

Installation of Sun Write/Paint/Draw for Sun3:

1. Create some directory for software as root
mkdir /home/tools
2. cd to the directory created above
cd /home/tools
3. tar the files into the /home/tools directory
tar xvf /dev/rst0
4. Next two changes need to be made to the .cshrc files in all users home directories in order to run the software. The path has to be modified to include this software and an environment variable needs to be set.

```
set path=( ... /home/tools/sundesk/bin)
setenv SUNDESK /home/tools/sundesk
```

After editing this file, the user should log out and log back in.

6. Before running the software, passwords must be obtained for all of the workstations using the sales order number and the hostid for the machine. Call 1 800-USA-4SUN.

After getting your password, use the install_{?}_password in the sundesk/bin directory.

7. Running the software can now be accomplished by typing in {sunwrite | sunpaint | sundraw} at the prompt.

Installation of f77 for the Sun3:

1. unbundled f77 is installed using the following utility:

```
/usr/etc/extract_unbundled
```
