Problem

Disk Basic operates such that when the KILL "filename" command is executed it closes all open files before the kill is actually executed. This is to prevent the diskette directory from being destroyed, which has occurred on Model I Disk Basic

Solution

1. At "TRSDOS READY" apply the following patch:

```
PATCH BASIC/CMD (ADD=60D0,FIND=CDE95C,CHG=000000)
```

Once this patch is made, the user should take care that he does NOT kill a file that is open, as this will destroy the diskette directory.
