 Processor.

Disk storage for the 8101 Storage and I/O Unit mdls A11 and A13 is provided by a non-removable high speed direct access storage. Depending on the mdl selected, disk storage of up to 64 million bytes with movable heads is available. The disk storage operates at a data rate of 1,031,000 bytes per second. The average access time is 27 milliseconds with a average rotational delay of 9.6 milliseconds. Removable diskette storage of up to 1MB (985,088 bytes) is available and operates at up to 62K bytes per second data rate. The diskette drive can read/write in basic data exchange format on either the Diskette 2D or the Diskette Type 1.

The 8100 System can attach to any S/370 or 4341 processor via the 3704, 3705 or 3725 for SNA/SDLC or BSC line control. The 8100 System can attach to the ICA of the 115, 125, 135, or 138 Processors for BSC line control. The 8100 System can attach to the Communications Adapter of the 4321 or 4331 Processor for BSC and/or SDLC line control. For specific attachment, see M2700 pages.

The 8101 Storage and I/O Unit extends the capability of the 8100 Information System by providing for the attachment of a variety of input/output devices. These devices consist of Displays, Printers, Magnetic Tape, Controllers and Data Collection Units. The devices may be attached to the 8101 loops, data link attached loops, communication ports or direct attachment to the 8101.

Designated Customer Setup: The 8101 Storage and I/O Unit is designated as a customer setup unit thereby offering the customer early availability and relocation flexibility. Aids and configurators are provided to enable the 8101 to be properly ordered and configured. Setup procedures for the customer will be shipped with each machine. An 8101 installation verification program will be shipped with each machine on a diskette. A clear indication that the machine is operational will be given.

Loop Installation: The customer is responsible for procurement, installation, and maintenance of the loop network. In order for the cable and required accessories to be properly installed, certain preparatory steps must be followed. See *IBM Multiuse Communications Loop Planning and Installation Guide,* GA27-3341, and *Installation Guide,* GA23-0039, for information necessary to plan and install the loop. The loop should be installed and checked out prior to attaching processors or devices.

Selected Configuration: To ease the selection, configuring, ordering and installation of 8101 Storage and Input/Output Units several selected configurations have been developed. These selected configurations are designed to be applicable for the majority of customer installations, both DPPX and DPCX are supported. The use of selected configurations is recommended. Traditional configuration selection and ordering should be used for configurations not included in the selected configurations.

Prerequisites: 8130, 8140 or 8150 Processor for the mdls A10, A11 or A13. The 8101 mdl A10 requires one Display and Printer Attachment Type I (**#9941**) or Communication Attachment Type I (**#9943**).

Bibliography: GC20-8100.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (120V AC, 1-phase, 3-wire, 60 Hz): Specify **#9891** for non-locking plug or **#9890** for locking plug. If 4.3 meter (14 foot) is not desired, specify **#9986** for 1.8 meter (6 foot) cable.

  Japan only, specify **#9890** for locking plug or **#9891** for non-locking plug. If **#9890** or **#9891** are not specified, a cord without a plug will be shipped unless a country RPQ is initiated.

- Color: Pebble gray is the only color available.

- Relocation: If the user relocates and/or interchanges an attaching 8101 from one 8100 system to another, the user must consider address compatibility of the processor and its attachments. For further information see *IBM 8100 Information System Site Planning Guide,* GA27-2884. For relocation/replace kit ordering see Relocate/Replace, in the M8130, 8140 or 8150 Accessories section.

- Cabling: For loop cabling information see the M8130, 8140 or 8150 Accessories section and the *IBM Multiuse Communication Loop-Planning and Installation Guide,* GA27-3341. For communication cable information See *IBM Information System Site Planning Guide,* GA27-2884.

  Communication cables must be ordered separately from the communication adapter features.

- Processor Attachment: Specify **#9931** for 8130, **#9932** for 8140 or **#9933** for 8150. **Field Installation:** Yes.

- System Attachment: Each 8101 requires a specify code to identify one of four sets of I/O addresses. Specify one of the following codes for each 8101 attaching to the same processor: **#9921, #9922, #9923** or **#9924**. These specify codes may be selected in any sequence. Duplicate codes are not permitted within a system. **Field Installation:** Yes.

- Device or Communication Attachment: Must specify one only for the 8101 mdl A10. The 8101 mdl A10 provides as part of the basic machine, the capabilities to attach Display/Printer or Communication facilities. On initial orders for the 8101 mdl A10, one of these capabilities must be specified. Further expansion of the 8101 mdl A10 is provided by special features. These same capabilities are provided by special features for the 8101 mdl A11 or A13. See Table 1 for additional configuration information.

  Display and Printer Attachment Type I (**#9941**): Provides, in conjunction with features #1505 and #1506, the capability for the attachment of 3277 Displays, 3732 Text Displays and 3284, 3286, 3287, 3288 and 3736 Printers in any combination up to a maximum of 24. **Field Installation:** Yes.

  Communication Attachment Type I (**#9943**): Provides the capability for the attachment of loops and communication facilities in any combination up to a maximum of four. Additional special features for line control, communication interface and modems are required to complete each communication port selected (See "System Attachment"). **Field Installation:** Yes.

- Terminal Requirements: For attachment of 3640 family of terminals, see "Terminal Requirements" in M8130, 8140 or 8150 pages.

SPECIAL FEATURES

Performance: The maximum number of Features for Attaching Communications **(FAC)** capable of concurrent operation is a function of the speed of the line, the communication facility, the operating system installed and the application work load. The maximum number of communications features which can be physically installed can exceed the operational capability. Increased processor utilization will result from sustained operation of BSC (#1603 and #1604) at the maximum aggregate data rate and may cause degradation of activity operating at lower priority levels. Analysis should be performed to determine the impact.

Note Use of BSC 8101-A2X feature #1605 or 8140-C features #1622, #1623, or 8150 features #1763 or #1764 or #1623 instead of features #1603 or #1604 will significantly reduce processor utilization.

Diagnostics: The 8100 System hardware and feature operation, diagnostic support and maintenance support described in 8100 System Publications are dependent on the presence of functional support modules provided by Distributed Processing Programming Executive (DPPX), Distributed Processing Control Executive (DPCX). Operational and maintenance conditions for the 8100 System are predicated on the presence of these functional support modules. Customers ordering 8100 System hardware without DPPX or DPCX should provide the functional support as contained and described in the *Functional Definition Manual 8100* which will be available from Mechanicsburg at FCS.

Display And Printer Attachment Type I (#1501): Provides in conjunction with feature #1505 and #1506 the capability for the attachment of 3277 Displays, 3732 Text Displays and 3284, 3286, 3287, 3288 and 3736 Printers in any combination up to a maximum of

8101 Storage and I/O Unit Mdls A10 - A13 (cont'd)

24. **Limitations:** Not available with 8101 mdl A10. Not available with Communication Attachment Type I (#1503), Communication Attachment Type II (#1504) or Display And Printer Attachment Type II (#1502). See Table 1 for additional information. **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes.

Display And Printer Attachment Type II (#1502): Provides in conjunction with feature #1505 and #1506 the capability for the attachment of 3277 Displays, 3732 Text Displays and 3284, 3286, 3287, 3288 and 3736 Printers in any combination up to a maximum of 24. **Limitations:** Not available with Display And Printer Attachment Type I (#1501 or **#9941**) or Communication Attachment Type II (#1504). See Table 1 for additional information. **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes. Field installation by purchase customer, see Note 2 under Table 1. **Prerequisites:** #1503 or **#9943**.

Communication Attachment Type I (#1503): Provides the capability for the attachment of loops and communication ports in any combination up to a maximum of four. Additional special features for line control, communication interface and modems are required to complete each communication facility selected. **Limitations:** Not available with 8101 mdl A10. Not available with Display And Printer Attachment Type I (#1501). See Table 1 for additional information. Only available with port positions one through four. **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes. Field installation by purchase customer, see Note 2 under Table 1.

Communication Attachment Type II (#1504): Provides the capability for the attachment of loops and communication ports in any combination up to a maximum of four. Additional special features for line control, communication interface and modems are required to complete each communication facility selected. **Limitations:** Not available with Display and Printer Attachment Type II (#1502) or Display and Printer Attachment Type I (#1501 or **#9941**). See Table 1 for additional information. Only available with port positions five through eight. **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #1503 or **#9943**.

Display And Printer Adapter (#1505): Provides for the attachment of the first four 3277 Displays, 3732 Text Displays and 3284, 3286, 3287, 3288 and 3736 Printers **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #1501, #1502 or **#9941**.

Display And Printer, Add'l (#1506): Provides for the attachment of additional 3277 Displays, 3732 Text Displays and 3284, 3286, 3287, 3288 and 3736 Printers in any combination up to a maximum of four. **Maximum:** Five. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #1505.

Table 1

When configuring the 8101 for Display/Printer and Communication Features, the Type I Feature requirement should be determined first. The Type II should then be configured if so required. The table below shows the combinations of these features that may be configured.

8101 Mdl A10

Type I	Type II
#9941 or **#9943** with	#1502 or #1504

8101 Mdl A11 or A13

Type I	Type II
#1501 or #1503 with	#1502 or #1504

Note 2: Purchase customer must submit an RPQ for field installation of **#9943** with #1502 concurrent with removal of **#9941** or field installation of #1503 with #1502 concurrent with removal of #1501.

Diskette Drive And Magnetic Tape Attachment (#1507): Provides the capability for the attachment of one Diskette Drive 2D (#4520) and one Magnetic Tape Attachment (#4521). **Limitations:** Only available with 8101 mdl A10. See special features #4520 and #4521 for Diskette Drive and Tape Attachment for the mdl A11 and A13. **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes.

Diskette 2D Drive (#4520): Provides 1MB (985,088) of removable diskette storage for the 8101 mdl A10, A11 or A13 operating at a data rate of up to 62KB per second. **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #1507 for mdl A10.

Magnetic Tape Attachment (#4521): Provides for the attachment to the 8101 mdl A10, A11 or A13 of up to four 8809 Magnetic Tape Units, consisting of one 8809 mdl 1A plus two mdl 2s and one mdl 3. **Limitations:** Not available if the 8130, 8140 or 8150 Processor has the 8809 Magnetic Tape Unit mdl 1B attached or if the 8140 mdl BXX or CXX has Magnetic Tape Attachment (#4901). **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #1507 for mdl A10.

Security Cover Locks (#6555): This feature provides key-operated security locks for the machine covers, restricting access to the machine interior and external cable connector area. See Security Lock, Diskette (#6566) if diskette security is required. Additional or replacement keys are not available from IBM. They maybe purchased from a local locksmith. **Maximum:** One. **Field Removable:** No. **Field Installation:** Yes.

Security Lock, Diskette (#6566): This feature provides a key-operated security lock to restrict access to the diskette magnetic media. It is accessible only by opening the front cover. For maximum system security, the Security Cover Lock (#6555) must be used in addition to the Diskette Security Lock. Additional or replacement keys are not available from IBM. They maybe purchased from a local locksmith. **Maximum:** One. **Field Removable:** No. **Field Installation:** Yes.

Selected Configurations

The following table lists the appropriate selected configuration codes for each mdl and the communication capabilities for each selected configuration.

	CODE								
	1 0 0 0	1 0 0 2	1 0 0 3	1 0 0 4	1 0 0 5	1 0 0 6	1 0 0 8	1 0 0 9	1 0 1 0
Description									
8101 mdl A10	-	X	X	X	X	X	X	X	X
8101 mdls A11, A13	X	X	X	X	X	X	X	X	X
Port 1 Dir Att Loop									
– 38.4KB	-	X	X	X	X	X	-	-	-
– 9.6KB	-	-	-	-	-	-	X	-	-
Port 2 Dir Att Loop

Port 6 Dir Att Loop									
9.6KB	-	-	X	-	-	X	-	-	-

Notes:

1. Magnetic tape attachment to 8130 or 8140.
   - use 8809 mdl 1B.
2. Recommended DPPX configurations:
   - No less than 512K processor storage
   - No less than 58MB disk storage
   - Fixed Head feature in processor disk
3. When attached to an 8140 mdl C processor with communication port features #1610, #1611, #1612, #1613 or #1614, or when attached to an 8150 processor with communication ports 1-4 or 9-12, Selected Configurations with 38,400 bps Loops are not available.

Selected Configuration Attachment (#1000): No communications available, mdls A11 and A13 only. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Selected Configuration Attachment (#1002): Provides for selection and attachment on one single-lobe 38.4K bps loop in port 1, one 9600 bps single-lobe loop in port 2, and one SDLC link up to 9600 bps in port 3. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Selected Configuration Attachment (#1003): Provides for selection and attachment of one single-lobe 38.4K bps loop in port 1, one 9600 bps single-lobe loop in port 2, one SDLC link up to 9600 bps in port 3, and one single-lobe 9600 bps loop in port 6. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Selected Configuration Attachment (#1004): Provides for selection and attachment of one single-lobe 38.4K bps loop in port 1 and one SDLC link up to 9600 bps in port 3 and port 4. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Selected Configuration Attachment (#1005): Provides for selection and attachment on one single-lobe 38.4K bps loop in port 1, one 9600 bps single-lobe loop in Port 2, one SDLC link up to 9600 bps in port 3

8101 Storage and I/O Unit Mdls A10 - A13 (cont'd)

and port 4. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Selected Configuration Attachment (#1006): Provides for selection and attachment on one single-lobe 38.4K bps loop in port 1, one 9600 bps single-lobe loop in port 2, one SDLC link up to 9600 bps in port 3 and port 4, and one single-lobe 9600 bps loop in port 6. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Selected Configuration Attachment (#1008): Provides for selection and attachment of one single-lobe 9600 bps loop in port 1, one 9600 bps single-lobe loop in port 2, and one SDLC link up to 9600 bps in port 3. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Selected Configuration Attachment (#1009): Provides for selection and attachment of one 9600 bps single-lobe loop in port 2, one SDLC link up to 9600 bps in port 3 and port 4. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Selected Configuration Attachment (#1010): Provides for selection and attachment of one 9600 bps single-lobe loop in port 2, and one SDLC link up to 9600 bps in port 3, port 4, and port 5. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Tables 4 and 5.

Communications And Loops:

CCITT V.35 Interface (#1550): Provides interface to external modems/ data communication equipment at up to 56,000 bps or Direct Connection at speeds of up to 56,000 bps. **Limitations:** Operation at speeds greater than 9600 bps is mutually exclusive with FAC code 21 or two FAC codes 08, 09 or 8140 mdl C processor with #1610, #1611, #1612, #1613 or #1614, or 8150 processor with ports 1-4 or 9-12, and is not available when the 8101 is attached to the 8130 Processor. See Table 2 for system maximums. **Maximum:** For speeds up to 9600 bps, one per selected Communication feature (#1601 or #1602). For operation at speeds greater than 9600 bps, one per 8101, one per 8140/8101 or 8150/8101. **Field Installation:** Yes. **Prerequisites:** #1601, 1602 or #1602 and #5200. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

SDLC Communications With Business Machine Clock (#1601): Provides control for EIA RS-232-C interface, integrated modems, direct connection and CCITT V.35 Interface. **Limitations:** In an 8100 System only ten Loops or SDLC communication ports may be active at one time, except for the 8150. The 8150 can support ten per Processing and Control element (PCE). **Maximum:** Eight. See Table 2 for 8100 System maximums. The maximum is reduced by one for each Communication feature (#1602, #1603 or #1604) selected. **Field Installation:** Yes. **Prerequisites:** #1503, #1504 or **#9943**. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

SDLC Communications Without Business Machine Clock (#1602): Provides control for EIA RS-232-C or Digital Data Service Adapter (DDSA) Interface, CCITT V.35 Interface and Loop Adapter. **Limitations:** In an 8100 System only ten Loops or SDLC communication ports may be active at one time, except for the 8150. The 8150 can support ten per Processing and Control element (PCE). **Maximum:** Eight. See Table 2 for 8100 System maximums. The maximum is reduced by one for each Communication feature (#1601, #1603 or #1604) selected. **Field Installation:** Yes. **Prerequisites:** #1503, #1504 or **#9943**. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

BSC/SS Communications With Business Machine Clock (#1603): Provides control for EIA RS-232-C Interface, integrated modems or direct connection. **Limitations:** Start/Stop Communications are not available with integrated modems. An 8101 with an 8130 Processor attached, has a maximum aggregate BSC data rate of 9600 bps and 330 bps for Start/Stop. With an 8140 Processor attached, the maximum aggregate BSC data rate is 19,200 bps and 660 bps for Start/Stop. Mutually exclusive with the 8101-A2X feature #1605 or 8140 mdl C communication ports features #1622 or #1623 or 8150 features #1763 or #1764 on an 8100 system. **Maximum:** Eight. See Table 2 for 8100 System maximums. The maximum is reduced by one for each Communication feature (#1601, #1602 or #1604) selected. **Field Installation:** Yes. **Prerequisites:** #1503, #1504 or **#9943**. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

BSC Communications Without Business Machine Clock (#1604): Provides control for EIA RS-232-C or Digital Data Service Adapter (DDSA) Interface and direct connect. **Limitations:** An 8101 with an 8130 Processor attached, has a maximum aggregate BSC data rate of 9600 bps. With 8140 Processor attached, the maximum BSC aggregate data rate is 19,200 bps. Mutually exclusive with 8101-A2X feature #1605 or 8140 mdl C communication ports features #1622 or #1623 or 8150 features #1763 or #1764 on an 8100 system. **Maximum:** Eight. See Table 2 for 8100 System maximums. The maximum is reduced by one for each Communication feature (#1601, #1602, or #1603) selected. **Field Installation:** Yes. **Prerequisites:** #1503, #1504 or **#9943**. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

EIA RS-232-C Interface (#3701): Provides interface to external modems/ data communication equipment direct connection at speeds of up to 9600 bps. **Maximum:** One per selected Communication feature (#1601, #1602, #1603 or #1604). **Field Installation:** Yes. **Prerequisites:** #1601, #1602, #1603, #1604, #1602 and #5200, or #1604 and #5200. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Loop Adapter (#4830): Provides for the direct attachment of a single-lobe loop at 9600 or 38,400 bps. **Maximum:** One per selected Communication feature (#1602). Only one of these features may operate at 38,400 bps in an 8130/8101, two in an 8140/8101, or 8150/8101 without ports 1-4 or 9-12 in the 8150. See Table 2 for system maximums. The maximum is reduced by one for each selected communication facility attached to the 8101. **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Loop Adapter Second Lobe (#4835): Provides for the attachment of a separate physical loop cable to extend the coverage and availability of the directly attached loop. **Maximum:** One per Communication Attachment Type I or II (#1503, #1504, or **#9943**). See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #4830. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Multi-Speed Clock (#5200): Provides business machine clocking at 2400, (FAC 44 only) 4800, 9600 and 56,000 bps for direct connection. Can provide multiple speeds simultaneously. **Maximum:** One with Communication Attachment Type I (#1503, or **#9943**) for port positions one through four and one with Communication Attachment Type II (#1504) for port positions five through eight. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #1503, #1504 or **#9943**) and either #1602 or #1604. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Modem, Integrated, Nonswitched (#5500): Provides interface to or common carrier leased facilities at 600 or 1200 bps. **Limitations:** Not available for Start/Stop Communication Facilities. **Maximum:** One per dselected Communication feature (#1601 or #1603). **Field Installation:** Yes. **Prerequisites:** #1601 or #1603. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Modem, Integrated, Switched (#5501): Provides interface to or common carrier switched facilities with auto answer at 600 or 1200 bps. **Limitations:** Not available with Start/Stop communication facilities. **Maximum:** One per selected communication feature (#1601). **Field Installation:** Yes. **Prerequisites:** #1601. **Note:** Attachment to the Switched Network is via FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Digital Data Service Adapter (DDSA) (#5660): Provides interface to AT&T Dataphone® Digital Service Network for transfer of digital data at speeds of 2400, 4800, 9600 or 56,000 bps in point-to-point or multipoint configurations, **Limitations:** Operation at 56,000 bps is mutually exclusive with FAC codes 26, 28, 29 or two FAC codes 08, 09, 8140 mdl C processor with #1610, #1611, #1612, #1613 or #1614, or 8150 processor with ports 1-4 or 9-12, and is not available when the 8101 is attached to the 8130 Processor. See Table 2 for system maximums. **Maximum:** For speeds up to 9600 bps one per selected communication feature (#1602 or #1604). For operation at 56,000 bps, one per 8101, one per 8140/8101 or 8150/8101. **Field Installation:** Yes. **Prerequisites:** #1602 for operation to 56,000 bps or #1604 for operation to 9600 bps. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

8100 System Maximums: The following table lists the system maximums common to the 8130, 8140, 8150 and 8101. Depending on the processor and special features selected, these maximums may not be possible. See the appropriate machine pages for additional feature information.

8101 Storage and I/O Unit Mdls A10 - A13 (cont'd)

Table 2

Machine/Feature Function	System Processor..... 8130 A21-A22 A23-A24	8130 B23 B24	8140 A31 A34	8140 A41 A44

TP Link Greater than 9600 bps	1*	1*	1*	8**
Multi-Speed clock	4	5	4	4

* Either two loops at 38.4K bps or one loop at 38.4K bps and one TP Link greater than 9600 bps.

** Only if all ports are in the 8150 processor, otherwise the maximum is the same as the 8140 processors.

Note: Only one 8101 may have Communication and Display/Printer features with the 8130 Processor, 8140 Processor mdls BXX, CXX and and 8150 Processor mdl BXX. Only two 8101 units may have Communication and Display/Printer features with the 8140 Processor, mdls A3X, A4X, A5X, A6X and A7X.

MODEL CONVERSIONS

Field conversion is possible for models A10 to A11, A10 to A13 and A11 to A13.

ACCESSORIES

For accessories see the M8130, 8140 or 8150 Accessories section. For prices, see the Hardware Price List section.

SUPPLIES (None)

COMMUNICATION CAPABILITIES

There are a variety of Communication Facilities (see M2700) supported by the 8101 Features for Attaching Communications (**FAC**) differing in speed, protocol and attachment interfaces. These FAC codes have been categorized as Loop, SDLC, BSC and Start/Stop. The user should select the desired communication FAC code and refer to the full special feature description and the FAC code description (identified by the abbreviation FAC No.) for additional details. Reference to switched communications in the FAC codes, refers to the communication link between the 8100 System and the S/370 or 4300 processors.

The 8101 special features allow a maximum of eight communication capabilities to be configured and designated as communication ports. Each communication port position (1 through 8) must consist of a communications feature for SDLC, BSC or Start/Stop.

The SDLC communications feature is available with and without business machine clock (#1601, #1602). The BSC/SS communications feature (#1603) is available with business machine clock and the BSC communications feature (#1604) is available without business machine clock. If an 8101 communication port is to provide the attached facility with business machine clock at speeds of 2400 bps or greater for FAC 44, or 4800 bps or greater for other FAC codes, the multi-speed clock feature (#5200) is required.

In addition to selecting a communications feature (#1601, #1602, #1603, #1604) for each port configured in an 8101, a communication interface or integrated modem must be selected to support the Communication Facility attaching to that port. Direct connect at 2400 (FAC 44 only), 4800, 9600 and 56,000 bps require the multi-speed clock feature (#5200). Each port of the 8101 also requires the selection of a specify code to indicate the System 8100 FAC Code selected for that port. Certain System 8100 FAC codes will require a second specify code to select options available within that facility: 2/4-wire or line speed.

Note: Within a given FAC, the selected option (2/4-wire LPDA or line speed) can be changed in the field by Field Engineering. All such changes are chargeable at the applicable CE hourly rate. Do not submit an MES. However, the MES for removal of a FAC and its associated feature and specify codes must identify the original codes ordered from the factory.

Specify And FAC Code Descriptions: A specify code number is required to identify the selected FAC code and its physical port position. Communication Attachment Type I (**#9943**, #1503) is specified as port positions one through four and Communication Attachment Type II (#1504) is specified as port positions five through eight. The specify code is constructed by concatenating the selected FAC and its port position to the numeral **9**, e.g.:

#9ABC where AB = FAC No. and C = Port Position.

FAC codes range in number from 08 to 61 resulting in FAC specify codes ranging in number from **#9081** to **#9618**. Additional codes must be specified for selected options. These codes are outlined in the FAC code descriptions. No two FAC codes can occupy the same port position. *Configuration Manual,* GA27-2876, will aid in assigning the port positions.

LOOP

FAC No.	FAC Code Description
FAC 08	Loop, high-speed single-lobe at 38,400 bps
FAC 09	Loop, high-speed two lobe at 38,400 bps
FAC 10	Loop, single-lobe at 9600 bps
FAC 11	Loop, two-lobe at 9600 bps

FAC 08 Loop High-Speed, Single-Lobe: Required for operating a loop at 38,400 bps. **Limitations:** If two 08 FAC codes are specified, FAC codes 09, 21, 26, 28, 29 are not available. Not available with 8140 mdl C processor with #1610, #1611, #1612, #1613 and #1614, or 8150 processor with ports 1-4 or 9-12. See Table 2 for system maximums. **Maximum:** One per 8130/8101, two in an 8140/8101 or 8150/8101. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9081**	**#9082**	**#9083**	**#9084**	**#9085**	**#9086**	**#9087**	**#9088**

FAC 09 Loop High-Speed, Two-Lobe: Required for operating a two-lobe loop at 38,400 bps. **Limitations:** If two 09 FAC codes are specified, FAC codes 08, 21, 26, 28, 29 are not available. Not available with 8140 mdl C processor with #1610, #1611, #1612, #1613 and #1614, or 8150 processor with ports 1-4 or 9-12. See Table 2 for system maximums. **Maximum:** One per 8130/8101, two in an 8140/8101. **Prerequisites:** #1602, #4830 and #4835. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9091**	**#9092**	**#9093**	**#9094**	**#9095**	**#9096**	**#9097**	**#9098**

8101 Storage and I/O Unit Mdls A10 - A13 (cont'd)

FAC 10 Loop, Single-Lobe: Required for operating a loop at 9600 bps. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9101**	**#9102**	**#9103**	**#9104**	**#9105**	**#9106**	**#9107**	**#9108**

FAC 11 Loop, Two-Lobe: Required for operating two-lobe loops at 9600 bps. **Prerequisites:** #1602, #4830 and #4835. **Maximum:** One for ports one through four and one for ports five through eight. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9111**	**#9112**	**#9113**	**#9114**	**#9115**	**#9116**	**#9117**	**#9118**

SDLC

FAC No.	FAC Code Description
EIA RS-232-C	
FAC 12	600 or 1200 bps (External modem)
FAC 13	Up to 9600 bps (External modem)
FAC 15	600, 1200 or 2400 bps Direct connect with clock (No modem)
FAC 16	4800 or 9600 bps Direct connect with clock (No modem)
FAC 17	Direct connect without clock to 9600 bps
Integrated Modem	
FAC 18	600 or 1200 bps nonswitched
FAC 19	600 or 1200 bps switched with auto answer
AT&T Dataphone® Digital Service	
FAC 20	2400, 4800 or 9600 bps nonswitched
FAC 21	56,000 bps nonswitched
CCITT V.35	
FAC 24	Direct connect with clock (No modem) 600, 1200 or 2400 bps
FAC 25	Direct connect with clock (No modem) 4800 or 9600 bps
FAC 26	Direct Connect with Clock (no modem) 56,000 bps
FAC 27	Direct connect without clock (No modem) to 9600 bps
FAC 28	Direct Connect without clock (no modem) to 56,000 bps
FAC 29	Up to 56,000 bps nonswitched.

FAC 12 EIA RS-232-C Interface: 600 or 1200 bps with business machine clock - operating with external modem without clocking - and point-to-point switched 2-wire - or point-to-point nonswitched 2- or 4-wire - or multipoint 4-wire. **Prerequisites:** #1601 and #3701 **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9121**	**#9122**	**#9123**	**#9124**	**#9125**	**#9126**	**#9127**	**#9128**
600 bps	**#9741**	**#9742**	**#9743**	**#9744**	**#9745**	**#9746**	**#9747**	**#9748**
1200 bps	**#9751**	**#9752**	**#9753**	**#9754**	**#9755**	**#9756**	**#9757**	**#9758**

FAC 13 EIA RS-232-C Interface: Up to 9600 bps without business machine clock - with external data communication equipment and clock - point-to-point switched with auto answer to 4800 bps or point-to-point nonswitched 2- or 4-wire - or multipoint 4-wire. **Prerequisites:** #1602 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9131**	**#9132**	**#9133**	**#9134**	**#9135**	**#9136**	**#9137**	**#9138**

FAC 20 Digital Network Interface (to ATT Dataphone® Digital Service): 2400, 4800, 9600 bps without business machine clock - and 4-wire point-to-point nonswitched - or multipoint nonswitched. **Prerequisites:** #1602 and #5660. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9201**	**#9202**	**#9203**	**#9204**	**#9205**	**#9206**	**#9207**	**#9208**
2400 bps	**#9761**	**#9762**	**#9763**	**#9764**	**#9765**	**#9766**	**#9767**	**#9768**
4800 bps	**#9771**	**#9772**	**#9773**	**#9774**	**#9775**	**#9776**	**#9777**	**#9778**
9600 bps	**#9781**	**#9782**	**#9783**	**#9784**	**#9785**	**#9786**	**#9787**	**#9788**

FAC 21 Digital Network Interface (to ATT Dataphone® Digital Service): 56,000 bps without business machine clock point to point and multipoint nonswitched operation. **Limitations:** Mutually exclusive with FAC codes 26, 28, 29, or two FAC codes 08, 09. Not available when 8101 is attached to the 8130 Processor. Not available with 8140 mdl C processor with #1610, #1611, #1612, #1613 and #1614, or 8150 processor with ports 1-4 or 9-12. See Table 2 for system maximums. **Maximum:** One per 8101 or one per 8140/8101 or 8150/8101. **Prerequisites:** #1602 and #5660. **Specify:** From the table below,

8101 Storage and I/O Unit Mdls A10 - A13 (cont'd)

specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9211**	**#9212**	**#9213**	**#9214**	**#9215**	**#9216**	**#9217**	**#9218**

FAC 24 CCITT V.35 Interface: 600, 1200 or 2400 bps with business machine clock - operating with no modem (Attached machine must not provide business machine clock) - and direct connection up to 1,000 feet. **Prerequisites:** #1601 and #1550. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	**#9241**	**#9242**	**#9243**	**#9244**	**#9245**	**#9246**	**#9247**	**#9248**
600 bps	**#9741**	**#9742**	**#9743**	**#9744**	**#9745**	**#9746**	**#9747**	**#9748**
1200 bps	**#9751**	**#9752**	**#9753**	**#9754**	**#9755**	**#9756**	**#9757**	**#9758**
2400 bps	**#9761**	**#9762**	**#9763**	**#9764**	**#9765**	**#9766**	**#9767**	**#9768**

FAC 25 CCITT V.35 Interface: 4800 or 9600 bps with business machine clock - operating with no modem (Attached machine must not provide business machine clock - and direct connection up to 1,000 feet. **Limitations:** One Multi-Speed Clock (#5200) is required for port position 1-4 or 5-8. **Prerequisites:** #1602, #1550 and #5200. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8

1200 bps	#9751	#9752	#9753	#9754	#9755	#9756	#9757	#9758

FAC 47 Digital Network Interface (to ATT Dataphone® Digital Service): 2400, 4800 or 9600 bps without business machine clock - 4-wire point-to-point nonswitched - or multipoint nonswitched. **Limitations:** Mutually exclusive with 8101-A2X FAC codes 42 or 46, or 8140 mdl C communication ports features #l622 or #1623 or 8150 features #1763 or #1764 on an 8100 system. **Prerequisites:** #1604 and #5660. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	#9471	#9472	#9473	#9474	#9475	#9476	#9477	#9478
2400 bps	#9761	#9762	#9763	#9764	#9765	#9766	#9767	#9768
4800 bps	#9771	#9772	#9773	#9774	#9775	#9776	#9777	#9778
9600 bps	#9781	#9782	#9783	#9784	#9785	#9786	#9787	#9788

START/STOP

FAC No.	FAC Code Description
EIA RS-232-C	
FAC 60	110, 134.5, 150, 300 or 600 bps (External modem)
FAC 61	110, 134.5, 150, 300 or 600 bps Direct connect with clock (No modem)

FAC 60 EIA RS-232-C Interface: 110, 134.5, 150, 300, 600 bps with business machine clock - operating with external modem - and point-to-point nonswitched facilities. Will be provided under provisions of the IBM Multiple Supplier Systems Policy. See M2700 pages for specific information on communication facilities and other attachment information. **Limitations:** The 600 bps line speed is not available when the 8101 is attached to an 8130 Processor. **Prerequisites:** #1603 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8
Port	#9601	#9602	#9603	#9604	#9605	#9606	#9607	#9608
110 bps	#9701	#9702	#9703	#9704	#9705	#9706	#9707	#9708
134.5 bps	#9711	#9712	#9713	#9714	#9715	#9716	#9717	#9718
150 bps	#9721	#9722	#9723	#9724	#9725	#9726	#9727	#9728
300 bps	#9731	#9732	#9733	#9734	#9735	#9736	#9737	#9738
600 bps	#9741	#9742	#9743	#9744	#9745	#9746	#9747	#9748

FAC 61 EIA RS-232-C Interface: 110, 134.5, 150, 300, 600 bps with business machine clock - operating with no modem (the attached terminal must provide its own business machine clock) - and direct connect to 40 feet. **Limitations:** The 600 bps line speed is not available when the 8101 is attached to an 8130 Processor. **Prerequisites:** #1603 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8

DEVICE ATTACHMENT

Direct Attached Devices: The following devices can attach directly to the 8101 Storage and Input/Output Unit:

3277 Display Station mdls 1, 2
3284 Printer mdls 1, 2
3286 Printer mdls 1, 2
3287 Printer mdls 1, 2
3288 Line Printer mdl 2
3732 Text Display Station
3736 Printer
8809 Magnetic Tape Unit

Loop Attached Devices: The following devices can attach to a direct attached loop or to a data link attached (via the 3842 or 3843 Loop Control Unit) loop. Refer to the *IBM 8100 Information System configurator*, GA27-2876, for selection of the 8100 FAC codes.

	Loop Attachment		
	Direct At		Data Link At 2400,
Device and Mdl	9600 bps	38400 bps	4800,9600 bps

Note 1: Dedication of a 9600 bps single-lobe loop to the attachment of the 3289-3, 3262-2 or 3262-12 printer should be considered in cases where the printer will be heavily utilized.

Communication Attached Devices: The following devices can attach to the communication ports. For communication facilities and modem attachment data see the M2700 pages and appropriate machine pages for additional information. Refer to the *IBM Information System Configurator,* GA27-2876, for selection of 8100 FAC codes.

Direct Connection Attachment: In addition to terminal attachment to 8100 System through common carrier facilities (see M2700 pages) or local loops, attachment can be made by direct connect. The direct connect is made by using SDLC (FAC 15, 16, 17, 24, 25, 26, 27 or 28), BSC (FAC 44) and Start/Stop (FAC 61). Shown below are the direct connect attachable devices and required device feature numbers. The *8100 Information System Site Planning Guide* , GA27-2884, will assist in the selection of direct connect cables.

#1004	1-#1503, 3-#1602, 2-#3701, 1-#4830, 1-**#9081**, 1-**#9133**, 1-**#9134**, 1-**#9921**
#1005	1-#1503, 4-#1602, 2-#3701, 2-#4830, 1-**#9081**, 1-**#9102**, 1-**#9133**, 1-**#9134**, 1-**#9921**
#1006	1-#1503, 1-#1504, 1-#1602, 2-#3701, 3-#4830, 1-**#9081**, 1-**#9102**, 1-**#9106**, 1-**#9133**, 1-**#9134**, 1-**#9921**
#1008	1-#1503, 3-#1602, 1-#3701, 2-#4830, 1-**#9101**, 1-**#9102**, 1-**#9133**, 1-**#9921**
#1009	1-#1503, 3-#1602, 2-#3701, 1-#4830, 1-**#9102**, 1-**#9133**, 1-**#9134**, 1-**#9921**
#1010	1-#1503, 1-#1504, 4-#1602, 3-#3701, 1-#4830, 1-**#9102**, 1-**#9133**, 1-**#9134**, 1-**#9135**, 1-**#9921**

When the 8101s are attached to an 8140 mdl C processor with communication ports #1610, #1611, #1612, #1613 or #1614, or when attached to an 8150 processor with communication ports 1-4 or 9-12, Selected Configurations with 38,000 bps Loops are not available.

Note: Only the appropriate codes listed below may be specified in addition to the Selected Configuration code.

Power Plug/Cable : **#9890, #9891, #9986.**

Processor Attachment (8130, 8140): **#9931, #9932.**

Optional Feature Code: #6555 - Security Cover Lock.

8101 STORAGE and I/O UNIT MDLS A20-A25

PURPOSE

Provides additional disk storage and device attachment capability for the 8100 Information System.

MODELS

Model A20 Device attachment capability

Model A23 64MB (64,520,192 bytes) - movable heads only and device attachments

Model A25 128MB (129,040,384 bytes) - movable heads only and device attachments

Maximum: Two per 8100 Information System with an 8130-AXX, three with an 8130-BXX Processor. One of the 8101s may be configured with Communication or Display/Printer features. Four with an 8140 or 8150 Processor. One of the 8101s may be configured with Communication or Display/Printer features with 8140 mdls B5X-B7X, C72-C92 or 8150, two with 8140 mdls A3X-A7X. The maximum is one if the 8809 Magnetic Tape Unit mdl 1B is attached to the 8130-AXX Processor, two for the 8130-BXX processor, or three if the 8809 Magnetic Tape Unit mdl 1B is attached to the 8140 or 8150 Processor. See Table 2 for 8100 System maximums.

Prerequisites: 8130, 8140 or 8150 Processor for the mdls A20, A23 or A25. The 8101 mdl A20 requires one Display and Printer Attachment or Communication Attachment or Diskette Drive and Magnetic Tape Attachment.

Customer Setup (CSU): Machine only.

HIGHLIGHTS

The 8101 Storage and Input/Output Unit provides additional disk storage and device attachment capabilities for the 8100 Information System. The 8101 Storage and Input/Output Unit attaches to the I/O bus of the 8130, 8140 or 8150 Processor.

Disk storage for the 8101 Storage and I/O Unit mdls A23 and A25 is provided by a non-removable high-speed direct access storage. Depending on the mdl selected, disk storage of up to 128 million bytes with movable heads is available. The disk storage operates at a data rate of 1,031,000 bytes per second. The average access time is 27 milliseconds with an average rotational delay of 9.6 milliseconds. Removable diskette storage of up to 1MB (985,088 bytes) is available for mdls A20, A23 and operates at up to 62K bytes per second data rate. The diskette drive can read/write in basic data exchange format on either the Diskette 2D or the Diskette Type 1.

The 8100 System can attach to any S/370 or 4300 Processor via the 3704, 3705 or 3725 Communications Controller for SNA/SDLC or BSC line control. The 8100 System can attach to the ICA of the 115, 125, 135 or 138 Processors for BSC line control. The 8100 System can attach to the Communications Adapter of the 4321 or 4331 or 4361 Processor for BSC and/or SDLC line control. For specific attachment, see M2700 pages.

The 8101 Storage and I/O Unit extends the capability of the 8100 Information System by providing for the attachment of a variety of input/output devices. These devices consist of Displays, Printers, Magnetic Tape, Controllers and Data Collection Units. The devices may be attached to the 8101 loops, data link attached loops, communication ports or direct attachment to the 8101.

Physical security is provided through the use of key locks on the diskette drive and machine covers. Additional or replacement Keys are not available from IBM. They may be purchased from a local locksmith.

Customer Setup: The 8101 Storage and I/O unit is designated as a customer setup unit, thereby offering the customer early availability and relocation flexibility. Aids and configurators are provided to enable the 8101 to be properly ordered and configured. Customer setup instructions will be shipped with each machine. An 8101 installation verification program will be shipped with each machine on a diskette. A clear indication that the machine is operational will be given. If the user relocates and/or interchanges 8101 units from one system to another, the user must consider address compatibility of the processor and its attachments (see "System Attachment").

Loop Installation: The customer is responsible for procurement, installation, and maintenance of the loop network. In order for the cable and required accessories to be properly installed, certain preparatory steps must be followed. See *IBM Multiuse Communications Loop Planning and Installation Guide,* GA27-3341, for information necessary to plan and install the loop. The loop should be installed and checked out prior to attaching processors or devices.

Selected Configurations: To ease the selection, configuring, ordering and installation of 8101 Storage and Input/Output Units, several selected configurations have been developed. These selected configurations are designed to be applicable for the majority of customer installations. Both DPPX and DPCX are supported. The use of Selected Configurations is recommended. Traditional configuration selection and ordering should be used for configurations not included in the selected configurations.

Bibliography: GC20-8100.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (AC, 1-phase, 3-wire, 60 Hz): **#9890** for 120V with locking plug, **#9891** for 120V with non-locking plug, **#9884** for 208V with locking plug, **#9894** for 240V with locking plug. **Field Installation:** Voltage conversions between 120V AC and 208/240V AC are not field installable. For conversion between 208V AC and 240V AC, contact your local CE representative.
- Cable: If 4.3 meter (14 foot) is not required, also specify **#9986** for 1.8 meter (6 foot) cable.
- Color: Pebble gray is the only color available.
- Relocation: If the user relocates and/or interchanges an attaching 8101 from one 8100 system to another, the user must consider address compatibility of the processor and its attachments. For further information see *IBM 8100 Information System Site Planning Guide,* GA27-3341. For relocation/replace kit ordering see Relocate/Replace 8100 System under M8130 or 8140 Accessories.
- Cabling: For loop cable information, see the M8130, 8140 or 8150 Accessories section, and the *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341. For communication cable informations, see the *IBM 8100 Information System Site Planning Guide,* GA27-2884.

  Communication cables must be ordered separately from the communication adapter features.
- Processor Attachment: Specify **#9931** for 8130, **#9932** for 8140, or **#9933** for 8150. **Field Installation:** Yes.
- System Attachment: Each 8101 requires a specify code to identify one of four sets of I/O addresses. Specify one of the following codes for each 8101 attaching to the same processor: **#9921, #9922, #9923** or **#9924**. These specify codes may be selected in any sequence. Duplicate codes are not permitted within a system. **Field Installation:** Yes.
- Terminal Requirements: For attachment of 3640 family of terminals, see "Terminal Requirements" in M8130, 8140 or 8150 pages.

SPECIAL FEATURES

Performance: The maximum number of Features for Attaching Communications (**FAC**) capable of concurrent operation is a function of the speed of the line, the communication facility, the operating system installed and the application work load. The maximum number of communications features which can be physically installed can exceed the operational capability. Increased processor utilization will result from sustained operation of BSC (#1603 and #1604) at the maximum aggregate data rate and may cause degradation of activity operating at lower priority levels. Analysis should be performed to determine the impact.

Note: Use of BSC 8101-A2X feature #1605 or 8140 mdl C features #1622 or #1623 or 8150 features #1763 or #1764 instead of features #1603 or #1604 will significantly reduce processor utilization.

Diagnostics: The 8100 System hardware and feature operation, diagnostic support and maintenance support described in 8100 System Publications are dependent on the presence of functional support modules provided by Distributed Processing Programming Executive (DPPX), Distributed Processing Control Executive (DPCX). Operational and maintenance conditions for the 8100 System are predicated on the presence of these functional support modules. Customers ordering 8100 System hardware without DPPX or DPCX should provide the functional support as contained and described in the *Functional Definition Manual 8100* which will be available from Mechanicsburg at FCS.

Display And Printer, Add'l (#1506): Provides for the attachment of additional 3277 Displays, 3732 Text Displays and 3284, 3286, 3287, 3288 and 3736 Printers in any combination up to four. **Maximum:** Five. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #3220.

Diskette Drive And Magnetic Tape Attachment (#1507): Provides the capability for the attachment of one Diskette Drive 2D (#4520) and one Magnetic Tape Attachment (#4521). **Limitations:** Only available with 8101 mdl A20. See special features #4520 and #4521 for Diskette Drive and Tape Attachment for the mdl A23 and A25. **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes.

Communication Attachment Type 1 and Type 2 (#1701): Provides the capability for the attachment of four loops and/or Communication Ports. The first #1701 (feature Type 1) provides for ports 1-4, the

8101 Storage and I/O Unit Mdls A20-A25 (cont'd)

second #1701 (feature Type 2) provides for ports 5-8. Additional special features for line control, communication interface and modems are required to complete each communication port selected. **Limitations:** Port positions 5 through 8 not available with Display and Printer Attachment (#3220). Feature Type 1 (#1701) not available with feature type 1 (#1702) in ports 1-4. See Table 1 for additional information. **Maximum:** Two. Order once for port positions 1 through 4. Order again for port positions 5 through 8. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #3901 for first #1701 ports 1 through 4.

Communication Attachment Type 1 (#1702): Provides the capability for the attachment of four loops and/or communication ports for ports 1-4. Additional special features for line control, communications interface and DCE's are required to complete each communication port selected. **Limitations:** Available with Communications Attachment Type 2 (#1701) or Display and Printer Attachment (#3220) in ports 5-8. BSC/SS Communications (#1603 and #1604) are available with #1701 only. **Maximum:** One. Order for port positions 1-4. See table 2 for 8100 system maximums. **Field Installation:** Yes. **Note:** #1702 should be ordered if future requirements for the Programmed Communication Feature (#1605) are anticipated. **Prerequisites:** #3901.

Display And Printer Attachment (#3220): Provides for the attachment of 3277 Display Stations, 3732 Text Display and 3284, 3286, 3287, 3288 and 3736 Printers in any combination up to four. Can be expanded to a maximum of 24 devices with Display and Printer, Add'l (#1506). **Limitations:** Not available with Communication Attachment Type 2 (#1701), ports 5 through 8. See Table 1 for additional information. **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #3901 when ordered without #1701 or #1702 ports 1 through 4.

TABLE 1

When configuring the 8101 for Display/Printer and Communication, the table below shows the combinations of these features that may be configured.

#3901 ------- PLUS ------- #3220

OR

#3901 ------- PLUS ------- #1701 ------- PLUS ------- #1701

OR

#3901 ------- PLUS ------- #1701 ------- PLUS ------- #3220

OR

#3901 ------- PLUS ------- #1702 ------- PLUS ------- #1701

OR

#3901 ------- PLUS ------- #1702 ------- PLUS ------- #3220

Feature Expansion Prerequisite (#3901): Required for first Communications Attachment Type 1 (#1701 or #1702) ports 1 through 4 or Display and Printer Attachment (#3220) without Communications Attachment (#1701 or #1702). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1701, #1702 or #3220.

Diskette Drive 2D (#4520): Provides 1MB (985,088 bytes) of removable diskette storage for the 8101 mdl A20 or A23 operating at a data rate of up to 62K bytes per second. **Maximum:** One. See Table 2 for IBM System maximums. **Field Installation:** Yes. **Prerequisites:** #1507 for the mdl A20.

Magnetic Tape Attachment (#4521): Provides for the attachment to the 8101 mdl A20, A23 or A25 of up to four 8809 Magnetic Tape Units, consisting of one 8809 mdl 1A plus two mdl 2s and one mdl 3. **Limitations:** Not available if the 8130, 8140 or 8150 Processor has the 8809 Magnetic Tape Unit mdl 1B attached or if the 8140 mdl BXX or CXX has Magnetic Tape Attachment (#4901). **Maximum:** One. See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #1507 for the mdl A20.

Selected Configurations

The following table lists the appropriate selected configuration codes for each mdl and the communication capabilities for each selected configuration.

	CODE									
Description	10000	10002	10003	10004	10005	10006	10008	10009	10010	10011
8101 mdl A20	-	x	x	x	x	x	x	x	x	x
8101 mdls A23, A25	x	x	x	x	x	x	x	x	x	x
Port 1 Dir Att Loop										
– 38.4KB	-	x	x	x	x	x	-	-	-	x
– 9.6KB	-	-	-	-	-	-	x	-	-	-
Port 2 Dir Att Loop										
9.6KB	-	x	x	-	x	x	x	x	x	x
Port 3 Data Link										
9.6KB	-	x	x	x	x	x	x	x	x	x
Port 4 Data Link

Port 7 Data Link										
9.6KB	-	-	-	-	-	-	-	-	-	x

Notes:

1. Magnetic tape attachment to 8130 or 8140, use 8809 mdl 1B.
2. Recommended DPPX configurations:
   - No less than 512K processor storage
   - No less than 58MB disk storage
   - Fixed Head feature in processor disk.
3. When attached to an 8140 mdl C processor with communication port features #1610, #1611, #1612 #1613 or #1614 or when attached to an 8150 processor with communication ports 1-4 or 9-12, Selected Configurations with 38,400 bps loops are not available.

Selected Configuration Attachment (#1000): No communications ... mdls A23 and A25 only. See Table 5 for component feature. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1002): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 1 ... a 9600 bps, single-lobe loop in Port 2 ... and an SDLC link up to 9600 bps in Port 3. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1003): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 1 ... a 9600 bps, single-lobe loop in Port 2 ... an SDLC link up to 9600 bps in Port 3 ... and a single-lobe, 9600 bps loop in Port 6. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1004): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 1 ... and an SDLC link up to 9600 bps in Port 3 and Port 4. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1005): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 1 ... a 9600 bps, single-lobe loop in Port 2 ... and an SDLC link up to 9600 bps in Port 3 and Port 4. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1006): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 1 ... a 9600 bps, single-lobe loop in Port 2 ... and an SDLC link up to 9600 bps in Port 3 and Port 4 ... and a single-lobe, 9600 bps loop in Port 6. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1008): Provides for the selection and attachment of one, single-lobe, 9600 bps loop in Port 1 ... a 9600 bps, single-lobe loop in Port 2 ... and an SDLC link up to 9600 bps in Port 3. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1009): Provides for the selection and attachment of one, single-lobe, 9600 bps loop in Port 2 ... and an SDLC link up to 9600 bps in Port 3 and Port 4. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1010): Provides for the selection and attachment of one, single-lobe, 9600 bps loop in Port 2 ... and an SDLC link up to 9600 bps in Port 3, Port 4 and Port 5. See

8101 Storage and I/O Unit Mdls A20-A25 (cont'd)

Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Selected Configuration Attachment (#1011): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 1 ... a 9600 bps, single-lobe loop in Port 2 and Port 6 ... and an SDLC link up to 9600 bps in Port 3, Port 5 and Port 7. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** None.

Communications And Loops:

CCITT V.35 Interface (#1550): Provides interface to external modems/data communication equipment up to 56,000 bps or Direct Connection at speeds of 9600 bps and at 56,000 bps. **Limitations:** Operation at speeds greater than 9600 bps is mutually exclusive with FAC code 21 or 31, 33 or two FAC codes 08, 09 or 8140 mdl C processor with #1610, #1611, #1612, #1613 or #1614, or 8150 processor with ports 1-4 or 9-12, and is not available when the 8101 is attached to the 8130 Processor. See Table 2 for system maximums. **Maximum:** For speeds up to 9600 bps, one per selected Communication feature (#1601 or #1602). For operation at speeds greater than 9600 bps, one per 8101, one per 8140/8101 or 8150/8101. **Field Installation:** Yes. **Prerequisites:** #1601 or #1602 and #5200. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

SDLC Communications With Business Machine Clock (#1601): Provides control for EIA RS-232-C Interface, integrated modems, direct connection and CCITT V.35 Interface. **Limitations:** In an 8100 System only ten loops or SDLC communication ports may be active at one time, except for the 8150. The 8150 can support ten per Processing and Control element (PCE). **Maximum:** Eight (per 8101). See Table 2 for 8100 System maximums. The maximum is reduced by one for each Communication feature (#1602, #1603, #1604 or #1605) selected. **Field Installation:** Yes. **Prerequisites:** #1701 (Type 1 and Type 2) or #1702. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

SDLC Communications Without Business Machine Clock (#1602): provides control for EIA RS-232-C or Digital Data Service Adapter (DDSA) or CCITT X.21 Interface, Direct Connection CCITT V.35 Interface and Loop Adapter. **Limitations:** In an 8100 System only ten loops or SDLC communications ports may be active at one time, except for the 8150. The 8150 can support ten per Processing and Control element (PCE). **Maximum:** Eight (per 8101). See Table 2 for 8100 System maximums. The maximum is reduced by one for each Communication feature (#1601, #1603, #1604 or #1605) selected. **Field Installation:** Yes. **Prerequisites:** #1701 (Type 1 and Type 2) or #1702. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

BSC/SS Communications With Business Machine Clock (#1603): Provides control for EIA RS-232-C Interface, integrated modems or direct connection. **Limitations:** Start/Stop Communications are not available with integrated modems. An 8101 with an 8130 Processor attached, the maximum aggregate BSC data rate is 9600 bps using #1603 and #1604 and 330 bps for Start/Stop. With an 8140 Processor attached, the maximum aggregate BSC data rate is 19,200 bps using #1603 and #1604, and 660 bps for Start/Stop. Not available in Communication Attachment Type 1 (#1702). Mutually exclusive with Programmed Communication Feature #1605 or 8140 mdl C Communication Ports Features #1622 or #1623 or 8150 features #1763 or #1764 on an 8100 System. **Maximum:** Eight. See Table 2 for 8100 System maximums. The maximum is reduced by one for each Communication feature (#1601, #1602, #1604 or #1605) selected. **Field Installation:** Yes. **Prerequisites:** #1701 (Type 1 and Type 2). **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

BSC Communications Without Business Machine Clock (#1604): Provides control for EIA RS-232-C or Digital Data Service Adapter (DDSA) Interface and direct connect. **Limitations:** An 8101 with an 8130 Processor attached, the maximum aggregate BSC data rate is 9600 bps using #1603 and #1604. With 8140 Processor attached, the maximum BSC aggregate data rate is 19,200 bps using #1603 and #1604. Not available in Communication Attachment Type 1 (#1702). Mutually exclusive with Programmed Communication Feature #1605 or 8140 mdl C Communication Ports Features #1622 or #1623 or 8150 features #1763 or #1764 on an 8100 System. **Maximum:** Eight. See Table 2 for 8100 System maximums. The maximum is reduced by one for each Communication feature (#1601, #1602, #1603, #1604 or #1605) selected. **Field Installation:** Yes. **Prerequisites:** #1701 (Type 1 and Type 2). **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

Programmed Communications Feature (#1605): Provides IBM microcode control for EIA RS-232-C BSC to external DCE with clocking from 1200-9600 bps, or without clocking at 600 or 1200 bps and direct connect with business machine clock at 1200, 1800, 2400, 3600, 7200 or 9600 bps. Speed and clocking options are user selected parameters. Processor utilization for #1605 is significantly reduced when substituted for features #1603 or #1604. **Limitations:** Available in ports 1-4 with #1702. Mutually exclusive with BSC features #1603 or #1604 in an 8100 system. **Maximum:** Four. See Table 2 for 8100 system maximums. The maximum is reduced by one for each communication feature (#1601 or #1602) selected. **Field Installation:** Yes. **Prerequisites:** #1702. **Specify:** Code as provided in FAC descriptions in "Communication Capabilities" section.

EIA RS-232-C Interface (#3701): Provides interface to external modems/data communication equipment or direct connection at speeds up to 9600 bps. **Maximum:** One per selected Communication feature (#1601, #1602, #1603, #1604 or #1605). **Field Installation:** Yes. **Prerequisites:** #1601, #1602, #1603, #1604, #1605, #1602 and #5200, #1604 and #5200. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

Loop Adapter (#4830): Provides for the direct attachment of a single-lobe loop at 9600 or 38,400 bps. **Maximum:** One per selected Communication feature (#1602). Only one of these features may operate at 38,400 bps in an 8130/8101, two in an 8140/8101 or 8150/8101 without ports 1-4 or 9-12 in the 8150. See Table 2 for system maximums. The maximum is reduced by one for each selected communication facility attached to the 8101. **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

Loop Adapter Second Lobe (#4835): Provides for the attachment of a separate physical loop cable to extend the coverage and availability of the directly attached loop. **Maximum:** One per Communication Attachment Type 1 and Type 2 (#1701 or #1702). See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #4830. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Multi-Speed Clock (#5200): Provides business machine clocking at 2400, (FAC 44 only) 4800 bps, 9600 bps and 56,000 bps for direct connection. Can provide multiple speeds simultaneously. **Maximum:** One with each Communication Attachment (#1701 or #1702). See Table 2 for 8100 System maximums. **Field Installation:** Yes. **Prerequisites:** #1701 and either #1602 or #1604 or #1702 and #1602. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

Modem, Integrated, Nonswitched (#5500): Provides interface to common carrier leased facilities at 600 or 1200 bps. **Limitations:** Not available for Start/Stop Communication Facilities. **Maximum:** One per selected Communication feature (#1601 or #1603). **Field Installation:** Yes. **Prerequisites:** #1601 or #1603. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

Modem, Integrated, Switched (#5501): Provides interface to common carrier switched facilities with auto answer at 600 or 1200 bps. **Limitations:** Not available with Start/Stop communication facilities. **Maximum:** One per selected Communication feature (#1601). **Field Installation:** Yes. **Prerequisites:** #1601. **Note:** Attachment to the switched network is via FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

X.21 Adapter For Nonswitched Networks (#5655): Provides interface for attachment to X.21 data communications equipment nonswitched at speeds up to 48,000 bps in point-to-point or multipoint configurations via an DCE complying with CCITT Recommendation X.21. **Limitations:** Operation at 48,000 bps is mutually exclusive with FAC codes 21, 26, 28, 29, 33 or two FAC codes 08, 09 , 8140 mdl C processor with #1610, #1611, #1612, #1613 or #1614, or 8150 processor with ports 1-4 or 9-12, and is not available when the 8101 is attached to the 8130 processor. See Table 2 for system maximums. **Maximum:** One per selected Communications Feature (#1602). For operation at 48,000 bps one per 8101, one per 8140/8101 or 8150/8101. **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in the FAC description in "Communication Capabilities" section. section.

X.21 Adapter For Switched Networks (#5656): Provides interface for attachment via a Data Circuit-terminating Equipment (DCE) which complies with CCITT Recommendation X.21 as it is delineated in SRL GA27-3287 and is switched at speeds up to 48,000 bps. **Limitations:** Operation at greater than 9600 bps is mutually exclusive with FAC codes 21, 26, 28, 29, 31, or two FAC codes 08, 09 and is not available when the 8101 is attached to the 8130, 8140 mdl C with #1610, #1611, #1612, #1613 and #1614, or 8150 processor with ports 1-4 or 9-12. **Maximum:** One per selected Communications Feature (#1602). For operation at greater than 9600 bps, one per 8101, one per 8140/8101 or 8150/8101. **Field Installation:** Yes. **Prerequisite:** #1602. **Specify:** Code as provided in the FAC description in "Communication Capabilities" section.

Digital Data Service Adapter (DDSA) (#5660): Provides interface to AT&T Dataphone® Digital Service Network for transfer of digital data at speeds of 2400, 4800, 9600 or 56,000 bps in point-to-point or multipoint configurations. **Limitations:** Operation at 56,000 bps is mutually exclusive with FAC codes 26, 28, 29, 31, 33 or two FAC codes 08, 09 , 8140 mdl C processor with #1610, #1611, #1612, #1613 or #1614, or 8150 processor with ports 1-4 or 9-12, and is not available when the 8101 is attached to an 8130 Processor. See Table 2 for system maximums. **Maximum:** For speeds up to 9600 bps, one per

8101 Storage and I/O Unit Mdls A20-A25 (cont'd)

selected Communication feature (#1602 or #1604). For operation at 56,000 bps one per 8101, one per 8140/8101 or 8150/8101. **Field Installation:** Yes. **Prerequisites:** #1602 for operation to 56,000 bps or #1604 for operation to 9600 bps. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

8100 System Maximums: The following table lists the system maximums common to the 8130, 8140, 8150 and 8101. Depending on the processor and special features selected, these maximums may not be possible. See the appropriate machine pages for additional feature information.

Table 2

	System Processor.....			
	8130	8130	8140	8140
Machine/Feature	A21-A22	B23	A31	A41
Function	A23-A24	B24	A34	A44

Disp./Prt. Add'l #1506	5	5	5	5
Communication Attch Type 1 and Type 2 (#1701)	4	2	2	2
Type 1 (#1702)	2	1	1	1
Diskette Drive	2	2	2	2
Tape Attachment	1	1	1	1
Communication Ports (SDLC, BSC/SS, Loop)	16	19	18	20
Loop at 38.4K bps	2*	2*	2*	6**
Loop 2nd lobe	4	5	4	6
TP Link Greater than 9600 bps	1*	1*	1*	8**
Multi-Speed clock	4	5	4	4

* Either two loops at 38.4K bps or one loop at 38.4K bps and one TP Link greater than 9600 bps.

** Only if all ports are in the 8150 processor, otherwise the maximum is the same as the 8140 processors.

Note:

3. Only one 8101 may have Communication and Display/Printer features with the 8130 Processor, 8140 Processor, mdls BXX or CXX and 8150 Processor. Only two 8101 units may have Communication and Display/Printer features with the 8140 Processor, mdls A3X, A4X, A5X, A6X and A7X.

MODEL CONVERSIONS

Field conversion is possible for model A20 to A23, A20 to A25, and A23 to A25.

ACCESSORIES

For accessories, see the M8130, 8140 or 8150 Accessories section. For prices, see the Hardware Price List.

SUPPLIES (None)

Communication Capabilities

There are a variety of Communication Facilities (see M2700 pages) supported by the 8101 Features for Attaching Communications (FAC) differing in speed, protocol and attachment interfaces. These FAC codes have been categorized as Loop, SDLC, BSC and Start/Stop. The user should select the desired communication FAC code and refer to the full special feature description and the FAC code description (identified by the abbreviation FAC No.) for additional details. Reference to switched communications in the FAC codes, refers to the communication link between the 8100 System and the S/370 or 4300 processors.

The 8101 special features allow a maximum of eight communications capabilities to be configured and designated as communication ports. Each communication port position (1 through 8) must consist of a communications feature for SDLC, BSC or Start/Stop.

The SDLC communications feature is available with and without business machine clock (#1601, #1602). The BSC/SS communications feature (#1603) is available with business machine clock and the BSC communications feature (#1604) is available without business machine clock. If an 8101 communication port is to provide the attached facility with business machine clock at speeds of 2400 bps or greater for FAC 44, or 4800 bps or greater for other FAC codes, the multi-speed clock feature (#5200) is required. The Programmed Communications Feature (#1605) for BSC supports user parameters to select business machine clock options and speed from 600-900 bps, without the multispeed clock feature (#5200).

In addition to selecting a communications feature (#1601, #1602, #1603, #1604 or #1605) for each port configured in an 8101, a communication interface or integrated modem must be selected to support the Communication Facility attaching to that port. Direct connect at 2400, 4800, 9600 and 56,000 bps require the multi-speed clock feature (#5200).

Each port of the 8101 also requires the selection of a specify code to indicate the System 8100 FAC Code selected for that port. Certain System 8100 FAC codes will require a second specify code to select options available within the facility: 2/4 wire or line speed.

Note: Within a given FAC, the selected option (2/4-wire, LPDA or line speed) can be changed in the field by the Customer Engineer. All such changes are chargeable at the applicable FE hourly rate. Do not submit an MES. However, the MES for removal of a FAC and its associated feature and specify codes must identify the original codes ordered from the factory.

Specify And FAC Code Descriptions: A specify code number is required to identify the selected FAC code and its physical port position. Port positions one through four are designated for Communications Attachment Type 1 (#1701 or #1702) and port positions five through eight are designated for the second Communications Attachment Type 2 (#1701). The specify code is constructed by concatenating the selected FAC and its port position to the numeral **9**, e.g., #9ABC where AB = FAC No. and C = Port Position.

FAC codes range in number from 08 to 61 resulting in FAC specify codes ranging in number from **#9081** to **#9618**. Additional codes must be specified for selected options. These codes are outlined in the FAC code descriptions. No two FAC codes can occupy the same port position. *Configuration Manual,* GA27-2876, will aid in assigning the port positions.

LOOP

FAC No.	FAC Code Description
FAC 08	Loop, high-speed single-lobe at 38,400 bps
FAC 09	Loop, high-speed two-lobe at 38,400 bps
FAC 10	Loop, single-lobe at 9600 bps
FAC 11	Loop, two-lobe at 9600 bps

FAC 08 Loop High-Speed, Single-Lobe: Required for operating a loop at 38,400 bps. **Limitations:** If two 08 FAC codes are specified, FAC codes 09, 21, 26, 28, 29, 31 or 33 are not available. Not available with 8140 mdl C processor containing feature codes #1610, #1611, #1612, #1613 and #1614, or 8150 processor with ports 1-4 or 9-12. See Table 2 for system maximums. **Maximum:** One per 8130/8101, two in an 8140/8101 or 8150/8101. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify the required codes to complete the configuration for the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4
Port	**#9081**	**#9082**	**#9083**	**#9084**
	Port 5	Port 6	Port 7	Port 8
Port	**#9085**	**#9086**	**#9087**	**#9088**

FAC 09 Loop High-Speed, Two-Lobe: Required for operating a two-lobe loop at 38,400 bps. **Limitations:** If two 09 FAC codes are specified, FAC codes 08, 21, 26, 28, 29, 31 or 33 are not available. Not available with 8140 mdl C processor containing feature codes #1610, #1611, #1612, #1613 and #1614, or 8150 processor with ports 1-4 or 9-12. See Table 2 for system maximum. **Maximum:** One per 8130/8101, two in an 8140/8101. **Prerequisites:** #1602, #4830 and #4835. **Specify:** From the table below, specify the required codes to complete the configuration for the port selected.

Port	#9295	#9296	#9297	#9298

8101 Storage and I/O Unit Mdls A20-A25 (cont'd)

FAC 32 CCITT X.21 Interface: Up to 9600 bps without business machine clock and switched with auto answer and auto call. **Prerequisites:** #1602 and #5656. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4
Port	#9321	#9322	#9323	#9324
	Port 5	Port 6	Port 7	Port 8
Port	#9325	#9326	#9327	#9328

FAC 33 CCITT X.21 Interface: Up to 48,000 bps without business machine clock and switched auto answer and auto call. **Limitations:** Mutually exclusive with FAC codes 21, 26, 28, 29, 31 or two FAC codes 08, 09. Not available when 8101 is attached to the 8130, 8140 mdl C with #1610, #1611, #1612, #1613 and #1614, or 8150 processor with ports 1-4 or 9-12. **Maximum:** One per 8101 or one per 8140/8101 or 8150/8101. **Prerequisites:** #1602 and #5656. **Specify:** From the table below specify the required codes to complete the configuration for each port selected.

BSC

FAC No.	FAC Code Description
EIA RS-232-C	
FAC 40	600 or 1200 bps (External modem)
FAC 41	Up to 9600 bps (External modem)
FAC 42	Up to 9600 bps (External modem)
FAC 44	2400, 4800 or 9600 bps direct connect with clock (No modem)
FAC 46	Direct connect 1200-9600 bps with clock (No modem)
Integrated Modem	
FAC 45	600 or 1200 bps nonswitched
AT&T Dataphone® Digital Service	
FAC 47	2400, 4800 or 9600 bps nonswitched

FAC 40 EIA RS-232-C Interface: 600 or 1200 bps with business machine clock - operating with external modem with no clock - point-to-point nonswitched 2- or 4-wire - or multipoint nonswitched 4-wire. **Limitations:** Mutually exclusive with 8101-A2X FAC codes 42 or 46, or 8140 mdl C communication ports features #1622 or #1623 or 8150 features #1763 or #1764 on an 8100 system. **Prerequisites:** #1603, #1701 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4
Port	#9401	#9402	#9403	#9404
600 bps	#9741	#9742	#9743	#9744
1200 bps	#9751	#9752	#9753	#9754
	Port 5	Port 6	Port 7	Port 8
Port	#9405	#9406	#9407	#9408
600 bps	#9745	#9746	#9747	#9748
1200 bps	#9755	#9756	#9757	#9758

FAC 41 EIA RS-232-C Interface: Up to 9600 bps without business machine clock - operating with external data communication equipment - and point-to-point nonswitched 2- or 4-wire - or multipoint nonswitched 4-wire. **Limitations:** Mutually exclusive with 8101 A2X-FAC codes 42 or 46, or 8140 mdl C communication ports features #1622 or #1623 or 8150 features #1763 or #1764 on an 8100 system. **Prerequisites:** #1604, #1701 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4
Port	#9411	#9412	#9413	#9414
	Port 5	Port 6	Port 7	Port 8
Port	#9415	#9416	#9417	#9418

FAC 42 EIA RS-232-C Interface: From 1200-9600 bps without business machine clock or 600 and 1200 bps with business machine clock...operating with external DCE...and point-to-point non-switched 2 or 4 wire...or multipoint non-switched 4 wire. User parameter selection of business machine clock options and speed is supported. **Limitations:** Mutually exclusive with FAC codes, 40, 41, 44, 45 or 47 on an 8100 System. **Prerequisites:** #1605, #1702, and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4
Port	#9421	#9422	#9423	#9424

FAC 44 EIA RS-232-C Interface: 2400, 4800 or 9600 bps with business machine clock - operating with no modem (attached downstream terminal must not provide business machine clock) - and direct connection to 40 feet. **Limitations:** One Multi-Speed Clock (#5200) is required for port positions 1 through 4 and the second Multi-Speed Clock (#5200) for ports 5 through 8. Mutually exclusive with 8101-A2X FAC codes 42 or 46, or 8140 mdl C communication ports features #1622 or #1623 or 8150 features #1763 or #1764 on an 8100 system. **Prerequisites:** #1604, #1701, #3701 and #5200. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4

Note 1: Dedication of a 9600 bps single-lobe loop to the attachment of the 3289-3, 3262-2 or 3262-12 printer should be considered in cases where the printer will be heavily utilized.

Communication Attached Devices: The following devices can attach to the communication ports. For communication facilities and modem attachment data see the M2700 pages and appropriate machine pages for additional information. Refer to the *IBM Information System Configurator* GA27-2876, for selection of 8100 FAC codes.

Direct Connection Attachment: In addition to terminal attachment to 8100 System through common carrier facilities (see M2700 pages) or local loops, attachment can be made by direct connect. The direct connect is made by using SDLC (FAC 15, 16, 17, 24, 25, 26, 27, or 28), BSC (FAC 44 or 46) and Start/Stop (FAC 61). Shown below are the direct connect attachable devices and required device feature numbers. The 8100 Information System Site Planning Guide GA27-2884 will assist in the selection of direct connect cables.

Attaching Device	Speeds bps	Attaching Device Feature No.	FAC CODE

#1011	6-#1602, 2-#1701, 4-#3701, 1-#3901, 2-#4830, 1-#9081, 1-#9102, 1-#9133, 1-#9134, 1-#9135, 1-#9137, 1-#9921

8101s when attached to an 8140 mdl C processor with communication ports: #1610, #1611, #1612, #1613 or #1614 or when attached to an 8150 processor with communication ports 1-4 or 9-12, Selected Configurations with 38,400 bps loops are not available.

Note: Only the appropriate codes listed below may be specified in addition to the Selected Configuration code.

Power Plug/Cable : **#9890, #9891, #9884, #9894, #9986.**

Processor Attachment (8130, 8140): **#9931, #9932.**

Systems Attachment (Selected Configuration #1000 only): **#9921, #9922, #9923, #9924.**

8130 PROCESSOR MDL A

PURPOSE

The 8130 Processor provides control, storage, processing capability, disk and diskette storage, and device attachment capabilities for the 8100 Information System.

MODELS

The following models of the 8130 are available depending on processor storage size and non-removable disk storage size. Some models have fixed head capability as well as movable heads for the non-removable, high speed, direct access disk storage. All 8130 models include removable diskette storage with up to 1 million bytes of storage.

Model	Base Processor Storage (bytes)	Non Removable Disk Capacity (million bytes)	Fixed Head Capacity (bytes)
A21	256K (262,144)	29MB (29,327,360)	None
A22	256K (262,144)	23MB (23,461,888)	131,072
A23	256K (262,144)	64MB (64,520,192)	None
A24	256K (262,144)	58MB (58,654,720)	131,072

Customer Setup (CSU): Machine Only

HIGHLIGHTS

The 8130 Processor is a multi-level, interrupt-driven processor which provides control, processing capability, processor storage, disk and diskette storage and communication features for the 8100 Information System. The flexibility offered by the 8130 allows the user to configure a system for initial requirements, while retaining the ability to modify the system to meet future needs.

System control and processing is provided by machine program instructions and up to eight I/O hardware interrupt levels provide for interrupt processing. The 8130 provides 256K (262,144)) bytes of processor storage that can be expanded to a maximum of 1,024K (1,048,576) bytes and provision for dynamic addressing and storage protection for up to 4 million bytes of logical storage.

The 8130 with a special feature for system expansion provides for the attachment of up to two 8101 Storage and Input/Output Units one of which may be configured with Communication and Display/Printer Feature Type I or Type II, or one 8101 Storage and Input/Output Unit and one 8809 Magnetic Tape Unit mdl 1B. An alternate configuration can consist of an 8130, two 8101 Storage and Input/Output Units, and one 8809 Magnetic Tape Unit mdl 1A. Up to three additional 8809 Magnetic Tape Units can be attached to the 8809 Magnetic Tape Unit mdl 1A or 1B.

The 8130 Processor is provided with fixed high speed direct access storage. Depending on the 8130 mdl selected, disk storage of up to 64 million bytes with movable heads or up to 58 million bytes of disk storage with movable and fixed heads is available. The disk storage operates at a data rate of 1.031 million bytes per second. The average access time is 27 milliseconds with an average rotational delay of 9.6 milliseconds. Removable diskette storage is available with up to 1MB (985,088) of storage operating at up to 62K bytes per second data rate. The diskette drive can read/write in basic data exchange format on either the diskette 2D or the diskette Type 1.

The 8100 System can attach to any S/370 or 4300 processor via the 3704, 3705 or 3725 for SNA/SDLC or BSC line control. The 8100 System can attach to the ICA of the 115, 125, 135, or 138 Processors for BSC line control. The 8100 System can attach to the Communications Adapter of the 4321 or 4331 or 4361 Processor for BSC and/or SDLC line control. For specific attachment, see M2700 pages.

The capability of the 8100 Information System is further extended by providing for the attachment of a variety of input/output devices. These devices may be attached to the 8130 via communication features which include data link, direct connect, and loops that are direct attached or data link attached loops. The 8130 provides for the attachment of two communication ports which can be expanded by optional features up to a maximum of six. With the 8101 Storage and Input/Output Unit attached, the communication ports physically attached can be further increased by eight, providing an 8100 System maximum of 14 communication ports.

Customer Setup: The 8130 Processor is designated as a customer setup unit thereby offering the customer early availability and relocation flexibility. Aids and configurators are provided to facilitate the configuration and ordering of the 8130. Setup procedures for the customer will be shipped with each machine. An 8130 installation verification program will be shipped with each machine on a diskette. A clear indication that the machine is operational will be given.

Loop Installation: The customer is responsible for procurement, installation, and maintenance of the loop network. In order for the cable and required accessories to be properly installed, certain preparatory steps must be followed. See *IBM Multiuse Communications Loop Planning and Installation Guide,* GA27-3341 and *Installation Guide,* GA23-0039, for information necessary to plan and install the loop. The loop should be installed and checked out prior to attaching processors or devices.

Selected Configurations: To ease the selection, configuring ordering and installation of an 8130 Processor, several selected configurations have been developed. These selected configurations are designed to be applicable for the majority of customer installations. Both DPPX and DPCX are supported. The use of selected configurations is recommended. Traditional configuration selection and ordering should be used by configurations not included in the selected configurations.

Bibliography: GC20-8100.

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture.

- Voltage (120 AC, 1-phase, 3-wire, 60 Hz): Specify **#9891** for Non-Locking Plug or **#9890** for Locking Plug. If 4.3 meter (14 foot) power cable is not desired, specify **#9986** for 1.8 meter (6 foot) cable.
- Color: Pebble gray is the only color available.
- Relocation: If the user relocates and/or interchanges an attaching 8101 from one 8100 system to another, the user must consider address compatibility of the processor and its attachments. For further information see *IBM 8100 Information System Site Planning and Guide,* GA27-2884. For relocation/replace kit ordering, see Relocate/Replace 8100 System under "Accessories".
- Cabling: For loop information see "Accessories" and the *IBM Multiuse Communication Loop-Planning Guide,* GA27-3341. For communication cable information, see the *IBM 8100 Information System Site Planning Guide,* GA27-2884.

  Communication cables must be ordered separately from the communication adapter features.
- Programming Configuration: Specify **#9700** for Distributed Processing Programming Executive (DPPX), **#9710** for Distributed Processing Control Executive (DPCX), **#9720** for DPPX and DPCX or **#9730** for all other configurations. **Field Installation:** Yes.
- Terminal Requirements: Specify **#9800** (offline 3640 terminal exerciser) if ordering any of the following terminals: 3641, 3642, 3643, 3644, 3645, 3646 or 3647:

  1) On the initial order.
  2) When the first terminal is ordered to attach via an 8101, and none are attached to the processor.
  3) Via MES when the first terminal is field installed on an 8100 System.

  Maximum: One per 8100 System. **Field Installation:** Yes.

SPECIAL FEATURES

Performance: The maximum number of Features for Attaching Communications **(FAC)** capable of concurrent operation is a function of the speed of the line, communication facility, the operating system installed and the application work load. The maximum number of communications facilities which can be physically installed can exceed the operational capability. Increased processor utilization will result from sustained operation of BSC (#1603 and #1604) at the maximum aggregate data rate and may cause degradation of activity operating at lower priority levels. Analysis should be performed to determine the impact.

Note: Use of BSC 8101 A2X feature #1605 instead of features #1603 or #1604 will significantly reduce processor utilization.

Diagnostics: The 8100 System hardware and feature operation, diagnostic support and maintenance support described in 8100 System Publications are dependent on the presence of functional support modules provided by DPPX, DPCX. Operational and maintenance conditions for the 8100 System are predicated on the presence of these functional support modules. Customers ordering 8100 System hardware without DPPX or DPCX should provide the functional support as contained and described in the *Functional Definition Manual 8100* which will be available from Mechanicsburg at FCS.

System Expansion (#1530): Provides programmable hardware interrupt levels and sublevel interrupt determination. Required for attachment of up to two 8101 Storage and Input/Output Units or one 8101 and/or one 8809 Magnetic Tape Unit mdl 1B directly to the 8130. **Maximum:** One per 8130. **Field Installation:** Yes.

PROCESSOR STORAGE TYPE 1 (#1710): Provides 128K (131,072) bytes of additional processor storage. **Limitations:** Not available if Processor Storage Type 2 (#1720) is selected. **Maximum:** One per 8130. **Field Installation:** Yes.

Processor Storage Type 2 (#1720): Provides 256K (262,144) bytes of additional processor storage. For 512K byte configuration specify **#9961**, For 768K byte configuration specify **#9962**, For 1,024K byte configuration specify **#9963**. **Limitations:** Not available if Processor

8130 Processor Mdl A (cont'd)

Storage Type I (#1710) is selected. **Maximum:** Three per 8130. **Field Installation:** Yes.

Keylock (#4655): This Keylock Feature provides processor security by the selection of three modes of operation. These consist of ... Disable power on and disable operator panel ... Enable power on but disable operator panel ... Enable power on and enable operator panel. Additional or replacement Keys are not available from IBM. They may be purchased from a local locksmith. **Maximum:** One. **Field Installation:** Yes. **Field Removable:** No.

Security Cover Locks (#6555): This feature provides key operated security locks for the machine covers, restricting access to the machine interior and external cable connector area. See Security Lock, Diskette (#6566) if diskette security is required. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith. **Maximum:** One. **Field Installation:** Yes. **Field Removable:** No.

Security Lock, Diskette (#6566): This feature provides a key operated security lock to restrict access to the diskette magnetic media. It is accessible only by opening the front cover. For maximum system security, the Security Cover Lock (#6555) must be used in addition to the Diskette Security Lock. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith. **Maximum:** One. **Field Installation:** Yes. **Field Removable:** No.

Selected Configurations

The following table lists the appropriate selected configuration codes for each mdl and the communication capabilities for each selected configuration.

	CODE							
	1 0 0 0	1 0 0 0	1 0 0 0	1 0 0 0	1 0 0 0	1 0 0 0	1 0 0 0	1 0 0 1
Description	1	2	4	5	7	8	9	0

Notes:

1. Magnetic tape attachment to 8130.
   – use 8809 mdl 1B.
2. Recommended DPPX configurations:
   – No less than 512K processor storage
   – No less than 58MB disk storage
   – Fixed Head feature in processor disk

Selected Configuration Attachment (#1001): Provides for selection and attachment of one single lobe 38.4K bps Loop in Port 1 and one SDLC link up to 9600 bps in Port 3. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

Selected Configuration Attachment (#1002): Provides for selection and attachment of one single-lobe 38.4K bps Loop in Port 1, one 9600 bps single-lobe loop in Port 2, and one SDLC link up to 9600 bps in Port 3. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

Selected Configuration Attachment (#1004): Provides for selection and attachment of one single-lobe 38.4K bps loop in Port 1 and one SDLC link up to 9600 bps in Port 3 and Port 4. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

Selected Configuration Attachment (#1005): Provides for selection and attachment of one single-lobe 38.4K bps loop in Port 1, one 9600 bps single-lobe loop in Port 2, one SDLC links up to 9600 bps in Port 3, and Port 4. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

Selected Configuration Attachment (#1007): Provides for selection and attachment of one 9600 bps single lobe loop in Port 2 and one SDLC link up to 9600 bps in Port 3. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

Selected Configuration Attachment (#1008): Provides for selection and attachment of one single-lobe 9600 bps loop in Port 1, one 9600 bps single-lobe loop in Port 2, and one SDLC link, up to 9600 bps in Port 3. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

Selected Configuration Attachment (#1009): Provides for selection and attachment of one 9600 bps single-lobe loop in Port 2, one SDLC link up to 9600 bps in Port 3 and Port 4. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

Selected Configuration Attachment (#1010): Provides for selection and attachment of one 9600 bps single lobe loop in Port 2 and one SDLC link up to 9600 bps in Port 3, Port 4 and Port 5. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

COMMUNICATIONS AND LOOPS

CCITT V.35 Interface (#1550): Provides interface for data transmission over direct connection at speeds up to 9600 bps. **Maximum:** One per selected Communication feature (#1601 or #1602). **Field Installation:** Yes. **Prerequisites:** #1601, #1602 or #1602 and #5200.

SDLC Communications With Business Machine Clock (#1601): Provides control for EIA RS-232-C interface, integrated modems, direct connection and CCITT V.35 Interface. **Limitations:** In an 8100 System only ten loop or SDLC communication ports may be active at one time. **Maximum:** Six. Maximum is fourteen per 8100 System *(See note)* with an 8130. The maximum is reduced by one for each Communication feature (#1602, #1603 or #1604). **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

SDLC Communications Without Business Machine Clock (#1602): Provides control for EIA RS-232-C or DDS Adapter or CCITT X.21 interface, CCITT V.35 Interface and Loop Adapter. **Limitations:** In an 8100 System only ten loop or SDLC communication ports may be active at one time. **Maximum:** Six. Maximum is 14 per 8100 System *(See note)* with an 8130. The maximum is reduced by one for each Communication feature (#1601, #1603 or #1604). **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

BSC/SS Communications With Business Machine Clock (#1603): Provides control for EIA RS-232-C interface, integrated modems or direct connection. In an 8100 System the maximum aggregate BSC data rate is 9600 bps and 330 bps for Start/Stop. **Limitations:** Start/Stop communications not available with integrated modems. BSC mutually exclusive with 8101 A2X FAC Codes 42 or 46 on an 8100 System. **Maximum:** Six. Maximum is fourteen per 8100 System *(See note)* with an 8130. The maximum is reduced by one for each Communication feature (#1601, #1602 or #1604). **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

BSC Communications Without Business Machine Clock (#1604): Provides control for EIA RS-232-C or DDS Adapter interface and direct connect. **Limitations:** In an 8100 System the maximum aggregate BSC data rate is 9600 bps. BSC mutually exclusive with 8101 A2X FAC Codes 42 or 46 on an 8100 system. **Maximum:**Six. Maximum is fourteen per 8100 System *(See note)* with an 8130. The maximum is reduced by one for each Communication feature (#1601, #1602 or #1603). **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

EIA RS-232-C Interface (#3701): Provides interface to external modems/data communication equipment or direct connection at speeds of up to 9600 bps. **Maximum:** One per selected Communication feature (#1601, #1602, #1603 or #1604). **Field Installation:** Yes. **Prerequisites:** #1601, #1602, #1603, #1604, #1602 and #5200, or #1604 and #5200. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Loop Adapter (#4830): Provides for the direct attachment of a single-lobe loop at 9600 or 38,400 bps. **Maximum:** Six. Maximum is fourteen per 8100 System *(See note)* with an 8130. Only one of these features may operate at 38,400 bps in an 8130/8101. **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Loop Adapter Second Lobe (#4835): Provides for the attachment of a separate physical loop cable to extend the coverage and availability of the directly attached loop. **Maximum:** Three per 8130. Maximum is five per 8100 Information System *(See note)* with an 8130. **Field Installation:** Yes. **Prerequisites:** #4830. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Note: An 8100 System consisting of an 8130 Processor and attached 8101 Storage and Input/Output Units.

Multi-Speed Clock (#5200): Provides business machine clocking at 2400, (FAC 44 only) 4800 bps and 9600 bps for direct connection. Can provide multiple speeds simultaneously. **Limitations:** Available for port positions three through six only. **Maximum:** One. Maximum is three per 8100 System with an 8130. **Field Installation:** Yes. **Prerequisites:** #1602 or #1604. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Modem, Integrated, Nonswitched (#5500): Provides interface to common carrier leased facilities at 600 or 1200 bps. **Limitations:** Not available for Start/Stop Communications Facilities. **Maximum:** One

8130 Processor Mdl A (cont'd)

per selected Communication feature (#1601 or #1603). **Field Installation:** Yes. **Prerequisites:** #1601 or #1603. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Modem, Integrated, Switched (#5501): Provides interface common-carrier switched facilities with auto answer at 600 or 1200 bps. **Limitations:** Not available with Start/Stop communication facilities. **Maximum:** One per selected Communication feature (#1601). **Field Installation:** Yes. **Prerequisites:** #1601. **Note:** Attachment to the Switched Network is via FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

X.21 Adapter For Nonswitched Networks (#5655): Provides for the attachment of point-to-point or multipoint nonswitched communication facilities at speeds up to 9600 bps via DCE complying with CCITT Recommendation X.21. **Maximum:** One per selected Communications Feature (#1602). **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in the FAC description in "Communications Capabilities" section.

X.21 Adapter For Switched Networks (#5656): Provides interface for attachment via a Data Circuit-terminating Equipment (DCE) which complies with CCITT Recommendation X.21, as it is delineated in SRL GA27-3287, switched at up to 9600 bps. **Maximum:** One per (#1602). **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in the FAC description "Communications Capabilities" section.

Digital Data Service Adapter (DDSA) (#5660): Provides interface to AT&T Dataphone* Digital Service Network for transfer of digital data at speeds of 2400, 4800 or 9600 bps. Available for point-to-point line configurations or multipoint line configurations. **Maximum:** One per selected Communications feature (#1602 or #1604). **Field Installation:** Yes. **Prerequisites:** #1602 or #1604. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

MODEL CONVERSIONS

The following mdl changes can be field installed. Mdl upgrade may require replacement of disk storage unit. Adequate provisions must be made for retaining data contained on disk storage unit and elimination of user-proprietary information.

ACCESSORIES

CABLES - LOOP

Loop Cables may be purchased from IBM or a customer selected source. See *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341, for part numbers, specifications and usage which is necessary for preplanning and ordering.

- **Indoor Cable P/N 1657265:** UL approved (style 2919) for interconnection of low voltage electronic equipment. Maximum allowable cable temperature range is -34°C to +80°C.
- **Indoor Cable P/N 7838694:** UL approved for cable tray installation (NEC Art. 725-40b3). Maximum allowable cable temperature range is -34°C to +90°C.
- **Indoor Cable P/N 7838695:** UL approved for duct and plenum installation (NEC Art. 725-2b). Maximum allowable cable temperature range is -34°C to +105°C.
- **Outdoor Cable P/N 1657267:** For above ground installation. Maximum allowable cable temperature range is -34°C to +80°C.
- **Outdoor Cable P/N 1657268:** For below ground installation. Maximum allowable cable temperature range is -34°C to +80°C.

Ordering Instructions: Interior cable (P/N 1657265, 7838694 and 7838695) should be ordered in lengths of 304.8m to 609.6m (1000 to 2000 feet). Additional lengths up to 609.6m (2000 ft.) can be ordered by specifying the length wanted. Indoor cable splices can be accomplished via P/N 1657300. A minimum order quantity is 304.8M (1000 feet).

Exterior cable (P/N 1657267 and 1657268) should be ordered in one continuous length, up to a maximum of 914.4m (3,000 feet), by specifying the length wanted.) Outdoor splices with aerial and burial cable should be avoided. Order via MSORDER (Category = Bulk Cable). Specify cable part number and number of feet desired.

Warranty: Loop cable is warranted free from defects of workmanship and materials for 90 days.

LOOP - ACCESSORIES

A group of accessory products are offered to permit plant electricians or contract personnel to install the loops. Refer to *IBM Multiuse Communications Loop Planning and Installation Guide,* GA23-3341, for information necessary to plan the layout and for selection of the loop hardware, for Installation and Testing information.

Loop Splice Plate (LSP): The LSP splices together two segments of indoor cable or provides a connecting point for future expansion of the loop. The LSP consists of a single connector strip, to which the incoming loop cable and the outgoing loop cable can be attached; it is installed in a standard outlet box for business office environments, or weatherproof outlet box for industrial environments.

Loop Station Connector (LSC): The LSC is available as two unique types: Wrap and radial. The wrap LSC attaches an I/O unit or controller directly to the main loop cable; the radial LSC attaches an I/O unit only through an LWC to the loop. The wrap LSC attaches an incoming and outgoing loop cable; the radial LSC attaches at the end of one loop cable from the LWC.

The wrap LSC also offers the isolation feature of wrapping, which allows the customer to wrap the loop away from a loop wiring failure or to reconfigure the loop during alterations. Both wrap and radial LSCs contain bypass relays that bypass the I/O unit when the I/O unit is powered-off or disconnected. These accessories are installed in a standard or weatherproof outlet box.

2 x 4 ADAPTER PLATE (2AP): The 2" x 4" Adapter Plate is used with the Loop Station Connector and accommodates the use of standard outlet boxes that have dimensions smaller than the outlet boxes defined in the Loop Installation and Planning Guide. It is not to be used with the environmental outlet boxes.

Loop Wiring Concentrator (LWC): The LWC provides the facility to attach a cluster of I/O units without a large number of drops on the loop cable. It attaches up to eight radial LSCs at the end of loop cables called *radials.* The point where a radial line terminates at the LWC is called an LWC *port.* Not all ports have to be used; unused ports can be reserved for future expansion.

The LWC has the same wrapping capability as the wrap LSC. In addition, the LWC allows the customer to bypass one or more of the radials by setting a corresponding switch located inside the LWC.

The LWC has its own enclosure or can be mounted in a NEMA-4X environmental equipment cabinet, with minimum measurement of 36x30x15cm (14x12x6 in.).

Loop Surge Suppressor (LSS): The LSS allows the loop to be run across an outdoor space to another building. It attaches two outdoor cables and two indoor cables, allowing the proper termination and grounding for each type of cable. In addition, the LSS contains four surge protectors, one for each twisted pair in the two outdoor cables, to protect from voltage surges caused by near strikes of lightning. There is no protection in the LSS from a direct lightning strike.

The LSS has its own enclosure or can be mounted in an electrical equipment cabinet, with minimum measurement of 36x30x15cm (14x12x6 in).

Continuity And Relay Tester: The Continuity and Relay Tester is used with a customer supplied volt-ohm meter, capable of reading 0.5 ohms and rated at least 5000 ohms/volt, to verify the loop installation, including loop cabling and accessories, after completion. By plugging the tester into any loop station connector and connecting the volt-ohm meter to the tester, the condition of the wire segment being tested can be determined as to conductor and shield continuity (opens or shorts), wrap switch operation, and total lobe resistance.

The loop station connector relays are also activated and their operation verified with this tester.

* For use with NEMA-4X enclosure and associated parts (used when installing in harsh environments) or as a replacement part for the LWC or LSS.

** 1 package (10 keys) shipped with each 8101 or 8130. 1 key shipped with each LWC and wrap LSC.

Ordering Instructions: Order via MSORDER (Order Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine type 8101 or 8130. Allow lead time of 120 days.

Warranty: All loop accessories are warranted free from defects of workmanship and materials for 90 days.

Customer Responsibilities: The customer is responsible to provide (purchase, install, test, and maintain) the loop cables and accessories for terminal attachments. However, see GI section 71 for FE contracts available to assist the customer with installation.

The customer is also responsible for procuring and stocking spare cable and spare parts for loop accessories.

See *IBM Multiuse Communications Loop Planning and Installation Guide,* (GA27-3341) for a suggested schedule to allow the customer to plan, install, and test the loop cable and accessories prior to delivery of the system.

It is recommended that the customer order additional loop components for spares with the initial order, as spares will not be stocked in the Branch Office.

To enable a customer to test his installed loops it is recommended that the customer order a Continuity and Relay Tester. Testing the loop wiring will require the tester or its equivalent.

SYSTEM ACCESSORIES:

Relocate/Replace Kits:

The material required to perform machine relocation or processor replacement has been grouped into machine type dependent kits. Kits are available with or without truck-move packaging material.

For 8100 Information Systems with 8101 Storage and Input/Output units attached:

- Use Figure 1 below to order appropriate kit B/M
- 8130 kits apply to processor relocate or replace.
- Each 8101 to be relocated requires a kit. Current CSU Diskette provided with each kit.

Figure 1
Kits For Systems With 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package
8101	4448550	4448551	N/A
8130	4448552	4448553	N/A

For 8100 Information Systems without 8101 storage and input/output units attached:

- Use Figure 2 below to order appropriate kit B/M.
- Kit is used for processor relocate or replace.

Figure 2
Kits For Systems Without 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package
8130	4448575	4448576	N/A

- Check for missing/damaged wrap plugs. If required, see the wrap plug entry in this section of the Sales Manual.
- **Ordering Information** Order via MSORDER (category = supplies/ accessories Group Code = DP Supply Order)

WRAP PLUGS

The communication cables listed below will require their respective wrap plugs to be re-installed for machine relocations.

If wrap plugs are lost or damaged, you may order replacements by the part numbers specified in Figure 3.

COMMUNICATION CAPABILITIES

There are a variety of Communication Capabilities (see M2700 pages) supported by the 8130 Features for Attaching Communications **(FAC)** differing in speed, protocol and attachment interfaces. These FAC codes have been categorized as LOOP, SDLC, BSC and START/STOP. The user should select the desired communication FAC code and refer to the full special feature description and the FAC code description (identified by the abbreviation FAC No.) for additional details. Reference to switched communications in the FAC codes, refers to the communication link between the 8100 System and the S/370 or 4300 Processor.

The 8130 special features allow a maximum of six communication capabilities to be configured and designated as communication ports. Each communication port position (1 through 6) must consist of a communications feature for SDLC, BSC or Start/Stop.

The SDLC communications feature is available with and without business machine clock (#1601, #1602). The BSC/SS communications feature (#1603) is available with business machine clock and the BSC communications feature (#1604) is available without business machine clock. If an 8130 communication port is to provide the attached facility with business machine clock at speeds of 2400 bps or greater for FAC 44, or 4800 bps or greater for other FAC codes, the multi-speed clock feature (#5200) is required. One Multi-Speed Clock feature (#5200) can provide business machine clocking to any or all of port positions three through six.

In addition to selecting a Communications feature (#1601, #1602, #1603, #1604) for each port configured in an 8130, a communication interface or integrated modem must be selected to support the Communication Facility attaching to that port. A two lobe loop port requires three special features (#1602, #4830 and #4835). Direct

8130 Processor Mdl A (cont'd)

connect at 2400, (FAC 44 only) 4800 and 9600 bps requires the multi-speed clock feature (#5200). Each port of the 8130 also requires the selection of a specify code to indicate the 8100 System FAC Code selected for that port. Certain 8100 System FAC codes will require a second specify code to select options available within that facility: 2/4 wire or line speed. **Note:** Within a given FAC, the selected option (2/4 wire, LPDA or line speed) can be changed in the field by Field Engineering. All such changes are chargeable at the applicable CE rate. Do not submit an MES. However, the MES for removal of a FAC and its associated feature and specify codes must identify the original codes ordered from the factory.

Specify And FAC Code Descriptions: A specify code number is required to identify the selected FAC code and its physical port position. The specify code is constructed by concatenating the selected FAC and its port position to the numeral **9**, e.g.:

#9ABC where AB = FAC No. and C = Port Position.

FAC codes range in number from **08** to **61** resulting in FAC specify codes ranging in number from **#9081** to **#9616**. Additional codes must be specified for selected options. These codes are outlined in the FAC code descriptions. No two FAC codes can occupy the same port position. *Configuration Manual,* GA27-2876 will aid in assigning the port positions.

LOOP

FAC No.	FAC Code Description
FAC 08	Loop, high-speed single-lobe at 38,400 bps
FAC 09	Loop, high-speed two-lobe at 38,400 bps
FAC 10	Loop, single-lobe at 9600 bps
FAC 11	Loop, two-lobes at 9600 bps

FAC 08 Loop High-Speed, Single-Lobe: Required for operating a loop at 38,400 bps. **Limitations:** Not available with FAC 09. **Prerequisites:** #1602 and #4830. **Maximum:** One per 8130. Maximum is one per 8130/8101. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6
Port	**#9081**	**#9082**	**#9083**	**#9084**	**#9085**	**#9086**

FAC 09 Loop High-Speed, Two-Lobe: Required for operating a two-lobe loop at 38,400 bps. **Limitations:** Not available with FAC 08. Available for ports 4, 5 or 6 only. **Prerequisites:** #1602, #4830 and #4835. **Maximum:** One per 8130/8101. Maximum is one per 8130/8101. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6
Port	N/A	N/A	N/A	**#9094**	**#9095**	**#9096**

FAC 10 Loop, Single-Lobe: Required for operating a loop at 9600 bps. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6
Port	**#9101**	**#9102**	**#9103**	**#9104**	**#9105**	**#9106**

FAC 11 Loop, Two-Lobe: Required for operating two-lobe loops at 9600 bps. **Limitations:** Available for ports 4, 5 or 6 only. **Prerequisites:** #1602, #4830 and #4835. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6

9600 bps	#9781	#9782	#9783	#9784	#9785	#9786

Start/Stop

FAC No.	FAC Code Description
EIA RS-232-C	
FAC 60	110, 134.5, 150 or 300 bps (External modem)
FAC 61	110, 134.5, 150 or 300 bps Direct connect with clock (No modem)

FAC 60 EIA RS-232-C Interface: 110, 134.5, 150 or 300 bps with business machine clock - operating with external modem - and point-to-point nonswitched facilities will be provided under provisions of the IBM Multiple Supplier Systems Policy . See M2700 pages for specific information on communication facilities and other attachment information. **Prerequisites:** #1603 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6
Port	#9601	#9602	#9603	#9604	#9605	#9606

Note 1: Dedication of a 9600 bps single-lobe loop to the attachment of the 3289-3, 3262-2 or 3262-12 printer should be considered in cases where the printer will be heavily utilized.

Communication Attached Devices: The following devices can attach to the communication ports. For communication facilities and modem attachment data see the M2700 pages and appropriate machine pages for additional information. Refer to the *IBM Information System Configurator,* GA27-2876, for selection of 8100 FAC codes.

Direct Connection Attachment: In addition to terminal attachment to 8100 System through common carrier facilities (see M2700 pages) or local loops, attachment can be made by direct connect. The direct connect is made by using the SDLC (FAC 15, 16, 17, 24, 25, or 27), BSC (FAC 44) and Start/Stop (FAC 61). Shown below are the direct connect attachable devices and required device feature numbers. The *8100 Information System Site Planning Guide*, GA27-2884, will assist in the selection of direct connect cables.

Attaching Device	Speeds bps	Attaching Device Feature No.	8100 FAC CODE

Note: Only the appropriate codes listed below may be specified in addition to the Selected Configuration code.

Programming Configuration: **#9700, #9710, #9720, #9730.**

3640 Attachment: **#9800.**

Storage Size: **#9961, #9962, #9963.**

Power Plug/Cable: **#9890, #9891, #9986.**

Optional Feature Code: #6555 - Keylock, Security Cover ... #1530 - Tape or 8101 Attachment ... #1710, #1720 - Processor Storage ... #4655 - Keylock, Operator ... #6566 Security Lock, Diskette.

8130 PROCESSOR MDLS B23, B24

PURPOSE

The 8130 Processors provide control, storage, processing capability, disk and diskette storage, and device communication attachment capabilities for the 8100 Information System.

MODELS

The following models of the 8130 are available, depending on non-removable disk storage size and fixed head capability. All models include 1 million bytes of removable diskette storage and 1 million bytes of processor storage.

Model	Base Processor Storage (Bytes)	Non Removable Disk Capacity (Million Bytes)	Fixed Head Capacity (Bytes)
B23	1,024K (1,048,576)	64MB (64,520,192)	None
B24	1,024K (1,048,576)	58MB (58,654,720)	131,072

Customer Setup (CSU): Machine only.

HIGHLIGHTS

The 8130 B23 and B24 are additions to the 8130 family of processors and offer up to 50% more performance than previous 8130 models, greater real and logical storage, capacity for more high speed communicated ports and support attachment of 32XX and 37XX Printers and Displays without the requirement for an 8101.

The 8130 Processor is a multi-level, interrupt-driven processor which provides control, processing capability, processor storage, disk and diskette storage and communication features for the 8100 Information System. The flexibility offered by the 8130 allows the user to configure a system for initial requirements, while retaining the ability to modify the system to meet future needs.

System control and processing is provided by machine program instructions and up to eight I/O hardware interrupt levels provide for interrupt processing. The 8130 B23 and B24 provide 1,024K (1,048,576) bytes of processor storage that can be expanded to a maximum of 2,096K (2,097,152) bytes with additional features, and provide for dynamic addressing and storage protection for up to 8 million bytes of logical storage. The 8130 Models B23 and B24 storage makes use of error correction codes (ECC) to provide single error correction and double error detection capability.

The 8130 includes system expansion to provide for the attachment of up to three 8101 Storage and Input/Output Units, only one of which may be configured with Communication and Display/Printer Feature Type I or Type II or two 8101 Storage and Input/Output Unit and one 8809 Magnetic Tape Unit mdl 1B. An alternate configuration can consist of an 8130, three 8101 storage and Input/Output units, and one 8809 magnetic tape unit Model 1A. Up to three additional 8809 Magnetic Tape Units can be attached to the 8809 Magnetic Tape Unit Model 1A or 1B.

The 8130 Processors are provided with fixed high speed direct access storage. Depending on the 8130 mdl selected, disk storage of up to 64 million bytes with movable heads or up to 58 million bytes of disk storage with movable and fixed heads is available. The disk storage operates at a data rate of 1.031 million bytes per second. The average access time is 27 milliseconds with an average rotational delay of 9.6 milliseconds. Removable diskette storage is provided with up to 1MB (985,088) of storage operating at up to 62K bytes per second. The diskette drive can read/write in basic data exchange format on either the diskette 2D or the diskette Type 1.

The 8130 can attach to any S/370, 30XX or 4341 processor via the 3704/3705 for SNA/SDLC. The 8130 can attach to the Communications Adapter of the 4331 Processor for SDLC line control. For specific attachment, see M2700 pages.

The capability of the 8130 is further extended by providing for the attachment of a variety of input/output devices. These devices may be attached to the 8130 via loops that are direct attached or data link attached. The 8130 provides for the attachment of six optional communication port features. (Only five if Display and Printer Attachment (#3220) selected.) On the 8130, the 8101 Storage and Input/Output Unit and the 8809-1B Magnetic Tape Unit can attach directly to the processor via the System Expansion Feature (#1530). With an 8101 Storage and Input/Output Unit attached the communication ports physically attached can be increased by eight, providing a maximum of fourteen communication ports.

Physical security is provided through the use of key locks on the operator panel, diskette drive, and machine covers. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith.

Loop Installation: The customer is responsible for procurement, installation, and maintenance of the loop network. In order for the cable and required accessories to be properly installed., certain preparatory steps must be followed. See IBM Multiuse Communications Loop Planning and Installation Guide, GA27-3341 for information necessary to plan and install the loop. The loop should be installed and checked out prior to attaching processors or devices.

Designated Customer Setup: The 8130 Processor is designated as a customer setup unit thereby offering the customer early availability and relocation flexibility. Aids and configurators are provided to facilitate the configuration and ordering of the 8130. Setup procedures for the customer will be shipped with each machine. An 8130 installation verification program will be shipped with each machine on a diskette. A clear indication that the machine is operational will be given. See IBM 8100 Information System, Site Planning Guide GA27-2884, for information necessary to plan the site and aid set-up personnel.

Bibliography: GC20-8100.

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture.

- Voltage (120 AC, 1-phase, 3-wire, 60 Hz): Specify **#9891** for Non-Locking Plug or **#9890** for Locking Plug. If 4.3 meter (14 foot) power cable is not desired, specify **#9986** for 1.8 meter (6 foot) cable.
- Color: Pebble gray is the only color available.
- Relocation: A user relocating, removing and/or interchanging an attaching 8101 from one 8100 system to another, the user must consider address compatibility of the processor and its attachments. For further information see *IBM 8100 Information System Site Planning and Preparation Guide,* GA27-2884. For relocation/replace kit ordering, see Relocate/Replace 8100 System under the 8130 A2X Accessories.
- Cabling: For loop information see the 8130 A1XX Accessories and the *IBM Multiuse Communication Loop-Planning Guide,* GA23-0038. For communication cable information, see the *IBM 8100 Information System Site Planning Guide,* GA27-2884.
- Programming Configuration: Specify **#9700** for Distributed Processing Programming Executive (DPPX), **#9710** for Distributed Processor Control Executive (DPCX), **#9720** for DPPX and DPCX or **#9730** for all other configurations.
- Terminal Requirements: Specify **#9800** (offline 3640 terminal exerciser) if ordering any of the following terminals: 3641, 3642, 643, 3644, 3645, 3646, or 3647:
  1) On the initial order.
  2) When the first terminal is ordered to attach via an 8101 and none are attached to the processor.
  3) Via MES when the first terminal is field installed on an 8100 System.

Maximum: One per 8100 System. **Field Installation:** Yes.

Performance: The maximum number of **Features for Attaching Communications (FAC)** capable of concurrent operation is a function of the speed of the line, communication facility, the operating system installed and the application work load. The maximum number of communication facilities which can be physically attached can exceed operational capability.

Diagnostics: The 8100 System hardware and feature operation, diagnostic support and maintenance support described in 8100 System Publications are dependent on the presence of functional support modules provided by DPPX, DPCX. Operational and maintenance conditions for the 8100 System are predicated on the presence of these functional support modules. Customers ordering 8100 System hardware without DPPX or DPCX should provide the functional support as contained and described in the SIPO Functional Definition Manual 8100 which will be available from Mechanicsburg at first customer ship.

SPECIAL FEATURES

Display and Printer Additional (#1506): Provides for the attachment of additional 3277 Displays, 3732 Text Displays, and 3284, 3286 or 3287, 3288 and 3736 Printers up to a maximum of four. **Limitations:** See #3220. **Field Installation:** Yes. **Maximum:** Five. **Prerequisites:** (#3220).

System Expansion (#1530): Provides programmable hardware interrupt levels and interrupt ID determination. Required for attachment of up to three 8101 storage and I/O units or two 8101 and one 8809-1B magnetic tape unit directly to the 8130. **Field Installation:** Yes. **Maximum:** One per 8130.

Processor Storage (#1730): Provides 512K (524,288) bytes of additional processor storage. For 1536K byte configuration specify **#9962**, for 2048K byte configuration specify **#9963**. **Maximum:** Two per 8130. **Field Installation:** Yes.

Display and Printer Attachment (#3220): Provides attachment capability in any combination up to a maximum of four of the following devices:

8130 Processor Mdls B23, B24 (cont'd)

- 3277 Display Station, Models 1,2
- 3732 Text Display Station
- 3287 Printer, Models 1,2
- 3284, 3286, 3288, and 3736 Printers

Limitations: Not available with Port 6, FAC 9XX6. **Maximum:** One per 8130 system. **Field Installation:** Yes.

Communications and Loops

CCITT V.35 Interface (#1550): Provides interface to external modems/data communication equipment to 56,000 bps or Direct Connection at speeds up to 9600 bps and at 56,000 bps. **Limitations:** Operation at speeds greater than 9600 bps is mutually exclusive with FAC code 31 or FAC 33 or two FAC codes 08, 09. See Table 2 in 8100 System pages for system maximums. **Maximum:** For speeds up to 9600 bps, one per selected Communication feature (#1602). For operation at speeds greater than 9600 bps, one in 8130, none in 8101. **Field Installation:** Yes. **Prerequisites:** #1602 or #1602 and #5200. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

SDLC Communications without Business Machine Clock (#1602): Provides control for EIA RS-232-C or CCITT X.21 Interface, CCITT V.24/V.35 Interface and Loop Adapter. **Limitations:** In an 8100 System only 8 SDLC or Loop communication ports may be active at one time if the 1602 operates at greater than 9600 bps. **Maximum:** Six. The maximum is reduced by one for each communication feature #1602). An additional eight ports can be added if an 8101 is attached. **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

EIA RS-232-C Interface (#3701): Provides interface to external modems/data communication equipment or direct connection at speeds of up to 9600 bps. **Maximum:** One per selected Communication feature. **Field Installation:** Yes. **Prerequisites:** #1602, #1602 and #5200 . **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Loop Adapter (#4830): Provides for the direct attachment of a single-lobe loop at 9600 bps or 38,400 bps. **Maximum:** Six. An additional eight loops can be added if an 8101 is attached. If two of the features may operate at 38,400 bps they must be in the 8130. The maximum is reduced by one for each communication feature. **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

Loop Adapter Second Lobe (#4835): Provides for the attachment of a separate physical loop cable to extend the coverage and availability of the directly attached loop. **Limitations:** Available in ports four through six only. **Maximum:** Three. An additional two lobes can be added if an 8101 is attached. **Field Installation:** Yes. **Prerequisites:** #4830.

Multi-Speed Clock (#5200): Provides business machine clocking at 4800 bps and 9600, or 56,000 bps for direct connection. **Limitations:** Available for port position three through six only. **Maximum:** One. Maximum is three per 8130/8101 System. **Field Installation:** Yes. **Prerequisites:** #1602.

X.21 Adapter for Nonswitched Networks (#5655): Provides interface for attachment to X.21 data communication equipment nonswitched at speeds up to 48,000 bps in point-to-point or multipoint configurations. **Maximum:** One per selected Communications Feature (#1602). One in 8130 only if operating above 9600 bps. **Limitations:** Operation at 48,000 bps is mutually exclusive with FAC codes 26, 28, 29, 33 or two FAC codes 08, 09. See Table 2 in 8100 Systems pages for systems maximums. **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

X.21 Adapter for Switched Networks (#5656): Provides interface for attachment via a Data Circuit-terminating Equipment (DCE) which complies with CCITT Recommendation X.21 as it is delineated in SRL GA27-3287, switched at speeds up to 48,000 bps. **Maximum:** One per selected Communications Feature (#1602). One in 8130 if operating above 9600 bps. **Limitations:** Operation at greater than 9600 bps is mutually exclusive with FAC codes 26, 28, 29, 31 or two FAC codes 08, 09. See Table 2 in 8100 Systems pages for systems maximums. One per #1602. For operation at greater than 9600 bps, only one in 8130. **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

MODEL CONVERSIONS

The following changes can be field installed. Adequate provisions must be made for retaining data contained on disk storage unit and elimination of user proprietary information.

ACCESSORIES

CABLES - LOOP

Loop Cables may be purchased from IBM or a customer selected source. See *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341, for part numbers, specifications and usage which is necessary for preplanning and ordering.

- **Indoor Cable P/N 1657265:** UL approved (style 2919) for interconnection of low voltage electronic equipment. Maximum allowable cable temperature range is -34°C to +80°C.
- **Indoor Cable P/N 7838694:** UL approved for cable tray installation (NEC Art. 725-40b3). Maximum allowable cable temperature range is -34°C to +90°C.
- **Indoor Cable P/N 7838695:** UL approved for duct and plenum installation (NEC Art. 725-2b). Maximum allowable cable temperature range is -34°C to +105°C.
- **Outdoor Cable P/N 1657267:** For above ground installation. Maximum allowable cable temperature range is -34°C to +80°C.
- **Outdoor Cable P/N 1657268:** For below ground installation. Maximum allowable cable temperature range is -34°C to +80°C.

Ordering Instructions: Interior cable (P/N 1657265, 7838694 and 7838695) should be ordered in lengths of 304.8m to 609.6m (1,000 to 2,000 feet). Additional lengths up to 609.6m (2,000 ft.) can be ordered by specifying the length wanted. Indoor cable splices can be accomplished via P/N 1657300. A minimum order quantity is 304.8M (1,000 feet).

Exterior cable (P/Ns 1657267 and 1657268) should be ordered in one continuous length, up to a maximum of 914.4m (3000 feet), by specifying the length wanted.) Outdoor splices with aerial and burial cable should be avoided. Specify cable part number and number of feet desired.

Warranty: Loop cable is warranted free from defects of workmanship and materials for 90 days.

LOOP - ACCESSORIES

A group of accessory products are offered to permit plant electricians or contract personnel to install the loops. Refer to *IBM Multiuse Communications Loop Planning and Installation Guide,* GA23-3341, for information necessary to plan the layout and for selection of the loop hardware, for Installation and Testing information.

Loop Splice Plate (LSP): The LSP splices together two segments of indoor cable or provides a connecting point for future expansion of the loop. The LSP consists of a single connector strip, to which the incoming loop cable and the outgoing loop cable can be attached; it is installed in a standard outlet box for business office environments, or weatherproof outlet box for industrial environments.

Loop Station Connector (LSC): The LSC is available as two unique types: Wrap and radial. The wrap LSC attaches an I/O unit or controller directly to the main loop cable; the radial LSC attaches an I/O unit only through an LWC to the loop. The wrap LSC attaches an incoming and outgoing loop cable; the radial LSC attaches at the end of one loop cable from the LWC.

The wrap LSC also offers the isolation feature of wrapping, which allows the customer to wrap the loop away from a loop wiring failure or to reconfigure the loop during alterations. Both wrap and radial LSCs contain bypass relays that bypass the I/O unit when the I/O unit is powered-off or disconnected. These accessories are installed in a standard or weatherproof outlet box.

2 x 4 ADAPTER PLATE (2AP): The 2" x 4" Adapter Plate is used with the Loop Station Connector and accommodates the use of standard outlet boxes that have dimensions smaller than the outlet boxes defined in the Loop Installation and Planning Guide. It is not to be used with the environmental outlet boxes.

Loop Wiring Concentrator (LWC): The LWC provides the facility to attach a cluster of I/O units without a large number of drops on the loop cable. It attaches up to eight radial LSCs at the end of loop cables called *radials.* The point where a radial line terminates at the LWC is called an LWC *port.* Not all ports have to be used; unused ports can be reserved for future expansion.

The LWC has the same wrapping capability as the wrap LSC. In addition, the LWC allows the customer to bypass one or more of the radials by setting a corresponding switch located inside the LWC.

The LWC has its own enclosure or can be mounted in a NEMA-4X environmental equipment cabinet, with minimum measurement of 36x30x15cm (14x12x6 in.).

Loop Surge Suppressor (LSS): The LSS allows the loop to be run across an outdoor space to another building. It attaches two outdoor cables and two indoor cables, allowing the proper termination and grounding for each type of cable. In addition, the LSS contains four surge protectors, one for each twisted pair in the two outdoor cables, to protect from voltage surges caused by near strikes of lightning. There is no protection in the LSS from a direct lightning strike.

8130 Processor Mdls B23, B24 (cont'd)

The LSS has its own enclosure or can be mounted in an electrical equipment cabinet, with minimum measurement of 36x30x15cm (14x12x6 in).

Continuity And Relay Tester: The Continuity and Relay Tester is used with a customer supplied volt-ohm meter, capable of reading 0.5 ohms and rated at least 5000 ohms/volt, to verify the loop installation, including loop cabling and accessories, after completion. By plugging the tester into any loop station connector and connecting the volt-ohm meter to the tester, the condition of the wire segment being tested can be determined as to conductor and shield continuity (opens or shorts), wrap switch operation, and total lobe resistance.

The loop station connector relays are also activated and their operation verified with this tester.

SYSTEM LOOP ACCESSORIES

Descriptions	Part Number
Loop Splice Plate (LSP) (indoor)	1657300
Loop Station Connector (Radial LSC)	1657310
Loop Station Connector (Wrap LSC)	1657320
Loop Station Connector Gasket	1657260
Loop Wiring Concentrator (LWC)	1657330
LWC Circuit Board Assy (order instead of LWC-1657330) *	1657332
Loop Surge Suppressor (LSS)	1657350
LSS Circuit Board Assy (order instead of LSS-1657350) *	1657354
Continuity and Relay Tester	1657420
Wrap Switch Access Cover	1657325
Loop Accessory Keys (10 spares) **	1657379
2 x 4 Adapter Plate (2AP)	7838771
Conventional Box (indoor) 5 x 10cm - (2 x 4 inches)	2102151
Clamp (for cable to indoor box)	2100264
Electrical Box (outdoor) 7 x 11.5cm - (2.75 x 4.5 inches) (For industrial use)	1657280
Clamp - small (for indoor cable to environmental box)	2114285
Clamp - large (for outdoor cable to environmental box)	1657377
Single Device Attachment Cable, 40 ft (12.1 m) 40 ft (12.1 m)	8269543

* For use with NEMA-4X enclosure and associated parts (used when installing in harsh environments) or as a replacement part for the LWC or LSS.

** 1 package (10 keys) shipped with each 8101 or 8130. 1 key shipped with each LWC and wrap LSC.

Ordering Instructions: Order via MSORDER (Order Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine type 8101 or 8130. Allow lead time of 120 days.

Warranty: All loop accessories are warranted free from defects of workmanship and materials for 90 days.

Customer Responsibilities: The customer is responsible to provide (purchase, install, test, and maintain) the loop cables and accessories for terminal attachments. However, see GI section 71 for FE contracts available to assist the customer with installation.

The customer is also responsible for procuring and stocking spare cable and spare parts for loop accessories.

See *IBM Multiuse Communications Loop Planning and Installation Guide,* (GA27-3341) for a suggested schedule to allow the customer to plan, install, and test the loop cable and accessories prior to delivery of the system.

It is recommended that the customer order additional loop components for spares with the initial order, as spares will not be stocked in the Branch Office.

To enable a customer to test his installed loops it is recommended that the customer order a Continuity and Relay Tester. Testing the loop wiring will require the tester or its equivalent.

SYSTEM ACCESSORIES

Relocate/Replace Kits: The material required to perform machine relocation or processor replacement has been grouped into machine type dependent kits. Kits are available with or without truck-move packaging material.

For 8100 Information Systems with 8101 Storage and Input/Output units attached:

- Use Figure 1 below to order appropriate kit B/M
- 8130 kits apply to processor relocate or replace.
- Each 8101 to be relocated requires a kit. Current CSU Diskette provided with each kit.

Figure 1
Kits For Systems With 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package
8101	4448550	4448551	N/A
8130	4448552	4448553	N/A

For 8100 Information Systems without 8101 storage and input/output units attached:

- Use Figure 2 below to order appropriate kit B/M.
- Kit is used for processor relocate or replace.

Figure 2
Kits For Systems Without 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package
8130	4448575	4448576	N/A

- Check for missing/damaged wrap plugs. If required, see the wrap plug entry in this section of the Sales Manual.
- **Ordering Information** Order via MSORDER (category = supplies/ accessories Group Code = DP Supply Order)

WRAP PLUGS

The communication cables listed below will require their respective wrap plugs to be re-installed for machine relocations.

If wrap plugs are lost or damaged, you may order replacements by the part numbers specified in Figure 3.

Figure 3

Communication Feature	Communication Cable Group Number	Wrap Plug Part Number

Ordering Information: Via Branch Office, Code 'S' from Mechanicsburg

SUPPLIES (None)

COMMUNICATION CAPABILITIES

There are a variety of Communication Capabilities (see M2700 pages) supported by the 8130 **Features for Attaching Communications (FAC)** differing in speed, protocol and attachment interfaces. These FAC codes have been categorized as LOOP, SDLC, BSC, and START/STOP. The user should select the desired communication FAC code and refer to the full special feature description and the FAC code description (identified by the abbreviation FAC No.) for additional details. Reference to switched communications in the FAC codes, refers to the communication link between the 8100 System and the S/370 or 4300 Processor.

The 8130 special features allow a maximum of six communication capabilities to be configured and designated as communication ports but only five if Display and Printer Attachment (3220) is selected. Each communication port position (1 through 6) must consist of a communications feature for SDLC,

The SDLC communications feature is available without business machine clock (#1602). . If the 8130 is to provide the attached facility with business machine clock at speeds of 2400 bps or greater, the multi-speed clock feature (#5200) is required. One Multi-Speed Clock feature (#5200) can provide business machine clocking to any or all of port position three through six.

In addition to selecting a Communications feature #1602 for each port configured in an 8130, a communication interface must be selected to support the Communication Facility attaching to that port. A two lobe loop port requires three special features (#1602, #4830 and #4835). Direct connect at 2400, 4800, 9600 or 56,000 bps requires the

8130 Processor Mdls B23, B24 (cont'd)

Multi-Speed clock (#5200). Each port of the 8130 also requires the selection of a specify code to indicate the 8100 System FAC Code selected for that port. Certain 8100 System Fac Codes will require a second specify code to select options available within that facility: Line speed/LPDA.

Note: Within a given FAC, the selected option (line speed/LPDA) can be changed in the field by Field Engineering. All such changes are chargeable at the applicable CE rate. Do not submit an MES. However, the MES for removal of a FAC and its associated feature and specify codes must identify the original codes ordered from the factory. Port 6 is not available if Display and Printer Attachment (3200) is selected.

Specify and FAC Code Descriptions: A specify code number is required to identify the selected FAC code and its physical port position. The specify code is constructed by concatenating the selected FAC and its port position to the numeral 9, e.g.:

#9ABC where AB = FAC No. and C = Port Position.

FAC codes range in number from 08 to 61 resulting in FAC specify codes ranging in number from **#9084** to **#9616**. Additional codes must be specified for selected options. These codes are outlined in the FAC code descriptions. No two FAC codes can occupy the same port position. *Configuration Manual*, GA27-2876 will aid in assigning the port positions. FAC's 9XX6 are not available if Display and Printer Attachment (#3220) is selected, as denoted by *.

LOOP

FAC No.	FAC Code Description
FAC 08	Loop, high-speed single-lobe at 38,400 bps
FAC 09	Loop, high-speed two lobe at 38,400 bps
FAC 10	Loop, single lobe at 9600 bps
FAC 11	Loop, two lobes at 9600 bps

FAC 08 Loop High-Speed, Single-Lobe: Required for operating a loop at 38,400 bps. **Limitations**: Available in ports 4 and 5 only. **Prerequisites:** #1602 and #4830. **Maximum:** Two per 8130. none in an 8101. The maximum is reduced by one for each FAC 09, 26, 28, 29, 31 or 33. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6
Port	N/A	N/A	N/A	**#9084**	**#9085**	N/A

FAC 09 Loop High-Speed, Two-Lobe: Required for operating a two-lobe loop at 38,400 bps. **Limitations:** Available in Ports 4 and 5 only. available for ports 4 or 5 only. **Prerequisites:** #1602, #4830 and #4835. **Maximum:** Two per 8130. None in 8101. Maximum is reduced by one for each FAC 08, 26, 28, 29, 31 or 33. **Specify:** From the table below, specify the required code to complete the configuration from the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6
Port	N/A	N/A	N/A	**#9094**	**#9095**	N/A

FAC 10 Loop Single Lobe: Required for operating a loop at 9600 bps. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify required codes to complete the configuration for each port selected.

FAC 31 CCITT X.21 Interface: 48,000 bps without business machine clock and point-to-point or multipoint nonswitched operation. **Limitations:** Mutually exclusive with FAC codes 26, 28, 29, 33 or two FAC codes 08, 09. Available in Port 3 only. See Table 2 in 8100 System. pages for system maximums. **Maximum:** One per 8130. None in 8101. **Prerequisites:** #1602 and #5655. **Specify:** From the table below, specify the required codes to complete the configuration for each port

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6
Port	N/A	N/A	**#9313**	N/A	N/A	N/A

FAC 32 CCITT X.21 Interface: Up to 9600 bps without business machine clock and switched with auto answer and auto call. **Prerequisites:** #1602 and #5656. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6*
Port	**#9321**	**#9322**	**#9323**	**#9324**	**#9325**	**#9326**

FAC 33 CCITT X.21 Interface: Up to 48,000 bps without business machine clock and switched with auto answer and auto call. **Limitations:** Mutually exclusive with FAC codes 26,28, 29, 31 or two FAC codes 08, 09. Available in Port 3 only. One per 8130. None in 8101. **Prerequisites:** #1602 and #5656. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6
Port	N/A	N/A	**#9333**	N/A	N/A	N/A

DEVICE ATTACHMENT

Direct Attached Devices: Devices that can attach directly to the 8130-B processor are:

3277 Display Station mdls 1, 2	(Via #3220, #1506)
3284 Printer mdls 1, 2	(Via #3220, #1506)
3286 Printer mdls 1, 2	(Via #3220, #1506)
3287 Printer mdls 1, 2	(Via #3220, #1506)
3288 Line Printer mdl 2	(Via #3220, #1506)
3732 Text Display Station	(Via #3220, #1506)
3736 Printer	(Via #3220, #1506)
8101 Storage & Input/Output Unit	
8809 Magnetic Tape Unit 1B	

Loop Attached Devices: The following devices can attach to a direct attached loop or to a data link attached (via the 3842 or 3843 Loop Control Unit) loop. Refer to the *IBM 8100 Information System configurator*, GA27-2876, for selection of the 8100 FAC codes.

Note 1: Dedication of a 9600 bps single lobe loop to the attachment of the 3289-3, 3262-2 or 3262-12 printer should be considered in cases where the printer will be heavily utilized.

Communication Attached Devices: The following devices can attach to the communication ports. For communication facilities and modem attachment data, see the M2700 pages and appropriate machine pages for additional information. Refer to the *IBM 8100 Information System Configurator*, GA27-2876, for selection of 8100 FAC codes.

3232 Keyboard Printer mdl 51
3274 Control Unit mdl 41C, 51C, 61C with:
- 3178 Display Station
- 3230 Printer mdl 2

8140 Processor
8150 Processor
8775 Display Terminal mdls 11, 12

Direct Connect Attachment: In addition to terminal attachment to 8130B System through common carrier facilities (see M2700 pages) or local loops, attachment can be made by direct connect. The direct connect is made by using the feature numbers and FAC codes as shown below. Shown below are the direct connect attachable devices and required device feature numbers. The *8100 IBM Information System Site Planning Guide for IBM 8101, 8130, 8140*, GA27-2884 will assist in the selection of direct connect cables.

Attaching Device	Speeds bps	Attaching Device Feature Number	8100 FAC Code
3274-41C, 51C, 61C	4800	#3701 and #6302	16
	9600	#3701 and #6302	16

8775	4800,9600	#1550	25

Note: FAC 17 or 28 in the attaching 8101, 8130, 8140 A2X, BXX, #1621 and 8140 mdl C or 8150 with #1733, #1734, #1742 or #1745 without business machine clock.

* Specify code #9770 is available to facilitate problem determination.

8140 PROCESSOR MDLS A31-A74

PURPOSE

The 8140 Processor provides control, storage, processing capability, disk and diskette storage, and device attachment capabilities for the 8100 Information System.

MODELS

Model	Base Processor Storage (bytes)	Non Removable Disk Capacity (million bytes)	Fixed Head Capacity (bytes)
A31	256K (262,144)	29MB (29,327,360)	None
A32	256K (262,144)	23MB (23,461,888)	131,072
A33	256K (262,144)	64MB (64,520,192)	None
A34	256K (262,144)	58MB (58,654,720)	131,072
A41	320K (327,680)	29MB (29,327,360)	None**
A42	320K (327,680)	23MB (23,461,888)	131,072**
A43	320K (327,680)	64MB (64,520,192)	None**
A44	320K (327,680)	58MB (58,654,720)	131,072**
A51	512K (524,288)	29MB (29,327,360)	None
A52	512K (524,288)	23MB (23,461,888)	131,072
A53	512K (524,288)	64MB (64,520,192)	None
A54	512K (524,288)	58MB (58,654,720)	131,072
A61*	768K (786,432)	29MB (29,327,360)	None
A62*	768K (786,432)	23MB (23,461,888)	131,072
A63*	768K (786,432)	64MB (64,520,192)	None
A64*	768K (786,432)	58MB (58,654,720)	131,072
A71*	1024K (1,048,576)	29MB (29,327,360)	
A72*	1024K (1,048,576)	23MB (23,461,888)	131,072
A73*	1024K (1,048,576)	64MB (64,	
A74*	1024K (1,048,576)	58MB (58,654,720)	131,072

* Available as mdl upgrade only.

** These mdls include Floating Point Arithmetic.

Maximum: One per 8100 Information System.

Customer Setup (CSU): Machine only.

HIGHLIGHTS

The 8140 Processor is a multi-level, interrupt-driven processor which provides control, processing capability, processor storage, disk and diskette storage and communication features for the 8100 Information System. The flexibility offered by the 8140 allows the user to configure a system for initial requirements, while retaining the ability to modify the system to meet future needs.

System control and processing is provided by machine program instructions. The 8140 mdl A41 through A44 also includes additional instructions for floating point arithmetic. Eight I/O interrupt levels provide for interrupt processing. The 8140 offers various amounts of bytes of processor storage of which 4,096 bytes are read only storage and not available for user programs. Processor storage can be expanded up to a maximum of 384K (393,216) for the mdl A31 through A34. Fixed amounts of 320K (327,680) bytes for the mdls A41 through A44 and 512K (524,288) bytes for the mdls A51 through A54, 768K (786,432) bytes for the mdls A61 through A64 and 1024K (1,048,576) bytes for the mdls A71 through A74. Capability for dynamic addressing and storage protection for up to 4 million bytes of logical storage is also available.

The 8140 allows for the attachment of up to four 8101 Storage and Input/Output Units two of which may be configured with Communication and Display/Printer Feature Type I or Type II, or three 8101 Storage and Input/Output Units and one 8809 Magnetic Tape Unit mdl 1B. An alternate configuration can consist of an 8140, four 8101 Storage and Input/Output Units, and one 8809 Magnetic Tape Unit mdl 1A. Up to three additional 8809 Magnetic Tape Units can be attached to the 8809 Magnetic Tape Unit mdl 1A or 1B.

The 8140 Processor is provided with fixed high-speed direct access storage. Depending on the 8140 mdl selected, disk storage of up to 64 million bytes with movable heads or up to 58 million bytes of disk storage with movable and fixed heads is available. The disk storage operates at a data rate of 1.031 million bytes per second. The average access time is 27 milliseconds with an average rotational delay of 9.6 milliseconds. Removable diskette storage is available with up to 1MB (985,088 bytes) of storage operating at up to 62K bytes per second data rate. The diskette drive can read/write in basic data exchange format on either the Diskette 2D or the Diskette Type 1.

The 8100 System can attach to any S/370 or 4300 processors via the 3704, 3705 or 3725 for SNA/SDLC or BSC line control. The 8100 System attaches to the ICA of the 115, 125, 135, or 138 Processors for BSC line control. The 8100 System can attach to the communications adapter of the 4331 or 4361 Processor for BSC and/or SDLC line control. For specific attachment see M2700 pages.

The capability of the 8100 Information System is further extended by providing for the attachment of a variety of input/output devices. These devices may be attached to the 8140 via communication features which include data link, direct-connect, and loops that are direct-attached or data link-attached. The number of communication ports that can be attached to the 8140 is three for mdls A31 through A34 and two for mdls A41 through A44. The 8140 mdls A51 through A74 requires the 8101 Storage and Input/Output Unit for the attachment of communication ports.

Customer Setup: The 8140 Processor is designated as a customer setup unit thereby offering the customer early availability and relocation flexibility. Aids and configurators are provided to facilitate the configuration and ordering of the 8140. Setup procedures for the customer will be shipped with each machine. An 8140 installation verification program will be shipped with each machine on a diskette. A clear indication that the machine is operational will be given.

Loop Installation: The customer is responsible for procurement, installation, and maintenance of the loop network. In order for the cable and required accessories to be properly installed, certain preparatory steps must be followed. See *IBM Multiuse Communications Loop Planning and Installation Guide,* GA27-3341, for information necessary to plan and install the loop. The loop should be installed and checked out prior to attaching processors or devices.

Performance: The maximum number of Features for Attaching Communications **(FAC)** capable of concurrent operation is a function of the speed of the line, communication facilities, the operating system installed and the application work load. The maximum number of communications features which can be physically installed can exceed the operational capability. Increased processor utilization will result from sustained operation of BSC (#1603 and #1604) at the maximum aggregate data rate and may cause degradation of activity operating at lower priority levels. Analysis should be performed to determine the impact.

Note: Use of BSC 8101-A2X feature #1605 instead of features #1603 or #1604 will significantly reduce processor utilization.

Diagnostics: The 8100 System hardware and feature operation, diagnostic support and maintenance support described in 8100 System Publications are dependent on the presence of functional support modules provided by DPPX, DPCX. Operational and maintenance conditions for the 8100 System are predicated on the presence of these functional support modules. Customers ordering 8100 System hardware without DPPX or DPCX should provide the functional support as contained and described in the *Functional Definition Manual 8100* which will be available from Mechanicsburg at FCS.

Selected Configurations: To ease the selection, configuring, ordering and installation of an 8140 Processor, Selected Configurations has been developed. Selected Configurations is designed to be applicable for the majority of customer installations, both DPPX and DPCX are supported. The use of Selected Configurations is recommended. Traditional configuration selection and ordering should be used for configurations not included in the selected configurations.

SELECTED CONFIGURATIONS

The following table lists the appropriate selected configuration codes for each mdl and the communication capabilities for each selected configuration.

	CODE							
	1 0 0 0	1 0 0 2	1 0 0 4	1 0 0 5	1 0 0 7	1 0 0 8	1 0 0 9	1 0 1 0
Description								
8140 mdl A4X, A5X, A6X, A7X	X							
Port 1 Dir-Att Loop – 38.4KB – 9.6KB								
Port 2 Dir-Att Loop 9.6KB								
Port 3 Data Link 9.6KB	**No Communication Attachment**							
Port 4 Data Link 9.6KB								
Port 5 Data Link 9.6KB								
Port 6 Dir-Att Loop 9.6KB								

Notes:

1. Magnetic tape attachment to 8140.
   - use 8809 mdl 1B.
2. Recommended DPPX configurations:
   - No less than 512K processor storage
   - No less than 58MB disk storage
   - Fixed Head feature in processor disk

Selected Configuration Attachment: No communications available. **Maximum:** One. **Field Installation:** No. **Prerequisites:** See Table 1.

8140 Processor Models A31 through A74 (cont'd)

Bibliography: GC20-8100.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (120 AC, 1-phase, 3-wire, 60 Hz): Specify **#9891** for non-locking plug, **#9890** for locking plug. If 4.3m (14 ft.) power cable is not desired, specify **#9986** for 1.8m (6 ft.) cable.
- Color: Pebble gray is the only color available.
- **Relocation:** If the user relocates and/or interchanges an attaching 8101 from one 8100 System to another, the user must consider address compatibility of the processor and its attachments. For further information, see *IBM 8100 Information System Site Planning Guide*, GA27-2884. For relocation/replace kit ordering, see "Relocate/ Replace, 8100 System" under "Accessories".
- Cabling: For loop cabling information, see "Accessories" and the *IBM Multiuse Communication Loop Planning and Installation Guide*, GA27-3341. For communication cable information, see the *IBM 8100 Information System Site Planning Guide* GA27-2884. Communication cables must be ordered separately from the communication adapter feature.
- Terminal Requirements: Specify **#9800** (offline 3640 terminal exerciser) when ordering any of the following terminals: 3641, 3642, 3643, 3644, 3645, 3646 or 3647.
  1) On the initial order.
  2) When the first terminal is ordered to attach via an 8101 and none are attached to the processor.
  3) Via MES when the first terminal is field installed on an 8100 System. **Maximum:** One per 8100 System. **Field Installation:** Yes.
- Programming Configuration: Specify **#9700** for Distributed Processing Programming Executive (DPPX), **#9710** for Distributed Processing Control Executive (DPCX), **#9720** for DPPX and DPCX or **#9730** for all other configurations. **Field Installation:** Yes.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

Storage Increment 128K (#1490): Provides 131,072 bytes of additional processor storage. The ordering of the additional quantities of this feature will allow the expansion of the 8140 mdl A31 through A34 storage up to a maximum 393,216 bytes. **Maximum:** One for 8140 mdls A31 through A34. **Field Installation:** Yes.

Expanded Function Operator Panel (#4545): This feature provides operator access to processor storage, program stop and restart capability and current operating indicators. **Limitations:** Not available on 8140 mdls A41 through A44 with SDLC or BSC/SS Communications (#1601, #1602, #1603, #1604), Loop Adapter (#4830), or the 8140 mdls A51 through A74. **Maximum:** One. **Field Installation:** Yes. **Field Removable:** No.

Keylock (#4655): This Keylock Feature provides processor security by the selection of three modes of operation: Disable power on and operator panel functions ... Enable power on but disable operator panel ... Enable power on and full operator panel functions. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith. **Maximum:** One. **Field Installation:** Yes. **Field Removable:** No.

Security Cover Locks (#6555): This feature provides key-operated security locks for the machine covers, restricting access to the machine interior and external cable connector area. See Security Lock, Diskette (#6566) if diskette security is required. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith. **Maximum:** One. **Field Installation:** Yes. **Field Removable:** No.

Security Lock, Diskette (#6566): This feature provides a key operated security lock to restrict access to the diskette magnetic media. It is accessable only by opening the front cover. For maximum system security, the Security Cover Lock (#6555) must be used in addition to the Diskette Security Lock. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith. **Maximum:** One. **Field Installation:** Yes. **Field Removable:** No.

COMMUNICATIONS FEATURES

CCITT V.35 Interface (#1550): Provides interface to External Modems/Data Communication equipment to 56,000 bps or Direct Connection at speeds up to 9600 bps. Transmission over direct connection at speeds up to 9600 bps. **Limitations:** Operation at speeds greater than 9600 bps is mutually exclusive with FAC code 21 or two FAC codes 08, 09. **Maximum:** For speeds up to 9600 bps one per selected Communication feature (#1601 or #1602). For operation at speeds greater than 9600 bps, one per 8140 or one per 8140/8101. **Field Installation:** Yes. **Prerequisites:** #1601, #1602, #5200. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

SDLC Communications With Business Machine Clock (#1601): Provides control for EIA RS-232-C interface, integrated modems, direct connection and CCITT V.35 Interface. **Limitations:** Not available with the Expanded Function Operator Panel (#4545) on the 8140 mdls 41 through 44. Not available with the 8140 mdls A51 through A74. In an 8100 System, only ten loop or SDLC communication ports may be active at one time. **Maximum:** Three with the 8140 mdls A31 through A34 and two with the mdls A41 through A44. Maximum is 19 per 8100 System (see Note) with 8140 mdls A31 through A34, 18 with 8140 mdls A41 through A44 or 16 with 8140 mdls A51 through A74. The maximum is reduced by one for each Communication feature (#1602, #1603 or #1604) selected. **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

SDLC Communications Without Business Machine Clock (#1602): Provides control for EIA RS-232-C or Digital Data Service Adapter interface, CCITT V.35 Interface and Loop Adapter. **Limitations:** Not available with the Expanded Function Operator Panel (#4545) on 8140 mdls 41 through 44. Not available with the 8140 mdls A51 through A74. In an 8100 System only ten loop or SDLC communication ports may be active at one time. **Maximum:** Three with 8140 mdls A31 through A34 and two with mdls A41 through A44. Maximum is 19 per 8100 System (see Note) with 8140 mdls A31 through A34, 18 with 8140 mdls A41 through A44 or 16 with 8140 mdls A51 through A74. The maximum is reduced by one for each Communication feature (#1601, #1603 or #1604) selected. **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

BSC/SS Communications With Business Machine Clock (#1603): Provides control for EIA RS-232-C interface, integrated modems or direct connection. **Limitations:** Start/Stop communications are not available with integrated modems. Not available with the Expanded Function Operator Panel (#4545) on the 8140 mdls 41 through 44. Not available with the 8140 mdls A51 through A74. In an 8100 System, the maximum aggregate BSC data rate is 19,200 bps and 660 bps for Start/Stop. BSC mutually exclusive with 8101-A2X FAC Codes 42 or 46 on an 8100 System. **Maximum:** Three with 8140 mdls A31 through A34 and two with 8140 mdls A41 through A44. Maximum is 19 per 8100 System (see Note) with 8140 mdls A31 through A34, 18 with 8140 mdls A41 through A44 or 16 with 8140 mdls A51 through A74. The maximum is reduced by one for each Communication feature (#1601, #1602 or #1604) selected. **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

BSC Communications Without Business Machine Clock (#1604): Provides control for EIA RS-232-C or Digital Data Service Adapter interface and direct-connect. **Limitations:** Not available with the Expanded Function Operator Panel (#4545) on the 8140 mdls 41 through 44. Not available with 8140 mdls A51 through A74. In an 8100 System, the maximum aggregate BSC data rate is 19,200 bps. BSC mutually exclusive with 8101-A2X FAC Codes 42 or 46 on an 8100 System. **Maximum:** Three with the 8140 mdls A31 through A34 and two with mdls A41 through A44. Maximum is 19 per 8100 System (see Note) with 8140 mdls A31 through A34, 18 with 8140 mdls A41 through A44 or 16 with 8140 mdls A51 through A74. The maximum is reduced by one for each Communication feature (#1601, #1602 or #1603) selected. **Field Installation:** Yes. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section.

EIA RS-232-C Interface (#3701): Provides interface to external modems/data communication equipment or direct connection at speeds of up to 9600 bps. **Maximum:** One per selected Communication feature (#1601, #1602, #1603 or #1604). **Field Installation:** Yes. **Prerequisites:** #1601, #1602, #1603, #1604, #5200. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Loop Adapter (#4830): Provides for the direct attachment of a single-lobe loop at 9600 or 38,400 bps. **Limitations:** Not available with the Expanded Function Operator Panel (#4545) on the 8140 mdls 41 through 44. Not available with the 8140 mdls A51 through A74. **Maximum:** Three with 8140 mdls A31 through A34 and two with the mdls A41 through A44. Only two of these features may operate at 38,400 bps in an 8140/8101. The maximum is reduced by one for each selected communication facility attached to the 8140. **Field Installation:** Yes. **Prerequisites:** #1602. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

8140 Processor Models A31 through A74 (cont'd)

Loop Adapter Second Lobe (#4835): Provides for the attachment of a separate physical loop cable to extend the coverage and availability of the directly attached loop. **Limitations:** Not available with 8140 mdls A51 through A74. **Maximum:** Two per 8140 mdls A31 through A34 and A41 through A44. Maximum is six per 8100 System (see Note) with the 8140 mdls A31 through A34 and A41 through A44 or four with 8140 mdls A51 through A74. **Field Installation:** Yes. **Prerequisites:** #4830. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Note: An 8100 System consisting of an 8140 Processor and attached 8101 Storage and Input/Output Units.

Multi-Speed Clock (#5200): Provides business machine clocking at 2400, (FAC 44 only) 4800 bps and 9600 bps for direct connection facilities. Can provide multiple speeds simultaneously. **Limitations:** Not available with the 8140 mdls A51 through A74. **Maximum:** One per 8140 mdls A31 through A34 and mdls A41 through A44. Maximum is five per 8100 System with the 8140 mdls A31 through A34 and A41 through A44 or four with the 8140 mdls A51 through A74. **Field Installation:** Yes. **Prerequisites:** #1602 or #1604. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Modem, Integrated, Nonswitched (#5500): Provides interface to common carrier leased facilities at 600 or 1200 bps. **Limitations:** Not available for Start/Stop communication facilities. **Maximum:** One per selected Communication feature (#1601 or #1603). **Field Installation:** Yes. **Prerequisites:** #1601, #1603. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Modem, Integrated, Switched (#5501): Provides interface to common carrier switched facilities with auto answer at 600 or 1200 bps. **Limitations:** Not available with Start/Stop communication facilities. **Maximum:** One per selected communication feature (#1601). **Field Installation:** Yes. **Prerequisites:** #1601. **Note:** Attachment to the Switched Network is via FCC registered protective circuitry of the CBS type (or equivalent) provided by the user. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

Digital Data Service Adapter (DDSA) (#5660): Provides interface to AT&T Dataphone® Digital Service Network for transfer of digital data at speeds of 2400, 4800, 9600 or 56,000 bps in point to point or multipoint configurations. **Limitations:** Operation at 56,000 bps is mutually exclusive with FAC codes 29, or two FAC codes 08, 09. See Table 2 in 8100 System Pages for system maximums. **Maximum:** One per selected Communication feature (#1602 or #1604). For operation at 56,000 bps, one per 8140 or one per 8140/8101. **Field Installation:** Yes. **Prerequisites:** SDLC Communications without Clock (#1602) for operation to 56,000 bps, or BSC Communications without Clock (#1604) for operation to 9600 bps. **Specify:** Code as provided in FAC description in the "Communication Capabilities" section.

MODEL CONVERSIONS

Model upgrades are available, however model changes from 8140-A3X to 8140-A4X are not recommended for field installation. The 8140 mdls A6X and A7X are available only for field upgrade. For model changes which require replacement of a disk storage unit, adequate provisions must be made for retaining data contained in disk storage and elimination of user-proprietary information.

The following model changes can be field installed

*Purchase price for this model upgrade is configuration and feature dependent. The purchase customer must submit an RPQ.

Customer price quotations and customer order acknowledgements letters for purchase MES must state "Installation of this model change involves the removal of parts which become the property of IBM".

ACCESSORIES

CABLES - LOOP

Loop Cables may be purchased from IBM or a customer selected source. See *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341, for part numbers, specifications and usage which is necessary for preplanning and ordering.

- **Indoor Cable P/N 1657265:** UL approved (style 2919) for interconnection of low voltage electronic equipment. Maximum allowable cable temperature range is -34°C to +80°C.
- **Indoor Cable P/N 7838694:** UL approved for cable tray installation (NEC Art. 725-40b3). Maximum allowable cable temperature range is -34°C to +90°C.
- **Indoor Cable P/N 7838695:** UL approved for duct and plenum installation (NEC Art. 725-2b). Maximum allowable cable temperature range is -34°C to +105°C.
- **Outdoor Cable P/N 1657267:** For above ground installation. Maximum allowable cable temperature range is -34°C to +80°C.
- **Outdoor Cable P/N 1657268:** For below ground installation. Maximum allowable cable temperature range is -34°C to +80°C.

Ordering Instructions: Interior cable (P/N 1657265, 7838694 and 7838695) should be ordered in lengths of 304.8m to 609.6m (1,000 to 2,000 ft.). Additional lengths up to 609.6m (2,000 ft.) can be ordered by specifying the length wanted. Indoor cable splices can be accomplished via P/N 1657300. A minimum order quantity is 304.8M (1,000 ft.).

Exterior cable (P/N's 1657267 and 1657268) should be ordered in one continuous length, up to a maximum of 914.4m (3,000 ft.), by specifying the length wanted.) Outdoor splices with aerial and burial cable should be avoided. @SMQ@Order via MSORDER (Category = Bulk Cable).@SS@ Specify cable part number and number of feet desired.

Warranty: Loop cable is warranted free from defects of workmanship and materials for 90 days.

LOOP - ACCESSORIES

A group of accessory products are offered to permit plant electricians or contract personnel to install the loops. Refer to *IBM Multiuse Communications Loop Planning and Installation Guide,* GA23-3341, for information necessary to plan the layout and for selection of the loop hardware, for Installation and Testing information.

Loop Splice Plate (LSP): The LSP splices together two segments of indoor cable or provides a connecting point for future expansion of the loop. The LSP consists of a single connector strip, to which the incoming loop cable and the outgoing loop cable can be attached; it is installed in a standard outlet box for business office environments, or weatherproof outlet box for industrial environments.

Loop Station Connector (LSC): The LSC is available as two unique types: Wrap and radial. The wrap LSC attaches an I/O unit or controller directly to the main loop cable; the radial LSC attaches an I/O unit only through an LWC to the loop. The wrap LSC attaches an incoming and outgoing loop cable; the radial LSC attaches at the end of one loop cable from the LWC.

The wrap LSC also offers the isolation feature of wrapping, which allows the customer to wrap the loop away from a loop wiring failure or

8140 Processor Models A31 through A74 (cont'd)

to reconfigure the loop during alterations. Both wrap and radial LSCs contain bypass relays that bypass the I/O unit when the I/O unit is powered-off or disconnected. These accessories are installed in a standard or weatherproof outlet box.

2 X 4 Adapter Plate (2AP): The 2" x 4" Adapter Plate is used with the Loop Station Connector and accommodates the use of standard outlet boxes that have dimensions smaller than the outlet boxes defined in the Loop Installation and Planning Guide. It is not to be used with the environmental outlet boxes.

Loop Wiring Concentrator (LWC): The LWC provides the facility to attach a cluster of I/O units without a large number of drops on the loop cable. It attaches up to eight radial LSCs at the end of loop cables called *radials.* The point where a radial line terminates at the LWC is called an LWC *port.* Not all ports have to be used; unused ports can be reserved for future expansion.

The LWC has the same wrapping capability as the wrap LSC. In addition, the LWC allows the customer to bypass one or more of the radials by setting a corresponding switch located inside the LWC.

The LWC has its own enclosure or can be mounted in a NEMA-4X environmental equipment cabinet, with minimum measurement of 36 x 30 x 15cm (14 x 12 x 6 in.).

Loop Surge Suppressor (LSS): The LSS allows the loop to be run across an outdoor space to another building. It attaches two outdoor cables and two indoor cables, allowing the proper termination and grounding for each type of cable. In addition, the LSS contains four surge protectors, one for each twisted pair in the two outdoor cables, to protect from voltage surges caused by near strikes of lightning. There is no protection in the LSS from a direct lightning strike.

The LSS has its own enclosure or can be mounted in an electrical equipment cabinet, with minimum measurement of 36 x30 x 15cm (14 x 12 x 6 in.).

Continuity And Relay Tester: The Continuity and Relay Tester is used with a customer supplied volt-ohm meter, capable of reading 0.5 ohms and rated at least 5000 ohms/volt, to verify the loop installation, including loop cabling and accessories, after completion. By plugging the tester into any loop station connector and connecting the volt-ohm meter to the tester, the condition of the wire segment being tested can be determined as to conductor and shield continuity (opens or shorts), wrap switch operation, and total lobe resistance.

The loop station connector relays are also activated and their operation verified with this tester.

System Loop Accessories	Part Number
Loop Splice Plate (LSP) (indoor)	**1657300**
Loop Station Connector (Radial LSC)	**1657310**
Loop Station Connector (Wrap LSC)	**1657320**
Loop Station Connector Gasket	**1657260**
Loop Wiring Concentrator (LWC)	**1657330**
LWC Circuit Board Assy (order instead of LWC-1657330) *	**1657332**
Loop Surge Suppressor (LSS)	**1657350**
LSS Circuit Board Assy (order instead of LSS-1657350) *	**1657354**
Continuity and Relay Tester	**1657420**
Wrap Switch Access Cover	**1657325**
Loop Accessory Keys (10 spares) **	**1657379**
2 x 4 Adapter Plate (2AP)	**7838771**
Conventional Box (indoor) 5 x 10cm - (2 x 4 inches)	**2102151**
Clamp (for cable to indoor box)	**2100264**
Electrical Box (outdoor) 7 x 11.5cm - (2.75 x 4.5 in.) (For industrial use)	**1657280**
Clamp - small (for indoor cable to environmental box)	**2114285**
Clamp - large (for outdoor cable to environmental box)	**1657377**
Single Device Attachment Cable, 12.1m (40 ft.) 12.1m (40 ft.)	**8269543**

* For use with NEMA-4X enclosure and associated parts (used when installing in harsh environments) or as a replacement part for the LWC or LSS.

** 1 package (10 keys) shipped with each 8101 or 8140. 1 key shipped with each LWC and wrap LSC.

Ordering Instructions: When ordering, use Machine type 8101 or 8140. Allow lead time of 120 days.

Warranty: All loop accessories are warranted free from defects of workmanship and materials for 90 days.

Customer Responsibilities: The customer is responsible to provide (purchase, install, test, and maintain) the loop cables and accessories for terminal attachments. However, see IBM for contracts available to assist the customer with installation.

The customer is also responsible for procuring and stocking spare cable and spare parts for loop accessories.

See *IBM Multiuse Communications Loop Planning and Installation Guide,* (GA27-3341) for a suggested schedule to allow the customer to plan, install, and test the loop cable and accessories prior to delivery of the system.

It is recommended that the customer order additional loop components for spares with the initial order, as spares will not be stocked in the Branch Office.

To enable a customer to test his installed loops it is recommended that the customer order a Continuity and Relay Tester. Testing the loop wiring will require the tester or its equivalent.

SYSTEM ACCESSORIES

Relocate/Replace Kits:

The material required to perform machine relocation or processor replacement has been grouped into machine type dependent kits. Kits are available with or without truck-move packaging material.

For 8100 Information Systems with 8101 Storage and Input/Output units attached:

- Use Figure 1 below to order appropriate kit B/M
- 8140 kits apply to processor relocate or replace.
- Each 8101 to be relocated requires a kit. Current CSU Diskette provided with each kit.

Figure 1
Kits For Systems With 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package
8101	**4448550**	**4448551**	N/A
8140	**4448554**	**4448555**	N/A

For 8100 Information Systems without 8101 storage and input/output units attached:

- Use Figure 2 below to order appropriate kit B/M.
- Kit is used for processor relocate or replace.

Figure 2
Kits For Systems Without 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package
8140	**4448577**	**4448578**	N/A

- Check for missing/damaged wrap plugs. If required, see the wrap plug entry in this section of the Sales Manual.
- **Ordering Information**

WRAP PLUGS

The communication cables listed below will require their respective wrap plugs to be re-installed for machine relocations.

If wrap plugs are lost or damaged, you may order replacements by the part numbers specified in Figure 3.

Figure 3

Ordering Information: Via Branch Office, Code 'S' from Mechanicsburg

SUPPLIES (None)

8140 Processor Models A31 through A74 (cont'd)

COMMUNICATIONS

There are a variety of Communication Facilities (see M2700 pages) supported by the 8140 mdls A31 through A44 Features for **A**ttaching **C**ommunications (**FAC**) which differ in speed, protocol and attachment interfaces. These FAC codes have been categorized as LOOP, SDLC, BSC and START/STOP. The user should select the desired communication FAC code and refer to the full special feature description and the FAC code description (identified by the abbreviation FAC No.) for additional details. Reference to switched communications in the FAC codes, refers to the communication link between the 8100 System and the S/370.

The 8140 special features allow a maximum of three communication capabilities to be configured and designated as communication ports. Each communication port position (1 through 3) must consist of a communications feature for SDLC, BSC or Start/Stop.

The SDLC communications feature is available with and without business machine clock (#1601, #1602). The BSC/SS communications feature (#1603) is available with business machine clock and the BSC communications feature (#1604) is available without business machine clock. If an 8140 communication port is to provide the attached facility with business machine clock at speeds greater than 2400 bps the Multi-Speed Clock feature (#5200) is required.

In addition to selecting a communications feature (#1601, #1602, #1603, #1604) for each port configured in an 8140, a communication interface or integrated modem must be selected to support the Communication Facility attaching to that port. A two-lobe loop port requires three special features (#1602, #4830 and #4835). Direct connect at 2400(FAC 44 only),4800 and 9600 bps requires the Multi-Speed Clock feature (#5200). Each port of the 8140 also requires the selection of a specify code to indicate the System 8100 FAC code selected for that port. Certain System 8100 FAC Codes will require a second specify code to select options available within that facility: 2/4-wire or line speed.

Note: Within a given FAC, the selected option (2/4 wire, LPDA or line speed) can be changed in the field by Field Engineering. All such changes are chargeable at the applicable CE hourly rate. Do not submit an MES. However, the MES for removal of a FAC and its associated feature and specify codes must identify the original codes ordered from the factory.

Specify And FAC Code Descriptions: A specify code number is required to identify the selected FAC Code and its physical port position. The specify code is constructed by concatenating the selected FAC and its port position to the numeral **9**, e.g.:

#9ABC where AB = FAC No. and C = Port Position

FAC codes range in number from 08 to 61 resulting in FAC specify codes ranging in number from **#9081** to **#9613**. Additional codes may be specified for selected options. These codes are outlined in the FAC code descriptions. No two FAC codes can occupy the same port position. *Configuration Manual,* GA27-2876, will aid in assigning the port positions.

LOOP

FAC No.	FAC Code Description
FAC 08	Loop, high-speed single-lobe at 38,400 bps
FAC 09	Loop, high-speed two lobes at 38,400 bps
FAC 10	Loop, single-lobe at 9600 bps
FAC 11	Loop, two-lobes at 9600 bps

FAC 08 Loop High-Speed, Single-Lobe: Required for operating a loop at 38,400 bps. Port position three not available with 8140 mdls A41 through A44. **Limitations:** If two 08 FAC codes are specified, FAC codes 09, 21, 29 are not available. See Table 2 in 8100 System pages for system maximums. **Maximum:** Two per 8140 or two per 8140/8101. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3
Port	**#9081**	**#9082**	**#9083**

FAC 09 Loop High-Speed, Two-Lobe: Required for operating a two-lobe loop at 38,400 bps. **Limitations:** If two 09 FAC codes are specified, FAC codes 08, 21, 29 are not available. See Table 2 in 8100 System pages for system maximums. **Prerequisites:** #1602, #4830 and #4835. **Maximum:** Two per 8140 or two per 8140/8101. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection	Port 1	Port 2	Port 3
Port	**#9091**	**#9092**	N/A

FAC 10 Loop, Single-Lobe: Required for operating a loop at 9600 bps. **Limitations:** Port position three not available with 8140 mdl A41 through A44. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3
Port	**#9101**	**#9102**	**#9103**

FAC 11 Loop, Two-Lobe: Required for operating two-lobe loops at 9600 bps. **Prerequisites:** #1602, #4830 and #4835. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3
Port	**#9111**	**#9112**	N/A

SDLC

FAC No.	FAC Code Description
EIA RS-232-C	
FAC 12	600 or 1200 bps (External modem)
FAC 13	Up to 9600 bps (External modem)
FAC 15	600, 1200 or 2400 bps Direct connect with clock (No modem)
FAC 16	4800 or 9600 bps Direct connect with clock (No modem)
FAC 17	Direct connect without clock
Integrated Modem	
FAC 18	600 or 1200 bps nonswitched
FAC 19	600 or 1200 bps switched with auto answer
AT&T Dataphone® Digital Service	
FAC 20	2400, 4800 or 9600 bps nonswitched
FAC 21	56,000 nonswitched
CCITT V.35	
FAC 24	Direct connect with clock (No modem) 600, 1200 or 2400 bps
FAC 25	Direct connect with clock (No modem) 4800 or 9600 bps
FAC 27	Direct connect without clock (No modem) 9600 bps
FAC 29	Up to 56,000 bps nonswitched

FAC 12 EIA RS-232-C Interface: 600 or 1200 bps with business machine clock - operating with external modem without clocking - and point-to-point switched 2-wire - or point-to-point nonswitched 2- or 4-wire - or multipoint 4-wire. **Limitations:** Port position three not available with 8140 mdl A41 through A44. **Prerequisites:** #1601 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection	Port 1	Port 2	Port 3

9600 bps	#9771	#9772	#9773
	#9781	#9782	#9783

START/STOP

FAC No.	FAC Code Description
EIA RS-232-C	
FAC 60	110, 134.5, 150, 300 or 600 bps (External modem)
FAC 61	110, 134.5, 150, 300 or 600 bps Direct connect with clock (No modem)

FAC 60 EIA RS-232-C Interface: 110, 134.5, 150, 300 and 600 bps with business machine clock - operating with external modem - and point-to-point nonswitched facilities will be provided under provisions of the IBM Mulitiple Supplier System Policy. (See GI pages). See M2700 pages for specific information on communication facilities and other attachment information. **Limitations:** Port position three not available with 8140 mdl A41 through A44. **Prerequisites:** #1603, #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection Port	Port 1	Port 2	Port 3
110 bps	#9601	#9602	#9603
134.5 bps	#9701	#9702	#9703
150 bps	#9711	#9712	#9713
300 bps	#9721	#9722	#9723
600 bps	#9731	#9732	#9733
	#9741	#9742	#9743

FAC 61 EIA RS-232-C Interface: 110, 134.5, 150, 300, 600 bps with business machine clock - operating with no modem (the attached terminal must provide its own business machine clock) - and direct connect to 40 ft. **Limitations:** Port position three not available with 8140 mdl A41 through A44. **Prerequisites:** #1603, #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection Port	Port 1	Port 2	Port 3
110 bps	#9611	#9612	#9613
134.5 bps	#9701	#9702	#9703
150 bps	#9711	#9712	#9713
300 bps	#9721	#9722	#9723
600 bps	#9731	#9732	#9733
	#9741	#9742	#9743

DEVICE ATTACHMENT

Direct Attached Devices: Devices that can attach directly to the processor are ... 8101 Storage and Input/Output Unit ... 8809 Magnetic Tape Unit.

Loop Attached Devices: The following devices can attach to a direct attached loop or to a data link attached (via the 3842 or 3843 Loop Control Unit) loop. Refer to the *IBM 8100 Information System configurator* GA27-2876 for selection of the 8100 FAC codes.

Device and Mdl	Loop Attachment Direct At 9600 bps	Direct At 38400 bps	Data Link At 2400, 4800,9600 bps
3104 Display Terminal B1, B2	X	X	X
3230 Printer 1	X	X	X
3232 Keyboard Printer Terminal mdl 11	X	X	X
3262 Printer 2,12	(1)	X	(1)
3268 Printer 1	X	X	X

3647 Time and Attendance Terminal	X		X
5210 Printer E01, E02	X		
7426 Terminal Interface Unit 1, with associated terminals	X	X	X
8775 Display Terminal 1,2	X	X	X

Note:

1. Dedication of a 9600 bps single-lobe loop to the attachment of the 3289-3, 3262-2 or 3262-12 printer should be considered in cases where the printer will be heavily utilized.

Communication Attached Devices: The following devices can attach to the communication ports. For communication facilities and modem attachment data see the M2700 pages and appropriate machine pages for additional information. Refer to the *IBM Information System Configurator* GA27-2876 for selection of 8100 FAC codes.

Devices conforming to TTY 33/35 or equivalent
2741 Communication Terminal
Terminals conforming to 2780/3780 line protocol
3232 Keyboard Printer mdl 1
3232 Keyboard Printer mdl 51
3101 Display Terminal mdls 10, 12, 13
3274 Control Unit mdl 51C, 61C with:
- 3178 Display Terminal
- 3230 Printer 2
- 3268 Printer 2

8140 Processor Models A31 through A74 (cont'd)

- 3262 Printer mdls 3, 13
- 3278 Display Station mdls 1, 2, 3, 4, 5
- 3279 Color Display Station mdls 2A, 2B, 3A, 3B
- 3287 Printer mdls 1, 2, 1C, 2C
- 3289 Line Printer mdls 1,2

3276 Control Unit Display Station mdls 1*, 2*, 3*, 4*, 11, 12, 13, 14 with: (*These mdls are supported in SDLC mode.)

- 3178 Display Terminal
- 3230 Printer 2
- 3262 Printer mdl 13
- 3268 Printer 2
- 3278 Display Station mdls 1, 2, 3, 4 (See M3276 for configuration details.)
- 3279 Color Display Station mdls 2A, 2B, 3A, 3B (Not supported on 3276 mdls 1, 2, 3, 4)
- 3287 Printer mdls 1, 2, 1C, 2C
- 3289 Line Printer mdls 1, 2

3600 Finance Communication Controllers
3630 Plant Communication Controllers
3651 Store Controllers mdls 25, 75
3684 Point of Sale Control Unit mdls 1, 2

8130 Processor
8140 Processor
8150 Processor
8775 Display Terminal mdls 11, 12

*Specify **#9770** is available to facilitate problem determination.

Direct Connection Attachment: In addition to terminal attachment to 8100 System through common carrier facilities (see M2700 pages) or local loops, attachment can be made by direct connect. The direct connect is made by using SDLC (FAC 15, 16, 17, 24, 25, or 27), BSC (FAC 44) and Start/Stop (FAC 61). Shown below are the direct connect attachable devices and required device feature numbers. The *8100 Information System Site Planning Guide* GA27-2884 will assist in the selection of direct connect cables.

Attaching Device	Speeds bps	Attaching Device Feature No.	8100 FAC CODE

Note: FAC 17 or 27 in the attaching 8101, 8130, 8140 AXX, BXX , #1621 on 8140 mdl C or #1733 or #1734 on 8150 without business machine clock.

SELECTED CONFIGURATIONS

Table 1
Selected Configuration Codes

Selected Configuration Feature Code	Quantity–Component.Feature Code
#1000	**No Communication Facilities**

Note: Additional required specified codes.

Power Plug/Cable: **#9890, #9891, #9986.**

3640 Attachment: **#9800.**

Programing Configuration: **#9700, #9710, #9720, #9730**

Optional feature codes: #4655-Keylock, Operator ... #6555-Keylock, Security Cover ... #6566-Security Lock, Diskette ... #1490-Storage Expansion, A3X.

8140 PROCESSOR MDLS B51-B72

PURPOSE

The 8140 Processor provides control, storage, processing capability, disk and diskette storage, and device attachment capabilities for the 8100 Information System.

MODELS

Model	Base Processor Storage (bytes)	Non-Removable Disk Capacity (million bytes)	Fixed Head Capacity (bytes)
B51	512K (524,288)	58MB (58,654,720)	131,072

B62	768K (786,432)	123MB (123,174,912)	131,072
B71	1024K (1,048,576)	58MB (58,654,720)	131,072
B72	1024K (1,048,576)	123MB (123,174,912)	131,072

Maximum: One per 8100 Information System.

Customer Setup (CSU): Machine only.

HIGHLIGHTS

The 8140 Processor is a multi-level, interrupt-driven processor which provides control, processing capability, processor storage, disk and diskette storage and communication features for the 8100 Information System. The flexibility offered by the 8140 allows the user to configure a system for initial requirements, while retaining the ability to modify the system to meet future needs.

System control and processing is provided by machine program instructions. Optional instructions are available for floating point arithmetic. Eight I/O interrupt levels provide for interrupt processing. The 8140 offers various amounts of bytes of processor storage. Depending on the mdl processor selected, processor storage can be up to a maximum of 1,024K (1,048,576 bytes). Capability for dynamic addressing and storage protection for up to 4 million bytes of logical storage is also available.

The 8140 mdls B51 through B72 allow for the attachment of up to four 8101 Storage and Input/Output Units, one of which may be configured with Communications and Display/Printer Features, or three 8101 Storage and Input/Output Units and one 8809 Magnetic Tape Unit mdl 1B. An alternate configuration can consist of an 8140, four 8101 Storage and Input/Output Units, and one 8809 Magnetic Tape Unit mdl 1A. Up to three additional 8809 Magnetic Tape Units can be attached to the 8809 Magnetic Tape Unit mdl 1A or 1B.

The 8140 Processor is provided with fixed high-speed direct access storage. Disk storage of up to 123 million bytes with movable and fixed heads is available. The disk storage operates at a data rate of 1.031 million bytes per second. The average access time is 27 milliseconds, with an average rotational delay of 9.6 milliseconds. Removable diskette storage is available with up to 1MB (985,088 bytes) of storage operating at up to 62K bytes per second data rate. The diskette drive can read/write in basic data exchange format on either the Diskette 2D or the Diskette Type 1.

The 8100 System can attach to any S/370, 4341 or 4381 Processors via the 3704, 3705 or 3725 for SNA/SDLC or BSC line control. The 8100 System attaches to the ICA of the 115, 125, 135 or 138 Processors for BSC line control. The 8100 System can attach to the communications adapter of the 4321, 4331 or 4361 Processor for BSC and/or SDLC line control. For specific attachment, see M2700 pages.

The capability of the 8100 Information System is further extended by providing for the attachment of a variety of input/output devices. These devices may be attached to the 8140 via communication features which include data link, direct-connect, and loops that are direct-attached or data link-attached. Up to 11 communication ports can be attached to the 8140 mdls B51 through B72.

Physical security is provided through the use of key locks on the operator panel, diskette drive and machine covers. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith.

Customer Setup: The 8140 Processor is designated as a customer setup unit, thereby offering the customer early availability and relocation flexibility. Aids and configurators are provided to facilitate the configuration and ordering of the 8140. Customer setup instructions will be shipped with each machine. An 8140 installation verification program will be shipped with each machine on a diskette. A clear indication that the machine is operational will be given.

Loop Installation: The customer is responsible for procurement, installation, and maintenance of the loop network. In order for the cable and required accessories to be properly installed, certain preparatory steps must be followed. See *IBM Multiuse Communications Loop Planning and Installation Guide,* GA27-3341 for information necessary to plan and install the loop. The loop should be installed and checked out prior to attaching processors or devices.

Selected Configurations: To ease the selection, configuring, ordering and installation of an 8140 Processor, several selected configurations have been developed. These selected configurations are designed to be applicable for the majority of customer installations. Both DPPX and DPCX are supported. The use of Selected Configurations is recommended. Traditional configuration selection and ordering should be used for configurations not included in the selected configurations.

Bibliography: GC20-8100.

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture.

- Relocation: If the user relocates and/or interchanges an attaching 8101 from one 8100 system to another, the user must consider address compatibility of the processor and its attachments. For further information, see *IBM 8100 Information System Site Planning Guide,* GA27-2884. For relocation/ replace kit ordering see "Relocate/Replace 8100 System Accessories".
- Upending: In the event the 8140-BXX must be placed on end to maneuver to the installation site, specify **#9840**. For additional ordering information associated with specify **#9840**, see Accessories "Upending Feature, 8140". **Field Installation:** Yes.
- Color: Pebble gray is the only available color.
- Cabling: For loop cabling information, see "Accessories" and the *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341. For communication cable information, see the *IBM 8100 Information System Site Planning Guide,* GA27-2884.

  Communication cables must be ordered separately from the communication adapter features.
- Terminal Requirements: Specify **#9800** (offline 3640 terminal exerciser) when ordering any of the following terminals: 3641, 3642, 3643, 3644, 3645, 3646 or 3647.

  1) On the initial order.
  2) When the first terminal is ordered to attach via an 8101 and none are attached to the processor.
  3) Via MES when the first terminal is field installed on an 8100 System.

  Maximum: One per 8100 System. **Field Installation:** Yes.
- Programming Configuration: Specify **#9700** for Distributed Processing Programming Executive (DPPX), **#9710** for Distributed Processing Control Executive (DPCX), **#9720** for DPPX and DPCX or **#9730** for all other configurations. **Field Installation:** Yes.
- Voltage (AC, 1-phase, 3-wire, 60 Hz): Specify **#9884** for 208V, **#9894** for 240V. For conversion between 208V AC and 240V AC, contact your local CE representative. If standard 4.3 meter (14 foot) cable is not required, also specify **#9986** for 1.8 meter (6 foot) cable.

SPECIAL FEATURES

Performance: The maximum number of Features for Attaching Communications (**FAC**) capable of concurrent operation is a function of the speed of the line, communication facilities, the operating system installed and the application work load. The maximum number of communications features which can be physically installed can exceed the operational capability. Increased processor utilization will result from sustained operation of BSC (#1603 and #1604) at the maximum aggregate data rate and may cause degradation of activity operating at lower priority levels. Analysis should be performed to determine the impact.

Note: Use of BSC 8101-A2X feature #1605 instead of features #1603 or #1604 will significantly reduce processor utilization.

Diagnostics: The 8100 System hardware and feature operation, diagnostic support and maintenance support described in 8100 System publications are dependent on the presence of functional support modules provided by DPPX, DPCX. Operational and maintenance conditions for the 8100 System are predicated on the presence of these functional support modules. Customers ordering 8100 System hardware without DPPX or DPCX should provide the functional support as contained and described in the *Functional Definition Manual 8100* which will be available from Mechanicsburg at FCS.

Display And Printer, Add'l (#1506): Provides for the attachment of additional 3277 Displays, 3732 Text Displays and 3284, 3286, 3287, 3288 and 3736 Printers in any combination up to four. **Maximum:** Five. **Field Installation:** Yes. **Prerequisites:** #3220.

Communication Attachment (#1701): Allows the expansion of communication capabilities to include ports 5-8 or 9-12. Additional special features for line control, communication interface and modems are required to complete each communication port selected. **Limitations:** Port positions 9-12 not available with Display and Printer Attachment (#3220), Magnetic Tape Attachment (#4901) or Floating Point (#3750). See Table 1 for additional information. **Maximum:** Order once for port positions 5-8. Order again for port positions 9-12.

8140 Processor Mdls B51-B72 (cont'd)

Field Installation: Yes. **Prerequisites:** #3901 for first #1701 (ports 5-8).

Display And Printer Attachment (#3220): Provides for the attachment of 3277 Displays, 3732 Text Displays and 3284, 3286, 3287, 3288 and 3736 Printers in any combination up to four. Can be expanded to a maximum of 24 devices with Display and Printer, Add'l (#1506). **Limitations:** Not available with Communication Attachment (#1701), ports 9-12, Magnetic Tape Attachment (#4901), or Communication Attachment (#1701) ports 5-8 and Floating Point (#3750). See Table 1 for additional information. **Maximum:** One per 8100 system. **Field Installation:** Yes. **Prerequisites:** #3901 when ordered without #1701 (ports 5-8).

Floating Point (#3750): Provides for execution of 30 floating point instructions and 32 floating point registers to improve performance of floating point operations. The instructions provide for loading, adding, subtracting, comparing, multiplying, dividing, storing and controlling the sign of short (4-byte) operands and long (8-byte) operands. **Limitations:** Not available with Communication Attachment (#1701) ports 9-12, or Display and Printer Attachment (#3220) with Communication Attachment (#1701) ports 5-8, or Magnetic Tape Attachment (#4901) with Communication Attachment (#1701) ports 5-8. **Maximum:** One. **Field Installation:** Yes.

Feature Expansion Prerequisite (#3901): Required for first Communication Attachment (#1701) ports 5-8 or Display and Printer Attachment (#3220) without Communication Attachment (#1701) or Magnetic Tape Attachment (#4901) without Communication Attachment (#1701). **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1701 or #3220 or #4901.

Expanded Function Operator Panel (#4545): This feature provides operator access to processor storage, program stop and restart capability and current operating indicators. **Maximum:** One. **Field Installation:** Yes.

Magnetic Tape Attachment (#4901): Provides for the attachment of up to four 8809 Magnetic Tape Units, consisting of one 8809 mdl 1A plus two mdl 2s and one mdl 3. **Limitations:** Not available if the 8101 Storage and Input/Output Unit has the 8809 Magnetic Unit mdl 1A attached (#4521) or if 8809 mdl 1B is attached to the 8140 mdl BXX Processor. Not available with Display and Printer Attachment (#3220), Communication Attachment (#1701), ports 9-12, or Communication Attachment (#1701), ports 5-8 and Floating Point (#3750). See Table 1 for additional information. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901 when ordered without #1701 (ports 5-8).

Table 1

When configuring the 8140 for Communication, Display/Printer, Magnetic Tape attachments, the table below shows the combinations of these features that may be configured.

#3901 PLUS (#1701 or #3220 or #4901)

OR

#3901 PLUS #1701 PLUS (#1701 or #3220 or #4901)

Selected Configurations

The following table lists the appropriate selected configuration codes for each mdl and the communication capabilities for each selected configuration.

	CODE								
	1	1	1	1	1	1	1	1	1
	0	0	0	0	0	0	0	0	0
	0	0	0	0	0	0	0	1	1
Description	**2**	**3**	**4**	**5**	**6**	**8**	**9**	**0**	**1**
8140 mdls B51, B52, B61, B62, B71, B72	x	x	x	x	x	x	x	x	x
Port 2 Dir Att Loop									
– 38.4KB	x	x	x	x	x	-	-	-	x
– 9.6KB	-	-	-	-	-	x	-	-	-
Port 3 Dir-Att Loop									
9.6KB	x	x	-	x	x	x	x	x	x
Port 4 Data Link									
9.6KB	x	x	x	x	x	x	x	x	x
Port 5 Data Link									
9.6KB	-	-	x	x	x	-	x	x	x
Port 6 Data Link									
9.6KB	-	-	-	-	-	-	-	x	x
Port 7 Dir-Att Loop									
9.6KB	-	x	-	-	x	-	-	-	-
Port 8 Data Link									
9.6KB	-	-	-	-	-	-	-	-	x

Notes:

1. Magnetic tape attachment to 8140, use 8809 mdl 1B.
2. Recommended DPPX configurations:
   - No less than 512K processor storage
   - No less than 58MB disk storage
   - Fixed Head feature in processor disk.

Selected Configuration Attachment (#1002): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 2 ... a 9600 bps, single-lobe loop in Port 3 ... and an SDLC link up to 9600 bps in Port 4. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

Selected Configuration Attachment (#1003): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 2 ... a 9600 bps, single-lobe loop in Port 3 ... an SDLC link up to 9600 bps in Port 4 ... and a single-lobe, 9600 bps loop in Port 7. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

Selected Configuration Attachment (#1004): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 2 ... and an SDLC link up to 9600 bps in Port 4 and Port 5. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

Selected Configuration Attachment (#1005): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 2 ... a 9600 bps, single-lobe loop in Port 3 ... and an SDLC link up to 9600 bps in Port 4 and Port 5. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

Selected Configuration Attachment (#1006): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 2 ... a 9600 bps, single-lobe loop in Port 3 ... an SDLC link up to 9600 bps in Port 4 and Port 5 ... and a single-lobe, 9600 bps loop in Port 7. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

Selected Configuration Attachment (#1008): Provides for the selection and attachment of one, single-lobe, 9600 bps loop in Port 2 ... a 9600 bps, single-lobe loop in Port 3 ... and an SDLC link up to 9600 bps in Port 4. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

Selected Configuration Attachment (#1009): Provides for the selection and attachment of one, single-lobe, 9600 bps loop in Port 3 ... and an SDLC link up to 9600 bps in Port 4 and Port 5. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

Selected Configuration Attachment (#1010): Provides for the selection and attachment of one, single-lobe, 9600 bps loop in Port 3 ... and an SDLC link up to 9600 bps in Port 4, Port 5 and Port 6. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

Selected Configuration Attachment (#1011): Provides for the selection and attachment of one, single-lobe, 38,400 bps loop in Port 2 ... a 9600 bps, single-lobe loop in Port 3 and Port 7 ... and an SDLC link up to 9600 bps in Port 4, Port 5, Port 6 and Port 8. See Table 5 for component features. **Maximum:** One. **Field Installation:** Yes.

8140 Processor Mdls B51-B72 (cont'd)

COMMUNICATIONS and LOOPS

CCITT V.35 Interface (#1550): Provides interface to external modems/data communication equipment to 56,000 bps or Direct Connection at speeds up to 9600 bps and at 56,000 bps. **Limitations:** Operation at speeds greater than 9600 bps is mutually exclusive with FAC codes 21, 31, 33, or two FAC codes 08, 09. **Maximum:** For speeds up to 9600 bps, one per selected Communication feature (#1601 or #1602). For operation at speeds greater than 9600 bps, one per 8140 or one per 8140/8101. **Field Installation:** Yes. **Prerequisites:** #1601 ... #1602 and #5200. **Specify:** Code as provided in FAC descriptions in the "Communication Capabilities" section. When ordering, use machine type 8101 or 8140. Allow lead time of 120 days.

Warranty: All loop accessories are warranted free from defects of workmanship and materials for 90 days.

Customer Responsibilities: The customer is responsible to provide (purchase, install, test, and maintain) the loop cables and accessories for terminal attachments. However, see contracts available to assist the customer with installation.

The customer is also responsible for procuring and stocking spare cable and spare parts for loop accessories.

See *IBM Multiuse Communications Loop Planning and Installation Guide,* GA27-3341, for a suggested schedule to allow the customer to plan, install, and test the loop cable and accessories prior to delivery of the system.

It is recommended that the customer order additional loop components for spares with the initial order, as spares will not be stocked in the branch office.

To enable a customer to test his installed loops it is recommended that the customer order a Continuity and Relay Tester. Testing the loop wiring will require the tester or its equivalent.

SYSTEM ACCESSORIES

Relocate/Replace Kits:

The material required to perform machine relocation or processor replacement has been grouped into machine type-dependent kits. Kits are available with or without truck-move packaging material.

For 8100 Information Systems with 8101 Storage and Input/Output units attached:

- Use Figure 1 below to order appropriate kit B/M
- 8140 kits apply to processor relocate or replace.
- Each 8101 to be relocated requires a kit. Current CSU Diskette provided with each kit.

Figure 1 - Kits For Systems With 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package*
8101	**4448550**	**4448551**	N/A
8140	**4448556**	**4448557**	**4448558**

* With packing material for units with upending feature **(#9840)** previously installed.

For 8100 Information Systems without 8101 storage and input/output units attached:

- Use Figure 2 below to order appropriate kit B/M.
- Kit is used for processor relocate or replace.

Figure 2 - Kits For Systems Without 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package*
8140	**4448579**	**4448580**	**4448549**

* With packing material for units with upending feature **(#9840)** previously installed.

– Check for missing/damaged wrap plugs. If required, see "Wrap Plugs" below.

– If up-ending is required to position the 8140, see "Upending Feature - 8140" below.

WRAP PLUGS

The communication cables listed below will require their respective wrap plugs to be re-installed for machine relocations.

If wrap plugs are lost or damaged, you may order replacements by the part numbers specified in Figure 3.

Figure 3

Communication Feature	Communication Cable Group Number	Wrap Plug Part Number
Loop Station Adapter (Single Lobe)	**#3709**	**7389282**
DDSA	**#3717**	**6835350**

V.35 Direct Connect PT TO PT	**#3720**	**6835642**
EIA Direct Connect	**#3721**	**6835642**
EIA Modem	**#3724**	**6835346**
Loop Station Adapter (Double Lobe)	**#3726**	**7389282**
	#3726	**7389282**
EIA Direct Connect PT to PT	**#3727**	**6835347**
X.21	**#3728**	**6835379**

Ordering Information: Via Branch Office, Code 'S' from Mechanicsburg

Upending Feature - 8140

Plant/Field feature **#9840** is required to upend the 8140. It consists of a reinforced left end cover, a removable wooden pallet and mounting straps and buckles. The wooden pallet, mounting straps and buckles should be removed during installation and stored for future use.

Ordering Instructions: See "Specify" for ordering **#9840.** When ordering replacement parts, order via IBM.

Replacement parts may be ordered separately and are listed below.

Pallet	P/N **4448587**
Mounting Reference Drawing	P/N **4448548**

SUPPLIES (None)

COMMUNICATION CAPABILITIES

There are a variety of Communication Facilities (see M2700 pages) supported by the 8140 mdls B51 through B72 Features for Attaching Communications **(FAC)** which differ in speed, protocol and attachment interfaces. These FAC codes have been categorized as LOOP, SDLC, BSC and Start/Stop. The user should select the desired communication FAC code and refer to the full special feature description and the FAC code description (identified by the abbreviation 'FAC No.') for additional details. Reference to switched communications in the FAC codes refers to the communication link between the 8100 System and the S/370.

The 8140 mdls B51 through B72 special features allow a maximum of 11 communication capabilities to be configured and designated as communication ports. Each communication port position (2 through 12) must consist of a communications feature for SDLC, BSC or Start/Stop.

Planning: When configuring communication ports for 8140 mdl B, thought should be given to possible future upgrades to 8140 mdl C in a network. These activities may be easier to implement if the port assignment capabilities of the 8140 mdls C (feature codes #1610 through #1614 plus #1620, #1621 and #1630) are studied first and the communication port assignment for the 8140 mdl B is then made in a way to minimize future reassignments and address changes.

The SDLC communications feature is available with and without business machine clock (#1601, #1602). The BSC/SS communications feature (#1603) is available with business machine clock and the BSC communications feature (#1604) is available without business machine clock. If an 8140 communication port is to provide the attached facility with business machine clock at speeds of 2400 bps or greater for FAC 44 or 4800 bps or greater for other FAC codes. the Multi-Speed Clock feature (#5200) is required.

In addition to selecting a communications feature (#1601, #1602, #1603, #1604) for each port configured in an 8140, a communication interface or integrated modem must be selected to support the Communication Facility attaching to that port. A two-lobe loop port requires three special features (#1602, #4830 and #4835). Direct connect at 2400, (FAC 44 only) 4800, 9600 and 56,000 bps requires the Multi-Speed Clock feature (#5200). Each port of the 8140 also requires the selection of a specify code to indicate the System 8100 FAC code selected for that port. Certain System 8100 FAC Codes will require a second specify code to select options available within that facility: 2/4-wire or line speed.

Note: Within a given FAC, the selected option (2/4 wire, LPDA or line speed) can be changed in the field by the CE. All such changes are chargeable at the applicable CE hourly rate. Do not submit an MES. However, the MES for removal of a FAC and its associated feature and specify codes must identify the original codes ordered from the factory.

Specify and FAC Code Descriptions: A specify code number is required to identify the selected FAC Code and its physical port position. The specify code is constructed by concatenating the selected FAC and its port position to the numeral **9** or **8** (where "9" is

8140 Processor Mdls B51-B72 (cont'd)

for ports 2 through 8 and "8" for ports 9 through 12), e.g., **#9ABC** or **#8ABC** where AB = FAC No. and C = Port Position.

FAC codes range in number from 08 to 61. Additional codes may be specified for selected options. These codes are outlined in the FAC code descriptions. No two FAC codes can occupy the same port position. *Configuration Manual,* GA27-2876, will aid in assigning the port positions.

LOOP

FAC No.	FAC Code Description
FAC 08	Loop, high-speed single-lobe at 38,400 bps
FAC 09	Loop, high-speed two-lobe at 38,400 bps
FAC 10	Loop, single-lobe at 9600 bps
FAC 11	Loop, two-lobe at 9600 bps

FAC 08 Loop High-Speed, Single-Lobe: Required for operating a loop at 38,400 bps. **Limitations:** If two 08 FAC codes are specified, FAC codes 09, 21, 26, 28, 29, 31, or 33 are not available. **Maximum:** Two per 8140 or two per 8140/8101. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection Port	Port 2	Port 3	Port 4	Port 5	Port 6
	#9082	**#9083**	**#9084**	**#9085**	**#9086**

Port	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
	#9087	**#9088**	**#8081**	**#8082**	**#8083**	**#8084**

FAC 09 Loop High-Speed, Two-Lobe: Required for operating a two-lobe loop at 38,400 bps. **Limitations:** If two 09 FAC codes are specified, FAC codes 08, 21, 26, 28, 29, x31, or 33 are not available. **Maximum:** Two per 8140 or two per 8140/8101. **Prerequisites:** #1602, #4830 and #4835. **Specify:** From the table below, specify the required code to complete the configuration for the port selected.

FAC Specify Selection Port	Port 2	Port 3	Port 4	Port 5	Port 6
	#9092	**#9093**	**#9094**	**#9095**	**#9096**

Port	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
	#9097	**#9098**	**#8091**	**#8092**	**#8093**	**#8094**

FAC 10 Loop, Single-Lobe: Required for operating a loop at 9600 bps. **Prerequisites:** #1602 and #4830. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection Port	Port 2	Port 3	Port 4	Port 5	Port 6
	#9102	**#9103**	**#9104**	**#9105**	**#9106**

Port	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
	#9107	**#9108**	**#8101**	**#8102**	**#8103**	**#8104**

FAC 11 Loop, Two-Lobe: Required for operating two-lobe loops at 9600 bps. **Prerequisites:** #1602, #4830 and #4835. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected. **Maximum:** Three, one for ports 2-4, one for ports 5-8 and one for ports 9-12. Two with FAC 09.

FAC Specify Selection Port	Port 2	Port 3	Port 4	Port 5	Port 6
	#9112	**#9113**	**#9114**	**#9115**	**#9116**

Port	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
	#9117	**#9118**	**#8111**	**#8112**	**#8113**	**#8114**

FAC No.	FAC Code Description
EIA RS-232-C	
FAC 12	600 or 1200 bps (External modem)
FAC 13	Up to 9600 bps (External modem)
FAC 15	600, 1200 or 2400 bps Direct connection with clock (No modem)
FAC 16	4800 or 9600 bps Direct connection with clock (No modem)
FAC 17	Direct connection without clock
Integrated Modem	
FAC 18	600 or 1200 bps nonswitched
FAC 19	600 or 1200 bps switched with auto answer
AT&T Dataphone® Digital Service	
FAC 20	2400, 4800 or 9600 bps nonswitched
FAC 21	56,000 bps nonswitched
CCITT V.35	
FAC 24	Direct connection with clock (No modem) 600, 1200 or 2400 bps
FAC 25	Direct connection with clock (No modem) 4800 or 9600 bps
FAC 26	Direct connection with clock (No modem) 56,000 bps
FAC 27	Direct connection without clock (No modem) 9600 bps
FAC 28	Direct connection without clock (No modem) 56,000 bps
FAC 29	Up to 56,000 bps nonswitched
CCITT X.21	
FAC 30	Up to 9600 bps nonswitched
FAC 31	48,000 bps nonswitched
FAC 32	Up to 9600 bps switched
FAC 33	48,000 bps switched

FAC 12 EIA RS-232-C Interface: 600 or 1200 bps with business machine clock - operating with external modem without clocking - and point-to-point switched 2-wire - or point-to-point nonswitched 2- or 4-wire - or multipoint 4-wire. **Prerequisites:** #1601 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection Port	Port 2	Port 3	Port 4	Port 5	Port 6
600 bps	**#9122**	**#9123**	**#9124**	**#9125**	**#9126**
1200 bps	**#9742**	**#9743**	**#9744**	**#9745**	**#9746**
	#9752	**#9753**	**#9754**	**#9755**	**#9756**

Port	Port 7	Port 8
	#9127	**#9128**
600 bps	**#9747**	**#9748**
1200 bps	**#9757**	**#9758**

FAC 13 EIA RS-232-C Interface: Up to 9600 bps without business machine clock - with external data communication equipment and clock - point-to-point switched with auto answer to 4800 bps - point-to-point nonswitched 2- or 4-wire - or multipoint 4-wire. **Prerequisites:** #1602 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection Port	Port 2	Port 3	Port 4	Port 5	Port 6
LPDA	**#9132**	**#9133**	**#9134**	**#9135**	**#9136**
	#9802	**#9803**	**#9804**	**#9805**	**#9806**

Port	Port 7	Port 8
	#9137	**#9138**
LPDA	**#9807**	**#9808**

FAC 15 EIA RS-232-C Interface: 600, 1200 or 2400 bps with business machine clock - operating with no modem (attached machine must not provide business machine clock) - and direct connection up to 40 feet. **Prerequisites:** #1601 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection Port	Port 2	Port 3	Port 4	Port 5	Port 6
	#9152	**#9153**	**#9154**	**#9155**	**#9156**
600 bps	**#9742**	**#9743**	**#9744**	**#9745**	**#9746**
1200 bps	**#9752**	**#9753**	**#9754**	**#9755**	**#9756**
2400 bps	**#9762**	**#9763**	**#9764**	**#9765**	**#9766**

Port	Port 7	Port 8
	#9157	**#9158**
600 bps	**#9747**	**#9748**
1200 bps	**#9757**	**#9758**
2400 bps	**#9767**	**#9768**

FAC 16 EIA RS-232-C Interface: 4800 or 9600 bps with business machine clock - operating with no modem (attached machine must not provide business machine clock) - and direct connection up to 40 feet. **Prerequisites:** #1602, #3701 and #5200. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection Port	Port 2	Port 3	Port 4	Port 5	Port 6
	#9162	**#9163**	**#9164**	**#9165**	**#9166**
4800 bps	**#9772**	**#9773**	**#9774**	**#9775**	**#9776**
9600 bps	**#9782**	**#9783**	**#9784**	**#9785**	**#9786**

Port	Port 7	Port 8
	#9167	**#9168**
4800 bps	**#9777**	**#9778**
9600 bps	**#9787**	**#9788**

FAC 17 EIA RS-232-C Interface: Up to 9600 bps without business machine clock - operating with other 8100 System (with business machine clock) - and direct connection up to 40 feet. **Prerequisites:**

8140 Processor Mdls B51-B72 (cont'd)

#1602 and #3701. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection		Port 2	Port 3	Port 4	Port 5	Port 6
Port		#9172	#9173	#9174	#9175	#9176
	Port 7	Port 8				
Port	#9177	#9178				

FAC 18 Integrated Modem: 600 or 1200 bps - and point-to-point nonswitched 2- or 4-wire - or multipoint nonswitched 4-wire. **Prerequisites:** #1601 and #5500. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection		Port 2	Port 3	Port 4	Port 5	Port 6
Port		#9182	#9183	#9184	#9185	#9186

9600 bps	#9787	#9788	#8781	#8782	#8783	#8784

FAC 26 CCITT V.35 Interface: 56,000 bps with business machine clock - operating with no modem - and direct connection up to 1,000 feet or up to a total cable length of 200 feet to a 3705. **Limitations:** Mutually exclusive with FAC codes 21, 28, 29, 31, 33 or two FAC codes 08, 09. **Maximum:** One per 8140 or one per 8140/8101. **Prerequisites:** #1602, #1550 and #5200. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection		Port 2	Port 3	Port 4	Port 5	Port 6
Port		#9262	#9263	#9264	#9265	#9266
	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
Port	#9267	#9268	#8261	#8262	#8263	#8264

FAC 27 CCITT V.35 Interface: Up to 9600 bps without business machine clock - operating with other 8100 System (with business machine clock) - and direct connection up to 1,000 feet. **Prerequisites:** #1602 and #1550. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection		Port 2	Port 3	Port 4	Port 5	Port 6
Port		#9272	#9273	#9274	#9275	#9276
	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
Port	#9277	#9278	#8271	#8272	#8273	#8274

FAC 28 CCITT V.35 Interface: 56,000 bps without business machine clock - operating with no modem - and direct connection up to 1,000 feet to another 8100 System (with business machine clock). **Limitations:** Mutually exclusive with FAC codes 21, 26, 29, 31, 33 or two FAC codes 08, 09. **Maximum:** One per 8140 or one per 8140/8101. **Prerequisites:** #1602 and #1550. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection		Port 2	Port 3	Port 4	Port 5	Port 6
Port		#9282	#9283	#9284	#9285	#9286
	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
Port	#9287	#9288	#8281	#8282	#8283	#8284

FAC 29 CCITT V.35 Interface: Up to 56,000 bps without business machines clock and external data communication equipment with clock, and point-to-point or multipoint nonswitched. **Limitations:** Operation at speeds greater than 9600 bps is mutually exclusive with FAC codes 21, 26, 28, 31, 33 or two FAC codes 08, 09. **Maximum:** For operation at speeds greater than 9600 bps, one per 8140 or one per 8140/8101. **Prerequisites:** #1602 and #1550. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection		Port 2	Port 3	Port 4	Port 5	Port 6
Port		#9292	#9293	#9294	#9295	#9296
	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
Port	#9297	#9298	#8291	#8292	#8293	#8294

FAC 30 CCITT X.21 Interface: Up to 9600 bps without business machine clock and 4-wire point-to-point nonswitched or multipoint nonswitched. **Prerequisites:** #1602 and #5655. **Specify:** From the

8140 Processor Mdls B51-B72 (cont'd)

table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection		Port 2	Port 3	Port 4	Port 5	Port 6
Port		#9302	#9303	#9304	#9305	#9306
	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12
Port	#9307	#9308	#8301	#8302	#8303	#8304

FAC 31 CCITT X.21 Interface: 48,000 bps without business machine clock and point-to-point or multipoint nonswitched operation. **Limitations:** Mutually exclusive with FAC codes 21, 26, 28, 29, 33 or two FAC codes 08, 09. **Maximum:** One per 8140 or one per 8140/8101. **Prerequisites:** #1602 and #5655. **Specify:** From the table below, specify the required codes to complete the configuration for each port selected.

FAC Specify Selection		Port 2	Port 3	Port 4	Port 5	Port 6
Port		#9312	#9313	#9314	#9315	#9316

Direct Connection Attachment: In addition to terminal attachment to 8100 System through common carrier facilities (see M2700 pages) or local loops, attachment can be made by direct connect. The direct connect is made by using SDLC (FAC 15, 16, 17, 24, 25, 27 or 28), BSC (FAC 44) and Start/Stop (FAC 61). Shown below are the direct connect attachable devices and required device feature numbers. The *8100 Information System Site Planning Guide,* GA27-2884, will assist in the selection of direct connect cables.

Direct Connection Attachment: In addition to terminal attachment to 8100 System through common carrier facilities (see M2700 pages) or local loops, attachment can be made by direct connect. The direct connect is made by using SDLC (FAC 15, 16, 17, 24, 25, 27 or 28), BSC (FAC 44) and Start/Stop (FAC 61). Shown below are the direct connect attachable devices and required device feature numbers. The *8100 Information System Site Planning Guide* GA27-2884 will assist in the selection of direct connect cables.

Attaching Device	Speeds bps	Attaching Device Feature No.	8100 FAC CODE

8140 PROCESSOR MDLS C72, C82, C92

PURPOSE

The 8140 Processor provides control, storage, processing capability, disk and diskette storage, and device or communication attachment capabilities for the 8100 Information System.

MODELS

Model	Base Processor Storage (bytes)	Non-Removable Disk Capacity (bytes)	Fixed Head Capacity (bytes)
C72	1024K (1,048,576)	123MB (123,174,192)	131,072
C82	1536K (1,572,864)	123MB (123,174,192)	131,072
C92	2048K (2,097,152)	123MB (123,174,192)	131,072

Maximum: One per 8100 Information System.

Customer Setup (CSU): Machine only

HIGHLIGHTS

The 8140 Processor is a multi-level, interrupt-driven processor which provides control, proccessing capability, processor storage, disk and diskette storage and communication features for the 8100 Information System. The flexibility offered by the 8140 allows the user to configure a system for initial requirements, while retaining the ability to modify the system to meet future needs.

System control and processing is provided by machine program instructions. Optional instructions are available for floating point arithmetic. Eight I/O interrupt levels provide for interrupt processing. The 8140 C mdls offer three processor storage sizes. Depending on the mdl of the processor selected, processor storage can be up to a maximum of 2048K (2,097,152) bytes. Capability for dynamic addressing and storage protection for up to 16 million bytes of logical storage is available. The 8140 Processor mdls C72, C82 and C92 storage makes use of the Error Correction Code (ECC) to provide single-error and double-error detection capability.

The 8140 mdls C72, C82 and C92 allow for the attachment of up to four 8101 Storage and Input/Output Units, or three 8101 Storage and Input/Output Units and one 8809 Magnetic Tape Unit mdl 1B. One 8101 I/O unit may be configured with Communications and Display/Printer features. An alternate configuration can consist of an 8140, four 8101 Storage and Input/Output Units, and one 8809 Magnetic Tape Unit mdl 1A. Up to three additional 8809 Magnetic Tape Units can be attached to the 8809 Magnetic Tape Unit mdl 1A or 1B.

The 8140 C mdls Processor is provided with fixed high-speed direct access disk storage of 123 million bytes (consisting of two volumes) with movable and fixed heads. The disk storage operates at a data rate of 1.031 million bytes per second. The average access time is 27 milliseconds with an average rotational delay of 9.6 milliseconds. Removable diskette storage is provided with up to 1MB (985,088 bytes) of storage operating at up to 62K bytes per second data rate. The diskette drive can read/write in basic data exchange format on either the Diskette 2D or the Diskette Type 1.

The 8100 System can attach to any S/370 or 4341 processor via the 3704, 3705, or 3725 for SNA/SDLC or BSC line control. The 8100 System can attach to the communications adapter of the 4321 or 4331 Processor for SDLC or BSC line control. For specific attachment, see M2700 pages.

The capability of the 8100 Information System is further extended by providing for the attachment of a variety of input/output devices. These devices may be attached to the 8140 via communication port features which include data link, direct connect, and loops that are direct attached or data link attached. Up to ten communication and loop ports can be configured in the 8140 mdls C72, C82 and C92.

Physical security is provided through the use of keylocks on the operator panel, diskette drive and machine covers. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith.

Customer Setup: The 8140 Processor is designated as a customer setup unit, thereby offering the customer early availability and relocation flexibility. Aids and configurators are provided to facilitate the configuration and ordering of the 8140. Customer setup instructions will be shipped with each machine. An 8140 installation verification program will be shipped with each machine on a diskette. A clear indication that the machine is operational will be given.

Loop Installation: The customer is responsible for procurement, installation, and maintenance of the loop network. In order for the cable and required accessories to be properly installed, certain preparatory steps must be followed. See *IBM Multiuse Communications Loop Planning and Installation Guide,* GA27-3341, for information necessary to plan and install the loop. The loop should be installed and checked out prior to attaching processors or devices.

Bibliography: GC20-8100.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (AC, 1-phase, 3-wire, 60 Hz): Specify **#9884** for 208V or **#9894** for 240V. For conversion between 208V AC and 240V AC, contact your Local customer engineering representative. If standard 4.3 meter (14 foot) cable is not required, also specify **#9986** for 1.8 meter (6 foot) cable.
- Color: Pebble gray is the only available color.
- Relocation: If the user relocates and/or interchanges an attaching 8101 from one 8100 System to another, the user must consider address compatibility of the processor and its attachments. For further information, see *IBM 8100 Information System Site Planning Guide,* GA27-2884. For relocation/replace Kit Ordering, see "Relocate/Replace: 8100 System" under Accessories.
- Upending: In the event the 8140 must be placed on end to maneuver to the installation site, specify **#9840**. For additional ordering information associated with **#9840**, see Accessories "Upending Feature, 8140". **Field Installation:** Yes.
- Cabling: For loop cabling information, see Accessories and the *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341. For communication cable information, see the *IBM 8100 Information System Site Planning Guide,* GA27-2884.

  Communication cables must be ordered separately from the communication adapter features.
- Terminal Requirements: Specify **#9800** (offline 3640 terminal exerciser) when ordering any of the following terminals: 3641, 3642, 3643, 3644, 3645, 3646 or 3647.
  1) On the initial order.
  2) When the first terminal is ordered to attach via an 8101 and none are attached to the processor.
  3) Via MES when the first terminal is field installed on an 8100 system.

  Maximum: One per 8100 system. **Field Installation:** Yes.
- Programming Configuration: Specify **#9700** for Distributed Processing Programming Executive (DPPX), **#9710** for Distributed Processing Control Executive (DPCX), **#9720** for DPPX and DPCX or **#9730** for all other configurations. **Field Installation:** Yes.

SPECIAL FEATURES

Performance: The maximum number of communication and loop ports configured and capable of concurrent operation is a function of the speed of the line, communication facilities, the operating system installed and the application work load. The maximum number of communications and loop ports which can be physically installed can exceed the operational capability.

Multiple High Speed Adapters: The 8140 C mdls have the physical capability for four (high-speed) communication ports in excess of 9600 bps. The maximum number of high-speed ports activated concurrently is limited to two.

- Two loops at 38400 bps, or
- One loop at 38400 bps and one SDLC data link at a speed greater than 9600 bps.

Diagnostics: The 8100 System hardware and feature operation, diagnostic support and maintenance support described in 8100 System publications require DPPX or DPCX. Customers ordering 8100 System hardware without DPPX or DPCX should provide the functional support as contained and described in the *Functional Definition Manual 8100* which will be available from Mechanicsburg at FCS.

Display and Printer, Add'l (#1506): Provides for the attachment of additional 3277 Displays, 3284, 3286, 3287 and 3288 Printers in any combination up to four. **Maximum:** Five. **Field Installation:** Yes. **Prerequisites:** #3220.

Display and Printer Attachment (#3220): Provides for the attachment of 3277 Displays, 3284, 3286, 3287 and 3288 Printers in any combination up to four. Can be expanded to a maximum of 24 devices with Display and Printer, Add'l (#1506). **Limitations:** Not available with #4901 or #1630 (see Table 1 for further information). **Maximum:** One per 8100 system. **Field Installation:** Yes. **Prerequisites:** #3901 when ordered without #1620, #1621, #1622 or #1623.

Floating Point Feature (#3750): Provides for execution of 30 floating point instructions and 32 floating point registers to improve performance of floating point operations. The instructions provide for loading, adding, subtracting, comparing, multiplying, dividing, storing and controlling the sign of short (4-byte) operands and long (8-byte) operands. **Maximum:** One. **Field Installation:** Yes.

Feature Expansion Prerequisite (#3901): Required for communication ports feature #1620, #1621, #1622 or #1623 or Display and Printer Attachment (#3220) without communication ports feature #1620, #1621, #1622 or #1623 or Magnetic Tape Attachment (#4901) without

8140 Processor Mdls C72, C82, C92 (cont'd)

communication ports feature #1620, #1621 #1622 or #1623. See Table 1. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1620, #1621, #1622 or #1623 ... #3220 or #4901 without #1620, #1621, #1622 or #1623.

Magnetic Tape Attachment (#4901): Provides for the attachment of up to four 8809 Magnetic Tape Units, consisting of one 8809 mdl 1A plus two mdl 2s and one mdl 3. **Limitations:** Not available if the 8101 Storage and Input/Output Unit has the 8809 Magnetic Tape Unit mdl 1A attached (#4521) or if 8809 mdl 1B is attached to the 8140 mdl C72, C82 or C92 Processor. Also not available with Communication Ports Feature #1630 or Display and Printer Attachment (#3220). See Table 1 for further information. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901 when ordered without #1620, #1621, #1622 or #1623.

Table 1

When configuring the 8140 C mdls for communication port features for Ports 5 through 10, Display and Printer Attachment, and Magnetic Tape Attachment, the table below shows the combination of these features that may be configured.

#3901 plus (#1620, #1621, #1622 or #1623, or #3220 or #4901)
or
#3901 plus (#1620, #1621, #1622 or #1623)
plus (#1630 or #3220 or #4901)

Communications And Loops

The communication and loop attachments are available in line sets which occupy pre-defined ports. There are five sets of which one can occupy Ports 1 through 4, four sets of which one can occupy Ports 5 through 8 and one set for Ports 9 and 10. A maximum of ten ports are available. If a line set is selected for Ports 1-4, there can be no high-speed (greater than 9600 bps) ports in an attached 8101 storage and I/O unit. Conversely, if there are no line sets selected for Ports 1-4, then the 8101 may contain high-speed ports (maximum two).

The speed of the loops in communication ports features #1610-#1614 are manually switch selectable at customer setup time at either 9600 bps or 38400 bps. The limitation on the total number of active ports at greater than 9600 bps is two. In 8100 System only 10 Loop or SDLC communication ports may be active at one time.

Note: With a given Communication Ports Feature the selected option LPDA can be changed in the field by the Customer Engineer. All such changes are chargeable at the applicable CE hourly rate. Do not submit an MES. However, the MES for removal of a Communication Ports Feature and its associated specify code must identify the original codes ordered from the factory.

Communication Ports Feature (#1610): Two directly attached loops and two SDLC/EIA RS-232-C interfaces. Provides for loop attachment in Ports 1 and 2 with the speed selectable by switch at 9600 bps or 38400 bps. Port 2 may be a two-lobe loop with the addition of #4835 and specify code **#9873**. Ports 3 and 4 provide a communication interface without clock to an external modem with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire. If LPDA is required, specify **#9803** for port 3 and **#9804** for port 4. **Limitations:** Not available with #1611, #1612, #1613 or #1614. Not available if high-speed (greater than 9600 bps) ports in an attached 8101. **Maximum:** One. **Field Installation:** Yes.

Special Feature	Port Position			
	1	2	3	4
#1610	Direct Attach Loop	Direct Attach Loop	SDLC/ EIA/ CCITT	SDLC/ EIA/ CCITT

Communication Ports Feature (#1611): Three directly attached loops and one SDLC/EIA RS-232-C interfaces. Provides for loop attachment in Ports 1, 2 and 3 with the speed selectable by switch at 9600 bps or 38400 bps. Port 2 may be a two-lobe loop with the addition of #4835 and specify code **#9873**. Port 4 provides communication interface without clock to an external modem with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire. If LPDA is required, specify **#9804** for port 4. **Limitations:** Not available with #1610, #1612, #1613 or #1614. Not available if high-speed (greater than 9600 bps) ports in an attached 8101. Only two loops may be activated concurrently at 38400 bps. **Maximum:** One. **Field Installation:** Yes.

Special Feature	Port Position			
	1	2	3	4
#1611	Direct Attach Loop	Direct Attach Loop	Direct Attach Loop	SDLC/ EIA/ CCITT

Communication Ports Feature (#1612): Three Loops and one SDLC/CCITT X.21 Switched interfaces. Provides for loop attachment in Ports 1, 2 and 3 with the speed selectable by switch at 9600 bps or 38400 bps. Port 2 may be a two-lobe loop with the addition of #4835 and specify code **#9873**. Port 4 provides SDLC/CCITT X.21 switched interface without clock up to 48000 bps ... with auto answer and auto call ... via a Data Circuit-terminating Equipment (DCE) which complies with CCITT Recommendation X.21 as it is delineated in IBM SRL GA27-3287. **Limitations:** Not available with #1610, #1611, #1613 or #1614. Not available if high-speed (greater than 9600 bps) ports in an attached 8101. Either two loops at 38400 bps, or one loop at 38400 bps and the X.21 port at greater than 9600 bps may be activated concurrently. **Maximum:** One. **Field Installation:** Yes.

Special Feature	Port Position			
	1	2	3	4
#1612	Direct Attach Loop	Direct Attach Loop	Direct Attach Loop	SDLC/ X.21 Non-Switched

Communication Ports Feature (#1613): Three Loops and one SDLC/CCITT X.21 Nonswitched interfaces. Provides for loop attachment in Ports 1, 2 and 3 with the speed selectable by switch at 9600 bps or 38400 bps. Port 2 may be a two-lobe loop with the addition of #4835 and specify code **#9873**. Port 4 provides SDLC/CCITT X.21 nonswitched interface without clock up to 48,000 bps --- point-to-point or multipoint --- via a Data Circuit-terminating Equipment (DCE) which complies with CCITT Recommendation X.21 as it is delineated in IBM SRL GA27-3287. **Limitations:** Not available with #1610, #1611, #1612 or #1614. Not available if high-speed (greater than 9600 bps) ports in an attached 8101. Either two loops at 38400 bps, or one loop at 38400 bps and the X.21 port at greater than 9600 bps may be activated concurrently. **Maximum:** One. **Field Installation:** Yes.

Special Feature	Port Position			
	1	2	3	4
#1613	Direct Attach Loop	Direct Attach Loop	Direct Attach Loop	SDLC/ X.21 Non-Switched

Communication Ports Feature (#1614): Three Loops and one SDLC/CCITT V.35 interfaces. Provides for loop attachment in Ports 1, 2 and 3 with the speed selectable by switch at 9600 bps or 38400 bps. Port 2 may be a two-lobe loop with the addition of #4835 and specify code **#9873**. Port 4 provides SDLC/CCITT V.35 interface without clock up to 56000 bps to external modem with clock, or direct connect with or without clock at 56000 bps up to 1,000 feet or up to a total cable length of 200 feet to a 3705. Specify code **#9684** for external modem, **#9683** for direct connect without clock, or **#9682** with prerequisite multi-speed clock (#5200), for direct connect with clock at 56000 bps. **Limitations:** Not available with #1610, #1611, #1612 or #1613. Not available if high-speed (greater than 9600 bps) ports in an attached 8101. Either two loops at 38400 bps, or one loop at 38400 bps and the CCITT V.35 port at greater than 9600 bps may be activated concurrently. **Maximum:** One. **Field Installation:** Yes.

Special Feature	Port Position			
	1	2	3	4
#1614	Direct Attach Loop	Direct Attach Loop	Direct Attach Loop	SDLC/ V.35

Communication Ports Feature (#1620): One Low Speed Loop and three SDLC/EIA RS-232-C interfaces. Provides for loop attachment in Port 7 operating at 9600 bps. Port 7 may be a two-lobe loop with the addition of #4835 and specify code **#9874**. Ports 5, 6 and 8 provide a communication interface without clock to an external modem with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire. If LPDA is required, specify **#9805** for port 5, **#9806** for port 6 and **#9808** for port 8. **Limitations:** Not available with #1621. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901.

#1620	SDLC/ EIA/ CCITT	SDLC/ EIA/ CCITT	Direct Attach Loop	SDLC/ EIA/ CCITT

8140 Processor Mdls C72, C82, C92 (cont'd)

Communication Ports Feature (#1621): Four SDLC/EIA RS-232-C interfaces. Provides communication interfaces in Ports 5, 6, 7 and 8. Ports 6, 7 and 8 are unclocked and attach to external modems with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire. Port 5 provides the same interface as Ports 6, 7 and 8, or direct connect at 4800 bps up to 40 feet for Port 5. Specify code **#9689** for external modem, **#9688** for direct connect without clock, or **#9686** with prerequisite multi-speed clock (#5200), for direct connect with clock at 4800 bps. If LPDA is required, specify **#9805** for port 5, **#9806** for port 6, **#9807** for port 7 and **9808** for port 8. **Limitations:** Not available with #1620. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901.

Special Feature	Port Position			
	5	6	7	8
#1621	SDLC/ EIA/ CCITT	SDLC/ EIA/ CCITT	SDLC/ EIA/ CCITT	SDLC/ EIA/ CCITT

Communication Ports Feature (#1622): One SDLC and three BSC EIA RS-232-C interfaces. Provides IBM microcode control for BSC communication interfaces in ports 5, 6, and 8 from 1200 to 9600 bps without clock or 600 and 1200 bps with clock to external DCE point-to-point non-switched 2- or 4-wire or multipoint 4-wire. Port 5 also provides for direct connect up to 40 feet. User parameter selectable business machine clock options and speed at 1200, 1800, 3600, 4800, 7200 and 9600 bps are available. The attached terminal must not provide business machine clocking. Specify code **#9690** for direct connect with clock. The SDLC port 7 provides a communication interface without clock to an external DCE with clock to 9600 bps point-to-point switched with auto answer to 4800 bps ... point-to-point non-switched 2- or 4-wire or multipoint 4-wire. If LPDA is required, specify **#9807** for port 7. **Limitations:** Not available with #1620, #1621, or #1623. Mutually exclusive with 8101 BSC FAC codes 40, 41, 44, 45 or 47 on an 8100 system. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901.

Special Feature	Port Position			
	5	6	7	8
#1622	BSC/ EIA/ CCITT	BSC/ EIA/ CCITT	SDLC/ EIA/ CCITT	BSC/ EIA/ CCITT

Communication Port Feature (#1623): Two BSC EIA RS-232-C interfaces. Provides IBM microcode control for BSC communication interfaces in ports 5 and 6 from 1200 to 9600 bps without clock or 600 and 1200 bps with clock to an external DCE point-to-point non-switched 2- or 4-wire or multipoint non-switched 4-wire. **Limitations:** Not available with #1620, #1621, or #1622. Mutually exclusive with 8101 BSC FAC codes 40, 41, 44, 45 or 47on an 8100 system. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901.

Special Feature	Port Position	
	5	6
#1623	BSC/ EIA/ CCITT	BSC/ EIA/ CCITT

Communication Ports Feature (#1630): Two SDLC/EIA interfaces. Provides for SDLC/EIA RS-232-C interface without clock to external modem, with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire in Ports 9 and 10. If LPDA is required, specify **#8801** for port 9, and **#8802** for port 10. **Limitations:** Not available with #3220 or #4901. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1620, #1621, #1622 or #1623.

Special Feature	Port Position	
	9	10
#1630	SDLC/ EIA/ CCITT	SDLC/ EIA/ CCITT

Loop Adapter Second Lobe (#4835): Provides for the attachment of a separate physical loop cable to extend the coverage and availability of the directly attached loop. **Maximum:** Two. One for Port 2 and one for Port 7. Maximum is four per 8100 System. **Field Installation:** Yes. **Prerequisites:** #1610, #1611, #1612, #1613, #1614 or #1620. **Specify:** Code **#9873** for Port 2 in Communication Ports Features #1610 through #1614 and **#9874** for Port 7 in Communication Ports Feature #1620.

Multi-Speed Clock (#5200): Provides business machine clocking at 56000 bps for direct connect in Port 4 of Communication Ports Feature #1614 or business machine clocking at 4800 bps for Port 5 of Communication Ports Feature #1621. One must be ordered for each clocked port. **Maximum:** Two per 8140 mdl C72, C82 or C92. **Field Installation:** Yes. **Prerequisites:** #1614 or #1621.

MODEL CONVERSIONS

The following model changes can be field installed:

From	To	C72	C82	C92
B52*		X	X	X
B62*		X	X	X
B72*		X	X	X
C72			X	X
C82				X

* For 8140 B mdl upgrades, order a preparation MES for steps 1 to 3 if required, and then order the upgrade MES for all items in step 4.

1. 8140 mdl BX1 without #4545 expanded function panel, order MES for:
   - Mdl change to 8140 mdl BX2.
2. 8140 mdl BX1 with #4545 expanded function panel, order MES for:
   - Remove #4545, and
   - Mdl change to 8140 mdl BX2.
3. 8140 mdl BX2 with #4545 expanded function panel, order MES for:
   - Remove #4545.
4. 8140 mdl BX2, order MES for:
   - Mdl change to 8140 C mdl.
   - Remove all 8140 B mdl communication and loop associated feature codes and specify codes.
   - Add 8140 C mdl communication port and loop features as required.

Purchase price for this model upgrade is configuration- and feature-dependent. The purchase customer must submit an RPQ.

Additional communications cables may be required when converting 8140 mdl B to mdl C. For communication cable information, see the *8100 Information System Site Planning Guide,* GA27-2884.

BSC, Start/Stop, integrated modems, digital data service adapter, communications features are not available in the 8140 mdls C72, C82, C92.

ACCESSORIES

CABLES - LOOP

Loop Cables may be purchased from IBM or a customer selected source. See *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341, for part numbers, specifications and usage which is necessary for preplanning and ordering.

- **Indoor Cable P/N 1657265:** UL approved (style 2919) for interconnection of low voltage electronic equipment. Maximum allowable cable temperature range is -34°C to +80°C.
- **Indoor Cable P/N 7838694:** UL approved for cable tray installation (NEC Art. 725-40b3). Maximum allowable cable temperature range is -34°C to +90°C.
- **Indoor Cable P/N 7838695:** UL approved for duct and plenum installation (NEC Art. 725-2b). Maximum allowable cable temperature range is -34°C to +105°C.
- **Outdoor Cable P/N 1657267:** For above ground installation. Maximum allowable cable temperature range is -34°C to +80°C.
- **Outdoor Cable P/N 1657268:** For below ground installation. Maximum allowable cable temperature range is -34°C to +80°C.

Ordering Instructions: Interior cable (P/N 1657265, 7838694 and 7838695) should be ordered in lengths of 304.8m to 609.6m (1000 to 2000 feet). Additional lengths up to 609.6m (2000 ft.) can be ordered by specifying the length wanted. Indoor cable splices can be accomplished via P/N 1657300. A minimum order quantity is 304.8M (1000 feet).

Exterior cable (P/N's 1657267 and 1657268) should be ordered in one continuous length, up to a maximum of 914.4m (3000 feet), by specifying the length wanted.) Outdoor splices with aerial and burial cable should be avoided. Order via MSORDER (Category = Bulk Cable). Specify cable part number and number of feet desired.

Warranty: Loop cable is warranted free from defects of workmanship and materials for 90 days.

8140 Processor Mdls C72, C82, C92 (cont'd)

LOOP - ACCESSORIES

A group of accessory products are offered to permit plant electricians or contract personnel to install the loops. Refer to *IBM Multiuse Communications Loop Planning and Installation Guide,* GA23-3341, for information necessary to plan the layout and for selection of the loop hardware, for Installation and Testing information.

Loop Splice Plate (LSP): The LSP splices together two segments of indoor cable or provides a connecting point for future expansion of the loop. The LSP consists of a single connector strip, to which the incoming loop cable and the outgoing loop cable can be attached; it is installed in a standard outlet box for business office environments, or weatherproof outlet box for industrial environments.

Loop Station Connector (LSC): The LSC is available as two unique types: Wrap and radial. The wrap LSC attaches an I/O unit or controller directly to the main loop cable; the radial LSC attaches an I/O unit only through an LWC to the loop. The wrap LSC attaches an incoming and outgoing loop cable; the radial LSC attaches at the end of one loop cable from the LWC.

2 X 4 ADAPTER PLATE (2AP): The 2" x 4" Adapter Plate is used with the Loop Station Connector and accommodates the use of standard outlet boxes that have dimensions smaller than the outlet boxes defined in the Loop Installation and Planning Guide. It is not to be used with the environmental outlet boxes.

The wrap LSC also offers the isolation feature of wrapping, which allows the customer to wrap the loop away from a loop wiring failure or to reconfigure the loop during alterations. Both wrap and radial LSCs contain bypass relays that bypass the I/O unit when the I/O unit is powered-off or disconnected. These accessories are installed in a standard or weatherproof outlet box.

Loop Wiring Concentrator (LWC): The LWC provides the facility to attach a cluster of I/O units without a large number of drops on the loop cable. It attaches up to eight radial LSCs at the end of loop cables called *radials.* The point where a radial line terminates at the LWC is called an LWC *port.* Not all ports have to be used; unused ports can be reserved for future expansion.

The LWC has the same wrapping capability as the wrap LSC. In addition, the LWC allows the customer to bypass one or more of the radials by setting a corresponding switch located inside the LWC.

The LWC has its own enclosure or can be mounted in a NEMA-4X environmental equipment cabinet, with minimum measurement of 36x30x15cm (14x12x6 in.).

Loop Surge Suppressor (LSS): The LSS allows the loop to be run across an outdoor space to another building. It attaches two outdoor cables and two indoor cables, allowing the proper termination and grounding for each type of cable. In addition, the LSS contains four surge protectors, one for each twisted pair in the two outdoor cables, to protect from voltage surges caused by near strikes of lightning. There is no protection in the LSS from a direct lightning strike.

The LSS has its own enclosure or can be mounted in an electrical equipment cabinet, with minimum measurement of 36x30x15cm (14x12x6 in).

Continuity And Relay Tester: The Continuity and Relay Tester is used with a customer supplied volt-ohm meter, capable of reading 0.5 ohms and rated at least 5000 ohms/volt, to verify the loop installation, including loop cabling and accessories, after completion. By plugging the tester into any loop station connector and connecting the volt-ohm meter to the tester, the condition of the wire segment being tested can be determined as to conductor and shield continuity (opens or shorts), wrap switch operation, and total lobe resistance.

The loop station connector relays are also activated and their operation verified with this tester.

System Loop Accessories	Part Number
Loop Splice Plate (LSP) (indoor)	1657300
Loop Station Connector (Radial LSC)	1657310
Loop Station Connector (Wrap LSC)	1657320
Loop Station Connector Gasket	1657260
Loop Wiring Concentrator (LWC)	1657330
LWC Circuit Board Assy (order instead of LWC-1657330) *	1657332
Loop Surge Suppressor (LSS)	1657350
LSS Circuit Board Assy (order instead of LSS-1657350) *	1657354
Continuity and Relay Tester	1657420
Wrap Switch Access Cover	1657325
Loop Accessory Keys (10 spares) **	1657379
2 x 4 Adapter Plate (2AP)	7838771
Conventional Box (indoor) 5 x 10cm - (2 x 4 inches)	2102151
Clamp (for cable to indoor box)	2100264
Electrical Box (outdoor) 7 x 11.5cm - (2.75 x 4.5 inches) (For industrial use)	1657280
Clamp - small (for indoor cable to environmental box)	2114285
Clamp - large (for outdoor cable to environmental box)	1657377
Single Device Attachment Cable, 40 ft (12.1 m) 40 ft (12.1 m)	8269543

* For use with NEMA-4X enclosure and associated parts (used when installing in harsh environments) or as a replacement part for the LWC or LSS.

** 1 package (10 keys) shipped with each 8101 or 8140. 1 key shipped with each LWC and wrap LSC.

Ordering Instructions: Order via MSORDER (Order Category = Supplies/ Accessories; Group Code = DP Supply Order). When ordering, use Machine type 8101 or 8140. Allow lead time of 120 days.

Warranty: All loop accessories are warranted free from defects of workmanship and materials for 90 days.

Customer Responsibilities: The customer is responsible to provide (purchase, install, test, and maintain) the loop cables and accessories for terminal attachments. However, see GI section 71 for FE contracts available to assist the customer with installation.

The customer is also responsible for procuring and stocking spare cable and spare parts for loop accessories.

See *IBM Multiuse Communications Loop Planning and Installation Guide,* (GA27-3341) for a suggested schedule to allow the customer to plan, install, and test the loop cable and accessories prior to delivery of the system.

It is recommended that the customer order additional loop components for spares with the initial order, as spares will not be stocked in the Branch Office.

To enable a customer to test his installed loops it is recommended that the customer order a Continuity and Relay Tester. Testing the loop wiring will require the tester or its equivalent.

SYSTEM ACCESSORIES

Relocate/Replace Kits:

The material required to perform machine relocation or processor replacement has been grouped into machine type dependent kits. Kits are available with or without truck-move packaging material.

For 8100 Information Systems with 8101 Storage and Input/Output units attached:

- Use Figure 1 below to order appropriate kit B/M
- 8140 kits apply to processor relocate or replace.
- Each 8101 to be relocated requires a kit. Current CSU Diskette provided with each kit.

Figure 1
Kits For Systems With 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package*
8101	4448550	4448551	N/A
8140	4448556	4448557	4448558

* With packing material for units with upending feature (#9840) previously installed.

For 8100 Information Systems without 8101 storage and input/output units attached:

- Use Figure 2 below to order appropriate kit B/M.
- Kit is used for processor relocate or replace.

Figure 2
Kits For Systems Without 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material	Relocate Package*
8140	4448579	4448580	4448549

*With packing material for units with upending feature (#9840) previously installed.

- Check for missing/damaged wrap plugs. If required, see the wrap plug entry in this section of the Sales Manual.
- If up-ending is required to position the 8140, see "Upending information" in this section of the Sales Pages.

8140 Processor Mdls C72, C82, C92 (cont'd)

- **Ordering Information** Order via MSORDER (category = supplies/accessories Group Code = DP Supply Order)

WRAP PLUGS

The communication cables listed below will require their respective wrap plugs to be re-installed for machine relocations.

If wrap plugs are lost or damaged, you may order replacements by the part numbers specified in Figure 3.

Figure 3:

Communication Feature	Communication Cable Group Number	Wrap Plug Part Number

	3726	7389282
EIA Direct Connect PT to PT	3727	6835347
X.21	3728	6835379

Ordering Information: Via Branch Office, Code 'S' from Mechanicsburg

Upending Feature 8140

Plant/Field feature **#9840** is required to upend the 8140. It consists of a reinforced left end cover, a removable wooden pallet and mounting straps and buckles. The wooden pallet, mounting straps and buckles should be removed during installation and stored for future use.

Ordering Instructions: See specify for ordering #9840. When ordering replacement parts, order via MSORDER (Category = Supplies/Accessories; Group Code = DP Supply Order).

Replacement parts may be ordered separately and are listed below.

Pallet	P/N 4448587
Mounting Reference Drawing	P/N 4448548

SUPPLIES

None required with machine order.

DEVICE ATTACHMENT

Direct Attached Devices: The following devices can attach directly to the processor:

3277 Display Station mdls 1, 2
3284 Printer mdls 1, 2
3286 Printer mdls 1, 2
3287 Printer mdls 1, 2
3288 Line Printer mdl 2
3732 Text Display Station
3736 Printer
8101 Storage and I/O Unit
8809 Magnetic Tape Unit

Loop Attached Devices: The following devices can attach to a direct attached loop or to a data link attached (via the 3842 or 3843 Loop Control Unit) loop. Refer to the *IBM 8100 Information System Configurator,* GA27-2876, for selection of the 8140 communication ports features.

8150 PROCESSOR MDLS B20, B40, B60

PURPOSE

The 8150 Processor provides higher performance and availability for the 8100 Information System. The 8150 has two Processing and Control Elements (PCEs) with the capability of operating in dual mode or in single mode with either PCE. Each processor also includes processor storage, diskette storage, communications attachment, and 8101 I/O attachment capabilities.

MODELS

Models	Storage
B20	2MB (2,097,152)
B40	4MB (4,194,304)
B60	6MB (6,291,456)

Prerequisites: 8101 Storage and I/O Unit mdl A13, A23, or A25.

Customer Setup (CSU): Yes. Machine only.

HIGHLIGHTS

The 8150 Processor is a multi-level, interrupt-driven processor which provides control, processing capability, processor storage, diskette storage, and communication features for the 8100 Information System. The flexibility offered by the 8150 Processor allows the user to configure a system for initial requirements, while retaining the ability to modify the system to meet future needs, with minimum disruption.

The 8150 Processor offers storage up to a maximum of 6MB (6,291,456 bytes). This storage makes use of Error Correction Code (ECC) to provide correction of all single and most double-bit main storage errors. Capability for dynamic address translation and storage protection for up to 16 million bytes of logical storage is provided. Utilization of this logical storage is enhanced by a facility called "Keys and Locks". It allows much larger Common Address Space Section (CASS) and a significantly larger number of address spaces.

The 8150 has two PCEs and two I/O buses with the capability of operating in dual mode or in single mode with either PCE. The Diskette and Ports 1 through 6, as a group, may be enabled by the Operating System on either PCE. Ports 7 through 12 as a group may also be enabled on either PCE. Attached 8101-A2X mdls with Manual/File Tape Switch RPQ may be attached to both I/O buses (active on only one at a time). This dual bus and switching capability permits reconfiguring for higher availability.

A minimum of one 8101 Storage and Input/Output Unit is required for use as the primary IPL device. Specify codes are required at the time of order so that the Primary IPL device address will be set in the 8150 Processor at the time of manufacture.

The 8150 Processor allows for the attachment of up to four 8101 Storage and Input/Output Units, or three 8101 Storage and I/O Units and one 8809 Magnetic Unit mdl 1B. An alternate configuration can consist of a 8150 Processor, four 8101 Storage and I/O Units, and one 8809 Magnetic Tape Unit mdl 1A. Up to three additional 8809 Magnetic Tape Units may be attached to the 8809 mdl 1A or 1B. A maximum of one 8101 may be configured with Communications and/or Display and Printer features.

Removable diskette storage is provided with up to 1MB (985,088) bytes) of storage operating at up to 62K bytes per second data rate. The diskette drive can read/write in basic data exchange format on either the Diskette 2D or the Diskette Type 1.

The 8100 system can attach to any S/370 or 4300 processor via the 3704, 3705 or 3725 for SNA/SDLC or BSC line control. The 8100 system can attach to the communications adapter of the 4321 or 4331 Processor for SDLC or BSC line control. See M2700 pages for specific attachment. **Note:** The 8150 can operate in dual mode using BSC Communications Features (#1763 and #1764).

The 8150 Processor provides for the attachment of a variety of input/output devices. These devices may be attached to the 8150 Processor via communication features which include data link, direct-connect, and loops that are direct-attached or data link attached. Up to 12 communication and loop ports may be configured in an 8150 Processor.

Physical security is provided through the use of key locks on the operator panel, diskette drive and machine covers. Additional or replacement keys are not available from IBM. They may be purchased from a local locksmith.

Customer Setup: The 8150 Processor is designated as a customer setup unit, thereby offering the customer early availability and relocation flexibility. Customer Setup instructions will be shipped with each machine. An 8150 Processor installation verification program will be shipped with each machine on a diskette. A clear indication that the machine is operational will be given.

Relocation/Replacement: If the user relocates the processor from one system to another or replaces the processor on an existing system the following conditions must be met:

1. Each 8101 on the system must have a unique address code -- **#9921**, **#9922**, **#9923** or **#9924**. There cannot be duplicate address codes on the same system.
2. The processor must have the correct address of the 8101 which will be its primary IPL device. Refer to "Primary IPL Device Address" under specify below. For further information, see *IBM 8100 Information System Site Planning Guide,* GA27-2884.

For relocation/replace kit ordering, see "Relocate/Replace: 8100 System" under "Accessories".

Loop Installation: The customer is responsible for procurement, installation, and maintenance of the loop network. In order for the cable and required accessories to be properly installed, certain preparatory steps must be followed. See *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341, for information necessary to plan and install the loop. The loop should be installed and checked out prior to attaching processors.

Cabling: For loop cabling information, see *Accessories and the IBM Multiuse Communications Loop Planning and Installation Guide,* GA23-3341. For communication cable information, see the *IBM 8100 Information System Site Planning Guide,* GA27-2884. Communications cables must be ordered separately from the Communications Features.

Bibliography: GC20-8100

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (200V to 240V AC, 1-phase, 3-wire 60 Hz): If standard 4.3 meter (14 foot) cable is not required specify **#9986** for 1.8 meter (6 foot) cable.
- Color: Pebble gray is the only available color.
- Programming Configuration: Specify **#9700** for Distributed Processing Programming Executive (DPPX), **#9710** for Distributed Processing Control Executive (DPCX), **#9720** for DPPX and DPCX, or **#9730** for all other configurations. **Maximum:** One. **Field Installation:** Yes.
- Primary IPL Device Address: The primary IPL device must be an 8101 Storage and I/O Unit. You must specify **#9935** for an 8101 mdl A13, A23, A25 and, in addition, specify **#9921**, **#9922**, **#9923** or **#9924** using the same number as used on the 8101 that will be the primary IPL device. **Field Installation:** The IPL Device Address can be changed by a CE. All such changes are chargeable at the applicable CE hourly rate. Do not submit an MES.
- Terminal Requirements: Specify **#9800** (offline 3640 terminal exerciser) when ordering any of the following terminals: 3641, 3642, 3643, 3644, 3645, 3646 or 3647. 1) On the initial order. 2) When the first terminal is ordered to attach via an 8101 and none are attached to the processor. 3) Via MES when the first terminal is field installed on an 8100 system. **Maximum:** One per system. **Field Installation:** Yes.
- 8101, 8809 mdl 1B Attachment: If any installed 8101 will be attached to an 8150 Processor, an MES to remove specify code **#9931** (8130 Attachment) or **#9932** (8140 Attachment) and add **#9933** (8150 Attachment) must be ordered for the 8101 to ensure the correct level of adapters and maintenance capability. If an 8809-1B will be attached to an 8150 Processor, an MES to add **#9933** must be ordered for the 8809.

SPECIAL FEATURES

Performance: Higher performance is achievable if the communication ports in a system are configured in the 8150 Processor and not in an 8101 I/O Unit and ports 1 through 6 are utilized first. **Note:** The maximum number of communication and loop ports configured and capable of concurrent operation in an 8100 System is a function of the speed of the lines, communication facilities, the operating system installed and the application work load. The maximum number of communications and loop ports which can be physically installed can exceed the operational capability. The aid ANDPPX can be used to determine the operational capability of the system (processor utilization, storage requirements, and response times).

Multiple High-Speed Adapters: An 8150 Processor has the physical capability for eight high-speed communication ports in excess of 9600 bps. The maximum number of high-speed ports activated concurrently is limited to four on each PCE.

Diagnostics: The 8100 system hardware and feature operation, diagnostic support and maintenance support described in 8100 Information System publications are dependent on the presence of functional support modules provided by DPPX or DPCX. Customers ordering 8100 Information System hardware without these programs should provide the functional support as contained and described in the *Functional Definition Manual 8100* which will be available from Mechanicsburg at FCS.

8150 Processor Mdls B20, B40, B60 (cont'd)

Floating Point Feature (#3750): Provides for execution of 30 floating point instructions and 32 floating point registers to improve performance of floating point operations (operates with only PCE 0). The instructions provide for loading, adding, subtracting, comparing, multiplying, dividing, storing and controlling the sign of short (4-byte) operands and long (8-byte) operands. **Maximum:** One. **Field Installation:** Yes.

Feature Expansion Prerequisite (#3901): Required for communications ports 7 through 12. This is a prerequisite for communication features #1716, #1726, #1734, #1735, #1745, #1755, and #1764. **Maximum:** One. **Field Installation:** Yes.

Multi-Speed clock (#5200): Provides business machine clocking at 4800, 9600 and 56,000 bps for SDLC direct-connection facilities. Can provide multiple speeds simultaneously. One multi-speed clock can provide clocking for features #1733, port 5, and #1742, port 4, and another multi-speed clock can provide clocking for features #1734, port 8, and #1745, port 9. **Maximum:** Two. One for ports 4 and 5 and one for ports 8 and 9. **Field Installation:** Yes. **Prerequisites:** #1733, #1734, #1742, or #1745.

COMMUNICATIONS and LOOPS

The communication and loop attachments are available in line sets which occupy predefined ports. A maximum of 12 ports are available, however only 10 loops and SDLC lines may be activated at any one time on each PCE. If line sets are selected in ports 1 to 4 or 9 to 12, there can be no high-speed ports in an attached 8101. The speed of the loops in communication ports 1 to 4 and ports 11 and 12 is manually switch selectable at either 9600 bps or 38,400 bps. The limitation on the total number of active ports at greater than 9600 bps is four on each PCE.

Note: Within a given Communications Feature the selected option Link Problem Determination Aid (LPDA) or line speed can be changed in the field by the CE. All such changes are chargeable at the applicable CE hourly rate. Do not submit an MES. However, the MES for removal of a Communications Feature and its associated specify codes must identify the original codes ordered from the factory.

For communication cable information, see the *IBM 8100 Information System Site Planning Guide,* GA27-2884.

Communications Feature (#1711): Provides for directly-attached loops with single lobes in ports 1 and 2 with the speed selectable by switch at 9600 bps or 38,400 bps. **Limitations:** Not available with #1721. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes.

Communications Feature (#1712): Provides for directly-attached loops with single lobes in ports 3 and 4 with the speed selectable by switch at 9600 bps or 38,400 bps. **Limitations:** Not available with #1732, #1742 or #1752. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes.

Communications Feature (#1716): Provides for directly-attached loops with single lobes in ports 11 and 12 with the speed selectable by switch at 9600 bps or 38,400 bps. **Limitations:** Not available with #1726. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901.

Communications Feature (#1721): Provides for directly-attached loops with double lobes in ports 1 and 2 with the speed selectable by switch at 9600 bps or 38,400 bps. **Limitations:** Not available with #1711. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes.

Communications Feature (#1726): Provides for directly-attached loops with double lobes in ports 11 and 12 with the speed selectable by switch at 9600 bps or 38,400 bps. **Limitations:** Not available with #1716. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901.

Communications Feature (#1732): Provides for two SDLC EIA RS-232-C interfaces in ports 3 and 4. Both interfaces are unclocked and attach to external modems with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire. **Limitations:** Not available with #1712, #1742, or #1752. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes. **Specify: #9803** for port 3 with LPDA, **#9804** for port 4 with LPDA.

Communications Feature (#1733): Provides for two SDLC EIA RS-232-C interfaces in ports 5 and 6. Port 6 is unclocked and attaches to an external modem with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire. Port 5 provides the same interface as Port 6 or direct-connect at 4800 bps or 9600 bps up to 40 feet. **Limitations:** Not available with #1763. **Maximum:** One. **Field Installation:** Yes. **Specify: #9689** for external modem, **#9688** for direct connect without clock, **#9686** with prerequisite multi-speed clock (#5200) for direct-connect with clock at 4800 bps or **#9687** with prerequisite multi-speed clock (#5200) for direct-connect at 9600 bps. Specify **#9805** for port 5 with LPDA, **#9806** for port 6 with LPDA.

Communications Feature (#1734): Provides for two SDLC EIA RS-232-C interfaces in ports 7 and 8. Port 7 is unclocked and attaches to an external modem with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire. Port 8 provides the same interface as Port 7 or direct-connect at 4800 bps or 9600 bps up to 40 feet. **Limitations:** Not available with #1764. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901. **Specify: #9699** for external modem, **#9698** for direct-connect without clock, **#9696** with prerequisite multi-speed clock (#5200) for direct-connect with clock at 4800 bps or **#9697** with prerequisite multi-speed clock (#5200) for

8150 Processor Mdls B20, B40, B60 (cont'd)

direct-connect at 9600 bps. Specify **#9807** for port 7 with LPDA, **#9808** for port 8 with LPDA.

Communications Feature (#1735): Provides for two SDLC EIA RS-232-C interfaces in ports 9 and 10. Both interfaces are unclocked and attach to external modems with clock up to 9600 bps -- point-to-point switched with auto answer to 4800 bps -- point-to-point nonswitched 2- or 4-wire or multipoint 4-wire. **Limitations:** Not available with #1745 or #1755. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901. **Specify: #8801** for port 9 with LPDA, **#8802** for port 10 with LPDA.

Communications Feature (#1742): Provides for two SDLC/CCITT V.35 interfaces in ports 3 and 4. Port 3 is unclocked and attaches to an external modem with clock up to 56,000 bps. Port 4 provides the same interface as Port 3 or direct-connect with or without clock at 56,000 bps for a total cable length of up to 1,000 feet or up to 200 feet to a 3705 or up to 492 feet to a 3725. **Limitations:** Not available with #1712, #1732 or #1752. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes. **Specify: #9684** for external modem, **#9683** for direct-connect without clock, **#9682** with prerequisite multi-speed clock (#5200) for direct-connect with clock at 56,000 bps.

Communications Feature (#1745): Provides for two SDLC/CCITT V.35 interfaces in ports 9 and 10. Port 10 is unclocked and attaches to an external modem with clock up to 56,000 bps. Port 9 provides the same interface as Port 10 or direct-connect with or without clock at 56,000 bps for a total cable length of up to 1,000 feet or up to 200 feet to a 3705 or up to 492 feet to a 3725. **Limitations:** Not available with #1735 or #1755. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901. **Specify: #9694** for external modem, **#9693** for direct-connect without clock, **#9692** with prerequisite multi-speed clock (#5200) for direct-connect with clock at 56,000 bps.

Communications Feature (#1752): Provides one SDLC/CCITT X.21 Switched interface with auto answer and auto call in port 3 and one SDLC/CCITT X.21 nonswitched interface point-to-point or multipoint in port 4, without clock up to 48,000 bps via a Data Circuit-Terminating Equipment (DCE) which complies with CCITT Recommendation X.21 as it is delineated in GA27-3287. **Limitations:** Not available with #1712, #1732 or #1742. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes.

Communications Feature (#1755): Provides one SDLC/CCITT X.21 Switched interface with auto answer and auto call in port 10 and one SDLC/CCITT X.21 nonswitched interface point-to-point or multipoint in port 9, without clock up to 48,000 bps via a Data Circuit-Terminating Equipment (DCE) which complies with CCITT Recommendation X.21 as it is delineated in GA27-3287. **Limitations:** Not available with #1735 or #1745. Not available if high-speed (greater than 9600 bps) ports are in an attached 8101. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3901.

Communications Feature (#1763): Provides two BSC EIA RS-232-C interfaces in ports 5 and 6. Port 6 provides an IBM microcode-programmed BSC communication interface from 1200 to 9600 bps without clock or 600 and 1200 bps with clock to external Data Circuit-Terminating Equipment (DCE) point-to-point nonswitched 2- or 4-wire or multipoint nonswitched 4-wire. Port 5 provides the same interface as port 6 or direct-connect up to 40 feet. **Limitations:** Not available with #1733. Not available if BSC FAC Codes 40, 41, 44, 45 or 47 are in an attached 8101. **Field Installation:** Yes. **Specify: #9690** for direct-connect. User parameter selectable business machine clock options and speed are available at 1200, 1800, 2400, 3600, 4800, 7200, or 9600 bps. The attached terminal must not provide business machine clocking.

Communications Feature (#1764): Provides two BSC EIA RS-232-C interfaces in ports 7 and 8. Port 7 provides an IBM microcode-programmed BSC communication interface from 1200 to 9600 bps without clock or 600 and 1200 bps with clock to external Data Circuit-Terminating Equipment (DCE) point-to-point nonswitched 2- or 4-wire or multipoint nonswitched 4-wire. Port 8 provides the same interface as port 7 or direct-connect up to 40 feet. User parameter selectable business machine clock options and speed are available at 1200, 1800, 2400, 3600, 4800, 7200, or 9600 bps. The attached terminal must not provide business clocking. **Limitations:** Not available with #1734. Not available if BSC FAC Codes 40, 41, 44, 45 or 47 are in an attached 8101. **Field Installation:** Yes. **Specify: #9680** for direct-connect.

ACCESSORIES

CABLES - LOOP

Loop Cables may be purchased from IBM or a customer selected source. See *IBM Multiuse Communication Loop Planning and Installation Guide,* GA27-3341, for part numbers, specifications and usage which is necessary for preplanning and ordering.

- Indoor Cable **P/N 1657265:** UL approved (style 2919 for interconnection of low voltage electronic equipment. Maximum allowable cable temperature range is -34°C to 80°C.
- Indoor Cable **P/N 7838694:** UL approved for cable tray installation (NEC Art. 725-40b3). Maximum allowable cable temperature range is -34°C to 90°C.
- Indoor Cable **P/N 7838695:** UL approved for duct and plenum installation (NEC Art. 725-2b). Maximum allowable cable temperature range is -34°C to 105°C.
- Outdoor Cable **P/N 1657267:** For above ground installation. Maximum allowable cable temperature range is -34°C to 80°C.
- Outdoor Cable **P/N 1657268:** For below ground installation. Maximum allowable cable temperature range is -34°C to 80°C.

Ordering Instructions: Indoor cable (**P/N 1657265**, **7838694** and **7838695**) should be ordered in lengths of 304.8m to 609.6m (1,000 to 2,000 feet). Additional lengths up to 609.6m (2,000 ft.) can be ordered by specifying the length wanted. Indoor cable splices can be accomplished via **P/N 1657300.** A minimum order quantity is 304.8m (1,000 feet). Outdoor cable (**P/Ns 1657267** and **1657268**) should be ordered in one continuous length, up to a maximum of 914.4m (3,000 feet), by specifying the length wanted. Outdoor splices with aerial and burial cable should be avoided.

Warranty: Loop cable is warranted free from defects of workmanship and materials for 90 days.

LOOP - ACCESSORIES

A group of accessory products are offered to permit plant electricians or contract personnel to install the loops. Refer to *IBM Multiuse Communications Loop Planning and Installation Guide,* GA23-3341, for information necessary to plan the layout and for selection of the loop hardware, and for installation and testing information.

Loop Splice Plate (LSP): The LSP splices together two segments of indoor cable or provides a connecting point for future expansion of the loop. The LSP consists of a single connector strip, to which the incoming loop cable and the outgoing loop cable can be attached; it is installed in a standard outlet box for business office environments, or weatherproof outlet box for industrial environments.

Loop Station Connector (LSC): The LSC is available as two unique types: Wrap and Radial. The wrap LSC attaches an I/O unit or controller directly to the main loop cable; the radial LSC attaches an I/O unit only through a Loop Wiring Concentrator (LWC) to the loop. The wrap LSC attaches an incoming and outgoing loop cable; the radial LSC attaches at the end of one loop cable from the LWC.

The wrap LSC also offers the isolation feature of wrapping, which allows the customer to wrap the loop away from a loop wiring failure or to reconfigure the loop during alterations. Both wrap and radial LSCs contain bypass relays that bypass the I/O unit when the I/O unit is powered off or disconnected. These accessories are installed in a standard or weatherproof outlet box.

2 x 4 Adapter Plate (2AP): The 2" x 4" Adapter Plate is used with the Loop Station Connector and accommodates the use of standard outlet boxes that have dimensions smaller than the outlet boxes defined in the *Loop Installation and Planning Guide.* It is not to be used with the environmental outlet boxes.

Loop Wiring Concentrator (LWC): The LWC provides the facility to attach a cluster of I/O units without a large number of drops on the loop cable. It attaches up to eight radial LSCs at the end of loop cables called radials. The point where a radial line terminates at the LWC is called an LWC port. Not all ports have to be used; unused ports can be reserved for future expansion.

The LWC has the same wrapping capability as the wrap LSC. In addition, the LWC allows the customer to bypass one or more of the radials by setting a switch located inside the LWC.

The LWC has its own enclosure or can be mounted in a NEMA-4X environmental equipment cabinet, with minimum measurement of 36x30x15cm (14x12x6 in.).

Loop Surge Suppressor (LSS): The LSS allows the loop to be run across an outdoor space to another building. It attaches two outdoor cables and two indoor cables, allowing the proper termination and grounding for each type of cable. In addition, the LSS contains four surge protectors, one for each twisted pair in the two outdoor cables, to protect from voltage surges caused by near strikes of lightning. There is no protection in the LSS from a direct lightning strike.

The LSS has its own enclosure or can be mounted in an electrical equipment cabinet, with minimum measurement of 36x30x15cm (14x12x6 in).

8150 Processor Mdls B20, B40, B60 (cont'd)

Continuity And Relay Tester: The Continuity and Relay Tester is used with a customer-supplied volt-ohm meter, capable of reading 0.5 ohms and rated at least 5,000 ohms/volt, to verify the loop installation, including loop cabling and accessories after completion. By plugging the tester into any loop station connector and connecting the volt-ohm meter to the tester, the condition of the wire segment being tested can be determined as to conductor and shield continuity (opens or shorts), wrap switch operation, and total lobe resistance.

The loop station connector relays are also activated and their operation verified with this tester.

System Loop Accessories	P/N
Loop Slice Plate (LSP) (indoor)	**1657300**
Loop Station Connector (Radial LSC)	**1657310**
Loop Station Connector (Wrap LSC)	**1657320**
Loop Station Connector Gasket	**1657260**
Loop Wiring Concentrator (LWC)	**1657330**
LWC Circuit Board Assy (order instead of LWC - **1657330**)*	**1657332**
Loop Surge Suppressor (LSS)	**1657350**
LSS Circuit Board Assy (order instead of LSS - **1657350**)*	**1657354**
Continuity and Relay Tester	**1657420**
Wrap Switch Access Cover	**1657325**
Loop Accessory Keys (10 spares)**	**1657379**
2 x 4 Adapter Plate (2AP)	**7838771**
Conventional Box (indoor) 5 x 10cm - (2 x 4 inches)	**2102151**
Clamp (for cable to indoor box)	**2100264**
Electrical box (outdoor) 7 x 11.5cm - (2.75 x 4.5 inches) (For industrial use)	**1657280**
Clamp - small (for indoor cable to environmental box)	**2114285**
Clamp - large (for indoor cable to environmental box)	**1657377**
Single Device Attach. Cable, 12.1m (40 ft)	**8269543**

* For use with NEMA-4X enclosure and associated parts (used when installing in harsh environments or as a replacement part for the LWC or LSS.

** 1 package (10 keys) shipped with each 8101 or 8140. 1 key shipped with each LWC and wrap LSC.

Ordering Instructions: When ordering, use Machine type 8101 or 8150. Allow lead time of 120 days.

Warranty: All loop accessories are warranted free from defects of workmanship and materials for 90 days.

Customer Responsibilities: The customer is responsible to provide (purchase, install, test, and maintain) the loop cables and accessories. However, see IBM for contracts available to assist the customer with installation.

The customer is also responsible for procuring and stocking spare cable and spare parts for loop accessories.

See *IBM Multiuse Communications Loop Planning and Installation Guide* (GA27-3341) for a suggested schedule to allow the customer to plan, install, and test the loop cable and accessories prior to delivery of the system.

It is recommended that the customer order additional loop components for spares with the initial order, as spares will not be stocked in the branch office.

To enable a customer to test his installed loops it is recommended that the customer order a Continuity and Relay Tester. Testing the loop wiring will require the tester or its equivalent.

SYSTEM ACCESSORIES

Relocate/Replace Kits: The material required to perform machine relocation or processor replacement has been grouped into machine type dependent kits. Kits are available with or without truck-move packaging material.

For 8100 Information Systems with 8101 Storage and Input/Output units attached:

- Use Figure 1 below to order appropriate kit.
- 8150 kits apply to processor relocation or replace.
- Each 8101 to be relocated requires a kit. Current CSU Diskette provided with each kit.

Figure 1
Kits For Systems With 8101 Attached

Machine	Kit Without Packaging Material	Kit With Packaging Material
8101	**4448550**	**4448551**
8150	**4719031**	**4719032**

- Check for missing/damaged wrap plugs. If required, see the wrap plug entry below.

WRAP PLUGS

The communication cables listed below will require their respective wrap plugs to be re-installed for machine relocations.

If wrap plugs are lost or damaged, you may order replacements by the part numbers specified in Figure 2.

Figure 2

Communication Feature	Communication Cable Group Number	Wrap Plug Part Number
Loop Station Adapter (Single Lobe)	#3709, #4838	**7389282**
DDSA	#3717	**6835350**

SUPPLIES

None required with machine order.

DEVICE ATTACHMENT

Direct Attached Devices: The following devices can be directly attached to the processor:

8101 Storage and I/O Unit
8809 mdl 1B Magnetic Tape Unit

Loop Attached Devices: The following devices can attach to a direct-attached loop or a data link attached loop via the 3842 or 3843 Loop Control Unit.

	Loop Attachment		
	Direct-Attach		Data Link
Device and Mdl	9600 bps	38,400 bps	At 2400,4800, 9600 bps

Direct-Connection Attachment: In addition to device attachment to the 8100 System through common carrier facilities (see M2700 pages), attachment can be made by direct-connect. Shown below are the direct-connect attachable devices and required device feature numbers. The *8100 Information System Site Planning Guide,* GA27-2884, will assist in the selection of cables.

Attaching Device	Speeds (bps)	Attaching Device Feature Number	8150 Comm. Feature Number

	9600	#3701	#1733,#5200,and **#9687** #1734,#5200,and **#9697**

Note: FAC 17, 28, #1614 with **#9683**, or #1621 and **#9688** in the attaching 8101, 8130, 8140 without business machine clock.

* Specify code **#9770** is available on the 3651-25/75 to facilitate problem determination.

8775 DISPLAY TERMINAL

PURPOSE

A high function cathode ray tube display terminal provides a means of entering data to or receiving data from the 4300, S/370 Processor or the 8100 Information System.

APL, field and character highlighting, field validation, multiple partitions, scrolling, programmed symbols, extended data entry capabilities and facilities for entry and edit of text are available. A Keyboard or a Selector Light-Pen permit an operator to display and manipulate data on the screen in a flexible and efficient manner. Other functions include Audible Alarm, Security Keylock, Printer Adapter and Magnetic Slot Reader or Magnetic Hand Scanner. The 8775 meets both general and unique display requirements with its set of basic and optional features.

MODELS

Loop Attach on the 4331 Processor Mdl Group 1 and 2 or 8100 System.

Model 1 001 — Displays 960, 1920 or 2560 characters in the 9x16 character matrix size.

Model 2 002 — Displays 960, 1920, 2560 in the 9x16 character matrix size or 3440 characters in the 9x12 character matrix size.

SNA/SDLC data link attach over communication facilities to a 4300, S/370 or 8100.

Model 11 011 — Displays 960, 1920 or 2560 characters in the 9x16 character matrix size.

Model 12 012 — Displays 960, 1920 or 2560 characters in the 9x16 character matrix size or 3440 characters in the 9x12 character matrix size.

Customer Setup (CSU): Machine only.

HIGHLIGHTS

Displays 960, 1920 or 2560 characters in a 9x16 character matrix, or 3440 characters in a 9x12 character matrix. (Mdl 2 and 12 only.)

The number of characters displayed is determined under operator control. All configurations include 62 alphameric and 32 special characters, the Space, and Null characters. Use of 3270 Field Formatting capability permits individual fields of data on the screen to be program defined with various attributes such as protected/unprotected, alphameric/numeric, normal/highlighted intensity, displayable/non-displayable, and selector light-pen detection allowed/disallowed.

The 8775 Display Terminal communicates with a 4331, 8130 or 8140 Processor using Synchronous Data Link Control (SDLC) over either direct or data link attach loops or with an 8130, 8140, 4300 or S/370 processor via data link attach over communication facilities. The basic 8775 offers equivalent function and is upward data stream compatible with the 3276/3278.

Downstream loadable function which includes APL, field and character highlighting, field validation, enhanced function with magnetics, multiple partitions, scrolling, and text entry and edit is optionally available. The Enhanced Function, Enhanced Function with Magnetics, and Multiple Partitions and Scrolling features, and the Interactive Display Text Facility (IDTF) licensed program consist of four sets of data contained on magnetic media. Only one set can be loaded into an 8775 at a given time. The Interactive Display Text Facility (IDTF) licensed program is on separate magnetic media supplied by IBM program libraries.

The Printer Adapter provides the capability to print either the screen contents or bulk data from the host. This feature is mutually exclusive with any of the downstream loadable function. One of the following printers may be attached 3230 mdl 2, 3262 mdl 13, 3268 mdl 2, 3287 mdl 1, 2, 1C, or 2C, 5210 mdl G01, G02 or 7436 mdl 1.

Operator Factors: 8775 has an anti-reflective screen. Indicators are displayed on the bottom row of the screen, outside the data display area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interrupt (i.e., no blinking). The keyboard, which is low in profile, provides a palm rest area and has separators to help prevent accidental striking of control keys. The operator may select one of several cursor modes.

Editing Facilities: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic. All alphanumeric, special symbol, and cursor move keys have typematic capability. Double speed cursor typematic is attained with a simultaneous depressing of the ALT key and a horizontal cursor positioning key. The cursor select function provides an alternative to the Selector Light-Pen function. Fields of data may be selected by positioning the cursor then using the Cursor Select Key.

Input Flexibility: A choice of keyboards or the Selector Light-Pen provide input flexibility ... see "Special Features" below. Fields of data can be selected by positioning the cursor and operating the cursor select key, instead of using the Selector Light-Pen. Twelve Program Function (PF) keys are basic with all typewriter keyboards; seven or more PF keys are available on all Data Entry Keyboards.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock (optional) prevents modification or display of data in the display buffer unless the key is turned to the "on" position. The Setup Keylock (optional) controls access via the keyboard to change the terminal address. Those capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and to record an audit of actions. A Magnetic Slot Reader or Magnetic Hand Scanner is available to enter system user identification.

Communications: The 8775 mdl 1, 2 display terminals are attached to customer-owned loops. A direct loop to a 4331 Mdl Group 1 and 2 or 8100 processor may operate at 38.4K bps, or 9600 bps, this operating speed being determined by the customer at order time. A data link-attached loop may be connected to an 4331 or an 8100 System via a 3843 Loop Control Unit. The 3843 provides an interface to a synchronous modem transmitting at 2400, 4800 or 9600 bps. The Loop Control Units support point-to-point or multipoint telecommunication links. Half-speed operation of the 8775 can be selected by the operator. Refer to the M3843 pages for more information.

The 8775 mdls 11, 12 may communicate to an 8100 Information System over data link nonswitched communication facilities or to a 4331 Processor via its Integrated Communications Adapter or to a 4300 and S/370 Processors via 3704, 3705 or 3725 Communication Controller over data link nonswitched, nonswitched with switched network back-up or public switched network communication facilities using Synchronous Data Link Control (SDLC).

Modems: A 1200 bps Integrated Modem feature (#5500) or an external IBM modem may be attached to an 8775 mdl 11, 12. External modems require the external modem interface (#3701).

3863 mdl 1/2	2400/1200
3864 mdl 1/2	4800/2400
3865 mdl 1/2	9600/4800
3868 mdl 1	2400/1200
3868 mdl 2	4800/2400
3868 mdl 3/4	9600/4800
3872 mdl 1	2400/1200

Switched Network back-up operation with Manual Call and Manual or Auto Answer is available on the 3872 mdl 1.

For communication capabilities, product utilization and special features, see the M2700 pages and appropriate modem pages for additional information.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of the problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities" below.

Communication network management problem determination support for 4331 Mdl Group 1 and 2 loop attached 8775s is provided via NCCF/NPDA.

Customer Setup (CSU): 8775 is designated Customer Setup, thereby offering customers ease of set up and relocation flexibility. For additional information on CSU, refer to the General Information section.

One copy of the CSU instructions, Problem Determination Guide, and Trouble Report form are shipped with each 8775 .

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at customer's receiving dock, unpacking and placement of 8775 display terminal.
- Physical setup, connection of cables incorporating protected customer access areas, and check-out.
- Contact Field Engineering to make cable connections of IBM CSU units to non-CSU units where customer access area is not provided.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance; appropriate instructions will be provided by IBM.
- Procurement, installation and maintenance of the loop network, see Accessories.
- Performing 8775 Customization if required in accordance with IBM supplied procedures.
  - For initial setup.
  - Updating of the 8775 diskettes (at customer option).

8775 Display Terminal (cont'd)

Bibliography: Refer to *An Introduction to the IBM 8775 Display Terminal*, GC33-3040.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- Voltage (120V, AC, 1-phase, 3-wire, 60 Hz): **#9890** for locking plug, or **#9891** for non-locking plug. If standard 2.8 meter (9 foot) power cable is not desired, specify **#9511** for 1.8 meter (6 foot) cable, **#9512** for 3.7 meter (12 foot) cable, or **#9513** for 4.5 meter (15 foot) cable.

- Attachment: Specify the following: **#9221** for attachment to the 8130 Information System, **#9222** for attachment to the 8140 Information System, **#9223** for attachment to a 4331 or 4361 Processor, **#9224** for attachment to a 4341 and 4381 Processor or **#9225** for attachment to a S/370 processor.

- Distribution of Magnetic Media for Enhanced Function (#3624), Enhanced Function with Magnetics (#3626) or Multiple Partitions and Scrolling (#5110).

  If Enhanced Function Feature (#3624), Enhanced Function with Magnetics (#3626) or Multiple Partitions and Scrolling (#5110) is ordered, one copy of magnetic media is needed per System, therefore, specify:

  #9491 - For one 8775 on each system

  #9492 - For all other 8775s on each system

  Note: For each system with one or more 8775s (with #3624, #3626 or #5110) attached, one and only one 8775 should specify **#9491**. Care should be exercised when relocating 8775s, that this relationship is maintained.

  If **#9491** is specified, also select **#9425** Diskette 2D for the 8100 System, **#9412** for 9/800 magnetic tape, **#9413** for 9/1600 magnetic tape or **#9414** for 9/6250 for magnetic tape for 4300 or S/370 Processor to identify the type of magnetic media. Additional shipping instructions are also required.

- Licensed Programming: Specify **#9600** if the Interactive Display Text Facility (IDTF) licensed program is to be used on this machine. **Prerequisites:** #3623, #3905, #4670,

  #5781, #3624, #3626 and #5110. These provide the necessary configuration to enable the IDTF licensed program to be loaded into the terminal.

  Note: The feature codes #3624, #3626, #5110 and #5781 are necessary to enable correct order processing. However, the functions provided by these features cannot be operational when the IDTF licensed program is loaded into the terminal. The IDTF licensed program is distributed on a separate diskette. If required, it must be ordered separately (see Program Product pages).

  If Enhanced Function Feature #3624, Enhanced Function with Magnetics (#3626) or Multiple Partitions and Scrolling (#5110) is ordered, additional shipping information is required.

  Supplemental specification (via AAS entry) is to be entered exactly as follows to indicate the shipping address to which the initial copy of magnetic media is sent. This may be either a S/370 or 4300 Processor or 8100 System or any address desired by the customer.

  For 8100 System:

  Line 1 - Name of Customer
  Line 2 - Street Address (or P.O. Box)
  Line 3 - City, State, Zip Code
  Line 4 - Attn: Data Processing Manager

  For 4300 or S/370 Processor:

  Line 1 - IBM Programming Support Representative
  Line 2 - C/O (Name of Customer)
  Line 3 - Street Address (or P.O. Box)
  Line 4 - City, State, Zip Code

  Whenever the Enhanced Function feature (#3624), Enhanced Function with Magnetics (#3626) or Multiple Partition and Scrolling (#5110) is updated by an EC, the magnetic media will be sent to the address associated with the MC for each Display Terminal designated by specify **#9491**.

  All 8775s with #3624, #3626 or #5110 are attached to a system which is assigned a MC (Microcode Control Number). This MC identifies a network associated with a 4331 or 8100 System or a Central Site Facility.

  The MC, controlled and supplied by the Field Engineering Branch Office, is a 6-character code. The MC is assigned subsequent to delivery of the 8775 when the machine serial number is known.

  Note: To ensure proper delivery of ECs, the MC should be submitted as soon as the serial number of the 8775 is known.

- Communication Cable: A 1.8 meter (6 foot) communication cable is provided for attachment to a direct or data link attached loop. If 1.8 meter cable is not desired, specify **#9405** for 4.3 meter (14 foot) cable.

  A 6.1 meter (20 foot) communication cable is provided as standard for attachment to stand-alone modems or to the communication facility when an integrated modem is used or to a communication facility when a X21 adapter is used or to the Communication facility when a DDS adapter is used. If the standard communication cable is not desired, specify **#9061** for 3.0 meter (10 foot) cable, **#9062** for 9.1 meter (30 foot) cable or **#9063** for 12.2 meter (40 foot) cable.

- Character Set:

  #9082 for EBCDIC Character Set - used in conjunction with 75-key Typewriter Keyboard or Data Entry Keyboard or 87-key EBCDIC Typewriter Keyboard.

SPECIAL FEATURES

Set Up Keylock (#1009): Controls access to change the unit address of the terminal. **Maximum:** One. **Field Installation:** Not recommended.

Audible Alarm (#1090): An alarm sounded under program control, to alert the operator to a special condition. This alarm during keyboard operation is also sounded when a character is entered into the next-to-last position on the screen. The operator may adjust the volume of the tone. **Maximum:** One. **Field Installation:** Yes.

Business Machine Clocking (#1488): Required for attachment of IBM 1200 bps Integrated Modem (#5500) or any external modem that does not provide its own clocking and operates at 1200/600 bps. **Maximum:** One. **Field Installation:** Yes.

Extended Feature Storage (#3623): Provides the storage capacity required for Enhanced Function (#3624), Enhanced Function with Magnetics (#3626), Multiple Partitions and Scrolling (#5110) or the IDTF licensed program. **Limitation:** Cannot be installed with #5580. **Maximum:** One. Refer to Specify for information on the shipment of the magnetic media to the proper location. **Field Installation:** Yes.

Note: The Enhanced Function, Enhanced Function with Magnetics, and Multiple Partitions and Scrolling features, and the IDTF licensed program, consist of four sets of data contained on magnetic media. Only one set can be loaded into the 8775 at a given time. If Enhanced Function with Magnetics (#3626) is installed then Enhanced Function Feature (#3624) or Multiple Partitions and Scrolling (#5110) may be loaded by the operator if required. If Enhanced Function (#3624) is installed then Enhanced Function with Magnetics (#3626) or Multiple Partitions and Scrolling (#5110) may be loaded by the operator if required.

Enhanced Function (#3624): Provides the ability to display APL characters, to highlight data, display data in user-defined partitions and to validate data fields as they are entered into the display terminal from the operator keyboard. Highlight is on a per character basis in one of three user selectable modes, blink, reverse video or underscore, and, additionally, on a field basis for intensify. Partitioning provides the ability to display data in up to eight user defined rectangular partitions and for the host or user to interact individually with the data within each partition. APL provides the ability to display the space (blank), and the unique characters consisting of 94 EBCDIC, 81 APL specific, 37 characters unique to 3270 text and 10 new graphic characters.

Validation provides:

Mandatory Enter -	Data must be entered into this field to permit entry to the host.
Mandatory Fill -	All positions in this field must be filled to permit entry to the host.
Trigger Field -	Causes the contents of the field to be sent from the display when data has been entered into the field and the cursor leaves the field.

Maximum: One. **Field Installation:** Yes. **Prerequisites:** #3623, #3905 and either **#9491** or **#9492**. If APL is used, 87-key APL Typewriter Keyboard (#4626), is required. If keyboard selectable highlighting is desired, 87-key keyboards (#4626, #4627, #4640 or #4670) are required.

Enhanced Function With Magnetics (#3626): Provides the function of the Enhanced Function Feature (#3624) with the addition of the ability to read via a magnetic slot reader, dual entry magnetic slot reader or magnetic hand scanner, magnetically encoded information from alphameric character set. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3905, #3623 and either **#9491** or **#9492**. If APL is used, 87-key APL typewriter keyboard (#4626) is required. If Keyboard selectable highlighting is desired 87-key keyboards (#4626, #4627, #4640 or #4670) is required.

Feature Adapter (#3905): Provides the logic necessary to perform Enhanced Function, Enhanced Function with Magnetics, or to execute IDTF. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:**

8775 Display Terminal (cont'd)

#3624 and/or #3626 and/or **#9600**.

Monocase Switch (#4944): Provides the choice to display either uppercase characters only or both uppercase and lowercase characters. **Maximum:** One. **Field Installation:** Yes.

Magnetic Reader Control (#4999): Provides the capability of attaching a Magnetic Slot Reader, Dual Entry Magnetic Slot Reader or Magnetic Hand Scanner, which reads encoded information from a magnetic stripe. **Maximum:** One. **Field Installation:** Yes.

Multiple Partitions And Scrolling (#5110): Multiple partitions provides the ability to display data in up to eight user defined rectangular partitions and for the host or user to interact individually with data within each partition. Scrolling provides the ability with any designated partition for user interaction with data record longer than provided for by the physical size of the visible portion of that partition. The operator controls the movement of data either up or down through the use of Scrolling control keys located on the keyboard. An additional scrolling buffer of a maximum of 58 lines of 80 characters wide (4640 characters) is provided. The actual scrolling capability is dependent upon screen/partition configuration. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #3623 and either **#9491** or **#9492**.

Printer Adapter (#5580): This adapter provides an interface which enables one of the following printers to be attached: 5210 mdls G01, G02 and 3230 mdl 2, 3262 mdl 13, 3268 mdl 2, 3287 mdls 1, 2, 1C and 2C, 7436 mdl 1. The user has the following print facilities. Local Copy printing in which a copy of the screen contents is printed on the attached printer, this can be initiated either by the operator or the host. Bulk printing controlled by the host processor or the use of both local copy and bulk printing in shared mode. **Limitations:** Cannot be installed with #3624, #3626, #5110 or **#9600**. **Maximum:** One. **Field Installation:** No.

Programmed Symbols (PS) (#5781, #5782): When used with Enhanced Function (#3624), or Enhanced Function with Magnetics (#3626), these features provide the storage and accessing of up to six 190 symbol sets whose shapes and codes are customer definable. Symbol sets are loaded under program control and accessed for display through programming or by an operator from the display keyboard. The number of symbols in any one set that can be accessed from the display keyboard is equal to the number of characters in the base character set which is 94 plus space.

PS-2 (#5781) provides PS control and two 190 symbol sets. **Prerequisites:** #3624 and/or #3626.

PS-4 (#5782) provides PS control and four 190 symbol sets. **Prerequisites:** #5781.

When used with **#9600** it provides the additional storage required by IDTF licensed program for text characters and control symbols. **Maximum:** One of each. **Field Installation:** Yes. **Prerequisites:** If display operator access to PS is required, select one of the following keyboards: 87-key EBCDIC typewriter overlay (#4640).

Security Keylock (#6340): A lock and key which prevents modification or display of data in the display terminal when in the "off" position. **Maximum:** One. **Field Installation:** Not recommended.

Selector Light-Pen (#6350): A hand-held, pen-like device which permits the operator to select fields of data from a display for input into the host system. The Selector Light-Pen, while not being used, can be placed in a recess of the keyboard which is used for user's incidental items. Selector Pen (and Cursor Select) operations include a new designator character "&". When this designator is used, the Read Modified operation results in the return of both the addresses and the data of all modified fields on the screen. **Maximum:** One. **Field Installation:** Yes.

Keyboards:

Refer to Type Catalog, for a picture of the keyboard layouts.

Contact IBM for RPQ keyboard descriptions.

#4621--75-Key Typewriter Keyboard: Typewriter-like layout, movable, with 49 data keys and 26 control keys. Twelve program function keys are included in the top row of data keys through use of an alternate shift key. **Prerequisites: #9082.**

#4622--75-Key Data Entry Keyboard: Movable with 35 data keys, 10 program function keys and 30 control keys. **Prerequisites: #9082.**

#4623--75-Key Data Entry Keyboard: Keypunch layout, movable, with 35 data keys, 10 program function keys and 30 control keys. This is the recommended keyboard for high volume data entry. **Prerequisites: #9082.**

#4626--87-Key EBCDIC Typewriter/APL Keyboard: 87-key EBCDIC typewriter keyboard (ref #4627) with modified keytops to allow entry of 81 APL specific characters in addition to the 94-character EBCDIC set. An APL On/Off key controls whether the keyboard is in basic EBCDIC typewriter or APL mode. In contrast to the 87-key EBCDIC typewriter keyboard without APL (see #4627), this keyboard has only twelve program function keys (PF1 through PF12) which are the group of twelve keys to the right of the main keyboard area. **Prerequisites:** #3624, #3626 **#9082.**

#4627--87-Key EBCDIC Typewriter Keyboard: Typewriter-like layout, movable, with 49 alphameric data keys, 26 control keys and 12 program function keys (24 total PF keys). Twelve of the program function keys are included in the top row of the data keys through the use of an alternate shift key. **Prerequisites: #9082.**

#4640--87-Key EBCDIC Typewriter Overlay Keyboard: This keyboard without an overlay has the same layout and can be used in the same way as the 87-key EBCDIC Typewriter Keyboard (#4627) with the 94-character EBCDIC character set. This keyboard, however, has special narrow keytops which permit the use of customer annotated overlays. These overlays are used to show the symbols associated with the keys when one of the Programmed Symbols (PS-A through PS-F) is selected. The desired PS can be selected by the operator through use of the appropriate PF keys in upper case and alternate shift on this keyboard. **Prerequisite: #9082.**

Note: Two keyboard overlays are supplied with each keyboard. Additional overlays may be obtained via MES, see Accessories.

4670-87-Key EBCDIC Typewriter/Text Entry And Edit Keyboard: Provides all the character and function keys of an 87-key EBCDIC Typewriter Keyboard with additions for entry and edit of text. The group of 12 program function keys to the right of the main keyboard area has special narrow keytops to accommodate an IBM supplied reversible annotated overlay. One side of the overlay indicates the function key assignments when an 8775 is being used for text applications. The other side of the overlay indicates the function key assignments for data applications. These data assignments are the same as those of the 87-key EBCDIC Typewriter Keyboard (#4627). The keyboard also allows entry of additional graphics and text control characters including the characters available on the IBM 3732 Text Display Station. A different color keytop marking is used to highlight those graphics, symbols, and controls that are only active when the IDTF licensed program is downstream-loaded and the display terminal is in text state. The keyboard does not provide the ability to enter APL characters. **Prerequisites: #9082 Note:** One keyboard overlay is supplied with each keyboard. Additional overlays can be obtained via MES, see Accessories.

All Keyboards, Limitations: Keyboards used on 3275, 3276, 3277, 3278 or 3279 machines are not interchangeable with keyboards used on 8775 machines. **Maximum:** One of each of the above. **Field Installation:** Yes. A 0.9 meter (3 foot) keyboard cable is standard. Specify **#9399** if 1.8 meter (6 foot) cable is required. **Prerequisites: #9082.**

Keyboard Numeric Lock (#4690): Provides the ability to lock the keyboard, if a non-numeric key (other than 0-9, minus (-), decimal sign, or dup) is depressed in a pre-defined numeric-only field. **Maximum:** One. **Field Installation:** Yes.

Attachment Features:

Each 8775 mdl 1 or 2 must be equipped with a loop adapter which provides the capability to attach to a direct or data link attached loop of the 4331 Processor or the 8100 System.

Loop Adapter (#4850): Provides the capability to attach to a direct-or data link-attached loop of a 4331 Processor or the 8100 System. Direct loop may operate at a data rate of 38.4K bps or 9600 bps. The data link-attached loop operates at a data rate of 2400, 4800 or 9600 bps. The Loop Adapter operating data rate of 2400, 4800, 9600 or 38.4K bps is specified by the customer at order time. Half-speed operation of the 8775 can be selected by the operator. Data link attached loops are connected to a 4331 Processor and to an 8100 processor via a 3843 Loop Control Unit. **Specify:** On initial order or by change by service representative.

#9829 for 38.4K bps
#9825 for 9600 bps
#9823 for 4800 bps
#9822 for 2400 bps

The data rate of a loop cannot be higher than that of the slowest device attached to the loop. Consideration should be given to attaching devices slower than the 8775 on a separate loop when the maximum data rate of the 8775 is required. **Maximum:** One.

Telecommunications

Each 8775 mdl 11 or 12 must be equipped with one of the following communication features. External modem interface (#3701), CCITT V35 interface (#1550), DDS Adapter (#5650 or #5651), X.21 Adapter (#5655) or 1200 bps integrated modem (#5500).

8775 Display Terminal (cont'd)

CCITT V35 Interface (#1550): (8100 attached only) Provides a CCITT V35 interface for direct connection up to 1000 feet operating without a modem. Speeds of 600, 1200, 2400, 4800 and 9600 bps are supported. Business Machine Clocking (#1488) is not required. **Limitations:** Cannot be installed with #4850, #3701, #5500, #5650, #5651 or #5655. **Maximum:** One. **Field Installation:** Yes on mdls 11 and 12.

External Modem Interface (#3701): Provides EIA RS-232C interface and appropriate code to attach either an external IBM modem or PTT mandatory modem. Refer to M2700 pages. Other external non-IBM modems may be attached subject to the IBM Multiple Supplier Systems Bulletin. Provides interface to Data Service Unit for attachment to AT&T Dataphone* Digital Service. Supports speeds of 600, 1200, 2000, 2400, 4800, 7200 and 9600 bps over nonswitched and switched facilities. Also supports direct connection to 8100 Information System or 4331 Processor. **Limitations:** Cannot be installed with: #4850, #1550, #5650, #5651, #5500 or #5655. Business Machine Clocking (#1488) required for those modems which do not provide their own clocking. **Maximum:** One. **Field Installation:** Yes on mdls 11 and 12. **Specify: #9493** for operation on public switched network (not available with **#9221, #9222**) or **#9494** for operation on nonswitched communication facilities.

IBM 1200 bps Integrated Modem (#5500): Provides an integrated modem at speeds of 1200/600 bps for operation over nonswitched communication facilities. No external modem is required. **Limitations:** Cannot be installed with #3701, #4850, #1550, #5650, #5651 or #5655. **Maximum:** One. **Field Installation:** Yes on mdls 11 and 12. **Prerequisites:** #1488. **Specify: #9651** for use with 4-wire facility or **#9652** for use with 2-wire facility.

DDS Adapter (#5650, #5651): [#5650 for point-to-point operation, #5651 for multipoint tributary operation] An adapter for SDLC data transmission at speeds of 2400, 4800 or 9600 bps over the AT&T nonswitched Dataphone* Digital Service network. The DDS Adapter interfaces to a DDS channel service unit, the customer site termination of the DDS network. Specify **#9822** for 2400 bps, **#9823** for 4800 bps or **#9825** for 9600 bps. **Limitations:** Cannot be installed with #4850, #3701, #5500, #5655 or #1550. **Maximum:** One #5650 or #5651. **Field Installation:** Yes on mdls 11 and 12.

* Trade Mark of American Telephone & Telegraph.

X.21 Adapter For Nonswitched Networks (#5655): Provides an interface and cable for attachment to the X.21 non switched Data Circuit-Terminating Equipment (DCE) complying with CCITT recommendation X.21. See specify for length of communication cable supplied. SDLC transmission at speeds of 2400 bps **#9822**, 4800 bps **#9823** and 9600 bps **#9825** are supported. **Limitation:** Cannot be installed with #1550, #3701, #4850, #5500, #5650 or #5651. **Maximum:** One. **Field installation:** Yes on Mdls 11 and 12.

MODEL CONVERSIONS

Model changes from 1 to 2 and 11 to 12 are field installable.

ACCESSORIES

The following items are available on a purchase-only basis. Order the feature number as shown below .

BATTERY, MERCURY:

Provides power to maintain the customer set up information while the terminal is powered off.

A 4.14 volt mercury battery: This supply item has a shelf life of one year under normal conditions, and can be expected to provide 3.5 years of normal service. Additional or replacement batteries can be ordered from IBM.

Discharged batteries should be returned to IBM for disposal. Return information is printed on the label of the battery.

Mercury Battery: P/N 1743456.

DISPLAY STATION KEYBOARD ACCESSORIES

The following keyboard accessories allow customers to define and change the messages on single position keytops of the 8775 Display Station keyboard. These accessories supply keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving and a keytop extractor.

These accessories may be ordered from IBM.

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key)

Legendable Keytops	Part No.
White	**5188775**
Charcoal Gray	**8627192**
Light Gray	**8542831**

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key)

Blank Keytops:	Part No.
White	**1853775**
Charcoal Gray	**1853567**
Light Gray	**1853563**

Keytop Extractor: The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled of its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

Keytop Extractor: P/N 9900373.

Keyboard Overlay: A keyboard overlay is available on which customer-defined Programmed Symbols can be annotated. An annotated overlay can be placed over the narrow keytops of Overlay keyboards to associate specific keytops with specific symbols.

Keyboard Overlay: P/N 1742762.

A Keyboard overlay is available for the 87-key EBCDIC Typewriter/Text Entry and Edit Keyboard #4670. The overlay is reversible and is annotated on both sides. Additional overlays are available by ordering P/N 4422226.

DISPLAY STATION TILT/ROTATE ACCESSORY

An accessory which fits under the display station and provides a ball and socket type movement to allow the angle of the screen face to be adjusted for comfort of viewing position. The screen angle is normally 20 degrees from the vertical but with this device it can be adjusted between 25 degrees to the vertical and the vertical position. A locking device is provided to maintain the selected position.

This accessory also allows the display station to be rotated plus or minus 90 degrees from the central position and this movement is independent of the tilt movement.

Interested customers may order from IBM directly. Call toll free at 800-631-5582; in Alaska and Hawaii, call 800-526-2484. For further information, contact an SSD sales representative.

Warranty: The Tilt Rotate accessory is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled preventive maintenance recommended by IBM, and IBM Maintenance Agreements are not available.

Customer Responsibility: The customer is responsible for mounting the Display Station on this accessory.

Tilt/Rotary Accessory: P/N 4422265.

LOCKS AND KEYS

The 8775 with the Security Set Up Keylock **#1009** special feature is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys only to original purchaser.) Order via MSORDER (Category = Supplies/Accessories; Group Code = DP Supply Order) on AAS A letter of authorization with key identification (on customer metal tag) must accompany each order.

The 8775 Security Keylock #6340 special feature is shipped with two keys. Additional keys may be purchased only from IBM, **(P/N 4420756)**. (Vendor will supply additional keys only to original purchaser).

MAGNETIC HAND SCANNER

The Magnetic Hand Scanner (MHS) attaches by a 1.5 meter coiled cable to a number of data entry and reporting devices that have an appropriate magnetic adapter feature. It allows the user to read magnetic stripe labels that are attached to shelves, cartons, machines, etc. It can also be used to read magnetic stripe tags which are hand-held or placed on a flat surface. See appropriate unit for prerequisites and possible limitations.

The MHS has three lights and an audible buzzer which provide feedback to the user on the status of the scanned data. With proper encoding the MHS can read a stripe in either direction. **Field Installation:** Yes. **Prerequisites:** #4999.

Ordering Instructions: See IBM.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventative maintenance recommended by IBM.

8775 Display Terminal (cont'd)

Primary maintenance for the Magnetic Scanners will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare scanners which the customer may want to consider stocking ... for 50 scanners, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5.

Warranty: The Magnetic Scanner Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

IBM Corporation
Repair Center
321 Route 17
Paramus, NJ 07652

There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance will be done by the customer, following the problem determination and parts replacement procedures.

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Hand Scanner: P/N 4123495 or feature **#9440**

MAGNETIC SLOT READER
MAGNETIC SLOT READER, DUAL ENTRY

The Magnetic Slot Reader (MSR) and Dual Entry Magnetic Slot Reader (DEMSR) attach by a 1.5 meter cable to a number of data entry and reporting devices that have an appropriate magnetic adapter feature. These slot readers accommodate a wide range (height and length) of magnetic striped card stock and plastic badges including: Magnetic striped 80-column cards, operator identification badges, large and small credit cards, etc.

The MSR and DEMSR have three lights and an audible buzzer which provide feedback to the user on the status of scanned data. Holes in the bottom of the MSR allow optional attachment to an appropriate flat surface. The MSR has a wide opening on one end to facilitate reading of badges or documents. The DEMSR has wide openings on both ends to facilitate reading in either direction. **Field Installation:** Yes. **Prerequisites:** #4999.

Ordering Instructions: See IBM.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Readers will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare readers which the customer may want to consider stocking ... for 50 readers, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5.

Warranty: The Magnetic Reader Accessories are warranted free from defects in workmanship and materials for 90 days. Warranty service will be performed at the FE Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form (GZ27-2981), pack, and mail it and the defective Magnetic Hand Scanner to:

321 Route 17
Paramus, NJ 07652

There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance will be done by the customer, following the problem determination and parts replacement procedures.

Optionally, the customer can obtain post warranty maintenance on a time and material basis at the IBM Repair Center, Paramus, NJ.

Magnetic Slot Reader: P/N 4123500 or feature code **#9441**.

Dual Entry Magnetic Slot Reader: P/N 4123520 or feature code **#9442**.

Note: The MHS, DEMSR and the MSR read magnetically encoded information from an alphanumeric character set. The MSR also reads the same 10 character numeric only set as the 3277 operator identification card reader which is not a subset of the alphanumeric character set. For further description of both character sets, see *IBM 8775 Display Terminal Character Set*, GA33-3041. The alphanumeric character set can only be read if the Enhanced Function (#3626) is installed. **Limitation:** The 3277 like character set numeric only magnetic cards coded with alternate end of message character (hexadecimal "C") cannot be read by MSR, DEMSR or MHS. The MSR, DEMSR or MHS cannot be used to logon to a SNA network.

A variety of magnetic documents, tags and labels which the MSR, DEMSR and MHS can read, may be optained from IRD. Some, depending on length, can be encoded by devices such as the 3642 Encoder Printer. For complete information on the availability of pre-encoded striped plastic cards contact an IRD sales representative.

The following cable assemblies can be used to extend the Magnetic Slot Reader or Magnetic Hand Scanner distances. **Limitation:** Extension cables cannot be plugged into other extension cables. **Prerequisites:** Feature #4999.

Description	Feature/Part	Number
6 meter (19.7 ft.)	**#9106, P/N**	**4832986**
12 meter (39.4 ft.)	**#9107, P/N**	**4832987**

The *MSR Customer Service Manual*, GA24-3663, should be ordered.

SUPPLIES (None)

8809 MAGNETIC TAPE UNIT MDLS 1A, 1B, 2, 3

PURPOSE

Magnetic tape unit for the 4321 or 4331 Processor and 8100 Information System. Provides high-speed save/restore capability for fixed DASD as well as satisfying the DB/DC journaling, tape interchange and processing requirements of the using system.

MODELS

Model 1A	A01	First drive which attaches to the 8101 Storage and I/O unit or the 8140-BXX and CXX Processor or to the 8809 Magnetic Tape Unit Adapter on the 4321 or 4331 Processor.
Model 1B	B01	First drive which attaches to the 8130, 8140 or 8150 Processor.
Model 2	002	Second, fourth or sixth drive which attaches to the first (model 1A or 1B), third drive (model 3) or fifth drive (model 3), respectively.
Model 3	003	Third drive or fifth drive which attaches to a model 2.

Limitations: The reel inertia is critical to the 8809 motion control system. An example of a reel that does not meet the 8809 inertia requirement is the 26.7cm (10.5 inch) large hub reel (P/N 1669031) that is designed to hold 366 meters (1200 feet) of tape. A detailed description of tape reel inertias is contained in the *Tape Requirements for One-Half Inch Tape Units,* GA32-0006-5, and *The IBM 8809 Magnetic Tape Description,* GA26-1659.

Interchange of tape written on an 8809 at its extended environment with a current IBM tape drive at its non-extended environment may result in an inter-layer slippage, permanent or temporary errors. A detailed description of tape environmental requirements is contained in the *Tape Requirements for One-Half Inch Tape Units,* GA32-0006-5.

Maximum:

8100 Information System: Up to four 8809 units can be attached to an 8100 Information System mdl 1A or 1B followed by a mdl 2, mdl 3 and another mdl 2.

4321 or 4331 Processor: Up to six 8809 units can be attached to a 4331 Processor mdl 1A followed by a mdl 2, mdl 3, mdl 2, mdl 3, and another mdl 2.

Prerequisites: 8100 Information System for mdl 1A.

A. Magnetic Tape Attachment (#4521) on the 8101 Storage and I/O Unit.

B. Diskette Drive and Magnetic Tape Attachment (#1507) on the 8101 mdl A10 or A20.

C. Magnetic Tape Attachment #4901 on 8140-BXX and CXX Processor.

For the 4321 or 4331 Mdl Group 1, 2, or 11 Processor: The 8809 Magnetic Tape Unit Adapter (#4910).

Magnetic Tape: IBM Multi-System Tape (MST) or equivalents, is recommended for optimum performance. The Minimum properties required for satisfactory performance are described in *Tape Requirements for One-Half Inch Tape Unit* GA32-0006-5. Assuming media requirements are met, the 8809 accommodates most industry standard reel sizes of 15.9cm (6.25 inches), 17.8cm (7.0 inches), 21.6cm (8.5 inches), and 26.7cm (10.5 inches).

HIGHLIGHTS

The 8809 Magnetic Tape Unit transports tape directly from reel-to-reel without capstans or vacuum columns, with tape tension and velocity controlled electronically.

The 8809 will operate in one of two operating modes selectable by the host processor. The first mode is start/stop mode in which the 8809 runs at .3175 meters per second (12.5 inches per second) to achieve a 20,000 bytes per second instantaneous data rate. The second mode is streaming mode in which the 8809 runs at 2.54 meters per second (100 inches per second) to achieve a 160,000 bytes per second instantaneous data rate for volume dumps.

Tapes written in either start-stop or streaming mode have an identical tape format. This 63 bytes per millimeter (1600 bytes per inch) phase encoded tape format permits the compatible interchange of tapes with the 2400 and 3400 tape subsystems operating with the same recording format and density.

Note: The 8100 Information System will require dedicated operation to achieve streaming mode for save/restore volume dumps. The 4321 or 4331 Processor may require dedicated operation and/or selection of the long gap (30.5mm or 1.2") mode in order to achieve acceptable performance in streaming mode.

Checking: Each byte is parity checked while tape is being read. Data written on tape is read back and checked as in reading, with full parity check.

Error Correction: Single track error correction "in flight" takes place similar to other IBM tape products in 63 bpmm (1600 bpi) Phase Encoded Mode during read operations.

	Characteristics	
	Start/Stop	**Streaming***
Tape Speed (plus or minus 5%)	.3175m/s (12.5 ips)	2.54m/s (100 ips)
Data Rate, Instantaneous	20kb/s	160kb/s
Access Time (Write)	40 ms	335 ms
Access Time (Read)	44 ms	335 ms
IBG Time, Nominal 0.6 inch gap (1.524cm)	48 ms	6 ms
IBG Time, Nominal 1.2 inch gap (3.048cm)	96 ms	12 ms
Rewind Time (2400 ft. reel) (732 meters)	2.6 min.	2.6 min.

* Refer to *IBM 8809 Magnetic Tape Description,* GA26-1659, for additional details.

SPECIFY

Unless indicated otherwise, these specify codes are only available at time of manufacture.

- Voltage (AC, 1-phase, 60 Hz): [Not required on mdl 2] **#9911** for 120V **#9902** for 208V, **#9914** for 240V.
- 8100 System Attachment: **#9606** for mdl 1A and 1B only. Also **#9933** if the mdl 1B is attached to 8150. **Field Installation:** Yes.
- Power Cord [Not required on mdl 2]: With waterproof locking plug **#9950**. With non-locking plug **#9891**.
- 4321 or 4331 Processor Attachment: **#9607** for mdl 1A only. **Field Installation:** Yes.
- Color (4321 or 4331 Processor and for mdl 1A only):

Willow Green **#9060**	Classic Blue **#9063**
Garnet Rose **#9061**	Charcoal Brown **#9064**
Sunrise Yellow **#9062**	Pebble Gray **#9065**

SPECIAL FEATURES

8100 System Multi-Drive (#4920): [Mdl 1B] Required on Mdl 1B if more than one tape drive (additional Mdl 2 or Mdl 3) is attached to an 8100 System. **Field Installation:** Yes.

MODEL CONVERSION (None)

ACCESSORIES (None)

SUPPLIES (None)

8815 SCANMASTER I

PURPOSE

- For capturing and transmitting noncoded documents to an 4300, S/370, 303X, or 308X system.
- For capturing and transmitting noncoded documents directly to another Scanmaster I.
- For printing noncoded documents.
- For printing formatted text documents.

The Scanmaster I is an SNA/SDLC device designed for system-attached operation and terminal-to-terminal operation. It attaches to 4300, S/370, 303X, and 308X processors over switched or non-switched communication facilities at speeds up to 9600 bps. It will communicate directly with another remote Scanmaster I over a public switched telephone network or private switched or nonswitched voice facilities at speeds up to 9600 bps.

MODELS

Model 1 001
Model 3 003
Model 4 004

The Scanmaster I is available in the following three models:

Model 1: Can be tailored, i.e., equipped with appropriate features for use in system-attached and terminal-to-terminal operations. Communication features permit operation over switched or nonswitched communication facilities via an external modem at speeds up to 9600 bps. Includes Mark Sense Control for addressing and/or identifying documents, and Character Print for printing data and text documents, and messages at 12.7 cpi and 6.1 lpi in prestige-style font in system-attached operations. The Model 1 will accommodate the Keypad feature for operators to key-in document addressing and/or identification information and password to the host.

Model 3: For use in both system-attached and terminal-to-terminal operations over a switched line via a 4800 bps integrated modem. Includes Mark Sense Control for addressing and/or identifying documents, and Character Print for printing data and text documents, and messages at 12.7 cpi and 6.1 lpi in prestige-style font in system-attached operations. The Model 3 will accommodate the Keypad feature for operators to key-in document addressing and/or identification information and password to the host.

Model 4: For use in system-attached operation over a nonswitched line via a 4800 bps integrated modem. Includes Mark Sense Control for addressing and/or identifying documents, and Character Print for printing data and text documents, and messages at 12.7 cpi and 6.1 lpi in prestige-style font in system-attached operations.

Scanmaster I Model Structure

	Mdl 1	Mdl 3	Mdl 4
CCA W/O CLOCK	STD	STD	STD
4800 bps IM-SW *	-	STD	-
4800 bps IM-NSW*	-	-	STD
EIA/CCITT ** [2]	OPT	-	-
X.21 LEASED **	OPT	-	-
DDSA(USA only)**	OPT	-	-
MARK SENSE CTRL	STD	STD	STD
CHARACTER PRINT	STD	STD	STD
KEYPAD	OPT	OPT	OPT
PEDESTAL	OPT	OPT	OPT

Note:
* IM: Integrated Modem, SW: Switched, NSW: Nonswitched

** Must select one of these options on Model 1.

Prerequisites: The Scanmaster I mdl 1 requires an external modem interface, or a DDS Adapter, or an X.21 Adapter for nonswitched networks.

Customer Setup (CSU): The Scanmaster I is designated as a Customer Setup Unit, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

The Scanmaster I is a high-speed, high-quality document transceiver consisting of a controller, a scanner and a printer in one integrally-designed desk-height unit for use by casual operators.

System-attached and terminal-to-terminal operations are available. In addition to the basic transceiver functions, the Scanmaster I offers:

- A convenience copying capability, one copy at a time.
- A compression/decompression function for compressing the scanned data prior to passing it to the communication line and for decompressing the incoming noncoded communication line data prior to printing.
- A Mark Sense Control function for system-attached operations that detects addressing and identifying marks written by the user on a Cover Sheet heading the noncoded input document. The Scanmaster I transmits the digital representation of this mark pattern to the host for interpretation.
- A Keypad feature provides a 16-keypad and 10-digit readout on the operator panel to allow operators to key-in document addressing and/or identification information and password to the host.
- A message-print capability in the system-attached operations for printing host messages, such as time stamping, addressing, and buck slip information on the cover page preceding a noncoded output document.
- A Character Print function for system-attached operations for printing formatted EBCDIC-coded text and data documents.
- 4800 bps integrated modems switched and nonswitched.
- External modem interface for attaching external modems with speed up to 9600 bps with switched network backup (SNBU).
- Communication adapters for attaching to the Digital Data Service and the X.21 leased digital networks.

Controller: The controller controls all online and offline operations. The Scanmaster I communicates with another Scanmaster I or with the host system using SNA with Advanced Program-to-Program Communication (APPC) and SDLC. APPC features a new LU type (6.2) providing common session protocols for document interchange among office-oriented systems and program products. SDLC communication protocols provide accurate transmission. SDLC as used in the Scanmaster I conforms to a subset (unbalanced normal mode) of both ISO HDLC and ANSI ADCCP standards.

Scanner: The scanner is a feed-through mechanism with Automatic Document Feed (ADF). The ADF chute accepts multiple documents with dimensions of 128mm (5 in.) to 216mm (8.5 in.) wide x 128mm (5.0 in.) to 356mm (14.0 in.) long. The sum of the width and length must be a minimum of 310mm (12.2 in.). For example, if the width is 128mm (5.0 in.) the minimum allowable length is 182mm (7.2 in.). Similarly if the length is 128mm (5.0 in.) the minimum allowable width is 182mm (7.2 in.). Approximately 30 pages with a total thickness of 3mm (0.12 in.) may be inserted to minimize operator intervention. The scanning resolution is 8 dots/mm (203 dots/in.) in the horizontal direction. In the vertical direction, the scanning resolution is 7.7 lines/mm (196 lines/in.) or 3.85 lines/mm (98 lines/in.). (The selection of scanning resolution, which can be made manually, or specified by the Cover Sheet for system-attached operations, can be made based on a trade-off between transmission time and the quality requirement for the document being scanned.) Darkness is selected via the Normal Original/Light Original switch on the operator panel or via the Cover Sheet for system-attached operations. Light Original is used when copies are to be made from an original document that does not have enough contrast for normal scanning.

Printer: The printer is a high-quality, multi-stylus, electrostatic printer that uses a pressure roller as a fixing mechanism. Received documents are printed and automatically cut to the length of the transmitted documents. Printed documents are from 216mm (8.5 in.) wide x 148mm (5.8 in.) long to 216mm (8.5 in.) wide x 356mm (14.0 in.) long. A scanned document as short as 128mm (5.0 in.) will be cut to the length of 148mm (5.8 in.) due to the printer feed mechanism. A 150m (492 ft.) long paper roll can be loaded. The printing resolution is 8 dots/mm (203 dots/in.) in the horizontal direction and 7.7 lines/mm (196 lines/in.) in the vertical direction. Note that the effective print width is 200mm (7.87 in.) for a 216mm paper roll. **Note:** When the selected scanning resolution is 3.85 lines/mm (98 lines/in.), the output document is printed at 7.7 lines/mm (196 lines/in.). This is accomplished by printing each line twice. The toner reservoir in the printer can be filled with a bottle of toner (100 g), which can develop approximately 3,000 pages of typical office documents.

Communications: The Scanmaster I mdls 1 and 3 communicate with each other on a terminal-to-terminal basis using SNA/SDLC communication protocol over voice communication facilities. The Scanmaster I mdls 1, 3, and 4 communicate with a 4300, S/370, 303X, or 308X system through a 3705 communication controller, using SNA/SDLC communication protocol.

Communication Facilities: The Scanmaster I mdls 1 and 4 operate in half-duplex point-to-point or multipoint mode on half-duplex or duplex facilities at transmission speeds of 2000 (mdl 1 only), 2400/1200 (mdl 1 only), 4800/2400 bps on nonswitched facilities. The mdl 1 will also operate at transmission speed of 7200/3600 and 9600 bps on these

8815 Scanmaster I (cont'd)

nonswitched facilities. The Scanmaster I mdls 1 and 3 operate in half-duplex point-to-point mode of transmission speeds of 2400/1200 (mdl 1 only) and 4800/2400 bps on switched facilities. See M2700 pages for details of the communication facilities/services.

Performance: The performance of the Scanmaster I subsystem is dependent upon many factors such as:

1) Native speeds of the scanner and printer - 30mm/sec (1.2 in/sec).
2) Overlap operations of scanning and printing (at the Scanmaster I or remote Scanmaster I in terminal-to-terminal operation) and processing time for the last page (cut and eject).
3) Tasks executed.
4) Document content/page length and resolution selected.
5) Text format - number of print lines, number of print characters in a line, skipping, page length, etc.
6) Modem speeds
7) Quality of communication line, which affects transmission time of data.
8) Host system availability and software implementation.

Therefore, an analysis of each document is necessary to find the actual throughput/performance.

The following formulas, with notes, are included for reference to approximate the Scanmaster I performance. Refer to IBM Aids for system performance evaluation information.

Local Copy

T = N x (.9 x L + 2.5) + 14

Where: T - Total time (in seconds)
N - Number of pages to copy
L - Length of original (inches)

Note: Total time is from depression of Local Copy key to ejection of last page.

If the length of the original is less than 10 inches, the total copy time may exceed the approximated time.

Example: Copying a four-page document of letter-size pages (11 inches long)

T = 4 x (.9 x 11 + 2.5) + 14 = 64 seconds (approximately)

Text Transmission:

LPM = 800 x R / [(4.1 + .03 x C) x R + 1]

Where: LPM - Lines per minute.
R - Ratio of lines printed per page to the maximum number of lines available per page.
C - Average number of character positions in the printed lines.

T = 60 x L / LPM

Where: T - Time to print a page (in seconds).
L - Lines printed on page.
LPM - Lines per minute from above formula.

PPM = 60 / [(summation of T above) / N + 2 + 12 / N]

Where: PPM - Pages per minute.
T - Time to print a page from above formula.
N - Number of text pages

Note: Excessive skipping in successive pages will degrade throughput performance.

Example: If 22 of 66 lines on a page are printed, R=0.33. Assuming an average line length of 75 character positions (C=75), then:

LPM = 800 x .33 / [(4.1 + .03 x 75) x .33 + 1] = 85 (approximately)
T = 60 x 22/85 = 16 (sec) (approximately)

If three pages of the same text format are printed,
PPM = 60 / [(16 + 16 + 16) / 3 + 2 + 12/3] = 2.7 (approximately)

Document Transmission (terminal-to-terminal operation):

T = summation of page transmission time (*) + 17

Where: T- Total time (in seconds) from start of send operation to completion of receive operation at remote Scanmaster I including page-eject time.

Page transmission time - time per page transmission (the concurrent operation of scan, transmission, print functions are included).

Note: * For comparison of transmission time, three types of pages have been selected as; A, basic diagrams; B, double spaced typed letter, and; C, single spaced typed text. The transmission speeds shown below are under error-free conditions.

PAGE TYPE	RESOLUTIONS SELECTED	TRANSMISSION SPEED (SEC/PAGE) AT LINE SPEEDS OF (BPS) 2400 a	4800 a	4800 b	9600 b
A	Normal	34	19	17	14
	Fine Detail	49	29	27	27
B	Normal	46	26	23	16
	Fine Detail	67	40	37	29
C	Normal	94	52	46	26
	Fine Detail	137	76	69	40

a: Switched line facility b: Leased line facility

Modems: One external IBM modem, or equivalent may be attached to a Scanmaster I mdl 1 that is equipped with the prerequisite External Modem Interface #3701.

IBM Modems	Speed (bps)
3863 Mdl 1/2	2400/1200
3864 Mdl 1/2	4800/2400
3865 Mdl 1/2	9600/4800

Switched Network Backup (SNBU) available for modems provides backup for nonswitched tele-communication lines. SNBU allows restoration of operation between two point-to-point modems, or between a multipoint control modem and any multipoint tributary modem.

SNBU feature available for modems may also be used to communicate with another Scanmaster I equipped with the equivalent modem in terminal-to-terminal operations when the Scanmaster I is not being used in system-attached operations.

Four-wire Switched Network Backup is available for 3863, 3864, or 3865 modems. For communication capabilities, product utilization, and special features, see M2700, 3863, 3864, and 3865 pages.

Security: The 3845 mdls 1, 2, 11 and 12 and 3846 mdls 2 and 12, where available, can be attached to the Scanmaster I mdl 1 via the External Modem Interface (#3701) to safeguard data transmitted over unprotected communication line through cryptography.

Problem Determination Procedures: Problem determination and recovery routines and procedures have been designed into this unit to provide greater availability to the customer. See "Customer Responsibilities" below.

Network Problem Determination Application (NPDA), a program product, operates with VTAM to assist in performing communication network problem determination/isolation and enhances the availability and serviceability of the Scanmaster I. See NPDA in the Program Products section.

Customer Responsibilities: The customer is responsible for:

- Site and system preparation.
- Arranging for the telecommunication service supplier to install the appropriate communication service equipped with the required connecting device.
- Arrangements with other vendors for equipment/facilities, if necessary.
- Receipt at customer's receiving dock, unpacking, and placement of the Scanmaster I.
- Physical setup, connection of cables to communication lines/modems and IBM devices, incorporating protected customer access areas, switch settings, and checkout.
- Performing the problem determination procedures and completing a problem report form before calling for IBM service.
- Procuring the Scanmaster I consumables - Toner, Paper and Felt wiper. See "Supplies".
- Replacement of felt wiper in the printer under the cover. See "Supplies".
- Designing and procuring the Cover Sheets when using host controlled distribution of documents. See "Supplies".
- Paper and Toner are affected by temperature and humidity. Each machine location must be compared to the acceptable environmental condition to ensure satisfactory print quality. The customer must be aware of these environmental limitations.

Bibliography: See KWIC Index, G320-1621, or specific system bibliography.

8815 Scanmaster I (cont'd)

SPECIFY

Specify codes are not normally required to order a Scanmaster I. If codes are not specified, the machine is shipped with the following specifications:

- Voltage (120V AC, 1-phase, 3-wire 60 Hz):
- Power Cable Plug: Non-locking.
- Power Cable Length: 2.8 meters (9 feet).
- Communication Cable Length:

  Mdl 1 only - 6.1 meters (20 feet) for attachment to standalone modem, or to communication facility when a DDS Adapter is used, or to communication facility when an X.21 Adapter for nonswitched networks is used.

  Mdls 3, and 4 - 3.0 meters (10 feet) for attachment to a communication facility through an integrated modem in the Scanmaster I.

- Document Width: 216mm Document Chute
  216mm Paper-Roll Flange

The remainder of this Specify section can be ignored unless special circumstances require a deviation from the standard default values.

- Power Cable Length: If the standard 2.8 meter (9 foot) power cable is not desired, specify **#9986** for a 1.8 meter (6 foot) cable.
- Communication Cable Length (Mdl 1 only): If the standard 6.1 meter (20 foot) communication cable is not desired, specify **#9261** for a 3.0 meter (10 foot) cable, **#9262** for a 9.1 meter (30 foot) cable or **#9263** for a 12.2 meter (40 foot) cable.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

Keypad (#4610): Provides a 16-key keypad and 10-digit readout on the operator panel to allow operators to key-in document addressing and/or identification information and password to the host. **Limitations:** Cannot be used for terminal-to-terminal operations. **Maximum:** One. **Field Installation:** No.

Pedestal (#5501): Adds 150mm (5.91 in.) to the height. **Maximum:** One. **Field Installation:** No.

COMMUNICATION FEATURES

Scanmaster I mdls 1, 3, and 4 are provided with communication features without Business Machine Clock. Mdls 3 and 4 are equipped with a 4800 bps integrated modem for data-link attachment as follows:

Model	Integrated Data-Link Attach Capability:
003	For system-attached operations and/or terminal-to-terminal operations: A self-clocked, micro-processor based, integrated modem that operates in half-duplex mode over 2-wire, switched communication facilities at speeds of 4800/2400 bps. Speed selection is under operator, host and/or remote station control. Equalization is automatic and continuously performed. Manual originate and auto answer procedures are used to establish connection. The protective circuits required for FCC Registration are built into the Scanmaster I to allow direct attachment to the public switched network, (conditional upon FCC Registration.) When a Scanmaster I mdl 3 communicates with a 4300, S/370, 303X, or 308X system in system-attached operations, the system must be equipped with a 3864 mdl 2, or its equivalent. When a Scanmaster I mdl 3 communicates with a Scanmaster I in terminal-to-terminal operations, the second Scanmaster I must be a Scanmaster I mdl 3, or be a Scanmaster I mdl 1 equipped with a 3864 mdl 2, or its equivalent.
004	For system-attached operations and/or terminal-to-terminal operations: A self-clocked, micro-processor based, integrated modem that operates in half-duplex mode over 4-wire, nonswitched duplex communication facilities in point-to-point or multipoint mode at speeds of 4800/2400 bps. Speed selection is under operator, host and/or remote station control. Equalization is automatic and continuously performed. When a Scanmaster I mdl 4 communicates with a 4300, S/370, 303X, or 308X system in system-attached operations, the system must be equipped with a 3864 mdl 1, or its equivalent. When a Scanmaster I mdl 4 communicates with a Scanmaster I in terminal-to-terminal operations, the second Scanmaster I must be a Scanmaster I mdl 4, or be a Scanmaster I mdl 1 equipped with a 3864 mdl 1, or its equivalent.

The Scanmaster I mdl 1 must be equipped with either a #3701, or a #5650, or a #5655.

External Modem Interface (#3701): [Mdl 1 only] Provides an interface and cable for attachment to an IBM or external modem with clock that complies with EIA 232C. **Limitations:** Cannot be ordered with #5650, or #5655. **Maximum:** One. **Field Installation:** Yes.

Digital Data Service (DDS) Adapter (#5650): [Mdl 1 only] Provides an interface and cable for attachment to the AT&T nonswitched Dataphone® digital data service network at speeds of 2400 bps, 4800 bps, and 9600 bps. The DDS Adapter interfaces with a DDS channel service unit, the customer's site termination of the DDS network. **Limitations:** Cannot be ordered with #3701 or #5655. **Field Installation:** Yes. **Maximum:** One. Specify **#9822** for 2400 bps, **#9823** for 4800 bps, or **#9825** for 9600 bps.

X.21 Adapter For Nonswitched Networks (#5655): [Mdl 1 only] Provides an interface and cable for attachment to the X.21 nonswitched data circuit-terminating equipment (DCE) at speeds of 2400, 4800, and 9600 bps. **Limitations:** Cannot be ordered with #3701 or #5650. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

The following model changes will be honored as RPQs:

From/To	001	003	004
001	-	Yes	Yes
003	No	-	Yes
004	No	No	-

ACCESSORIES

The following items are available on a purchase-only basis.

Document Chute/Paper-Roll Flange: The machine is shipped with one 216mm (8.5 in.) Document Chute and one pair of Paper-Roll Flanges. For additional Document Chutes and/or Paper-Roll Flanges, contact IBM. **Field Installation:** Yes. **CSU:** Yes. **Prerequisites:** Document Chute Label, see below.

Items	Part Number	Number Shipped
Document Chute - 216mm	6829010	one
Paper-Roll Flange - 216mm	6828968	one piece*

Note: * Two flanges are required to support a roll of paper.

Document Chute Label: Order P/N **6828258**

SUPPLIES

Toner: Toner, P/N 7038486 or equivalent, is required. **Note:** Each P/N contains six bottles of toner in a carton. Contact IBM for ordering information.

Paper Roll: The following Paper Roll, or equivalent, is required. **Note:** Each P/N contains six rolls of paper 150m (492 feet.) long in a carton. Contact IBM for ordering information.

Items	P/N
Paper Roll - 216mm (8.5 in) (Wide-Range Paper)	**7038482**
Paper Roll - 216mm (8.5 in) (Full-Range Paper)	**6109607**

Note: For operating environmental conditions and paper selection, contact IBM.

Felt Wiper: It is necessary to replace the felt wiper after each usage of six paper rolls. To order felt wipers, contact IBM. **Note:** Each P/N contains 20 felt wipers in a carton.

Note: While other combinations of commercially available papers and toners may work, machine reliability and image quality will vary widely as a function of the paper and toner used. It is recommended that IBM's systems matched supplies referenced above be used for optimum performance.

Cover Sheet: Cover Sheets may be required for system-attached operations. For IBM system-defined (for use with DISOSS, and the Image Distribution System PRPQ 5799-BJA and 5799-BJB) or customization Cover Sheets, contact IBM. A "customization" cover sheet is printed with all mark positions and timing marks so that the customer may overprint operator instructions/nomenclature for any customer applications.
