Problem

Accounts Payable Model II printing check for an invoice with more than 14 transactions. If more transactions are covered by one check it will print 14 transactions on the first stub and 15 on subsequent stubs, putting the totals on the check. Also the check numbering is off—the machine says last check printed was more than it should be.

Solution

The problem is corrected by following the steps listed below.

1. Backup the diskette(s) and make the changes on the Backup copy of the program.
2. In BASIC load the program by typing LOAD"APCHECKS/BAS".
3. Make the following corrections:

CHANGES (Retype the line or refer to the Edit section of the owners manual)

Old Line: 2060 IC=IC+1:IFIC=15THENLPRINTL1\$:GOSUB8000:IC=0:CF=0

New Line: 2060 IC=IC+1:IFIC=14THENLPRINTL1\$:GOSUB8000:IC=0:CF=0

Old Line: 2070 IFCF=0THENGOSUB2410

New Line: 2070 IFCF=0THENIC=0:GOSUB2410

4. Type SAVE"APCHECKS/BAS" to save the changes in the program.
5. At TRSDOS Ready, make a backup copy of the corrected diskette.
