Model	<u>Model II</u>
Stock No.	<u>26-4506 Prior to 2.0</u>
Date	<u>June 13, 1980</u>
Page 1 of	<u>1</u>

Problem

In some cases, when a lot of editing followed by adding, deleting, etc. is performed on large data files, the files will be split up and scattered on the disk. This causes the number of extents that files have to exceed 14. If this is exceeded, a disk full error occurs even though the Directory shows plenty of space.

Solution

Backup your original Mailing List master diskette (containing no data) and copy File1, File2, and File0 (where File is the name you assigned to your Mailing List system) to this Backup. This will decrease the number of extents used by each file.
