WE'VE REVOLUTIONIZED GRAPHICS EDITING
NOW IT'S AS EASY AS TEXT EDITING

The Intran Image Design Center edits and manipulates graphics as no other pre-press system can. With the press of a finger, the Image Design Center is yours to command.

For the first time, you can edit line graphics at any scale, in any resolution, on a pixel by pixel basis. Start with scanned-in or computer-generated images, or create your own graphics. Then add lines, arcs, boxes. Change the size of selected elements, rotate, reposition, delete or crop. Add shading or patterns from Intran's electronic shading palette. Choose from a wide array of typographic fonts to integrate text and graphics, on-screen. Then preview the completed image before printing.

Best of all, the Image Design Center is easy to use. The menu-driven point-and-select system minimizes keyboarding.

Creating electronic images is a snap, even for people with little or no computer experience.

And graphic manipulation is only the beginning. Create complex business forms. Build fonts and logos.

Compose page layouts. All in one compact system. All with unmatched speed.

The Image Design Center interfaces with a wide variety of scanners, CAD/CAM systems, text and word processors. It drives laser printers, digital photo-typesetters, and other imaging output devices.

Intran's Image Design Center, the world's fastest image preparation system for electronic publishing. For more details, or a demonstration, call Intran toll-free **1-800-328-3341.**
