<input type="checkbox"/> RETROFIT RECOMMENDED		
<input checked="" type="checkbox"/> SERVICE INFORMATION ONLY		

PURPOSE: Current production D3000 operator control panel assemblies are being equipped with Licon brand switches instead of Compulites. Operationally these two switches are identical. There are however, some integral differences which are outlined below.

- Although the switch assemblies are interchangeable, the switch caps, between Licon and Compulite, are not. i.e., READY, SAFE, PROT/PROT and RUN/STOP. Should a cap replacement on a Compulite switch become necessary a complete Licon switch with cap should be ordered. Licon numbers are as follows:

<u>Switch with cap</u>	<u>P/N</u>
RUN/STOP	102357-27
SAFE	102357-28
READY	102357-29
PROT/PROT	102357-30

- When replacing a switch in the operator control panel, refer to appropriate figure for wiring. (Attached)
- Ensure that before installing the switch that the switch terminals are twisted 45°. If the 45° twist does not exist, the terminal could be pushed into the switch body causing damage inside the switch.
